After teaching in Alexandria, Valentinus moved to Rome before the year 140 C.E. and it is likely that he was already exposed to classic gnostic teaching before he left Alexandria. Tertullian informs us that Valentinus was a candidate for the office of bishop in the church in Rome (ca. 143 C.E.). As a speculative theological reformer, Valentinus sought to revise the classic gnostic myth according to the terms and conceptual categories of emerging orthodoxy. Valentinus certainly accepted the authoritative texts of the orthodox camp (Williams 1983; Layton 1987: 251) and with them the traditional Roman formulation of belief.

But the genius of Valentinus' exegetical and theological contributions, and the contributions of his students, was found in the use of a peculiar allegorical interpretation of those commonly accepted texts. By this allegorical method, Valentinus sought to discover deeper levels of meaning within the texts and so made the (apparently tacit) claim of having discovered the hermeneutical key to those texts (Tate in *OCD*, 45–46; Layton 1987: 272–74), a claim which certainly put Valentinians at odds with emerging orthodoxy.

C. Valentinus' System of Theology

It is clear from the preceding survey that the paucity of primary texts makes the reconstruction of Valentinus' system very difficult. Researchers have depended on the heresiological accounts which describe the systems of his followers, hoping to see an imprint of their mentor's system. Helpful modern discussions of the classic gnostic myth are those by Layton (1987: 5–22) and Rudolph (1983: 53–272), while useful discussions of Valentinus' own gnostic system, and the systems of his followers, also can be found in Layton (1987: 267–353) and Rudolph (1983: 317–25).

Valentinus accepted the classic gnostic world-view, as represented in the *Apocryphon of John* (NHC II,*1;* III,*1;* IV,*1;* and BG 8502,2), but with his own revisions. Rudolph suggests that we see in Valentinus' teaching the apex of gnosticism, the greatest and most influential of the gnostic schools (1983: 322–23).

D. Gnosticism in the Tradition of Valentinus

Even before the death of Valentinus some of his students were already becoming influential teachers. But soon after his death the Valentinian school split into two groups, the "Eastern" (or Anatolian, mostly located in Alexandria) and the "Western" (or Italic, situated in Rome). The Eastern branch produced such luminaries as Axionicus of Antioch, Kolorbasos (?), Mark, Theodotus ("Excerpta ex Theodoto"; Casey 1934; Sagnard 1948; and Hill 1972), Ambrose and Candidus, while the West produced Heracleon (Brooke 1891; Pagels 1973), Ptolemy (*Epistle to Flora;* Quispel 1966), Secundus, Alexander, Flora, Florinus, and Theotimus (Layton 1987: map 5; Rudolph 1983: 322–25).

The heresiological assault on the Valentinian schools began in about the middle of the 2d century. Such orthodox thinkers as Justin Martyr (Rome, ca. 150), Miltiades (ca. 165), Irenaeus (Lyon, ca. 180), Clement (Alexandria, ca. 200), Origen (Alexandria, ca. 200), Tertullian (Carthage, ca. 195–207), Hippolytus (Rome, ca. 222–235), Ambrose (Milan, ca. 338), John Chrysostom (Antioch, ca. 386), Theodore (Mopsuestia, ca. 400), and Theodoret (Cyrrus, ca. 450) wrote merciless polemic against the Valentinians. The presence of Valentinian texts, representing more than one Coptic dialect, in the Nag Hammadi library attest to the continued interest in Valentinian concepts, in the mid-4th century, within circles of ascetic monks, who were themselves not Valentinian. The emperor Constantine proscribed the Valentinians, among other "sectarians," in about the year 325, while the last contemporary condemnation dates from the Trullan Synod (Canon 95) of 692 (Constantinople).

VALLEY GATE (PLACE) [Heb *ša‹ar haggayˀ* (שַׁעַר הַגַּיְא)]. A gate of Jerusalem on the W side of the City of David (2 Chr 26:9; Neh 2:13, 15 and 3:13) approximately 500 m N of the Dung Gate (Neh 3:13; Williamson 1984: 83) located at the S tip of the E hill. Earliest mention of the Valley Gate was in regard to its fortification with defensive towers by Uzziah (769–733 B.C.E., 2 Chr 26:9; Williamson 1984: 84, 87 n. 2). It was from this gate that Nehemiah departed for his inspection tour (Neh 2:13, 15), and it is universally accepted that it was from this point that the dedicatory processions began (Neh 12:31–43).

Two primary objections (surveyed by Simons 1952: 125) to the Valley Gate being located on the W slope of the City of David are: (1) the Hinnom Valley (not the Tyropoeon or Central Valley) is usually "the valley" to which the scriptures refer (Jer 2:23) and (2) the maximalist view, that Nehemiah repaired the walls around the western hill, requires that Nehemiah's dedicatory processionals started on the western hill S of the present-day Zion Gate, which lacks archaeological support. But the increasing weight of evidence (Williamson 1984: 81–88; Avi-Yonah 1954: 244–45) again points to the W slope of the City of David as the location of the Valley Gate and more specifically to the W gate uncovered by Crowfoot and Fitzgerald in 1927–28 (1929).

DALE C. LIID

VANIAH (PERSON) [Heb *wanyâ* (וַנְיָה)]. A descendant of Bani and one of the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:36 = 1 Esdr 9:34). According to Noth, the text is corrupt here and Vaniah is not a proper name (*IPN*, 241). This is supported by wide variations among other texts. Several Hebrew mss read *znyh,* the LXX reads *ououania,* and the parallel text in 1 Esdr 9:34 reads *kai anos.* The editors of *BHS* suggest reading *ʼmibbĕnê* ("from the sons of"), making Meremoth the patriarch of another family; however, there is no textual support for this. We may assume that "Vaniah" was an individual whose actual name has been lost. This person was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:10; note that Binnui replaces Bani in Nehemiah's list [7:15].) For further discussion, see BEDEIAH.

JEFFREY A. FAGER

VASHTI (PERSON) [Heb *waštî* (וַשְׁתִּי)]. Wife of Ahasuerus and queen in the Persian Empire about 485–465 B.C., and a prominent character early in the story of Esther (Esth 1:9, 11, 12, 15, 16, 17, 19; 2:1, 4, 17). Her refusal to respond positively to an invitation from the king threatens to demean not only the prestige of the royal throne but also the status of husbands as heads of households throughout the kingdom. Her behavior in not appearing at the royal banquet in order to display her beauty and person is understood in the royal court as an act against the stability and order of the whole empire. When the princely advisers to the king successfully sought to rid the court of Vashti's rebellious presence, they opened up the way to the throne for her successor, Queen Esther, facilitating the ultimate deliverance of the Jews from their oppressors in the empire. Vashti completely disappears from the concerns of the story once Esther takes her place (Esth 2:17).

The name Vashti has been thought to be of Persian origin and to mean "the best" or "the beloved, the desired one" (Moore, *Esther* AB), and the historical accuracy of the preservation of Persian names in the Hebrew texts has been substantiated (Millard 1977). The variants in the spelling (LXX - *ashtin;* Cambridge LXX - *ouasthein;* Josephus - *aste;* Vulgate - *vashti*) can perhaps be explained with a better

understanding of the practices of orthography in various speech communities. The historical connection of Vashti with Queen Amestis evidently has been abandoned.

VATICANUS. See CODEX (CODEX VATICANUS).

VEGETABLES. See FLORA.

VEIL. See DRESS AND ORNAMENTATION.

VEIL OF THE TEMPLE [Heb *pārōket* (פָּרֹכֶת)]. Var. CURTAIN. The fabric that served to divide the inner sanctum ("holy of holies") of the Tabernacle from the outer sanctum. It guarded the most holy object, the ark, from the profanity of contact with humans. Thus, no one could pass through this veil, not even Levitical priests (Num 18:7, so Haran 1978: 206). Only the high priest could go past it, and only after special cleansing, for the annual atonement ceremonies (Lev 16:24). Hanging before the ark, which symbolized God's presence and served as the place of God's glory, the veil marked the place where the divine and the human met (Exod 30:6).

Its fabrication and placement are described in Exod 26:31–35 (cf. Exod 36:35–36), and it is referred to in various other priestly passages (e.g., Exod 27:21; 40:21; Lev 4:17; 16:12; Num 4:12). Because it shielded the sacred ark, it was made of the finest materials and was crafted with the most elaborate workmanship. It was the premier piece among the series of textiles that were integrated into the Tabernacle's design.

The veil was to be made of a blend of colored wools (blue, red, purple) and fine twined linen. Its fabrication involved the technique known as *ḥôšēb* workmanship (RSV "skilled work"), which was probably a kind of needlework that produced figural designs—cherubim in the case of the veil—on the fabric. It was suspended on golden hooks from four acacia-wood pillars, which were overlaid with gold. The golden offering table of the outer sanctum was to be placed in front of the veil, opposite the ark that was hidden behind it. Its connection to the sanctity of the ark is expressed not only by its costly design and its placement but also by the fact that it was said to have been used as a cover for the ark when the Tabernacle was dismantled for journeys (Num 4:5). As such, it was the only fabric to be carried by the Kohathites, the most important of the Levitical families. See also TABERNACLE for a different interpretation.

Because the portable Tabernacle involved the use of fabrics for its walls, doors, and roof, not all of those fabric elements were said to be used for the analogous parts of the Temple. Wood and stone architectural elements were used instead of textiles. The screens of the Tabernacle, which marked its other two main passageways, are omitted from the temple texts; instead wooden doors were placed at entrances. However, for the veil, there is some evidence of its existence in the Temple, at least in the Second and/or Herodian Temples, at the doorway between the holy of holies and the main interior space (*hêkāl*). The temple texts in Kings do not mention the veil, but it appears in the parallel Chronicles account (2 Chr 3:14). In addition, the NT refers to the rending of the veil at Jesus' death (see Matt 27:51; Mark 15:38; Luke 23:45). These gospel references are rendered "curtain" in the RSV, but the Greek employs the same word that the LXX uses for "veil." See also SCREEN.

CAROL MEYERS

VENGEANCE. The verbal and nominal forms normally translated as "to avenge, vengeance, etc." fall into two categories of definition: (1) the rendering of a just punishment upon a wrongdoer or the recompense given to the victim of the wrongdoing; (2) vindictive revenge inflicted by wicked people upon the innocent. The most common Hebrew word translated by this term is *nāqam* (verb, "to avenge") and its nominal relatives, *nāqām* and *nĕqāmâ* ("vengeance"). In the NT the usual word is *ekdikeō* (verb)

and its nominal derivatives, *ekdikēsis* and *ekdikos.* In addition the RSV translates a few specific occurrences of three other verbs as "to avenge." These are: *hôšî‹a* (usually, "to save") in 1 Sam 25:31; *rāb* (usually, "to contend, to take to court") in 1 Sam 25:39; and *hēšîb* (usually, "to bring back, requite") in 2 Sam 16:8. The other significant word translated with this term is the participle, *gō›ēl,* in the phrase *gō›ēl haddām,* which is rendered, "the avenger of blood" (see below). Words related to the concept of vengeance and often used in parallel with *nqm* include *hēšîb* ("to bring, give back = make requital"); *šillēm* ("to requite, recompense, reward"); *dāraš* ("to seek, require," particularly in the phrase, "to seek the blood of"); *gĕmûl* ("dealing, recompense").

The concept of vengeance in the Bible is complex and multi-faceted. Although the English term, "vengeance," has generally been perceived as having a negative or pejorative connotation, the concept designated by the root *nqm* in the Hebrew Bible is generally presented in a positive light as a type of action appropriate (with certain limitations) to humans and particularly to God. The term, *nqm*, appears to have developed its central meaning in the context of judicial language. Most of its occurrences are found in passages which have at least a vague legal theme, in which the "vengeance" is viewed as the rectification of some misdeed. The root occurs 74 times in some 49 passages in the Hebrew Bible. Of these passages, 14 have an explicit legal context—*nqm* appears in some laws themselves (e.g., Exod 21:20–21), as well as in prophetic oracles which have been cast in the form of speeches in court (cf. Isa 1:24; 59:15–19; Ezek 25:13–14). In these passages *nqm* always refers to the just punishment meted out to a wrongdoer or to the damages or recompense awarded to the victim of the crime. This is not to be seen as malicious or vindictive retaliation by the wronged person, but rather as a just recompense for a crime.

In addition to these 14 passages, 24 others use the word where it is reasonably clear that the notion of "just recompense" for a crime is reflected, although not in a strictly legal context (cf. Josh 10:12–13; Jer 15:15). Only in the remaining 12 passages (one passage, Jer 20:10–12, falls both here and in the first category) does *nqm* appear in contexts which might call for a negative or pejorative translation related to "revenge" or "malicious retaliation for inflicted wrongs" (cf. Gen 4:24; Ezek 25:12, 15; Ps 8:3—Eng8:2; Lam 3:60). In most (but not all) of these cases, the "avenger" is an enemy of Israel or God. (A complete listing of the passages may be found in Pitard 1982: 17.)

The concept of vengeance may be divided into several categories. Probably the most significant of these is the division between human and divine vengeance. Human vengeance may be either a private redressing of wrongs or public and judicial in nature. It may be perceived as either appropriate or inappropriate retaliation. Divine vengeance, however, is always presented as appropriate and is often requested by a petitioner when the latter is afraid that justice may not be done on a human level (cf. 1 Sam 24:12; Jer 11:19–20; Ps 79:9–10). The exact form of the divine vengeance upon the wicked is usually left quite vague.

Private vengeance is an important element in a number of narratives and is particularly significant in the case of murder. Legal material in the Pentateuch indicates that the responsibility for punishing a murderer was invested in the kinship group of the victim, which was to appoint a kinsman of the victim to avenge the death (cf. Num 35:19–21). This person is called *gō›ēl haddām,* translated "the avenger of blood" in the RSV, although a better rendering would be "the redeemer of the blood." It was his responsibility to restore the balance of (i.e., "redeem") the kinship group by seeing that the murderer was put to death. This form of private vengeance, while deeply rooted in ANE practice, was also recognized for its tendency to lead to cyclical retaliation in the form of blood feuds. As the Israelite state became more centralized and as the court system began to develop, legislation appeared which attempted to limit the violence of private vengeance by adding a number of restrictions to its performance. For example, the cities of refuge were instituted, which allowed a person who had accidentally killed someone to find safety from the "redeemer of the blood" until judicial authorities in the city could determine his guilt or innocence (cf. Num 35:22–28). In addition, unrestrained and excessive vengeance was forbidden under the *lex talionis* (Exod 21:23–25), which mandated that punishment should be in accordance with the crime. The extreme violence that could develop from unrestrained personal vengeance is well illustrated in the song of Lamech (Gen 4:24) and the story of Samson (Judges 14–16), which recounts repeated acts of revenge on the part of both

Samson and the Philistines, climaxing with Samson's killing of 3,000 Philistines "that I may be avenged for one of my two eyes." On blood vengeance, see especially Merz 1916.

Various biblical books present different views toward the use of vengeance (just retribution) by individuals. Generally, the authors assume that it is fully appropriate for innocent victims to be avenged upon the guilty. In fact, the laws in Num 35:31–34 make it mandatory to execute a murderer, since the blood of a victim is a defilement of the land that can be expiated only by the blood of the perpetrator of the crime (see also Deut 19:11–13 and, in a more private context, 1 Kgs 2:5–9). However, while those who seek vengeance for other offenses are not condemned (cf. Judges 14–16; 1 Samuel 25), several narratives suggest approval for those who opt for forgiveness and refuse to take legitimate vengeance. See especially the story of Joseph and his brothers (Genesis 45; 50:15–21), the stories of David's refusal to kill Saul in 1 Samuel 24 and 26 (cf. also Lev 19:18). On the other hand, limits to this kind of forgiveness are evident in certain narratives, in which a character (the king) is condemned for showing mercy to his enemy (1 Sam 15:4–33; 1 Kgs 20:30–43).

As the Israelite monarchy developed, the state attempted to preempt private vengeance with the development of a court system. The legal portions of the Pentateuch in large measure reflect this attempt (cf. Num 35:9–35; Deut 24:16).

While a substantial number of the legal passages about vengeance deal with human avengers, the avenger par excellence in the Hebrew Bible is God himself. This is particularly in evidence in the Psalms and prophetic literature, where God is described as the One who will bring about a just recompense upon those who have attacked Israel or one of God's faithful. Divine vengeance is particularly invoked upon external enemies who oppress Israel, on the upper class which has unlawfully enriched itself at the expense of the humble, on those who have been unfaithful to Yahweh, and on those who seek to injure the faithful individual. Again, these announcements of or calls for God's vengeance generally are not to be construed as calls for vindictive action by God, but rather should be understood as appeals for justice. God's vengeance will restore the balance which has been upset by wickedness. God is asked to, or announces that he will, bring about a just punishment for the guilty and compensation for the victim (cf. Ps 94:1–2; Jer 51:34–37; Isa 35:4; Ps 79:10). Because of its relationship to justice, the divine vengeance can be described both in terms of encouragement to the oppressed, as in Isa 61:1–4, or in harsh terms of punishment, as in Psalm 58.

In recent years, a different understanding of the term *nāqam* was developed by Mendenhall, which received considerable acceptance. Mendenhall (1973: 69–104) proposed that the meaning of *nqm* has been misunderstood and has nothing to do with vengeance, which he defined as a basically negative term. He argued that the context of the word was not in the judicial sphere at all, but rather in the realm of covenant terminology. He suggested that *nqm* does not denote a legal process, but rather an extralegal intervention by a sovereign into a situation of danger or chaos in a vassal state where all regular and normal legal processes have broken down. The sovereign intervenes to rescue the faithful vassal and punish the forces that are causing the trouble. These two aspects of *nqm* he labeled as "Defensive Vindication" and "Punitive Vindication." His primary evidence for this proposal came from the Amarna tablets, where he found six letters that appeared to have occurrences of the verb *naqāmu.* In these letters, the Canaanite writers petition the Pharaoh of Egypt to rescue their cities or themselves from attackers. The verb in these passages clearly means "to rescue" and never approaches a meaning such as "to avenge." From this starting point Mendenhall examined occurrences of *nqm* in the Hebrew Bible and proposed that the root here, too, is a technical covenant term for the intervention of the sovereign (in this case, usually God, with Israel as his vassal). Mendenhall's proposal, however, must be rejected, since the verb in the Amarna letters, which is the foundation for his argument, has been shown to be unrelated to the root *nqm* (see Pitard 1982: 5–16). As seen above, the context of the verb in normal legal terminology seems beyond doubt.

The concept of divine vengeance or recompense continues to play a role in the NT writings. Human vengeance is discouraged, and reliance on God's action is emphasized (cf. Rom 12: 17–21). The theme of forgiveness and renunciation of vengeance, found already in the Hebrew Bible, becomes a major theme in

the words of both Jesus and Paul (cf. Matt 5:38–48; Luke 17:3–4; 23:34; Rom 12:17–21). God's intervention in the last days is portrayed as the day of vengeance, when the wicked will be punished for lack of faithfulness to God and for their oppression of God's people (2 Thess 1:5–10; Rev 6:10; 19:2), thereby continuing the earlier Israelite theme.

VERSIONS, ANCIENT. This entry consists of 9 articles that treat various ancient versions of the Bible. The first article provides an introductory overview to the corpus of ancient versions and their value for the textual criticism of the Bible. The next four articles cover the most archaic (3d century A.D. or earlier) versions: Greek, Syriac, Latin, and Coptic. These are "primary versions:" that is, they constitute translations of biblical books from their original languages (Hebrew [OT] and Greek [NT]). The final four articles in this entry cover the next most-ancient versions: Gothic, Armenian, Ethiopic, and Georgian. These are for the most part "secondary versions:" that is, they tend to be early translations of various primary versions, and therefore they have some value in helping scholars establish the nature of the ancient versions. These articles can be supplemented by the entries on AQUILA'S VERSION; ARISTEAS, LETTER OF; DIATESSARON; HEXAPLA OF ORIGEN; SEPTUAGINT; SYMMACHUS, SYMMACHUS'S VERSION; SYRO-HEXAPLA; TARGUM, TARGUMIM; THEODOTION, THEODOTION'S VERSION; and VULGATE. See also TEXTUAL CRITICISM; DEAD SEA SCROLLS; NAG HAMMADI; and WADI MURABBAAT. For discussions of the various languages themselves into which these versions are translated, see LANGUAGES.

INTRODUCTORY SURVEY

Translation was not unknown in antiquity. We find bilingual versions of treaties and of the inscriptions of kings, and the rendering of religious ceremonies from Sumerian into Akkadian; at a later date, agricultural and other practical treatises find their translators. But the translation of the Bible, first in the Jewish context, and later in the Christian, is innovative in various ways, especially in the extent of the literature reproduced. The centrality of scripture to the religion and theology both of Judaism and of Christianity brought this about. While the cultic aspects of the texts first translated and the legislative function provide some sort of parallel to the other translated material which were known in antiquity, the narrative and poetic aspects, as well as the theological and philosophical overtones, rendered into the language (and later, the languages) of another culture, make the enterprise novel in its totality. (For various surveys, see Burkitt 1903; Metzger 1962, 1977; Vööbus 1954; Eissfeldt 1966: part 5.)

A. Historical Survey of Ancient Versions

1. Earliest Versions of the Hebrew Bible. The deportation of the Jewish people to Mesopotamia deprived them of their temple worship and they were thrown back upon scripture for a principle of coherence of religious and national identity. Thus the returning exiles in the following century, although they restored the worship of the temple, adhered to the Law and its public reading, as the books of Ezra and Nehemiah reveal. Nor were the Jews now confined to Palestine: at the time of the deportation, there were already communities of exiles in Egypt, and the community there grew under Persian rule, while a Jewish population remained in Mesopotamia. The successors of Alexander the Great encouraged people of many races to settle in newly established cities, and Jews thus greatly increased in number in Egypt, and spread throughout the Hellenistic world. All these events brought linguistic change of habit. Aramaic, for Palestinian and Mesopotamian Jews, took the place of Hebrew as the vernacular, while the Jews of the Hellenistic cities adopted Greek as their tongue. These are the languages of the first translations of biblical writings, on the one hand the Targumim, on the other the Greek translation known as the Septuagint (LXX).

a. Aramaic. Tradition has the origin of the Aramaic translations or Targumim in the days of the return from exile, and Neh 8:8 is taken to refer to translation being given when the Hebrew scriptures are read, in this case, the participle *měpōrāš,* is taken to mean "with an interpretation" rather than simply "clearly," or "distinctly". However, the tradition cannot be substantiated. But it is clear from the Qumran scrolls, the NT, and passages of the Mishnah, that by the end of the Second Commonwealth, Targumic interpretations were part of the exegetical inheritance among the Jews. See also TARGUM, TARGUMIM. Such translations would at first have been transmitted in oral tradition, and only later committed to writing. In the earlier Targumim, there is a certain amount of haggadic material or MIDRASH introduced along with the Aramaic rendering of the Hebrew text: this illustrates how the two senses of "interpretation" are present in this translation. Not only are obscure passages given a more specific application in this way, but edifying or merely interesting detail is added to the accounts. In the later Targumim, this element is not entirely absent but has been reduced. The discoveries in the materials from the Cairo Genizah, from Qumran, and in the Codex Neofiti of the Vatican library, have shown the variety of renderings which existed, sometimes showing links with the kind of textual variation in the Hebrew which the Qumran finds in particular have revealed. This suggests that in origin the translations represented may have arisen in different places or communities. (For a good survey, see Bowker 1969.)

b. Greek. It has been suggested by a few scholars that the Septuagint (LXX) translation arose in a similar way, with different Greek translations made in different Greek-speaking Jewish communities. In this way the different families of text within the LXX tradition are explained as the representatives of early forms of the texts, and not as later corruptions or revisions. See SEPTUAGINT. But although scholars of stature have put such views forward, they have not commanded general acceptance. The evidence is held by most experts to signify that, for the Pentateuch at least, we can accept the notion of a distinct single act of translation in the third century before the Christian era.

Such a specific dating is found in the *Letter of Aristeas.* This work purports to be a letter exchanged between Greeks describing the origin of the Greek rendering of the Jewish Law. It is alleged to have been undertaken at the command of Ptolemy II Philadelpus (283–246 B.C.E.) at the instigation of his librarian Demetrius of Phalerum. At the request of the king, the Jewish high priest sends seventy-two scholars who finish the translation in as many days. (Later forms of the story in Christian writers introduce the miracle that these scholars worked in pairs without consultation with any others, and upon collation, were found to have produced the same identical Greek text!). The details of the story will not stand up to investigation. Demetrius was not Ptolemy's librarian, and was in fact banished by him. Moreover, the story, though purporting to be the work of a Greek, is written in many respects from a Jewish point of

view. However, it is generally conceded that in spite of this, the origin of the translation should be placed at the date, apparently traditional, which the *Letter* ascribes to it. (For a survey of the LXX, see Jellicoe 1974.) See ARISTEAS, LETTER OF.

Examination of the text of the Greek OT shows that its translation was the work of a number of translators: we may date the rendering of the Pentateuch in the 3d century, and it would appear from the Prologue to Ecclesiasticus (ca. 116 B.C.E.) that by that date the whole of the Jewish scriptures had been rendered. This is also demonstrable from the use of the translation made by Alexandrian Jewish historians and a probable echo of the translation of Isaiah in the work of the poet and scholar Callimachus (ca. 300–240 B.C.E.). The style differs: much is marked by a tendency to imitate Hebrew constructions in the Greek, but there are varying degrees of such literalness. Some Wisdom books are marked on the other hand by great freedom, which sometimes strays far from the sense of the original: perhaps the great difficulty of parts of the original encouraged this.

In general, there was great concern for accuracy, and from this arose a succession of revisions of the text. Our earlier knowledge of this from later Christian scholars has been enhanced and rendered more precise by manuscript discoveries in the caves by the Dead Sea at Qumran and Muraba'at. See DEAD SEA SCROLLS; WADI MURABBAAT. Certain manuscripts characterized particularly by the rendering of the Hebrew *wĕgam* by the Greek *kaige* have been associated with the name of Theodotion, previously assumed to have lived in the late 2d century of the Christian era, but now by the dating of the manuscripts necessarily placed at an earlier date, the first century B.C.E. or C.E. The name of Theodotion was already known, along with those of Aquila and Symmachus, as revisors of the Greek text, whose motivation was greater accuracy and verbal equivalence between the Hebrew original and the Greek rendering. See AQUILA'S VERSION; SYMMACHUS, SYMMACHUS'S VERSION; and THEODOTION, THEODOTION'S VERSION. References in early fathers and in marginal annotations provided our main source of knowledge until modern manuscript discovery filled out the picture. The context of their activity, especially that of Aquila, was theological controversy between Christian and Jew over the interpretation of the testimonies drawn from the Hebrew scriptures, which the Christian urged should be understood to support the claims made for Jesus Christ and the Church. In such controversy it became clear to the Christian participants that their arguments were rendered weak when based on passages where the LXX differed from the Hebrew adduced by their Jewish opponents. As a reference aid in such circumstances, the Alexandrian scholar Origen produced the six-columned work known as the HEXAPLA. In this work, the Hebrew text, along with a transcription, was accompanied by the versions of Theodotion, Aquila, and Symmachus (and by other versions in certain books), together with the text of the LXX, which Origen had provided with a critical apparatus to remedy its shortcomings. This work (of which a few manuscript traces have lately come to light), although intended to clarify, became at length a potential source of corruption as the significance of Origen's apparatus became incomprehensible. The work of the Antiochene Lucian also sought to provide a more accurate relationship between the Hebrew and the translated Greek text. See also GREEK VERSIONS below.

c. Syriac. In the opinion of many scholars, the Syriac Pentateuch is believed to have been a Jewish translation in origin, although preserved in the Bible of the Syriac-speaking church. It has many contacts with the Targumic tradition. It is suggested that the conversion of the royal house of Adiabene to Judaism in the 1st century C.E. was the occasion for this translation. A similar suggestion for the origin of the Latin version in Jewish circles in Antioch and its adaptation by the Christian church, made on mainly linguistic grounds, has not however met with acceptance. See SYRIAC VERSIONS below.

2. Earliest Versions of the Christian Bible. The NT writings, in Greek, drew upon the text of the LXX and its variety: both Testaments were used by the church, after some time, as inspired scripture. The church spread among Greek-speaking urban dwellers: here the inherited scriptures of the OT and NT were immediately available, and their influence is evident in early traces of the development of liturgy, canon law, theology, and the legends of the saints. But as the Gospel expanded in the course of the 2d century, it encountered and converted, both in the Latin speaking West and in the countryside of the Hellenized East, indigenous peoples unfamiliar with Greek. It must shortly have discovered the necessity of translating the

scriptures which were the source of the substance and form of its belief and life. The translation of the OT for Jews who had lost Hebrew as a native tongue was the analogy of this; but, although there were many similarities in methods and in end-product, the analogy does not seem to have been recognized.

a. Latin and Syriac. The earliest translation appears to have been in Latin. See LATIN VERSIONS below. This appears in Africa towards the end of the 2d century: but it is not altogether certain that it originated there. An Eastern origin in Antioch and a N Italian origin in or near Milan have also been suggested. In textual terms, however, the form of the Latin version which survived in Africa appears to be the most primitive.

In the Syriac–speaking world of the East, a gospel tradition in the fourfold gospel form would appear to be attested fairly late, by comparison with the Latin: this is due to the creation in the 2d century C.E. of a gospel harmony by the apologist TATIAN, a Syriac speaker by birth, who introduced his work, known generally as the DIATESSARON, among his fellow Syriac speakers. The influence of this harmony upon the gospel text in Syriac was all-pervasive, even when a fourfold gospel form was adopted: it reveals itself in harmonistic readings and in other variants of theological *Tendenz* deriving from Tatian's encratite and anti-Judaic views. Such readings, through the influence of the Syriac text, have spread to versions derived from or influenced by it, such as the Armenian, Georgian, and Ethiopic (see Lyonnet and Vööbus). Whether Tatian's harmony was composed in Greek (since he was in the West at the time of his conversion and wrote in Greek before his return to his native Mesopotamia) is a question still debated. We have a 3d century fragment of the Diatessaron in Greek from the frontier town of Dura-Europos on the Euphrates, and it has recently been very plausibly argued that the Greek hymnodist Romanos the Melodist was influenced by the Diatesseron in the early 6th century. The above data, however, need not imply the existence of a Greek Diatessaron. Hence, the view once entertained by a number of scholars that such a document had influenced the text of such a witness as Codex Bezae is no longer canvassed.

There is still a stronger body of opinion that the Latin tradition was affected by the harmony of Tatian. This view rests not only upon the evidence of readings in the manuscripts of the Latin tradition, but also upon a number of gospel harmonies dated at various times throughout the Middle Ages in languages of Western Christendom (German, Dutch, English, Italian, and French). From this has been deduced the existence of a Latin harmony, derived from Tatian's work, if not actually composed by him: and its corrupting influence upon the Latin text of the fourfold gospel has been suggested. But although several manuscripts of Latin harmonies are known, the view outlined is by no means that of all scholars, many of whom consider the Latin and Western harmony tradition to be an independent development, and its coincidences with what we know of Tatian's text to be fortuitous.

b. Coptic. The translation of the first Coptic version is not so precisely to be dated as that in Latin or Syriac: however, the date cannot be later than the 3d century. The conversion of St. Antony through the hearing of scripture about 270 C.E. indicated the existence of a Coptic version, since he knew no Greek, and about 50 years later Pachomius, writing a rule for monks in Egypt, demanded the capacity to read scripture, or to recite it, from postulants. The sensational find of NAG HAMMADI is of manuscripts of the 4th century, among them the *Gospel of Thomas*, a collection of sayings attributed to Jesus, many of them with parallels in the Synoptic Gospels. The translation of these in Coptic owes a great deal to the canonical gospels in Coptic, and therefore presupposes their existence. All these data point to the 3d century as the latest *terminus a quo* for the earliest Coptic translation. We have not only parts of the gospels, but of many other parts of the Bible in the various dialects into which Coptic had developed by the effect of the geography of the Nile Valley. The Sahidic dialect came to overwhelm the others in course of time: this may be related to the fact that one of the others, sub-Achmimic, was preeminently the language of Gnosticism and Manichaeism, and the eventual triumph of orthodoxy brought the literary use of that dialect to an end. Sahidic in its turn was superseded by Bohairic, which remains the liturgical language of the Coptic church. The complicating factor of harmonization is not found in the Coptic gospels.

All other parts of the Bible, both NT and OT, were translated in due course. The different estimations of the extent of the canon played their part in different areas. In the Syriac speaking regions, the NT lacks

the books of 2 Peter, 2 and 3 John, Jude, and Revelation, which were counted among the *antilegomena* in the early 4th century, according to Eusebius. The major part of the OT in Syriac, was rendered from Hebrew, including the Wisdom of Jesus ben Sira (which only came to light in Hebrew within the last hundred years): only the letter of Baruch, the additions to Daniel known only in Greek, and the deutero-canonical books of Tobit, Judith, the Wisdom of Solomon, and 1 Maccabees were rendered from Greek. Latin and Coptic were rendered from Greek throughout the Bible, and the whole of the NT in Syriac.

3. Subsequent Versions and Editions. The three versions mentioned hitherto, Latin, Syriac, and Coptic, are all termed "primary versions" of the NT, since they are all rendered from the Greek text. For the OT, in addition to the LXX, the only primary versions used by Christians were the Syriac and the Latin Vulgate (most parts of which were translated from Hebrew by Jerome, but a few books were simply revised from the Old Latin, which was itself based on the LXX). See VULGATE. Later primary versions of the NT are attested for Gothic and Slavonic, each translated directly from Greek. See GOTHIC VERSIONS below. "Secondary versions" are those made from a translation, as opposed to the original language; thus, any version of the OT translated from the LXX is a secondary version. Syriac engendered many (the earliest stratum of the Armenian version, Arabic, Persian, and Sogdian), while the Ethiopic, translated from Greek, was subject to a revision from Syriac. Coptic also gave rise to Arabic translations and provided the base of the Apocalypse in Ethiopic. See ARMENIAN VERSIONS and ETHIOPIC VERSIONS below.

As churches became established, and scholarship could arise, greater recourse to the original Hebrew or Greek was made. Thus the Old Latin, in which there are different strands, was eventually revised, at least in part, by Jerome: the Old Syriac, with its debt to Tatian, was supplanted by the Peshitta. The Armenian turned to the LXX and the Greek NT for its revisions leading to later authorized versions. The Georgian version, in part at least the offspring of the Armenian, was revised to a Greek standard on more than one occasion. See GEORGIAN VERSIONS below. In Syriac, we have a valuable rendering of the critical work of Origen, the Hexapla, known therefore in Western scholarship as the SYRO-HEXAPLA version which seeks to give a word for word equivalence to the Greek. A similar NT version was also produced, known as the Harklean, after the birthplace of Thomas, its translator.

While the West was served in the earliest periods of Christian expansion by the Latin version alone, and this continued to be the preeminent text of scripture throughout the Middle Ages, there were nevertheless translations into a number of languages of the Germanic invaders of the Roman Empire as these were converted, namely into Old High German, Anglo-Saxon or Old English, and Icelandic or Old Norse: while at a later period, translations and paraphrases are known in the Middle German, Middle English, Middle Dutch, Old French, and in the Tuscan and Venetian dialects of the medieval form of the Italian language.

The versions of the Bible entered into a new phase of influence with the invention of printing. In the West, the Vulgate was committed to its first printed edition in the 15th century and became available for critical study as manuscripts were studied and compared. The various Eastern versions, which had begun to be known in the West through the attempts to unify the church in the 15th century, were the object of both Catholic and Protestant scholarship. Type for the major languages was already cut in the 16th century, but the appearance of full Bibles in some cases waited for more than a century. Where biblical texts were available, they found a place in the Polyglot Bibles of the 17th century. When editions with critical apparatus began to be made, beginning with Mill's in the early 18th century, the versions were included as fully as they were known (often, though, in case of the Eastern versions, in reliance upon Latin renderings, not always accurate). In the course of the 19th century, as textual criticism developed for the Hebrew Bible, the LXX and the NT, the evidence of the various versions (Latin, Greek, and Eastern) played an increasing part. Although opinions differ sharply on the weight to be given to evidence from these sources, they continue to occupy the attention even of those who underrate their importance. See TEXTUAL CRITICISM.

As to editions, the present position is far from perfect. For some versions, especially the Vulgate, we are in a position of advantage, while for others there are projects of critical edition under way (e.g., the Old

Latin or the Peshitta OT). Others still, such as Coptic and Georgian, while having valuable editions of many manuscripts available, still lack a critically coordinated edition. Others again, such as the Armenian and the Ethiopic, are still not available in a critically useful form. The minor versions, both Oriental and Western, are often very difficult of access. Another problem is that of manpower: while there may be many scholars competent in a language important for Christian or Jewish antiquity, few may make editorial or philological work on biblical (or indeed other relevant) texts their main research. For languages which few Westerners still learn (Georgian, Sogdian, Nubian, medieval Western languages), the situation is even more unsatisfactory to the biblical scholar (the cultural policy of the former Soviet Republic of Georgia has made Georgian a special case). It should also be noted that the study of Latin now is far less common or advanced than a generation or two ago.

B. The Critical Study of Ancient Versions

Before outlining the importance of the versions in a study of the Bible, a sketch must be given of the necessary memoranda for users of versions for that or any other study. Every version has its own history, as the sketch above will have shown. This perhaps obvious fact has a number of ramifications. There may have been independent tentatives at translation when this was first undertaken, or a first attempt may have been neglected as a possible base of revision, at a later date, and a new translation begun. In establishing this, attention must be given to the way in which the same original is rendered in the language receiving the translation: the same text may be rendered in distinct ways. To trace this, we need access not only to manuscripts of the Bible, but to quotations from the Bible in the writers of the receiving language, and to liturgy, hymnody, and so on, in which scriptural words may have been adapted or echoed. The study of the Old Armenian by Lyonnet, and many classics of the study of the Old Latin version are fine examples of this type of research. A further corollary of this is that a manuscript does not necessarily represent the same version in all parts (as is true also, textually, of Greek manuscripts of the NT). Manuscripts and quotations, too, may also be the result of revision, which has produced a mixed text. This is a singularly difficult problem to deal with.

Whether studying the version itself, or in relation to its putative model, we must note its style and the approach of the translator to his task. Does he paraphrase or gloss his model, or does he painstakingly, or even pedantically, reproduce his model word for word? Does he comprehend his text, or does he struggle? Does his translation derive from an original in which there were corruptions, such as mistakes in copying? Investigation of these aspects will be an aid to determining whether the version primarily comes from the original Greek or Hebrew, or whether it is a secondary or even tertiary version. In all this, we shall become aware of the limitations which the idiom of the receiving language has placed upon translation. For example, quoting a classic article by Ll. J. M. Bebb (1902), "there are no distinctions of gender in Armenian, no neuter in Arabic, no passive voice in Bohairic, no article in Latin, and therefore these versions afford no help where readings involving such points are being discussed."

1. History of the Canon. The ancient versions are valuable objects of study, both in themselves and in the context of the study of the Bible and of church history. First, they illuminate the history of the development of the canon of scripture. The fact that the Samaritans possessed only the Pentateuch reflects the state of the concept of the extent of scripture at the time of the Samaritan schism. The Syriac NT canon, with the absence of the lesser Catholic Epistles and Revelation, corresponds to the contrast of *homologoumena* and *antilegomena* in Eusebius's description of canonical status in his day: the late rendering of Revelation into Georgian shows how long doubts about that book persisted within Eastern Christianity. On the other hand, the presence of the book of *Enoch* within the canon of the Ethiopic church illustrates that the existence of a penumbra to the canon could eventuate in inclusions as well as exclusions. It is often on the borders of Christendom that older states of the biblical literature survived, when the progress of theology and scholarship in the Greek "center" had produced new parameters.

2. History of the Text. This also reveals itself in the second of the fields upon which the versions, critically studied, may cast light, namely, the history of the text of scripture. We may use the versions, if we know their history, to erect an historical framework for the dating of variant forms by a series of *termini ante quem.* Often in dealing with the earliest variants and the earliest versions, it is the knowledge

of the version's history that is the most difficult requirement to attain. As has been pointed out above (with respect to the translations into Syriac, Latin, and Coptic), we can only arrive at tentative and approximate conclusions about the place and date of the translations, and the same is true certainly of Georgian and Ethiopic, to mention only two other striking cases. We must beware of the circular argument which is always there to entrap us. Nevertheless, we can argue, even in these important areas of problematic, that a reading existed "by such and such a date, at least."

It has often been further deduced that such a reading existed in the original. Evidence coming to light in new discoveries sometimes confirms this, as when readings previously known only in Greek form, for instance, have been found in the Hebrew of Qumran documents. Can we make it a general rule however? The study of the text of the NT continues to be bedeviled by debate over this point. In earlier days, when the Greek evidence was largely confined to manuscripts dating from the 4th century C.E., a scholar such as F. C. Burkitt could argue that the sharing of a reading by the oldest form of the Latin gospels and the oldest form of the separated gospels in Syriac not only indicated its antiquity, but also guaranteed its candidacy for consideration as the original text. Recently, in the work of Kurt and Barbara Aland in their survey of the text of the NT (1987), and in many papers of Kurt Aland, we find such a view dismissed with virulent scorn on the grounds that no such text as those versions presuppose had been found in the 2d and 3d century Greek papyri of the gospels we now possess. The methodological question involved here is found in the fact that the gospel manuscripts which the Alands can draw upon are of Egyptian origin, for it is only (with rare exception) in the climate of Egypt that papyrus survives to our day. Greek fathers, of other provenance but early date, such as Justin, Irenaeus, and Clement, can frequently be found to attest variants known otherwise only in the earliest versions, while the papyri do not invariably fail to share versional readings against other witnesses. Thus, the arguments of the Alands, while they justifiably draw attention to certain dangers of overemphasis in older use of the versions, themselves overemphasize their point. In spite of their misgivings, it cannot be gainsaid that in the versions we may find forms of text, or individual readings, which have left no traces in Greek manuscripts presently known to us. But in many cases the presence of such textual forms or readings in the quotations and allusions of early Greek Christian writers demonstrates that the readings of the versions were most probably derived from Greek manuscripts at the time of their translation.

3. The "Original Text." This leads to the third aspect of biblical study upon which the versions have been held to have a bearing, namely, the establishment of the original text. The use to which versional evidence has been put has differed in the NT and the OT. In the NT the method has usually been as in the case outlined. The coincidence in reading between versions either against the Greek tradition as a whole, or supporting one or a few significant witnesses against the rest of the Greek tradition, has been held to give a reading acceptable as original. But this has not generally been applied in any mechanical way, but the argument for any acceptable reading has been reinforced by the arguments of rational criticism.

In the OT, versional evidence has generally been that derived from the LXX: readings in which the meaning of the Greek differed materially from the Masoretic text of the Hebrew have at certain periods been made the basis of conjectural emendation of the Hebrew text, based either upon paleographical considerations or upon comparative philological considerations which have drawn upon real or alleged alternative meanings of the same roots, which would explain the LXX rendering. Such approaches have aroused dissent, and trenchant criticisms have been made; nevertheless, the renderings of the New English Bible in its OT portion bear the marks of this type of textual procedure. However, in some cases, the finds of Qumran have revealed the existence of Hebrew originals upon which the Septuagintal renderings have been based. This removes the debate from the field of the versional evidence to that of a critical choice between variations now known to have existed in different text-types of the original.

Variant readings in the original or in versions, apart from those which may arise from sheer error, may be due to the understanding of the text. This may come either from the knowledge of the language from which the translation is made by the translator, or from a tradition of exegesis which he has inherited. Thus, the versions are of value in both these ways. They reveal to us the understanding of obscure words or the resolution of ambiguous punctuation as those were circulating in Christian circles, and they may

also show the exegesis current at the time of translation. Exegetical translation often comes about by making the generalized more specific or by clarificatory additions. There are many examples in the Targumim, especially in passages such as Genesis 49 and Isaiah 53. Lexicographical material latent in translations is most readily seen in the NT, since the earliest translations in that case are only a few centuries later than the original, when much the same Greek was still spoken.

4. The Ancient Languages Themselves. The last matter upon which the ancient versions bear takes us outside biblical study itself, namely the history of the languages of the versions. It is often the case that the Bible version is the earliest source for our knowledge of the language, or that it constitutes a valuable corpus of information about the language dateable to a particular time. So, for example, Gothic, Armenian, and Georgian biblical versions are a primary source for our study of the languages in which they are composed, while the Greek of the LXX, the Latin of the Bible, and the dialects of Coptic known from biblical versions are important corpora representing well defined stages in the history of those languages.

The ancient versions, insofar as they represent pioneering work in the activity of translation, also provide a significant chapter in that aspect of intellectual history. Detailed work upon the methods of the translators and the pitfalls which beset them will illuminate questions which have only recently attracted full investigation as modern linguistic science has expanded. The ancient translators, for the most part unknown by name, have not left much theoretical discussion of their endeavor. There are, however, interesting remarks to be found in several works of Jerome (see e.g., Kelly 1975, chap 15).

Both in its specifically biblical application and in its more general ramifications, the study of the ancient versions is a field still containing much that is worth discovery, examination, and discussion, bearing upon biblical study, church history, the history of doctrine, and linguistic study of many kinds. It is to be encouraged and presented as an area deserving the attention of both seasoned scholars and beginners. (Surveys of the subject may be found in the articles "Bibelhandschriften" and "Bibeluebersetzungen" from *TRE* 6, Lieferung 1/2 [1976].)

J. NEVILLE BIRDSALL

GREEK VERSIONS

The Torah, or first five books of the Hebrew Bible, was initially translated into Greek in the 3d century B.C.E. in the Egyptian metropolis of Alexandria. This initial translation is generally known as the Septuagint (LXX). The term Septuagint is also applied to the earliest Greek rendering of the remaining books of the Hebrew Bible. See SEPTUAGINT. This or Old Greek (OG) text was revised on a number of occasions, and fresh translations from the Hebrew were occasionally undertaken. These later or non-Septuagintal Greek versions are the subject of the following article.

Among the best known of these versions are the works of Aquila, Theodotion, and Symmachus (known collectively as the Three). These three individuals were Jews who lived in the 2d (or, in the case of Symmachus, possibly in the 3d) century C.E. Theodotion and Aquila can be viewed as revisers of already existing Greek texts; Symmachus is more correctly seen as the initiator of a fresh translation from the Hebrew.

Other ancient revisions or translations are also known. Lucian, for example, a Christian leader in 3d-century Antioch, produced an influential Greek text of the Bible, as Origen had done earlier in the same century at Caesarea. And Origen, who was responsible for preserving the work of the Three, also preserved the text of an additional three Greek translations or revisions—known only as Fifth, Sixth, and Seventh (Quinta, Sexta, and Septima). Anonymous readings are also found in the works of Church Fathers and Jewish writers, on the margins and in the texts of Greek manuscripts, and in a variety of writings in other languages.

A chief factor leading to the production of revisions or new translations was the observation that then current Greek and Hebrew texts differed at numerous points. To certain Jews, these differences reflected misrepresentations of the Hebrew text and created an urgent need to "correct." However, we should not artificially limit the factors that motivated individuals or groups to make changes in the Greek version possessed by their community. In the case of the Three, for example, we can detect a variety of stylistic and theological motivations of an inner-Greek nature, in addition to the desire to reflect with more accuracy a particular Hebrew text. Each of these has also been linked to one or more rabbinic traditions of exegesis.

This willingness to modify the LXX or other existing Greek biblical texts stands in contrast to the position taken by the *Letter of Aristeas,* one of the earliest witnesses (mid-2d century B.C.E.) to the OG translation of the Torah. In *Aristeas'* view, the LXX text of the Torah was authoritative, sacred, and fixed for all time. The same authority was later attached to the LXX or OG translation of other biblical books.

That *Aristeas* insisted on the immutable status of the first Greek translation makes it evident that a challenge to that status—in the form of "corrections" or revision toward the current Hebrew text—had arisen in his community. Even if we cannot date any particular revision from as early as the mid-2d century B.C.E., there is no reason to doubt that the process had begun by that time.

Evidence for revision at a period only slightly later than *Aristeas* is contained in the text transmitted under the name of Theodotion. The composite nature of this text is now widely recognized: "historical" Theodotion lived in the 2d century C.E., but distinctive "Theodotionic" readings are found in earlier sources. This first "layer" of Theodotion's work appears to be part of a larger burst of recensional activity, from the 1st century B.C.E., known as "kaige." It is this "Ur-Theodotion" who heavily influenced the work of Aquila. The text of Lucian, referred to above, has also been divided into an earlier, or Proto-Lucianic layer, and a later one.

The issues raised in the preceding section exemplify the complexities that arise when we begin to investigate carefully the surviving remnants of ancient Greek texts. Many gaps in our knowledge remain, but we are not without resources to bridge at least some of them. New manuscript discoveries offer illuminating possibilities for expanding our knowledge, as do comparative studies and forays into translation theory. Through textual criticism and analysis, scholars are reconstructing the Old Greek or original translation that frequently lies buried underneath mountains of conjecture or molehills of variants. The readings of dozens of manuscripts are carefully collated, in order to identify family and other genetic groups among extant texts. Every ancient author is culled for a stray reading that might have hitherto escaped notice. An increasing number of details are thus discerned, discussed, and drawn together. Broader hypotheses are then developed, debated, and dismantled—only to begin again the procedures necessary for a reconstruction of the new evidence.

In order to achieve best results, scholars must be sure to cite the Greek evidence in a clear way. All too often in contemporary scholarship a reading is haphazardly and uncritically lifted from its source in a manuscript or ancient author and enshrined as *the* LXX or OG. This type of methodological and terminological sloppiness makes it difficult for researchers to make proper use of the Greek evidence.

When correctly understood, this evidence points to a tradition—with a long textual and exegetical history—that is far too rich and much too valuable to be ignored or, even worse, misused.

4. Philoxenian
5. Harklean
6. Christian Palestinian Aramaic

C. Translations and Commentaries

———

A. Old Testament

The two main translations into Classical Syriac (Eastern Aramaic) are the Peshitta, made from Hebrew, and the Syro-Hexapla, made from Greek; fragments of two further translations, both from Greek, also survive. The translation into Christian Palestinian Aramaic (sometimes called Palestinian Syriac; a Western Aramaic dialect) was made from the LXX and is only partially preserved.

1. Peshitta. This is the standard version of the Syriac Churches (Syrian Orthodox, Maronite and Church of the East). The name, meaning "Simple," is not found until the 9th century when it was first used to distinguish this version from the Syro-Hexapla (in the OT) and the Harklean (in the NT). The origins of the Peshitta OT lie in obscurity: both date and place remain matters of conjecture. Most, if not all, the work must have been completed by the 3d century A.D., for the Old Syriac Gospels adapt some OT quotations to the Peshitta OT text. Perhaps most books date from 1st–2d century A.D. As with the LXX, the OT was not translated as a whole, but book by book; it is possible that some books were translated by Jews and others by Christians. Certain books (notably the Pentateuch) have a loose connection with the Targum tradition, perhaps by way of some lost ancestor of the extant Palestinian and Babylonian Targum traditions; in the case of one book (Proverbs) the extant Targum derives from the Peshitta (which was thus presumably of Jewish origin for this book). Suggestions have been made that there once existed an "Old

Syriac" form of the Syriac OT (on analogy with the situation in the NT), but the evidence adduced for this is unconvincing. See also TARGUM, TARGUMIM.

All books of the Peshitta OT were basically translated from Hebrew, though in some books there are the links mentioned above with the Targum traditions, and in others the translators may have made occasional use of LXX. With the exception of Ecclesiasticus, also translated from Hebrew, the Apocrypha were translated from LXX. Because mss of the complete Peshitta OT are rare, the division between canonical and uncanonical was not clear cut; thus the earliest complete OT ms, Milan, Ambros. B.21.Inf. of 6th–7th century (7al in the Leiden edition), also contains the following, mostly intermingled with the canonical books: Wisdom of Solomon, Epistle of Jeremiah, Epistle of Baruch, Baruch, Bel and the Dragon, Susanna, Judith, Ecclesiasticus, *2 Baruch, 4 Ezra,* 1–4 Maccabees, and Josephus *JW* 6. Some Psalters contain Psalm 151 (from LXX) and 152–5 (made from Hebrew ca. A.D. 800; the original of Psalms 154 and 155 is now known from 11QPs^{a}).

Manuscripts of the Peshitta OT range in date from 5th to 20th century; they include the two oldest dated biblical mss in any language, British Library Add. 14512 of A.D. 459/60 (palimpsest of Isaiah), and Add.14425 of A.D. 463/4 (Pentateuch). Some 60 mss from the 6th and 7th centuries are preserved; these normally contain single books, or small groups, and only one is a complete OT. A system of chapter divisions (different from the one in current use, which is of European origin) is found in most mss from the 8th century onwards. Separate Lectionary mss occur from the 9th century onwards; some of these include lections taken from the Syro-Hexapla. A small number of mss, dating between 9th and 13th century, contain what is referred to as a "masorah" (i.e. notes on pronunciation, etc.). A few illuminated mss survive, notably Sinai 1048 (6th century?), Paris syr.341 (8al, 7th/8th century), and Cambridge Oo.1.1–2 (12al, 12th century). The order of books is variable, but Job often follows the Pentateuch (based on the Jewish tradition identifying Job with Jobab and the author as Moses).

Compared to the LXX, the textual history of the Peshitta OT is relatively stable, and variations of any real importance are infrequent. Recent studies (notably Koster) have indicated that in many books at least three slightly different text forms are to be found in the extant manuscripts. The earliest stage, closest to the Hebrew, is only poorly preserved, being partially represented in the rare 5th century mss and in some of the aberrant readings in 9al. The next stage, represented by mss of 6th–8th centuries, is well preserved. The differences between the first and second stages concern small alterations in vocabulary and improvements in style, making the text read more smoothly. This process was taken a stage further in later mss, containing the medieval Textus Receptus. For the textual critic interested in the Hebrew *Vorlage* of the Peshitta it is essential to work from the oldest stage attainable, recorded in the apparatus of the Leiden Peshitta, and not from other printed editions which, being based on late medieval mss, reproduce the most evolved stage of the Peshitta text (many of the references to Peshitta in *BHK* and *BHS* are unreliable in this respect).

The most important older editions are: the Paris Polyglot of 1645, the London Polyglot of 1657, S. Lee (1823), and three editions published in the Middle East, Urmiah (1852), Mosul (1887–92), and Beirut (1951). None of these are critical editions and all are based on late mss; in some cases the mss used can be identified (Emerton). Lee's edition has been republished by the United Bible Societies (1979), with the addition of the Apocrypha (evidently based on the Mosul edition). Of more use for critical purposes is A. Ceriani's photolithographic edition (1876) of 7al, the ms which also serves as the basis for the Leiden Peshitta Institute editions, which are equipped with a good apparatus; to date (1986) the following volumes have appeared: Sample Edition (1966; Cant, Tob, *2 Bar.*); I.1 (1977; Gen, Exod); II.1a (1982; Job) II.2 (1978; Judg, Sam); II.3 (1980; Pss); II.4 (1976; Kgs); II.5 (1979; Prov, Wis, Eccl, Cant); III.3 (1985; Ezek); III.4 (1980; 12 Proph, Dan, Bel; IV.3 (1973; *2 Bar.*, 4 Ezra); IV.6 (1972; *Odes Sol.*, Pr. Man., Pss 151–55, *Pss. Sol.*, Tob, 1 [3] Esdr). The main aim of the Leiden edition is to provide the early ms evidence; a critical edition, based on eclectic principles corresponding to those behind the Göttingen LXX, remains a task for the future.

Good or satisfactory editions of some individual books exist: Pentateuch (W. E. Barnes 1914); Psalms (Barnes 1904); Lamentations (B. Albrektson 1963); Wisdom of Solomon (J. A. Emerton 1959); Apocrypha (P. de Lagarde 1861). For Isaiah an apparatus alone was published by G. Diettrich (1905).

Concordances for the following books are so far available: Prophets (W. Strothmann 1984); Psalms (N. Sprenger 1977); Ecclesiastes (Strothmann 1973); Sirach (M. M. Winter 1976).

There is an English translation of the Peshitta OT by G. M. Lamsa (1957); this needs to be used with caution.

2. Syro-Hexapla. This is a 7th-century Syriac translation of Origen's revision of the LXX text, bringing it into line with the Hebrew. In several mss the hexaplaric signs are preserved, together with numerous marginal readings taken from Aquila, Symmachus and Theodotion. The translation was probably commissioned by the Syrian Orthodox patriarch Athanasius and it was undertaken (as we know from colophons) by Paul, bishop of Tella (N Mesopotamia) in a monastery at the Enaton, or ninth milestone, of Alexandria in the years 615–17. During the same period and at the same monastery the Syriac NT was revised by Thomas of Harkel (Harklean, see below, B.5). Both the Syro-Hexapla and the Harklean make use of highly sophisticated techniques of literal translation which Syriac translators had developed by this period (Brock); their aim was to mirror every detail of the Greek original in the Syriac translation, and this has been achieved with such success that the modern textual critic, for whom the Syro-Hexapla is a key witness to the hexaplaric recension of the LXX, is enabled to reconstruct the underlying Greek text with a high degree of confidence.

Syriac writers normally refer to the Syro-Hexapla as "the Seventy" or "the Greek." Although the translation was mostly transmitted in Syrian Orthodox circles, use was sometimes made of it by scholars of the Church of the East, notably Isho‘dad of Merv (9th century).

From an early date the Syro-Hexapla circulated in two different forms: in mss containing individual books or groups of books, and in folio sized "pandects" constituting a two-volume edition of the entire work. A magnificent 8th or 9th century ms of the second volume of this edition is preserved in the Ambrosian Library, Milan, and has been published photolithographically by Ceriani (1874). A ms of the accompanying first volume (Pentateuch and Historical Books) was in the possession of the 16th century scholar A. Masius, but has since disappeared. The loss of this ms is made good only in part by the survival of some 20 mss containing individual books (many of these date from 7th to 9th century; an important later one is an incomplete Pentateuch of 1204, published photographically by Vööbus). From the mss available in 1892 A. Rahlfs and P. de Lagarde published what could be recovered of the contents of the lost first volume. Some additional materials discovered subsequently have been published by J. Gwynn, Baars, Vööbus and others; some of these passages are derived from lectionary mss. Baars (p. 25) lists all passages of the Syro-Hexapla not yet (in 1968) recovered; some of these lacunae have now been filled by the Pentateuch ms of 1204. See SYRO-HEXAPLA.

3. Other Translations. Two other translations, covering only individual books, survive in part. A fragmentary translation of Isaiah is preserved in British Library Add. 17106; its editor, Ceriani (1868), attributed this version to Polycarp, author of the Philoxenian NT, on the grounds that the Milan Syro-Hexapla attributes an alternative rendering of Isa 9:6 to "the version which was translated by the care of the holy Philoxenus." Polycarp is also said by his contemporary, Moses of Inghilene, to have translated the Psalms, but of this no trace survives. This Syriac version of Isaiah is made from the LXX and in the apparatus of the Göttingen LXX it is referred to as "the Syrolucianic."

Another translation, of which the Pentateuch, 1–2 Samuel, 1 Kings, Isaiah, Ezekiel and Daniel alone survive in whole or in part, was made by the great Syrian Orthodox scholar Jacob of Edessa, shortly before his death (708). Jacob evidently constructed his version out of three sources: the already existing Syriac texts of the Peshitta and Syro-Hexapla, and some LXX mss containing a Lucianic text. Only a few samples of this version have so far been published.

4. Christian Palestinian Aramaic (CPA). The literature in this dialect consists entirely of translations from Greek and was the product of the Aramaic-speaking Christian community in Palestine which remained loyal to the Council of Chalcedon (451), popularly known as "Melkites." Extant mss (often

palimpsests and almost all fragmentary) date from 6th to 13th century (by the latter date the dialect was rapidly being replaced by Arabic). Only parts of the OT in CPA survive, and many of these are in the form of lections, rather than straight Bible texts. The version is basically from the LXX, though some scholars claim to have discerned the sporadic influence of the Peshitta and even of the Targumim.

The oldest OT mss are all palimpsests and are almost all fragments of lectionaries. Particularly important is the well preserved OT Lectionary published by Lewis (1897), with texts from Pentateuch, Job and Prophets. A list of all known biblical texts in CPA up to 1903 was given by F. Schultess in his *Lexicon Syropalaestinum,* pp. vii–xvi. A much-needed republication of all OT texts is being undertaken by Goshen-Gottstein and Shirun.

B. New Testament

1. Diatessaron. Tatian's Harmony of the Gospels, or Diatessaron, is not preserved in its original form, and it remains disputed whether Tatian, who flourished ca. 160, compiled it in Greek or in Syriac. The most important textual witnesses are the small parchment fragment in Greek from Dura Europos (thus dating from before 256, when the town was destroyed), and the Syriac quotations to be found in Ephrem's Commentary on the Diatessaron, of which the whole survives in Armenian translation and about two-thirds in the original Syriac. Later Gospel Harmonies in various languages, eastern and western, probably preserve something of the structure of Tatian's Harmony, but their text has undergone considerable adaptation (e.g., to the Peshitta in the Arabic Harmony, and to the Vulgate in the Latin Codex Fuldensis).

The Diatessaron was regarded as an authoritative gospel text by the early Syriac-speaking Church. When by the 4th century it became necessary to distinguish the Diatessaron from the Syriac translation of the four gospels (Old Syriac), the former was given the name *Evangelion da-mĕḥallĕṭē,* "Gospel of the mixed ones," while the latter was called *Evangelion da-mĕpharrĕshē,* "Gospel of the separated ones." The Diatessaron only fell out of favor in the 5th century: Theodoret, who found 200 mss of the Diatessaron in use in his diocese of Cyrrhus, tells (*Haer. fab. comp.*, 1.20) how he replaced them by mss of the four gospels.

Besides drawing on the four gospels (primarily Matthew), Tatian appears to have made some use of apocryphal sources as well: thus he evidently introduced the theme of light (or fire) appearing at the baptism of Jesus (a feature developed in Syriac liturgical poetry).

The Syriac evidence for the text of the Diatessaron is collected by Leloir and Ortiz de Urbina. It has been suggested that prior to the Diatessaron the earliest gospel text available in Syriac may have been the *Gospel of the Hebrews* or the *Gospel of Thomas,* but the evidence is very tenuous. Somewhat more plausible is the suggestion that Tatian himself drew on the *Gospel of Thomas,* though the reverse is also possible. See also DIATESSARON.

2. Old Syriac. Although some earlier scholars claimed that the Diatessaron was preceded by a Syriac translation of all four gospels (i.e., the Old Syriac), there is now a general consensus that the Old Syriac followed the Diatessaron in time. Two witnesses to the Old Syriac text survive, both belonging to the 5th century, known as the Curetonianus and the Sinaiticus. In neither ms is the text of the gospels complete.

The Curetonianus was named after W. Cureton who first published a large part of the ms (British Library Add. 14451) in 1858. Subsequently three further leaves were identified in a Berlin ms (Or. Quad. 528) and these were included in F. C. Burkitt's edition (with English translation) of 1904, which remains the standard. In 1985 a further leaf, filling the lacuna of Luke 16:12–17:1 between two of the Berlin leaves, was found to be still remaining at the Syrian Monastery in the Nitrian Desert (Egypt) by D. McConaughy. There still remain many lacunae (almost all Mark, and much of John, is missing). The unusual sequence Matthew, Mark, John, Luke is provided.

The Sinaiticus, a palimpsest ms, was discovered by the twin sisters, Mrs. A. S. Lewis and Mrs. M. D. Gibson, in the Monastery of St. Catherine on Mount Sinai (Sinai syr. 30). The Old Syriac gospel text is to be found in the under writing (the upper writing contains *Lives of Women Saints,* in an 8th-century hand). Again the text is not complete and many passages have remained impossible to read with certainty. See SINAITICUS, SYRUS. Although Burkitt's edition of the Curetonianus gives the variants of the Sinaiticus, the subsequent edition of the Sinaiticus (recording the variants of the Curetonianus) by Mrs.

Lewis in 1910 contains several improved readings. There is also a photographic edition of the ms by A. Hjelt (1930). New techniques for reading the under text, developed at Princeton, should result in the recovery of much more of the text.

Besides the many small variations between the two mss are some larger ones; thus the longer ending of Mark is absent from the Sinaiticus but present in the Curetonianus. It is generally agreed that the two mss represent two somewhat different revised forms of a common original text; the date of this original translation is not known, but the 3d century is now widely accepted. The two main characteristics of the Old Syriac text are the large number of harmonizations and the many "Western" readings which they attest. Whether or not the former are due to the influence of the Diatessaron is disputed. Both mss contain several archaic linguistic features; these have sometimes been identified as traces of Palestinian Aramaic, but more probably they should be seen as survivals of "Proto-Syriac," otherwise known from pagan Syriac inscriptions of 1st –3d centuries. The character of the translation is the freest of all the Syriac versions, and so caution needs to be exercised when citing the Old Syriac in any apparatus to the Greek NT.

No Old Syriac text of Acts or the Epistles survives. Isolated readings of this pre-Peshitta text can be recovered from quotations by early Syriac writers. Ephrem's commentaries on Acts and on the Pauline Epistles, preserved only in Armenian translation, are important witnesses. Materials have been collected by J. Molitor (1938) and Kerschensteiner. In his Commentary on the Pauline Epistles Ephrem includes the apocryphal *3 Corinthians,* which, however, was later dropped from the Syriac canon and so no longer survives in that language.

3. Peshitta. This is the standard version of the Syriac churches. It covers all the NT apart from 2–3 John, 2 Peter, Jude and Revelation, which do not form part of the canon of the early Syriac Church. The following passages are also missing: Matt 27:35b; Luke 22:17–18; John 7:53–8:11; Acts 8:37; 15:34; and 28:29.

As can be seen from the gospels, the Peshitta is not a new translation, but a revision of the Old Syriac, bringing it more closely into line with the Greek; for this purpose a Greek ms (or mss) with an early form of the Byzantine text was evidently used. The revision must have been completed in the early decades of the 5th century and it was propagated very effectively, for it soon replaced its earlier rivals. Although the famous bishop of Edessa Rabbula (died 435) may well have had a hand in propagating the revised text, he cannot have undertaken the revision himself (as Burkitt proposed), for there is evidence for "revised" readings in existence before his time. It is now recognized that the process of revision must have taken place over an extended period (each of the two Old Syriac mss indeed already show traces of such revision here and there on the basis of the Greek).

Over 60 Peshitta NT mss dating from the 5th and 6th centuries survive (the majority contain just the gospels). They exhibit a remarkably uniform text and only in a few mss do some Old Syriac readings survive (notably in a Berlin ms of the 5th–6th century, Phillipps 1388). Elsewhere in the Peshitta NT significant variations are rare: a famous example occurs at Heb 2:9, where early Peshitta witnesses are to be found for both "apart from God" and "in his grace, God" *(sic).*

In mss with the complete Peshitta NT the Pauline Epistles follow, rather than precede, James, 1 Peter, and 1 John. A system of chapter numbering, different from the current one, is first found in Add. 14460 of A.D. 600, and soon became widespread. Several early Peshitta gospel mss are provided with the Ammonian Sections and Eusebian canons, in an elaborated form. Separate Lectionary mss are found from the 9th century onwards. A number of gospel and lectionary mss contain illuminations; most famous of these is a gospel ms in Florence (Plut. I, Cod. 56) written in A.D. 586 by a scribe named Rabbula (hence often called the "Rabbula Gospels").

The first printed edition of the Peshitta NT, edited by J. A. Widmanstadt and published in Vienna in 1555, receives mention in the Translators' Preface to the King James Version of 1611. In the Paris and London Polyglots, for the books missing from the Peshitta canon the minor Catholic Epistles were supplied from the "Pococke Epistles" (see under Philoxenian), and Revelation from the Harklean. The only edition based on a collation of a selection of early mss is that of the gospels by G. H. Gwilliam

(1901). Gwilliam's unpublished work for the rest of the NT served as the basis for the British and Foreign Bible Society's edition of 1920 (without apparatus), and this remains the most satisfactory text. For this edition the text of those books not in the Peshitta canon was taken from Gwynn's editions of 6th-century translations of these books (see below). Both these editions employ a vocalized *serto* script. An *estrangelo* edition, based directly on early mss, has been published by The Way International (1983); although the introduction states that the books not available in the Peshitta are taken from the Harklean, in fact they derive from the 6th-century translations. The United Bible Societies' edition of the entire Syriac Bible (1979) provides a reprint of Lee's edition of 1832; this retains a large number of rubrics indicating lections. For books not available in the Peshitta Lee used the "Pococke Epistles" and the Harklean Apocalypse.

No concordance proper to the Peshitta NT yet exists, although one is promised. Word lists with full references, however, are to be found in C. Schaaf, *Lexicon Syriacum Concordantiale* (2d ed. 1717) and The Way International's *The Concordance to the Peshitta Version of the Aramaic NT* (1985). Besides Schaaf's *Lexicon* (Syriac-Latin) there is a handy Syriac-English NT Lexicon by W. Jennings (1926). There are English translations of the Peshitta NT by J. Murdock (1896) and G. M. Lamsa (1957); an earlier translation of the gospels alone was made by J. W. Etheridge (1846).

4. Philoxenian. In his Commentary on the Prologue of John, the Syrian Orthodox writer Philoxenus (bishop of Mabbug, d. 523) tells how, being unsatisfied with some loose translations in the Peshitta of certain key doctrinal passages, he commissioned a revision of this version, bringing it closer into line with the Greek. The work was undertaken, according to a contemporary author, Moses of Inghilene, by his chorepiscopus Polycarp, while the date and place (Mabbug, 507/8) are given in the colophons to the Harklean gospels.

Ever since J. White edited the Harklean NT with the misleading words *versio philoxeniana* in the title, there has been a long dispute over whether the text of White's edition represented the Philoxenian revision (as White thought, in which case Thomas of Harkel's work was limited to the critical signs and marginal readings), or Thomas of Harkel's own revision (in which case the Philoxenian is lost). Argument centered largely around the ambiguous wording of the colophons, found in many Harklean mss, which describe Thomas' work. The publication in 1977 of Philoxenus' Commentary on the Prologue of John (from a 6th-century ms) provided a final solution to the problem, for Philoxenus there frequently quotes from a revised text, rather than the Peshitta; this revised text, which will doubtless be Polycarp's work (i.e., the Philoxenian) is not the same as White's text, but represents a half-way stage between the Peshitta and that text. Thus White's text can now definitively be identified as the Harklean. This means that the Philoxenian revision can only be recovered from quotations in the later works of Philoxenus and in some other 6th-century writings.

It is evident that Polycarp also introduced the Euthalian material into Syriac, to accompany his revision of the Peshitta; this survives only fragmentarily in British Library Add. 7157 of A.D. 767/8.

Certain anonymous biblical translations have often been identified as belonging to the Philoxenian version. This applies to the anonymous Syriac translation of Isaiah from Greek (see above, A.3), and to a version of the minor Catholic Epistles and Apocalypse which clearly served as the basis for the later Harklean. For the NT books the identification remains uncertain, since Philoxenus himself never makes use of these NT books which fall outside the Peshitta canon; on the other hand, the Harklean colophon to the Catholic Epistles implies that all seven letters were in the Philoxenian. In any case these anonymous translations can safely be attributed to the 6th century on the basis of the translation technique employed.

The 6th-century version of the minor Catholic Epistles (often referred to as the "Pococke Epistles," after E. Pococke who first published them in 1630) already features in the Paris and London Polyglots, whence it was taken over by other editions such as that by Lee; a much improved text, based on the earliest mss available, was edited by J. Gwynn (1909). In the same volume Gwynn also published two versions, of the 6th and of the 7th century, of the Pericope on the Adulteress. The text of the anonymous translation of the Apocalypse (often referred to as the "Crawford Apocalypse," after a former owner) was also published by

Gwynn (1897). The texts of Gwynn's editions are republished in the standard British and Foreign Bible Society's edition of the Syriac NT.

5. Harklean. The Harklean version, covering the entire NT, represents the culmination in the long process of bringing the Syriac NT into as close conformity as possible to the Greek, employing techniques of "mirror translation" very similar to those used for the Syro-Hexapla. Like the Syro-Hexapla, the revision was undertaken at the Enaton, outside Alexandria; the work was done, as we learn from detailed colophons preserved in many mss, by Thomas of Harkel, and was completed in 616 (the gospel colophons specify that 2 or 3 Greek mss were used). The text is accompanied in the best mss by a number of obeli, asterisks and marginal readings; the precise purpose of these remains disputed, though several of the marginal readings are specifically identified as being derived from different Greek manuscripts. In Acts the Harklean margin is an important witness to "Western" readings. Thomas also revised the earlier translation of the Euthalian material.

The Harklean gospels are preserved in over 50 mss, of which at least 10 (not all complete) belong to the 8th or 9th centuries (a few may even belong to the late 7th century). The rest of the NT is much less satisfactorily preserved, and only three fuller Harklean NT mss survive, Oxford, New College 333 of the 11th century, Cambridge Add.1700 of A.D. 1170, and (it seems) Damascus Patr.1/2 of A.D. 1419; these contain (besides the gospels) Acts and the Epistles, but not Revelation. The Harklean gospels, Acts and Epistles (including all seven Catholic Epistles) were published (with Latin translation) by J. White under the erroneous title *Versio Syriaca Philoxeniana* in three volumes (1778, 1799, 1803). His source was the Oxford ms, from which the end of Hebrews had been lost; this was eventually published, from the Cambridge ms, by R. L. Bensley (1889). The Harklean version of the Apocalypse is known only from a ms of the 12th/13th century in Mardin (Turkey), published photographically by Vööbus (1978), and from a group of late Maronite mss from which all printed editions derive; the text was first published by L. Le Dieu, (1627); it is also given in the Paris and London Polyglots and in Lee's edition. About 70% of the text of the Harklean Apocalypse is also to be found in an anonymous Syriac commentary on this book, preserved in British Library Add. 17127 of A.D. 1088 (to be published by S. Larson).

The Harklean text often features in gospel lectionaries (9th century onwards), and for the Passion Narrative this is sometimes in the form of a harmony compiled by Daniel of Beth Batin (near Harran). A new edition of the Harklean NT is much to be desired.

6. Christian Palestinian Aramaic. This version is only partly preserved; it was made from Greek and shows only minimal traces of influence from the older Syriac versions (including the Diatessaron). The date of the version is uncertain, but the oldest mss (all palimpsests and very fragmentary) may belong to the 6th century. Among the better preserved later mss are three complete gospel lectionaries (dated 1030, 1104, and 1118; two of the scribes are associated with ʿAbud, a village between Jaffa and Caesarea). Apart from the gospels, fragments from Acts, most of the Pauline Epistles, and James and 2 Peter are represented; the majority of these are preserved only in lectionary manuscripts. Although most of the extant fragments come from Sinai, Damascus and the Cairo Geniza (discovered at the end of last century), there have been a few more recent finds in the Judean Desert (Perrot).

The three gospel lectionaries have been edited in synoptic form by A. S. Lewis and M. D. Gibson (1899). A list of CPA texts published before 1962 is given by Perrot, who published a new fragment of Acts.

C. Translations and Commentaries

Some Syriac biblical versions (usually Peshitta, but in some cases Syro-Hexapla and Harklean) have been translated in the Middle Ages into other languages, notably Arabic, Persian and Sogdian. Traces of Syriac influence have also been discerned in certain books in the Armenian, Georgian, and Ethiopic (Geʿez) versions, all of which are otherwise basically from Greek.

The main extant commentaries on the Syriac Bible (OT and/or NT, in whole or in part) are by Ephrem (d. 373) and then, (i) in the Syrian Orthodox tradition, Jacob of Serugh (d. 521), Philoxenus (d. 523), Jacob of Edessa (d. 708), Moshe bar Kepha (d. 903), Dionysios bar Salibi (d. 1171), and Barhebraeus (d. 1286); and (ii) from the Church of the East, Narsai (d. ca. 500), Theodore bar Koni, Ishoʿbar Nun,

Isho‘dad of Merv and two anonymous commentators (all 8th/9th century), and the Gannat Bussāmē, a commentary on the Lectionary of the 13th century.

(Full bibliography up to 1960 can be found in C. Moss, *Catalogue of Syriac Printed Books and Related Literature in the British Museum* [London: the Trustees of the British Museum 1962] cols. 110–96 and Addenda, cols. 29–52; supplements for 1961–70 and 1971–80 in S. A. The Greek Bible in Latin (Old Latin)

1. Origin. During the first centuries of Christian expansion, the vernacular language of the Mediterranean world was mainly Greek, even in the West. The books of the OT were read in the early Christian churches according to the LXX and the NT in Greek. When the necessity arose—as early as the 2d century in Roman Africa—the Bible was translated into Latin from the Greek. In many places, Tertullian (ca. 160–220) used a Latin version already at his disposal, certain peculiarities of which remained throughout the history of the Latin Bible. When, in the middle of the 3d century, Cyprian, bishop of Carthage, quoted Scripture at great length and not from memory (*Libri III ad Quirinum,* commonly called *Testimonia*), he did it according to a Latin translation which was itself a revision and had already a complex history. This process of successive revisions continued for centuries and is a special feature of the Latin Bible. The *Acta martyrum,* in Africa again, mention sacred books as early as 180.

2. Unity and Diversity. As it appears from patristic quotations and from manuscripts, the Old Latin is not constant and contains many divergencies. Augustine and Jerome were aware of this *vitiosissima varietas* (most vicious diversity). But, with the exception of some special cases, the differences do not attest the plurality of translations for a given book. Similarities are too characteristic and numerous, and differences only attest successive and even parallel revisions. The quotations of Novatian (ca. 250) do not succeed in demonstrating the existence of a distinct European translation independent of the African. The use of *testimonia* (anthologies of scriptural quotations) is an adequate explanation for some of the major divergencies. Liturgists know that the Latinization of the Christian community in Rome was slow and did not succeed completely before Pope Damasus. The history of the Latin version of the Greek Bible is, on the one hand, that of revisions according to Greek models (LXX and NT) different from those used by the first translator and, on the other hand, that of alterations in Latin vocabulary and style following the evolution of the language.

a. Revision According to Greek Models. The first translation was done from Greek witnesses differing considerably from texts commonly received in the 4th century. In the NT, the model was, as a rule, a witness of the "Western Text"; the OT (LXX) was marked by many of the so-called Lucianic variants, which were certainly prior to the martyr Lucian (died ca. 310) and which sometimes went back to the oldest known form of the LXX (Old Greek). Before Cyprian and repeatedly afterwards especially at those points where the differences were apparent, the Latin was revised on Gk mss akin to the great uncials. From this point of view, the Latin version had no independent authority; its authority depended on its reliability when compared with received Greek witnesses. It is worth noting that the stability of liturgical use and the memorizing of texts slowed the process of alteration.

b. Changes in Vocabulary. At the same time, a progressive change in vocabulary and style took place. Some technical words, some common words, and even some form-words (e.g. *itaque*) disappeared, and others came into use. At the outset, these may be called "African", later being replaced by the term

"European". The change is probably no less a matter of chronology than of geography. It is clear from quotations by Augustine that the Italian "European" use was soon to return to Africa.

The joint use of these two types of observation permits the modern investigator to distinguish some marked stages in the evolution of the text which are attested in the majority of the books of the OT and of the NT: the old African text (Cyprian), a more advanced African text (Ticonius, died before 400), an Italian text, and another European text (Lucifer of Cagliari, middle 4th century). The final victory, from the Carolingian Times onwards, of the Hieronymian translations and the success of some other texts not revised by Jerome involved the disappearance of nearly all non-conform witnesses. The terms "Old Latin" and *vetus latina* perfectly suit translations and revisions prior to Jerome. They are extended to old revisions the absolute date of which we do not know.

3. Witnesses. The sources of our knowledge of the Old Latin versions may be listed as follows: (1) Quotations in patristic literature (inventory in Frede 1981; 1984; 1988). Most relevant on account of the number and the length of the quotations are the works of Cyprian, Lucifer of Cagliari, Jerome, Augustine and some *florilegia,* such as the *Liber de divinis scripturis.* All the patristic material is available on files in the Vetus Latina Institut of Beuron (West Germany) and is being published. Biblical texts from quotations are approximately dated and localized by their context.

(2) Biblical manuscripts written in the period when the Old Latin was still in use. Many are fragmentary or palimpsests; some are well preserved (Lowe 1934–1972).

(3) Carolingian and medieval Bibles. Especially for books not translated by Jerome from the Hebrew, it may be that their text is copied according to an archaic form in the middle of a Vulgate Bible. Examples are known even in 13th century Bibles.

(4) Glosses or additions to the translations of Jerome, especially when the Hebrew and Jerome are notably shorter than the Greek and the Old Latin (Samuel, Proverbs).

(5) Biblical lessons, canticles, and antiphons in early and medieval liturgical books of the various rites (Milanese, Roman, Gallican, Mozarabic). Liturgy is conservative.

4. Editions. The editions are scattered in many publications and not always easily accessible. Only editions of at least one biblical book are mentioned here. The *Vetus Italica* of P. Sabatier (1743) remains useful. The Vetus Latina Institut of Beuron started in 1949 the critical edition of the Old Latin Bible (manuscripts and quotations). The volumes of the *Vetus Latina* already printed are masterpieces of scholarship.

5. Relevancy. The Old Latin, not the Vulgate, has been the Bible used and commentated on by the Fathers of the Church; the translations of Jerome are discussed, although rarely quoted by late authors. The lemma of the commentaries has often been changed by copyists to conform with the Vulgate but the commentary itself may offer a clue to the original. Identifying the quotations may be a difficult task because, in some books of the OT especially, the LXX (followed by the Old Latin) and the Hebrew differ greatly. In such cases, concordances of the Vulgate are of no use; only the Greek concordance of Hatch and Redpath gives assistance after tentative retroversion. The earlier forms of the Old Latin are older witnesses to the Greek than the preserved Greek manuscripts. The Old Latin sometimes attests the Old Greek, itself witnessing an Old Hebrew prior to the MT.

B. The Books Translated by Jerome

It would be erroneous to identify the Vulgate with the translations of Jerome (see C below). Nevertheless Jerome occupies an unequalled position in the history of the Latin versions of the Bible. His genius as a translator and an exegete did more for the diffusion of his works than his choice of the *veritas hebraica* (against the LXX), which was much criticized in his own time and afterwards.

During his stay in Rome (382–385), Jerome revised the Latin Gospels, using old models of a European type *(b, ff²),* correcting them most probably according to Gk mss of *koinē* type ("K" in H. von Soden terminology). Pope Damasus accepted the dedication (prologue *Novum opus*), thus involving his high authority in this venture. Jerome also did a first revision of the Psalter of which nothing is known.

At Bethlehem (after 387), Jerome began to translate the Origenian or hexaplaric edition of the LXX, easily recognizable by the use of the asterisk and the obelus. He published a new Latin Psalter, called

hexaplaric or, commonly, Gallican (it was used for the liturgy in Gaul), which subsequently became the Vulgate Psalter. He also published in this way a translation of Job (extant), Proverbs, Canticles (extant), Ecclesiastes and 1–2 Chronicles (the prologues are extant). It is not known if he translated more from the hexaplaric Greek. The material he did translate was to appear in the *codex grandior* of Cassiodorus.

With the assistance of the Greek translations of Aquila and especially of Symmachus, Jerome undertook a translation of the OT from the Hebrew. He probably began with the Psalter *(iuxta Hebraeos),* continued with the Prophets, including Daniel and its Greek supplements (390–392), 1–2 Samuel and 1–2 Kings (392 or 393), Job (before 394) and, in one book called Esdras, Ezra-Nehemiah (394). Then followed 1–2 Chronicles (395–396), Proverbs, Ecclesiastes, Canticles (398), the Pentateuch (ca. 400). He achieved the whole Hebrew Bible with Esther and its Greek supplements (shortly before 404) and with Joshua, Judges and Ruth (405–406). Again, using his often declared principles, he translated Tobit and Judith, without much care and using Old Latin texts (before 407).

No experienced scholar ever attributed to Jerome the translation or the revision of Sirach, Wisdom of Solomon, 1–2 Maccabees, Baruch, and the Epistle of Jeremiah, which are to be found in Vulgate mss. It is also accepted today that Jerome did not touch the Pauline and Catholic Epistles, Acts, or Revelation. The Pelagian circles in Rome and Rufinus the Syrian are likely the authors of the Vulgate revision of those NT books.

At the outset, Jerome's new translations did nothing but add to the multiplicity and the diversity he fought against. Nor did they end other attempts at translation. Moreover Jerome was certainly not the editor of a complete Latin Bible and not even of his own grouped translations.

C. The Vulgate

1. The Term "Vulgata." In the usage of the Latin Fathers, including Jerome, the term *vulgata* (*koinē,* "common") is applied to the Greek Bible in the current and nonrevised text and to its Latin version. However, since the 16th century, the term has been used to refer to the current Latin Bibles containing the translation of Jerome. No decision was taken in patristic times to give the translation of Jerome an official character, and his short canon (without the so-called deuterocanonical books) was never received. But the mention of Pope Damasus in the prologue of the gospels is likely to have subsequently extended his authority to the rest. Probably in the middle of the 5th century, the Hieronymian translations were completed with others and put together by an editor who used the terminology of Rufin of Aquileia. This compilation is rather well preserved in the Bible of Saint-Germain-des Prés (Paris, B.N., lat. 11553 ca. 800).

2. "Bibliotheca" and "Pandectes." No Latin Bible in one codex is known with certainty before the middle of the 6th century. The Bible was actually a *bibliotheca* (nine or more *codices*), and this custom remained common until the 9th century. The parts of such *bibliothecae* were not necessarily homogeneous and it was not easy to produce a general edition. The first mention of Bibles in one volume comes from Cassiodorus, under the term *pandectes* (complete collection). Their use spread slowly. The oldest two are the palimpsest Bible of Léon (Catedral 15; 7th century) and the *Amiatinus* written in Wearmouth-Yarrow between 689 and 716. They became the common practice in the scriptoria of Alcuin (Tours) and Theodulf (Orléans) from the very beginning of the 9th century. In those Bibles, which were widely disseminated, the translations of Jerome were privileged and, for the other books, the choices of Alcuin and Theodulf (under Spanish influence) rather similar. Regional differences continued to remain and certain attempts at revision on the Hebrew will interfere until, at the beginning of the 13th century, the University of Paris and its librarians generalized a type of Latin Bible *(Biblia Parisiensia)* quite similar to what we call the Vulgate. At the same time, Stephen Langton (1150–1228) introduced those chapter divisions still in use today.

3. Content. Since the beginning of the 9th century, the following parts are common in the mss: (1) the translations from the Hebrew by Jerome, including Judith, Tobit, and the supplements to Esther and Daniel; (2) the hexaplaric version of the Psalter (also called *gallicanum*) by Jerome, used in the Carolingian liturgy and chosen by Alcuin, and not as one might have expected the *iuxta Hebraeos,* although chosen by Theodulf (on the respective diffusion of the Latin Psalters, see Fischer 1985: 407–

415); (3) the revision of the gospels by Jerome; (4) in the Wisdom of Solomon, Sirach, 1–2 Maccabees, and the rest of the NT, the Alcuinian text, sometimes influenced by the Theodulfian and with persistent regional differences. Baruch which was not separated from Jeremiah in the Old Latin, is often absent between the 8th and the 13th centuries; the Bibles of Theodulf preserved a type of text of Baruch which became common only in the *Biblia Parisiensia* (13th century). These Bibles usually put 3 Esdras (Esdras A in the LXX), which was a part of the Old Latin Bible, after Ezra and Nehemiah (counted as 1–2 Esdras). The book of 4 Esdras, which entered under Spanish influence, followed 3 Esdras. The short Prayer of Manasseh follows 2 Chronicles. These books, which the Council of Trent did not recognize as canonical, were nevertheless printed as an appendix in the Sixto-Clementine Bible (1592 and following editions).

4. History. Medieval erudition marked the transmission of the Latin Bibles, introducing new series of *capitula,* prefaces, and marginal and interlineary glosses. Some revisors tried to produce a text nearer to the Hebrew than Jerome's (e.g., an anonymous scribe of the school of Theodulf, Étienne Harding). Others aimed at eliminating errors and wrote *correctoria.* Humanists in the 16th century printed Latin Bibles corrected according to the Hebrew and to the Greek. The first to look for reliable old Latin mss to prepare an improved text was Robert Estienne especially in his edition of 1540. It is to him that we owe the present verse numbering (1553, 1555), which he introduced to subdivide the chapters of Stephen Langton. The Council of Trent, which recognized the Vulgate as the authentic (authoritative, official) Latin version, gave only a list of canonical books and commissioned scholars to provide the Church with a new edition. It was published by Sixtus V (1590) and a better edition appeared under Clement VIII (1592) with the assistance of Robert Bellarmin. The continuity from Alcuin to the Sixto-Clementine via the *Biblia Parisiensia,* the Gutenberg Bible (1450–1455), the Estienne Bible and the Louvain Bibles (1547, 1583) is manifest. In its final stabilization, just as in its long and complex history, the Vulgate appears as the result of two main trends: respect for the original tradition (the first *vulgata,* the Greek Bible translated in Latin) and the translations of Jerome according to the *hebraica veritas.* When they conflicted, the latter supplanted the former. The result is the Vulgate in the usual sense.

5. Critical Editions. The NT has been critically edited by J. Wordsworth, H. J. White and H. F. D. Sparks (1889–1954). The OT has been critically edited by the Benedictines of San Girolamo in Rome (H. Quentin, R. Weber, J. Gribomont, H. de Sainte-Marie, J. Mallet, A. Thibaut, 1926–1987). Only 1–2 Maccabees have not yet been published (see De Bruyne and Sodar 1932). R. Weber, with the help of others, has given an excellent edition of the whole Vulgate with an abridged apparatus (1969).

D. The Neo-Vulgate

In 1979, John Paul II promulgated a new official Latin translation of the Bible which was the final product of the Pontifical Commission for the Neo-Vulgate created by Paul VI in 1965. This new version respects the tradition of the Christian Latin language and is a revision of the Vulgate according to the Hebrew and to the Greek. It follows with caution the present state of modern exegesis. There are notable innovations in the deuterocanonical books; e.g., Judith and Tobit are translated from the Greek with the help of the Old Latin.

PIERRE-MAURICE BOGAERT

COPTIC VERSIONS

A "Coptic Version" is a translation of the Bible (or some part of it) into Coptic. Portions of the Bible are extant in all of the Coptic dialects, although Sahidic and Bohairic are the most important. See also LANGUAGES (COPTIC). Early translators apparently utilized then current Gk texts of the NT as well as

the LXX. The only complete codices come very late, i.e., after the 11th century C.E., and thus are of only relative importance. The early translations exist in various mss often of a single NT writing and frequently are only partially preserved. In the 3d and early 4th centuries virtually all of the NT texts were translated into Sahidic Coptic. In fact, several NT books were translated more than once by different translators. The so-called NAG HAMMADI codices reflect the Sahidic dialect, but often mixed with other dialects.

The Bohairic Version, translated independently of the Sahidic, came to supersede the Sahidic as the standard Coptic Version (this dialect continues to be used today as the liturgical language of the Coptic Orthodox Church). These translations, however, are generally later than the Sahidic. Until only recently, the oldest ms of the Bohairic dated to the 10th or 11th century, however several recent mss have come to light dating from the 4th and 5th centuries.

In the NT writings, the text of both the Sahidic and Bohairic often agrees with the Alexandrian text though there are a number of agreements with the Western text in the gospels and Acts. See also WESTERN TEXT; TEXTUAL CRITICISM (NT).

Until the 20th century the "Coptic NT " existed only in fragments scattered throughout the world. In 1905 George Horner completed a critical text of the Bohairic Version (four volumes) and in 1924 he completed the Sahidic (seven volumes). The Coptic Orthodox Society published a one-volume Bohairic text in 1934 based upon Henry Tattam's *Coptic New Testament* and Horner. The "Coptic Versions" are preserved for the most part in fragments scattered throughout the world in various collections. A list of published manuscripts to about 1922 may be found in A. Vaschalde; for those after 1920 until the late 1950s, in W. Till.

There are numerous limitations indigenous to the Coptic, as compared to the Greek, that make it difficult to infer with exactness the Greek text that may underlie a specific Coptic rendering. For example, Sahidic Coptic has no case endings (a fact that puts enormous stress upon word order in Coptic); Sahidic Coptic has no neuter gender (thus most Greek neuter nouns are rendered as though they were masculine); Sahidic Coptic has only the active voice; Sahidic Coptic often renders the Greek imperfect and the aorist as perfects, etc. Early Coptic translations reflect a heavy use of Greek loan-words, but often with variations in spelling especially with regard to vowels. As B. Metzger observes, "Compared with Greek [Coptic] is much more wooden and lacking in suppleness and variety of expression" (1977: 107). Yet, despite these and other limitations, scholars generally agree that the Versions can be of great importance in the effort toward establishing the critical text.

WATSON E. MILLS

GOTHIC VERSIONS

A. The Gothic Nation

The Goths, who originated in Scandinavia, migrated South and East during the early Christian centuries, settling in the Balkans and the Ukraine. The two Gothic branches of Ostrogoths (East Goths) and Visigoths (West Goths) were separated geographically by the river Dniester. They were a problem to the Empire for some centuries, invading Cappadocia in 264, and carrying off prisoners to Moesia. There is

some evidence, even so early, for Christians amongst them, and a Gothic bishop was present at the Council of Nicaea in A.D. 325.

B. The Translator

The bishop whom tradition designates as translator of the Bible into the Gothic language was ordained in 341: his grandparents were among the prisoners taken to Moesia in 264. His name is usually given in modern handbooks in the form Wulfila, which is a retroversion from the Greek forms Oulphilas and Ourphilas, and the Latin forms Ulfila, Vulfila, Vulphilas, and Gulfila. He is credited by his eulogist Auxentius (ca. 383) with knowledge of Greek, Latin, and his native Gothic.

Wulfila led his persecuted flock to within the Roman empire in about 348. With the Visigothic kingdom there was further persecution in 370 and after, but shortly thereafter some Visigoths became Christian under their leader, Fritigern. After wanderings in Italy, the Visigoths established a kingdom in Spain, which survived until 711. The conversion of the Ostrogoths was later, certainly by 454, although the exact date is not known. Both groups were converted to the Arian form of Christianity, as were the related Vandals, who shared the same language. The Visigoths turned to Catholic Christianity in 589. In the later years of their rule in Spain they no longer used the Gothic language.

C. The Gothic Language

This language is a member of the Germanic group of the Indo-European languages, a group which is subdivided into North-Germanic, West-Germanic, and East-Germanic. To North-Germanic belong Norse and Scandinavian languages; to West-Germanic belong German, Dutch, Frisian, English, and related languages; while Gothic, now extinct, is the only representative of East-Germanic. Our knowledge of the Gothic language comes largely from the Bible translation traditionally ascribed to Wulfila; the only other extensive document is a commentary on the gospel of John, called Skeireins ("Interpretation") by its first modern editor. Otherwise, we are limited to glosses, two trading receipts, Gothic names known from historians, and some inscriptions in the runic script. Wulfila used signs from the Greek and Latin alphabets, and a few signs taken from runic, to form an alphabet for the transcription of Gothic.

D. Manuscript Evidence

Of the surviving mss of the Gothic version, the best preserved is the *Codex Argenteus Upsaliensis,* 187 leaves of a "de luxe" ms, written in silver, with golden initials, upon purple vellum, containing the gospels in the order Matthew, John, Luke, Mark. It marks the Ammonian Sections in its margin, and has a corresponding harmony based on the Eusebian Canons at the foot of each page. Dateable about 500, it is often considered to have been produced for Theoderic the king of the Ostrogoths (see Friesen and Grape 1927). Two further fragments contain respectively 20 verses of Matthew (Milan, Ambrosianus I.61 sup.), underwriting of a palimpsest, and a short section of Luke (formerly in Giessen, Germany, now destroyed), which is from a Gothic-Latin bilingual found in Egypt. We have evidence for all Pauline Epistles (except Hebrews) in a number of palimpsests (Milan, Ambrosianus 1.61 sup. [in which leaves of two different mss are preserved for the Paulines], and mss in Turin and Wolfenbüttel). For about half the extent preserved, we have two ms representatives of the text, which increases our knowledge of this part of the version. Chapter divisions appear to be related to the Euthalian apparatus, which is known from Greek, Syriac, Armenian, and Georgian sources: but the Gothic reflects only certain aspects of what is elsewhere attested. The absence of Hebrews may be accidental, but may be due to the Arians' initial uncertainties about its canonicity. In another palimpsest (again, Milan Ambrosianus 1.61 sup.) are preserved the only other part of the Bible known in Gothic, Nehemiah 5–7. According to Greek sources, Wulfila translated the OT, apart from the too warlike books of Samuel and Kings, but no more than these fragments survive, with the exception of references to single words and numbers from Genesis, which appear to be more a school exercise than a biblical text. References to traces of a Psalms translation, in some earlier scholarly literature, seem to rest on misinterpretation of data, and the same applies to references to Ezra, rather than to Nehemiah.

E. Interaction of Latin and Gothic Versions

One gospel fragment (Giessen) and one ms of the Paulines (Wolfenbüttel) are Gothic-Latin bilinguals. We can see from the study of these that such bilinguals have left their mark upon the rest of both parts of

the NT extant in Gothic, even when the text is not preserved in an actual bilingual. Readings, unknown in Greek, and derived from the Old Latin, have infiltrated the Gothic text. In our analysis then, we must distinguish between readings of the Gothic which are derived from the Greek original from which the translator worked, and intrusive readings from the Latin, derived in the way we have outlined. These are not witnesses to the Greek original, but date from the later stages of Gothic history, and the history of the Gothic text, when migration had brought the Goths into contact with Latin speaking Christianity in Italy, S Gaul, and Spain. We also have evidence that, given a bilingual manuscript, the process could work the other way, with readings from the Gothic intruding into the Latin. One Old Latin ms, the codex Brixianus (of the 6th century, preserved in Brescia: conventional siglum *f*), has many readings which distinguish it from the rest of the Old Latin tradition of the gospel text, but which show close affiliation with the type of Gk mss from which the Gothic was taken. In these cases then, such a Latin manuscript is no longer a witness to the Old Latin, but an ally of the Gothic and its Greek original.

F. Text-type of Greek Original (New Testament)

Both in the Gospels and in the Paulines, the basic text used by Wulfila was an early type of the text which dominates the later Greek ms tradition, and which is known as early as the quotations of John Chrysostom (d. 407); in textual theory it has borne a number of different names, and today is generally known as the Byzantine text. Its origins and history have not recently been investigated, but it would appear that it was, in one of its forms at any rate, associated with Antioch, since it is known in writers linked with Antioch (such as Chrysostom himself, Severian of Gabala [d. after 408], and Theodoret [d. about 466]. The Gothic may then be treated as another witness to the early form of this long surviving text-type. But as has been observed, the user of the Gothic must always be alert to the possibility of Latin corruption in the extant witnesses.

G. Wulthres

The codex Brixianus shows in its preface that Gothic scribes and scholars made comparisons with both Greek and Latin. Here the author indicates that symbols, indicating Greek and Latin respectively, will be found above a *wulthre.* This Gothic word, transliterated in the Latin text, is otherwise unknown. A considerable literature of debate amongst students of the version has developed, some believing that differences of the respective texts were thus being noted, while others believe that identities of meaning were being noted. Since the preface presupposes a Gothic-Latin manuscript, it is no surprise that the Brixianus, which is a descendant of such, but in Latin only, retains no instances of the use of the term, nor any example of the data to which it referred. A few marginalia are found in the codex Argenteus and in one Pauline manuscript preserved in palimpsest leaves in Milan (referred to as Cod. Ambr. A); but in neither case is found the sign referred to in the Brixian preface. However, for all its enigmatic quality, the preface reveals the Goths of the later centuries as giving close attention to the text of their Bible.

H. Absence of the *Pericope Adulterae*

The Gothic gospel text, as we have indicated, is taken from Gk mss of Byzantine text-type. But the date of the surviving manuscripts makes it inevitable that readings from the Latin have crept in. The most striking of these, in all likelihood, is the absence of the pericope of the Woman taken in Adultery (John 7:53–8:11). The presence of this is distinctive of the Byzantine text, although the pericope is older than that text. Its absence in the Gothic is the more remarkable. We may note that it is absent not only in the codex Brixianus but in three other Old Latin mss as well, and is not quoted by Latin Christian writers until the late 4th century. Such a type of Latin text, where the pericope was not known, may then have early led to its exclusion from the Gothic when that version began to encounter Latin tradition.

I. Text-type of the Greek Original (Old Testament)

Of the OT, only parts of Nehemiah are known, apart from the fragmentary and baffling hints of knowledge of Genesis. We can be clear of the affiliations of the Gothic Nehemiah, however: time and again it shares readings (often in very distinctive matters such as numbers and the spelling of names) with three Gk mss numbered 19, 108, and 93 in the current lists (known as b´, *b*, and e^2 in the Cambridge LXX). These mss are the basis, in the books of Kingdoms, for Rahlfs' study of the Lucianic text. It may follow, then, that the Gothic version of Nehemiah may attest the Lucianic text, since these mss appear to

be its witness elsewhere than in Kingdoms. Recent debate about the nature, origin, and antecedents of the Lucianic text may change any interpretation of these data of affiliation, but the data themselves are secure.

J. Value and Future of Research

We have a number of excellent monographs on the Gothic version, especially of the NT, but almost without exception these are from the hand of Germanists. Their objective has been to secure sound philological grounds for the use of Gothic in the reconstruction of the history of the Germanic languages. Their work is of great value to the biblical textual critic, enabling him to comprehend the Gothic language; but with some exceptions, few of these scholars have given the Gothic much attention as a witness to the biblical text. This is true for the NT, and even more so the old. There is scope here for further work in biblical textual criticism.

J. NEVILLE BIRDSALL

ARMENIAN VERSIONS

A. Evangelization of Armenia

Christianity entered Armenia through Syria, probably as early as the first century. The new religion, apparently Ebionitic in character, spread slowly through the southern provinces, encountering opposition from the dominant religions, the native Armenian worship of Anahita, consort of Mithra, and Zoroastrianism.

Armenia was converted to orthodox Christianity during the reign of Tiridates III (ca. 287–ca. 314) through the preaching of Gregory, called the Illuminator. The son of an Armenian nobleman, Gregory was converted to Christianity in Caesarea of Cappadocia, where he had been reared and educated. Returning to Armenia as a missionary, Gregory suffered years of persecution until the king, in 304, proclaimed Christianity the national religion.

B. The Translation of the Bible

The political implications of the conversion of Armenia to orthodox Christianity were not lost on the Persians. During the following three centuries, Armenia became the unfortunate battlefield in the political and religious rivalry between Ctesiphon and Constantinople. Both the Sassanians and the Byzantines were determined to impose their own religion on the Armenians. Syriac language and literature were forbidden in the West, Greek language and literature in the East. The partition of Armenia between the Persian and Roman Empires in 387 and the attempts to impose foreign cultures on the people, to say nothing of the persecutions and deportations, threatened the very existence of the young Christian nation.

This crisis was met by the visionary leadership of the Catholicos Sahak (ca. 350–439) and the scholar-preacher Mesrop Mashtotz (ca. 361–440). With the support of the king, Mesrop created an Armenian alphabet (ca. 406), after which Sahak and Mesrop and their disciples translated the Bible, liturgical literature, and the writings of Syriac and Greek church fathers and secular authors into Armenian. This

was nothing less than a spiritual and cultural renaissance which insured the survival of the Armenian church and people.

C. Nature of the Biblical Text

1. Patristic Testimony. The testimony of the early Armenian historians regarding the archetype of the Armenian Bible and the process of translation is contradictory and difficult to interpret. Koriun (5th century), one of Mesrop's students, gives Mesrop the major role in translation but does not indicate the nature of the base text. Moses of Khorene (7th or 8th century) refers to both Mesrop and Sahak as translators and states that Sahak was translating from Syriac texts because the Persian king had ordered all Greek books in Armenia burned. Koriun further states that Sahak, Eznik, and others revised this "hurriedly-done" translation (Arm 1) on the basis of accurate Gk mss brought from Constantinople following the Council of Ephesus (431). Moses also refers to this thorough revision based on Gk mss (Arm 2) but differs in some details. Lazar of P'arp (5th century) speaks only of Sahak's translation of the OT and NT directly from Greek and does not mention an earlier, less accurate translation. The work of translation and revision was completed by about 435.

2. Internal Evidence. Scholarly investigation of the text itself supports the patristic testimony to two or three stages of translation and revision in the 5th century: an initial translation (Arm 1) followed perhaps by a preliminary revision, and later a thorough revision or new translation (Arm 2). Vestiges of the Arm 1 text of Psalms, the Gospels, and Acts have been found in 5th-century patristic quotations, early liturgical mss, Old Georgian mss, endsheet fragments of Armenian gospel mss, and even in the Arm 2 text itself. In addition, two versions of Chronicles, Song of Songs, Maccabees, and Sirach are extant, the earlier of which may represent Arm 1.

Studies of individual OT books indicate that the Arm 1 translations of Ruth, 1 Samuel, Daniel, and Sirach were based on both the Syriac and the Greek Lucianic texts. Some scholars speak of an initial translation from Syriac followed by a revision according to the Greek; others view the Arm 1 translation as composite from the start. The texts of Deuteronomy, Song of Songs, and the Epistle of Jeremiah show little evidence of Syriac influence. The text of Chronicles was based on the proto-Lucianic text of the LXX in Syria.

Arm 2 was clearly translated from Greek. The text of Genesis was based on the Hexaplaric recension of the LXX. The nature of the Septuagintal text in Deuteronomy, Ruth, 1 Samuel, Isaiah, Daniel, and Wisdom of Solomon has been identified as Lucianic or non-Hexaplaric, although secondary Hexaplaric influence is clearly evident in all but Daniel and Wisdom. Job, on the other hand, is an excellent witness to Origen's Hexaplaric text. The text of Jeremiah, though Septuagintal, has been corrected throughout by the Hebrew or Syriac text in regard to the omissions in the LXX text and the ordering of chapters and verses.

The gospel text has received more scholarly attention than any other portion of the Armenian Bible. The debate over whether the Arm 1 text of the gospels was translated from Greek or Syriac would appear to be settled in favor of Syriac, since every study published since 1938 has advocated that position. The form of the Syriac gospels was probably the Old Syriac separated gospels, although a few scholars have favored the Diatessaron. Evidence of the Syriac base of Arm 1 in the extant Arm 2 mss includes Old Syriac and Tatianic readings, proper names transliterated from Syriac, confusion of singular and plural forms, addition of the personal pronoun after the verb, and the rendering of Greek participles by finite verbs.

Limited investigation of the remaining NT books suggests that Acts, the Pauline Epistles, and 1 John were also translated first from Syriac. The absence of any trace of Syriac in 2 Peter and Revelation and the inclusion of 3 Corinthians in the early Arm 2 canon reflect the early Syriac canon and support the conclusion that the Arm 1 NT was translated from Syriac.

As with the OT, the Arm 2 NT was translated from the Greek. Inquiry into the nature of the Greek text has been limited largely to the gospels. The prevailing view that the Arm 2 gospels were translated from Caesarean-type mss must be revised in view of the overwhelming evidence against the existence of a Caesarean text-type. The "pre-Caesarean" witnesses to which the Armenian gospels are most closely

related may well represent a wide-spread Early Koine text which developed from the Alexandrian text-type and provided the Greek base for the earliest Old Syriac, Old Latin, and Arm 2 Gospels.

D. The Arm 2 Canon

Judging from the contents of the extant mss, the Arm 2 OT canon followed the LXX in including all of the Hebrew canon plus the Apocrypha (except for *4 Maccabees*). Other apocryphal and pseudepigraphal books such as *4 Ezra* and the *Testaments of the Twelve Patriarchs* also appear in many mss. Medieval canon lists appear to follow Greek sources and do not reflect actual church practice.

The Arm 2 NT in the early centuries included the orthodox canon plus the apocryphal *3 Corinthians.* Although Revelation was translated in the 5th century, it was little used until the 12th, when its text underwent careful revision. Mark 16:9–20 and John 7:53–8:11 were apparently not in the original Arm 2 text, since they are absent from virtually all Armenian mss through the 12th century, and from many later Armenian mss as well.

E. The Text from the 5th Through the 11th Centuries

The Arm 2 text of the 5th century was closer to Arm 1 than appears in our extant mss. From the 5th through the 8th centuries, Arm 2 underwent gradual revision to conform it more closely to the Greek text. Certain evidence suggests that Arm 1 continued in use until the eighth century, competing with Arm 2 for acceptance. Apocryphal books not in the original Arm 2 canon were translated during this period and found their way into some biblical mss.

The earliest extant biblical mss come from the 9th, 10th, and 11th centuries, an era of peace and cultural florescence in Armenia. The power of the Bagratid Kingdom (859–1045) and smaller neighboring kingdoms allowed monasteries and scriptoria to flourish. During these centuries the Arm 2 text became more standardized and attained that fidelity to the Greek text and idiom for which the Armenian version is noted.

F. The Text from the 12th Through the 18th Centuries

As the Bagratid period ended with the onslaughts of the Seljuk Turks from the east and the Byzantine armies from the W, the center of Armenian political and religious life shifted from historic Armenia to Cilicia. The Kingdom of Cilicia (1080–1375) directly involved Armenians for the first time in the governmental and ecclesiastical politics of Europe and the Roman Catholic Church.

Although we hear of no systematic revision of the Arm 2 text during the Cilician period, the changes in the biblical text were significant. Scribal errors and variant readings were dramatically reduced. Hexaplaric marginal notations were dropped. The first one-volume Bibles appeared in the early 13th century, made possible by the shift from erkat'agir (uncial) to bolorgir (minuscule) script. The influence of the Vg text is seen in the adoption of the Frankish chapter divisions, the acceptance of disputed Gospel passages into the text, and the more frequent appearance of *4 Ezra,* Sirach, and Revelation in the biblical mss.

These and other changes produced a text that was fuller and smoother than the Arm text of the Bagratid period. Meanwhile, in historic Armenia, where there was considerable animosity toward Cilicia, scribes continued to produce the standard Arm 2 text.

The Kingdom of Cilicia succumbed to the ravages of the Black Death and the attacks of the Moslem forces of Egypt and Syria. The survivors fled, carrying with them their cherished biblical mss. In this way, the textual traditions of Cilicia spread throughout Greater Armenia and the diaspora and further shaped the Arm 2 text during the succeeding centuries, reinforced by the ever-present influence of the Greek Byzantine text.

G. Ms Collections and Catalogs

Armenian biblical mss number well over 2,500, including approximately ninety complete Bibles and 2,100 Gospels. The largest collections are at the State Manuscript Library (the Matenadaran), Erevan, Armenia; at the Armenian Patriarchate, Jerusalem; and in the libraries of the Mekhitarist Fathers in Venice and Vienna. The remainder are in libraries, museums, and private collections throughout the world.

The oldest extant biblical mss, excluding fragments, are two gospel mss from the 9th century located in Erevan and Venice. Gospel mss from the 9th, 10th, and 11th centuries number approximately 45. The oldest non-gospel ms is a Venice ms of the Psalms from the 10th or 11th century. The oldest Armenian Bible is a Venice codex dated A.D. 1220.

Catalogs are available for the major collections and for many of the smaller ones (Leloir 1960: 817; Metzger 1977: 157–58; Cox 1982: 102–3). In addition, centralized collections of microfilm are being gathered at Erevan, Jerusalem, and the Hill Monastic Manuscript Library (Collegeville, MN). Microfilm of 26 mss from the Jerusalem collection are available from the Library of Congress (Washington, DC), and St. Louis University (St. Louis, MO) has microfilm of all mss in the Vatican collection. The Ancient Biblical Manuscript Center (Claremont, CA) has microfilm of some mss in Jerusalem and the United States.

H. Printed Editions in Classical Armenian

Many printed editions of the Armenian Version have appeared, both in classical Armenian and in the E and W dialects of modern Armenian. Only the principal ones are noted here (Hyvernat 1926: 1011–14; Leloir 1960: 814–15, 817–18; Nida 1972: 20–21).

The first portion of the classical Arm 2 text to appear in print was the Psalter in 1565 in Rome (Hyvernat 1926: 1011 says Venice). One hundred years passed before Bishop Oskan published the first Bible in 1666 in Amsterdam. Oskan conformed the text of his base ms (Ms. 180, Erevan, A.D. 1295) to the Latin Vg at many points.

In 1805 in Venice, the Mekhitarist Y. Zohrabian (Zohrab) published the Cilician text of Venice Ms. 1508 (A.D. 1319) with an apparatus listing the variant readings of mss which he, unfortunately, did not identify. The Zohrab Bible became the standard text of the Armenian Apostolic Church. Though inadequate as a critical tool, it has had to serve scholarly purposes as well. The Matenadaran and the Academy of Sciences in Erevan, with the assistance of Armenologists world-wide, are now preparing a critical edition of the OT with the NT to follow.

I. Printed Editions in Modern Armenian

A few of the principal editions in modern eastern Armenian are the following: 1835, NT, British and Foreign Bible Society (BFBS), Moscow; 1860, NT, BFBS, Constantinople; 1896, Bible, BFBS, Constantinople; 1976, NT, Armenian Catholicate, Echmiadzin. In modern W Armenian: 1825, NT, BFBS, Paris, translated by Zohrab; 1853, Bible, American Bible Society, Smyrna, the standard version among Armenian Protestants; 1911, Gospels and Acts, Society of Jesus (Jesuits), Beirut; 1981, NT, Armenian Patriarchate, Jerusalem, an adaptation of the 1976 eastern Armenian NT.

J. Value of the Version to Textual Scholars

The Armenian Version is one of the earliest translations of the Greek Bible and, as such, has text-critical value for determining the original text of the LXX and the NT. Since the quality of the translation varies from book to book, the usefulness of the version will, of course, vary. More serious factors affecting its usefulness are our limited knowledge of the archetypes and the absence of MSS from the first five centuries of the version.

Nevertheless, it may be said that for many of the biblical books, e.g. the gospels, the Arm 2 version translates the Greek base sensitively and accurately, reproducing word order, proper names, grammatical constructions, and even nuances of the Greek idiom with precision (for the limitations of the Armenian in representing the Greek base, see Metzger 1977: 171–81; Cox 1981: 223–41).

The last twenty years have seen renewed interest and significant progress in the study of the Armenian biblical text. As Armenologists prepare critical editions of the OT and NT and shed light on the early history of the Arm 1 and Arm 2 texts, the usefulness of the Armenian Version will increase dramatically.

ETHIOPIC VERSIONS

A. The Bible in Ethiopia

Early Ethiopic tradition ("Ethiopic" stands for "Classical Ethiopic" or "Ge‹ez" language; see LANGUAGES [ETHIOPIC]) does not distinguish clearly between "canonical" and "extra-canonical" books. In addition to the canonical and deutero-canonical (apocryphal) books of the traditional Western canon, Ethiopic biblical mss may contain pseudepigraphical works, such as *1 Enoch, Jubilees, Ascension of Isaiah* and *Paralipomena of Jeremiah (4 Baruch).* Quotations on inscriptions as well as other evidence suggest that all these books were translated from the Greek between the 4th and the 6th centuries.

More pseudepigrapha, such as *Testament of Abraham* (Aešcoly 1951), *Death of Moses* (Ullendorff 1961), *Colloquy of Moses with God on Mount Sinai* (Denis 1970: 138), *5 Baruch* (Leslau 1951: 57–76) and *Wisdom of the Sybil* (Denis 1970: 311), were translated from the Arabic in the 14th and 15th century. *Shepherd of Hermes, Didascalia Apostolorum,* and other pseudo-apostolic literature (Hammerschmidt 1964), are often also considered to be part of the canon.

1. The Old Testament. The earliest form of the Ethiopic OT is a rather literal translation of the LXX. No clear relationship could be established between the Ethiopic and one particular recension of the LXX. There are some interesting examples of theocrasy. In Sir 31:8 and 37:21 "The Lord" is translated with the name of the Semitic god "Astār." The usual word for the godhead is literally "The Lord of the Land." The expression "Son of Man" is translated "Son of the Offspring of the Mother of Life."

Since the 14th century the Ethiopic Bible has been revised repeatedly on the basis of Arabic texts. Because Arabic Old Testaments originated from many sources, it is very hard to establish which Arabic texts have been used in producing the ensuing "Vulgar Recension." In Genesis and Daniel it has been shown that the Arabic version of Saadya had no influence.

Amazingly, in some of the more recent mss (notably in the late 17th century ms Paris: Bibl. Nat. d'Abb 35, containing practically the whole OT minus the Octateuch) one finds the odd Hebrew word, vocalized in accordance with the MT, in Ethiopic transcription. It appears that these Hebrew words are only the most conspicuous sign of a wide scale recension, which probably took place in the 16th century, on the basis of the Hebrew Bible. It is known as the "Academic Recension."

A number of mss (notably Cambridge: University Library Add. 1570) contain a text which does not fit into either of these categories. Some OT books show some influence from the Peshitta. This is most likely due to medieval revision, either directly or indirectly via Arabic (Knibb 1988).

2. The New Testament. Research on the NT has been limited to Matthew (Hackspill), the Act of the Apostles (Montgomery), the Apocalypse (Hofmann) and the Synoptic Gospels (Zuurmond 1989). The

general picture is identical with that of the OT. The earliest translation must have been made from the Greek between 350 and 600 A.D. From the late 13th century onward this text has been emended several times on the basis of various Arabic texts. In the Synoptic Gospels one may distinguish five types of text. The earliest is the "A-text", extant in two mss from the 13th century or earlier: Abbā Garimā 1 and 2. There is ample reason to assume that in the half millennium between its origin(s) and the date of the earliest extant mss, occasional changes on the basis of Greek, Coptic, Syriac or early Arabic gospel traditions have been introduced.

The A-text alternates literal translation with what almost amounts to paraphrase. It tends towards stylistic simplification. Synoptic harmonization is extremely frequent. No clear type of Greek text lies behind the A-text. Hackspill drew the attention to some "Western" elements, but one could also point at many "Byzantine" readings. A clear correlation has only been established in the first five chapters of Mark, between the A-text and the Greek codex W (Freerianus), which is supposedly "Western" in these chapters.

The "B-text" appears only in the gospel of Matthew. The earliest example is offered by the Vatican ms Etiop. 25 from the 13th or 14th century. There is a tradition that at one time Abbā Maṭā‹, known as Libānos, translated the gospel of Matthew. Libānos however is supposed to have flourished in the 6th century, whereas the B-text probably originated not earlier than the 12th century. Since neither date is historically beyond doubt there still may be a connection. The B-text is usually closer to the Greek than the A-text. It is probably an A-text corrected on the basis of an Arabic *Vorlage.* In the 13th century scribes began to conflate the A-text and the B-text. The earliest example is EMML 1832 from Ḥayq Esṭifānos, dated 1280/81. In the course of its ever expanding development this "C-text" absorbed many other elements: stylistic improvements, additions originating from Arabic versions, glosses. In some mss of the 17th century one may find conflations of as many as six readings. From the 17th century onward several efforts have been made to correct the C-text. One was the rather widespread "D-text," (a good example one finds in ms Or. 518 of the British Library in London) made on the basis of an Arabic text distinguished by a number of Diatessaron readings. Another was the much more rare "E-text" (e.g. in London: B.L. ms Or. 509), obviously with the "Alexandrian Vulgate" as point of comparison. In the 18th–20th centuries several types of eclectic texts began to emerge. Towards the middle of the 20th century they had developed more or less into a new standard text, such as may be found in modern Ethiopian printed editions.

Without thorough source criticism readings from random mss or from uncritical editions of the Ethiopic Bible should not be used for research into the earliest origins of the version. It is at this point that A. Vööbus' thesis of an (Old) Syriac *Vorlage* of the Ethiopic gospel fails to convince.

3. The Pseudepigrapha. Only in recent times has the text-critical work on the Ethiopic Pseudepigrapha by scholars like Dillmann and Charles been resumed. The discovery of extensive Aramaic fragments of *Enoch* and tiny Hebrew fragments of *Jubilees* in Qumran gave a new impetus to the study of these books.

B. Editions

The Asmara edition of a complete Bible by F. da Bassano in 1922–26, is unreliable for text-critical purposes. The same goes for other editions printed in Ethiopia during the 20th century. The first printed edition of any part of the Ethiopic Bible was the *Psalterium Chaldaeum,* edited by J. Potken in Rome in 1513. The first critical edition was J. Ludolf's *Psalterium Davidis* in 1701. A large part of the Ethiopic OT was critically edited by A. Dillmann in the second half of the 19th century. In *Annotationes* to each book Dillmann registered the differences between the assumed Greek *Vorlage* of his text and the Septuagint. The Octateuch edition of Boyd (1909–1911) covers one more ms (Paris: Bibl. Nat. Eth. 3) than Dillmann's, but since the edition contains a large number of inaccuracies, Dillmann's edition should have preference. All 20th century editions, some of which are excellent (e.g. Löfgren 1927 and 1930), some of which have rightly been criticized (e.g. Ecclesiastes by S. A. B. Mercer in 1931), are mentioned by Ullendorff (1968: 34) and by Knibb (1988: 12). Much work remains to be done, or—in view of the large increase in available manuscripts—redone.

For the NT the situation is even worse. The text of the *Editio Princeps* (Rome, 1548), although based on relatively early mss, has occasionally been emended by its editor. The Gospel is based on Vatican Etiop. 51, exhibiting a B-text in Matthew and an A-text, in the other gospels. The text of Acts was copied from the 15th century Vatican ms Etiop. 23, but its extensive lacunae have been filled with a translation of the Latin Vulgate. Other Vatican mss from the 15th or 16th century provided the text for the Catholic Epistles and Hebrews (Etiop. 5) and the Apocalypse (Etiop. 68). The Pauline Epistles were added in 1549 from a mss imported from Cyprus. Because of the delay, they are missing in some of the earlier copies of the edition. The complete Roman edition has been reproduced in Walton's *Polyglot*.

The most common edition of the Ethiopic NT was prepared by Thomas Pell Platt and published in 1830. Since then it has regularly been reprinted. The text is eclectic and without value for textual criticism.

The only part of the NT ever critically edited is the book of Revelation (Hofmann). Hackspill (1896: 367–88) reproduced the text (of the Paris ms Bibl. Nat. Eth. 32) of the first 10 chapters of Matthew. It contains a slightly contaminated A-text. Zuurmond's critical edition of the gospel of Mark, based on 24 mss, is scheduled to appear in 1989. Most of the Pseudepigrapha in Ethiopic await reedition. The most recent editions are *Enoch* by Knibb (1978), *Jubilees* by Charles (1895; J. C. VanderKam prepares a new edition), *Ascension of Isaiah* by Charles (1900), *5 Baruch* by Halévy (1902), and *Testament of Abraham* by Aešcoly (1951). The last two have been edited from Falasha mss, but they also exist in the Christian tradition. Leslau (1951) provided an English translation of these books, with a short introduction. A Christian fragment of the *Testament of Abraham* was also edited by Aešcoly (1951). Parts of the *Lives of the Prophets* have been published by Knibb (1980–85).

C. Manuscripts

Most Ethiopic mss are of a recent date. A 15th century mss is considered to be "old." Only a handful of mss antedate the 14th century, in particular some in the Vatican Library (*Ascension of Isaiah:* Etiop. 263; Samuel/Kings: Borg. Etiop. 3), in the Davies collection and in the EMML collection at Collegeville (see below). Recent lists of available biblical mss have been published by Zuurmond (1982: 115 *Jubilees;* 1988: 34 Octateuch; 1989 Synoptic Gospels and Apocalypse) and Knibb (Ezekiel 1988). Other lists may be found in the appropriate editions. Some 13th–14th century polyglot Bible-mss from Egypt contain—apart from Coptic, Syriac, Arabic and Armenian—an Ethiopic column. They are: the Psalter (Vatican, Barb. Or. 2), the NT Epistles and Acts (Milan, Ambrosiana 6) and fragments of the Gospel (Oxford: Bodleian Copt. c.2.; and London: British Library Or. 1240). The most extensive collections of Ethiopic biblical mss are those in London (British Library), Paris (Bibliothèque Nationale), the Vatican Library (its Cerulli collection has not yet been catalogued), Cambridge (in particular the collection of the British and Foreign Bible Society, deposited in the University Library), and Berlin (Staatsbibliothek Preussischer Kulturbesitz). Important microfilmed collections are the Lake Ṭānā mss (Hammerschmidt: 1973–1977) and the huge collection in the Hill Monastic Manuscript Library at Collegeville, Minnesota (Macomber 1975–78; Getatchew 1979–88). The Davies collection of microfilmed early biblical mss, containing a.o. the three Abbā Garimā Gospels (13th century or earlier), has now also been deposited in Collegeville. It was described by Macomber (1979).

Detailed bibliographies and other useful information may be found in Ullendorff (1968), the editions of the corresponding biblical books, and in many of the studies listed in the bibliography below.

GEORGIAN VERSIONS

The versions of the Bible produced in the early days of the church form an important object of study since they provide information about the types of Greek texts that were current and approved at the time of the translation. Since in many cases the text employed was commended by Church authority or Christian scholarship, the versions inform us about textual knowledge and criteria at an early period. Thus the various stages of translation into the Georgian language are of importance to the textual critic in particular, and have played a not inconsiderable part in text-critical theory. The earliest manuscripts of the versions date from the 5th to the 10th centuries.

The versions here described are written in the Georgian language, the modern form of which is still spoken by over three million people in the Georgian Republic, and is an official language in which publication and instruction take place.

A. Name and History of the Georgian People

The geographical name Georgia became common in the West during the Middle Ages, and was sometimes erroneously linked with the Christian saint George: it is identical in root with the Persian *Gurğistan;* the Russian form is *Gruziya. Georgi* as the name of its inhabitants is known in Pliny (1st century A.D.). An older name is Iberia, which is linked with the Armenian and Parthian designations for the region: the inhabitants can be called *Iberi* or *Iveri* (in Latin or Greek), from which the formerly Georgian monastery on Mount Athos, the *Iveron,* derives its name. (The identity in sound and spelling with "Iberia" used as an old name for Spain is unexplained and probably accidental.)

Our earliest knowledge of the language (*k'artuli ena* "the Georgian language") dates from the 5th century of the Christian era. There are inscriptions from that date, and a palimpsest manuscript of the gospels has been so dated. These post-date the entry of the Christian faith into the country, probably in the 4th century. All examples of the language are from Christian texts: there are no literary remains of the pagan period. Christianity spread to the Georgians both from the Armenians (whose early links were with the Syriac church) and from the Greek-speaking church. Ecclesiastically, the Georgians were at first linked with the Armenians, with whom they opposed the formulations of the council of Chalcedon (A.D. 451) and the formula of attempted reconciliation of the emperor Zeno, termed the Henoticon (A.D. 505–506). As a result, the dominant cultural influences of this period were Armenian. But about A.D. 600 the Georgian church accepted the Chalcedonian definition, and remained thereafter in close theological and cultural contact with the Byzantine church and empire.

As the country lay on the frontiers of the Byzantine empire and of lands of various other peoples, and as it is very fruitful, it was throughout its history open to invasion and to the overlordship of whichever power happened to be in ascendancy. The greatest period of unity of the various groups speaking Georgian was in the eleventh to the thirteenth centuries, and was brought to an end by the Mongol invasions. After several centuries of Turkish and Persian supremacy, the Georgians became a part of the Russian Empire, by a decision of their own kings, taken for the defense of their own country. After the Revolution, they enjoyed a brief period as an independent state from 1918–1921, but afterwards became a part of the Soviet Union, in whose history they have played a not insignificant part.

B. Language and Problems of Translation

The Georgian language is totally unrelated to any language which figures in the account of the early translation of the scriptures in ancient and medieval Christendom. It should particularly be noted, in the light of modern political geography, that it has no links with Russian or Old Slavonic. The language is almost *sui generis,* since its only relatives are three languages spoken in the same area, namely Laz, Mingreli, and Svan. These together form the South-Caucasian or K'artvelian languages (from *K'artvelebi,* "Georgians"). The language has many consonants and few vowels. Its morphology is basically agglutinating, although some inflection is found. The verb is polypersonal, that is, within the one verbal form, morphemes may indicate the subject, the direct object, and the indirect object of the verb. The so-called "passive construction" (e.g., "it was written by me" contrasted with "I wrote it") is much favored and is always found in verbal forms built on the perfect tense stem (or "third series," to use the recent terminology). There is no definite or indefinite article, nor any distinction of gender.

The peculiarities of the language lead to various difficulties for the interpreter as they no doubt did for the translator. The absence of the article causes less difficulty than might be anticipated, because often another feature of the sentence makes it clear whether definition is present. A number of functions performed by prepositions in Greek, Armenian, or Syriac, are those of morphemes within the noun: hence prepositions may not be explicitly represented (e.g., the Greek preposition *en* when used instrumentally may be represented by the instrumental form of the noun, or when used locatively, by the locative form). There is also, especially in the earlier strata of the translations, much freedom of rendering, giving rise for instance to singular for plural, or *vice versa.* The polypersonal verbal construction leads to the frequent lack of an explicit pronominal indirect object. Besides these problems of language difference (such as all versions exemplify), we also encounter the expected changes which arise from exegesis and interpretation.

C. Early Georgian Texts (5th–8th Centuries)

The earliest known Georgian texts are Christian. The earliest biblical documents date from the 5th century, and the first inscriptions, with Christian vocabulary of prayer and dedication, are from the same period. By this time the alphabet, which is carefully devised to fit the phonetics of Georgian, was fully formed, while the language shows signs of prior use for the expression of Christian belief and practice. Most of the mss which have survived from this period are fragments, generally found in palimpsests, that is, mss made up of leaves from previous mss that have been cleansed of the prior writing and reused. From the OT, there are fragments of Genesis, Proverbs, and Jeremiah, all published, and of Deuteronomy and Judges, still unpublished, and of the deutero-canonical 1 Esdras. From the NT, there are considerable portions of the gospels, in four mss, and smaller fragments of Romans and Galatians. The mss range in date from the 5th to the 8th century: their ancient character is emphasized by the fact that they are written in forms of the Georgian language which had become extinct by the first half of the 7th century.

Many of these mss are from continuous texts, but others from lectionaries. The form of lectionary from which they come is known to be that of the Jerusalem church, as its liturgy developed in the 4th century, and pilgrimage to the Holy Places began to be a custom. Some rubrics punctuate the readings in these mss sources. Other sources of knowledge of the earliest forms of Georgian texts are to be found in quotations and echoes of biblical texts in the earliest literature which gives accounts of the martyrdoms of Georgian Christians of the earliest centuries at the hands of Mazdaean and Muslim persecutors.

D. Later Manuscripts (9th–10th Centuries)

Before these fragmentary mss were discovered or the literary echoes of biblical material examined, scholars had knowledge of the Georgian biblical texts in mss of the 9th and 10th centuries, giving a full text of those parts of scripture which they contain. A majority of these have survived in Georgia itself, but others in the centers of former Georgian monasticism: Jerusalem, Mount Sinai, and Mount Athos.

1. Gospel Translations. From the material in all these mss we may deduce that translation of scripture took place at the earliest point in the existence of Georgian Christianity, and even at that earliest point we may observe different types of textual affiliation. For example, our oldest complete mss of the four gospels dates from the 9th century, and carries the name of *Adiš,* the village where it was found. The text of this mss shows very clear signs that it had been translated from Armenian, not directly from Greek. The rest of the mss tradition of these early centuries probably rests, in the gospels at least, on such a text rendered from Armenian but has also been revised from the Greek. But when we examine the very early fragments, we do not find, as we might expect to do, that they all agree with the text based solely on the Armenian; on the contrary, the majority of those fragments agree more with the text revised from the Greek than with the other. This duality of text type is also found in the allusions and quotations. Moreover, in some of the passages used in the lectionaries, we meet some texts which are identical in wording with the continuous text mss alongside others which differ. Because of the date of the earliest sources of information, we cannot posit successive stages of translation (unless this began long before we know there to have been either a Georgian church or a Georgian alphabet). It would appear rather that there were translations, sometimes from Armenian, sometimes from Greek, and that very early these became mixed by some sort of mutual interaction, whether intentional or accidental. The centers of these translations would have been in the border regions of Armenia and Georgia, and in early Georgian monastic centers in Palestine and perhaps also in Egypt. That there were at the beginning more than two tentative translations may be shown by the fact that some passages within the mss of the Jerusalem lectionary present very different linguistic and textual features from those of the mss (such as the *Adiš* manuscript and the others alluded to which are known to us in detail already.

2. Gospel Affiliations. Because of the situation in the publication of texts, our knowledge of the affiliation of the Georgian texts to the original Greek of the NT, to the LXX, and to other versions made from these, differs considerably in depth from book to book. The gospels have received the most attention, especially the gospel of Mark (which is the common practice of textual critics, since Mark is the shortest gospel, and the one in which early variation tends most regularly to survive). Two different emphases have been made. Some scholars, on the grounds of the probable Armenian base of the Georgian, and of the Syriac background of the Armenian, have laid stress on the harmonistic readings in

the text. On their hypothesis, these will have been derived from the gospel harmony of Tatian, made in the 2d century, which we know to have had a considerable influence upon the oldest strata of the Syriac, and to have been reflected in the Armenian. Others have laid their stress upon links which may be perceived with the text of the gospels reflected in the quotations of Origen at certain times in his life, and of Eusebius. The readings which provide these links are often found in a number of Gk mss, especially various relatively late minuscules, often of South Italian provenance. This difference of emphasis and interpretation is linked with the debate over the so-called "Caesarean Text" of the gospels, in which the Georgian version was amongst the witnesses considered to bear strong witness to the existence of this type of text (see Lake et al. 1928; Klijn 1949; Vööbus 1953; Birdsall 1983). Suffice it to say, that whichever emphasis may prove better founded, the Georgian version is shown by its early links to be one which must be taken into account in any description or assessment of the text of the gospels, for it is, in its earlier forms, a version with close links to the very center of developing Christianity.

3. Other NT Affiliations. The same can be said in principle about the Acts, the Catholic epistles, and the Pauline corpus on the basis of such research as the more recently published texts have attracted. In the Acts, while we have no trace of the distinctive longer text (known from Codex Bezae), the readings of the Georgian do sometimes accord with "Western" witnesses, in cases where those readings were of wider circulation, but also, on other occasions, accord with Alexandrian witnesses. In the case of the epistles of Paul, we find links with the earliest Greek papyri in some distinctive readings, and with forms of text attested in early fathers. The text of the Catholic Epistles is related in similar ways. Although the book of Revelation was translated only at a later stage in the development of the Georgian versions, we may appropriately mention here its textual value. It is known in three mss, and gives the text in the form known from and generally accompanied by the commentary of Andreas of Caesarea (5th century). The Georgian manuscripts are of the same date as the translation itself, and moreover, antedate all but three of the mss of the Greek original. Since that text and commentary preserve a very important witness to the original text of Revelation, the Georgian version is of great importance for the textual critic of that book.

4. Affiliations in the OT. Less specific information is available about the text of the Georgian versions of the OT and the deutero-canonical books, but we may judge from sources published in Georgia the general direction research is taking. There is agreement that Armenian bases underlie the earliest translations into Georgian, but that, in a manner reminiscent of the discoveries about the NT, there was also early recourse to Greek models for revision. We must state the textual affiliations in terms of the history of the LXX: generally, the texts translated were of the type termed Lucianic, but there are also traces of the critical work of Origen in his repertorium of textual information which is called the Hexapla. Here again, we glimpse how the Georgian may preserve information from the history of the biblical text in early Christian times. In another respect too, we find a similar phenomenon to one within the data of NT documents: some of the earliest fragments retain evidence of distinct translations which were not to become part of the mainstream of Georgian biblical usage (Proverbs and 1 Esdras are among the books in which such examples are known).

E. Later Revisions (10th–12th Centuries)

In the 10th and 11th centuries, scriptural translations were revised by three great literary figures, two of them from the Georgian monastery on Mount Athos (the monastery of the *Iveron*), and the third from the center of Georgian monasticism near Antioch in Syria, the "Black Mountain," or "Wonderful Mountain". The first of these was Euthymius the Athonite (963–1028), who with his father John founded the house of the *Iveron.* He was the translator of the book of Revelation, which had not previously been translated into Georgian. It was a book which, while accepted early as scripture in the churches of the West, had always been viewed with great suspicion in the Eastern churches. He is also said to have translated the Psalms, but the text has not come down to us. He produced a version of the gospels (a revision of the older translations).

To the second, George the Athonite (active in translation on Athos about 1040), we owe two versions of the Psalms, one close to the old text, and one more accommodated to the usage of his own day. He revised yet further than Euthymius the translation of the gospels, and undertook new translations of the Acts, and

the whole corpus of the epistles (Catholic and Pauline). These he brought into textual congruence with the biblical texts which had become dominant in the Greek church in the recent centuries, perhaps in the wake of the revival of learning after the end of the Iconoclast controversy. His translation of the Psalms and gospels became the standard thereafter in the Georgian church, but the rest of the NT awaited another revision by Ephrem Mcire (the Less), after 1057, whose center of work was on the Black Mountain. The book of Revelation, however, in spite of the work of Euthymius, remained of dubious canonicity, and was not revised.

For the OT, apart from the Psalter (which had an existence of its own because of its central importance in worship), we are not yet informed in so detailed a way. A ms of the 12th century (known as the Gelati manuscript from the monastery where it was preserved) presents a revision of the OT in which a slavish imitation of Greek has been adopted as a means of representing the Greek original in Georgian. In the opinion of some, this work was that of Ephrem Mcire, in part at least; in that of others, it was that of John Petrici (late 11th and early 12th century), a noted translator of classical philosophy. As his cognomen implies, he worked in the Georgian monastery of Petriconi in Bulgaria.

F. The Printed Bible

The printed Bible (Psalms and gospels in Tbilisi [1705] and the complete Bible in Moscow [1742–43]), before the rise of 20th century scholarship, was eclectic in text. It rested to some extent upon the learning of Sulxan-Saba Orbeliani (18th century) and the Mcxeta Bible, a ms prepared for him. But it also suffered revision from the Old Slavonic Bible in use in the Russian Orthodox Church. As a critical tool then it is without value, although it is a monument to various stages of earlier Georgian attempts at biblical revision. In 1963, an authorized version of the NT was published by the Catholics of the Georgian Orthodox church, based on recent scholarly editions. A translation into modern Georgian had not been made until 1980 when the gospels and Psalms were produced by a Swedish Bible Society. This version is apparently based on modern critical Greek and Hebrew texts and owes nothing to the long earlier tradition.

G. Modern Scholarship and Publication

The bulk of the published materials on which these preliminary analyses can be made is the work of both Georgian and foreign scholars of the present century, and most of it has been done since the Second World War. The whole of the NT is available. The older recensions of the gospels have been twice edited, once in Georgia and once in the West, and so has the Acts of the Apostles; but for later recensions of the gospels, for the epistles, and for the book of Revelation, we have one edition only, each the work of Georgian scholars. Because of increasing cooperation between the two groups of scholars involved, no duplication in these areas is planned or necessary. We do not yet have the whole of the OT available. The prophetic corpus has been edited as a whole outside Georgia, and the book of Ezekiel independently by Georgian scholars. Some incomplete texts of parts of the Pentateuch, some of the deutero-canonical (or apocryphal) books, and all the recensions of the version of the Psalter have been edited in Georgia.

There are many studies available, and many summaries of other studies made as theses and so on (in addition to the bibliography, see the articles on “Georgien,” “Georgische Handschriften,” etc. in *Kleines Wörterbuch des Christlichen Orients* [Wiesbaden 1975]). The text of the Bible of Mcxeta, which was written for the eighteenth century for the traveller, diplomat, and scholar Sulxan-Saba Orbeliani, compiled from many sources, is in the process of publication. Work proceeds both outside the former Soviet Union and in Georgia itself, especially in the Institute of Manuscripts, Tbilisi, and in the Department of Old Georgian Language in the University of Tbilisi. There are a number of journals, Georgian and foreign, which act as a means of information and vehicles of scholarly analysis (e.g., *Le Muséon* [Louvain], *Oriens Christianus* [Leipzig & Wiesbaden], *Bedi Kartlisa: Révue de kartvelologie* [Paris], and *Révue des études géorgiennes et caucasiennes* [Paris]).

J. NEVILLE BIRDSALL

VERSIONS, CATHOLIC. Although the Roman Catholic versions of the Bible can be conveniently divided according to the various modern languages, it is more important that the division among them be made on a chronological basis. Since the Council of Trent had decreed that the Vulgate was the sole "authentic edition for public reading, disputations, sermons and explanations," the vast majority of Roman Catholic translations of the Bible in the 17th–20th centuries were translated from the Latin rather than from the original Hebrew, Aramaic, and Greek. Only with the publication of Pius XII's encyclical *Divino Afflante Spiritu* (1943) and especially because of the Second Vatican Council's dogmatic decree *Dei Verbum* (1965) have Roman Catholic editors systematically begun to publish translations based primarily on the original languages of the biblical texts. The decree strongly encouraged the translation of the Bible into the modern languages (Par. 22) and cited the particular responsibility of bishops to see to it that such translations be made available (Pars. 26).

The World Translations Progress Report of the United Bible Societies for 1988 reported that the Bible had been translated, completely or in part, into 605 languages and that 1988 was a record year for Bible translations. Some of these translations were the work of Catholic missionaries, as for example, those provided for some native populations in Guatemala. Since it is impossible to provide a complete listing of all the versions produced under Catholic auspices, the remainder of this article will concentrate on the modern European language translations of the Bible, especially those in English.

B. English Versions Based on the Original Languages
C. Versions in Other Languages
D. Ecumenical Projects

———

A. English Versions Based on the Vulgate

Prior to 1943 the most common English-language Roman Catholic Bible was the Douay-Rheims version. Sponsored by Canon (later Cardinal) William Allen, the translation was prepared on the European continent by Gregory Martin, an Oxford trained scholar, who published the NT at Rheims in 1582 and the OT at Douay in 1609. The translation was literal and the style stilted. The NT was revised and provided with explanatory notes by Bishop Richard Challoner in 1749 and 1752. Challoner's revision of the OT appeared in 1750 and 1763. Challoner's work, which radically modernized the English language and style of the text, particularly eliminating the Latinisms of the earlier version, served as the standard version of the Bible for English-language Roman Catholics for two centuries.

In the United States the Episcopal Committee for the Confraternity of Christian Doctrine sponsored a revision of the Rheims-Challoner version of the NT (1941). Commonly known as the Confraternity edition, its footnotes took into account the Greek text of the NT, but the translation itself was based on the Sixto-Clementine Vulgate, even when this departed from Jerome's work. A revision of the Douay-Challoner OT was undertaken, only to be abandoned because of the publication of *Divino Afflante Spiritu.*

In Great Britain the Catholic hierarchies similarly approved a new translation of the Vulgate, the work of Ronald Knox, an Oxford-trained scholar, reputed for his use of English style. The so-called Knox Bible appeared in 1944 (NT) and 1950 (OT). Although the translation was based on the Latin, the footnotes made use of the Greek and Hebrew. Because of its style and because Knox's knowledge of Greek was superior to his knowledge of Hebrew, the NT is generally considered superior to the OT.

B. English Versions Based on the Original Languages

A somewhat pedantic version of the NT, known as the Westminster Bible and edited by C. Lattey, appeared in Great Britain in 1935. Lattey abandoned work on the OT in 1949. In 1961 John Bligh's revision of the Westminster NT appeared in a missal. In the United States, the Kleist-Lilly translation of the NT appeared in 1950 and 1954. J. A. Kleist was responsible for the gospels and J. L. Lilly for the epistles. The translation was intended to keep pace with modern developments in English, but the overall effort is theologically slanted and occasionally marred by poor scholarship.

The New American Bible (NAB) was a major endeavor sponsored by the bishops of the United States to provide the faithful with a biblical translation based on the original languages. It is, in fact, the version most commonly used in Roman Catholic liturgical celebrations in the United States. The translation was done by members of the Catholic Biblical Association (CBA), under the chairmanship of Louis F. Hartman (OT) and Myles Bourke (NT). The language of the translation is formal, but modern, following the American idiom. The work on the OT (1952), done at a relatively leisurely pace, made ample use of the recently discovered Dead Sea Scrolls. The NT (1970), however, was prepared in haste so that it would be available for use in the vernacular liturgy which was permitted and encouraged by the Second Vatican Council. Under the care of a committee chaired by Francis Gignac, a revision of the NT appeared in 1987, but the so-called revision is really an entirely new translation by members of the CBA, including some non-Roman Catholics. This revision is in greater conformity with the Greek than was its predecessor; the translation itself is rather similar to that of the RSV. A revision of the translation of the Psalter is expected to appear in 1990–91.

The Jerusalem Bible (JB) was published in 1966 under the general editorship of Alexander Jones. Inspired by the *Bible de Jerusalem,* the first draft translation of most books was based on the Hebrew or Greek and then compared with the French. In some cases, however, the OT translations were initially based on the French with the draft subsequently revised in the light of the Hebrew or Aramaic. Although highly esteemed for personal reading and liturgical use because of its readability, the Jerusalem Bible suffers from many of the same idiosyncracies of the French forerunner (particularly with regard to issues of textual criticism) and the conservative posture of Roman Catholic biblical scholarship in the 1950s. The New Jerusalem Bible (NJB) appeared in 1985 under the general editorship of Henry Wansbrough. This vastly improved revision was inspired by the French revision of 1973 and consciously attempts to avoid sexist translations.

C. Versions in Other Languages

The 19th and 20th centuries have seen an almost untold number of new translations by Catholic authors. Those published in the second half of the 20th century are generally based on the original texts, while many of the more recent translation projects are the fruits of ecumenical cooperation.

1. French. Richard Simon's anonymously published translation of the NT appeared at Trévoux in 1702. A number of rather staid translations were produced under the inspiration of Port Royal and the Jansenist school. Of these the most important was the work of Louis Isaac le Maistre (De Sacy) whose NT (1667) was based on the Greek, while the OT (1695) was based on the Vulgate.

Two of the most popular 20th-century Bibles have been Crampon's *La Sainte Bible* (Paris, 1907) and Canon Osty's *La Bible* (Paris, 1973). The 1952 edition of the former included Joseph Bonsirven revision of the OT and Andre Tricot's new translation of the NT. Osty's work has been considered the standard-setter for French translations of the Bible. It is particularly esteemed because of its philological exactness and the quality of its French expression.

In Belgium, the *Bible de Maredsous*, produced by Benedictine monks, was published in Brussels in 1950 and 1951 (corrected edition, 1970). In Canada, the Association catholique des études bibliques published a version of the NT in Montreal in 1952.

The most important of the French translation projects were, however, associated with the École biblique, founded in Jerusalem by Marie-Joseph Lagrange in 1890. Scholarly translations of individual books of the Bible appeared in the commentaries of the Études bibliques series. A particularly significant project, *La Bible de Jerusalem (BJ)* initially appeared as a series of 43 fully annotated individual volumes (1948–54) under the general editorship of Roland de Vaux, assisted by Pierre Benoit for the NT. For the most part the translations and commentaries were the work of scholars associated with the École biblique in Jerusalem, but some scholars based in Europe were also involved in the project. The translation of the OT occasionally relies on the LXX rather than the MT; its notes often reflect a Christian slant. The text on which the NT translation is based often relied on the text-critical positions of M.-E. Boismard, thus imparting an idiosyncratic quality to the work. The translation was particularly esteemed because of the quality of its French style, but was admittedly periphrastic as far as the biblical text itself was concerned.

A single volume edition of the *BJ*, with footnotes and introductions greatly reduced, appeared in 1956. A number of translations into other languages attest to the popularity of the original *BJ*. A radically revised edition appeared in 1973. Less periphrastic than the original, its introductions and notes moved away from the conservative stance found in much of the earlier work.

2. Italian. Subsequent to Benedict XIV's cautious suggestion that the laity be allowed to read the Scriptures (1757), Antonio Martini published an elegant translation of the Vulgate into Latin (1776). A revised and corrected version was published in Turin in 1920. During the 19th century, especially under the influence of Prince Louis Lucien Bonaparte, the Bible was translated into various Italian dialects. Under the auspices of the recently founded Pontifical Biblical Institute (1909), a translation of the Bible into Italian began to be published in 1922 under the direction of Alberto Vaccari. A version of the Bible produced by Giuseppi Ricciotti and other scholars appeared in Florence in 1929.

In 1961 the Pontifical Biblical Institute published a new edition of the Bible in Italian, based on the Scriptures in their original language. Alberto Vaccari, a professor at the PBI, was general editor of this project. Work on *La Sacra Bibbia traditta dai testi originali e commentat*, under the chairmanship of Salvatore Garofalo, rector of the Pontifical Urban University in Rome, was begun and published (1963) before the completion of the Second Vatican Council. Francisco Vattioni chaired the OT section of the project and Leone Algisi, rector of the seminary in Bergamo, chaired the NT section. In the same year another translation, edited by Enrico Galbiati, Angelo Penna and Piero Rossano, was published in Turin under the same name. A translation of the Bible has also been produced under the auspices of the Italian Episcopal Conference (CEI).

3. Spanish. The first complete publication of the Bible in Spanish in Spain (1793) was the work of Felipe Scio de San Miguel, later bishop of Segovia. The ten-volume work was based on the Vulgate. A nineteen-volume 2d edition appeared in 1794–97. Scio's work remained popular even though Felix Torres Amat, later bishop of Astorga, produced a new Spanish translation of the Vulgate (1825), for which he made a comparison between the Latin and the original Hebrew and Greek texts.

The first complete Spanish translation from the original languages was prepared under the auspices of the University of Salamanca by Eloíno Nácar Fuster and Alberto Colunga (Madrid, 1944). In Madrid, in 1947, Francisco Cantera and José Maria Bover published another Spanish version of the Bible based on the original languages. A major project has been the publication of the *Nueva Biblia Española*, the work of Luis Alonso Schokel and Juan Mateos. It is an idiomatic rendering of the biblical text. The translation of the OT began to appear in a series of commentaries beginning in 1965. The NT appeared in 1974. A revised edition of the complete Bible, originally published in 1975, appeared in 1977.

During the 20th century, many translations of the Bible into Spanish have been published in South America. Among them is an Argentinean pastoral version of the Bible, *El Libro del Pueblo de Dios* (1981), prepared by A. J. Levoratti in collaboration with A. B. Trusso and a Chilean pastoral edition (2nd. ed., 1972) presented by a team under the general direction of Ramon Ricciardi.

4. Portuguese. The first translation of the Bible into Portuguese was the work of Joao Ferreira d'Almeida, a priest who later became a Protestant missionary. The NT was printed at Amsterdam in 1681. The entire Bible first appeared in Batavia in 1753, when d'Almeida's work on the OT had been completed by other missionaries. The first Portuguese Bible printed in Portugal itself was the work of the priest Anton Pereira de Figueiredo. Complete with copious notes, it was published in Lisbon in twenty-three volumes (1783–90).

Biblia Sagrada versao dos textos originais is an ecclesiastically endorsed Portuguese version of the Bible, prepared in Portugal, but commonly used in the Portuguese-language communities throughout the world. The annotated OT (Lisbon, 1968) was the work of a team of seven Capuchin priests, Alcindo Costa, A. A. Tavares, J. C. Das Neves, J. M. Lima, J. N. Carreira, M. A. Rodriguez, and G. C. Dias, while the NT translation (1970) was the work of Costa.

5. German. A so-called "Catholic" or "Mainz" Bible circulated in Germany well into the 18th century. Its NT was based on Hieronymus Emser's 1527 translation, in fact, a revision of Luther's 1522 work, only slightly amended for conformity with the Vulgate. Emser's work was subsequently revised by Johann Dietenberger who, in collaboration with other scholars, published the entire Bible in 1534. The OT followed Luther's version. The translation was further revised in 1630 by Caspar Ulenberg in Cologne and again in 1662 by a group of Mainz theologians, whence its popular name.

In the 20th century, a translation of the Bible by P. Riessler and R. Storr (Mainz, 1949) was published in an eighth edition just seven years after its initial appearance. The earlier work of two Capuchins, Konstantin Rosch (NT, 1932) and Eugen Henne (OT, 1936), likewise appeared in several editions over a short period of time. The most popular German translation of the Bible under Catholic auspices was the work of Pius Parsch, a monk of Klosterneuberg, Austria, whose project of translation from the original languages was completed in 1952.

6. Dutch. The first Dutch Catholic version of the complete Bible, prepared by Alexander Blankaert and others on the basis of the Vulgate, but making use of the Delft Bible as well, was published under the aegis of the University of Cologne in 1478. The translation produced at Louvain by Canon Claes van Winghe and periodically revised since its original publication in 1548 has, nonetheless, remained the standard Catholic version of the Bible in Dutch for centuries.

Between 1936 and 1939 the so-called Canisius edition of the Bible was published at Amsterdam by Bernard (later Cardinal) Alfrink, R. Jansen, and J. Cook. *De Katholieke Bijbel,* whose OT was the work of Laetus Himmelreich and whose NT was the work of Crispinus Smits, was published at Bruges and Hertogenbosch in 1938. During the 1970s the Dutch and Flemish Biblical Associations produced the so-called Willibrord Bible. In 1987 a new translation of the gospels and Acts was published by the Dutch Catholic Bible Society and the Flemish Bible Society.

7. Other Languages. The Cracow Bible, the first Polish translation of the Bible, was published in 1561, but its history is clouded in obscurity. Another Polish translation, more faithful to the Vulgate than the Cracow Bible, was published at Cracow in 1599. This translation, produced by the Jesuit Jakub Wujek, and revised even in the 20th century, became the classic Polish Bible.

Work on an Irish translation of the Bible was started in 1945. Completed in 1981, the translation was published as *An Biobla Naofa*.

A new translation of the Bible into Latin, the *Nova Vulgata,* appeared in 1979. Intended for liturgical and pastoral use, the text represents a happy synthesis between the demands of textual criticism and respect for the ecclesiastical Latin of the church.

D. Ecumenical Projects

Paragraph 22 of *Dei Verbum* (1965) approved and encouraged ecumenical cooperation in the modern translations of the Bible. "Guidelines for Interconfessional Cooperation in Translating the Bible" were developed by the Vatican's Secretariat for Promoting Christian Unity in conjunction with the United Bible Societies (1968; revised, 1987). Accordingly, John Reumann, a Lutheran, was a member of the committee responsible for the revision of the NAB's NT.

On the European continent, self-styled ecumenical translations are commonly used. As early as 1960 a German-language ecumenical translation project was begun. Having been endorsed by the German Catholic bishops in 1978, the *Einheitsübersetzung* appeared in 1980. A French-language *Traduction oecuménique de la Bible* (TOR), whose NT is based on the Greek, was published in 1975 (new edition, 1988), and the Italian *Parola del Signore: Il Nuovo Testamento-Traduzione interconvessionale dal testo greco in lingua corrente* appeared in 1976. After seven years of scholarly and financial ecumenical cooperation, in which the Studium Biblicum Franciscanum was a partner, the first complete Bible in Japanese was published in 1978.

VERSIONS, ENGLISH. Because the Church of England had broken off from the Roman Catholic Church, and because Jews were not permitted to live in England until 1655, most of the English translations surveyed in this five-article entry were used in "Protestant" contexts. The first article surveys the history of English versions of the Bible up to 1960. (For a survey of post-1960 English translations, see THEORY OF TRANSLATION; and VERSIONS, AMERICAN. Subsequent articles treat various particular aspects of the English Bible: Wycliffe's Version, the term "Authorized Version," the King James Version, and various American versions. Within each article are cross-references to other related entries. See also VERSIONS, CATHOLIC; VERSIONS, JEWISH; and VERSIONS, MODERN ERA.

A. Beginnings

The origins of Christianity in Britain are shrouded in legends that date earlier than the conversion of Constantine. Almost a hundred years later than Constantine, Patrick began work in Ireland in A.D. 405. Ninion (died 432) was a missionary and monastic bishop of North Britain, and Columba (about 565) worked first in Ireland and later, going out from Iona, in Scotland. Christianity received great impetus through the coming of Augustine in A.D. 596. Following a period of conflict between the Irish and Roman forms of Christianity, the Roman form became dominant.

There is no evidence of vernacular translation of the Scriptures at these early dates. Christianity spread through the oral teaching of monks who used the Latin Vulgate. Codex Amiatinus was made at either Jarrow or Wearmouth about A.D. 716. Carvings and pictures in the churches as well as miracle and mystery plays instructed the masses, most of whom were unable to read Latin.

The first paraphraser of Scripture into Anglo-Saxon is traditionally Caedmon, an unlearned secular brother of piety and humility who resided at the monastery of Whitby about A.D. 680. Caedmon, declining his turn for entertaining by singing, is said to have retired to the stable where an apparition ordered him to sing of the beginning of created things. Awaking from his sleep, Caedmon remembered what he had sung and later added to it. When he revealed his experience, learned men expounded messages to him which he turned into verse. His paraphrases covered the creation, the Exodus, the entrance into Canaan, and the incarnation, passion, and resurrection of the Lord. Caedmon's work has largely not survived, but a metrical version from a 10th century manuscript in the Bodleian Library is sometimes attributed to him. Morrell (1965: 18–31) insists that while this text may be Cadmonian in inspiration, it is by a series of authors and not by Caedmon, as previously thought.

Guthlac (A.D. 673?–714), a Saxon anchorite, is said to have glossed the Psalms at Crowland and Peterborough near the end of the 7th century. There are fourteen Psalters with old English glosses ranging in date from the 8th to the 12th centuries (Morrell 1965: 45).

Aldhelm, abbot of Malmesbury, about A.D. 700 sang religious themes as a minstrel on the bridge of the city. In addition to Greek and Latin, Aldhelm could read Hebrew. His translation of the Psalms into Anglo-Saxon survives in a single ms preserved in the National Library in Paris. Also Egbert about A.D. 700 produced a translation of the gospels.

Cuthbert, one of Bede's disciples, in 735 tells the romantic story of Bede's rendering the gospel of John, finishing the last sentence on the last evening of his life. No trace of Bede's translation survives. It is not known whether it was from Greek or Latin.

King Alfred of the West Saxons is said to have put the translated Ten Commandments at the head of his laws. He is also said to have begun a translation of the Psalms which he did not finish.

The earliest surviving examples of translation into the vernacular are the Anglo-Saxon glosses between the lines of Latin mss. The Lindisfarne Gospels were written in Latin by Bishop Eadfrith about A.D. 700 and were beautifully illuminated. An added interlinear gloss of the tenth century is attributed to Aldred. The Rushworth Gospels, written in an Irish half-uncial hand about A.D. 800, has an Old English gloss added throughout. The gospel of Matthew and parts of Mark and John are by Farmen and the remainder by Owun. Parts are merely copied from the Lindisfarne Gospels.

Six manuscripts of West Saxon Gospels, intended to be read in church, all derive from a single version made by an unknown translator about A.D. 1000–1050. One has the order Mark, Luke, Matthew, and John, and another Mark, Matthew, Luke, and John. An edition of the Anglo-Saxon Gospels was printed with a preface by John Foxe in 1571 (Herbert 1968: no. 131) and dedicated to Queen Elizabeth.

Aelfric (ca. 1005), about whose identity there has been much discussion, complains of the lack of knowledge on the part of those who could not read Latin. His Heptateuch was an abridgement and translation of the first seven books of the OT. He also did a homily on the book of Job.

The Norman conquest in 1066 by William the Conqueror brought a new ruling class to Britain who read Norman French while the language of the farmhouse and cottage remained Anglo-Saxon. Although there was a prose translation into Norman French about A.D. 1260, Latin was thought of as the language for religious use.

Orm (ca. 1200), a monk living in the Danish territory of England, turned "the gospels of the year" into English speech. Orm paraphrased, adding a quaint and mystical explanation. His work *The Ormulum*, preserved in a single copy in the Bodleian Library, consists of about 20,000 lines.

Interesting as these early efforts are, they are not to be thought of as forming a genealogical continuum with the later printed English Bibles. They were not complete Bibles. They were principally read by the clergy rather than by lay readers and did not create the problems for the church which later translations did.

B. Pre-Reformation Bibles

The English language supplanted Anglo-Norman, and in the mid 14th century the book of Psalms was collected into the West-Midland Psalter (formerly attributed to William of Shoreham). A northern metrical version of the Psalms was made about 1300. Richard Rolle (d. 1349) of Hampole in Yorkshire turned the Psalms into English following the commentary on the Psalms of Peter Lombard (Herbert 1968: no. 2033). In south England, the texts of Peter, James, three epistles of John, and the Pauline Epistles were translated (Paues 1904). This manuscript already had "breeches" for Adam's and Eve's clothing (Gen 3:7). These early versions were orthodox and there was no opposition to their being read by the few who could read. There is no evidence that the church encouraged or allowed versions among the common people. The custom was for the preacher to give his own English rendering of the verse on which he spoke. No two citations are completely alike (see further, *CHB* 2: 362–86).

With the appearance of the Bible of John Wycliffe (1324–1384), church officials began to look with suspicion on translation (*CHB* 2: 387–414). Wycliffe was a vigorous participant in the ecclesiastical disputes of his time, and his followers were known as the Lollards. Certain points of Wycliffe's teaching were condemned in the summer of 1382. His translation was a part of a larger movement which put "God's law" and "Christ's law" in conflict with the canon law of the church. Vernacular Scripture threatened the unity which universal use of Latin in the church represented.

It is uncertain exactly what part Wycliffe played in the translation which appeared about 1382. See VERSIONS, ENGLISH (WYCLIFFE'S) following. His name is not attached to the text of any manuscript which survives. Deanesly (1920: 254) is positive that the translation was done by Wycliffe's followers. Nicholas of Hereford translated the OT up to Baruch 3:19, as a note at that point attests. Wycliffe died in 1384; the Council of Constance in 1414 ordered his bones dug up and burned. His body was exhumed, burned in 1428, and the ashes thrown into the River Swift.

The first Wycliffite version approaches a word-for-word rendering. John Purvey (about 1388) is credited with a revision and with the prologue which accompanies it. He describes an effort to collect many old Bibles and expository works in order to establish a Latin text, and speaks of studying especially helps from Nicholas of Lyra, and of consulting grammarians and old divines. Once done, the revision was submitted to "many good and cunning fellows." Purvey stated a conviction that common Latin Bibles had more need to be corrected than did the English Bible he had worked on. Purvey's revision is more idiomatic, more free of Latinisms than the earlier edition, and its vocabulary less archaic. Mozley (1937: 77) gives 180 as the number of extant Wycliffe Bible manuscripts, not all dating at the same time and not all intended for the same economic level of reader. Only about 30 are of the first edition. Wycliffe's NT was first printed by John Lewis in 1731 (Herbert 1968: no. 1011). Forshall and Madden issued the first printing of the complete Purvey revision in 1850 (Herbert 1968: no. 1876).

A bill before the House of Lords about 1390 to suppress the English Bible was spoken against by John of Gaunt, the Duke of Lancaster, who said, "We will not be the dregs of all, seeing that other nations have the Law of God, which is the Law of our Faith, written in their own language." However, a provincial council convened in 1408 at Oxford by Archbishop Arundel of York forbade translation without approval of the diocesan bishop or of a provincial council. Persecution records reveal that one of the incriminating evidences against victims was possession of forbidden English Bibles (Foxe 1843–49: 4.135). At the same time, in the hands of proper people reading was permitted. Archbishop Arundel commended Anne of Bohemia at her funeral for having read English Gospels. See VERSIONS, ENGLISH (AUTHORIZED) following.

The question of the circulation of authorized English Bibles in the 15th and prior centuries remains an enigma. Tyndale claimed there were no predecessors to imitate; but Thomas More said that the whole Bible had been translated into English before Wycliffe's time and claimed he had seen Bibles known to the bishops and left in the hands of laymen and women. Thomas Cranmer in his famous prologue to the Great Bible spoke of prior Bible reading and of copies of translations into Saxon remaining in his time. John Foxe in his dedication of the Saxon Gospels (printed in 1571) spoke of translations before Wycliffe was born. No trace of these remain, and it is the consensus of current thought that Wycliffe was the first to produce an English Bible.

In the century following Wycliffe, momentous events affecting Bible circulation changed the history of Europe forever. The fall of Constantinople to the Turks in 1453 forced eastern European scholars to flee westward, bringing with them Greek and Hebrew manuscripts previously unavailable in the west. Oxford had a professor of Greek in the person of Grocyn in 1491. Erasmus admired the state of Greek studies at Oxford in 1497. Ferdinand and Isabella's expulsion of the Jews from Spain in 1492 stimulated the study of Hebrew throughout Europe. Robert Wakefield, in 1520, was the first professor of Hebrew at Oxford.

Particularly influential was the invention of printing with movable type by Johannes Gutenberg who issued the Latin Gutenberg Bible in 1456. Printing made books affordable and made possible the production of many copies exactly alike, an accomplishment not possible in hand copying. William Caxton, among his numerous other works, issued *The Golden Legend* on November 20, 1483. The *Legend* includes an almost literal translation from the Vulgate by Caxton of nearly the whole Pentateuch, passages from the historical books, and a paraphrase of a great part of the Gospels (Butterworth 1941: 52–54). Though the source was not designated, here were sections of the Bible in English in printed form for the first time. In its use of "breeches" for the clothing made of fig leaves by Adam and Eve (Gen 3:7), the *Legend* long antedated the Geneva Bible.

England was late among European countries in having a vernacular printed Bible (Guppy 1935: 2). The basis for a vernacular Bible was being laid with Ximenes' preparation of the *Complutensian Polyglot,* which began as early as 1502 (publication was delayed until 1522). Meanwhile Erasmus hurriedly edited and published his Latin-Greek NT in 1516; new editions appeared in 1519, 1522, 1527, and 1536. Erasmus' Greek Testament gave great impetus to NT study and became the tool used by English translators. Knowledge of the Greek and Hebrew originals made a Latin-based Bible no longer acceptable to the English reader.

C. Printed Bibles

A comprehensive listing of printed English Bibles is given in the catalogues of Hills (1961) and Herbert (1968). For a general discussion, see *CHB* 3: 141–74.

1. The Tyndale New Testament. William Tyndale, educated at Oxford and Cambridge, became the chaplain and tutor to the family of Sir John Walsh in Little Sodbury in Gloucestershire. There he resolved to make the boy who drives the plow to know more Scripture than the clerics with whom he debated (Foxe 1843–49: 5.117). The lay people could only be established in the truth by giving them the Scriptures in English.

Tyndale sought support in London from Bishop Cuthbert Tunstall in the summer of 1523. Success would have cleared him of transgression against the prohibition of translation passed by the convocation of Oxford in 1408. However, Tunstall had been present at the Diet of Worms and heard Luther's statements there. Lutheran books were publicly burned in St. Paul's churchyard in 1521, and Henry VIII had written his *Defense of the Seven Sacraments* for which he received from the Pope the title "Defender of the Faith." Tunstall suggested that Tyndale look elsewhere for support.

After a year in the employ of Humphrey Monmouth, Tyndale despaired of translating in London and left for Hamburg in May 1524 (Mozley 1937: 50). There aided by William Roye, he completed his NT which contained notes many of which were derived from Luther's work. The printing in quarto size, entrusted to Peter Quentel at Cologne, was interrupted by John Dobneck (Cochlaeus) after completion of eighty pages. Tyndale and Roye rescued the pages and fled to Worms where in 1525 they brought out the quarto size Testament of which one copy survives (Herbert 1968: no. 1) and also an octavo size without

notes of which two copies survive (Herbert 1968: no. 2). Tyndale was about thirty-one years of age at the time. Reproductions of the octavo have been issued in 1836, 1837, 1862, and 1939. A reprint of the quarto edition was done by Arber in 1871.

Smuggled into England in merchandise, the Testament was being sold early in 1526 and by the autumn was being bought for burning by Tunstall and Warham. Tunstall claimed to find two thousand errors in it (Anderson 1849: 54). Tyndale found the burning nothing other than what he had expected. British church leaders saw the translation as a tool of Lutheranism. Henry VIII appealed to the queen of Holland and to the governor of the English House at Antwerp to search for copies for burning. English agents attempted in vain to locate Tyndale to bring him back to England.

Seeing the profit in Testaments, Christopher van Endhoven in 1526, 1530, and 1534 did unauthorized reprints of Tyndale's work and exported them to England. Because they were not proofread by an Englishman, the Dutch prints became increasingly corrupt.

Henry VIII in 1529 issued a decree against the circulation of Lutheran books; Tyndale's writings were on the list of proscribed works. Another condemnation in 1530 specified Tyndale's NT (Pollard 1911: 163). Meanwhile, Tyndale had published several other treatises objectionable to church authorities. Having failed to lure Tyndale back to England, Tunstall authorized Thomas More in 1528 to read heretical books for the purpose of refuting them. More spent the next five or six years at the task, casting his first reply in the form of a dialogue which was issued 1529. While he claimed that translating Scripture into English was good, he proposed that the bishops do it and then let their work be read by trusted people, not by the masses. In the harsh language of the day, he gave an adverse report on the work Tyndale was doing. More's actual case deals with about six words (Anderson 1849: 137). He objected to the dropping of the words "priest," "church," "charity," "grace," "confession," and "penance" in favor of "senior," "congregation," "love," "favor," "witnessing," and "repentance." Tyndale replied to More, and More then answered Tyndale.

While these events were transpiring, Henry VIII was seeking an annulment of his marriage to Catherine. Cardinal Wolsey, failing to procure the annulment, fell from power, was removed from office, replaced by Thomas More. Thomas Cromwell became keeper of the Great Seal. Influenced by these developments, in 1530, Henry VIII authorized a commission to consider the expediency of an English translation (Pollard 1911: 163). The report was negative, but Henry stirred hopes that he would grant a translation when the time was right. Efforts through an agent Vaughan failed to persuade Tyndale to agree to return to England. These efforts gave way to an unsuccessful plot to kidnap him.

Tyndale was busy translating the OT. Tyndale's books, along with his manuscript of Deuteronomy, were lost in a shipwreck off the coast of Holland in 1529 (Foxe 1843–49: 5.120). He issued the Psalms in 1530 as well as the entire Pentateuch (a copy of which is in the British Museum [Herbert 1968: no. 4]). It was reissued in 1534, and after Tyndale's death was reprinted in 1551, 1884, and the text of Genesis in Weigle (1965).

Tyndale published his translation of Jonah with a prologue in 1531. He did a reissue of his NT in 1534 which had notes and prologues to the Epistles. A revision of 1535, printed by G. van der Haghen (now known as the G. H. edition), had no notes, and became the basis of later English Testaments.

The English Primers containing English Scripture selections hold a special place in the history of the English Bible. The *Hortulus Animae* of 1530, thought to have been by George Joye and to have reproduced his earlier Primer, which is now lost, had The Lord's Prayer, the Ten Commandments, prayers from various parts of the OT and texts of thirty-nine different Psalms (Butterworth 1953: 28–46). Though Primers were frequently prohibited, English printers issued many during the reign of Henry VIII. Compilers felt free to choose readings from any source available to them. The Primers were a means by which Britishers came to know Scripture. By 1546, Henry VIII issued an authorized Primer with instructions about its use for instruction of youth and its being read by the aged.

In 1533 Henry VIII married Anne Boleyn, who "reigned in the king's heart as absolutely as he did over his subjects" (Burnet 1837, 1: 279). Thomas Cranmer became Archbishop of Canterbury the same year. The Act of Supremacy in November 1534 made Henry the Supreme Head of the Church of England. John

Fisher and Thomas More were executed for refusing to acknowledge the invalidity of Henry's marriage to Catherine and to accept Henry as the Supreme Head of the church.

Anne Boleyn was known to favor reform sentiments. There was expectation in England for a Bible. Tyndale in absentia presented Queen Anne a NT in 1534 with her name on the edge, which is now preserved in the British Museum. George Joye had earlier issued translations of OT books. His Psalms of 1530 had at Ps 91:3 the reading "a frayd for any bugges by night." Later editions were in 1534 and 1541. His Isaiah was issued in 1531. Joye, an English exile who had met Tyndale on the Continent, had earlier issued translations of OT books. His Psalms of 1530 had at Ps 91:3 the reading "a frayede of night bugges." Later editions were in 1534 and 1541. His Isaiah was issued in 1531. Joye now translated a portion of Genesis and sent a copy to both the King and Queen hoping in vain to get a license to print a Bible (Foxe 1843–49: 5.132). Joye also translated Proverbs through Lamentations and the prophet Jeremiah. He used "backslider," a word which still lives in English religious language. Less felicitous were "triakle" in Jer 8:22 and "sheephoke" in Psalm 23.

Joye while acting as a proofreader, introduced changes into the edition of Tyndale's NT which a Dutch printer was issuing. Tyndale in three months issued his 1534 revision and included a section in which he denounced Joye. Most offensive to him was the change of "resurrection" to "life after this life" or "very life" in some places. Joye complained of Tyndale's lack of charity, defended himself as best he could, but again issued his NT in 1535 without important changes (Butterworth and Chester 1962: 165–82).

Thomas Cranmer in 1534 stimulated the Convocation of Canterbury to petition the king for a Bible. About this time Cranmer divided the NT into portions which were sent to the bishops for correction. A sharp negative reply from Bishop Stokesley foiled the project (Mozley 1953: 36–37; Pollard 1911: 197), but the effort is remembered as a precedent for the committee concept of revision as contrasted with that of a single individual.

In May 1535 Tyndale was enticed out of the Merchant's House in Antwerp by a pretended friend, Henry Phillips, and imprisoned at Vilvorde Castle. A touching letter from Tyndale to the governor of the castle survives. It is thought that he translated the biblical section Joshua to 2 Chronicles while in prison, leaving it behind in manuscript. He was executed Oct. 6, 1536, at the age of forty-two. His dying words were, "Lord, open the King of England's eyes." Back in England, 1536 saw a reprint of Tyndale's NT of 1534, the first done in England. Within a year of Tyndale's death both Coverdale's and Matthew's Bibles had received royal licenses, within two years Cromwell had ordered the Great Bible set up within the churches, and within five years a royal proclamation made the setting up of Bibles mandatory.

Tyndale is the most significant individual contributor to the English Bible. Between 1525 and 1566 there were more than forty editions of Tyndale's NT which are known, and there may be others which perished (Pollard 1911: 10). Francis Fry (1878) described in detail twenty-one of the numerous editions appearing before 1550. Estimates are that 80 percent of the KJV wording is due to Tyndale. His influence continued to be dominant up to the rise of the modern speech translations.

2. The Coverdale Bible. On Oct. 4, 1535, a year before Tyndale's death, Myles Coverdale, then about forty-seven years of age, issued his Bible, the first complete English Bible to be printed. Coverdale, while living in Cambridge, had at the White Horse Inn come into contact with Reformation ideas (Foxe 1843–49: 5.415). By 1527 he was corresponding with Thomas Cromwell, who had become his patron. Accused of heresy, Coverdale fled to Hamburg where he associated with Tyndale for a part of the year 1529. Mozley (1953: 86) conjectures that he was also at Antwerp. Tyndale, however, does not mention meeting Coverdale.

Coverdale, alternating between England and exile, lived on into the reign of Elizabeth, participated in the consecration of Matthew Parker, and finally died in 1569 at the age of 81.

Coverdale began his translation by rendering a Latin paraphrase of the Psalms in 1535. His Bible (Herbert 1968: no. 18) was prepared and printed on the Continent. The Bible was dedicated to Henry VIII, whom Coverdale invited to correct it, improve it, or completely reject it as he saw fit. Unable to read Greek and Hebrew, Coverdale had worked from Latin and confesses dependence on five interpreters (whom scholars conjecture to be Luther, the Zurich Bible, Leo Juda, Pagninus, and the Vulgate). In the

NT he was heavily dependent on Tyndale, but also revised in the light of the German versions (Mozley 1953: 98). Like Tyndale, he used the words "congregation," "elder," and "love" but also used a variety in words like "image," "idol," "grade," "favor," "confess," and "knowledge." He used "penance" but explains that he meant by it true repentance (Mozley 1953: 106).

The place of the printing and the name of the printer of the Coverdale Bible remains disputed. The title page had six woodcuts with a picture of Adam and Eve after the fall at the top. At the opposite side, the Redeemer tramples the serpent's head. At the bottom, the King is delivering the Bible to his prelates. The Bible was brought into England in unbound sheets for the purpose of being sold by J. Nycolson, who prepared a second title page which omitted the statement that it had been translated out of "Douche and Latyn." Nycolson in August sent a copy of the Bible to Cromwell asking that he obtain permission for its circulation (Mozley 1953: 111).

The Coverdale Bible is divided into six parts: Pentateuch, Historical books, Job to Song of Solomon (called *Salomons Balettes*), Prophetic books, Apocrypha, and the NT. About 188 woodcuts illustrate the text. The Pentateuch, the book of Jonah, and the NT are Tyndale's, but the rest of the OT and the Apocrypha are Coverdale's, appearing in English for the first time. Coverdale followed the practice of Luther and Olivetan of printing the Apocrypha between the Testaments.

Coverdale was not offensive to Henry VIII as Tyndale had been. Matthew Parker later credited Queen Anne Boleyn with the Coverdale Bible's being permitted, though authorization was not granted. She had a copy in her chamber (Mozley 1937: 118–20). After her execution, the Bibles had a new title page in which her name was omitted and that of Queen Jane substituted. Nycolson reprinted the Coverdale Bible in folio and quarto sizes in 1537, and reprints of the quarto were in 1550 and 1553.

The text of Coverdale's Bible was reprinted by Bagster in 1838 and in a memorial edition in 1847. His Jonah was printed along with Tyndale's in 1863 and his Psalms in 1911, 1926, 1930, and 1935. The Coverdale Bible was issued in a facsimile in 1975, printed for Wm. Dawson and Sons in Britain. There are eighty copies of the Coverdale Bible known to exist, all of them imperfect (May 1977: 55).

3. The Matthew's Bible. Two years after the publication of the Coverdale Bible, and less than a year after Tyndale's death, in 1537 John Rogers issued a Bible under the pseudonym of Thomas Matthew. An alternate identity suggested by Whitley (1937: 61–72) has not been convincing. Rogers had associated with Tyndale and Coverdale at Antwerp (Foxe 1843–49: 6.591). Rogers ultimately suffered martyrdom under Mary Tudor.

In preparation of the Matthew's Bible (Herbert 1968: no. 34), Rogers used Tyndale's Pentateuch and the section Joshua to Chronicles which Tyndale had left in manuscript form (Pollard 1911: 195–96), but the rest of the OT and Apocrypha, except for the Prayer of Manasseh, which Rogers supplied, was revised from Coverdale. In the NT, Tyndale was followed with modifications. Grafton and Whitchurch supplied the funds for publication. The printing was done perhaps by Matthew Crom of Antwerp.

The Matthew's Bible was in folio size, printed in black-letter with two columns to the page and illustrated with 119 separate pictures. The order of NT books was that of Luther. The Epistle to the Romans was preceded by Tyndale's prologue in small print, and there were about two thousand annotations borrowed from various sources (Mozley 1953: 146). Christological headings were supplied for the Song of SongsSongs which Rogers called *Ballet of Balettes of Solomon.*

Ignoring the Bible's dependence on Tyndale, Cranmer sent a copy of the Bible to Cromwell calling it a new translation and new printing and asking that Cromwell get a license for it to be sold and read by all. While admitting that there were faults, Cranmer claimed to like this Bible better than any he had seen. Recalling his earlier failure to produce a revision, he stated that he did not think the bishops would get around to supplying a translation until "a day after doomesday." Cromwell wrote back that the license had been granted. The title page of the Bible carried the statement "Set forth by the Kinges most gracyous licēce."Coverdale's quarto Bible of the same year (1537), which is thought to be the first English Bible printed in England rather than abroad, also carried the phrase.

Some churches purchased copies of the Matthew's Bible, and they were read (Mozley 1953: 177–78). Foxe (1843–49: 5.410) speaks of offense taken by the clergy at the prologues and at the collection of

Scriptures about the Lord's Supper. The Matthew's Bible was printed again in 1538, 1549, and 1551. The British church attempted a statement of belief in *The Institution of a Christian Man* in 1537. A royal proclamation was issued in 1538 concerning reading the Bible, and injunctions were issued to the churches (Guppy 1938: 23–25). Public reading of the Bible proved so disruptive that in 1539 the king found it expedient to order that no person read the Bible in church with a loud voice during the time of service.

4. The Taverner's Bible. The King's printer, Thomas Barthlet, secured the services of Richard Taverner to prepare a Bible which was published in 1539. Taverner, a thirty-two year old practicing lawyer educated at Cambridge and Oxford, was a capable Greek scholar. It is not known whether his Bible or the Great Bible appeared first; both were of the same year. Taverner's was the first of the translations totally printed in England. Nycolson earlier had printed a Coverdale folio in 1537.

Taverner's Bible (Herbert 1968: no. 45) in the OT made use of the Matthew's Bible with some changes by comparison with Latin. The NT followed Tyndale with changes from Greek. It was the last of the English translations to follow the order of books of Luther. Many of the Matthew notes were dropped and Taverner's own inserted. Tyndale's prologue to the Epistle to the Romans was dropped. There were no woodcut illustrations. The Bible, folio in size, was dedicated to Henry VIII.

A revised edition of Taverner's NT was issued in quarto and octavo in 1939. The OT was issued in five parts between 1549 and 1551, and Taverner's OT, revised by Edmund Becke, was combined with Tyndale's NT and published by John Day in 1551. Other editions are unknown.

Westcott (1927: 83–84) and Butterworth (1941: 128) found Taverner exercising only minor influence on the later English Bible. The appearance of the Great Bible in the same year no doubt adversely affected the circulation of Taverner's.

5. The Great Bible. Cromwell planned a Bible with Coverdale as the editor and Grafton as the publisher. Coverdale used Matthew's Bible rather than his own as the basis and also used the Latin OT of Sebastian Münster. Münster was to OT study what Erasmus was to NT. The Apocrypha was left almost unrevised (Mozley 1953: 221). Coverdale and Grafton went to Paris to secure better paper and better printing. Henry VIII petitioned the French king to allow the printing (Foxe 1843–49: 5.411); however, after the project was well under way the Inquisitor-general intervened (Strype 1853: 1.120–21). Coverdale and Grafton escaped. After six months of negotiations the presses, types, and workmen were brought to London, and the Bible was completed by April 1539.

From its 15 × 9 inch size, the Bible is known as the Great Bible. Bonner promised Grafton that he would set up Bibles in St. Paul's (Foxe 1843–49: 5.412), and he issued an admonition that it be read reverently without disturbing sermon or service (Mozley 1953: 265). Five months later he found it necessary to threaten the removal of the Bible because of abuses.

The title page of the Great Bible reflects the political and religious loyalty desired in the British situation. Henry VIII is depicted as receiving the Word of the Lord from the Lord and passing it to Cromwell and Cranmer, who deliver it to the people. The people call out "God save the King!"

In the Great Bible, the OT is followed by the Apocrypha, but the NT is in Erasmus' order, not that of Luther, as earlier English Bibles had been. Notes were planned and markers inserted for them, but the notes never appeared. Words derived from the Latin Bible but not represented in Greek are in smaller type enclosed in brackets. See also GREAT BIBLE.

The seven editions of the Great Bible, issued in the three years 1539–41, were the subject of a study by Francis Fry in 1865. The second edition had the preface by Cranmer which gave the Bible the name "Cranmer's Bible." It had on the title page: "This is the Bible appointed to the use of the Churches." The Psalter became that later used in *The Book of Common Prayer.* In most cases the ecclesiastical words which had caused controversy are changed as Tyndale had modified them (Mozley 1953: 240).

Cromwell was granted a patent for printing the Bible for five years from Nov. 14, 1539. A royal proclamation of May 1541 ordered curates of the churches to provide themselves a Bible of the largest volume and also set the price of the Bible. However, Cromwell's plans for a league with the Lutheran princes failed, and Henry VIII's marriage to Anne of Cleves which Cromwell had arranged was annulled.

Cromwell fell from power and was beheaded on July 28, 1540. The Bible, however, was not withdrawn; extant church records show purchases of Bibles (Mozley 1953: 261–65). Cromwell's most lasting contribution was to give the English people a free Bible.

At about this period the Counter-Reformation began to get the upper hand. Henry VIII hesitated in reform. *The Six Articles* of 1539, which are distinctly Catholic, attempted to control diversity of opinion. It was declared in Convocation in 1542 that the Great Bible was not suitable for reading in church (Pollard 1911: 230). However, a motion for the undertaking of a fresh version failed. When the NT was divided among fifteen bishops and an OT committee formed, Gardiner supplied a list of 99 Latin terms which had to be retained. The project was referred to the universities, and nothing came of it (Mozley 1953: 272–75; Pollard 1911: 272–74).

In 1543, acts against Tyndale's translation were passed. *The Erudition of any Christian Man* further defined the English theological position. By 1546 both Tyndale's and Coverdale's Bibles were included on the prohibited lists. There was a further burning of Bibles at St. Paul's Cross on Sept. 26, 1546 (Mozley 1953: 287). Henry's last address to Parliament lamented that the Bible was "disputed, rhymed, sung, and jangled in every alehouse and tavern."

With the accession of Edward VI, injunctions to the churches to acquire Bibles were renewed. Unsold stocks were called upon to supply the need, but also all the English versions were reprinted—an impressive number of thirteen editions of the whole Bible and thirty-five of the NT (Eadie 1876: 1.423). At this period *The First Book of Homilies* was issued, as well as a translation of the *Paraphrases* of Erasmus. The first *Acts of Uniformity*, Jan. 21, 1549, required that the books of services be acquired by the parishes.

A translation of Matthew and Mark done about 1550 by Sir John Cheke, professor of Greek at Cambridge, remained in manuscript until published in 1843. Cheke's work was divided into chapters but not verses. He attempted to avoid words derived from Greek and Latin and in the process offered striking innovations in vocabulary. Any influence on later English translations is untraceable. A plan to undertake an official revision during Edward's reign failed when Martin Bucer, who had come to England at the invitation of Archbishop Cranmer, died (Strype 1853: 1.280–86).

Edward VI died after a reign of six and a half years; Mary Tudor came to the throne in 1553. England was absolved from schism by Cardinal Pole. Painting of Scripture quotations on the walls of churches was forbidden. Bible printings ceased, and, while no specific act against the Bible was passed, in some instances Bibles in the churches were destroyed (Mozley 1953: 299–301) as were those of some individuals (Foxe 1843–49: 8.318, 379, 469, 529, 561). Among the three hundred martyrs were John Rogers and Thomas Cranmer, both of whom had been significant in the story of the English Bible. Some 800 church leaders favoring reform fled to the continent. Mary's reign lasted only five years.

6. The Geneva Bible. On June 10, 1557, William Whittingham, an English refugee in Geneva, issued a NT for which Calvin supplied the preface (Herbert 1968: no. 106). In addition to the Greek text, Tyndale, the Great Bible, and Beza's Latin were consulted. An abundance of marginal notes and other supplementary materials were included. This NT was printed in Roman type with supplemental words italicized and with the verses as separate paragraphs. Whittingham's text can be found in *The English Hexapla* of 1841; it was reprinted separately in 1842.

In 1560, Whittingham, Anthony Gilby, and Thomas Sampson, who had remained for the purpose in Geneva after Elizabeth's accession in 1558, issued the Geneva Bible in quarto size with the expense borne by the congregation. The Bible (Herbert 1968: no. 107) is dedicated to Queen Elizabeth and contains the OT, Apocrypha, and NT. The OT had been revised in the light of the Hebrew text in consultation with a recently published Latin version. The NT followed Tyndale, revised with reference to Beza's translation. Without official sanction, this most popular of 16th-century English translations went through at least one hundred and forty printings before its last in 1640.

Elizabeth had kissed a NT presented her on her way to her coronation and had promised to read it, but she never gave recognition to the Geneva Bible. Injunctions in 1559 required the setting up of the Bible as

well as the *Paraphrases* of Erasmus in the churches. Reprints were done of The Great Bible and of Tyndale's NT.

History has ignored the chief merits of the Geneva Bible and called it the "Breeches Bible" because of its rendering of Gen 3:7. Roman type was used for the text with supplemental words in italics. The text was broken into paragraph verses for the first time in English Bibles. There were woodcuts, maps, and other study aids. Its most distinctive trait was its system of notes, some of which were anti-Catholic and others pro-Calvinistic; however, the majority of the notes were not polemic.

The Geneva Bible circulated in two other forms besides the original. Laurence Tomson did a revision in 1576, and then in 1599 it was printed with Junius's Revelation instead of Tomson's. The Geneva was issued in at least fourteen folio editions in addition to the many quartos, making it suitable for both home and church. It was the first Bible printed in Scotland where it received authorization of the Kirk.

The Geneva was used in early life by King James, used by Shakespeare in his later plays, preferred by the Puritans, used by Bunyan and used by the Pilgrims who came to America on the Mayflower. The Geneva Bible, the best of the translations up to its time, was issued in a facsimile reprint by the University of Wisconsin Press in 1969. See also GENEVA BIBLE.

7. The Bishops' Bible. Matthew Parker, Archbishop of Canterbury, dissatisfied with the Geneva notes, organized another Bible revision by assigning sections for revision to individuals most of whom were bishops. Parker revised some of the books, compiled the whole, and gave the initials of the participants at the end of their books. Rules of procedure specified limited modification of Bibles then in use. Bitter notes were to be omitted, and places not edifying were to be marked so that the reader could pass them over. Although there were no general meetings of the translators for discussion of various readings, the effort set a pattern later followed that a committee should revise Scripture. Parker instructed Jugge, the printer, to use heavier paper on the NT because of its greater use.

Issued in 1568, the Bishops' Bible (Herbert 1968: no. 125), though not the largest, was the most elaborate of 16th century Bibles. It had pictures of Queen Elizabeth, William Cecil, and Robert Dudley. There were 150 woodcut engravings, coats of arms in initial letters, and extensive supplementary material, including Cranmer's Preface. The print was black-letter and the text divided into verses but with the older system of A, B, C. also down the margin marking divisions.

Though Parker sought authorization of his Bible from the Queen, it was not forthcoming. However, the *Constitutions and Canons Ecclesiastical* of April 3, 1571, ordered that each archbishop and bishop have a copy at his house. Cathedrals were to have them and churches as far as convenient. Contemporary church records show the purchase of Bibles.

The Bishops' Bible underwent revision in 1569 (the year of the last printing of the great Bible) which incorporated criticism of Thomas Laurence. The 1572 edition printed the Great Bible Psalms in parallel with the Bishops' Psalms after which, with the exception of a 1585 printing, only the Great Bible Psalms were included. The 1572 printing used the picture of Leda and the Swan, giving the Bible the name "The Leda Bible." The Bible went through twenty editions with the last in 1602 which was used by the KJV translators. The NT was last printed in 1633 in the fourth edition of a work by William Fulke intended to refute the Rheims NT. The NT text was reproduced in *The New Testament Octapla* in 1962. The text of Genesis is in *The Genesis Octapla* of 1965.

The Bishops' Bible circulated in folio printings but also in quarto. Some homes had copies. As true with the preparers of other translations, some of the bishops who worked on the revision continued to quote the Geneva in their sermons. Richmond Noble (1935) demonstrated that Shakespeare used the Bishops' Bible in his earlier plays. See also BIBLE, BISHOPS'.

8. The Rheims-Douay Bible. English Catholic exile Gregory Martin, aided by William Allen and Richard Bristow at Rheims, prepared a translation with the NT in quarto size and Roman type issued in 1582 (Herbert 1968: no. 177). Martin translated two chapters a day, and the work was corrected by the others. The notes, saturated with Catholic doctrine, are said to be the work of Bristow. The text is paragraphed with verse numbers on the inner margin rather than being broken into verses. OT quotations are in italics.

A preface denies that vernacular translations are necessary and defends the use of the Latin text rather than the Greek, insisting that where they differ, the Latin is superior. Greek was not ignored and most chapters have Greek words in the margins. The existing English translations had been consulted. Carleton (1902) pointed out that there are more resemblances than differences. Treatments of the Rheims usually emphasize the Latin terms, which are incorporated without translation, and despite words like "gratis," "character," "resuscitate," and "victory," all of which have since become accepted English words, the wording must have been confusing. The Glossary included in the NT explains 58 words. Martin felt that reading the Latin words would make the reader familiar with them.

William Fulke and Thomas Cartwright produced works for the refutation of the Rheims. Fulke in 1589 printed the text of the Rheims in parallel with the Bishops' in a work which went through three reprints (1601, 1617, and 1633) and made for wider knowledge of the Rheims than otherwise would have been.

Though Martin prepared the OT before his death on Oct. 28, 1582, it was not published until 1609–10 (Herbert 1968: 300) after the college had moved back to Douay in 1593. Laurence Kellam had done additional revision in keeping with the Latin text published by Clement VIII in 1592. Lack of funds necessitated the delay. The accompanying notes are less polemic than those of the NT, yet the Preface criticizes Protestant Bibles of 1552, 1577, 1579, and 1603.

The NT was reprinted in 1600, 1621, and 1633, but not again until a revision in 1738. The OT was reprinted only in 1635 and then not again until Challoner's revision in 1750 and 1763–64. The OT and NT were not printed together until 1790 and then in a form based on Challoner. Catholics were a persecuted minority in Elizabethan England, and their Bible enjoyed no such popularity as is attested by the many editions of the Protestant Bible. See also DOUAY VERSION.

9. The King James Bible. King James took up the suggestion of John Reynolds made at the Hampton Court conference that a new translation was needed and set in operation the machinery to produce one that the whole church might be "bound to it and none other." The 54 persons (extant lists have only 47 names) were divided into six companies with two meeting at each Cambridge, Oxford, and Westminster. Fourteen rules of procedure authorized only a minimal revision of the Bishops' Bible with the translations of Tyndale, Coverdale, Matthew, Whitchurch, and Geneva followed where they were preferable. The old ecclesiastical words were to be retained. If the repeated screenings suggested in the rules were actually done, a careful revision would have been made. A group of overseers composed of two members of each company was to put the whole together.

Information about the actual procedure followed is sparse. Replacements were made in the groups when deaths occurred. Financing plagued the project. Unable to finance the revision himself, King James attempted to raise money from the Bishops, Deans, and Chapters. Church positions were to be held open for the participants, and the universities were to furnish room and board for those working on their campuses. Eventually, the Stationers' Company supplied 30 shillings a week each for the group that went to London for the final work.

Scattered evidence suggests that the groups were working after 1604. Miles Smith wrote the "Translators to the Readers" which regrettably no longer is printed in King James Bibles but which gives great insight into the purpose of the translation. They aimed to make a good translation better "or out of many good ones, one principal good one, not justly to be excepted against." A flattering dedication by Bishop Barlow to King James is still printed. Bishop Bilson is credited with chapter summaries called "arguments."

The King James (Herbert 1968: no. 309) was issued in folio and in black-letter in 1611 by printer Robert Barker. It contained the OT, the Apocrypha, and the NT as all its predecessors in English had done. Though free of notes, some variant readings and some alternate translations were indicated, and there were center references. Initial letters decorated books, and curiously enough that to the gospel of Matthew is of Neptune taming the sea horses. The title page carried the phrase "Appointed to be read in Churches."

The last reprint of the Bishops' Bible had been nine years earlier. The Geneva was cited in the preface of the KJV, and older translators like Andrewes and bishops like Laud continued to use the Geneva.

Though there is no record of an official authorization, the KJV from the beginning dominated the field. There were seventeen editions of the KJV in the first three years, and in the period 1611 to 1640, there were only fifteen editions of the Geneva against 182 for the KJV (Kenyon 1958: 305). Ecclesiastical recognition came in 1662 when the fifth *Prayer Book* used citations for the Gospel and Epistles from the KJV instead of from the Great Bible.

The KJV has never been free of criticism and has been progressively revised across its history, beginning as early as 1616. Its literary excellencies have always been recognized. For the next centuries it was the Bible of the English reading public. See VERSIONS, ENGLISH (KING JAMES VERSION) following.

D. From the 17th to the 19th Century

The drive for English Scriptures which had produced 9 revisions in 85 years had spent itself with the KJV. (See the survey in *CHB* 3: 361–82.) A growing recognition of the excellencies of the KJV is in part responsible. Men improved it and commented on it, but civil war in Britain following the death of King James in 1625 occupied public interests. However, private translators continued their work. Translations of the Psalms of David were popular, and one of 1631 said to be by King James is attributed to Sir William Alexander. In 1650 a translation of Psalms in meter was issued by the Kirk of Scotland. Henry Danvers published Solomon's Proverbs alphabetically arranged in 1666.

Henry Hammond in 1653 published his paraphrase of the NT in parallel with the KJV text, and in 1706 Philip Bedingfield did the same for four books of the OT and Apocrypha. Paraphrases were issued in 1727 on OT books by Simon Patrick Lord Bishop of Ely. Philip Doddridge's "The Family Expositor" of 1739–56 contained a commentary and paraphrase on the NT and was printed in America after 1808.

Daniel Mace, a Presbyterian, published a Greek-English diglot in 1729 and is considered a pioneer in NT text criticism. His English was colloquial and, among some oddities, used phrases anticipating those later chosen by others.

William Whiston, translator of Josephus, published a NT in 1745 in which he had made particular use of Codex Bezae but also used the Latin Clermont manuscript and Alexandrinus. Anthony Purver, a member of the Society of Friends, published a Bible in 1764 which is remembered for its colorful rendering of Song of Songs 2:12. Edward Harwood in 1768 rendered the NT which is remembered for its bombastic style of which one example has Peter say, "O, Sir! what a delectable residence we might establish here!"

John Wesley, founder of the Methodists, published a NT in 1755 (Herbert 1968: no. 1114) which shows many departures from the Textus Receptus, making use of the Greek texts which had been published up to his time. Wesley has 12,000 departures from the KJV. He used "love" instead of "charity," returned to pre-Geneva paragraphing, used "who" instead of "which" when referring to persons, and in other choices anticipated twentieth century translations. Wesley also modified unjustified Calvinistic renderings as in Acts 2:47 and Gal 5:17. Wesley retained, however, old English pronoun and verb forms.

Translations aimed at reflecting the increasing knowledge of the text of the NT include William Newcome's work in 1796 based on Griesbach's Greek text as also were those of John Gorham Palfrey in 1828, which modified the KJV text, Samuel Sharpe in 1840, and Edgar Taylor in 1840. Rodolphus Dickinson in 1833 attempted to correct the NT to the content and form of Griesbach's Greek Testament. Leicester Ambrose Sawyer in 1858, Robert Ainslie in 1869, and Samuel Davidson in 1875 used Tischendorf's Greek Text. John Taylor in 1852 issued a NT in which he had compared the KJV with the various readings of the Vatican manuscript. J. B. Rotherham translated the NT from Tregelles's text in 1872. A Tauchnitz edition of the NT in 1869 had English equivalents of variants from the Sinaitic, the Vatican, and Alexandrian manuscripts at the bottom of each page. *The Emphatic Diglott* in 1864 by Benjamin Wilson had Griesbach's Greek text with an interlinear translation and notes on readings of the Vatican manuscript. This work has had vogue with the Watch Tower Society and was printed by it after 1902. In England, Herman Heifetter in 1864 issued a text in a sixth edition from the Vatican manuscript.

The Peshitta version received notice with J. W. Etheridge's translation of the gospel of Matthew in 1843, the four gospels in 1846, and the Acts and epistles in 1849. The NT was translated by James

Murdock in 1851. Etheridge translated the Targums of Onkelos and Jonathan ben Uzziel on the Pentateuch in 1865, and Agnes Scott Lewis the four gospels from the Sinaitic Syriac in 1894.

1. America. Explorers and settlers brought Bishops' Bibles, Geneva Bibles, and the KJV with them (Simms 1936), but no Bibles were printed in America without false imprints of British printers until after the colonial period. The Bay Psalm Book (1640), a versified paraphrase of the Book of Psalms, went through many editions. John Eliot in 1663 produced a Bible translation in the language of the Massachusetts Indians. The Continental Congress considered authorizing the printing of a Bible but declined because of the unavailability of suitable materials in America (Simms 1936: 126; Herbert 1968: 272–73).

Robert Aitken in Philadelphia in 1777 published a NT and then a complete Bible, the first in America, in 1782. Charles Thomson, former secretary to Congress from 1774 to 1789 issued in 1808 the earliest translation into English from the Septuagint. In 1844 Bagster in Britain printed a translation from Codex Vaticanus by a scholar Charles Lee Brenton. Both of these works have been reprinted in the second half of the 20th century.

The English Version of the Polyglot Bible, using the text from Bagster's Polyglott Bible of 1816 had many reprints in Britain, began to be printed in America in 1831 and had a particular vogue with over a hundred reprints within fifty years (Herbert 1968: no. 1785).

In 1826, Alexander Campbell, preacher for the churches of Christ, issued a NT (Herbert 1968: no. 1759; Hills 1961: no. 567). Campbell had assembled modified translations done by George Campbell, James Macknight, and Philip Doddridge. This very popular work was progressively revised through six editions under Campbell's supervision, was then reprinted many times afterwards, and continues in print. Campbell was a pioneer in the movement toward current speech.

The American Bible Union, an interdenominational cooperation in America formed out of dissatisfaction with the policies of the American and Foreign Bible Society, and wanting an "immersion" version, produced a NT in 1862 with a second revision in 1865.

The KJV text of the NT was arranged in paragraphs by James Nourse in 1827, Alexander Bell in 1837, and Robert B. Blackader (with dates inserted) in 1851. The Bible followed in 1866. A revised Testament of 1824 paragraphed the KJV text, modified punctuation, and expunged some words not in the original. J. T. Conquest in 1841 published the KJV text with 20,000 emendations from various authorities. The OT in the KJV wording was arranged in chronological order by George Townsend in 1821. The NT followed in 1825. A NT with books chronologically arranged was translated from Tischendorf's text by L. A. Sawyer in 1858.

Other 19th-century innovations in the appearance of the Bible include the insertion of a "family register" of births, deaths, and marriages begun in 1804 in printings of Matthew Cary, was continued in 1822 by Samuel Wood, and was taken up by other printers. Near the end of the century in 1899 a publisher began the practice of printing the words of Jesus in red. A later effort in 1910 to indicate in red the OT passages thought to be concerning Jesus failed to become a practice.

Jonathan Morgan, advocate of spelling reform, attempted to improve the orthography of the KJV in 1848; A. Comstock in 1855 attempted use of a phonetic alphabet for the NT.

Joseph Smith's revision of the KJV, called The Holy Scriptures Translated and Corrected by the Spirit of Revelation, was a work of three years (1830–1833) but changes continued until Smith's death in 1844. Smith, without claiming to consult the languages, made the wording relevant to the Latter Day Saints. This revision was published in 1867, has been reprinted several times, and was issued as "The Inspired Version" by the Reorganized Church of Jesus Christ in 1936.

Remembered because done by a famous person is the revision of the KJV in 1833 by Noah Webster who made corrections in the KJV text in grammar, obsolete words and phrases, and in certain mistranslations. Webster used "Holy Spirit" instead of "Holy Ghost."

Julia E. Smith, a member of the Sandemanian sect, was the first woman to translate the entire Bible. Her word for word rendering was published in 1876, and the OT follows the order of books in the Jewish canon. Smith claimed to have written out the Bible five times. Helen Spurrell in 1885 made a translation

from unpointed Hebrew. Women participated in the preparation of the Twentieth Century New Testament, and in the 20th century, Helen Barrett Montgomery, a Baptist, published in modern speech the Centenary New Testament in 1924. See VERSIONS, ENGLISH (AMERICAN VERSIONS) following.

2. Catholic Bibles. The Psalms of David were published by C. Caryll in 1700. Cornelius Nary, dissatisfied with the wording of the Rheims-Douay effort, produced a NT from the Latin Vulgate, supplying annotations and marginal notes, in 1719. Robert Witham issued a NT in 1730 in which he claimed to show the differences between the Latin and the Greek. The most influential reviser was Richard Challoner, who with Francis Blyth issued the Rheims NT in a fifth edition in 1738; but then in 1749 the first of Challoner's revision of the Rheims NT appeared, it was successively revised in following editions. In 1764 the Challoner edition of the Bible containing both the OT and NT appeared, and a fifth edition in 1772 which has been the form widely used by Catholics until modern times. Challoner used the Vulgate edition published by Clement VIII in 1592. He made the language of the Catholic Bible approximate more closely the language of the KJV. The first Catholic Bible published in America was issued by Carey, Stewart, and Company of Philadelphia in 1790. George Leo Haydock compiled a Bible with notes from various commentators which was issued in 1814. Francis Patrick Kenrick, in an effort to exclude corruptions in current Rheims-Douay versions, issued the NT in 1849–51 and the OT in portions completed by 1860 (Hills 1961: noss. 1414, 1730). For other Catholic translations, see F.2 below. See also VERSIONS, CATHOLIC.

3. Jewish Translations. Jews were excluded from England until 1655. Jewish English Bible translation, appearing later on the scene than Anglican, begins with David Levi's *The First (-Fifth) Book of Moses* in 1787. He was followed by Isaac Delgado in 1789 with a translation of the Pentateuch, by a complete OT translated by A. Benisch (1851–56), and by a commentary and translation done by M. M. Kalisch (1855–72). The Hebrew Scriptures were published in America with marginal notes in 1813, but in 1845–46 Isaac Leeser published the Torah in Hebrew and in English aiming at being as literal as possible. Leeser then followed in 1854 with the whole OT in the KJV style, while introducing many changes. Leeser's work was used for a half a century. A project presided over successively by Marcus Jastrow, Cyrus Adler, and Max L. Margolis, began work in 1892 and finally issued its Bible in 1917 under the auspices of The Jewish Publication Society. The KJV style was followed in the English. See also VERSIONS, JEWISH.

E. The Revised Version, 1881–85

After much discussion and agitation on the part of many people for further revision of the KJV, Bishop Samuel Wilberforce introduced a motion for revision of the NT in the Upper House of the Convocation of Canterbury on February 10, 1870. The motion was enlarged to include also the OT. In the plans which developed, Anglicans were to be in the lead, but Baptists, Congregationalists, Methodists, Presbyterians, and Unitarians were represented on the committees. Roman Catholics declined to participate. Harold Browne chaired the OT group of 27 members and C. J. Ellicott the N.T. group of 28 members, making a total of 55. Eight governing principles were agreed upon. The work began in June 1870.

After the project was well under way, it was decided to invite Americans to participate, and Dr. Philip Schaff assembled a group from various denominations who began work on October 4, 1872. Lists of British participants and of rules followed are given by Cadoux (1940: 242–47), and a list of the Americans is in the Documentary History of the Revision.

The NT group held 407 meetings, completing their work in ten and a half years. The OT group met 792 days over a longer period. The British and American companies never met face to face for discussion. A British draft was sent to America and then returned with American suggestions. Those suggestions receiving approval of two thirds of the British committee were accepted. An appendix was projected to carry the important American suggestions which were rejected. The NT was issued May 17, 1881 (Herbert 1968: no. 2017) and printed in both Britain and in America. The OT was issued in four volumes May 19, 1885 (Herbert 1968: no. 2037); but the Apocrypha was only begun later, revised by four committees, and not issued until 1895 (Herbert 1968: no. 2061).

The purpose of the revision was to bring the English Bible into harmony with the original texts—"to make a good translation still better, more accurate and self consistent, and to bring it up to the present

standard of biblical scholarship." Changes in the underlying Greek text followed in the NT are estimated at more than 5,788. E. Palmer in 1881 printed the Greek text with readings adopted by the Revisers, and it was issued in 1947 in a second edition with apparatus by A. Souter. There are estimated to be 36,000 changes in the English of the NT. The OT group did not find it necessary to reconstruct a Hebrew text, but did make use of advances in Hebrew learning.

The text was printed in paragraphs, but traditional chapter divisions were retained for convenience of reference. Dates were omitted in the center column; a special committee dealt with margin references. Book titles remained the same, but page and chapter headings and italics were revised. Poetry was more clearly indicated. The revisers rejected the variety in rendering accepted in 1611 and attempted always to render a Greek word by the same English word. The practice made for difficult English style and for some warping of meaning.

Though received at first with enthusiasm on both sides of the Atlantic, the RV also touched off much criticism. Dean John W. Burgon published a series of harsh critical essays which eventually were gathered into *The Revision Revised*, 1883. Though not convincing in his own day, periodically Burgon's arguments have been revived by such persons as K. B. Wilkinson, D. O. Fuller, and L. P. Letis. In what seems to be an often repeated but unlocatable quotation, Spurgeon characterized the revision as "Strong in Greek and weak in English."

The RV went through numerous printings in its own right but also touched off numerous unauthorized publications in which the two versions were printed in parallel. A Linear Parallel Edition combination of the KJV and RV of 1898 (Herbert 1968: no. 2078) had one line of type where the two versions agreed but printed differences above or below the line. Another in 1899 (Herbert 1968: no. 2087) printed the KJV with the differences in the margin. An edition was printed in America in 1898 with revised marginal references (Herbert 1968: no. 2076) and a similar edition in England in 1903 (Herbert 1968: no. 2124). The Revised Version Old Testament in 1885 (Herbert 1968: no. 2043) printed the American preferences as footnotes. An 1898 printing (Herbert 1968: no. 2077) inserted the American preferences into the text and printed the British preferences in the Appendixes. Printings without the marginal notes began for the British and Foreign Bible Society in 1903 (Herbert 1968: nos. 2125, 2126, 2127) which had decided in 1901 to circulate the RV as well as the KJV. The Society decided in 1904 to circulate the Nestle Greek Text instead of the Textus Receptus. The NT was printed with references compiled by Scrivener and Moulton in 1910 (Herbert 1968: no. 2163).

Despite all these efforts, and despite the revision's being accepted for use in Canterbury Cathedral, Westminster Abbey, and in some parish churches, the passage of time made clear that the RV would never displace the KJV in the hearts of the people.

The American participants in the revision were dissatisfied with the Appendix which the British published. The wording suggested to them an implication that the preferences printed were all the important differences the Americans had. Though abiding by their agreement not to issue a rival revision for 14 years, they planned an American edition.

Within the intervening period all members of the American NT committee died except T. Dwight, M. B. Riddle, and J. H. Thayer. Of the OT committee only G. E. Day, J. DeWitt, C. M. Mead, and H. Osgood survived. Philip Schaff died October 20, 1893.

Work on the final revision—the American Standard Version (ASV)—was begun on the NT on June 24, 1897. Mead edited the OT, and Thayer, who had kept notes of meetings of the earlier committee, led the NT committee. The completed work was copyrighted by Thomas Nelson and Sons to protect "the purity of the text," and the Bible was placed on sale August 26, 1901. Thayer died three months later on November 26. For ASV differences from the RV, see Lewis (1982: 69–105).

The Lockman Foundation, aiming to preserve the ASV and spread its influence, produced the New American Standard Version with NT in 1963 and complete Bible in 1970. The names of the revising committee have not been revealed in order that the merits of the revision not be judged on the basis of those who prepared it. The NASV has an appeal to those who want literalism but are unconcerned about

English style. Considerable freedom has been exercised, however, in inserting added information in the text by use of italics. There have been numerous reprints with modifications since 1970.

F. The 20th Century (Before 1960)

1. Overview. While the KJV continued in popularity with many reprints in many forms throughout the 20th century, a renewed concern arose just before the dawn of the 20th century to bring the English Bible into conformity with current archaeological information, with the current state of Hebrew and Greek knowledge, and with current English speech. Special impetus was given later by Adolph Deissmann's theory that the NT was first written in koine Greek—the language of the people. People came to feel that the NT, not designed to be a masterpiece of prose or poetry but to communicate God's message to men, should be translated into non-literary contemporary English.

The Twentieth Century New Testament, issued in parts, but printed as a unit in 1902? and 1904?, was prepared over fourteen years by a group of about thirty-five men and women of various ages, religious affiliations, and educational qualifications. Though the translators were long unnamed, a study by Kenneth Clark (1955) revealed their identities. The preface, in declaring that the Greek of the NT writers was "the form of language spoken in their day," anticipated Deissmann's discovery. The aim of the translation, which was a pioneer in modern speech versions, was "to exclude all words and phrases not used in current English." Text passages which Westcott-Hort considered not a part of the original text were bracketed. The text was paragraphed with chapter and verse numbers in the margin. OT quotations were printed in italics. Within the traditional groupings, books were given in what was considered chronological order. Money sums were given in current values. Poetry was printed in poetic form. Many of the phrases of this translation have influenced later translations. The Twentieth Century NT was re-issued in 1961 by Moody Press with the books in the usual order.

Ferrar Fenton issued his translation in parts, beginning with the Epistle to the Romans in 1882, with The New Testament in Modern English completed in 1900 and the Complete Bible in Modern English in 1903. The books of the OT, rendered from Hebrew, were in the traditional Jewish order. The NT was translated from the Westcott-Hort text. Fenton is among the few persons who single-handedly have translated the entire Bible into English. A reprint of this Bible was issued in 1938.

The ASV text was issued as The Student's Chronological New Testament in 1904 with the books in an assumed chronological order and with notes by A. T. Robertson. Another chronological effort using the KJV text was made by T. M. Lindsay in 1906. Other chronological efforts were by W. L. Courtney in 1915 and G. W. Wade in 1934. C. F. Kent arranged OT books logically and chronologically in 1927 while translating the texts into their modern equivalent.

The New Testament in Modern Speech, translated by R. F. Weymouth from his Resultant Greek Testament but revised by Ernest Hampden-Cook, was issued in 1903, 1904, and 1909. The fourth edition of 1924 had been revised by well-known NT scholars, and a fifth in 1929 revised by J. A. Robertson. Books had introductions and explanatory footnotes. This work was reprinted in 1936.

Richard G. Moulton issued his Modern Reader's Bible in 22 volumes in 1906, in one volume in 1907, and in an abridgement in 1922. Moulton's work was a rearrangement of the English Revised Version. There are extensive notes. Choices are made between readings in the text and the margin, and there are slight changes of wording needed for modern literary structure.

James Moffatt published The Historical New Testament in 1901, in which he preserved the language of the KJV; however, by 1913 he had prepared a new translation of the NT in modern speech based on the von Soden Greek Text. Moffatt's text was published in parallel with the KJV in 1922. His OT was issued in 1924, and then the whole Bible in a "revised and final edition" in 1935. Moffatt's work enjoyed a phenomenal sale with numerous reprints. Moffatt was later until his death in 1944 executive secretary of the committee preparing the RSV.

Edgar J. Goodspeed prepared The New Testament. An American Translation in 1924 in which he had followed the Westcott-Hort text and had sought "simple, straight-forward English of the everyday expression." There were many printings, with an Anniversary Edition in 1948 containing improvements. Goodspeed's NT was combined with a translation of the OT edited by J. Powis Smith in 1931 with the

title The Bible, An American Translation. Goodspeed also translated the Apocrypha in 1938, and the 1939 edition of the Bible contained the Apocrypha. Goodspeed was later active in the production of the RSV.

The Concordant Version of the NT edited by A. Knoch, appearing in parts between 1919 and 1926, attempted to give the Bible reader a means of interpreting the original text for himself through a uniform English translation for each Greek form. The Greek Textus Receptus with a sublinear literal English translation was on one page and an idiomatic translation on the opposite one. Reprints were issued in 1931, 1944, and a Memorial Edition in 1966.

George M. Lamsa had completed his translation from the Peshitta Syriac by 1957. Lamsa believed that the Syriac was "written in the language in which our Blessed Lord, His disciples, and the Early Christians spoke and wrote." Apart from his questionable presuppositions about the value of the Peshitta, Lamsa was greatly influenced by the KJV and followed its style and format.

Charles B. Williams, Professor of Greek at Union University, Jackson, Tennessee, in 1937 issued The New Testament: A Translation in Language of the People. Working from the Westcott-Hort text, Williams sought to make the NT "readable and understandable by the plain people." A slightly revised edition was issued by Moody Press in 1950. This work is not to be confused with The New Testament in Plain English of 1952 by C. Kingsley Williams, which uses a limited simple vocabulary.

C. F. Kent, C. C. Torrey, and others attempted to eliminate duplicated matter in the NT in The Shorter Bible of 1918, which was then followed by the OT in 1921. A committee directed by S. H. Hooke issued in 1941 The New Testament in Basic English using a vocabulary of 850 words supplemented by 50 special Bible words. This work was followed by The Basic Bible in 1949.

Gerrit Verkuyl issued The Berkeley Version of the New Testament in 1945 from the eighth edition of Tischendorf's text with reference to the Nestle text. Dates for events or sayings and writings of the NT are given. The OT, prepared by a committee with Verkuyl as chairman, was published in 1959. In a revised form, this Bible has become The Modern Language Bible published by Zondervan.

William G. Ballantine issued the thoroughly modern Riverside New Testament in 1923 (revised in 1934). E. V. Rieu issued The Four Gospels in 1952 as one of the Penguin Classics. Hugh Schonfield, a Jewish scholar, translated the gospel of Matthew in 1927 from an old Hebrew manuscript but in 1955 translated the rest of the NT from Greek as The Authentic New Testament. The NT Letters were prefaced and paraphrased by J. W. C. Wand in 1946.

While all of these translations were appearing the American Standard Bible Committee of the International Council of Religious Education began a revision of the William Tyndale line of Bibles last represented by the ASV. Three committees (with Luther A. Weigle as chairman of the whole) made the revision. The consonantal Hebrew text of the OT and the Westcott-Hort Greek text of the NT served as a basis. The revision, done in the light of modern scholarship, aimed to make a Bible suitable for private and public worship. The revision was to be in the direction of the simple, classic English style of the KJV. The NT was completed in 1946, the Bible with a second edition of the NT in 1952, and the Apocrypha in 1956. A Catholic edition issued in 1965 restored to the text some of the passages printed as footnotes due to lack of textual support. "Lord" was used for the name of the Deity. Archaic terms were replaced; however, old English forms were retained in address to the Deity, liturgical passages, and prayers.

Though innovative for its day, the RSV had come by the 1980's to appear conservative in translation practices. The English used was not contemporary. A further revision called the NRSV, done by an international, interdenominational group of men and women, was issued in September 1989. Among other matters, particular effort was made to remove sexist language.

J. B. Phillips began his publication with Letters to Young Churches in 1947. Phillips, during the London blitz of World War II, had found the KJV hard for young people to understand and had begun translating. He had completed his NT by 1958. This very popular work was frequently reprinted and was further revised. Phillips' The Four Prophets followed in 1963, but the rest of the OT was never completed.

In 1950 the New World Translation Committee of the Jehovah's Witnesses issued a NT based on the Westcott-Hort text supplemented by the texts of Nestle, Bover and Merk. The OT was issued in 1960 and

the combined OT and NT entitled The New World Translation of the Holy Scriptures issued in 1961 and 1971.

The Lockman Foundation of Lahabra, California, issued in 1958 The Amplified New Testament edited by Francis E. Siewert and a committee. Alternate words and phrases thought to restore the full meaning of the original Greek are added in brackets. Parts of the OT were issued in 1962 and 1964, and the whole eventually became The Amplified Bible.

2. Catholic Translations. Catholic translations in the 20th century began with F. A. Spencer's modern translation of the four gospels from Greek with reference to Latin and Syriac in 1098. Spencer had completed the NT before his death in 1913, but his work was not published until revised by Callan and McHugh in 1937. In England, The Westminster Version, edited by C. Lattey and J. Keating, was successively issued in volumes of NT books by various scholars from 1913 to 1935 and made into one volume in 1948. Issuing of the OT began in 1934 but was not completed. The Confraternity of Christian Doctrine sponsored revision of the Challoner-Rheims version. Working from the Vulgate, with reference to the Greek, Catholic scholars issued the annotated NT in 1941. In 1949 the NT was combined with the Challoner-Douay OT and a new translation of the Psalms from the new Latin version to make The New Catholic Edition of the Holy Bible. Combinations of the Challoner-Douay and the Confraternity editions were issued in 1950 and 1956. The OT from the Challoner-Douay was combined with the NT and Psalms from the Westminster text in 1958.

Ronald Knox, whose literary skills are well known, issued his NT translated from the Vulgate in London and America in 1944, and in Australia in 1947. Knox issued the OT in 1949, and the two were combined in the Bible of 1956. Knox's language is described as "timeless English," but he occasionally resorts to paraphrase. Knox's Bible received official approval for use in Britain.

A very significant event in Catholic history was the papal decree *Divino Afflante Spiritu* of 1943, which opened the way for Catholic translations from the original languages. In 1954 the NT was translated into modern popular English from the 1943 Bover Greek Text by J. A. Kleist and J. L. Lilly, but the effort failed to gain official approval. The fruit of other translating efforts is beyond the scope of this article.

3. Bibles with Note Systems. One of the most influential note systems of the 20th century is that of C. I. Scofield. These notes have been printed with the KJV text (with revised renderings of some words) since 1909. Scofield, a lawyer turned Congregational minister, was assisted by a board of editors. The reference notes and the introductions to various books set forth premillennial and dispensational teaching. A second edition was issued in 1917 and the copyright renewed by Oxford University Press in 1961 and 1971. A New Scofield Reference Bible, edited with considerable modifications by a group headed by E. Schyuler English was issued in 1967 and 1971. Many of the revised renderings have been placed in the text with the earlier translation in the margin. This work maintains the original theological position but is edited for today's readers.

Also of wide use has been the Thompson Chain Reference Bibles compiled and edited by Frank Charles Thompson beginning in 1908. Since 1929 the copyright is held by the Kirkbride Bible Company. Extensive cross references of terms and names, as well as an index of Chain Topics of the KJV text, seek to guide the reader in tracing any important theme through the entire Scripture. This Bible went through many editions and reprints. As of 1983, the Thompson Chain-Reference Bible has also been adapted to the NIV text and issued jointly by Kirkbride and Zondervan.

Yet another Bible of wide circulation using the KJV text is the Dickson Bible which began in 1902? as The Indexed Bible compiled under the direction of the John A. Dickson Publishing Company. This Bible became in 1931 The New Analytical Indexed Bible edited by James R. Kaye with ASV variants inserted in brackets in the text. With concordance reset and with a new index, this Bible was issued in 1950? as The New Analytical Bible and Dictionary of the Bible. It continues to be marketed by the Dickson Company.

For a discussion of more recent English translations of the Bible, see THEORIES OF TRANSLATION.

JACK P. LEWIS

WYCLIFFE'S VERSION

John Wycliffe (1330–1384; also spelled Wyclif and Wiclif), an active participant in the church struggles of his day (the time of the so-called Babylonian Captivity of the Papacy: 1378–1417), backed Parliament in its refusal to pay the sums the Pope demanded. In theological debates, he attacked the doctrine of transubstantiation. Wycliffe supported and was protected by John of Gaunt, Duke of Lancaster and leader of the feudal party in its struggle against the temporal power of the clerical party. Oxford–trained and Rector of the church in Lutterworth, Wycliffe recruited volunteer lay preachers who came to be known as the Lollards. Wycliffe is quoted as having said, "No man is so rude a scholar but that he can learn the words of the Gospel according to his simplicity."

Wycliffe, trained in Hebrew and Greek, and his associates translated the Latin Bible into the English of his day (about the time of Chaucer: 1340–1400). The NT was completed about 1380. A manuscript in the Bodleian Library makes clear that Nicholas of Hereford did the OT up to Baruch 3:20 where it abruptly breaks off. The identity of the translator of the rest of Baruch, the rest of the OT, and the NT is unknown, but is traditionally ascribed to Wycliffe, though it may actually have been his secretary John Purvey. Completed about 1382, the Bible was a small pocket edition. The language is a stiff, literal translation from inferior Latin texts whose exact identity is unknown.

A second edition in a refined English style which broke free from the influence of the Latin syntax was issued about 1388 after Wycliffe's death. The earliest ms of this refined second edition bears the date 1408. Though names are omitted from the preface, the work is thought to have been done by John Purvey. Purvey tells the reader that he "had much travail with divers fellows and helpers, to gather many old [Latin] bibles, and other doctors, and common glosses, and [so] to make one Latin bible in some measure correct" (Preface). About 30 of the 170 extant mss are of the original text, and the rest are of Purvey's revision. The *Epistle to the Laodiceans* (an apocryphal work of the 4th century) was inserted in this second edition. On the other hand, the doxology of the model prayer (Matt 5:13) was not included. The book of "The Deeds of the Apostles" follows the Epistle to the Hebrews. According to Foxe (1563), in the 14th century, a copy was quite expensive.

Wycliffe's Bible aided in the unification of the English language and prepared the way for later English translations. While the language of Wycliffe is hardly understandable to a current English reader, and while an ample number of oddities can be cited, "the strait gate," "the narrow way," "the beam and the mote," "compass land and sea," and other phrases have stayed with us. Butterworth attributes four percent of the King James Version's wording to Wycliffe and contemporary English sermons.

A provincial synod at Oxford in 1408 proscribed Wycliffe's work and forbade any person to translate any part of Scripture without permission of the bishops, but the bishops made no move to give the people vernacular Scriptures. Bishop Arundal spoke of "That wicked and pestilent fellow, the son of a serpent, the herald and child of Anti-Christ, John Wycliffe" whom he saw "doing the work of Anti-Christ by the expedient of a new translation of Scripture into the mother tongue." The Council of Constance condemned Wycliffe's writings to be burned and ordered his bones dug up out of consecrated ground. Wycliffe's bones were burned in 1428 and the ashes thrown into the River Swift.

The earliest printing of Wycliffe's NT (later edition) was by John Lewis in 1731 (Herbert 1968, No. 110), with a reprint in 1810 (No. 1537). (All numbered references follow Herbert 1968.) The text from a different ms was included in Bagster's *English Octapla,* 1841, and a printing from another manuscript was in 1848 (No. 1868). The first printing of the complete Wycliffe Bible from the Purvey revision was by Forshall and Madden in 1850 (No. 1876). The Gothic and Anglo-Saxon Gospels were printed in parallel columns with Wycliffe (early version) and Tyndale in 1865. A New *Biblia Pauperum* of 1877 (No. 2008) has pictures based on verses extracted from Wycliffe. Forshall and Madden's NT was extracted and reprinted in 1879 by Skeat (No. 2011), and parts of the OT in 1881 (No. 2015). A photographic reprint of the NT in the Purvey revision was issued in 1986 by International Bible Publications (Portland, Oregon). For further discussion see *CHB* 2: 387–415.

AUTHORIZED VERSIONS

Authorized version means authorized for use in the Church of England. A provincial Oxford Synod in 1408 forbade English Bible translation until permission was had from the diocesan bishop or provincial council; but the bishops were slow to grant such permission because early translators had Lollard or Lutheran connections. There appears to have been no royal prohibition, but the decree of the synod seems to have been influential beyond the actual authority of the gathering.

Even before Henry VIII became head of the Church of England in 1534, desirous people were looking to the king for authorization of Bible circulation, but the king was not yet favorable toward such action. In June 1530, the king had issued a royal proclamation prohibiting possessing Holy Scriptures translated into the vulgar tongue of English, French, or German; at the same time the king promised to provide for an authorized translation when the time was right (Pollard 1911: 163–69). An anonymous letter attributed to Hugh Latimer reminded the king of the promise in December 1530.

William Tyndale in 1531 offered in vain to return to England to suffer whatever fate might be in store if the king would allow to circulate a bare text of Scripture done by any translator whom he would choose. In 1533 George Joye sent his sample translation of Genesis to Henry VIII and Anne Boleyn in an unsuccessful effort to obtain a license to translate the whole Bible. In December 1534, the Canterbury Convocation petitioned the crown for an English Bible by translators to be named by the king and then to be delivered to the people for their instruction (Pollard 1911: 175–77). Cranmer at one time divided Bible portions among bishops and clergymen for revision, but the project failed (Pollard 1911: 196–98).

Before her death in 1536, Anne Boleyn persuaded Henry VIII to have an English Bible placed in every church, and injunctions to this effect were prepared by Cromwell in 1537. The Injunctions, however, were not issued.

Coverdale's first edition had a dedication to "King Henry and Quene Anne" which assumes that the king was personally interested in Bible translation. The atmosphere in Britain was changing rapidly. The 1537 edition (Herbert 1968: No. 32) substituted "Quene Jane," and then the quarto edition of 1537 (No. 33) dedicated to "King Henry and Quene Jane," carried on its title page "Set forth with the Kynges moost gracious licence." Hence, in a sense, it was the first authorized version of the English Bible.

The merchant-publishers Richard Grafton and Edward Whitechurch bore the cost of 1500 copies of the Matthew's Bible. Grafton in August 1537 sent a copy to Archbishop Cranmer. In a letter of August 4, 1537, Thomas Cranmer commended the Matthew's Bible (No. 34) to Thomas Cromwell and requested that Cromwell secure a license from the king for its circulation. Within a week (August 13th) Cromwell replied that he had obtained permission for it to be bought and sold within the realm (Pollard 1911: 215–16). Dedicated "to the moost noble and gracyous Prynce Kyng Henry the eyght," it carried the print "Set forth with the Kynges most gracyous lycēcex." The king was the supreme head of the Church of England licensing the Bible for personal and political reasons.

The merchant-publisher Grafton presented six copies to Cromwell on August 28 requesting further licensing which would protect the investment he had in printing (Pollard 1911: 218–19). Later, Grafton wrote again proposing that every curate have a Bible and each monastery have six as a means of overcoming the papists (Pollard 1911: 222). A diglot New Testament (No. 36) containing Latin and Tyndale's English was published in 1538 by Robert Redman and carried the claim, "Set forth vnderthe Kynges moste gracyous lycence." In the same year a diglot (No. 37) including Coverdale's testament with the identical claim was published.

In September 1538, injunctions were drafted to the clergy that they by a certain date must obtain "one boke of the whole Bible in the largest volume in Englishe." No man was to be discouraged from reading the Bible. The GREAT BIBLE, already in preparation, was then issued in April 1539 to meet the need as

well as to correct problems raised by the authorization of Matthew's Bible with its prologue and notes which was heavily dependent on Tyndale. A royal decree of November 1538 forbade the importation of divine Scripture with notes, prologue, or additions without his majesty's special license (Pollard 1911: 18, 240–42).

The title page of the Great Bible depicted God at the center top with hands outspread blessing the king who is giving out the Bible to Cranmer and Cromwell, who are giving copies to the people. A crowd of people are exclaiming "Vivat Rex" and "God Save the King." The symbolism connects authorization of Scripture with proper and loyal obedience to King Henry VIII. On November 14, 1539, Cromwell secured a Royal patent which gave him authority for five years to determine what Bibles were printed in England (Pollard 1911: 257–59).

In its April 1540 printing (2nd edition), the Great Bible was the first Bible to carry the imprint "This is the Byble apoynted to the vse of the churches." The fourth and sixth editions had "auctorised and apoynted by the commaundement of oure moost redoubted prynce and soueraygne Lorde, Kynge Henry the.viii … to be frequented and vsed in every church w'in this his sayd royal realme …" Cromwell, patron of the Great Bible, fell into disgrace and was executed in July 1540, but the Bible continued to be printed with Cromwell's coat of arms excised from the title page.

The November 1540 (No. 60) and November 1541 (No. 62) editions carried the names of the Bishops of Duresme and Rochester, the first of whom was Cuthbert Tunstall who as Bishop of London had refused to aid Tyndale and later had ordered Tyndale's testament to be burned. A royal decree, May 6, 1541, further ordered curates and parishioners to provide Bibles in the churches (Pollard 1911: 261–65). Bishop Bonner provided six for St. Paul's in London.

After 1542 Bibles were not printed in England during the remainder of the reign of Henry VIII, and freedom for Bible reading became more restricted. A February 1542 Convocation moved to have another version issued which was to be corrected by the Vulgate. Committees for revision were formed, but the effort failed with the king's proposal to submit the need to the universities, an action which he never carried out (Dore 1888: 170; Pollard 1911: 276–77).

An act of Parliament in 1543 authorized the circulation of all Bibles not of Tyndale's translation (Dore 1888: 125). The same act allowed noblemen to read the Bible in their homes and noble women to read to themselves alone, but people of lower rank were forbidden to read in English. In 1546, all Bibles were proscribed except the Great Bible (Bruce 1978: 79). In London large collections of other Bibles were burned at St. Paul's Cross. Henry VIII died in January 1547, and, with his passing, policies governing the printing of Bibles changed.

During the reign of Edward VI there were issued printings of thirty-five Testaments and sixteen Bibles of various sorts. A 1547 injunction ordered placing in the parishes the whole Bible of the largest volume in English along with Erasmus's paraphrases on the gospels in English. However, with the accession of Mary, printing again ceased. No official use of the English Bible was allowed, but private Bible possession was not forbidden.

When Elizabeth came to the throne (November 1558), the injunctions of 1538 were repealed and various Bibles were again reprinted and circulated freely. In 1559, an injunction that the Great Bible was to be set up in the churches was issued. A 1569 printing by Cawood of the Great Bible (No. 127) carried the claim "According to the translation that is appointed to be read in the churches."

Although never sanctioned by royal authority, convocation, or by Parliament, the GENEVA BIBLE prepared by English exiles in Geneva enjoyed great popularity with 140 editions between 1560 and 1640. It was first issued in convenient quarto size in contrast to the folios of the Great Bible, Bishops' Bible, and the King James. John Bodley received a patent for the right to print it in England for seven years, a right which he seems not to have exercised. After its expiration, Matthew Parker petitioned for a twelve year extension for Bodley; however, the Geneva Bible was printed first in England only in 1578, three years after Parker's death. A 1597 printing had on the title: "To the most vertuous and noble Queen Elizabeth." The Geneva was approved for use in Scotland in 1579. However, after the Geneva ceased

being printed in England in 1616, Archbishop Laud forbade the importation of the Geneva Bible into England because of errors in the Amsterdam printings.

Much earlier Archbishop Matthew Parker had in 1568 requested that William Cecil (secretary to Queen Elizabeth) obtain royal approval of his BISHOPS' BIBLE which had been prepared by about eighteen persons most of whom were bishops. The Bible had Elizabeth's picture on the title page, but was not otherwise dedicated to her. The license seems never to have been forthcoming. Nevertheless, printed by Jugge, the royal printer, the Bishops' Bible colophon carried "cum privilegio Regiae Maiestatis" which applied to the printing not to its use. Convocation of the Province of Canterbury in 1571 did order that every bishop and archbishop have a copy "of a Bible of the largest volume as published recently in London" in his house and that each cathedral and other churches have copies as convenient. Editions of 1574–78 had "Set foorth by aucthoritie"; the 1584 edition (No. 185) had "Of that Translation authorised to be read in Churches"; then the 1585 edition (No. 188) and successive editions including the 1602 had "Authorised and appointed to be read in Churches." However, no injunction requiring the Bishops' Bible to be read in churches was ever passed by royal authority.

Archbishop Whitgift, noting in a letter to Bishop Wicham, 16 July 1587, that some churches lacked Bibles or only had torn or defaced ones "and yet not of the translation authorized by the synods of bishops," instructed Wickam in his visitations to see that churches had "one Bible or more, at your discretion, of the translation allowed as aforesaid …" In printing his *The Text of the New Testament* … of 1589 which contained the Bishops' NT in parallel with the Rheims, William Fulke called the Bishops' "the translation of the Church of England." Nevertheless, the Geneva continued in popular use and some were bought by churches.

The KJV was produced with the encouragement of King James who at the Hampton Court Conference proposed that it be approved by the bishops, the chief learned of the church, the Privy Council, and at last ratified by his Royal authority, "with this whole church bound to it and no other." History has, however, preserved no record of its ever having received official approval by Parliament, King, Privy Council, or Convocation. Some have conjectured that an authorization once existed but that the record was destroyed in the fire at Whitehall in 1616; however, scholars have not been convinced and suppose that no authorization existed. Butterworth (1941: 6) suggested that the KJV was not entered in the Stationers' Register because it was considered a revision rather than a new book. From the first edition the KJV carried the print "diligently compared and revised by his Maiesties special Cōmandement"and "Appointed to be read in Churches" just as the Bishops' Bible before it had. The dedication expressed great hope that "the Church of *England* shall reap great good thereby." Certain of the Visitation Articles began to specify a Bible of the "latest edition," and the Scottish Canons Constitutional and Ecclesiastical of 1636 specified "the translation of King James"; however, the ruling was rejected two years later. With more than one translation allowed, there was no authorized version in Scotland. Official church recognition in England for the KJV came in 1666 when the fifth edition of the Prayer Book used the KJV for its scripture.

The King James NT was printed first in Scotland in 1628 (No. 420), the complete Bible in 1633 (Nos. 476–77), in Ireland in 1714 (No. 928), and in America (with a fictitious imprint) in 1752.

Historically "Authorized Version" has meant authorized for use in the Church of England. Denominations may authorize any particular translation for use within the denomination, but there is no ecclesiastical or political body with authority to authorize a translation for the use of all Christendom.

JACK P. LEWIS

KING JAMES VERSION

The King James Version developed as a result of a suggestion of need made at the Hampton Court Conference in 1604 by John Reynolds, a leader of the Puritans. Surprisingly, the suggestion was taken up by King James who was new in England at the time. King James at the same time derided the Puritans with derogatory remarks about the Geneva Bible which they preferred, and then he approved the making of a translation "so that the whole church to be bound unto it, and none other." Richard Bancroft, Bishop of London, who had opposed Reynolds' proposal promptly lined up with the king, but made the proposal that no notes be included in the Bible.

While a letter of the king states that fifty-four men were appointed to the task, the surviving list of participants has only forty-seven names. Paine (1977) and Opfell (1982) have made detailed studies of the personalities, qualifications, and careers of the men who did participate. Notably missing from the participants is Hugh Broughton who had argued persuasively for a new translation and who considered himself as the most qualified person to make one.

The king, unable to finance the project, suggested that the translators be given preferment in church positions. They seem to have received no remuneration but to have been cared for while at the task at the colleges where they worked. Two companies each were at Oxford, Cambridge, and Westminster. A list preserved by Burnett gives fourteen rules for their guidance, but at a report to the Synod of Dort (1618) only seven rules were mentioned. The revision was to be minimal. The Bishops' Bible was to be followed where it agreed with the Hebrew and Greek, but "Tindall's, Matthew's, Coverdale's, Whitchurch's, Geneva" are next mentioned. Proper names were to be preserved as nearly as possible to the original. Ecclesiastical terms were to be preserved. Bancroft's proposal that no marginal notes be included was accepted, except in the cases where Hebrew and Greek terms were to be explained.

From various sources it can be established that after 1604 the groups were at their tasks without fanfare. Replacements were made in the groups from time to time when deaths occurred, but it is not entirely clear who replaced whom. Seven of the translators were eventually elevated to the episcopate and seventeen or eighteen to other offices. Ward Allen (1969) has identified and published notes kept by John Bois during the work. Puritan and Anglican churchmen, linguists and theologians, laymen and divines, worked side by side. The aim was to produce a translation for the common man.

Following the preliminary work, a further revision was done in a period of about nine months by a smaller group for which they were paid thirty shillings a week by the Stationer's Company. Then Bishop Thomas Bilson and Miles Smith put the finishing touches on the project, supplying chapter summaries, page headings, a preface, and dedication to the king. From 1611 Robert Barker was given a monopoly on the printing, a monopoly later claimed by his son Matthew Barker in 1651.

In their preface, the revisers give as their aim the making of an already good translation even better, "or out of many good ones, one principal good one, not justly to be excepted against." The translators are thought to have used Beza's Greek text and probably the Hebrew text of the Complutensian Polyglot. They were influenced by Beza's Latin, the Geneva, and the Rheims. They give a defense in the preface of their use of variety in rendering terms. The cadences and rhythms which improve on the original won among English readers a love for the style which has not yet died.

While the first edition carried the statement "Newly translated out of the originall tongues & with the former translations diligently compared and reuised by his Maiesties speciall comandement. Appointed to be read in Churches," history has not preserved a record of endorsement by Convocation, Parliament, Privy Council, or the King himself. The Bishops' Bible was not reprinted after 1602, but the Geneva continued until 1644 in Holland. Churchmen like Andrews and Laud continued to use the Geneva in their sermons. However, by 1640 there had been forty editions of the KJV by Barker and his successors. There was no question that it was superior to its predecessors. Ecclesiastical recognition came in 1662 when the fifth Prayer Book was printed using citations from the Gospels and Epistles of the 1611 translation. Despite some very vocal criticisms by Catholics, Hugh Broughton (who said he had rather be tied between wild horses than to let it go forth among the people, and that the translators had put the errors in the text and the correct readings in the margins), William Kilbourne, Robert Gell, and some others, by the

end of the 17th century it had become *the* Bible for all English speaking people. However, the Great Bible Psalms continued to be used in the liturgy.

As a specific example, debate has reigned over whether the 1611 folio edition which read "she" in Ruth 3:15 or that which had "he" is the earlier, with bibliographers favoring "he." The Bible had an elaborate title page and many initial letters. That of the Gospel of Matthew shows Neptune taming the sea horses. Early printings were plagued by misprints one of which is "strain at a gnat" (Matt 23:24) for "strain out a gnat" which has never been corrected. Unnecessary variety in spelling proper names like Isaiah and Esaias, Jeremiah, Jeremy and Jeremias, Elijah and Elias complicates reading. Mythical animals like the unicorn, dragon, cockatrice, and arrowsnake appear. For other communication and translation problems, see Lewis (1981: 35–68). Butterworth estimated that (apart from the Apocrypha) thirty-nine percent of the wording and phraseology of the KJV first makes its appearance in this revision.

The KJV has not been static across the years. Changes made by unknown persons began in 1612 (Herbert 1968: nos. 313–18) and more were made in 1616 (no. 349). The Apocrypha was omitted in 1629 when the first printing at Cambridge (no. 424) was done. In 1633, the first printing was done in Scotland (no. 476). An edition corrected by Goad, Ward, Boyse, and Mead was issued in 1638 at Cambridge and remained the standard text until Paris's edition of 1762 (no. 1142). Benjamin Blaney did a correction for the Oxford University Press in 1769 (no. 1194).

Facsimile reproductions of the 1611 folio were done by the Oxford University Press in 1833 and by World Publishing Company in 1965. A page reprint was done with an introduction by Alfred W. Palmer by Oxford University Press in 1911. The King James 1611 text was printed in Bagster's *English Hexapla* in 1841 and in Weigle's *The New Testament Octapla* in 1962; the text of Psalms in the *Hexaplar Psalter* of 1911 and the Genesis text in Weigle's *Genesis Octapla* of 1965.

The KJV, called "the noblest monument of English prose," has been the object of much praise. Its impact on English speech and literature is beyond measure. It has spawned countless proverbs and proverbial forms of speech. It is the source of quotations which English writers have worked into their productions. It has enriched their vocabulary and their images, and has contributed to their rhythms. For almost four centuries it has been without rival the Bible for the common reader who tends to forget that it is a translation. Despite its original merits and its contribution, however, with the secularization of the English speaking world and the normal change of language, numerous words of the KJV are no longer in use. Its message becomes less understandable to the common person for whom it was intended. In 1988 the KJV lost its dominance in sales on the American market to the NIV.

AMERICAN VERSIONS

The translating of the Bible into the vernacular in the United States has been carried out by numerous individuals and by various committees with a broad variety of purposes. Many of these translators have been concerned with only the translation of the NT. Although the translations of major import have been carried out by committees, individual translators have played significant roles in responding to the need for a new translation, whether out of theological, textual, philological, or translation theory motives.

Individual translators have not been confined by the restraints of religious communities nor by the need to maintain a particular tradition of translation. Indeed the absence of such restraints has contributed to the publication of versions of the Bible committed to particular theological concerns or addressed to persons sharing a specific form of Amero-English. Translation into languages other than English (e.g., North American Indian) has been a more minor aspect of Bible translation in the United States. The existence of bilingual communities resulting from immigration, however, has been an important stimulus to Bible editions and translations.

———

A. The Colonial Period

The history of the United States in its colonial phase reveals the dominance of Bibles imported to America, especially the Geneva Version (1560) and the King James Version (1611). For Bibles in the English language the American settlers depended on Bibles produced by royal license, permission normally extended to the King's Printer or to the Universities of Oxford and Cambridge. The Crown Copyright covered the printing of the Bible and was respected by American printers until the American Revolution.

Bible versions in other languages were not affected by Crown Copyright and we can note as the first American Bible, the Eliot Indian Bible. The Eliot Bible was a translation of the entire Bible into the local Algonquin language and was produced in roman type in Cambridge in 1663. The magnitude of John Eliot's work can be seen in the printing of the Indian Bible in an edition of 1180 pages, each page containing some four thousand characters.

During the colonial period a further American version was produced for German readers. In 1743 Christopher Sower printed a quarto German Bible in Germantown, a suburb of Philadelphia. Second and third editions of this Bible were published by Sower's son in 1763 and 1776. The Sower Bible was a printing of the 34th edition of Luther's Bible with certain sections derived from the Berleberg Bible.

On the eve of the American Revolution, two major language groups in the American Colonies possessed Bibles: the English in imported form from Britain and the Germans through the printing efforts of the Sowers.

The onset of the Revolution severely reduced the importation of Bibles and removed the need to observe the Crown Copyright. During this period there was discussion in the Continental Congress about the restricted supply of imported Bibles and a resolution, never effected, was passed to import 20,000 copies of the Bible. Robert Aitken, a printer of Philadelphia, published the NT in 1777 with three further editions and petitioned Congress for permission to print the whole Bible. The Robert Aitken Bible, a King James Version, was published in Philadelphia in 1782, becoming the first English Bible openly printed in America and with an American imprint.

B. The Nineteenth and Twentieth Centuries

The formation of the Federal government and the ratification of the United States Constitution created an environment in which Bibles could be printed without royal authorization. It is also true that there was a common recognition of the need to revise the King James Version. Many persons recognized the

changes in the English language since 1611 and there was also a ferment acknowledging the need to review the Greek text used as the basis for the translation of the NT.

The first translation of the Bible by an American was that of Charles Thomson, who had served for fifteen years as Secretary of the Continental Congress. When Thomson retired in 1789, he devoted the next twenty years to the study of Greek and the translation of the Bible, accomplished in 1808 with the publication of four volumes. Thomson's use of the Greek text of the Bible was based on the belief that the Greek text was a more accurate reflection of the original Hebrew text of the Hebrew Bible than the MT. Thomson's translation was unusual in another respect, namely, in serving as the first translation of the LXX into any modern European language.

The independence of the United States led to a freedom for translators of the Bible which produced a series of translations from the beginnings of the 19th century to the present day. Individuals used this freedom from the constraints of religious bodies and from the need to defer to authorized versions to create versions suited to many needs. Reflections of the current results of biblical critical studies could be incorporated in such translations including new conclusions about the best Hebrew or Greek text. The widespread growth of biblical criticism in England and Europe in the 19th century fueled this drive for new translations. Experiments in translation occurred with translation principles not reflected in the traditional versions. Translations reflecting the theological concerns of particular religious groups were expressed in new translations. Theories about the original languages of the Bible led to the creation of new translations reflecting those theories. Any of these motivations led individual translators to produce a steady stream of translations in the 19th and 20th centuries. In retrospect some of these translations are of little value in the history of Bible translations except as they point to the prevalence of particular theological or linguistic theories which were subsequently abandoned. The richness of these efforts, however, can be seen in noting that there have been more than seventy translations of at least an entire Testament by American translators since the publication of Charles Thomson's translation.

1. The KJV and its American Revisions. A number of 19th-century translations were the result of individual or collaborative efforts to revise the KJV, seeking an improvement of style or to express the particular translation theory of the translators. David Bernard collaborated with several translators, including A. C. Kendrick and George Ripley Bliss, to produce in 1842 a Bible published by the J. B. Lippincott Company of Philadelphia. Editorial revisions of the KJV were effected in the Bernard Version: consistency in the orthography of OT and NT names, alteration in archaic words, and corrections of improper grammar. This translation is one example among several reflecting the 19th century debate about the best translation into English of the word, baptize, seen as a transliteration into English from the Greek text. The Bernard translation and several others of this period argued that the only proper translation is "immerse." American versions of the Bible following the "immersion" translation appeared from at least 1826 (the Alexander Campbell version) to 1928 (the George N. LeFevre version). Notable among these immersion translations is the translation by Julia E. Smith of the entire Bible, published in Connecticut in 1876 and notable as the first translation of the complete Bible by a woman.

An important voice in the creation and distribution of Bibles in America was the American Bible Society, founded in 1816. By 1849 a history of the American Bible Society could report that more than five million copies of Bibles and Testaments had been distributed. The Society, a major publisher of the KJV, was among those who determined to revise and standardize the King James text. In 1847 the Society appointed a committee to review the King James text. The efforts of the committee led to the publication of a "standard" text in 1850 of the KJV and the entire Bible in 1852. Although the American Bible Society's committee found some 24,000 variations among the six King James texts reviewed, the committee reported that none of these variations damaged the integrity of the text or affected biblical doctrines or precepts. A second committee, more conservative in its revisions of the King James text, issued a further revised King James text in 1857. In 1962 the American Bible Society issued an even further revision of a standardized King James text, printing the text in paragraph form and dividing the poetic sections into lines.

The efforts to revise the KJV by agencies like the American Bible Society and by individuals helped to sustain the widespread popularity in the United States of the KJV. Individual efforts were made to translate the Bible, or especially the NT, by persons committed to particular theories characterized by a modern historian (Simms 1936: 228) as "eccentric in character or claim." An instance of this can be seen in the commitment to spelling reform by Jonathan Morgan, a Maine lawyer, who published in 1848 a NT translation incorporating various examples of phonetic spelling.

a. The American Standard Version (ASV). Further important efforts to revise the KJV in the United States must be understood as efforts to respond to the British initiative in the publication (1881–1885) of the English Revised Version (ERV). In England in 1870 the upper house of the Convocation of Canterbury established a committee, subsequently including non-Anglican members, to revise the KJV. Efforts to involve American scholars in the preparation of the ERV failed because of distance. The result of the limited involvement of Americans led to the publication in 1901 of the American Standard Version (ASV), with Thomas Nelson and Sons holding the copyright. A comparison of the ERV and the ASV reveals the frequent departures of the ASV Committee from the decisions of the ERV Committee. Whatever the merits of the eclectic decisions of both the British and American Committees with respect to the choice of a particular NT Gk text, the ASV revealed a heavy dependency of the translation on the syntax and style of the Greek and Hebrew texts. This was consistent with an acknowledged goal of being as nearly literal as possible. Although the ASV avoided many archaic expressions in the KJV (e.g., "holpen," "bewray," "pourtray"), the translators did not use those English terms for biblical words and phrases which would have been natural in the usage of their time. The result was an English translation judged by many American readers to be stylistically unappealing.

b. The Revised Standard Version (RSV). The ASV copyright was acquired and renewed in 1928 by the International Council of Religious Education, which appointed a committee to recommend on the need for further revision. A positive recommendation was made with the stipulation that the revised translation remain close to the Tyndale-King James tradition. It was expected that the best understanding of Greek and Hebrew texts would be used and that the English usage would reflect modern usage. The work of the American Standard Bible Committee was interrupted in the early 1930's and in 1937 the International Council authorized a new revision intended for use in "public and private worship" which would "preserve those qualities which have given to the King James Version a supreme place in English literature." The language of the Revised Standard Version (RSV) was to be "in the direction of the simple, classic English style of the King James Version." Such direction separated the intended translation from modern speech translations and paraphrases and also freed the translators from the need to use Elizabethan English, a restriction honored by the translators of the ERV and the ASV.

Separate committees produced the RSV NT in 1946, the OT and complete Bible in 1952, and the Apocrypha in 1957. The translation committees considered the evidence from ancient translations and were guided on occasion by "other authorities" cited in the footnotes of the translation. The OT was not forced into conformity with the NT (e.g., Isaiah 7:14). Idiosyncratic theories of translation or minority views from biblical scholarship were avoided. The RSV tended to follow mainstream positions on textual and other critical matters. The translation language has been viewed as ranging between the 17th and early 20th centuries, but not wholly identifiable with any period in the history of the English language.

Despite widespread acceptance, the RSV has still not displaced the KJV in the sales and distribution of Bibles in America. Although the RSV introduced the large numbers of Bible versions available in the contemporary market of American Bible versions, it is now viewed as a rather traditional translation with respect to translation theory and even in its retention of archaic language. Unlike other translation committees which disbanded upon the completion of their work, the RSV Committee with changes in personnel has continued to meet and in 1989 issued a further revised edition of the RSV, the NRSV.

c. The New American Standard Bible (NASB). The Lockman Foundation of La Habra, California, believed that "interest in the American Standard Version should be renewed and increased." It was committed to produce a translation "in clear and contemporary language" and established a group of fifty-eight anonymous translators to work on the project. The intent of the Lockman Foundation was not to

produce a revised ASV, but "to follow the principles used in the ASV." The result of this effort was the publication of the NT in 1963 and the OT and NT in 1970.

The NASB emerged as a Bible representing a conservative and literal approach to Bible translation. The conservatism of the NASB is evident in its theological outlook and in its approach to the determination of the Heb and Gk texts to be used. The theological conservatism of the translators is evidenced in such examples as the several instances in which explicit references to Jesus Christ are introduced into the OT text. In its textual policy the traditional Hebrew text was used with relatively slight attention to textual readings from Hebrew manuscripts or ancient versions. Although the 23d edition of the Nestle Greek NT was the basic translation text, considerable use was made of the Received Text, the underlying text of the King James translators.

Although the NASB made a number of advances over the ASV in the physical presentation of the translation, it failed to achieve a contemporary language or an idiomatic English usage. Despite various strengths of the NASB, it is unlikely to exceed the ASV in popularity among English Bible translations in America.

d. The New King James Version (NKJV). The popular appeal of the KJV has continued unabated, despite the various efforts to revise its language and style, to improve its typographic appearance, and to replace its textual base. This popular appeal led Thomas Nelson Publishers to undertake a revision of the King James Version which would update the original text as much as possible, but effect as little change as possible. Following discussions in 1975 and 1976 more than one hundred scholars were invited to participate in a new revision. A translation process was established in which individual translators worked with individual books of the Bible and recommended changes to the KJV text. Executive editors reviewed these, as well as an English editor. An executive review committee gave final approval to a translation which was published for the NT in 1979 and for the OT in 1982. The NKJV improves the KJV with respect to readability, but does not attempt to change the format or text of the KJV. In general, the NKJV has been favorably received in theologically conservative Christian circles, though this translation is more successful in linguistic changes than in changes from the text of the KJV.

2. Other Modern Bible Translations. In addition to the various attempts to produce a revision of the KJV in the United States there have been many other Bible translations. Some of these seek to serve the needs of particular populations: children, youth, Christian converts, dialect speakers. There have been attempts to produce paraphrase translations, translations concerned primarily with translation meaning, translations reflecting contemporary Biblical scholarship, translations using "inclusive language" to reduce the sexist language of the Biblical text. At all times there have been translations concerned with the theological significance of the translated text.

a. Modern Language Translations. Among the more recent modern-language translations and also reflective of Biblical scholarship in the 1920's is the University of Chicago Press publication of 1931, *The Bible: An American Translation.* Two Chicago professors, Edgar J. Goodspeed and J. M. Powis Smith (with three scholar collaborators), produced the work. The NT was Goodspeed's translation and the OT was carried out by Smith and his collaborators. Arguing that the NT was written in the ordinary language of its time, Goodspeed intended that contemporary readers should also be able to read the NT in a popular, contemporary usage. The Smith OT was based on the same translation principles as Goodspeed's NT and the two translations were combined in 1931.

The American Bible Society turned in the 1960's to the preparation of "common language" versions of the Bible in several languages. Robert G. Bratcher of the American Bible Society produced in 1966 *Good News for Modern Man,* a translation of the NT referred to as *Today's English Version* (TEV). Bratcher chaired a committee of six to prepare the OT translation which was published in combined form in 1976. The Apocrypha was prepared by three members of the OT Committee and released in 1979. Modern critical Greek and Hebrew texts were used by the translators and the format of the translation was that of most modern versions of the 1960's and 1970's. The text is presented in paragraph form, verse numbers imbedded in the text. Lists, letters and poetry are indented. The translation theory of TEV is based heavily

on the scholarship of Eugene A. Nida of the American Bible Society and exhibits a "dynamic equivalence" translation with great emphasis on effective and accurate communication.

b. Expanded Translations and Paraphrases. Notable among the expanded translations seeking to provide the reader with an enlarged meaning vocabulary has been *The Amplified Bible.* In 1958 the Lockman Foundation and the Zondervan Publishing House jointly issued the NT of the Amplified Bible, prepared by Frances E. Siewert. A committee produced the OT and the entire Amplified Bible was published by Zondervan in 1965. Thousands of words or phrases, more from the NT than from the OT, are supplied with expanded meanings following the translated word in brackets, parentheses, or italics.

The most popular paraphrase translation since the publication of the NT in 1967 and the whole Bible in 1971 has been *The Living Bible.* Using the ASV as the basis of his translation, Kenneth Taylor worked for almost twenty years to produce a translation with the primary goal of communication. The communication is reflective of the theological conservatism of the translator, but the translation has become the most widely read popular English version published by an individual. No attempt was made to use the most recent manuscript evidence and in the absence of the constraints imposed by a committee process, the translator was free to add or remove material from the text as he believed appropriate.

c. Conservative Theological Translations (Protestant). The most successful modern language version reflecting a conservative theological outlook is the New International Version of the Bible (NIV) which was published by Zondervan Bible Publishers in 1978. Originating in the initiatives of committees from the Christian Reformed Church and the National Association of Evangelicals, the New York Bible Society (now known as the International Bible Society) assumed responsibility for the projected translation and appointed a committee of fifteen scholars to oversee it. This 1978 translation emerges from the work of more than one hundred scholars from more than a dozen evangelical Christian denominations. The publishers stress the transdenominational and international character of the NIV. The translators are said to have a "high view of Scripture" and the Preface states that all translators were committed to "the full authority and complete trustworthiness of the Scriptures which they believe is God's Word in written form." The OT is based on the MT and the NT rests on an eclectic Greek text, close to the standard United Bible Societies and Nestle-Aland texts. The response to the NIV has been favorable with respect to its readability and to its format policies.

3. American Jewish Versions. Despite the recognition that the Hebrew text is the only authentic basis for the study of the Torah in the Jewish community, many American Jews in the 19th century knew little Hebrew and used the KJV as their Bible. Not only did this mean the use of a Christian Bible with two Testaments, but also the need to read editions of the KJV in a christological format with Christian interpretations of the OT introduced regularly into the biblical text. Beyond these objections lay the further recognition that the KJV translators had introduced Christian readings into their translation.

The first response to these objections came from the energetic American Jewish leader, Isaac Leeser, who issued a Jewish version of the Hebrew Scriptures between 1845 and 1853. Leeser strove to produce a literal translation of the Bible, dependent on rabbinic commentators and the work of contemporary German Jews.

By the last quarter of the century Jewish scholar immigrants from Europe were increasing rapidly and many Jews believed that there should be a new Jewish translation. The appearance of the ERV in 1885 led some Jews to argue for issuing a revision of the ERV, following the example of London Jews, who published sixteen pages of corrections in 1896 as an *Appendix to the Revised Version.* The initiatives of the Jewish Publication Society led to various attempts at a new translation beginning in the discussions of 1892. Finally, in 1917 under the general editorship of Max Margolis, the Jewish Publication Society translation (JPS) was published. The JPS translation claimed to take into account "the existing English versions" and also to reflect ancient versions as well as the observations of traditional rabbinic commentators.

As the ERV played a significant role in pressing the Jewish community for a new Jewish translation, the publication of the RSV in 1952 had a similar effect on a larger and ever more confident group of Jewish Biblical scholars. Under the general editorship of the scholar Harry Orlinsky, three committees were

established to deal with the three parts of the Torah. In 1962 a new translation of the Torah was published, followed by the Prophets in 1978 and the Writings in 1982. The translators based their work carefully on the MT, even while consulting other versions and commentaries. In English style their goal was an idiomatic English, rather than a literal translation. In 1985 the Jewish Publication Society published a single-volume translation, *TANAKH, a New Translation of The Holy Scriptures according to the Traditional Hebrew Text* (NJPS).

4. American Catholic Versions. The response of the Catholic community to translations of the Bible was conditioned by traditions relating to the required use of the Vulgate as the basis of translation. The widespread use of the KJV in America represented for Catholics the prohibited use of an unauthorized translation. There were additional needs for authorized translations in French, Spanish, and Portuguese to meet the needs of a growing population of Catholic immigrants. For English-speaking Catholics the standard translation was the Douay version, itself the source of various revisions, including that of Bishop Richard Challoner.

In 1790, in response to the urging of Bishop John Carroll, Matthew Carey, a Catholic publisher of Philadelphia, issued the first Catholic Bible in the United States, based on Challoner's second edition in 1764 of the entire Bible. There was concern, however, among Catholic prelates that there should be an authoritative version of the Douay Bible with annotations. The project was undertaken by Bishop Francis P. Kenrick when he was Bishop of Philadelphia and completed by him when he had become Archbishop of Baltimore. The Kenrick Version appeared in six volumes between 1849 and 1862. Archbishop Kenrick never published an edition of the entire Bible, but a complete NT was issued in 1862. Despite considerable support, Kenrick's revision was not accepted as the official American Catholic version. American Catholics used various editions of the Douay-Challoner-Rheims version until the 1930's.

A major step was taken in the project initiated by Bishop Edwin Vincent O'Hara to produce a new translation of the NT from the Vulgate. The initial committee of supervision included thirteen priests who determined that the Clementine Vulgate would be the basis of the translation. In 1941, the Confraternity edition (Confraternity of Christian Doctrine) of the NT was published. Its official title was *A Revision of the Challoner-Rheims Version.* The production of what was known as The Confraternity Version continued and by 1969 the OT was completed, including the Apocrypha. On the basis of the 1943 Encyclical, *Divino Afflante Spiritu,* urging translations from original languages, the NT was retranslated from the Greek. Finally in 1970 the New American Bible (NAB) was published and for the first time there was an American Catholic Bible translated from the original languages. The translation, accomplished by a team of more than sixty scholars (including five Protestant scholars), relied heavily on the MT for the OT translation and on the Nestle-Aland 25th edition of the NT with some use of the United Bible Societies' Greek version of the NT. The format of the NAB is in paragraphs with verse numbers embedded in the text. The translation has been commended for its readability and is intended to serve various uses—liturgical, study use, devotional use, reading in the home. Continuing criticism of the NAB led to a commitment by the Catholic Biblical Association a revision of the NAB approximating a new translation. In 1987, a new translation of the NAB NT was published.

C. Conclusion

In an age of prolific Bible publication, with versions appearing to serve every taste and to suit every need, we can observe several developments. The considerable cost involved in producing a major translation will argue for further versions which are revisions of revisions (e.g., as in the case of the American RSV and the British NEB). A primary concern for meaning and readability will influence the trend to produce translations which are more reflective of "dynamic equivalence" than "formal equivalence." The strong voices of the major religious traditions will seek to continue the achievements represented by such American translations as the RSV, the NAB, and the NJPS. At the same time, there will be both an attempt to produce translations which are supportive of the theological views of particular segments of a religious tradition (e.g., the NIV) as well as attempts to find a common Bible translation which can surmount the differences between religious traditions (e.g., the experiments with an edition of the RSV acceptable for use by both Catholics and Protestants). The 19th and 20th centuries have emerged

as a major period of Bible translation and publication. Within that major period American versions of the Bible play a role of increasing importance.

ERNEST S. FRERICHS

VERSIONS, JEWISH. All translations of the Hebrew Bible are basically Jewish; they cannot be otherwise. For not only is the Hebrew text itself a Jewish work, but the earliest translations of it, the (Greek) Septuagint (LXX) and the (Aramaic) Targums, were also made by Jews for Jews in pre-Christian times; indeed, even the next important translation of the Bible, the (Latin) Vulgate made by Jerome at the end of the fourth century for Christian readers, was made directly from the "Hebrew Truth" *(hebraica ueritas)* and was strongly influenced by LXX and by Jerome's Jewish teachers *(hebraeus meus)*—to the point where it was regarded, and denounced, by some contemporary Christians as manifesting too much Jewish influence.

The great age of Bible translation brought on by the Reformation in the early 16th century was marked significantly by additional Jewish influence. The commentaries and grammars produced by learned Jews during the preceding half-millennium, especially in Moslem countries during the floruit of the great Islamic culture—it was still the "Dark Ages" in Christian countries before the Renaissance emerged—were widely and intensively used by the new, Protestant translators. Best known among these Jewish scholars were Rashi (d. 1105), Abraham ibn Ezra (d. 1167), and David Kimchi (or Radak; d. 1235); and best known among the Protestant translators and versions were Martin Luther, Wiliam Tyndale (and such revisions of Tyndale as the Coverdale, Matthew, Great, Geneva, and Bishops' Bibles), the translators of the King James Version (1611) and hence of the two major revisions of KJV, the British Revised Version (1885) and the American Standard Version (1901)—down to and including the New Revised Standard Version (1989). Indeed, if Luther was mocked by his detractors, not without justification, in the ditty, *Si Lyra non lyrasset/Lutherus non saltasset* ("If Lyra had not played the lyre/Luther would not have danced"), even more justifiable would have been the additional lines, *Si Rashi non composuisset/Lyra non lyrasset* ("If Rashi had not composed the music/Lyra would not have played the lyre"). Nicholas of Lyra, a Jewish convert to Christianity, had literally adopted Rashi's commentary as his own, turning the original into Latin. To cite but one more case in point, it has been observed (Margolis 1917: 61) that "the influence of Kimḥi … may be traced in every line of the Anglican (KJV) translation of 1611."

The Jewish people were not given to making translations of the Bible, for unlike the Christian communities they generally had direct access to the original Hebrew text; indeed, the text was an integral part of their daily life. Thus, e.g., the Pentateuch and the Haftarot (portions of the Prophets), the book of Psalms and the Five Scrolls, constituted a part of the daily liturgy and of the prayers for the Sabbath, the sacred festivals, and other special occasions. There was an additional important factor. Already in the last centuries before Rome deprived Judea of its sovereignty, the Jews had developed the legal concept of the Oral Law (*torah še-bĕʿal-pê*), according to which God gave Moses on Mount Sinai an Oral along with the Written Law *(torah še-biktāb),* with the Oral Law prevailing over the Written when the two could not be harmonized with one another. The Oral Law was determined by the rabbis in power at any given time, and the arguments pro and con may be found readily in the pages of the Talmud. Since the Written Law, i.e., the Hebrew text of the Bible, and the Oral Law were accessible to Jewish communities everywhere, translation of the Bible into a vernacular was only relatively rarely necessary, and at best sporadic.

During the long history of Bible translation, covering a period of some 2,200 years, four Jewish translations of the Bible stand out insofar as scholarship and impact are concerned: the LXX and the Targums during the last couple of centuries B.C.E., Saadia's version in the 10th century, and the New Jewish Version (NJPSV) in our own days (1962–82; one-volume edition, 1985). The LXX and the Targums—the former especially because it became the Bible of the Christian world—determined the basic character of virtually every serious Bible translation that came into being prior to the 1950s, above all in the matter of philosophy of translation. The translators of the Septuagint and the Targums were making the sacred Word of God available in the vernaculars to their fellow Jews, and one did not toy with divinely revealed and inspired Holy Writ. Moreover in that period and milieu, Greek and Latin were the dominant vernaculars, and as cognate languages it was natural to translate the text in either one of them into the other virtually literally, word for word and in the same word order. These two independent factors combined to create a philosophy of Bible translation, that of word-for-word reproduction of the Hebrew text, a philosophy that is only in our own days giving way to another.

The Targums, too, even if often enough in oral form, followed the order of the Hebrew—Hebrew and Aramaic are, after all, cognate languages; occasionally, however (but far less frequently than scholars have tended to assert) interpreting a phrase or event. The impact of the Targums on Christian Bible translation (in part by way of Kimḥi's frequent citations of it in his widely-used commentary) was especially strong from the Reformation on, through direct contact with Jewish scholars and scholarship and through Latin translations of Jewish writings.

Probably the outstanding translation of the Bible ever made by an individual is the (Judeo-) Arabic version by Saadia ben Joseph (892–942 C.E.). His sound philological knowledge and his essentially rational approach to the comprehension of the text found expression not in a mechanical, word-for-word "pony" translation but in an overall philosophy of translation according to which the idiom of the original Hebrew was turned into a corresponding idiom of his Arabic vernacular; thus the reader was told exactly what the biblical author meant to convey to his reader. In sum, sound scholarship, clarity, and elegant diction characterized Saadia's version.

An interesting aspect of this philosophy is the way in which Saadia sometimes ignored the traditional Hebrew sentence division so as to reproduce for his reader the intent of the text. Thus in Genesis 1, he combined the verses containing the refrain, "And it/there was evening and morning …," with the verses that followed: 4–5a, 5b–6, 8–9, 13–14, 17–18, and 23–24, not to mention 1:51–2:1. A striking example of mid-verse division may be found at 2:4b.

With the advent of the Reformation and the rise of a new economic-political-social order in the form of commercial-urban capitalism, first within and alongside traditional agrarian feudalism and then increasingly in opposition to it, Jews began to move into the more tolerant centers that were springing up. In time, enough Jewish communities adjusted to their new environments and absorbed enough of their new cultures that, like the Jewries of Alexandria and Western Asia before them and of North America after them, they had lost working knowledge of Hebrew and required versions of the Bible in their new vernaculars. And so they began to produce versions of the Bible, though never large in number, to satisfy their needs.

What were these needs? And why couldn't the Jews use the Bibles that the Christians had produced and were using? The basic and clear fact was that the Bibles that the Christians were using were actually Christian, that is to say, they were Christianized versions of the Hebrew Bible with a long history behind them. When the Septuagint became the Bible of the early Christians, it soon came to be interpreted so as to provide proof texts for Christian theological beliefs where they ran counter to those of their Jewish contemporaries. Thus the Gk *pneuma (tou theou)* and the Heb *ruaḥ (ʾĕlohîm)* in Gen 1:2 were given the meaning "Spirit" (viz., the Holy Spirit) in place of original "wind"; Gk *hē parthenos* and consequently also Heb *hā-ʿalmâ* in Isa 7:14 were given the meaning "the virgin" in place of original and correct "the young woman"; and corrupt *našš̆ēqû-bar* in Ps 2:12—even now beyond scholarly comprehension, with none of the versions of real help—was understood as "kiss the Son" (viz., Jesus). It was not the text that was altered, but the meaning of the text. On occasion the Jews were accused of altering the text, e.g.,

when it was claimed that LXX 's *apo tou xylou* (to be understood as "from the cross") following on "The Lord reigns" in Ps 96:10 represented an original Hebrew text that was subsequently deleted by the Jews; or that original *bĕtûlâ* (to be understood as "virgin") was excised in favor of *ʿalmâ* (simply "young woman") in Isa 7:14. Accusations of this kind are described by Swete (1968: 464–69) as "… often obviously wrong … sometimes … even grotesque …"

And so the Jewish versions that began to appear from the Reformation on derived directly from and were essentially no different from the Protestant versions, except in "theological" passages. A striking example is offered by the Spanish Ferrara Bible (1553), where one and the same text was printed for Christians and Jews, except that in Isa 7:14 *virgen* appeared in the Christian edition and *moça* ("maiden") and even *la ALMA* in the non-Christian editions. In England and in the United States, several de-Christianized versions of the King James Bible and then of the Revised Version were published by Jews for Jews; none of them, whatever their claims, was really a "New Translation" or a substantial "Revision," but in this respect they are no different from the scores of Christian Bibles that have appeared since the King James and Revised Version down to our own day and have made the identical claims.

In 1789 Isaac Delgado, described as "teacher of the Hebrew Language," produced in England an English version of the Torah that was intended to correct the King James Bible "wherever it deviates from the genuine sense of the Hebrew expression, or where it renders obscure the meaning of the text, or, lastly, when it occasions a seeming contradiction." Fifty years later, Selig Newman (1788–1871; born in Poland, resident most of his life in England; died in the U.S.A.) published *Emendations of the English [KJ] Version of the Old Testament.* Abraham Benisch (1814–78) published in 1851–56 the *Jewish School and Family Bible,* which "while in the legal portions of the Pentateuch it faithfully reproduced Jewish opinion, was intended otherwise to be an independent product." And Michael Friedländer (1833–1919) edited still another variation on the theme of the King James, *The Hebrew Bible with English Translation. Sanctioned by the [Jerusalem] Rabbinate;* while described as the KJV "slightly retouched," a more revealing description of Friedländer's product would include mention of the fact that it deleted—rather than confronted—such Christianized contexts as Gen 1:2, Isa 7:14, and Ps 2:12 (respectively *rûaḥ, ʿalmâ,* and *naššĕqû-bar*).

In keeping with the relatively small and culturally meager Christian population of the United States until well into the 19th century, certainly so far as a knowledge of biblical Hebrew was concerned, even more did the minute Jewish minority lag behind the level attained by their Jewish counterparts in Europe. This was to be expected; as put by the American author of *New England's First Fruits* (1943),

> After God had carried us safe to New England, and we had builded our houses, provided necessaries for our livelihood, reared convenient place for God's worship, and settled the civil government: one of the next things we longed for and looked after was to advance learning and perpetuate it to posterity; dreading to leave an illiterate ministry to the churches when our present ministers shall be in the dust.

As for the American Jewish community prior to the 20th century, it was not until the Jewish masses of Eastern Europe, with their remarkable knowledge and thirst for knowledge, began to enter this free country, that biblical scholarship began to assert itself. George Foot Moore put it bluntly, in 1889, when he asserted that the critical study of the Old Testament in America was hardly more than a decade old.

It was largely to Jewish scholarship that the American community owed its knowledge of the grammar of biblical Hebrew. One need mention only the first Hebrew grammar, *Dickdook Leshon Gnebreet,* etc., by Judah Monis (a convert to Christianity) in 1735; *A Key to the Hebrew Tongue* in 1815 by Emanuel N. Carvalho; *A New Edition of a Hebrew Grammar* in 1823 by the converted Jew, Joseph Samuel Christian Frederick Frey; *A Manual Hebrew Grammar for the Use of Beginners* in 1833 by James Seixas; *A Key to the Hebrew Language and the Science of Hebrew Grammar* in 1834 by Joseph Aaron; Solomon Deutsch's *New Practical Hebrew Grammar,* in 1868—preceded a quarter of a century earlier by probably the most influential of them all, the two-volume edition of *A Critical Grammar of the Hebrew Language* in 1842 by Isaac Nordheimer (published a year before he died at the age of 42).

It should come as no surprise, therefore, that standing alone as the best translation of the Hebrew Bible produced in America in the nineteenth century is Isaac Leeser's version of the Pentateuch, *Torat ha-*

Elohim ("The Torah of God"; 5 vols., Philadelphia, 5605–1845) and in 1853 *The Twenty-Four Books of the Holy Scriptures … Carefully Translated According to the Masoretic Text on the Basis of the English Version*, both publications offering the Hebrew text along with the translation.

Born and raised in Westphalia, Leeser (1806–68) was orphaned by his mother when he was eight years old and by his father in the year of his bar mitzvah; at the age of fourteen he entered the Catholic Academy in Münster where he received his secular education, and the city's Jewish Institute for his Jewish education. Four years later he came to a maternal uncle in Richmond, Virginia, and a half decade after that he moved on to Philadelphia. There he became the *ḥazzan* of the Mikveh Israel synagogue, and he served the congregation with distinction for just over two decades as spiritual leader, preacher, and educator, before retiring in order to devote himself completely to the translation of the Bible.

L. Sussman has observed (1985: 161)—citing in this connection the observation by Tocqueville in his *Democracy in America* (1831 [shortly after Leeser had settled in Philadelphia]) that "there is no country in the world in which the Christian religion retains a greater influence over the souls of men than in America"—that Leeser recognized that "the core of religion in Protestant America was the Bible," and that the King James was that Bible. And so it was the KJV that Leeser adopted as the basis for the version he would compose. This version, Leeser envisaged, and achieved, would be a Judaizing of the Christian KJV and a rendering of the Hebrew text that would not run counter to the rabbinic understanding of it; in addition, his German background and training, which gave him, e.g., direct knowledge of Leopold Zunz's German translation of the Bible (1838–39) and his own access to German scholarship, helped Leeser maintain a measure of independence from the King James Bible.

Leeser's Bible included the Hebrew text facing his translation, with each verse in the English beginning a new line and each section in the Hebrew marked in the English by the sign for a paragraph; also, none of the Hebrew poetry was reproduced in the form of poetry in the translation. Clearly the format of the KJV lay in the background. But upper case "S" in "Spirit" in Gen 1:2 and in "Son" in Ps 2:12, the norm in KJV and Christian Bibles generally, appeared in lower case in Leeser ("Do homage to the son"); "this young woman" represents *hā-ʿalmâ* in Isa 7:14 (though the incorrect future tense, as in most versions before and since, Jewish and Christian alike, is retained for adj. *hārâ* and for part. *yoledet* "shall conceive, and bear …").

The *thou*'s and the *ye*'s and the corresponding forms of the verbs are preserved, as they were, e.g., in the Revised Version three decades later and in the Jewish version of 1917; and the pronouns referring to God, in accord with KJV (and RV, ASV, RSV, and the rest) are not capitalized.

Yet Leeser will render the sense of a phrase, rather than reproduce it mechanically, more often than the KJV before him and RV and the Jewish version of 1917 after him, so that, e.g., *ûtĕḥî* in Gen 19:20 becomes "that my life may be saved" (adopted in the New Jewish Version) in place of traditional, and meaningless, "and my soul shall live." In Ps 90:3 Leeser departed from the KJV " (Thou turnest man to) destruction," for unclear *dakkāʾ*, in favor of "contrition," a rendering adopted by the 1917 Jewish version and as an alternate by the New Jewish Version (as against "dust" in the text, as in RSV).

An interesting aspect of Leeser's philosophy of translation involves the different methods he used to introduce rabbinic exegesis. "For example," Sussman has noted (1985: 172ff.), "he used parentheses to indicate words he added to elliptical verses 'to make the sense clear.' Instead of having Samuel 'lying down in the temple of the Lord,' he had him 'sleep in (the hall of) the temple' (1 Samuel 3:3), a correction that brought the translation into agreement with a rabbinic understanding of priestly protocol but, nevertheless, was a non-literal addendum. In some instances, Leeser … sought to harmonize conflicting passages … 'so that they reflect the final decision in Jewish law.' …" Thus he rendered *lĕ-ʿōlām* in Exod 21:6 by "till the jubilee" instead of "for ever," and thus accords with Lev 25:10. In sum, as put by Margolis (1917: 94), "… the changes introduced by [Leeser] are so many and so great that his translation may lay claim to being an independent work …"

As the 19th century wore on, the increasing influx of Jews from Eastern Europe brought about two major developments in the American Jewish community. In 1888 the Jewish Publication Society of America (JPS) came into being in Philadelphia, with the avowed purpose of constituting the cultural

representative and funnel of the entire Jewish population of the country; in time it achieved that purpose, largely under the leadership of Cyrus Adler, the first American to receive the Doctorate in Semitics at an American university (Johns Hopkins). The other major development involved the making of the Bible translation that replaced Leeser's as the unofficially "official" Bible of English speaking Jews in America and the world over. Indeed, the raison d'être and growth of the Society was tied closely to the making of that Bible.

At its second biennial convention (1892), the Society decided to produce a new English version of the Bible for use in synagogue, home, and school, the version to be based on Leeser's Bible. But for various reasons, virtually nothing was achieved for almost two decades, until a new procedure was introduced in 1908. The outstanding Jewish biblical scholar, Max L. Margolis, would serve as editor in chief of a committee of seven in all—none of the other six were specialists in Bible—and he would prepare a draft of the new version for the committee to work from; the draft, however, would not be based on Leeser—which had been based on the KJV —but directly on the Revised Version that the British had published in the mid-eighties. The project was completed in 1917, with the publication of *The Holy Scriptures according to the Masoretic Text. A New Translation with the Aid of Previous Versions and with Constant Consultation of Jewish Authorities,* soon to be called simply "The JPS Bible."

Like so many other Bibles before and after 1917, the word "New" is a misnomer in connection with the word "Translation"; for the JPS Bible was essentially a very modest revision of the Revised Version, along the lines of Leeser's revision of the King James. Both Leeser and JPS—though the former often less so than the latter—adhered to the same word for word philosophy of translation and to the same kind of old-fashioned vocabulary and style. What made them Jewish was their de-Christianization of the Christianized passages of the Hebrew. No serious attempt was made in any way to produce a fresh translation directly from the Hebrew text; whatever was satisfactory in the KJV or RV was retained. As for the externals, unlike KJV-Leeser, where every sentence, prose or poetry in the Hebrew, constituted a separate paragraph, RV had introduced paragraphing; but JPS went beyond RV, by printing its text as poetry when the Hebrew was poetry, by capitalizing the KJV-Leeser-RV pronouns "thou, thee," etc., when they referred to God, and by putting direct discourse inside quotation marks.

Mention must be made, even if but briefly, of translations in Yiddish. The earlier ones, in the 17th–19th centuries, were made for women in Eastern Europe, where their education lagged far behind that of men; the translations generally covered the *Ḥumaš* (Pentateuch), the *Haftarot,* and the *Megillot,* and they came to be called familiarly *ṣê (ʿ)nâ ûrĕʿênâ* (cf. Cant 3:11). The most serious Yiddish version was that by Yehoash (Solomon Bloomgarden; 1870–1927), who lived to see the first two volumes (the Pentateuch) of a beautifully printed edition in eight volumes (1937). A two-volume *Folks Oísgabe* (People's Edition) came out in 1938, followed by a bi-glot edition (Hebrew and Yiddish) in 1941. In 1949 Mordecai Kosover published a volume of *Heʿáros* (Notes) *tsum Tanakh fun Yeshoash.*

Naftoli Gross (1896–1956) produced fine Yiddish translations of the Megillot (1936) and of the Pentateuch (1948); unlike Yehoash, he tended more toward an idiomatic rendering.

An English version for American Jewry was that by Alexander Harkavy. It had no special merit so far as scholarship was concerned, being essentially a de-Christianization of the King James and Revised Versions. But American Jewry received it well, and a third edition appeared in 1924 in four handsome volumes, containing the Hebrew text and his revised translation. World War I had come and gone, but the economic and social problems that had brought it on were not solved by it. The rampant inflation of the Twenties, the Great Depression that set in after the Wall Street Crash of 1929, the consequent totalitarianism that began to sweep Europe in the Thirties—these created enough anxiety and despair on both sides of the Atlantic for people to wonder whether science and reason sufficed to solve their problems; many turned back to religion as an additional resource. This meant a return to the Bible.

But to what Bible? The old Bibles, KJV, Douay-Challoner, Leeser, RV, ASV, JPS, and the rest, no longer sufficed; their language was less than current and their accuracy open to doubt—for hadn't archaeology been making available considerable and important data for the better understanding of the Bible ever since King Tut's tomb had been discovered in 1922? And so Protestant and Catholic

authorities had begun in the Thirties to plan and to start on the making of new Bibles for their constituents: the Revised Standard Version, which appeared in 1952, and the Confraternity Bible, which was completed by the end of the Sixties.

The Jewish community of the United States and Canada was ready, even eager, for something better than the JPS Bible of 1917; that community was no longer the relatively small and insecure collection of recent arrivals from inhospitable Europe. True, it had just experienced the shattering act of genocide perpetrated by the Nazis and their associates upon European Jewry; at the same time a sovereign Jewish state was already in the making, and North American Jewry itself had grown in numbers and had reached a level of security, prosperity, and sophistication never before attained in the more than two thousand years of diaspora existence. This was not the kind of community that would be content with still another revision along the lines that its Christian counterparts were planning and producing; nothing short of a completely new translation of the Hebrew text was acceptable. More than that, not only would all new data pertinent to the comprehension of the text be utilised, regardless of the beliefs of any of the groups that made up North American Jewry, and not only would the language reflect current literary usage, but the philosophy of translation would, for the first time in the history of official Bible translation, be that of idiom for idiom instead of word for word; the new Jewish version that was being planned would offer the reader in idiomatic, clear English what the original Hebrew author had meant to convey to his audience in the first place.

The New Jewish Version, sponsored by the Jewish Publication Society, made its public debut in 1962 (5723 according to the Jewish calendar) with the publication of *The Torah: The Five Books of Moses*, followed by *The Five Megilloth and Jonah* in 1969 (5729), *The Prophets/Nevi*ʾ*im* in 1978, and *The Writings/Kethubim* in 1982, the whole in one volume in 1985 (5740), entitled *Tanakh: A New Translation of THE HOLY SCRIPTURES According to the Traditional Hebrew Text.* In 1969 (5730) H. M. Orlinsky edited for the Committee of translators a volume of *Notes on the New Translation of the Torah;* as put in the Preface (p. 3), "This is the first time that a committee responsible for an official translation of the Bible has attempted a public and systematic exposition … of its labors and reasoning. This unprecedented act is due in no small measure to the fact that there is now available, for the first time, a large knowledgeable and inquisitive audience for such *Notes* … This sociological fact is evident from the new translation itself."

The idiom for idiom philosophy of translation introduced in the New Jewish Version constitutes a revolutionary breakthrough in the long history of Bible translation. It helped usher in the new, Fourth Great Age of Bible Translation, now represented—in contrast to the King James, Revised, American Standard, JPS 1917, Revised Standard Versions (in part), and such allegedly "New" Bibles as the New American Standard Bible, New King James Version, and (in large part) New International Version, all members of the Third Great Age (early 16th century to essentially the 1960's)—by such other current versions as the Jerusalem Bible, New American Bible, New English Bible, Good News Bible/Today's English Version, and the New Revised Standard Version.

VERSIONS, MODERN ERA. It may be argued that Bible translation in the "modern era" began with the invention of printing in Europe in the 15th century C.E. At this time books certainly became more widely available, and in time the effect upon literacy and literature was immense. Yet the art of printing did not at once increase Bible translation activity. When Gutenberg's famous Latin Vulgate Bible appeared about 1456, by one count (North 1938: 2, 37) the Bible had been translated in whole or in part into 33 languages (European, 22; Asian, 7; African, 4). In time Scriptures were published in printed form in all of these languages from versions already in existence. By the mid-15th century several of the 33 languages were no longer living languages, and the Scriptures in these so-called "dead languages" were eventually printed for scholars, or for liturgical use.

By 1500 the Scriptures had been printed in 11 of the 33 languages, and two languages had been added to the number of those in which Bible translation had been done, namely Serbo-Croatian and Portuguese.

Some authorities would make a case for beginning the modern era of Bible translation with the Protestant Reformation of the 16th century. This movement was indeed a stimulus to such activity. Yet much of the effort went into new translation in languages that already had one or more versions of the Scriptures, or into the revision of existing versions. There was no marked increase in the number of languages into which the Bible was translated. By 1600 there were versions of the Bible in perhaps another 10 languages, all European, for a total of 45.

Two hundred years later, on the eve of the 19th century, the number of languages in which some significant part of the Bible had been printed came to 70 (European, 48; Asian, 13; African, 4; North American, 3; Latin American, 2). These figures do not include a few languages in which Bible translation had been done at some time, but in which the resulting versions had not been printed.

The year 1800 marked a most important turning point. In the first quarter of the 19th century, the number of languages in which versions of Scripture were published almost doubled, to about 125 languages. In the second quarter of the century, the number reached 205. By the end of 1987 the Bible, or some significant part of it (a Testament, or at least one book of the Bible), had been printed in 1,884 languages and dialects. Included in this number are 303 languages in which there are complete Bibles, 670 in which there are Testaments (mostly NT), and 911 having portions. About half of these publications appeared in the half-century prior to 1988. These languages into which the Scriptures had been translated represent the languages spoken by about 97% of the population of the world.

Besides the extraordinary increase in the number of languages into which Bible translations have been done in the modern era, there has been a significant growth in the number of versions produced in many of the major languages of the world. For example, if one takes into account not only complete Bibles, but Testaments and portions, the number of English versions produced in the 20th century alone comes to 159 (Kubo and Specht 1983: 345–75). Similar developments have taken place in other major languages and language families. Even in languages representing fewer users, it is common to find that many versions have been produced.

This article will attempt to describe and explain the monumental development in Bible translation that began about the year 1800. Much more is involved than the numerical increase in the number of languages into which the Bible has been translated. Following a brief historical sketch of movements that affected the production of translations of the Bible, and a review of the spread of Bible translations among the peoples and languages of the world, we will treat several other aspects of the development: the translators and their sponsors; what was translated (texts, versions, scope); how it was done (purposes,

kinds of language and rendering, approaches to translating); and the results (versions, editions, text forms). Finally, we will look at the future of Bible translation.

In dealing with this subject, it is important to note that for hundreds of languages in which Bible translation has taken place, there have been—and in some cases still are—more than one name by which a language may be known. For the most part, we will use the names that are currently in use by the United Bible Societies. In some cases, however, with an eye on history, we may use an older name, where it is appropriate and meaningful in the context. In most such cases the present-day name will also be used.

A. Currents of History and Bible Translation

1. The Catholic Reformation. During the period from about 1500 to 1750 the expansion of the Christian faith from Europe to the New World was largely the work of the Roman Catholic Church. The reformation of the Roman Catholic Church was not simply a response to the Protestant Reformation, but took place in parallel, at times stimulated by the Protestant movement, and again, more or less independent of it (Greenslade *CHB* 3: 384).

The concurrence of reformation in the Roman Catholic Church and the activity of Catholic nations (notably Spain and Portugal, and later France) in the early exploration, colonization, and commercial development of the New World resulted in a widespread expansion of the Roman Catholic Church in this period. Of great use to the Church in this endeavor were the monastic orders, from which recruits for the missionary task were drawn.

Because the Bible was not deemed so central to Catholic missionary activity as the Church and its doctrine, Scripture was not widely translated into the languages of the peoples who were Christianized by Roman Catholic missionaries. To be sure, some parts of Scripture or creed needed for instruction and worship were often rendered for those purposes by the missionaries. For example, Francis Xavier, the great Jesuit missionary to India and the Far East, while working with the Paravas of southeast India in the 1540's, translated for them the Ten Commandments and the Lord's Prayer, along with the Apostles' Creed (Latourette 1953: 929).

There was, however, during this period of Roman Catholic missionary activity, significant Catholic Bible translation done in many of the languages of Europe prior to the year 1800. This was in part in response to Protestant Bible translation inspired by the Reformation. Pope Benedict XIV, on June 13, 1757, issued a decree permitting the reading and printing of vernacular Bibles, provided they were approved by the Holy See, or published with orthodox notes under the supervision of a bishop. But the Roman Catholic Church was not of one mind on the matter. For example, until near the end of the 18th century the Inquisition's ban on the use of vernacular Scriptures continued in Spain, with the curious exception of versions in verse (Greenslade *CHB* 3: 125, 354, 358).

An important change, which greatly affected Roman Catholic Bible translation, came with the encyclical issued by Pope Pius XII on September 30, 1943 entitled *Divino afflante Spiritu.* The encyclical encouraged the study, exposition, and translation of the Bible from the text in its original languages. This was further undergirded by the work of Vatican II in the 1960's. See VERSIONS, CATHOLIC.

2. The Protestant Movement. The Bible was clearly at the center of the Protestant Reformation. In Europe this provided a stimulus for the translation and revision of the Scriptures, especially in the languages of nations where the Reformation was active. Yet in its early centuries the movement was so engrossed in the problems of survival and controversy—both with the Roman Catholic Church and within itself—that it did not reach out in mission to other parts of the world, except in a tentative and isolated fashion. Some Protestants even had a theological bias against such activity (Greenslade *CHB* 3: 387). But as nations where Protestantism was strong became more active in colonizing and in overseas commerce, people of those nations began to take interest in missionary endeavor. It was A. C. Ruyl, a representative of the Dutch East Indies Company, who in 1629 issued the first Malay Gospel, "the earliest example in the history of the translation and printing of a book of the Bible in a non-European language as a means of evangelization" (North 1938: 220).

It was not, however, until the 18th century, with the Evangelical Revival in Great Britain, the Great Awakening in America, and similar movements on the continent of Europe, that the stage was set for the phenomenal growth of the Protestant missionary movement, which caused Latourette (1941–44) to call the 19th century "the Great Century." This movement resulted in a marked increase in Bible translation.

As a result of the Protestant missionary movement, the Bible or significant parts of it were nearly always translated into the language of a people as soon as missionary work was begun among them. In fact, more than once the Scriptures were translated in the language of a people and sent in among them even before the missionaries themselves could gain access (e.g., Korea, China, Tibet).

The Protestant churches did not have monastic orders from which to recruit missionaries. Instead, serving to recruit, train, and support missionaries on the field, there grew up a large number of missionary societies and agencies in Europe and America. This movement had tentative beginnings in Great Britain and Europe about 1700, but it burgeoned beginning in the last decade of the 18th century (*CHB* 3: 387), and had much to do with the great increase in Bible translation activity in the modern era.

Further, of greatest significance for the cause of Bible translation was the rise of the Bible societies (*CHB* 3: 388–93), again at first in Europe and America, but spreading eventually to over a hundred nations around the world. The primary function of these societies was the translation, publication, and distribution of Scriptures around the world. To avoid the sectarian rivalry associated with many earlier annotated versions of the Bible, and to encourage interdenominational support and cooperation, the Bible societies, beginning with the first one formed, the British and Foreign Bible Society (1804), undertook to publish the Bible "without note or comment." Later on the United Bible Societies adopted the modified

guideline, "without doctrinal note or comment," as a concession to the usefulness of objective notes on text and rendering and on cultural or historical background. The Bible society movement had the most profound effect on the proliferation of Bible translations around the world. In time, many other organizations were formed with similar, though often with more special or limited purposes, that served to provide Bible translations as part of the Christian missionary movement (see C.2 below).

3. Orthodox Churches. The long history of the Orthodox churches of E Europe and the Middle East was marked by conservatism in the translation and use of the Scriptures. In the centuries before the modern era, one ancient version stands out, that done in the 9th century C.E. by Slavic missionaries from Macedonia (Salonika) to Greater Moravia, namely Cyril and Methodius. They translated the Bible—or major parts of it—from Greek (LXX and the traditional NT text) into what is called Old Church Slavonic, a version long used liturgically by Orthodox churches even after Slavonic was no longer a living language. The alphabet for this venture in translation was devised by Cyril (or his brother Methodius, or a disciple) and later became the alphabet used for the Russian language.

Old Church Slavonic continued to be used liturgically in some countries (Russia, Bulgaria, Serbia), even in the modern era, much as Latin was used by the Roman Catholic Church long after Catholics could no longer understand it. The Slavonic version underwent numerous revisions reflecting regional development of the Slavic languages. In turn, it became the basis of early translations into Czech (1475) and Bulgarian (1840), and influenced still other versions in Slavic tongues (Nida 1972: 397).

In the 19th and 20th centuries, as further Bible translation and revision took place in the languages where Orthodoxy was strong, the text basis slowly became Hebrew and Greek. A Russian version of the Psalms translated from Hebrew was published in 1822; the books Genesis to Ruth followed in 1825. Another example was Bulgarian, with a NT based on Greek published in 1859, and an OT from the Hebrew printed in three parts between 1862 and 1864 (Metzger *IDB* 4: 779). The gospels were translated into Modern Greek by A. Pallis from Codex Vaticanus and published in 1902.

4. Jewish Bible Translation. As Jewish people settled in the nations of Europe in significant numbers during the Middle Ages, there was need for their Scriptures, the Tanakh (which Christians call the OT), to be translated into the languages of those nations, and into Jewish national languages such as Yiddish and Ladino.

In part because of proscription against Jewish outreach into the gentile community, most Scripture translation by Jewish scholars was done for Jewish readers. Yet it is significant that during the 16th century and following, as Christians translated the OT into their vernaculars, they sometimes depended on the work of Jewish scholars for translation from the Hebrew Bible.

It is also important to note on the other hand that as versions of the Bible were produced for Jewish readers, there was sometimes dependence upon Christian versions for wording in the languages of Europe. A notable example of this was the influence of the English KJV on the Jewish Publication Society version of the Scriptures in English published in 1917. Long before that, Jews of England had published the KJV text itself, but without the tendentious headings and notes of earlier editions of the KJV.

By 1800 there had been significant Scripture translation by and for Jews into several European languages. During the 19th and 20th centuries, some of the previous Jewish versions were revised, and there were new translations made, sometimes guided and informed by previous efforts. If one counts the translations of parts of the Jewish Scriptures, along with those projects that embraced the whole, the number of Jewish Bible translations in this period is considerable.

Languages in which at least one whole Bible—i.e., the entire Tanakh—was published sometime between 1800 and 1971 are: Judeo-Tatar (for the Karaites of the Crimea, in Russia), Yiddish, English, German, Italian, French, Hungarian, and Polish. Parts of the Jewish Scriptures were translated during this period into Russian and Danish (see *EncJud* 4: 864–89 and VERSIONS, JEWISH).

5. Interconfessional Bible Translation. Although there had been some more or less isolated cases of interconfessional cooperation and consultation in Bible translation before, during, and after the Reformation period, the movement for this became a matter of stated policy in the period following

World War II. Contributing greatly to such cooperation were the papal encyclical of 1943, *Divino afflante Spiritu*, and the new openness toward ecumenical cooperation encouraged by Vatican II. In 1968 a statement was issued jointly by the United Bible Societies and the Vatican's Secretariat for Christian Unity, entitled "Guiding Principles for Interconfessional Cooperation in Translating the Bible." By 1985 no less than 172 translation projects had been based on the guidelines of this publication (see G below).

There have been in the modern era a great variety of forms of interconfessional cooperation in Bible translation. To illustrate, the New American Bible of 1970, a Roman Catholic translation done for the most part by members of the Catholic Biblical Association of America, included among its translators five prominent Protestant biblical scholars. In Thailand, a thorough revision of the Thai Bible was published (NT, 1967; OT, 1971) under the auspices of the Thailand Bible Society (TBS), with the aid of the American Bible Society (ABS). Although most of the work was done by Protestant scholars, both Thai and American, Roman Catholic scholars worked with them on a new system of transliterating Bible proper names, so that this might be used in the revised text, to make it possible for the Roman Catholics of Thailand to use the TBS/ABS text of the OT. There was a Catholic version of the NT in Thai.

In many other instances there has been a larger or smaller degree of cooperation, especially between Protestants and Catholics in Bible translation. Further, several recent Protestant Bibles have included the Deuterocanonical (Apocryphal) books in at least some editions, and have received the Roman Catholic imprimatur. On the other hand, many recent Catholic versions have come to be widely used by Protestant readers and scholars. It may also be noted that as biblical scholarship has become more and more ecumenical and interconfessional in nature and appeal, Bible translators in recent decades have, even in working on versions intended for readers of a particular confession, used the help to be gleaned from all reliable sources, whatever the background of the scholars consulted might be.

B. The Expansion of Bible Translation, 1800–1988

As was noted in the introduction, up until the beginning of this period, by far the greatest number of versions of the Bible, or of parts of it, had been published in languages of Europe (48 languages). Asia was a poor second (13, several of which were no longer living languages), and then, with very few, came Africa (4), North America (3), and Latin America (2). What follows is a brief sketch of the phenomenal growth of Bible translation in the period under review, looked at area by area, for the most part continent by continent, following the arrangement used by the UBS publication, *Scriptures of the World*, which is issued biennially.

It should be noted that in this study in some cases a particular language may be included in an area or continent on the basis of geography, while linguistically it belongs to another. For example, Malagasy, the language of Madagascar, is counted here among the languages of Africa, but linguistically it is related to the Malayo-Polynesian family of Asia and Oceania.

1. Europe. By the year 1800 there had long existed versions of the Bible in all the major languages of Europe, except Russian. There were also versions in some of the languages spoken by smaller numbers of people than the major languages. In addition, significant parts of Scripture had been rendered in still other European languages.

Thus, in the period under review, most European Bible translation activity was devoted to the revision of earlier versions, and to the extension of parts translated in the cases of versions not yet including the whole Bible. In the case of some languages, however, even where older versions existed, fresh translations were made. The reasons for this were various. As the language in which older versions were translated became outdated, completely fresh translations were undertaken, in part because of the feeling people had against revising older, cherished versions. Again, better texts of the Bible in the original languages, and new understanding of the ancient meaning of some passages, often seemed to demand a fresh approach. Sometimes new kinds of readers were identified in major languages, and translations were made especially for them. In 1800 there were still some languages of Europe in which there was no part of Scripture, but they were nearly all languages spoken by relatively few people.

The first European language in which a complete Bible was published in the period 1800 to 1988 was Gaelic (1801), a language spoken by some of the people of Scotland, and closely akin to Irish—which is

also sometimes called Gaelic. The first portion, for the purpose of this article at least a whole book of the Bible, was Romans in Russian, published (1815) in a diglot with Slavonic, long the liturgical language of the Eastern Orthodox Church. The NT was published in 1821, the OT in 1867. The first complete Russian Bible in a single volume did not become available until 1877 (known as the version of 1876).

By the beginning of 1988, the number of languages in which there were complete Bibles in European languages was 58, Testaments 23, and portions 105, for a total of 186.

2. Asia. William Carey and his associates, principally Joshua Marshman and William Ward, made the first substantial beginning with the translation and publication of the Scriptures in Asian languages in the modern era. Carey, an English Baptist, sailed to India in 1793, established the Serampore Mission near Calcutta, and with his colleagues began one of the most extraordinary efforts at Bible translation in history. By the time of Carey's death in 1835, the Serampore group had translated some or all of the Bible into 34 languages of India, and had given help to translation projects in Chinese and Burmese. They had significant help from native speakers of the languages they worked with. From their work came six complete Bibles, three others that were nearly so, 20 New Testaments, and at least a gospel in five more languages.

In the 19th century the first Asian language in which any portion of the Scriptures was published was Bengali. In this language Carey's translation of Matthew was printed in 1800, his first NT in 1801, and the first complete Bengali Bible in 1809. All this was printed first by the Mission Press at Serampore.

By the end of the 19th century the number of languages in which whole Bibles had been translated and published in Asian languages had grown to 33, and from then until 1988 there were another 59, for a total of 92. In addition to this there was a very large number of languages in which New Testaments (153) or portions (226) had been published. By the beginning of 1988 the total came to 470.

3. Africa. In the 19th century, missionary activity under the societies burgeoned in Africa as it did in Asia. The first Scripture portion printed in a modern African language after 1800 was the gospel of Matthew, published in the Bullom language of southern Sierra Leone in 1816 (Nida 1972: 54). The first NT in a language of Africa was in Amharic, now the official language of Ethiopia (1829). The first complete Bible was in Malagasy (1835), a language spoken in the Malagasy Republic (before 1960, known as Madagascar). By the end of the century there were 14 complete African Bibles in that many languages, and by the end of 1987, 100 more, for a total of 114. In addition to this there was a very large number of portions (226) and Testaments (197), so that by the end of 1987 the total number of languages in which there was some Scripture came to 537.

4. Oceania. As North (1938: 2) says, by 1800 there was one language of Oceania in which there had been Bible translation; it was Malay, a language geographically associated with Asia, though of the Malayo-Polynesian language family, which is also found in Oceania. The first Bible translation in the area was Tahitian: Luke (1818), the NT (1929), and the Bible (1838). Tahiti was the first island in the South Pacific where a Christian mission was founded, and it became the center of mission work in the area.

By the end of the 19th century, Bible translation had produced 10 complete Bibles in Oceania, and by December 31, 1987, 15 more, for a total of 25. The total number of languages in Oceania in which there are Bibles, Testaments, or portions comes to 288.

5. North America. Before 1800 little Bible translation work had taken place on the North American continent. Settlers from Europe brought with them to the New World their versions in the languages of Europe. Following 1800, the first portion to be printed in North America was in Labrador Eskimo (1810), the first NT in the same language (1826), and the first complete Bible in Hawaiian (1838). If this last should rather be included in Oceania, then the first Bible in North America in a non-European language was in Plains (or Western) Cree, in 1861.

During the period under review, most of the Bible translation activity in North America in new languages was in various Indian tribal languages of Canada and the U.S.A. By 1988, the total number of languages in which complete Bibles had been printed was 7; New Testaments, 17; and portions 45, for a total of 69. Of course, the languages in which there were now Bibles and Testaments had, in many cases, had portions in print prior to the completion of the larger units.

6. Latin America. Bible translation was slow to begin in Latin America. This was due in part to the dominance of Roman Catholicism in the region, at a time when the Catholic Church did not encourage the use of the vernaculars of the native populations in worship and the study of Scripture. Spanish was the common language of government and commerce, except in Brazil, and Latin was the language of liturgy.

Before 1800 very little had been done. By the end of the 19th century, however, there were portions in 12 scattered Indian languages of the area, and just one NT, in Sranan, or "Negro English," the creole used in the coastal area of Surinam.

In the 20th century, Bible translation in the region increased greatly, so that by 1988 there were complete Bibles in six languages of Latin America, Testaments in 165, and portions in 160, for a total of 331 languages.

C. Translators and Their Sponsors

The modern era of Bible translation has been marked by the extraordinary variety and numbers, both of the translators and of the sponsors who supported their work.

1. Translators Themselves. Bible translators and their assistants in the modern era, numbering in the thousands, included missionaries, nationals, trained linguists, scholars and teachers in Biblical studies, men of letters, and yet others.

By far the largest group were Christian missionaries from Europe and America, though some came from other continents as well. Through most of the modern era, Bible translation was dominated by Protestant missionaries, who upon first entering a country—and sometimes even before that—made the translation of some part of Scripture into the language (or languages) of that country a priority.

Pioneer translators, to name a few by way of example, were: William Carey (India), Robert Morrison and S. I. J. Schereschewsky (China), Adoniram Judson (Burma), Karl F. A. Gutzlaff (Japan), Henry Martyn (Persia), Henry Nott (Tahiti), John Williams (Rarotonga), John G. Paton (New Hebrides), Hiram Bingham, Sr. (Hawaii), Hiram Bingham, Jr. (Gilbert Islands), and, working in Africa, Robert Moffat (Chuana), Edward Steere (Swahili), and George Pilkington (Ganda).

In most cases, these translators depended heavily on native speakers for assistance. These nationals were often, though not always, converts. As the period of the pioneer translators drew to a close, and churches and biblical training were established in mission lands, there was a shift from missionary translators to more and more reliance upon native speakers of the languages into which translation and revision was done. But even in the earlier period, there were sometimes native speakers who did the actual translation. For example, as early as 1804 the Gospel of John was published in Mohawk, having been translated by John Norton, a Cherokee Indian who had lived among the Mohawks. This was the first publication of the newly organized British and Foreign Bible Society (BFBS). In 1829 Matthew was published in Cherokee, having been translated by both S. A. Worcester of the American Board of Commissioners for Foreign Missions and Elias Boudinot, a Cherokee Indian, using the syllabary that had been devised by George Guess (also known as Sequoya), another Cherokee. Ye Suchon, a Korean converted in Japan, translated the Gospels and Acts into his own language; they were published in Yokohama in 1884 by the ABS and the BFBS.

During the modern era the preparation of translators for the task varied greatly. Some did the work by necessity, with little or no formal training. Others were well trained. It was the policy of some Bible societies to use missionaries on the field for Bible translation. Other societies, e.g., the Netherlands Bible Society, trained and sent out their own personnel to do Bible translating.

Also active in Bible translation, especially in Europe and the U.S.A. during this period, were scholars, usually connected with universities or theological seminaries, with special training in biblical studies, theology, and sometimes philology and linguistics. There was some involvement in Bible translation by literary specialists, sometimes as stylists rather than primary translators. One example is J. R. R. Tolkien of England, who had such a role in the preparation of the Jerusalem Bible (1966).

Some translators do not seem to fit into any of the categories so far delineated. B. J. Bettelheim was a Hungarian Christian physician of Jewish birth, who while serving the British "Naval Mission" to the Luchu Islands, learned the Japanese dialect used there and translated the NT into that form of Japanese. It

was published in Hong Kong, but the dialect was unusable in Japan proper. Later Bettelheim revised his work in Chicago with the help of Japanese residents there. Luke and John were published by the BFBS in 1873, and Acts in 1874 (North 1938: 181, 183).

Along with those engaged in direct translation, there was a large number of others in this period who assisted in translation work in a variety of ways: as language teachers, consultants, stylists, copyists, members of committees that reviewed and helped to revise drafts, administrators of translation and revision projects, and editors and publishers.

Most of the Bible translators in this period were men, but some women were involved as well. For example, Mrs. Hiram Bingham, Jr., is said to have inserted 120,000 commas into her husband's translation of the Gilbert Island Bible. Ann H. Judson, who, while her husband Adoniram worked on the Burmese Bible, learned Siamese (Thai) from prisoners of war in Burma and translated Matthew into that language ten years before any Protestant missionary set foot on the soil of Siam. There have been husband and wife teams that have done translation work. For example, Mr. and Mrs. Paul Lewis together translated the NT into Akkha (a tribal language of Burma); it was published in 1968 by the Bible Society of Burma.

2. Sponsors of Translators. The Bible translators of the modern era could not have done the monumental work they did without having behind them a large number of organizations that provided support, expert help with the organization and work of translation, and in some cases training for the task, and facilitation of publication and distribution. Notable among these organizations were the Bible societies and other groups devoted to Bible translation. Also of importance were the missionary societies of various churches, some of them interdenominational in scope; the denominations themselves with their mission agencies; at times and in some places, governments, publishing houses, and in much rarer cases, individuals.

The Bible society movement began about the turn of the 19th century and very quickly took on a most important role in Bible translation. Although the British and Foreign Bible Society and the American Bible Society were the largest societies, there came to be over 100 national societies and offices around the world, all committed to the translation, publication, and distribution of the Scriptures. Along with the BFBS and the ABS, the Netherlands Bible Society (NBS) has been among the most active. The results of the work of the Bible societies have been almost incalculable. In some countries, more than one society worked, and projects have often been done on a cooperative basis. In 1946, most of the Bible societies of the world formed an organization, the United Bible Societies, in order to coordinate work around the world, and to share resources and personnel for the common task.

Other groups devoted to Bible translation, usually with more limited purposes than the Bible societies, have played a significant part. Among them are the following:

The Wycliffe Bible Translators, along with its related organization, the Summer Institute of Linguistics, is dedicated to the translation of Scriptures into languages that have had no such translation before, and often where there is no written form of the language. Begun in 1934 (SIL) and 1942 (WBT), by 1983 these organizations had translated and published 200 New Testaments. The hallmark of the group is the special training given to translators, who are required in many cases to reduce the languages they work with to writing. Evangelization is an essential aim of the WBT/SIL.

The International Bible Society, based in New York, sponsors the publication of translations around the world that are based on the principles of the (English) New International Version, whose translators were committed to a plenary view of the inspiration of Scripture.

Living Bible International undertakes translations in various parts of the world that are based on, or translated from, the paraphrased Living Bible of Kenneth Taylor, published by Tyndale House.

The Institute for Bible Translation, based in Stockholm, is concerned with translations in the non-Slavic languages of the former Soviet Union.

Scores of missionary societies and other mission agencies provided personnel for Bible translation work and cooperated with the Bible societies in helping to provide Scriptures for the people among whom they worked. This has sometimes included the work of publication and distribution, as well as translation. These societies were typically agencies of church denominations, but there have been examples of

interdenominational cooperation, as, e.g., the American Board of Commissioners for Foreign Missions, organized in 1810 and supported by the Congregational, Presbyterian, and other churches. Further, denominations have often worked together to produce particular versions, such as the ASV (the International Council of Religious Education), the RSV (the National Council of Churches in the U.S.A.), and the NEB, sponsored by most of the Protestant denominations of Great Britain and Ireland, as well as Bible Societies (BFBS and NBS; for a discussion of state-sponsored Bible translation and revision projects, see VERSIONS, ENGLISH (AUTHORIZED).

The most notable individual to sponsor Bible translation in this era was Prince Louis-Lucien Bonaparte, a nephew of Napoleon, who had a keen interest in philology, and especially in the dialects of European languages. During the mid-19th century, for reasons of philology, he arranged for the translation and publication, in limited editions, and at his own expense, of portions (Matthew or the Song of Solomon) in about 70 dialects of English, French, Spanish, Portuguese, and languages of Russia (Nida 1972: 7).

D. Source Texts

There is no single, uncomplicated answer to the question of just what was translated during the modern era into so many languages. At times the translation was done from some form or other of the text in the original languages of Scripture, sometimes from one or more versions—or from a variety of combinations of both.

1. Texts in Original Languages. When a text in the original languages was used for translation, one must still ask, what particular text form?

When the OT has been translated from Hebrew (and Aramaic), the text used in the modern period has nearly always been the Masoretic Text (MT), but with a significant development that resulted, in many cases, in modifications of the MT as the text base used for translation. There became available critical printed editions of the text, with alternative manuscript and versional readings in the margin. These alternative readings were sometimes adopted for translation. Notable among the critical editions of the MT, and widely used, was Rudolph Kittel's *Biblia Hebraica*, beginning with the first edition in 1906. At first, there was also in Kittel much reliance in the critical apparatus on conjectural emendations. In the 7th edition (1951) there was added to the textual apparatus variants from the almost complete Dead Sea scroll Isaiah ms and from the Habakkuk scroll. Many of these variants have been used by Bible translators since they appeared. The most recent form of Kittel is *Biblia Hebraic Stuttgartensia*, edited by K. Elliger (1977).

Critical study of the text provided guidelines that enabled Bible translators to make informed judgments on variant readings in cases of textual difficulty. Thus most translations from the original language of the OT in the latter part of the modern era have used an eclectic text, basically the MT, but modified to include readings from Hebrew mss, from the Qere as well as the Kethib, and from the ancient versions. Occasionally conjectural emendations were adopted by translators.

As for the NT, the Textus Receptus (TR) continued to be used for Bible translation. But as new and improved texts became available, they were increasingly used as the text base for translation. Critical editions of the Greek NT based on better mss than the TR slowly found acceptance. See TEXTUAL CRITICISM (NT). The first NT text based on such mss, critically evaluated, came after 1800.

A recent Greek NT of great importance for Bible translation was prepared by an international team of scholars under the auspices of the United Bible Societies, *The New Testament in Greek (1966, 1968, 1975, 1983).* The textual apparatus includes evaluation of selected alternative ms readings of special importance to translators.

2. Versions as Source Texts. A considerable amount of Bible translating done during this period, especially in the first part, was not based on the Hebrew and Greek texts. Instead, it was done from various versions of the Scriptures already in existence, both ancient and modern. Or, if the text in the original languages was used for translation, one or more versions was often used as a guide to text and interpretation in the translation process. Sometimes it was the other way around: the translation was made from a version, and then checked against the Hebrew or Greek to make sure that it accorded with the original languages.

Illustrating the role of versions of the Bible in modern translation work is the fact that, until recent decades, the translation base for most Roman Catholic Bibles was the Latin Vulgate, even when the Hebrew and Greek texts were consulted in the process of rendering the Latin text.

In Europe, the German version of the Bible that went back to Martin Luther had great influence upon other European versions, especially those in the Scandinavian languages and Dutch. It was sometimes translated directly, and often used as a guide. As the latter, its influence has continued well into the modern era.

Again, in the English-speaking world, as missionaries went out across the world, more often than not the first Bible translation efforts were based on the KJV, and later in some cases on the ERV and the ASV or the RSV. Even some of the versions more recent than these have had a role in Bible translation in cases where the translators do not use Hebrew or Greek.

3. Scope of Texts Translated. The scope of biblical texts translated in the modern period has varied greatly, from short passages to complete Bibles. For the purpose of counting languages in which Bible translation has taken place, the Bible societies have generally included only those languages in which at least one book has been translated. This has usually, but not always, been one of the four gospels.

In the list of 670 languages in which Testaments (apart from complete Bibles) have been published by 1988, nearly all are New Testaments. Further, there has not been agreement as to what constitutes a "complete Bible." The canon varies among different religious traditions. The scope of the text of the Bible is not the same for the following groups: Jews (the Tanakh), Protestants (the 39 books of the OT and the 27 of the NT), Roman Catholics (the 66 books of the OT and the NT, plus the Deuterocanonicals), and the Eastern Orthodox (who include apocryphal books not in the Roman Catholic canon).

E. Bible Translation Process

Before considering the organization of Bible translators for their work, and the means of getting translations on paper, we will discuss various factors affecting the translation process: languages with written forms vs. those with no writing, translation aims, intended readership, language and dialect groups, kinds of language, types of rendering, and new translation vs. revision. At times decisions regarding such matters were made deliberately, in other cases they were not consciously made, but were always important in determining process and results.

1. Written and Unwritten Languages. As Bible translators began to reach out into areas where the Bible had not been translated before, they encountered a wide diversity of languages and writing systems. In the case of many languages, there was not only a well-established written form ready for use, but a well-developed literature. In some cases this literature either included religious expression, or was predominantly religious in character. This meant that translators had to take the literature into account, sometimes using its vocabulary and forms of expression to advantage, but in others avoiding some terminology in order not to compromise the biblical message. An example was Arabic, with its great religious classic, the Quran. Some languages are written in more than one script; the selection of writing system may be related to social or religious factors. Translators of Scripture in such languages must select the writing system to be employed. In some instances translations of Scripture have been published in more than one script.

Scores of languages did not employ any writing system. In such cases, translators of Scripture have often developed a script in which to write the language.

2. Effects of Translation Aims. The aims of the translators (and their sponsors) often had a marked effect on the way a translation was done, and upon the results. Let us look first at the effect of the intended function or functions of a version, and then at that of the intended readership.

a. Intended Function. Typically, when a new translation, or a revision, was undertaken, the translators and their sponsors had in mind certain kinds of usefulness that they hoped the version would serve: evangelism, Christian nurture, public worship and liturgy, personal study, private devotion, and so on. The aim at times focused on one or more of these purposes, but sometimes embraced all of them. The intended function governed several aspects of the translation process. For example, if the primary purpose was evangelism, this helped to govern what was translated and published first in a new language: it was

usually a gospel, though in some instances (as in Thailand) Genesis might be regarded as crucial for laying the groundwork for evangelization. If the purpose was mainly Christian nurture, then vocabulary that had become traditional in the life of the church for which the translation was made needed to be considered. The first translation in Asia that was made primarily for an established church, rather than for evangelistic purposes, was in Malayalam, which was spoken by members of the Malayalam-speaking Syrian Church in Travancore (completed in 1841). Versions used for the liturgy took into account the way passages deemed important for public worship sounded when read aloud.

b. Intended Readership. Many matters important for the translation process, such as choice of vocabulary, interpretation, the use (or non-use) of explanatory notes, and so on, were effected by the intended readership of a version.

There is first of all the intention with regard to the religious constituencies translators have had in mind, such as Roman Catholic, Protestant, Jewish, Eastern Orthodox, or, more broadly, interfaith readership in some combination or other. Obviously, if a version was intended for one or another of these communities, decisions regarding the above matters were affected.

Further, within a religious communion, there have often been special groups for which particular versions were intended. In English, for example, as an answer to the RSV, which some conservatives regard as being too "liberal," the NIV was prepared to appeal to conservative Protestants. On the other hand, interfaith versions have attempted to appeal to readers of various persuasions by an approach to language and interpretation that is more inclusive.

The ways in which translations were made was influenced in many cases by the social or cultural groups that translators had in mind as they worked. For example, some versions have been done for children (e.g., the American Bible Society *A Book about Jesus*), others for new readers in various languages, still others primarily for scholars (e.g., the Anchor Bible), one for people in the southern part of the U.S.A. (the Cottonpatch Version). Such intended readership has affected not only the vocabulary used, but also interpretation of the text, the format, the use of illustrations or pictures, and so on.

c. Language Groups. In addition to the translation of the Bible into major, primary languages, there has been much attention in our period to translation into various dialects of those, or of lesser languages. Also, in cases where it was feasible, there has often been the attempt, at least, to prepare translations in "union" languages, that might be useable among peoples who speak closely related dialects. In three cases, there have been translations into constructed languages, such as Esperanto.

3. Kinds or Levels of Language. Bible translation has often involved the choice of the kind or level of language to be used for a particular version. Should it be literary, reflecting established literary norms? Or colloquial, to meet the needs of people who do not know or have a literature? Should "common" language be used, so that the version will be intelligible to all users of the language? For a few versions the question has been asked, to what extent can translators or revisers of a version of the Bible use gender-inclusive language. Such language has been used in a few versions to the extent that sound exegesis will permit (e.g., NJB, and the rev. NT of the NAB).

4. Types of Rendering. There is a wide range of types of rendering that have been used in the modern era. The summary here is based on de Waard and Nida (1986: 40–42). Basically there have been five main types, with some versions marked by more than one type. The five kinds of translation are: (1) interlinear, word-for-word translations, usually of special interest to linguists or philologists; (2) literal renderings, that conform as much as possible to the form of the source language, while at the same time being grammatically possible, though often stylistically awkward, and sometimes misleading; (3) renderings that provide the "closest natural equivalence," whether on a literary level, or the level of "common" language; (4) adapted renderings, with some special accompanying code in mind, such as verse form; or adaptation governed by a theological stance (e.g., the Living Bible, with its harmonization, deletions, additions, explanations, and "corrections"); (5) Culturally reinterpreted renderings (such as Clarence Jordan's Cottonpatch Version of most of the NT).

5. Revision Versus New Translation. The approach to Bible translation has been deeply affected by whether a particular translation project is conceived as a revision of a previous version or a fresh

translation. If it is a revision, then it needs to be determined what kinds of changes are to be made, and on what basis: correction of translation errors, changes in the language, better text, or new light on meaning. There has been much need for revision, sometimes often repeated, in the modern era, because the first translation in so many languages was done by non-speakers of the language.

6. Organization of Translators. There has been almost endless variety in the way Bible translators and their assistants have organized for their task. Many, especially in the earlier part of the period, worked alone, or virtually so. Even these usually had some kind of help from consultants or native speakers of the languages they worked with.

In other cases where the work was done by a team, the ways of setting it up varied. Typically, there were one or more primary translators, who provided the initial draft of the translation, sometimes of an entire portion, Testament, or Bible. Again, there were often many translators who worked separately on various parts of a version to produce working drafts. Then there were one or more committees to review and correct the work of the primary translator(s). In addition, there were often consultants, who usually did not meet as a group, who read the translation drafts and provided written criticisms to be taken into account by the translators and the review committee. If the translation project was connected with a society or organization devoted to such work, there were often specialists related to these organizations who from time to time gave help with special problems, or took part in the training of translators. Often persons with a special sense of the language were brought in for stylistic review. Lastly, in the case of projects sponsored by Bible societies or church bodies, there was at times review by representatives of these groups for final approval before publication. There were, of course, many variations in the actual application of the above pattern. In connection with any particular translation project there was usually a statement of principles and procedures for the guidance of those involved.

7. Writing Technologies. A period of less than two hundred years saw a marked change in the ways of actually getting the text of a translation down on paper. In the early decades the mss of new translations were handwritten. In some cases, where the work was a revision rather than a new translation, the changes were simply introduced by hand into printed copies of the version being revised.

The second stage was the development of typewriters. The first practical typewriter was built by Christopher L. Sholes, an American inventor, in 1867. In 1874, the first typewriters were put on the market. The typewriter was soon adapted for use with scripts of other languages than those that used the Roman alphabet, and these became available for the use of Bible translators. For example, the first Siamese (Thai) typewriter was made by Edwin MacFarland, the son of a Presbyterian missionary to Siam in the latter part of the 19th century. More recently, sophisticated electronic typewriters have become available and been put to use.

In recent years, there has become available a still more versatile writing tool, that greatly facilitates the correction and reproduction of translated text. This is the computer, with its word processing capabilities and the capacity to generate a wide range of fonts and type styles. Word processors are now being widely used in Bible translation in numerous languages around the world.

F. Results

We have already focused attention in this survey on the remarkable increase between 1800 and 1988 in the number of languages in which the Bible or some significant part of it was translated (see B above). This is only part of the story, however. In many major languages of the world, there have been in this period numerous versions in a particular language produced for a variety of purposes. The reasons for this are mainly three: changes in the language that required either revision of previous versions, or new translation; new knowledge of the biblical text and its interpretation, that needed to be used; and the development of new aims and insights in the area of rendering. In numerically important languages where there is a developed Christian community, it has come to be recognized that at least three types of versions may be useful: "one of a traditional and conservative orientation for the majority of Bible readers, one based on critical texts and provided with helps for more sophisticated readers, e.g., students and ministers, and a 'simple-language' translation for the newly literate and for those who are reading an acquired language" (Bratcher 1971: 1245).

Along with the multiplication of versions, however, there have been in numerous instances of particular versions the production of more than one—often many—editions and forms to meet the needs of various kinds of readers. For instance, many recent versions have been published in basically two forms: one with few or no aids to study and use, and another with a range of accompanying aids, such as: introductions to the Bible, Testaments, extended portions, or individual books; section headings, cross references, concordances, indexes, glossaries, chronologies, lists of weights and measures, maps, illustrations.

There has been an effusion of kinds of Bibles produced for various sorts of readers: family Bibles (one with material doubtful for children printed at the bottom of the page), Scriptures for women, youth, children, new readers, the blind (in Braille or sound recordings), the sight-impaired (large print Bibles), red-letter editions (with Jesus' words printed in red), diglots and polyglots, editions with special forms of the language (e.g., in American English and in British English), editions for scholars, editions for various religious communities or combinations of them.

G. Future of Bible Translation

The momentum of Bible translation in the last two centuries is still with us. Currently, under various auspices, there are under way over 570 Bible translation and revision projects in which the UBS is in some way involved *(World Translations Progress Report 1987).* These are of four kinds: translations into languages that have up to now had no Scripture, continuing translation to extend the scope of versions partly completed, the revision of previously published versions, and fresh translation in languages where there are older versions. In addition to the above, over 765 translation projects are reported by other groups, notably Wycliffe Bible Translators.

A most important development is the production of "common" language translations in many of the world's languages. "Common" language here means the resources of a given language common to the usage of both the educated and the uneducated. It strikes to make the version both acceptable to the former and accessible to the latter. At present the total number of such versions as recorded at the Library of the American Bible Society comes to 173, including 34 Bibles, 94 New Testaments, and 45 portions, with many more to be produced in the future. Many persons have been involved in this development, but two have had major roles in the formulation of the linguistic principles and guidelines behind it: Eugene A. Nida, formerly Translations Secretary of the American Bible Society and Translations Research Coordinator for the United Bible Societies, and William L. Wonderly, Translations Consultant for the UBS.

Another important development that will have a considerable effect upon Bible translation in the years to come is the production of interconfessional translations of the Bible. By the end of 1987 there had been reported no less than 292 interconfessional projects undertaken to date, with a substantial number of them having produced versions in the publication stage, while others are yet to be completed.

If all goes as expected, the 1990's should see the Bible, or some substantial part of it, published in over 2,000 of the world's languages and dialects, with a total number of versions and editions of the Bible, or parts of it, far greater than this.

HERBERT G. GRETHER

VESPASIAN (EMPEROR). Titus Flavius Vespasianus, the future emperor Vespasian, was born in 9 A.D. His father was a tax-collector; on his mother's side he had senatorial connections. The major steps in his career occurred under Gaius Caligula and Claudius. The former advanced him to the praetorship, the latter to legionary commands in Germany and Britain, followed by a consulship in 51 A.D. Under Nero, he held the proconsulate of Africa (ca. 63 A.D.) and accompanied the emperor to Greece in 66 A.D. as one of his *comites,* or staff. It was here that he was appointed to take command of the Roman army engaged in suppressing the rebellion in Judea (February, 67 A.D.). His operations in Judea were so successful that only Jerusalem still remained to be subdued at the time of Nero's downfall and suicide (June, 68 A.D.). Vespasian immediately halted operations to watch on events in Rome.

Vespasian accepted the rule of Nero's successor, Galba, and then that of Otho. However, after the suicide of Otho and the advent to power of Vitellius, Vespasian and Mucianus, the governor of neighboring Syria, began to form plans for an attempt on the imperial position. They were joined by the Prefect of Egypt, Tiberius Alexander, himself a Hellenized Jew. On July 1, 69 A.D., Vespasian's movement began with his proclamation as emperor by the Egyptian legions; the legions of Syria and Judea quickly followed suit. Vespasian's plan was that Mucianus should lead an army against the Vitellians in Italy, Vespasian himself should hold Egypt and its grain supplies, while Titus, Vespasian's eldest son, should press on with the Jewish War. However, the plan was frustrated by the accession to Vespasian of the legions of the Danubian provinces. Troops from these provinces, commanded by the legionary commander Antonius Primus, without waiting for Mucianus, burst into Italy and defeated the Vitellian army at the second battle of Bedriacum. After the battle, Antonius' troops stormed and sacked Cremona and commenced a bloody march through Italy against Rome. Before his arrival at Rome, Vespasian's brother, Flavius Sabinus, was killed and the temple of Jupiter on the Capitol burnt down by the soldiers of Vitellius. Antonius' entry into Rome was accompanied by savage fighting; Vitellius was seized and executed; and on December 22, 69 A.D., the Senate met and formally acclaimed Vespasian as emperor. A part of the Senate's decree conferring the imperial powers on the new emperor may be seen on the famous bronze tablet set up 1300 years later in the church of St. John Lateran by Cola di Rienzi.

The power of Antonius, in alliance with Vespasian's younger son, Domitian, was soon broken by the arrival in the capital of Mucianus. Vespasian himself remained in Alexandria, where he allegedly performed miracles of healing. He returned to Rome only in late 70 A.D. Meanwhile, Mucianus controlled affairs in Rome and the West. His ruthless removal of potential enemies and skilful dispersal of Vitellius' Praetorian Guard put Vespasian deeply in his debt.

The new regime was faced with many problems. Politically, there was the task of consolidating the power gained by usurpation. Economically, it was necessary to restore financial stability to a state that had been devastated by Neronian extravagance and a year of civil war. Militarily, there was the need to restore discipline among the troops and to suppress a serious rebellion on the Rhine, as well as complete the reduction of Judea. Finally, order and confidence had to be revived in all sections of the community, especially at Rome itself.

To consolidate his rule, Vespasian frequently hearkened back to the examples of Augustus and Claudius. He also tried to increase the prestige of his family by ensuring that he and his sons held many consulships. His supporters in the civil war were also rewarded with consulships and other offices. The office of censor, held along with Titus, further increased his dignity. Military distinction was essential for a Roman emperor; and Vespasian sedulously promoted the victories won during his reign. The settlement of the Jewish rebellion, culminating in Titus' capture and destruction of Jerusalem in September, 70 A.D., was celebrated by father and son in a joint triumph in 71 A.D. and coins were struck with the legend "Judea Captured." The fact that Vespasian had two adult sons to succeed him had been a powerful argument used by Mucianus in 69 A.D. Vespasian diligently promoted his dynastic plans in his speeches and on his coins. Titus was carefully groomed to succeed; and for the greater part of the reign was effectively the deputy-emperor. Some senators disapproved of the dynastic concept, but most accepted that it removed the danger of civil war among rival contenders. Moderation and accessibility were

Augustan qualities practiced by Vespasian and much approved after the regal trappings of a Nero. He was able to pursue this policy largely because Titus, as Praetorian Prefect, efficiently crushed any plots and opposition before they could mature. The success of Vespasian's consolidation of his and his family's power can be seen in the smooth and undisputed succession of Titus.

The measures taken by Vespasian to restore the finances of the empire were far-reaching, in some cases harsh and inevitably unpopular. Among the measures may be mentioned: removing from some areas of the immunity from taxation granted by previous emperors; turning client-states into Roman provinces and hence tax-producing areas; increasing—in some instances doubling—provincial taxation; and devising new taxes. As an example of the last may be mentioned the poll-tax imposed on all Jews in the empire, for which a special Fiscus Iudaicus ("Jewish Treasury") was established. In theory, the Jews were obliged to pay to Jupiter the two drachmae which they had paid each year to the temple at Jerusalem. Vespasian's methods in raising new sources of revenue made him the object of satire and won for him a reputation for avarice. His success may be seen from the fact that he was able to pursue an extensive program of public building at Rome and to hand on to Titus an apparently full treasury.

In the military sphere, both the rebellion on the Rhine and the Jewish revolt were ended in 70 A.D. Discipline was restored to the Roman armies, and units that had disgraced themselves were disbanded. Next, the frontiers could be given the emperor's attention. Military operations in S Germany resulted in the annexation of the Black Forest area between the Rhine and the Danube. On the E frontier, client-kingdoms were brought under direct Roman rule and the upper reaches of the Euphrates were secured by making Cappadocia an armed province. Roman influence was also strengthened in the Caucasus area. In Britain, Agricola completed the conquest of N Wales.

The restoration of order and confidence was achieved in several ways. As censor, with Titus as his colleague, Vespasian carried out a revision of the Senate. Many new senators were enrolled or promoted to higher rank. The new senators were mostly from the Italian municipal aristocracies and they brought into public life the more frugal, sober virtues of that class, in strong contrast to the extravagance and ostentation of Nero's reign. The emperor himself was an example, being averse to pomp and ceremony and modest in his life-style. Measures were passed to strengthen the difference between the freeborn and servile sections of society and to deter money-lenders from lending to young men against their future inheritances on the death of their father. An impressive program of building both provided work for the masses of Rome and emphasized Vespasian's concern for religion and the people. Most significant of these were the new temple of Jupiter Capitolinus—a symbol of Rome's resurgence—the Temple of Peace, the completion of the temple of the Deified Claudius, and the commencement of the Flavian Amphitheatre, or Colosseum, which was completed by Domitian. The emperor's interest in promoting among the subject-peoples the benefits of the Roman way of life can be seen in his grant, perhaps as censor, of Latin status to the whole of Spain. Latin status guaranteed the attaining of Roman citizenship by the magistrates of each Spanish municipality and thus an ever increasing body of Roman citizens of Spanish origin. Extensive remains of the charters regulating the administration of three of the new Latin communities have been recovered from Baetica in S Spain.

When Vespasian died in 79 A.D., he was immediately deified by the Senate—a genuine mark of its respect and admiration for the man and his work. The coins which he struck during his reign proclaimed "The Augustan Peace," "Rome Rising Anew," and "The Happiness of the People." These were not empty phrases. Even "Liberty Restored" had a certain plausibility. For though Vespasian was no less an autocrat than Nero had been, his modest, down-to-earth manner, his affability, and his accessibility at least helped to conceal the realities of power. His shrewd judgement, combined with a quick wit and keen humor, enabled him to avoid or deflect difficult and unpleasant situations. He had deserved well of Rome, for he had ended a calamitous civil war, brought back order and prosperity and, above all, had restored confidence in Rome and its system of government. He has been called "the common-sense emperor"; but in Vespasian it was the common-sense of genius. For further discussion see *CAH* ^{2} 10: 808–39; 11: 1–45, 131–86, 393–432.

VIRGIN [Heb *bĕtûlâ* (בְּתוּלָה)]. The Hebrew word occurs 50 times in the OT; the Greek word *(parthenos)* appears 15 times in the NT.

The Semitic root from which the Hebrew word derives does not appear in other Hebrew words except in a plural form, which means "virginity." The closest cognate is Akk *batultu,* generally meaning "young (unmarried) girl," with an equivalent masculine form. In Ug, *btlt* occurs as an epithet for the goddess ʿAnat, the wife of El.

A. Old Testament

The writers of the OT use the word in a variety of situations. From significant passages, one sees that the word's meaning is not that of the modern English word, one who has not experienced sexual intercourse. The Hebrew word is usually qualified by a phrase such as "who has never known a man" (e.g., Gen 24:16, Num 31:18) when the word is used specifically to mean what the word "virgin" means today. The Hebrew word designates a young woman who has not yet married, although in Joel 1:8 it seems to refer to a woman who has already had a husband. In later legal terminology, the Bible's usage approaches the modern use. One can compare that development to the gradual specialization of the German word *"Jungfrau"* from "young woman" to "virgin."

This lack of a word for the condition suggests that physical virginity held no special role in ancient Israel. Israel, indeed, shares a linguistic phenomenon with other ancient languages, as put by C. Gordon (*UT*, 378): "There is no word in the Near Eastern languages that by itself means *virgo intacta.*" The word frequently simply suggests "youth." One can see this emphasis on youth when the word is paired with the word for young man *(bāḥûr),* about 12 times.

The book of Deuteronomy offers a passage which might deceptively suggest that physical virginity of a woman before marriage was a particular value in ancient Israel. Closer inspection of Deut 22:13–21, however, reveals a different stress. The young woman who marries but who previously had intercourse with a different man has disgraced not herself but her father. On the other hand, if the husband's charge of his wife's premarital indiscretion does not prove correct, this procedure in Deuteronomy protects the innocent woman from being abandoned.

B. Special Uses of the Word

In Job 31:1, Job avers that he has not "looked upon a virgin." Although one might read this as an exercise in avoiding sexual arousal, the weight and the context of the verse indicate that the reference is to the Canaanite goddess and not any young woman. The Israelites often appear in the Bible as somewhat attracted to the Canaanite religion that had both male and female deities. Job declares his resistence to this attraction.

Another striking use of the word "virgin" occurs in the phrase in two of the prophets, "the virgin of Israel" (RSV has "virgin Israel"). Commentators often have taken the phrase to be an instance of the feminine depiction of the people Israel. Careful analysis, however, has argued that Israel is never depicted as feminine. This position relies in part on the grammatical gender of peoples (masculine) and cities (feminine) in biblical Hebrew and especially on the analysis of particular texts.

In the phrase "virgin of Israel," "virgin" is a reference to a city, just as cities are typically termed mothers, wives, whores, sisters, daughters, and widows. Amos refers to the impending fall of Samaria (5:2). The book of Jeremiah, too, uses the phrase in reference to Samaria (31:4, 21), but also to Jeremiah's native city, Jerusalem (18:13). The designation "virgin," beyond the general feminine depiction of the city, alludes to the ancient practice by which an unmarried woman continued to live under the protection of her father.

C. New Testament

In two passages Paul uses the word "virgin." In 1 Cor 7:36–38, Paul writes of a man who has a virgin, and he is uncertain whether to marry her (to another?) or not. There is a problem of translation and interpretation: the passage leaves unclear whether the man is the father of the young woman or her fiance (RSV has "unmarried" in v 25, "girl" in v 28, and "betrothed" in vv 34, 36, 37, 38). In either case, physical virginity is not the issue. Paul thinks, at that point, that one need not bother about marriage since the world will soon end.

In 2 Cor 11:2, Paul compares the Christian community of Corinth to a "chaste virgin" (RSV, "pure bride") whom Paul has betrothed to Christ. It is unclear whether Paul is influenced mainly by the traditional depictions of cities as women, by the reputation of Corinth as a center of prostitution, or by the Adam and Eve story (cf. 11:3).

The authors of both Matthew and Luke emphasize that the mother of Jesus conceived him while she was still a virgin (in the modern sense). This emphasis on the virginal conception of Jesus is primarily a statement about the special status of Jesus and secondarily a statement about his mother, Mary. The tradition in both these gospels is somewhat different, and the variations suggest that the tradition is already an old one by the time of the writing. It is well known that Matt 1:23 quotes from the LXX of Isa 7:14, which has the word "virgin" *(parthenos)* while the Hebrew has simply "young girl" *(ʿalmâ).*

One of the parables of Jesus in Matthew concerns "ten virgins" (Matt 25:1–13). Matthew lays no obvious emphasis or interpretation on the "virginity" of the ten. The RSV translates the word as "maiden"; Robert Lattimore translates it as "girls." The parable deals rather with the readiness with which the Christian should respond to the gospel. The tradition uses the *parthenos* as "unmarried."

The last occurrence of "virgin" in the NT is in Rev 14:4. The passage describes 144,000 followers of the Lamb, those who "have not defiled themselves with woman, for they are virgins" (RSV, "chaste"). Although this brief passage could be understood as remarkably offensive toward women, the more careful understanding is that the faithful (of both sexes) have been true to their Christian faith and not followed the Hellenistic religions with their goddesses.

VIRGIN MARY. See MARY, MOTHER OF JESUS.

VIRGIN, APOCALYPSES OF THE. There are two *Apocalypses of the Virgin Mary,* as well as some similar material in the Assumption literature:

A. Greek *Apocalypse of the Virgin*

This work is known in a large number of Gk mss, which vary quite considerably. (Variant texts, from various mss, are published by Gidel 1871; James 1893: 109–26; Vassiliev 1893: 125–34; Pernot 1900; Delatte 1927: 272–88; Dawkins 1948; see also Tischendorf 1866: xxvii–xxx; Stegmüller 1950: 238–39; Halkin 1957: 128–130; 1984: 294–295.) There are also versions of it in Armenian (Voicu 1983: 177), Old Slavonic (Kozak 1892: 151–52; Müller 1961; de Santos Otero 1978: 188–95) and Rumanian (Stegmüller 1976: 207). It is very probably dependent on the *Apocalypse of Paul,* but other literary relationships cannot be determined until a critical edition of the text is available. Its date is uncertain: it might be as early as the 6th century or as late as the 9th.

This text is one of the latest of a group of apocalypses in which a seer is given a conducted tour of the torments of the damned in hell and intercedes for them *(Apocalypse of Zephaniah, Apocalypse of Peter, Apocalypse of Paul,* Greek *Apocalypse of Ezra,* Latin *Vision of Ezra*). In this case, the archangel Michael conducts Mary the Mother of God through hell and explains the punishments to her. They correspond to particular kinds of sin, according to a pattern which is standard in such apocalypses: in this case they also have strongly ecclesiastical and anti-Semitic features. Mary's prayer for mercy for the damned, in which she is joined by Michael and various saints, is granted in the form of a respite from punishment for fifty days each year (the period from Easter to Pentecost), presumably in addition to the weekly Sunday rest which Paul's intercession (in the *Apoc. Paul*) had already secured for the damned. At least one manuscript adds an appendix in which Mary is shown the righteous in paradise.

The work was evidently very popular in the Orthodox churches, no doubt because it both portrays hell in vivid imaginative terms as a warning against a whole series of specific sins and also because it expresses a natural compassionate reaction to the sufferings of the damned. The conflict between eschatological justice and mercy is not expressed as penetratingly as in some other apocalypses of this type, but at least this issue is posed. This accounts for the Russian novelist Fyodor Dostoyevsky's use of a summary of this apocalypse (in its Slavonic version) in Book 5, chap. 5 of *Brothers Karamazov,* where it helps to form a link between Ivan Karamazov's argument about eschatological justice and forgiveness in the preceding chapter and his famous parable of the Grand Inquisitor which follows.

B. Ethiopic *Apocalypse of the Virgin*

This work, though distinct from the Gk *Apoc. Vir.*, belongs to the same type. Mary is taken up into heaven, sees the fate of good and bad souls as they leave the body at death and are judged, paradise and its inhabitants, and the punishments of hell and their victims, and pleads for mercy for the damned. Much of the content is closely related to the *Apoc. Paul*, from which it seems to have been borrowed and freely adapted. Since the *Apoc. Paul* itself is not extant in Ethiopic, it could be regarded as in effect the Ethiopic version of that apocalypse.

There are some undoubtedly late features: one category of sinners in hell are Muslims, while the weekly period of respite for the damned, granted at Mary's intercession, lasts from the evening of the sixth day to the morning of the second, in line with the Sabbath observance of the Ethiopian church. But whether the work was composed in Ethiopic or translated from another language is uncertain. The fact that the *Apoc. Paul* is not known in Ethiopic might suggest the latter, but it is possible that an Ethiopic version of the *Apoc. Paul* fell out of use, replaced by this *Apocalypse of the Virgin.* Another closely related work is the Eth *Apocalypse of Baruch,* which is perhaps dependent on the Eth *Apoc. Vir.* and on the *Apoc. Paul*.

An interesting feature of the work, not to be found in the *Apoc. Paul*, is the abundance of biblical quotations. Explicit quotations of Scripture are rare in the older apocalypses, but are found in later apocalyptic works, such as the apocryphal *Apocalypse of John* and the medieval Hebrew apocalypses, where they serve to give canonical support to non-canonical revelations.

C. Assumption Literature

In addition to these two *Apocalypses of the Virgin,* some of the narratives of the *Assumption of the Virgin* contain what are in effect apocalypses: revelations of heaven and hell given to the Virgin after her death and resurrection. Two such apocalyptic accounts occur.

One is in the final section (fifth and/or sixth book) of the Syriac *Transitus Mariae* (Lewis 1902: 64–69; Wright 1865b: 156–60; cf. Budge 1899: 131), which in its present form dates from about the 5th century. (The section is also found in Arabic and Ethiopic versions: Enger 1854: 88–107; Chaîne 1909: Latin section 39–42). It describes how Mary, whose body has been transported to the earthly paradise, is raised up by Christ and taken by him through the heavens to see the heavenly Jerusalem where God dwells, the mansions of the righteous, and the fires of hell. One text adds a further vision of the throne of God and the worship of Christ by all the angels (Lewis 1902: 67–68). Unlike the other apocalypses of the Virgin, this one shows little or no sign of dependence on the *Apoc. Paul*. Some features of the account link it with the old apocalyptic tradition of accounts of ascents through the heavens.

In heaven Mary sees the mansions which the righteous do not yet inhabit, but will inherit on the day of resurrection. Similarly, she does not see the wicked suffering in hell (as is usual in apocalyptic visions of hell): rather they view it from afar and fear the day of judgment when they will be consigned to it (cf. *4 Ezra* 7:78–87; Hipp. *de Universo* 1). Mary begs Christ to have mercy on them when he judges them at the last day.

Apart from the plea for mercy, which is found in other apocalypses, this account of Mary's vision of hell has nothing in common with the Gk *Apoc. Vir.* to which it is probably quite unrelated.

Other versions of the assumption narrative include a different apocalypse at the same point, following Mary's resurrection in paradise. This is best preserved in the Eth *Liber Requiei* (Arras 1973: Latin section 34–39) and in the Irish *Testament of Mary* (Donahue 1942: 50–55), though there is also a substantial Syriac fragment (Wright 1865a: 47–48) and a somewhat abbreviated Latin version (Wenger 1955: 258–59). It must date from about the 5th century.

In this account Christ takes Mary, accompanied by the apostles and the archangel Michael, to see hell. They see the punishments of a number of particular types of sinners. The damned cry out for mercy, and the intercession of Mary, accompanied by Michael and the apostles, wins for them a period of three hours respite each Sunday. (Probably the *Apoc. Paul* is here presupposed, so that readers would know that the period of respite was later extended, through Paul's intercession, to the whole of Sunday.)

The account seems dependent on the *Apoc. Paul* (35–39, 43–44). Its resemblances to the Gk *Apoc. Vir.* extend only to features which both share with the *Apoc. Paul*, and since both must also be independently indebted to the latter there is no reason to postulate a direct connection between this vision of hell by the Virgin and that in the Gk *Apoc. Vir.* But the fact that the Gk *Apoc. Vir.* was well known in the Byzantine church and provided a fuller account of the same kind of material may account for the absence of a vision of hell from the extant Greek versions of the Assumption narrative.

RICHARD BAUCKHAM

VIRGIN, ASSUMPTION OF THE. An apocryphal legend about the death of Jesus' mother Mary, and about her bodily transfer to heaven shortly afterwards. In 1950, "the Assumption of the Blessed Virgin" became an official part of Roman Catholic dogma, consequently there has been renewed interest in this legend. (The materials relevant to the dogmatic question have been collected by Jugie 1944, and Balic 1948.)

Written legends about the Dormition of the Virgin Mary exceed 70 various types of texts, most of which are in non-Greek languages, the oldest Greek type having disappeared. There remains one old legend in Greek (Wenger 1955: 210–240), and from ca. 591 onwards, a standard liturgical lecture for the 15 August (Tischendorf 1866). The oldest manuscript fragments of the legend are in Syriac, dating to the 5th century (Wright 1865a; Smith-Lewis 1902). The oldest quotation is a sentence in a homily of Eusebius of Alexandria from the late 4th century (van Esbroeck 1985: 292). The most primitive redaction corresponds to the "Exsequiae Mariae Virginis" published by W. Wright (1865a: 55–65). Its strong literary parallelism with the Ethiopic, Irish, and Georgian versions points to a lost old Greek redaction (van Esbroeck 1973: 55–57). A further development is the so-called Syriac version "in six books" (each one by two apostles), also published by Wright (1865b) and illustrated by the old palimpsest (Smith-Lewis 1902). That redaction reflects the period of Zeno's Henoticon (A.D. 483), while it attempts to harmonize previous divergent traditions about the Virgin's Dormition. The standard Greek liturgical text (Tischendorf 1866) strongly resumes this longer Syriac legend. Another Georgian redaction, the pseudo-Basilian Transitus, presupposes Justinian's policy in 543, with a whole Holy Week for the Virgin (van Esbroeck 1974). The Coptic (and Ethiopic) traditions presuppose (and therefore post-date) the Monophysite-Chalcedonian struggle over various theological views about the body of the Virgin.

The general outline of the legend in its Greek/ Latin/ Syriac form is the following: the Virgin is visited by an Angel (in the Coptic version she is visited by Christ Himself) who tells her of her imminent death, and that Christ himself will take her personally above any celestial power. The apostles then gather from all parts of the world to assist the Virgin and to hear her last recommendations (in the Coptic version the apostles have not yet been scattered around the world). Christ then descends from heaven and takes the soul of Mary back with Him. All the celestial powers and the patriarchs and prophets assemble to praise God's grace. The apostles take the body of the Virgin and place it in the tomb of Gethsemane. Along the way, a certain Jew attempts to destroy her body; he is punished by heaven but healed by the prayers of the apostles addressed to the Virgin. The apostles sealed the tomb and remained three days in prayer. On the third day, celestial voices proclaim that the Virgin has been assumed bodily to heaven (in the Coptic version the Virgin's assumption occurs 206 days after her death).

An important and related question is the origin of the liturgical celebration. Emperor Mauritius introduced the fixed date of August 15 around 591; however, the Georgian pseudo-Basilian text and their calendar make it clear that earlier Emperor Justinian devoted a whole week to the celebration (a sort of

Virgin's Holy Week) associated with the inauguration of the *Nea Maria* church in Jerusalem on August 17, 543. Before Justinian, the celebration had been the subject of debate between Monophysites and Chalcedonians just after 451. One can demonstrate that the Coptic version's chronology of 206 days between Mary's death and assumption—January 16 (= 21 Tobe) for the death of the Virgin, and August 9 (= 16 Mesore) for her Assumption—reflects the struggles of 453, when Juvenal used the imperial police to reduce Monophysite opposition in Gethsemane on January 16. The Virgin and her immortal nature was understood to have been killed on that same day, and her body was believed to have been taken to heaven simultaneously with the former celebration of the Jewish destruction of the temple 206 days later (August 9).

A full bibliography is available in Arras 1974: 71–74, where reference to extant texts are given. A general summary of these early medieval texts is offered by van Esbroeck (1981).

MICHEL V ESBROECK

VIRTUE/VICE LISTS. The practice of compiling lists of virtues and vices was widespread in the ancient Mediterranean world. These lists typically specified vices or sins that were to be avoided and virtues that were to be practiced. The code of conduct reflected in such lists was normally the conventional one of the period. Both abstract and concrete terms for virtues and vices were employed, and mental dispositions as well as overt acts were mentioned. In addition, types of people who exhibited particular virtues and vices were frequently enumerated, and occasionally various vices and virtues were even personified. These ethical lists were used for a wide variety of purposes, including characterization, description, exemplification, instruction, exhortation, apology, and polemic. Numerous examples of these lists, which vary enormously in length, form, function, and content, are contained in polytheistic, Jewish, and Christian literature.

A. Greco-Roman World

As the comprehensive examination by Vögtle (1936) established, lists of virtues and vices occur in both literary and non-literary sources of the Greco-Roman world. They are found, for instance, in philosophical discussions of virtue and vice, in the diatribe and Roman satire, in rhetorical and astrological texts, and on inscriptions. Stoics, who maintained that virtue is the only good and vice the only evil, were especially fond of compiling extensive lists of the various virtues and vices. Accepting Plato's fourfold division of virtue *(aretē)* into *phronēsis* (wisdom, prudence, understanding), *sōphrosynē* (moderation, temperance, self-restraint), *dikaiosynē* (justice), and *andreia* (courage), they divided these cardinal virtues into numerous sub-types.

A similar procedure was used in regard to both vices and emotions, with a basic fourfold division applied in each case. *Aphrosynē* (folly), *akolasia* (profligacy, licentiousness), *adikia* (injustice), and *deilia* (cowardice) were given as the four cardinal vices *(kakiai),* and each was understood as the antithesis of the corresponding virtue. Closely linked to the vices were the emotions and passions *(pathē).* Stoics viewed these negatively and regarded *apatheia* or freedom from passion as the ideal. The four chief passions were seen as *lypē* (grief), *phobos* (fear), *epithymia* (desire, lust), and *hēdonē* (pleasure). Specific

types of *lypē* were said to include not only such emotions as anguish and distress but also jealousy, envy, and even pity.

Both passions and vices proper were mentioned in Stoic vice lists, which were often used to describe and castigate the sinful and irrational life led by the masses or by particular individuals. Whereas vice lists thus depict the deficient life that fails to achieve its human potential, virtue lists paint and praise the ideal, whether it be that of the ideal manner of life or of some ideal figure, such as that of the wise man or of the good sovereign. Lists of virtues and vices thus play an important role in moral instruction and exhortation (Malherbe 1986: 138–41).

Greco-Roman authors who use the lists include Pseudo-Aristotle *(On Virtues and Vices),* Pseudo-Cebes (Fitzgerald and White 1983), Cicero (e.g., *Tusc.* 4.11–27), Pseudo-Crates (e.g., *Ep.* 15), Pseudo-Diogenes (e.g., *Ep.* 28), Dio Chrysostom (Mussies 1972: 67–70, 172–77), Diogenes Laertius (e.g., 7.92–93, 110–12), Epictetus (e.g., *Diss.* 3.20.5–6), Pseudo-Heraclitus (Attridge 1976: 25–39), Horace (e.g., *Ep.* 1.1.33–40; 6.12), Lucian (Betz 1961: 183–211), Maximus of Tyre (e.g., *Or.* 36.4c), Musonius Rufus (e.g., Frag. XVI), Onasander (Dibelius and Conzelmann *Pastoral Epistles* Hermeneia, 158–60), Philostratus (Petzke 1970: 220–27), Plautus (e.g., *Pseudolus* 138–39, 360–68), Plutarch (e.g., *Mor.* 468B, 523D; see the indices in Betz 1975: 367 and 1978: 581), Seneca (Bultmann 1910: 19 n. 3), Soranus (Vögtle 1936: 79–80), Teles (e.g., Frag. IVA), Virgil (e.g., *Aen.* 6.733), and various astrologers, including Ptolemy (= Claudius Ptolemaeus), Teucer of Babylon, and Vettius Valens (Vögtle 1936: 84–88; Kamlah 1964: 137–39). In addition, lists of virtues and vices occur in the Corpus Hermeticum (Kamlah 1964: 115–36), especially in tractates I and XIII (Grese 1979: 111–12, 121, 127–28, 131–33).

B. The Ancient Near East

While catalogs of sins and transgressions in both Mesopotamian (Schmökel 1978: 131–33) and Egyptian materials (e.g., *Book of the Dead* 125) have been noted, particular attention has been given to lists in ancient Iranian cosmological traditions. These mythological lists contain the names of various spirits of good (under Ahuramazda) and evil (under Angra Mainyu) which oppose one another in a cosmic, dualistic struggle. These divine and demonic spirits are largely personifications of abstract virtues and vices (Jackson 1928: 37–109), so that the juxtaposition of these two groups serves to form an antithetic catalog of good and evil. Kamlah (1964) has paid particular attention to this primitive Iranian myth with its antithetic catalog form and has endeavored to trace the history of its development and use in both Iranian (e.g., the *Bundahishn*) and non-Iranian literature (e.g., Plutarch, *De Is. et Os.* 46–47 = *Mor.* 369D–370C).

C. The Hebrew Bible and Non-Canonical Early Jewish Literature

The Hebrew Bible contains surprisingly few lists of sins. Simple lists occur in Jer 7:9 and Hos 4:2, which presuppose the sins forbidden in the Decalogue (Exod 20:1–17; Deut 5:6–21), and in Prov 6:16–19, which gives seven evils hated by God (cf. Prov 8:13). Similarly, lists of virtues are brief and appear in descriptions of God (Exod 34:6–7; Num 14:18; Pss 86:15; 103:8; Jonah 4:2), of humans endowed by God (Exod 31:3; 35:31; Eccl 2:26), and of righteous men (Job 1:1, 8; 2:3). In the judgment of most scholars (e.g., Wibbing 1959: 26; Conzelmann *1 Corinthians* Hermeneia, 100; Schweizer 1976: 463 n. 13; Betz *Galatians* Hermeneia, 282), however, these lists neither constitute a fixed literary form nor serve as the models for later Jewish and Christian catalogs.

In contrast to the Hebrew Bible, lists of both virtues and vices are quite numerous in later Jewish literature. They vary widely in both form and content, with some reflecting the influence of the Decalogue (Berger 1972: 272–73) and others that of Greek philosophy. The lists appear, for example, in *Apocalypse of Abraham* 24, *3 Baruch* (4:17; 8:5; 13:4), *1 Enoch* (10:20; 91:6–7), *2 Enoch* (9:1; 10:4–6; 34:1–2; 66:6; Kamlah 1964: 160–62), *Jubilees* (7:20–21; 21:21; 23:14), *4 Maccabees* (1:2–4, 18, 26–27; 2:15; 5:23–24; 8:3), Philo (Lagrange 1911: 539–42; Lietzmann *An die Römer* HNT, 36; Vögtle 1936: 107–13; Wibbing 1959: 27–29; Kamlah 1964: 50–53, 104–15), *Sybilline Oracles* (Bussmann 1975: 155–57), *Testament of Abraham* 10 (rec. A), *Testament of Moses* 7, *Testaments of the Twelve Patriarchs* (Vögtle 1936: 102–06; Wibbing 1959: 31–33; Kamlah 1964: 171–75), Wisdom of Solomon (8:7; 14:22–26; Easton 1932: 1–3), and in rabbinic literature (Klein 1909: 94–101; Francke 1930: 24–27; Kamlah 1964: 150–60; contrast

Vögtle 1936: 106–07), as well as in the writings of Qumran. The double catalog in 1QS 4:3–14 has received particular attention (Wibbing 1959: 43–76; Kamlah 1964: 39–50; von der Osten-Sacken 1969: 150–63) in regard to Gal 5:19–23 and other early Christian texts (Braun 1966: 1.172, 212–14; 2.289–301; Mussner *Galaterbrief* HTKNT, 392–95).

D. The New Testament

The fullest list of NT catalogs of virtues and vices is given by Mussies (1972: 67, 172), who cites as examples the following:

Virtue Lists: 2 Cor 6:6–7a; Gal 5:22–23; Eph 4:2–3, 32–5:2; 5:9; Phil 4:8; Col 3:12; 1 Tim 3:2–4, 8–10, 11–12; 4:12; 6:11, 18; 2 Tim 2:22–25; 3:10; Titus 1:8; 2:2–10; Heb 7:26; 1 Pet 3:8; 2 Pet 1:5–7; (1 Cor 13:4–7).

Vice Lists: Matt 15:19; Mark 7:21–22; Rom 1:29–31; 13:13; 1 Cor 5:10–11; 6:9–10; 2 Cor 12:20–21; Gal 5:19–21; Eph 4:31; 5:3–5; Col 3:5–8; 1 Tim 1:9–10; 6:4–5; 2 Tim 3:2–4; Titus 1:7; 3:3; 1 Pet 2:1; 4:3, 15; Rev 9:21; 21:8; 22:15.

While other scholars would delete some of Mussies' examples and/or add further instances (e.g., Luke 18:11), there is a broad consensus that the lists played an important role in both early Christian parenesis and polemic (Karris 1971; 1973). Debate has centered on the origin of the NT lists. Various Hellenistic (e.g., Lietzmann *An die Römer* HNT, 35–36; *ANRW* 25/2: 1088–92), Jewish (e.g., Seeberg 1903: 9–44; 1905: 109–29; Daxer 1914: 25–58; Wibbing 1959), and Iranian (Kamlah 1964; Suggs 1972: 65–73) sources have been proposed, but no solution has become definitive (so Käsemann 1980: 49–50; Coetzer 1984: 37–39). Of the NT lists, greatest attention has been paid to those in the Pauline corpus (Larsson 1962: 210–23; Furnish 1968: 84–89; Schweizer 1976), especially those in the Pastoral Epistles (McEleney 1974; Mott 1978; Donelson 1986: 171–76).

The functions of the NT lists are broadly analogous to their use outside of early Christian literature. For example, Greco-Roman philosophers frequently began their speeches with a list of vices in order to depict the wretched moral condition of the masses. Paul, similarly, uses a vice list at the beginning of Romans (1:29–31) to depict the condition of people who have not appropriated the knowledge of God (Malherbe 1987: 24, 31–32). Again, lists of virtues are employed in both philosophical tractates and the NT to delineate the qualifications and characteristics of good leaders, such as the ideal king or bishop (Malherbe 1986: 138–39).

E. Non-Canonical Early Christian Literature

Many of the Apostolic Fathers, the apologists, the authors of the NT Apocrypha and Nag Hammadi Codices, the theologians, and other early Christians made frequent use of lists of virtues and vices. In general, these lists have received surprisingly little scholarly attention. Recent exceptions to this neglect include studies by Rambaux (1978) of Tertullian's lists and by Mussies (1981) of a personified list of vices and virtues in the Gnostic treatise *On the Origin of the World* (NHC II,106,27–107,17). Examples of the non-canonical lists cited in secondary literature include the following:

1. Apostolic Fathers: *Barn.* 2:2–3; 18–20; *1 Clem.* 3:2; 30:1,3,8; 35:5; 62:2; 64:1; *2 Clem.* 4:3 (see Donfried 1974: 114–18); *Did.* 2:1–5:2; *Herm. Mand.* 5.2.4; 6.2.3–5; 8.3–5, 9–10; 11.8, 12; 12.2.1; 12.3.1; *Sim.* 6.5.5; 9.15.2–3; *Vis.* 3.8.3–7; *Ign. Eph.* 3:1; Pol. *Phil.* 2:2; 4:3; 5:2; 12:2.

2. Apologists: Aristides, *Apol.* 8; 9; 11; 13; 15; Athenagoras *Res.* 21; 23; Justin *Apol.* II,2; 5; *Dial.* 14; 93; 95; 110; Theoph. *Autol.* 1.2; 2.34.

3. New Testament Apocrypha: *Acts Andr.* 8; 10; *Acts John* 29; 35–36; *Acts Paul and Thecla* 17; *Acts Pet.* 2; *Acts Phil.* 90; *Acts Thom.* 12; 28; 55–56; 58; 79; 84–85; 126 (see Klijn 1962: 218–19); *Apoc. Paul* 5–6; *Apoc. Pet.* 22–34 (see Dieterich 1913: 163–95); *Ps-Clem.* Hom. 1.18; 2.44; 8.23; 11.27; 17.16; *Ps-Clem.* Rec. 4.36; 9.17.

4. Nag Hammadi Codices: I,80,3–11; 85,7–12; II,18,14–31; 106,27–107,17; VI,23,12–17; 30,34–31,7; 39,22–33; VII,37,26–35; 84,19–26; 95,20–33. For other Gnostic lists, see *Pistis Sophia* 102; 127; 146–47; Irenaeus *Haer.* 1.29.4.

5. Other: *Altercatio Simonis et Theophili* 21; Ps-Clement, *de virg.* 1.8; Clement of Alexandria *Strom.* 2.6, 20; 7.12; *Const. App.* 2.6, 24; 7.18, 33; Ps-Cyprian, *adv. aleat.* 5; Hippolytus, *Haer.* 4.15–26; John

Chrysostom, *Cat.* 1.32–33, 36 (Series Stavronikita); 2.16, 39, 42–43 (Series Montfaucon); and Tertullian (see Rambaux 1978: 212–13). For additional Christian vice lists, see esp. Resch 1905: 117–24.

Lists of virtues and vices continued to play an important role in later Christianity. The three "theological" virtues of faith, hope, and love were added to the four Platonic-Stoic "cardinal" or "natural" virtues to form the "Seven Virtues" (Zöckler 1904; Kirk 1920: 29–48). The most famous vice list was that of the "Seven Deadly Sins," which were held to be pride, covetousness, lust, envy, gluttony, anger, and sloth (Zöckler 1893; 1897: 253–56; Kirk 1920: 265–68; 1932: 201 n. 4). The popularity of such lists resided, above all, in their utility for moral instruction and exhortation.

VISION. See PROPHECY; MYSTICISM.

VOPHSI (PERSON) [Heb *wopsî* (וָפְסִי)]. The name Vophsi is not known outside of the Hebrew text of Num 13:14. Manuscripts of the LXX, on the other hand, have five different readings with *Iabi* or *Iabei* being the most probable. This unlikely transliteration suggests that the Hebrew text containing the name Vophsi is problematic. Although its meaning is uncertain, Noth (*IPN*, 8) speculates that the name may have a Persian origin. Vophsi is the father of Nahbi who represented the tribe of Naphtali among the 12 men Moses sent from the wilderness of Paran (Num 12:16) to spy out the land of Canaan.
JON PAULIEN

VULGAR LANGUAGE. See BIBLE, EUPHEMISM AND DYSPHEMISM IN THE.

VULGATE. The name Vulgate, indicating a text generally accepted as standard (Latin *vulgatus*, meaning "common," or "commonly known"), was not applied to Jerome's Latin Bible until the Middle Ages. While its title of "Jerome's Vulgate" is unlikely ever to be abandoned, the most striking result of the past century of study is to have shown that Jerome's role in the production of its NT was far more limited than had traditionally been assumed.

A. Origins

A chief characteristic of Old Latin biblical texts is their lack of unanimity. It was because of this that in 382 or 383, Pope Damasus (ca. 304–384) commissioned Jerome (ca. 342–420) to produce an authoritative Latin Bible. The new version of the gospels was completed within the year. It has been shown that, as the work progressed, Jerome altered fewer and fewer acceptable readings from the OL mss on which his version was based. Neither the character of these mss, nor the Gk mss with which he collated them, has been identified in specific terms. Suggestions that he used several text-types of each kind are more acceptable, although these theories emphasize the fact that, particularly for the OL, we do not have enough evidence to form a judgment. All that is clear is that the text-type represented primarily by Codex Bezae (which contains both a Gk and an OL text) is not influential.

At about the same time, we find Jerome concentrating his attention on the OT. In a letter of 384 he writes that he has been comparing Aquila's Greek version with the Hebrew. In this period he produced the first of three versions of the Psalter. This is generally identified with the Roman Psalter, so-called because it was used in the Roman Liturgy until about 1570. This is a far less detailed revision than the gospels. Based on the Septuagint (LXX), it presents a predominantly OL text.

Returning from Rome to the East, Jerome settled at Bethlehem in 386. His next edition (387 is a possible date) was the Gallican Psalter (the title is due to its first being adopted by the churches of Gaul). For this he used the best materials available—Origen's Hexapla. This second Psalter is the text printed in the official version of the Vulgate. Shortly afterwards he produced Job, the three books attributed to Solomon, and Chronicles, again translating from the LXX. Of these revisions only Job is extant. We have the prefaces of the remainder.

There is no proof that Jerome translated any more books from the LXX than these, although he occasionally implied that he had translated the whole of it. It is more likely that instead he broke off and—as was perhaps inevitable—began a more thorough undertaking. He was already using the Hebrew in his LXX revisions. But to abandon the LXX altogether was a bold step, for it was accorded a higher place in the Western church than the Hebrew itself. Learning Hebrew, Aramaic, Syriac, and Arabic was to

labor in empty fields of study, and in several prefaces Jerome tells of his difficulties. The result, his Latin version of the *Hebraica veritas,* the Hebrew verity, appeared at intervals between 390 and 405. H. J. White (1902) suggested the following chronology:

390 or 391 Samuel and Kings

392–93 The Psalter (his third version, the *Psalmi iuxta Hebraicum*), Prophets, Job

394 Esdras

396 Chronicles

398 Proverbs, Ecclesiastes, Canticles

401? Genesis, Exodus–Deuteronomy

405 Joshua, Judges, Ruth, Esther, Tobit, Judith, and the apocryphal parts of Daniel and Esther.

At this point it must be emphasized that we have been describing, not precisely the creation of the Vulgate itself, but Jerome's work as a Bible translator. The formation of the Latin Vulgate is another stage.

B. Development

Jerome's version of the Hebrew OT and the gospels by no means won universal approval. Given a deep-seated and irrational resistance among the churches, we should not be surprised that many OL texts, far from being outdated, were still in their infancy. We find them being copied as late as the 13th century. The fact that these late examples are all from Vulgate Bibles of which some books are OL, illustrates the development of the Vg. The vast majority of ancient Bible mss were of a part only. Larger collections were made from whatever materials were available. The creation of the Vg was from just such disparate elements, and this is how the rest of the Vg NT became connected with Jerome's versions.

An early form of the Vg Pauline Epistles is first encountered in Pelagius's Commentary, which was written between 405 and 410. The version's origins probably lie in the closing years of the 4th century. The same translator was certainly responsible for the Catholic Epistles, and possibly for the other books of the NT. Many different OL text-types were used as the bases of these productions.

In spite of the opposition, Jerome's version and its companions continued to grow in popularity. One indication of this is the provision, during the 5th and 6th centuries, of ancillary material, namely, chapter headings and prefaces. Some, such as the *Marcionite Prologues* to the Pauline corpus, were taken over from the OL tradition. The *Priscillianist Prologues* to the NT were probably of independent origin. Chapter headings to Acts that are to be found in a few mss were the work of a 4th-century Donatist. Other prefaces are from Pelagian circles. Thus the Vg proves to be as variedly orthodox and heterodox in its ancillary material as its text is mixed. These aids are to be found in the mss in a variety of combinations, and their study is of great importance in reconstructing the history of the Vg.

By the middle of the 6th century, there was the first movement of which we know towards the compilation of a complete Latin Bible. It is associated with Cassiodorus (ca. 485–ca. 580), the monk and scholar of Vivarium in the extreme S of Italy. He brought together a team of scholars who prepared three editions of the Bible. The first, in nine volumes, was the OL text which Cassiodorus himself used. The second and most famous was the one volume *Codex grandior littera clariore conscriptus.* Its OT text was Jerome's revision according to the LXX (we have to assume with other sources for the books not treated by Jerome). For the NT Cassiodorus probably used Jerome's gospels, and an OL text or texts for the rest. The third edition, known as the Lesser Pandect, has a Vg text throughout. Nothing is known in detail of the character of any of these three editions, although Cassiodorus's biblical citations in his writings give us a little knowledge about the first. It is not therefore possible to make any assessment of their influence on the transmission of the text.

It is only in relation to the Northumbrian school that we know anything about the fate of Cassiodorus's productions. Ceolfrid, the abbot of Wearmouth in Northumbria, brought the *codex grandior* to his monastery in 678. And here, in the first years of the 8th century, he instigated the copying of the Codex Amiatinus. This was derived largely from Italian mss, the gospels being of a Neapolitan type, although the Psalter is an indifferent Irish text, and the Catholic Epistles include elements of a Northumbrian type.

The influence of the *codex grandior* consists in externals—the adoption of the one volume format (and Ceolfrid was responsible for two more such), and the order of the books.

C. The Vulgate in the Middle Ages

The further development of the Vg is marked by the growth of a number of distinctive texts. These texts, either local or national according to their degree of importance, owe their distinctiveness partly to the influence of the OL text predominant in their area, partly to their continued history in isolation. Typical to each group is the text, the orthography, and the ancillary material. The study of the Vg down to the 9th century is the study of these groups. Seven texts are generally isolated as being of the first importance. These are Italian (which can be subdivided in more detail), the Spanish, the Anglo-Saxon (the Northumbrian and Canterbury texts can be isolated), the Irish (these can be divided into those written in Ireland and those written on the Continent), the Languedoc, a number of Gallic texts, and the Swiss (of which mss connected with St. Gall form a particularly clear sub-group). It must be added that these groups did not all continue for centuries in isolation.

The 9th century and the Carolingian renaissance saw a new stage. It is associated with the work of two scholars. The first, Theodulph (ca. 750–821), was abbot of Fleury and bishop of Orleans from the closing years of the 8th century. He was responsible, not for a single definitive text, but for a revision which he continually modified. The belief that his text was fundamentally Spanish in character has now to be abandoned: amongst many sources, Italian models were pre-eminent.

The edition of Alcuin (ca. 735–804) was, deservedly, far more influential. Undertaken at the very end of the 8th century, it was presented to Charlemagne at his coronation in 800. Alcuin drew on the textual traditions of his native Northumbria, which by now included a S Italian text mediated through Canterbury, as well as the text of Ceolfrid. By the consistency both of its physical appearance and of its text, as well as by its importance in Charlemagne's program of reform, the Alcuin Bible has a claim to be the first standard Latin Bible. It was to become, for the majority, "the Vulgate" of the Middle Ages. In particular, we may trace its influence down to the early 13th century. At this period there was developed the Paris Bible. This small, convenient "hand edition" was designed for use by students in conjunction with the Gloss. From it come the chapter divisions in use today. In spite of attempts to improve this text, full as it was of interpolations and corruptions, its influence continued into the Renaissance.

D. The Modern Period

The first printed Vg was the Mazarin Bible, probably completed in 1455. Over a hundred more editions are known to have been produced by 1500. The first critical editions were the work of Robert Estienne (Stephanus) of Paris. Seventeen mss are cited in the *apparatus criticus* of his fourth edition of 1540. This formed the basis of the 1547 Louvain edition of Hentenius, who collated a further 31 mss, and the 1574 revision by Arianus Montanus, who examined over 60.

As a result of the authority accorded the Vulgate by the Council of Trent in 1546, a committee to produce a new text was established. Using good mss that included the Amiatinus, and based on the Louvain Bible, the Sixtine edition appeared in 1590. It was short-lived. The Clementine Vulgate (both editions are named after their sponsoring pope) of 1592 took its place. Corrected editions appeared in 1593 and 1598, and it has been the official Roman Catholic Vg text ever since.

One aspect of the developing science of textual criticism was a growing awareness of the importance of the Vulgate in understanding the early history of the biblical text. John Mill (1645–1707) and Richard Bentley (1662–1742) both stressed this. Their arguments are worked out in practice in the *Novum Testamentum Graece et Latine* (1842–50) of Karl Lachmann.

In the most recent period two great projects have collected much manuscript evidence, and established a critical text. Since there are estimated to be over 10,000 Vg mss in existence, it is clear that only the most important can be used. The NT of Wordsworth and White has a text based on the Codex Amiatinus. Twenty-nine mss are cited for the Gospels, and between 15 and 21 for the rest of the NT.

In 1907 Pope Pius X established a commission to revise the Vg Genesis appeared in 1926 under the first editor, Dom Henri Quentin, and publication of the OT was almost complete in 1988. As yet none of the NT has been undertaken.

Among many smaller editions the most valuable, with respect to both text and apparatus, is the Stuttgart edition (1969 2d ed. 1973 3d ed. 1983); whose chief editor was Robert Weber. Study of the Vulgate is also a part of the researches of the Vetus Latina Institut at Beuron in Germany.

Besides its importance in text-critical studies, the investigation of the history of the Vulgate is fundamental, not only for the study of exegesis in the Latin church, but also for the understanding of the growth of western European society.

W

WADI. Geographic names with the element "wadi," meaning "river," generally can be found under the second element of the name; for example: DALIYEH, WADI ED-; JILAT, WADI AL-. Exceptions are WADI MURABBAAT and WADI MUSA.

WADI MURABBAAT (M.R. 110185). At the end of November 1951 bedouin from the Judean desert began to bring fragments of manuscripts to Jerusalem. It was immediately clear that they did not come from Qumran, but it was only in January 1952 that the bedouin were persuaded to reveal their source. The documents came from a series of four caves in the N wall of the Wadi Murabbaat, which is the name given to a section of a long wadi that begins just W of Herodium and drains into the Dead Sea. On modern Israeli maps it is identified as Nahal Teqoa which becomes Nahal Darga.

A. Archaeology

When the excavators arrived on the site on 21 January 1952 they found the bedouin manuscript seekers actually at work in the caves. This guaranteed the provenance of the manuscripts and artifacts they sold in Jerusalem. The excavation continued until 1 March 1952, and was directed by R. de Vaux, L. Harding, and D. Barthélemy. Their task was complicated by two earlier clandestine excavations that had disturbed the stratigraphy. The first was the bedouin exploitation of guano deposits in the 1920s, when pieces of leather (now known to be manuscripts) were thrown away as valueless, and the second the recent manuscript hunt. Nonetheless, a clear occupation series could be reconstructed from the artifacts discovered.

In the 4th millennium B.C. the caves were occupied for a considerable time. The pottery vessels and flint tools are typical of the middle Chalcolithic period. Most unusual for this period in Palestine, an undisturbed layer produced wooden objects, splints, hardwood needles, fire-making devices, and an adze handle with its leather binding for the flint blade intact.

The later MB and Iron Age II remains do not suggest permanent occupation. The MB artifacts (a scarab of the Hyksos period, an alabaster juglet made in Egypt, toggle pins, wooden combs) suggest an Egyptian fugitive who, like Sinuhe, sought refuge in the desert. Similarly the paucity of Iron II remains (pottery and two iron knives with wooden handles) indicates a passing traveller who accidentally dropped a document (Mur 17).

The majority of the finds come from the Roman period. Although the clandestine operations had been most destructive in this level, the excavators were able to distinguish two main phases.

One coin of the year 42/43, three dated to 58/59, and one to 69/70, when taken in conjunction with pieces of pottery that have close parallels with Qumran II, indicate that the caves were occupied by Jewish refugees during the First Revolt (66–70). This is confirmed by an IOU dated to 55/56 (Mur 18), which would not have been conserved indefinitely by its owner.

The second phase is the more important, and is securely dated by nine coins of the Second Revolt (132–135), by two letters from the leader of the rebellion, Simeon ben Kosba (Mur 43–44), and by two legal documents dated 131 (Mur 22) and 133 (Mur 24). That Jewish rebels with their families took refuge in the caves during this troubled period is confirmed by a variety of domestic objects, a key, a writing tablet, needles, spindles, rings, combs, buttons, and sandals belonging both to adults and children. The remains of their garments show them to have been of excellent quality though repatched many times. They had prepared for their exile by bringing with them a saw to provide firewood. Some of these objects may have been leftovers from the occupation during the First Revolt.

The presence of Roman soldiers is indicated by the discovery of a pilum, two javelins, three arrowheads, and parts of military uniforms. One of the soldiers left behind a wooden stamp with two lines of Roman script, C[ENTURIA] ANNAEI/GARGILIU[S] "Gargilius of the century of Annaeus." Since all the biblical texts on parchment, with the exception of the phylactery, were deliberately torn into shreds, it

seems clear that the Roman patrol must have trapped the refugees, who would never have left their sacred books behind. On the basis of two coins of the Tenth Legion and a fragment mentioning the emperor Commodius (Mur 117), de Vaux argues that a Roman garrison must have remained in the caves until the end of the 2d century A.D. The evidence is perhaps better explained as due to sporadic visits by desert patrols, since the caves do not offer the wide perspective that would merit permanent observers.

The caves also had visitors in the 8–10th centuries A.D. as indicated by a coin struck in Ramla in the 8th century and by a document written in Arabic on paper and dated 938/939.

In March 1955, three years after the end of the excavation, a bedouin shepherd discovered the remains of a scroll containing the Hebrew text of the Twelve Minor Prophets in a fifth cave located in the S wall of the wadi some 300 m upstream from caves 1–4. It had been buried with a corpse, but the cave showed no sign of habitation.

J. MURPHY-O'CONNOR

B. Texts

In addition to material culture, finds in the four large Murabbaat caves have yielded numerous manuscripts. Letters appear from the period of the Second Revolt (132–135 C.E.), written on papyrus and addressed to the cave dwellers from Simeon Bar Kokhba. Other nonbiblical materials include documents written in Greek, Aramaic, and Hebrew.

The Hebrew biblical remains from Murabbaat date to the Roman period and are written in Herodian script. All are fragmentary, and their tears may have been deliberately made by Roman soldiers. Fragments from the Pentateuch appear to derive from a single scroll, although little of their text remains. Pentateuchal readings also appear on phylacteries which, unlike those found at Qumran, adhere to tannaitic regulations. From Isaiah, only eleven verses remain.

Most numerous and complete of the texts are fragments from the Minor Prophets, likely from a single scroll. Very little of Zechariah and no readings from Hosea and Malachi have been preserved; all other books of the Minor Prophets are represented, in present Masoretic order.

Many textual critics consider these biblical manuscripts, along with those retrieved from Nahal Hever and Masada, as evidence that the consonantal text of the Hebrew Bible was standardized by the period of the Second Revolt. While the great variety in types of biblical texts found at Qumran suggests that no one textual type was considered authoritative at the turn of the era, the biblical manuscripts from the second century at Murabbaat, Nahal Hever and Masada reflect only the textual type preserved in the present MT. This interpretation of the Murabbaat finds was suggested by de Vaux during his initial work and has been accepted by most historians of the biblical text.

The Murabbaat biblical manuscripts do exhibit some differences from the present MT. Most of these differences are minor, often involving the presence or absence of vowel letters (25 cases) or alternate spelling. Occasional variations are more substantive, reflecting the use of a different preposition (e.g., Mic 5:7) or even a different phrase (e.g., Hab 3:10, perhaps a harmonization toward Psalm 77). Despite these differences, the prominence of the MT textual type is clear: all additions and corrections to the fragments are made toward the MT (18 cases).

Of further interest to textual critics, the Murabbaat texts alternately agree with the *qere* and the *kethib* readings of the MT. This fact may lend support to the argument of Rabin (1955) and Orlinsky (1960) that the Masoretic *qere/kethib* system functions to preserve variant readings rather than to offer corrections.

JULIA M. O'BRIEN

WADI MUSA (M.R. 196970). The name of an Arab village located E of Petra. As a designation of a settlement, the name is relatively recent. In Musil (1907–08) "Wâdî Mûsâ" refers only to the valley which derives its name from the perennial spring of ʿAin Mûsâ. The name of the valley changes at its exit from the depression of Petra. The name of the wadi, "Valley of Moses" is secondary to the name of the spring, "Moses' Spring." The post-biblical, but pre-Christian Jewish tradition localized Kadesh (Num 20:1; 20:22) at Petra, and, accordingly, the miracle of the water from the rock (Num 20:2–13) and Aaron's death (Num 20:23–29) in its vicinity. Aaron's tomb, originally a pre-Islamic sanctuary (Jeremias 1958: 107), is traditionally located at the highest peak of the Petra region: Nabî Hârûn, "The (sanctuary of the) Prophet Aaron." For the name of the village below that spring, Musil and his contemporaries still recorded el-Jîʾ. This is the ancient name of the settlement: *Gaia* (Eus. *Onomast.* 62, 18–19 [4th century A.D.]), *gyʾ* in Nabataean inscriptions (1st century A.D.), and *rĕqam gêʾâ* (Petra) for Kadesh-barnea in the Targum (Deut 1:19). "The Valley," *hag-gayʾ* in 1 Chr 4:39 may refer to the same place (see *infra*).

Wadi Musa is situated on the first terrace of the Transjordanian Plateau's escarpment leading down to the Wadi ʿArabah. Relatively gentle slopes surrounding the village to the N, E, and S and continuing below the village to the W provided potential for terrace farming and horticulture. Annual rainfall averages 300 mm; together with the perennial flow of its spring, ʿAin Mûsâ, the village occupies an environment that allows continuous settled occupation. This case is an exception rather than the rule in S Jordan. Manageable roads, transformed by Trajan into the *Via Nova Traiana*, linked Wadi Musa/el-Jîʾ to the N and to the S. A camel track, which was still used by pilgrims in the Roman period, connected Wadi Musa with the caravan station of Udhruh on the E side of the Transjordanian ridge. All traffic bound for Petra from the N, E, and S had (and still has) to pass through Wadi Musa.

Being continuously occupied, i.e., without standing monuments, and overshadowed by the magnificence of the architectural remains at nearby Petra, Wadi Musa had not yet become a focus of archaeological research. Monumental architecture which is epigraphically and literally attested (Eusebius called Gaia a *polis*, "city"!) has been destroyed and partially recycled by later building activity (Wenning 1987: 91–92). Nabataean and Roman architectural pieces have been reported by Dalman (1908: 359–60), Kirkbride (1960), and Zayadine (1981: 350). A Nabataean inscription from Wadi Musa was erroneously attributed to Petra (Khairy 1981). The foundations of a major temple were bulldozed in 1978 (Brooker and Knauf fc.).

The Iron Age predecessor of Wadi Musa was located at Ṭawīlān, which produced Midianite sherds (13th–12th centuries B.C.) and Edomite occupational strata (8th through 5th centuries B.C.). See TAWILAN. From the Hellenistic period onwards, surface pottery is reported from Wadi Musa (unpublished). 1 Chr 4:39–43 reports an action of Simeonites against *hag-gayʾ* (v 39) in Seir (v 42) with repercussions on *mĕʿînîm*, Minaeans (v 41). Because this action cannot have taken place in the time of Hezekiah (v 41), it is likely that the account alludes to economic and political conflicts at the time of the Chronicler, i.e., the late Persian or early Hellenistic period (Knauf 1985: 116–17; and see MEUNIM). The text, then, reflects the prominence of Gaia/Wadi Musa in the early Nabataean period. Minaean presence among the Nabataeans and in the Petra region is epigraphically attested (Knauf 1985: 117, n. 17). The supreme deity of the Nabataean state is called "Dushara of Gaia" in two inscriptions from Dumah/el-Jôf (A.D. 44; Savignac and Starcky 1957) and Oboda (A.D. 98; Negev 1961: 127–28). The evidence from epigraphy and geography suggests that Gaia/Wadi Musa was the administrative center of the Nabataean realm (Milik 1982: 265; Brooker and Knauf fc.), whereas the significance of Petra was predominantly religious in nature. The precedence of Gaia over Petra is also reflected in the Targumic designation of Petra: *Reqam Gêʾâ,* "Petra of Gaia" vis-à-vis a second *rĕqam, Rĕqam d-Ḥegrâ* (the Nabataean rock-cut necropolis Madâʾin Ṣâliḥ near ancient Hegra, al-Ḥijr). Besides Dushara, Nabataean inscriptions mention the deities Baalshamin (Khairy 1981) and al-Kutbâ (Savignac 1934: 586–89) for Gaia/Wadi Musa. When, early in the 12th century A.D., the Crusaders erected a fortress NW of el-Jîʾ amidst an early Nabataean sacred area (Brown 1987), for the first time its name referred to the "Moses-Valley-tradition": "Li Vaux Moyse," today al-Wuʿayrah.

ERNST AXEL KNAUF

WAFER. As a translation of Heb *rāqîq*, "wafer" indicates an item that was part of the array of foodstuffs which comprised the various sacrificial offerings specified in the priestly texts of the Pentateuch. As "wafer" suggests, this type of break was a thin cake; the Hebrew term can be related to an Arabic word meaning "to be thin." In the more detailed listings of the offerings (Exod 29:2; Lev 2:4; 7:12; Num 6:15), the wafer is said to be unleavened and to be spread with oil. It was to be made of fine wheat flour.

The wafer was used in the "wave offerings" to consecrate priests (Exod 29:2, 23; Lev 8:26); it was also included among the elaborate sacrifices made by Nazirites when they completed their vows (Num 6:14–15). The officiating priest would wave the wafers along with other forms of unleavened bread, the meat from the sacrificed animals, and sometimes its fat and kidneys.

The wafer was also used in the "cereal offerings," when an Israelite layperson would prepare and bring the wafers to the officiating priest, who would offer part of the bread directly to God; the remainder would go to the priest (Lev 2:4, 8–10). Like other cereal offerings (see Leviticus 2), wafers could either be brought by themselves (Lev 2:4) or accompany a peace offering (Lev 7:12). The wafer also appears in the list in 1 Chr 23:29 of foodstuffs that the Levites were supposed to help prepare.

Although all these references to wafers are in cultic passages, it is to be assumed that thin cakes were eaten in everyday life. One passage in Exodus (16:31) compares manna to "wafers made with honey," although the Hebrew word in this verse is *ṣĕpîḥit.*

CAROL MEYERS
PAUL V. M. FLESHER

WAHEB (PLACE) [Heb *wāhēb* (וָהֵב)]. Considered a place name by the RSV and the NEB, Waheb introduces a poetic fragment taken from the ancient Book of the Wars of Yahweh which has been inserted into the Transjordanian itinerary of the Israelites (Num 21:14). Both the grammar and versional variants indicate that the reading is disputed. Though the MT considers Waheb to be an object it appears to provide no verb on which Waheb is dependent within the poetic section. The LXX and OL read *Zōob* for Waheb assuming the Heb reading *zāhāb* which is the name of a locality in Deut 1:1. The KJV following Vg, which in turn reflects early targumic readings, assumed the Heb root *yhb* for Waheb and translated it by a verb "what he did." If Waheb is a place name, as is most likely, it designates an unidentified location in Moab near the river Arnon.

WAILING WALL. See TEMPLE, JERUSALEM.

WALLS. See FORTIFICATIONS (LEVANT).

WANTING AND DESIRING. The expression "desire" or "inordinate longing" is reflected in the OT primarily by the roots *ʾwh* and *ḥmd*. The root *ʾwh* appears as a verb in the *Piʿel, Hitpaʿel*, and *Nipʿal* (30x) and as a noun in the forms *ʾawwâ, taʾăwâ,* and *maʾăwayîm*. The root *ḥmd* appears as a verb in the *Qal, Piʿel, Nipʿal* (21x) and as a noun in the forms *ḥemed, ḥemdâ, ḥămudôt, ḥemdûn, maḥmăd,* and *maḥmōd* (*TWAT* 1: 145–48; 2: 1020–32; *THAT* 1: 74–76, 579–81).

The words *ʾwh* and *ḥmd* are synonymous and often appear in parallelism (Gen 3:6) or interchangeably in the same context (Exod 20:17 and Deut 5:21; Prov 6:25 and Ps 45:12; Ps 68:17 and Ps 132:13–14). Nevertheless, even the word *bḥr* ("choose") can appear in parallelism with *ʾwh* (Ps 132:13–14; Job 23:13, conjecture following Fohrer, *KAT* XVI, 362–63). Likewise, there is a thematic connection between the terms *ʾwh* and *ḥmd* and the semantic range of *ḥšb* ("think, consider"). Finally, even the noun *hawwâ,* "desire" (Mic 7:3; Prov 10:3; 11:6), is related in meaning and cannot be distinguished semantically from *ʾwh*.

In the *Piʿel* the verb *ʾwh* is always associated with *nepeš* as a subject (except in Ps 132:13–14). Likewise, the nouns *ʾawwâ* and *hawwâ* are always found in connection with *nepeš,* while the noun *taʾăwâ* is determined by *nepeš* (Isa 26:8; Ps 10:3), *leb* (Ps 21:3), or *ʾādām* (Prov 19:22). That indicates clearly that the verb *ʾwh* (shades of meaning between its verbal roots cannot be distinguished) as well as the corresponding nouns understand "desiring," "wishing," and "wanting" as a natural expression of the human personality or ego. The intensity and the object of this desire can be quite diverse. It is noteworthy, however, that this desire is concerned primarily with the basic needs of human life such as drinking (2 Sam 23:15), eating (Deut 12:20; Mic 7:1; Job 33:20; Prov 23:3, 6), a partner of the opposite gender (Ps 45:12), or good fortune in general (Prov 10:24; 11:23; Ps 21:3), to which belongs even a correct relationship with God (Isa 26:8–9; Amos 5:18).

Human desire is viewed throughout as normal and good insofar as a reasonable and correct measure is not exceeded and it is not directed toward the wrong ends. For this reason, desire for the property of one's neighbor (Deut 5:21) and striving for the company of evil persons (Prov 24:1) is prohibited. Whoever strives for evil is a wicked person (Prov 21:10), and the wicked person's desire is just as fruitless as is that of the lazy person (Prov 13:4; 21:25–26; Ps 112:10), because it is an inappropriate desire that has no actual basis. That applies also especially to an unquenchable desire that is directed against God (Num 11:4; Pss 78:29–30; 106:14). This desire, which is an expression of human self-realization, represents gulity rebellion against God that must be punished. Eve's desire for the tree in the midst of God's garden and its fruits should also be understood from this perspective (Gen 3:6): in doing this, she abandoned a state of obedience, and this called for punishment.

When God is the subject of *ʾwh* (Ps 132:13–14; Job 23:13), the word *ʾwh* expresses God's far-reaching freedom to make decisions, of which he makes full use.

Statements associated with the semantic range of the word *ʾwh* allow one to recognize that the latter does not simply refer to desire as an intellectual reflection, but even includes forms of behavior that might lead to the acquisition of the object. This information applies equally to the semantic range of *ḥmd* (Herrmann 1927). If the word *ʾwh* expresses the desire that arises from an inner human need, then the word *ḥmd* refers to the desire that comes from seeing something beautiful (Moran 1967).

Both the verb *ḥmd* in its various verbal roots and the corresponding nouns always designate a behavior or activity that was caused by a visual perception of a desired object or person. Still, in such a situation one should again distinguish between positive and negative uses within the semantic range. Just as the semantic range of *ʾwh* expresses desire that is allowed, one may treat the word *ḥmd* also as an expression of such desire—as long as it is not directed toward clearly forbidden objects and does not harm the neighbor and the community. Sexual desire is not prohibited *per se* (Cant 2:3); on the other hand, desire for the wife of one's neighbor (Exod 20:17 = Deut 5:21; Prov 6:25) as well as his property (Exod 20:17; Mic 2:2) is. Likewise, the desire for goods that are reserved for God, and which have therefore come

under the ban *(ḥrm)* (Deut 7:25; Josh 7:21), is not allowed. In contrast, God's legal judgments are characterized as especially desirous (Ps 19:11). The desire for objects and goods that enhance human life, thereby making it more comfortable—e.g., nice clothes (Gen 27:15), good food (Dan 10:3), and possessions in general (Ps 39:12; Isa 32:12)—is thought of as normal and legitimate. Of course, even striving for beauty and a good figure are entirely permissible (Cant 5:16; Ezek 23:6, 12, 23), while plainness is unpleasing (Isa 53:2).

Just as individuals and human groups can be the subject of *ḥmd,* so can God (Ps 68:17). God's desire can be fulfilled without limitation.

Whether expressed by *ʾwh* or *ḥmd,* the expression "desire" acquires a theological significance whenever the desire in question not only breaks human rules of behavior but even violates divine instructions. Such a situation appears both in Eve's desire to eat from the fruits of the tree that stands in the midst of God's garden, in spite of divine prohibition (Gen 3:6), and in the desire of the Israelites in the wilderness for food other than manna (Num 11:4; Ps 78:29–30; 106:14). These desires amount to a rejection of God's leadership and care. Such human behavior, directed against God, is understood theologically as sin necessitating divine punishment. Moreover, the statement that God does what he desires (Job 23:13) unconditionally and independent of human influence provides a clear testimony to God's eminence and omnipotence. This is also confirmed in the view that God desires Mount Zion as an earthly residence (Pss 68:17; 132:13).

Based on Num 11:4, there emerged in late Judaism a tendency to interpret every human desire that issued from external stimulation as a strong action against God, and to understand it as a sin. The thematic overlapping of the prohibition of theft (Exod 20:15 = Deut 5:19) and of coveting (Exod 20:17 = Deut 5:21) was fundamentally significant in extending this view. Regardless of how illogical it may seem, this view led to the false inference that Exod 20:17 = Deut 5:21 in particular must refer to a mental transgression, thereby already prohibiting desire as *intention* (rather than as *deed*). This perspective devalues all human desire and makes all human urges, especially the sexual one, a tabu. In Judaism as well as Christianity this attitude led to unequivocal statements about the general sinfulness of desires and urges. Corresponding statements can be found in the Qumran writings (1QS 9:25; 10:19; 4:9–11; and 5:5) and rabbinic sources (Str-B 1: 298–301; 3: 234–36; 4/1: 466–68).

The NT, in Matt 5:28 and Rom 7:7, makes this especially clear (*TWNT* 3: 168–73). According to Matt 5:28 Jesus already considers desirous thoughts about a married woman—thoughts which have been caused by an urge—as tantamount to adultery with her. This agrees with the rabbinic view that an adulterer is not only a person who physically has had sexual relations with a married person but anyone who commits adultery with his eyes (*Lev. Rab.* 23 [122b]). Undoubtedly, optical-mental desire is already understood in this case as a sin. According to Paul in Rom 7:7, desire in general is a sin: he held the view that the prohibition of desire (= the Law) had initially awakened desire in humans, thereby bringing them for the first time into a state of sin. Correspondingly, Col 3:5 prohibits each and every type of desire and puts it on the same level with greed, incest, unchastity, and passion.

Finally, *4 Macc* 2:2–6 reveals how human desire can be controlled and overcome, especially the sexual urge. Using Joseph as its model, this passage introduces reason or rational thinking as a counterforce to desire. Accordingly, the knowledge of human susceptibility vis-à-vis the senses of seeing and feeling, which compel the person to act, points to the possibility of self-control and self-examination. The human *ratio* is able to interrupt the connection between perception, desire, and action by bringing that desire under its control.

WAR AND WARFARE. See WEAPONS AND IMPLEMENTS OF WARFARE; MILITARY ORGANIZATION IN MESOPOTAMIA. On the subject of "holy war," see DEUTERONOMY, BOOK OF.

WAR IN THE NT. War is a state of armed conflict between two groups of people in which lethal violence is used to coerce one to do the other's will. Karl von Clausewitz (1780–1831) described war as an activity engaged in by duly constituted states that is: "a continuation of political commerce … by other means" (von Clausewitz 1968: 101, 119). In the 2d century, Aelius Aristides wrote that "people no longer believe in wars" and indeed they doubted that they had ever happened. War was like a myth from the past (*EulogyR.* 70; Levin 1950). That may have been true in Athens, where Aristides acquired his rhetorical skills, or Rome, where he visited; but Palestine had been ravaged by war nearly 200 times in 150 years; and between the time that Jesus lived and most of the NT was written the Jews experienced the worst war in their history, leaving Jerusalem in ruins and the temple destroyed. See JEWISH WAR. Whatever Greek or Roman historians may have written and whatever emperors may have claimed about the Roman peace, the perception "from below" of the NT writers is quite different. Weary of war, and disillusioned with its claims to bring or enforce peace, they saw it as demonic and the opposite to the peace which their Lord had brought.

A. NT Words for War

The noun "war" *(polemos)* appears sixteen times in the NT, of which nine occurrences appear in Rev (eight are symbolic) and the verb "to make war" *(polemeō)* appears 7 times, of which 6 occurrences are found in the Revelation. Christ is described as "making war" with the "sword of his mouth" (Rev 2:16); the Word of God is "just in judgment and in making war" (19:11) (an allusion to Ps 96:12 and Isa 11:4; the reference to war is an addition to the LXX). The other occurrences depict war as something done under evil influence. Related words like "fighting" (*machomai, machē:* 2 Cor 7:5; 2 Tim 2:23; Titus 3:9; Jas 4:1; John 6:52) describe quarrels and are negative, for "the servant of the Lord must not be pugnacious" (2 Tim 2:24). The term "to contend" *(palē)* appears only once (Eph 6:12). The verb *strateuō* "to serve as a soldier" and the related terms *strateia* ("battle," "warfare") *strateuma* ("army," "soldier") and *stratiōtes* ("soldier") are used a total of 45 times, both literally and figuratively. Paul, although never referring to himself as a "soldier of Christ" describes his work as an apostle (1 Cor 9:7; 2 Cor 10:3–4; 1 Tim 1:18) along military lines; but the operative statement is: "While we are in the flesh, we do not fight according to the flesh" (2 Cor 10:3). The admonition of 2 Tim 2:3, "Take your share of hardship, like a good soldier of Christ Jesus," could be a genuinely Pauline sentiment, but it is a simile (rather than a metaphor) and it occurs only once.

The hope expressed in Mic 4:3, Zech 9:10, Hos 2:18–23 and Isa 2:4 that eventually the instruments of war and war itself will be abolished as the nations allow God to adjudicate their disputes, is not reflected in the NT. Rather, a pronouncement is attributed to Jesus that war is a birth pang of the new age signaling the coming of the end (a recurrent motif of Jewish apocalyptic: Volz 1934: 157, 213). Thus in Mark 13:7 (= Matt 24:6) reference is made to hearing of "war and rumours" of wars (Luke 21:9 "war and tumults").

Some see an indication here that wars are an essential divinely willed aspect of history. That question is not addressed in this text. The primary reference is to the temple's destruction.

James asks, "From whence come wars *(polemoi)* and conflicts *(machai)* among you? Don't they come from the fighting *(strateuō)* among your members? You desire uncontrollably and cannot have, you quarrel *(machōmai)* and fight *(polemeō).* You have not because you do not ask" (4:1–2).

In two of the fifteen references to war in the Revelation, God or God's agent is portrayed as making war (2:16; 19:11); always by the "word of his mouth." "To make war" is behavior more characteristic of the beast (11:7; 13:7; 16:14; cf. 17:14; 19:19; 20:8) or the angelic beings against the dragon (12:7, 17).

Research on war in the NT has focused on five issues: war in the Greco-Roman world, God as "warrior" in Judaism, Jesus as eschatological or Messianic Warrior, the NT and the Christian Soldier, and the Early Church and the military.

B. War in the Greco-Roman World

In ancient Greece war was seen as essential to the existence of the nation state. Had it not been for the unsuccessful war of Athens against Sparta the praise for war could have been unrestrained. Even the great epics of war, the *Illiad* and the *Odyssey* of Homer, painted graphically both the horrors of war and its glories. In Hector's farewell there is no hint that this is a war to end all wars; rather, much as he regrets the foolishness of the Trojan war, as he takes his son into his arms he prays to Zeus not for the vocation of peace for his young son, but for the life of a warrior, who, better far than his father, might "kill his enemy and bring home the blooded spoils and delight the heart of his mother" (*Il.* 6.465–82).

Bauernfeind (*TDNT* 6:503) has shown that in the Homeric epics war is intimately tied to the rule of the gods, although it is hardly legitimate to designate war-gods. The symbol depicted on the shield of Achilles of Ares and Pallas Athena leading the armies indicates that these two stand together only in war (*Il.* 18.516).

Ares, originating in pre-Homeric times, is the ideal wild hero, driven by a warrior's courage, insatiable in fighting (*Il.* 5.388) and noted for his violent acts, "for killing so many and such good Achaian warriors for no reason, and out of due order," and he is referred to as "this maniac who knows nothing of justice" whom Kypris and Apollo of the golden bow had let loose (*Il.* 5.759–62).

Athena, however, rewards only the deliberate strategies of war and the heroes who emerge from it. She seeks to control the more impetuous Ares (*Il.* 5.851ff.; 21.385ff.), who seems to be in poor repute even on Mount Olympus (*Il.* 5.890; *Od.* 8.267ff.). Thersites, however, lays the blame for war squarely at the feet of the monarch, Agamemnon, who seeks to fill his storehouse with plunder and his harem with new women (*Il.* 2.211–42).

In reaction to this and to balance the poems of Tyrtaeus which encouraged men to battle there were the writings of Euripides and Aristophanes, which dramatized the evils of war. Euripides had a special talent for bringing to the world stage the voices of the children and women most deeply affected by the tragedies of war *(Medea, Women of Troy).* In Aristophanes' *Lysistrata* the magistrate decries the impudence of the women who have no idea what a war means and seek to instruct men on politics. Lysistrata replies, "We are the people who feel it the keenliest, doubly on us the affliction is cast; we bore the sons you took for soldiers" (Rogers 1955: 310).

The wisdom poet Hesiod accepts the divine origins and city-destroying actions of Ares (*Theog.* 922). He reports that the goddess Athena derives deep joy from war and battle (*Theog.* 926). On the whole, however, he approaches the relationship between the gods and war differently. Presumably Hesiod saw behind the wars of mortals the designs of the immortals, but the latter are not seen as being an original cause nor as directly involved; thus, Hesiod places a greater distance between the gods and war (*TDNT* 6:503).

The cause of war is *eris* (*Op.* 14): contemptible, despicable *eris.* Because there are two kinds of *eris* on earth, whose spirits are completely opposed, the person who is wise should praise the one, and blame the other, which stirs up the evil of war and the conflict of battle. In the first two world ages there was no war. Only in the third age does the tragic business of Ares begin (*Op.* 145ff.). As time goes on the goddess

Athena takes precedence over the god Ares; Ares becomes someone who needs to be vanquished. The epithet Eualios, the war-like one, is used for Ares by many writers and on temples (*TDNT* 6:502–7).

Hesiod recognizes that "even war has its honor." But the honor given to *eris* and what it breeds is reluctantly bestowed. Already Achilleus expresses the wish that "*eris* would vanish away" but seems driven by destiny to allow it to run its course in his own life (*Il.* 18.105–15). Hesiod does not recognize war as natural nor as divinely directed to confirm and maintain the truly human. In this respect he differs from Heraclitus, who believed: "It is necessary to know that war *(polemos)* draws people together, and justice is strife *w (eris)* and all living things come into being through strife *(eris)* and necessity" (B 80). His most often quoted saying: "War *(polemos)* is the father of all things and is the king of all" (B 53) has been the philosophy which has guided much of Greek and Roman statecraft.

Among the philosophers the legitimacy of war is at first seldom questioned. Plato describes the Greeks and Barbarians as "enemies by nature and war as the fit name for this enmity and hatred" (*Resp.* 5.470C). The origin of war, "comes from those things from which the greatest disasters, public and private come to states" (*Resp.* 2.373E). He sees armies as necessary for they protect "all our wealth and luxuries." He calls the business of fighting an "art and a profession" *(agonia* and *technikē)* and tries to persuade others that "the right accomplishment of the business of war is of supreme moment" (*Resp.* 2.374C). Soldiers are "to be gentle to their friends and harsh (Gk *xalēpous*) to their enemies" (*Resp.* 2.375C). When asked how they can have both traits, he replies that even dogs are kind to those whom they know and harsh to the stranger (*Resp.* 2.375E).

For Plato, education revolves around military preparedness; the guardians should learn mathematics, geometry, and even astronomy "for the uses of war and for facilitating the conversion of the soul itself from the world to the generation of essence and truth" (*Resp.* 7.525C–527D).

In considering whether a *politeia* in which there is reconciliation of Greek with Greek can ever come into existence, Socrates is told that if it did it would be altogether lovely "… and the [inhabitants] would also be most successful in war [against barbarians] because they would be least likely to desert one another, knowing and addressing each other by the names of brothers, fathers, sons. And if the females should also join in their campaigns … I recognize that all this too would make them irresistible *(amachoi)*" (*Resp.* 471D).

The pursuits of men and women must be the same in peace and in war and their rulers are to be those who have proven themselves the best in both war and philosophy (*Resp.* 8.543).

The Greeks gave strong impetus to viewing war as under human control and determined by degrees of tolerance, and by access to appeals to justice and communication rather than weapons (Leipoldt 1958). This is especially true of the Cynics, who sought to get rid of war by attacking the causes of war. In the Cynic Utopia as described by Crates there will be no war, for the "things for which men make wars on each other, or take up arms for cash or for renown" will not exist; only Pera, the knapsack (Baldry 1965: 109). When that which all have in common and the unity of humankind are stressed the glorification of war ceases. There is at the same time a considerable expansion of the military metaphor as applied to the struggles of life, begun already by Plato and probably going back as far as the Pythagoreans and appearing with some prominence in both the cult of Isis (Apuleius speaks for example of the "holy militia of Isis" which one joins through the *sacramentum* [*Meta.* 9.15, 5]) and of course Mithraism (Edmonds 1938: 21–30). Indeed Ovid enjoys the use of war metaphors in his manual on how to conquer in love and boasts that he has supplied his reader "with arms as Vulcan did to Achilles" and foresees that the reader will "conquer your Amazon with the sword I have sharpened for your use" (*Ars* 2). He sees himself as providing the "proper tools of war" (*Ars* 3), and the love chase as a military service (*Ars* 2).

Sharp criticisms of war come also from the Cynics of the first century, who direct at Alexander their judgment that war is "senselessness" (Diogenes *Ep.* 40). Their clever rhetorician under the name of Heraclitus registers one of the sharpest denunciations of war. Not even animals arm for conflict; war is "defiling" and insulting to "Athena the warrior, as well as Ares who is called the war-like." He does not consider it a laughing matter that they draw up phalanxes and "men against men pray for each others' slaughter" (Heraclit. *Ep.* 7).

Cicero spoke of two ways of settling disputes: "one by reasonable discussion, the other by force. Although reason is characteristic of men and force of beasts, you must resort to force if there is no opportunity to employ reason. Therefore wars should be undertaken only so that one may live in peace without wrongdoing" (*Off.* 1.34).

It is not entirely true that the concept of the religious or holy war is missing from among the Greeks and Romans (Nestle 1935) but religion was less intrusive in Greek and Roman wars than it was in some Hebrew sources and certainly than it was in later Christian and Islamic practice. The Romans more than the Greeks politicized all religion and tended to sacralize war. In the 4th century B.C.E., M. Furius Camillus upon becoming dictator brought the ten-year war against Veii to an end by calling upon her tutelary deity, Juno Regina, with a prayer promising her a temple in Rome worthy of her majesty and offering to make Rome her city (Livy 5.21.3; Schilling 1969: 461).

In a class by themselves are the various expressions of praise for the *pax romana* culminating in Aelius Aristides in the latter half of the 2d century. Augustus took pride in having closed the doors of the war temple of Janus Quirinus three times, something that had happened only twice before in history. Seneca described his age as a "time of deep peace when military conflict is in abeyance everywhere, when an international peace covers all of the globe" (*Epis.* 91.2). In the provinces, at Priene near Ephesus, Augustus is celebrated in 9 B.C.E. as the one "who has brought war to an end and has ordained peace." For the world the birthday of the god means "the beginning of his tidings of peace" (Wengst 1987: 9). The inscription at Halicarnassus in Asia Minor celebrates Augustus as Savior of the human race for "land and sea have peace … people are filled with happy hopes for the future and with delight at the present" (Wengst 1987: 9).

The *pax Romana* has been hailed as "one of the most solid, if not sublime, achievements in history" (Levin 1950: 8). Klaus Wengst has observed, however, that such a judgment can only be sustained if made without any serious comparison with Jewish and Christian views of peace and war. In those religious communities war, and of course peace as well, were seen from the perspective of a God of love and a community in which power was shared with the weak (Wengst 1987).

C. God as Warrior in Judaism

The warlike image of Yahweh or the example of Jewish fighting prowess is no longer invoked as exemplary, as it was during the First World War (e.g., Gunkel 1916: 2–3, 23, 25) and during the Second World War (Rendtorff 1937). The discovery of the War Scroll at Qumran gave considerable impetus to research on this theme for the period of the Second Temple.

As evident from the LXX, some members of the Jewish community were uneasy about portraying Yahweh as a warrior. The Hebrew prophets had already portrayed Yahweh as a military leader of foreign nations, thus modifying the idea that Yahweh might be invoked as their exclusive military leader (Isa 42:13–16). Cyrus is depicted as Yahweh's anointed, the instrument of righteousness. Of him it is said that God will "take him by the hand, to subdue nations before him" (Isa 45:1–8).

The LXX was equally daring in taking each of the four texts in which Yahweh is described as "a man of war" and changing them to "one who destroys war" (Exod 15:3; Isa 42:13; Jdt 9:7; 16:3). In at least one LXX passage the "destruction of war" is added where it does not appear in the MT (Mic 2:8); and in some the hope is escalated from the destruction of instruments of war to the destruction of war itself (Hos 2:20). Apparently influential members of the Jewish community sought to minimize the bellicose depictions of Yahweh (van Leeuwen 1940: 24–29) for it is reflected in the Targums as well (on Isa 42:13 see Chilton 1987: 82). The external pressures which bore on the community thus to change the Hebrew text are not known. There is inherent, however, in the theology of war developed in the Hebrew scriptures the potential for this change. If Yahweh is God of war, Yahweh can destroy it, for it is an institution, not a part of the created order.

Philo foresees an end to war globally (*Praem* 91) and certainly is convinced that "war will not pass through the land of the godly at all … when the enemy perceives … that they have in justice an irresistible ally" (*Praem* 93). A permanent and bloodless victory will be won over war.

The Qumran Scrolls depict a war in more graphic terms, although it is not likely that a literal war is visualized. 1QM is apparently based on a Roman military manual and the battle cries, banners, and the detailed prescription of how to fight would seem to indicate that this group, while non-violent towards their own Jewish compatriots, did not hesitate to engage the Romans in battle when the occasion presented itself. It has been argued that in 1QM a distinction is made for the first time not on the basis of nationalistic or ethnic language "but rather on the moral forces of good and evil, or the cosmic principles of light and darkness … it opens up a possibility radically different from the traditional nationalistic conception of holy war which we still find in the mythological framework of Daniel" (J. Collins 1975: 609). This possibility, according to Collins, is not carried through consistently, nor indeed does he see it as an unmixed blessing. In any case the cry, "Rise up O Warrior! Take your captives, O Man of Glory" in 1QM 12:10 appears to be an exception to the trend noted above.

Finally there was a very strong movement within Judaism which took evil seriously, and consistently saw life as a conflict between evil and good in non-literal terms. Some examples from one of the oldest midrashic works, the Tractate Beshallah [(Lauterbach 1976); *Mek.* 214] illustrate this. Four groups of Israelites are depicted at the Red Sea: (1) Those who want to throw themselves into the sea; "Stand still and see the salvation of the Lord." (2) Those who wish to return to Egypt. (3) Those who wish to fight the Egyptians are promised that the Lord will fight for them. (4) Those who wish to cry out against them are told to hold their peace confident that the Lord will always fight for them. They are assured, "if even when you stand there silent, the Lord will fight for you, how much more so when you render praise to him!" God will fight for them and their task is to engage in worship.

In the Tractate Shirata (Lauterbach 1976: 2.30–35) commenting on Exod 15:3–4 ("The LORD is a Man of war") R. Judah finds this verse to mean that the LORD appeared to them with all the implements of war: *like* a mighty hero girded with a sword (Ps 45:4); *like* a mighty horseman, (Ps 18:11); in a coat of mail and helmet (= righteousness and salvation; Isa 59:17); with a *spear*, (Hab 3:11; cf. Ps 35:3); with a bow and arrows (Hab 3:9; cf. 2 Sam 22:15); shield and buckler (= truth; Pss 91:4; 35:2).

For R. Judah, the LORD fights with his name and has no need of any of these weapons. "If so, why need Scripture specify every single one of them? Merely to tell that when Israel is in need of them, God fights their battles for them." There follows an extensive comparison between Yahweh as divine warrior and a "king of flesh and blood" (Lauterbach 1976: 2.35).

This depiction of Yahweh as a warrior who fights with his word or with his name is exceedingly frequent in Judaism. The transfer also applies to instruments of war; e.g., the sword and the bow are in fact "prayer and fasting" (*Tg. Onq.* Gen 48:22 [Grossfeld 1988: 156]), the "soldier and the warrior" and "those who repel attacks at the gate" in Isa (3:2; 28:6) are not warriors but "those who know how to dispute in the battle of the Torah" (*b. Hag.* 14a; *b. Meg.* 15b). The sword of the mighty is the Torah (*Midr.* Ps. 45:4). The military leaders of the Bible are transformed into scholars and heads of the Sanhedrin, and David's armed men (2 Sam 23:8) are none other than manifestations of the might of his spirit.

Military terms are applied to the struggle between good and evil. In 2 Maccabees the zeal of the martyrs emulating Phineas becomes the ground of Divine deliverance. Moreover in *4 Maccabees*, where the battles of Judas Maccabaeus are not even mentioned, the mother of the Maccabean sons is described as a "warrior of God in the cause of religion" who "defeated the tyrant by her endurance and was found stronger than a man" (*4 Macc.* 16:14–15). The mother urged the sons to "fight their battle zealously on behalf of the Law" (*4 Macc.* 16:16), for "truly it is a holy war" (17:11). Not only has justice been victorious through their sacrifice and the propitiation made by their deaths purified the country, Israel has been delivered through their death (*4 Macc.* 17:22). Lastly, "through them the nation obtained peace and restoring the observance of the Law in our country has captured the city from the enemy" (*4 Macc.* 18:4; Brownlee 1983: 288).

The members of the Qumran group also saw themselves as chosen to clear iniquity "by active performance of justice and passive submission to the trials of chastisement" (1QS 8:3–4). Participants in the community are seen as "effecting atonement for the earth and ensuring the requital of the wicked"

(1QS 8:10). Apparently the members of the community will participate in the holy war or in the vengeance which God enacts against the evil. In the highly symbolic War Scroll it is said repeatedly, "Thine is the battle" (11). At the same time the community seems to prefer military imagery for God, referring to El as the "hero" or "strongman" (Heb *gibbôr*) of the war (12:9). It appears that they are not prepared to depict God in non-military terms and their own role was aggressively enough defined that they most likely joined in battle against the Romans some time between 66 and 74. This likelihood increases if one admits the possibility that John the Essene, mentioned by Josephus (*War* 2 §567; 3 §11, §19) as a military commander against Vespasian, was a member of the sect. Indeed one of the difficulties of identifying the Qumran sect with the Essenes is that Philo states clearly that the Essenes would have nothing to do with the manufacture and sale of weapons (*Quod Omn* 78). Josephus, while describing them as "ministers of peace" (*JW* 2.135) says that they wore arms for protection against brigands (*JW* 2.125). To speak here of "spiritualizing" or internalizing a struggle does not do justice to it. Rather there was emerging among Jews and Greeks an understanding of the human struggle which saw it as going beyond flesh and blood to ideas, concepts and values. Perhaps it was always there but the articulation of this new kind of battle came into its fullest strength when military images were used to portray the human battle.

D. Jesus as Messianic Warrior

One writer states that "the extensive use of the Holy War theme has not been elucidated … only implicitly recognized" by students of the NT (Longman 1982: 291). In fact attention to this theme goes back to the same decade in which OT scholars began to publish on the subject, and to the first and still most important book to deal with Jesus and the messianic war motif (Windisch 1909). Windisch saw that there are certain strands in the gospel tradition which point in the direction of militancy, battle and struggle; in short, despite other indicators; nevertheless "Jesus possessed a certain militancy" (1909: 53). Without the messianic war, it is hard to understand how these militant features came into the gospel tradition. It is no longer possible to deny them: "Jesus conducts the holy war in deed and word to defend and establish the Divine Rule" (Betz 1956: 128–29).

A comparison with the Targumim and their definition of the role of the Messiah as military liberator (Levey 1975: 11, 65) indicates that Jesus took the myths of the Messiah around him, and transformed them by engaging in a battle against the demonic powers which freed people from slavery to them. In the gospel tradition "the exorcisms themselves are regarded as a victorious combat with the devil and his kingdom" (Leivestad 1954: 47). On the road to his victory as "the complete renunciation of every demonstration of power on his own behalf" (Leivestad 1954: 12) he was rejected as simply another messianic pretender when he died on the cross. "We had hoped this one would save Israel," Cleopas said in deep discouragement shortly after Jesus died on the cross (Luke 24:21). Later they would attribute to Jesus (or perhaps recall?) the statement: "My kingdom is not of this world; if my kingdom were of this world my 'officers' would have fought and continued to fight" (John 18:36; for this translation, see BDF 360 (3)). The verb *agonizo* translated "fight" is used only twice in the gospels (Luke 13:24), but only here in the literal sense. The usage has affinities with the wrestling match portrayed in *T. Job* 27 as well as *4 Maccabees,* where it ends in martyrdom. The images of an athletic contest and battle merge into one and this word makes it easier to see the struggle as unconventional. The difference in the kingdoms can be seen most clearly in the fact that the followers of Jesus do not use violence.

In Paul, where the *agon* motif is especially strong, there is a rich confluence of Jewish and Greek ideas on the theme of conflict. The Greek sources, going back to at least Plato, were gathered by Hilarius Edmonds (1935). In 1 Thessalonians 5 with its reference to "peace and security" (v 3) Paul invites the Thessalonians to be "armed with faith and love as breastplate, and the hope of salvation for helmet" (1 Thess 5:8, alluding to Isa 59:17 [LXX]). We have here the first evidence of Paul's inclination to use war terminology and apply it to three fundamental aspects of the style of the Christian life. Malherbe (1983) has pointed out some striking parallels between Paul and Philo and Hellenistic writers of the 1st and 2d centuries. In 2 Cor 10:3–6 Paul uses the image of the siege, and the main verb "to fight" *(strateuō)* is modified by three participles meaning, respectively "to demolish," (v 4), "to compel to surrender" (v 5) and "to punish" (every rebellion; v 6). Although the image of the siege is also used in Prov 21:22, it is

much more detailed here. It is similarly used in Philo, but as Malherbe observes, Philo along with the Hellenistic moralists has in mind primarily the passions. Here virtue becomes the "indestructible and impregnable fortress." He further points out that for Paul the structures he attacks are defensive in nature, the issues are cognitive and volitional rather than sophistical, as in Philo. He writes that "the Spartans held that a city is well fortified when it is surrounded by brave men, who are in fact its walls and the virtues of its inhabitants provide sufficient fortification" (Malherbe 1987: 59). Sentiments like that appear regularly for centuries in many different kinds of literature; only once in Paul.

These observations could also be extended to Eph 6:10–20, which has an extended listing of battle imagery. The threefold repetition of the command to "stand" (vv 11, 13, 14) already indicates the author's main concern. Borrowing freely from Wis 18:14–25, this passage obviously has taken individual pieces of armor and the image of a battle and radically revised it. For here it is not a virtuous person fighting against vices or evils. It is a community clothed in the armor of God and battling, not against people, but against the structures of evil which lie behind them. Although the imagery is similar to that found in Isa 59:15b–18 the weapons of justice (2 Cor 6:7) are depicted differently here. Nevertheless similar imagery appears in the "triumphal procession" terminology (Col 2:15; 2 Cor 2:14). Obviously Paul found some war terminology useful. He used it ingeniously to assist people in struggling against evil powers.

The most problematic book in the NT with regard to war symbolism is the book of Revelation. Recent scholarly work (Caird 1966; Leivestad 1954) makes it possible to see the rich imagery of apocalyptic literature in context and to perceive that many apocalyptic thinkers were in fact non-violent and quietists. Above all it is possible to see in the book the myths of conflict found in the OT as well and to observe their adaptation to the Christian community.

One cannot make sense of the book without recognizing the central place which the Lamb has in the book. Clearly this Lamb (Gk *arnion*) is the source of all action after chap. 5 and becomes the central figure. The author while describing the Lamb's wrath (6:16) shows it as leading (7:17; 14:4) and even as conquering (17:14), but never as engaged in warring activity or as waging war (contra Longman 1982: 300, 302) even when the ten kings and the Beast attack. Rather, the Lamb's victory takes place in solidarity with those "who are called, chosen and faithful" (17:14). The most difficult passage of all is Rev 19:11–21. The imagery of Word and Sword are brought together here and the critical question is how the sovereignty of King of Kings and Lord of Lords is affirmed. The language to describe the victory is borrowed from classical war terminology: "rider on a horse" (19:11, 19, 21), "armies of heaven" (19:14, 19) "the sharp sword that smites the nations" (19:15; cf. 1:16) and the marshaling of the "kings of the earth and their armies to do battle with the Rider upon the horse and his army" (Rev 19:19). This clearly is the last war. Here the Lamb has become the Word, but even the instrument used to overcome the enemies is the Word coming out of his mouth (Rev 19:15), and whatever "killed" means in verse 21, the instrument used remains the sword that comes out of the Rider's mouth. These images do not lend themselves to facile translation into modern language. It is surely possible that the community out of which they come had not resolved the tension that exists between Christ as Lord of Lords and as suffering Lamb who died for the World out of love for it. In addition we are here in the presence of rich imagery with a long history in which apocalyptic and wisdom realms flow together. Wisdom 18:14–25 which sees the "Almighty Word leaping from the throne in heaven … like a relentless warrior, bearing the sharp sword of thy inflexible decree" subduing the avenger and beating back the Divine wrath may be in the back of the author's mind. In any case the motif of the Divine warrior comes to its historical climax here and must in some way be seen in the light of the rich history or "appropriation, reformulation and transformation" it has experienced (Neufeld Yoder 1989: 156).

Although Isaiah, Wisdom and Paul as well as the author of Ephesians had contributed to it, the most thorough rewriting in all of Jewish Christian literature of the war motif was done as the titles of Domitian (Stauffer 1955) are conferred upon the Lamb, and the symbol of non-violent suffering of Judaism—the Lamb—is used to transform the Messianic War. This is not a retreat into privacy, for the Revelation engages political power which has become demonized. In a rich assortment of images, the text signals the direction holy disobedience is to take. The Revelation "makes use of holy war traditions to interpret the

situation of its first readers … and advocates passive resistance … The elect are not purely passive, because the deaths suffered by members of the community are thought to play a role in bringing about the turning point, the eschatological battle" (A. Y. Collins 1977). Far from advocating "an abortive hatred that can only lead to … destruction" (*IDB* 2:176) the book's evocative Christology combines an appeal to faithfulness and following the Lamb. While taking injustices seriously it also rejects all vengeance secure in the knowledge that the Lamb was "slain and by his blood ransomed for God people from every tribe and language, people and nation, making of them a royal house, to serve God as priests; and they shall reign upon the earth" (Rev 5:9–10; cf. Klassen 1966).

E. War in the Early Christian Writings

Some scholars argue that the NT itself has nothing to say directly on the matter of war or military participation. Others insist that a careful reading of the NT can only lead to the conclusion that "war by its very nature contradicts the principles [of the Kingdom] point by point" and that it "represents a concentration of all those things in human life which are most irreconcilably opposed to the will of God as shown in Jesus Christ" (Dodd 1939: 12, 15). The dominant position until recent times is that the NT does not rule out all participation in wars.

Those who allow for Christian participation in war have to come to terms with two aspects of the early Christian teaching which are very difficult to reconcile with participation in war, or indeed with any lethal violence.

The first and the most important is the teaching of Jesus that his disciples are to love their enemies (Luke 6:28, 35). The illustrations he provides on how this might work make the point that the enemy can be treated as God treats people, treating enemy and friend alike (Matt 5:43–8). No Stoic passivity is recommended; rather, an assertive act of engaging the enemy through an act of love which invests in the furtherance of the life of the enemy. Any attempt to justify participation in war must come to terms with this clear and undisputed teaching.

During past wars it has usually been stated or tacitly assumed by exegetes that the teachings of Jesus do not apply in this instance. A manual provided for German soldiers during the Second World War written by a distinguished professor argued that Christians make the best soldiers and that "the Christian is cheerful in life, cheerful in death, friendly towards friends and courageous towards enemies" (Rendtorff 1937: 6). The same author affirms that "Genuine soldierhood and genuine faith in God belong together. It is no joke that on our belt buckles as soldiers the words appear: God with us; and that these words have been preserved for us over many dark years" (ibid. 7). It is difficult to resurrect such arguments in favor of wars, for our understanding of the message of the kingdom of Jesus and of the church has grown. Moreover, Martin Luther King and Cesar Chavez, who actively loved their enemies and manifested courageous non-violence, seem closer to the rule of God.

In addition, the technology of modern warfare makes a profound difference to the discussion. Few believe that a "just" war is possible today, and it is hard to make a moral case for pursuing a nuclear war. The greatest global security may come as people learn to love their enemies and seek a solution in which there will be no losers but only winners. Modern war depersonalizes the enemy. To love enemies makes it possible to regard them as human beings for whom Christ died. To be sure some would restrict "enemies" to personal enemies and suggest that the command has nothing to do with international relations or group relations; or that the claims of justice must also be met and that Jesus says nothing about what to do when others are being abused. In the case of grave abuses, it is argued, resorting to violence is necessary to avert greater harm. There is no easy way to resolve the dilemma.

The second issue to be addressed is the nature of the social reality Jesus brought into being, which he called the kingdom, and which later Christians called the church. While the argument whether the NT allows participation in war cannot be settled, there is agreement that the conflicts which came into being as a result of Jesus' call to discipleship do not constitute the purpose of his mission. When he said that he came "to bring not peace but a sword" he was not disagreeing with his own beatitude for the peacemaker (Matt 5:9) or denying that his disciples should be called children of peace (Luke 10:6) or the hope of the angelic promise at his birth: "Peace on earth" (Luke 2:14). Rather he was realistically and

compassionately saying that the birth pangs of the messianic age would be violence and war (Borg 1984: 199). The writer of Acts described the message of the early church in a nutshell as a "gospel of peace" (Acts 10:36).

The writer to the Ephesians saw the work of Christ as the great bringer of peace who destroyed walls and brought reconciliation between Jew and Greek, and who killed not his enemies but the enmity that existed between humans and God and between various human classes (Eph 2:14–18). With all this came a new view of God—as the God of peace.

Finally in contrast to the earlier pacifism which was grounded on an optimistic view of human nature biblical scholarship now takes seriously the relation between peace and justice and recognizes that passivism, or indeed nonresistance, is never the way of the NT. The profound commitment of early Christians to the values of justice and peace, their sagacity in avoiding the pitfalls of the *pax romana* are in retrospect impressive. There is increasing recognition of the fact that behind this movement stood one person of considerable strength, Jesus of Nazareth, who, drawing from his religious heritage said a decisive no to war. There were other strands in his heritage. He could have chosen Phineas as his hero, the most widely honored Jewish leader in the first century (Klassen 1986). The dominant positions in Judaism of his time saw participation in war as a god-given duty and his creativity in rejecting those options is especially remarkable (Kocis 1971). He stood with Johanan ben Zakkai and others of his generation and in retrospect it is hard to fault him for that path. Those who chose the path of war brought untold pain and suffering to their people and harm to their religion. It is generally agreed "that the ethic of Jesus is the antithesis of the warlike mood, and if universally accepted, would create an ethos in which war was impossible" (*IDB* 4: 801).

F. The Early Church and the Military

Since Adolf Harnack wrote his book *Militia Christi* in 1903, scholars have devoted much time to the question, Did early Christians participate in the military and if not what were the reasons for their refusal? Hans von Campenhausen argued that until the year 175 C.E. there is no evidence that there were any Christians in the army, ergo there was no problem. Even the NT he argued, cannot be pressed into service on this issue: "Every attempt to derive answers from the early sources, especially from the NT itself on this question are doomed to failure" he concluded (von Campenhausen 1960: 206).

Ten years later the distinguished church historian, Robert M. Grant reached the opposite conclusion. He singled out, "The only point, though it was a crucial one, at which Christian teaching sharply diverged from that of most Greek and Roman moralists was in relation to war and military service. Jesus' pronouncements about nonresistance left an indelible impression on the minds of the early Christians. Early Christian theologians condemned murder and cited war as prime instance. Manuals of church discipline refused to allow for the possibility of military service and insisted that upon conversion a soldier had to leave the army" (Grant 1970: 273).

There has, however, been unrelenting pressure from those for whom the early church is in some sense normative, to ask why there are no Christian soldiers in the army till 175 and why so few from 175 till 310? Was it the violence connected with the army or the idolatry? Or did it perhaps have something to do with the fact that the words, "love your enemies" as a summary of their faith were among the most often quoted by the 2d -century Christians? Already *2 Clement* noted that pagans, when they heard of Christians, admired the doctrine of loving the enemies, but goes on to lament the fact that it was so seldom put into practice (*2 Clem.* 13:4), even towards their friends.

Adolf Harnack's interest arose from the growth of the church. He was fascinated by the fact "that the early Christians perceived themselves as God's soldiers and that the historical shift from paganism to Christianity first took place publicly in the army" (1963: 24). Harnack's work was severely criticized by historians, pacifist (Cadoux 1919: 10–13) and non-pacifist (Hornus 1980) alike. In the introduction to the English translation of Harnack (1981) David McInnes Gracie has masterfully outlined the course of the discussion. It is clear from his survey that the discussion can easily be divided into "hawks and doves" as he himself does. It is also clear that through the careful historical work of Hornus, Helgeland, Daly,

Bainton and others more light is cast upon this issue. The fullness of the evidence is now being assimilated and we will need clearly to revise the extreme positions on either side.

Harnack was no doubt mistaken in his conclusion that apocalyptic imagery can lead to easier use of violence. He is also perhaps less than candid in his reasons why the designation, soldier *(miles)* for a Christian fell into disfavor. The evidence Hornus (1980) gathered suggests that Christians invoked a higher loyalty and that there was always then some uneasiness about Christians serving in the military (police duty) or killing their neighbors. Just as modern policemen and soldiers often have trauma after killing someone, so by the late 2d and 3d centuries Christians sought to assist not only their own when lethal violence had been used, but also to prevent them from doing so. Invoking the higher law then covered more than merely the commandment to "love one's enemies." It made it possible to serve the *politeuma* of God without renouncing the *politeia* in which they lived.

Even now there is no agreement on the issue of Christian participation in the military in the first few centuries. The NT indicates that army personnel were recruited into the church. There is no report whether they continued in their occupation. Some Church Fathers speak against Christians participating in the military. By the 4th century, Martin of Tours, a Christian in the military, was so revolted by the use of violence in his time that he left the military because "It is not lawful for me to fight" (Hornus 1980). Without the strong conviction that Jesus was the Messianic King and that the Christian call is to fight with different weapons under his Lordship, that break could not have been undertaken. In any case the NT cannot be invoked in support of participation in war or for traditional pacifism. When certain questions are asked of it we must first ascertain the context in which those questions are asked and the context in which the NT was written. On the question of war, the answers have always been varied and therefore invite continuing dialogue based on careful study before a consensus can be reached.

WILLIAM KLASSEN

WAR RULE (1QM). Also known as the *War Scroll* or *War of the Sons of Light Against the Sons of Darkness,* this scroll was among the major documents discovered in Qumran Cave 1, and was first published by Sukenik (1954–55). The definitive edition in English is that of Yadin (1962). Several fragments from this work have also been found in Cave 4 (see Hunzinger 1957; Baillet 1972, 1982), their contents suggesting that the work existed in different recensions, probably at different times. Nineteen columns of 1QM (= *Milḥamah*) have been preserved, but the bottom of all the columns and almost certainly some final columns have been destroyed. Column XIX was written on a separate sheet, and may not have followed directly after XVIII; however, its contents form a plausible sequel to those of XVIII.

A. Contents

The document is divided into three sections. The first (cols. I–IX) describes the plan of the war, and regulations regarding the warriors and their equipment. The overall sequence of events is first given (col. I): the war will last for forty years, beginning with a conquest of the land of Israel in six years. It will be fought by the "children of light" and predominant among the enemy (the "children of darkness") in the initial phase is the nation of the "Kittim." The seventh, sabbatical year (col. II) is devoted to the (reformed) temple cult. The remaining years of the war will be divided into campaigns against the nations of the known world, who are listed according to Genesis 10. Cols. III–IV describe the army's trumpets, banners, (also shields?) and their inscriptions. Cols. V–VI.7 are apparently intended to depict the formation, weaponry, and age-limits of the three components of the army of the "children of light": infantry, light infantry (?—*nšy hbynym*), and cavalry. All women, children, and cultically ineligible persons are barred from the camp. VII.9–IX describe military maneuvers, the pitched battle, siege (?), and ambush.

The second section (cols. X–XIV) contains various liturgical pieces juxtaposed without any explicit rationale, and unfortunately the beginning of the section is lost at the foot of col. IX. However, it seems from the quoting of Deut 20:2–4 that the first item (XI.1–5) comprises a speech from the chief priest before battle. X.5 prescribes an address by "officers" *(sôterîm)* to the soldiers, but it is unclear whether the following items of liturgy in X.6–XII.17, which are juxtaposed without a break or any further rubrics, are meant to constitute such an address, or whether the whole of cols. X–XII is the chief priest's speech. There is certainly no doubt that the various items are originally quite independent and indeed quite varied in theme and ideology. They offer an interesting form-critical challenge to scholars. By contrast, the settings of the contents of cols. XII and XIV are clear. XIII opens with a rubric stipulating that the chief priest (?—the reference is lost at the end of col. XII), the other priests, the Levites, and "elders of the *sereḥ"* ("army"?) shall "bless … the God of Israel … and they shall curse Belial, and all the spirits of his lot *(gôral).*" The following material is the only markedly dualistic part of this section, and shows strong similarities with the covenant renewal ceremony described in 1QS 1:18 (see Yadin 1962: 224). Col. XIV also opens with rubrics: "After they have retired from the slain towards the camp, they shall all sing the 'psalm of return.' In the morning … they shall bless all together the God of Israel …"

The third section, cols. XV–XIX, describes the battle against the "Kittim," whose seven stages are won alternately by the "children of light" and the "children of darkness." This consists of three kinds of material: liturgical items, battle-descriptions, and the framework which binds them together and provides the overall picture of the encounter. Some of the material is paralleled elsewhere in the document (see below).

The battle itself, as well as the liturgy, is conducted by the priests, headed by the chief priest. Priestly leadership of the army is in fact maintained throughout all the sections of the scroll. The brief reference to the inscription on the shield of the "Prince of the Congregation" (v 1) is tantalizing. This character belongs to the source-material rather than to the ideology of the scroll as a whole, for its presence serves to emphasize the complete absence of any lay figure elsewhere in 1QM, a curious and interesting absence. It seems that the only "messianic" figure in 1QM is priestly. The place of a lay warrior "messiah" is filled by the angelic host, or an individual angel, the "Prince of Light" (XIII.10) or Michael (XVII.6), or God himself (XIII.13; XIX.1). The lack of consistency in 1QM in this respect as well as others is almost certainly to be explained by its complex literary history.

B. Literary History

Although the overall plan as outlined above is reasonably clear, the arrangement of the contents is not without its problems. First, the relationship between the 40-year war of cols. II–IX, and the seven-stage battle of XV–XIX is unclear. Although col. I seems to explain that the battle of XV–XIX represents the opening stage of the war of II–IX, XV–XIX depict an eschatological confrontation between light and darkness, while II–IX depict Israel against the nations. Second, the relationship between the liturgical items in X–XIV and between this section as a whole and the rest of the scroll is unexplained. Third, the three sections of the scroll share material which is either virtually identical (XII.7ff. and XIX.1ff.) or

closely related (XIV.2ff. and XIX.9ff.; battle descriptions from VII and XVI). Such observations have led to suggestions that it was compiled from several sources. After earlier assumptions about the literary unity of the document, it has been recognized that the document has a literary history (Davies 1977). This is confirmed by fragments from Cave 4, which appear to belong to a different recension (or recensions) of the work.

Although the Cave 4 fragments (4QM$^{iii–f}$[491–496]) have now been published in full (Baillet 1982) and compared with 1QM, no analysis of the data has yet been undertaken in terms of the literary history and recension of the document. On the basis of a study of dualism at Qumran (P. von der Osten-Sacken 1969) argued that the "eschatological war-dualism" of 1QM I was the earliest form of that belief at Qumran and the earliest stratum of 1QM itself. A detailed analysis focusing on the document itself (Davies 1977) reached the opposite conclusion, namely that the dualistic material in the document was one of the latest strata, and the non-dualistic nationalistic ideology lay in the earlier strata. Similar conclusions have been reached by Duhaime (1977, 1987). The first Cave 4 fragment published (4QM^{iii}: Hunzinger 1957) was held to represent an "older recension" which was demonstrably less "sectarian" and more "nationalistic." Further comparison of 1QM with the Cave 4 fragments will hopefully clarify: (1) the nature of literary recensional activity at Qumran (which can be applied to other works such as 1QS, CD, and 1QH); and (2) the development of ideology at Qumran, especially with respect to dualism.

C. Genre and Historical Background

The purpose of the scroll remains disputed. The ms of 1QM dates from the end of the 1st century B.C.E. or early 1st century C.E. According to Yadin the tactics and weaponry described in it reflect Roman practice of the time of Caesar and Augustus. However, this view remains disputed, and the fact that all the fighting in the scroll is done by light infantry with a large body of heavy infantry and cavalry used only in pursuit may point to the experience of guerrilla warfare such as used in the Maccabean period (Davies 1979: 65–67). If the scroll has a long history then obviously many different political and military conditions may have influenced it. However, it seems impossible that in our document the Kittim are any other than the Romans; no other "final enemy" could possibly be in view. In Yadin's view, and that of several other scholars, 1QM is essentially a practical composition which foresees a war against Rome which would be eschatological. Such a background is plausible; indeed, the mixture in the scroll of dualistic and nationalistic viewpoints may be the result of a deliberate effort to harmonize formal idealistic notions of the final overthrow of evil with zealous antagonism to the power of Rome. However, this can only be speculative and may not hold for earlier versions of the work which seem to have circulated and will have reflected a different historical context and even a different enemy. It has been suggested, for example (Davies 1977), that II–IX contain materials from a Hasmonean military manual (see also Duhaime 1986). The view has also been expressed that 1QM is entirely idealistic—perhaps a liturgical text (Carmignac 1958; North 1958). Generic analysis is important for this question; although earlier commentators have sometimes described 1QM as an "apocalypse" (e.g., Michaud 1955), more recent analyses based on more technical definitions (Collins [ed] 1979) of "apocalypse" have withheld this label. Duhaime (1986) has recently conducted a comparison with other Greco-Roman military works, concluding that 1QM corresponds rather closely in content and structure to Hellenistic military manuals. Nevertheless, its obvious impracticalities, such as the highly choreographed movements which entail the enemy falling or fleeing on cue, the direction of all maneuvers by priests blowing trumpets, and the direct intervention of God render this work unique and link it as closely to OT theological traditions (see, for example, 2 Chronicles 20) as to the practicalities, political and military, of the Hellenistic-Roman world whose destruction it envisages.

WARRIOR, DIVINE. The understanding of God as a warrior is grounded in the origins of biblical religion. The image of the divine warrior dominates the oldest Israelite poetry, remains a frequent characterization of God throughout the biblical period, and gains a new prominence in the apocalyptic literature of both Jewish and Christian communities. Throughout its use in different literary and historical contexts this image of God retained many of its fundamental features and yet functioned in various ways in the thought and practice of the communities which employed it.

A. The Hebrew Scriptures

1. The Premonarchic Era. Israel's earliest literature, a group of archaic poems, describes divine activity primarily in terms of war. Most of these poems—Exodus 15, Deuteronomy 33, Judges 5, Habakkuk 3 (cf. Genesis 49, Psalm 68)—are hymns of victory recording Israel's early military successes. In them God is described fighting alongside Israel's tribal militia and representing the determinative factor in the victory. The oldest of these hymns introduces Israel's deity with explicit military language: "Yahweh is a warrior,/Yahweh is his name./Pharaoh's chariots and army/he cast into the sea" (Exod 15:3–4). Though not mentioned in these hymns, references in other historical traditions indicate that the ark was carried into war in this early period as a concrete representation of the divine presence on the battlefield (Numbers 10:35–36; cf. Joshua 6; 1 Samuel 4–7). The "Book of the Wars of Yahweh," which is quoted briefly in Numbers 21:14–15 but has not survived, and mention of other records of divine war (Exod 17:14–16), suggest that these archaic hymns are a small sample of a larger literature which once existed in early Israel describing God as a warrior.

This notion of war as a religious event in which God fought as a participant was not unique to Israel, but common throughout the ancient Near East. The historical annals of the great empires in Mesopotamia and Egypt describe major military engagements as including the participation of divine warriors, both male and female, alongside the king and his human armies. Wars recorded in these texts are typically initiated by a deity through an oracle or divination ritual, and won as a result of the strategy, frightening presence, and superior strength of the deity (e.g., *ANET,* 234–37, 253–56, 267–90). This understanding was reflected on the battlefield itself where, for example, each division in the armies of Seit I and Ramesses II was named for a god whose image preceded it into battle (*ANET,* 253–56).

While Israel's premonarchic poems represent divine warfare as an historical reality undertaken to secure its existence in the land of Canaan, the imagery for the divine warrior as well as for Israel's enemy is

taken from the realm of nature. The divine warrior is portrayed as a storm god. God appears with the storm cloud representing the divine chariot (Judg 5:4; Hab 3:8; Ps 68:4, 7–9, 33) and heavily armed with the powers of the thunderstorm, violent winds (Exod 15:8–10), and lightning bolts (Hab 3:9–12). Accompanying the storm god are heavenly armies, sometimes identified with other aspects of nature (Deut 33:2–3; Judg 5:20; Ps 68:18; Hab 3:5, 11; Miller 1973). When the divine warrior appears, nature on earth is devastated (Judg 5:4–5; Hab 3:6, 16–17). The historical enemy in these poems is commonly identified with another natural symbol, the sea or river (Exod 15:4–10; Judg 5:19–21; Ps 68:22–23; Hab 3:8–15). When the enemy is vanquished, nature returns to life and produces abundant crops (Deut 23:28; Ps 68:10–11).

This imagery indicates that Israel's understanding of the divine warrior has its roots in an ANE myth recounting a battle between the gods themselves: the storm god and the sea, a deity symbolizing cosmic powers of chaos and death. Detailed examples of this conflict myth are present in the neighboring cultures of Mesopotamia and N Canaan. In *Enūma eliš,* a Babylonian myth, the storm god Marduk defeats the deity Tiamat, the sea, thereby vanquishing all forces of chaos and disorder in the cosmos. Consequently, Marduk establishes the natural orders underlying human life and the political orders in which Babylon was granted preeminence (*ANET,* 60–72, 501–3). A similar picture is presented in texts from the Canaanite city of Ugarit in which the storm god Baʿal defeats Yamm, the sea (alias Nahar, the river), a myth recited presumably to celebrate Baʿal's control of both natural and historical orders (*ANET,* 129–42).

By using nature imagery drawn from the ANE myth of divine conflict to describe its divine warrior, its enemies, and its battles themselves, Israel's early poet-theologians claimed that each historical battle was part of a larger conflict, a conflict between Israel's God and the forces of chaos in the universe as a whole. The primordial victory of Israel's God over these forces, celebrated in the mythic imagery of these early poems, ensured the stability and fertility of the natural orders which sustained physical life and also secured the political orders which guaranteed the survival of Israelite tribal society. Israel's poets knew existence as a struggle to survive and recognized threats to well-being from both natural and political realms, realms not clearly distinguished from one another in antiquity. Within this struggle they perceived the presence of divine powers—described as warriors—who were believed to be instrumental in its outcome. The fascination of Israel's early poets with the notion of God as warrior thus expressed their confidence that the life of the people of Israel would be preserved from all threats against it.

The exact character of the historical conflicts between Israelite tribal coalitions and their enemies, which the divine participation legitimated and mandated is difficult to determine because the literary corpus of poetry from this period is limited and the historical and sociological situation hard to reconstruct. The warfare of Israel and its God in this early period has been described as primarily offensive (Miller 1973), primarily defensive (von Rad 1951), and as a popular struggle for liberation from an oppressive city-state regime (Gottwald *IDBSup,* 942–44). Likely, conflicts of each of these kinds were involved in the emergence of the new Israelite state in the Canaanite hill country. Whether Israel understood its divine warrior to fight these wars alone, requiring no human participation, is less likely (Lind 1980; see esp. Exodus 15). The emphasis on the determinative character of the divine presence does lead to a kind of passivism in later apocalyptic presentations. But in Israel's old poetry, as war literature from neighboring cultures also suggests, the focus on the divine warrior acknowledges divine power as the ultimate determiner of human fate without denying or discouraging the warfare of human armies (e.g., Judg 5:12–18, 23; cf. *ANET,* 289–90).

2. The Monarchy. The conception of the divine warrior in Israel's premonarchic poetry is preserved in its fundamental features in literature which comes from the royal court and temple in Jerusalem during Israel's monarchy. In fact, the notion of divine warfare is a major theme linking the religious ideology of the tribal period to that of the kingdom (*CMHE,* 91–111). In psalms written to honor the rule of God and the Davidic king on Mount Zion, the imagery of the divine warrior is prominant (e.g., Psalms 2; 18; 24; 46; 48; 76; 89; 97; 132; 144). As did the earlier poetry, these poems picture the deity as a warrior who has vanquished primordial chaos and become king in the universe, ruling on Zion and ensuring the failure of

any natural or historical threat to Israel's security and well-being. In some hymns, reflections of primordial-divine conflict are particularly vivid (Pss 18:8–16; 89:6–14; cf. 74:12–17). The new element in these monarchic hymns is the connection between the divine warrior and Jerusalemite royal institutions. Mount Zion has taken the place of the old southern mountain as the divine sanctuary (Psalms 46; 48; 76; cf. Deut 33:2; Judg 5:4; Hab 3:3–7), and the Davidic king, as commander of the royal armies, has become the human representative of the divine warrior (Psalms 2; 89:9, 25). The identification of the divine warrior with Jerusalem lends divine legitimation to the monarchic institutions and to the use of force to preserve the political orders they represent (cf. Paul's view of the state in Rom 13:1–7).

Another type of Israelite literature from the royal court which highlights the warfare of God is the Deuteronomistic History (DH, Deuteronomy–2 Kings), a history of the state of Israel which reflects in its original edition the point of view of the court of the Davidic King Josiah near the end of the monarchy. This history of Israel preserves older traditions about divine warfare in poetry (e.g., Deuteronomy 33; Josh 10:12–13; Judges 5), narrative (e.g., 1 Samuel 2; 4–6) and legislation (e.g., Deuteronomy 20). As did these and other early traditions, the DH attributes Israel's military successes, both in the tribal period and in the monarchy, to the fighting of the divine warrior (Deut 7:16–26; Joshua 6; 2 Sam 5:17–25), though the primordial dimension of divine warfare which was so much a part of earlier poetry has essentially been omitted in the historian's own commentary. The historian's particular treatment of the divine warrior focuses on God's declaration and leadership of tribal warfare as a unified conquest of the entire land (Joshua 1–12), on God's demand that the enemy with its idols and possessions be completely annihilated (Heb *ḥerem;* Deut 20:10–18; Joshua 6–7), and on God's demand for obedience to the law as a condition for divine combat on Israel's behalf (Josh 1:1–9; 23; Judges 2; 2 Kings 17). These characteristics of the divine warrior's activity in Israel's history all appear to reflect the understanding of the Josianic historian rather than actual earlier concepts or practice. They reflect a theological interpretation of the divine warrior's activity in Israel's history which lends support to Josiah's own policies; his renewed commitment to the law, his purge of non-Yahwistic shrines and killing of their priests, and his move toward political independence from Assyria and the reclamation of land which had earlier been Israel's (2 Kings 22–23).

A third kind of literature from the period of monarchy reflects an understanding of the divine warrior within a different institutional setting—the circles of the prophets. Israel's prophets shared the tribal and royal conception of God as a warrior whose involvement in military engagements determined their outcome and preserved or destroyed nations, but they saw political implications in this image less closely identified with Israel's own national interest. The prophets, like Israel's poets and historians, considered Israel's deity to be king of the universe who executed the divine will through the practice of divine warfare (Isaiah 6; Mic 1:2–4; Zeph 1:14–18; Joel 2:1–11). The fervent concern for justice among Israel's prophets, however, gave a unique emphasis to their apprehension of the kinds of warfare in which the divine warrior was engaged. For the prophets, the divine warrior entered military conflicts against any nation characterized by injustice and political hubris. Thus the prophecy of Amos begins with the announcement of a series of attacks against Israel's neighbors who had violated acceptable standards of international fidelity and social justice (Amos 1:3–2:3). Yet, the more remarkable conviction, which dominates the remainder of Amos' speeches (2:4–9:10) and the prophetic books as a whole, is that Israel's divine warrior could attack Israel itself as judgment for the corruption in its own society. Repeatedly, in oracles against Israel (e.g., Amos 2, 9; Hosea 9) and Judah (e.g., Micah 1; Isaiah 5; Jeremiah 9), the divine warrior is identified with the armies of Assyria or Babylonia fighting against God's own people. Thus prophetic circles associated the warfare of God with the divine maintenance of justice in the world, a justice which would eventuate ultimately in the abolition of war and the reign of peace (e.g., Isaiah 2; 11; Jeremiah 31).

3. The Postmonarchic Era. After Jerusalem was destroyed and Israel ceased to be an independent ANE state with its own government and political institutions, the conception of God as a warrior was preserved and developed primarily in a new literary genre, the apocalyptic vision. In this literature, arising from circles which had become disillusioned with efforts to revive the Israelite state after the Babylonian

exile, the image of the divine warrior is invoked in a way which exploits its earliest roots in ANE myth and at the same time identifies it with a new political crisis. New divine warrior hymns from prophetic schools preserving and editing the oracles of Isaiah and Zechariah picture the divine warrior with images which highlight the cosmic conflict with the chaos deity present in the ANE combat myth, and in Israel's earliest divine warrior poetry (e.g., Isa 26:16–27:6; 59:15b–20; 63:1–6; Zech 9:1–17; 14:1–21; Hanson 1975). In apocalyptic visions, however, the setting of the divine combat shifts from the primordial origins of the universe when chaos was vanquished and order established as preeminent, to the future in which the powers of chaos and death will be annihilated absolutely and the universe will be reconstituted as a world free from any threat to physical or political well-being. This new emphasis on the character of divine conflict as a cosmic event inaugurating a new era, together with the fact that Israel no longer had its own state or military, gives the impression that divine warfare was no longer considered part of an actual historical battle between human armies. Rather, the appearance of the divine warrior was understood as an attack by heavenly forces which would destroy existing political institutions oppressing God's faithful people and establish an enduring divine government without precedent.

The culmination of this apocalyptic conception of the divine warrior within the Hebrew Scriptures is found in the book of Daniel, composed in response to the Seleucid repression of Jewish religion in the middle of the 2d century B.C.E. With imagery reminiscent of the divine warrior's conflict with the sea in older Israelite and ANE texts, the visionary describes in Daniel 7–12 the fall of four earthly kingdoms culminating in the destruction of that of Antiochus IV Epiphanes. The victory is so exclusively attributed in these visions to the divine warrior that the author appears to renounce any human participation in the conflict (Daniel 7; 12; Collins 1977: 153–223). The final solution to oppressive force is still seen as force, but the force of divine armies, not human ones. The culmination of the war, anticipated by this visionary, was to be a new age without death in which God's people would reign (Daniel 12).

B. Postbiblical Jewish Literature

1. Apocrypha. Written to record another Jewish response to the same political crisis which gave rise to the book of Daniel, 1 and 2 Maccabees also see the survival of the Jews dependent on the intervention of God as a warrior. In these works, however, the divine warrior is not described as acting alone to achieve a final, apocalyptic victory over the evil earthly kingdom of Antiochus. Rather, God is understood to command and participate in the armed insurrection led by the Maccabees. The outnumbered Jewish guerrillas recognized, according to these accounts of the war, that only power from heaven could ensure their success (1 Macc 3:18–22; 4:9–11, 30–33). In visions on the battlefield itself the Maccabees are reported to have seen a heavenly cavalry leading the Jewish army into battle (2 Macc 10:27–31; 11:6–12; cf. 5:1–4). Thus the old image of the divine warrior was used in response to a new political crisis in contrasting ways: in 1 and 2 Maccabees to inspire armed resistance in an actual historical conflict, in Daniel to disparage human resistance and express confidence in a divine solution beyond the limits of current human institutions.

2. Qumran. Within the separatist religious sect at Qumran, the image of God as a warrior is particularly prominent in the War Scroll, where it assumes highly apocalyptic form. The War Scroll describes a divine battle against the forces of darkness which will eradicate evil once and for all. In this case, members of the sect expect to participate in the final war, and detailed instructions are included to prescribe the regulations for officers, recruitment of soldiers, organization of armies, kinds of signals, battle strategy, and even the hymns of victory to be sung following the conflict. In this apocalyptic document, the expectation of a cosmic conflict between the divine warrior and cosmic and earthly evil is combined with the preparation for human participation in the battle. The war will not be a narrowly historical one, however, as the Maccabean war or the insurrections against Rome, but one inaugurated by the appearance of the divine warrior and culminating in the founding of divine rule in the world.

C. Early Christian Literature

Though the use of the divine warrior image is not widespread in early Christian literature, it does have a prominent place in one NT book, the Apocalypse of John (Revelation). Its use here is influenced primarily by its apocalyptic coloring in Isaiah 56–66, Zechariah 9–14, and Daniel 7–12. The author of these visions,

writing in response to the repression of Christianity by the Roman Empire, regards the divine warrior in ways particularly reminiscent of the book of Daniel. The Apocalypse is structured according to the pattern of the ancient combat myth. It pictures the divine warrior, heavily armed and leading the heavenly armies against the Roman Empire, symbolized as a dragon (19:11–21; Yarbro Collins 1976). As in Daniel, this conflict was to be no ordinary war but the final conquest by the divine warrior—in this case the triumphant Christ—of human political institutions which acted contrary to God's designs and persecuted the faithful communities of believers. The result was to be the establishment of the rule of God on earth at which time both natural and political orders would be reconstituted to ensure the complete well-being of God's people (chaps. 21–22). As in Daniel, the divine warrior acts alone and the description of victory over the dragon reflects the author's confidence that ultimate powers were moving against repressive human institutions and would in the end reward the passive resistance of the faithful.

Elsewhere in the NT, imagery drawn from the divine warrior tradition is neither as prominent nor as directly related to actual political institutions as it is in the Apocalypse of John. When Paul (Rom 13:11–14; 2 Cor 6:7; 10:3–6; 1 Thess 5:2–11) or his disciples (Eph 6:10–20; Col 2:15) use military imagery, they urge the Christian community to see itself involved in a struggle not with human adversaries or institutions (2 Cor 10:3–4; Eph 6:12; cf. Rom 13:1–7), but with the powers of evil which threaten the gospel. Lying behind this Pauline perspective is the apocalyptic idea that the world is caught in a struggle between divine and diabolical forces which will one day be resolved by the conquest of chaos and death (Rom 8:18–25; 1 Cor 15:1–28). Until then, Paul and his disciples instruct Christians to arm themselves with the values of the gospel—truth, righteousness, faith, peace—in order to become participants in the present, earthly dimensions of this larger spiritual and moral struggle.

THEODORE HIEBERT

WARS OF THE LORD, BOOK OF THE

[Heb *sēper milḥămōt yhwh* (סֵפֶר מִלְחֲמֹת יהוה)]. A book, or perhaps an epic poem, mentioned only once in the Bible, which apparently contained an archaic poetic account of God's "Holy War" directed against the enemies of Israel in the time of Moses and Joshua (Num 21:14). Most scholars have assumed it to be an anthology of old war poems dealing with the conflict between the invading Israelites and the original inhabitants of Canaan, suggesting that it perhaps be identified with the Book of Jashar. See JASHAR, BOOK OF. According to a tradition preserved in the LXX and in the Aramaic Targums, the phrase "The Wars of the Lord" is the beginning of the poetic quotation and not part of the actual title. The book referred to would then be the Torah. But according to the Vulgate and both medieval and modern exegetes, this is the complete title of a book which, like the Book of Jashar, has not been preserved.

The brief poetic quotation was cited by the narrator primarily because it placed the boundary of Moab at the Arnon River. Though the Hebrew text is difficult, it may be rendered as follows:

The Benefactor (i.e., Yahweh) has come in a storm;
Yes, He has come to the wadies of the Arnon.
He marched through the wadies;

He marched, he turned aside—to the seat of Ar;
He leaned toward the border of Moab.

Because of archaic features, the text was subsequently misread with resultant confusion in the ancient versions and some textual corruption in the transmission of MT. The picture presented is that of the Divine Warrior poised on the edge of the promised land, before the most celebrated battles of the Exodus-Conquest. He has come in the whirlwind with His hosts to the sources of the Arnon River in Transjordan. He marches through the wadies, turning aside to settle affairs with Moab before marching against the two Amorite kings to the N, and then across the Jordan to Gilgal and the conquest of Canaan. The picture is indeed a fitting one for the *incipit* of a narrative poem entitled "The Book of the Wars of Yahweh."

The citation appears in a prose context in which two other ancient poems are also quoted: "The Song of the Well" in Num 21:17–20; and the Amorite "Song of Heshbon" in Num 21:27–30 (Hanson 1968). It is not certain whether the book was actually a written source as such. It may have been a familiar song in the oral repertoire of the professional singers of ancient Israel, which was used within some festival context—perhaps in the celebration of the Ritual Conquest tradition at Gilgal in premonarchic Israel. If so, we have here a reference to a major poetic source behind the familiar JEDP sources of Pentateuchal criticism.

The origin and concept of the Day of the Lord in Israel's prophetic tradition is apparently connected with the content of this book (von Rad 1959: 108). The "Wars of the Lord" are the classical battles of the Exodus-Conquest era, which were celebrated within the cult of ancient Israel (see also Christensen 1975: 50–51).

WASHINGTONIANUS. See CODEX (CODEX WASHINGTONIANUS).

WASM (CAMEL BRAND). Brands (Ar *wasm,* pl. *wusūm*) are used by the bedouin tribes as an indelible mark to indicate the ownership of camels. While, as with any herdsman, the bedouin would be able to recognize their own animals, were a dispute to arise over a camel that has strayed the brand would provide proof of ownership. Many different shapes, usually of quite simple and often symmetrical forms are used by the tribes as brands, and are known by the names of familiar objects. See Fig. WAS.01. In Jordan today, for example, the Howeitat tribe use the *ʾafayhij* and the Beni Sakhr the *dabbūs.* Subsections of a tribe sometimes use a completely different *wasm* from that of the main tribe, or use the same basic shape in combination with another. Frequently, the additional brand is one or more straight lines *(miṭraq)* which, when it is used to indicate this distinction, is called *šāhid* (pl. *šawāhid*). The line (or lines) may be placed in any relationship to the main *wasm* and in some instances is joined to the basic shape (for example, the *ṭuwayqah* in Fig. WAS.01 is used by the Faiz branch of the Beni Sakhr). Some authors have compared European heraldic devices used to distinguish branches of a family; however, too close a comparison is not justified, as there is no rigid system or set of rules governing adoption of *šawāhid,* and they are often subsequently abandoned when the distinction is no longer useful or necessary (Huber 1891: 178).

The position of the *wasm,* whether branded on the camel's cheek, neck, shoulder, or thigh, for example, is as important for identification as the shape itself (see the descriptions of *wusūm* in Dickson 1949: 420–25; Oppenheim 1939–52, 1967–68). In some cases when the same basic shape is used by more than one tribe it is the only distinction.

When a camel is sold, the new owner brands the animal with his tribal *wasm* and although the previous brand remains, the tribal *wasm* of the latest owner can be recognized as more recent, thus identifying the animal (Musil 1926: 28–29).

The tribal brand is not generally used on smaller livestock such as sheep and goats, which are either not marked at all (Musil 1927: 232) or which have their ears clipped or incised with a different shape.

In addition to being used to mark the ownership of camels, the *wasm* is often inscribed on graves, on the rocks around wells and shelters and on isolated boulders and outcrops. On gravestones a single *wasm,* that used by close kinsmen of the deceased, is usually engraved alone, although sometimes the *wusūm* of all branches and subsections of his tribe can be inscribed as well (Musil 1928b: 419). *Wusūm* are hammered into rocks around or inside wells to indicate ownership (Dickson 1949: 428) but also, as with shelters, to mark the temporary presence of members of a tribe. As a form of graffiti they are found on isolated boulders and rock faces throughout the deserts of Arabia.

The identification of inscribed *wusūm* presents considerable difficulties (Field 1952: 2). It is impossible to date them, and even if they are not very old, they are frequently not recognized by the people living in the area today. Different tribes often use the same shape as a *wasm,* the identifying factor being the position of the brand on the camel's body; this distinction is lost when the *wasm* is hammered or chiseled into a rock. A further complication when inscribed *wusūm* occur in groups such as those covering the walls of buildings (Field 1952: fig. 22–23) is the difficulty of separating the various signs into particular combinations. Unless there is an obvious space, difference of patina, or technique of inscribing, it is hard to know where one *wasm* ends and another begins. A few records of inscribed *wusūm* have been made, but the only major published study is Field (1952). In recent years systematic recording of inscribed *wusūm* has been undertaken in Jordan as an important aspect of epigraphic surveys (Macdonald and Searight 1982; King 1987).

Wusūm have been identified as marked on camels depicted in the ancient rock art found in Arabia; an example occurs, for instance, in Littmann (1904: pl. VII) and have been found in association with Early North Arabian inscriptions (Field 1952: 31–35; van den Branden 1950 *passim,* 1966: 63–64; Livingstone 1983: 114) although, in some cases the copies of these inscriptions are inaccurate and misleading and the interpretations of the signs as *wusūm* incorrect.

Littmann (1904: 78–102) pointed out the similarities between the forms of *wusūm* (both ancient and modern) and the shapes of the letters of the Thamudic inscriptions. However, one should not place too much significance on this (cf. Knauf 1985: 75) since it is probably the result of a preference when defining a brand to choose simple clear shapes based on a cross, circle, triangle, or rectangle which also frequently correspond, coincidentally, to the symmetrical forms of some of the letters in the scripts used in Early North Arabian and Sayhadic inscriptions. After all, similar shapes used as *wusūm* have been found in such diverse locations as Algeria, the Central Sahara, and Egypt (Field 1952: 31–35).

WATEN, KHIRBET EL-. See MOLADAH (PLACE).

WATER FOR IMPURITY. Water which has been mixed with ashes obtained from the burning of the Red Cow for purifying persons and objects from corpse contamination (Numbers 19). (On the burning of the Red Cow, the treatment of the ashes and the preparation and use of the ash-water mixture, see HEIFER, RED.)

The Hebrew term *mê (han)niddâ* (Num 19:9, 13, 20, 21; 31:23) has been variously understood. Most of the instances of the noun *niddâ* signify "impurity." It is used specifically of menstrual impurity (Lev 12:2, 5; 15:19, 20, 24, 25, 26, 33; 18:19; Ezek 18:6; 22:10; 36:17) and of impurity in a general sense (Ezek 7:19, 20; Lam 1:17; Ezra 9:11; 2 Chr 29:5). Once it has the meaning "abomination" (Lev 20:21). In view of this usage, the phrase *mê (han)niddâ* has been translated "water of impurity," or since, the water mixture is used to remove corpse contamination, "water (for the removal) of impurity."

Recently a different understanding of *niddâ* has been advanced (J. Milgrom and D. P. Wright in *TWAT* 5: 250–53). Its etymology is not entirely clear; it may be connected with the root *ndd* which means "depart, flee, wander" *(Qal)* and "make flee, chase away" *(Hip‹il)* or with the root *ndh* "chase away, put aside" *(Pi‹el).* Whatever the etymology, the base meaning of *niddâ* according to these near synonymous verbal roots could be "explusion, elimination." Thus, in the case of menstruation, *niddâ* could signify "discharge" or "elimination" of blood. From this specific use the noun would have acquired a more general sense of "impurity" and "abomination." In the phrase *mê (han)niddâ* the noun retained its more original meaning "elimination." Hence *mê (han)niddâ* signifies "water for the elimination (of impurity)," or simply, "water for purification." This understanding is supported by Zech 13:1 which talks of a water source being opened up for *ḥaṭṭā›t* and *niddâ.* It has been shown that *ḥaṭṭā›t* here can be understood as a privative *Pi‹el* noun meaning "purification, purgation" (Milgrom 1971). This suggests that *niddâ* should have a similar meaning of "purification" rather than "sin." Also Num 8:7 prescribes that the Levites are to be cleansed with *mê ḥaṭṭā›t.* Again, if *ḥaṭṭā›t* here is taken as meaning "purification," then this phrase and *mê (han)niddâ* have a very similar meaning: "water for purification."

Wefing (1981: 356–63) views the term *mê (han)niddâ* as a secondary element of the text. In its present context it means "water against impurity" or "water for purification." Perhaps the term at an earlier stage of the ritual had a connection with ordeal waters such as in Num 5:18, 19, 22, 23, 24, 27 and Exod 32:20.

WATER GATE (PLACE) [Heb *ša‹ar hammayim* (שַׁעַר הַמַּיִם)]. A gate on the E side of Jerusalem in the Persian period, mentioned in connection with Nehemiah's building of the wall (Neh 3:26) and its dedication (Neh 12:37). At this site Ezra read the law to the returned exiles (Neh 8:1, 3 (= 1 Esdr 9:38, 41), and booths were set up for the celebration of the Feast of Tabernacles (Neh 8:16). All that is known about the gate is that it was located on the E side of Jerusalem. There is general agreement that the Water Gate was in some proximity to the Gihon spring, serving either as a city access to the spring (Burrows 1933–34: 120), a palace gate (Avi-Yonah 1954: 247), or an access for water for temple use (Pohlmann

1970: 151–54). The parallel account in 1 Esdras identifies the site only as the "east gate of the temple" (1 Esdr 9:38). Williamson (*Ezra, Nehemiah* WBC, 287) suggests that because of the ruined state of the E wall the reading of the law (Neh 8:1, 3) and celebration of Sukkoth (Neh 8:16) took place outside the city wall "a little down the slope in the general vicinity of the spring itself," rather than inside the city. The mention of the Water Gate provides a common link between material considered to belong to the Ezra Memoir (Ezra 7–10 and Nehemiah 8) and the Nehemiah Memoirs.

WATER WORKS. Because of the necessity of water for human existence, access to and/or storage of this commodity has been a matter of constant concern, and particularly so in the marginally arid regions typical of the E Mediterranean land masses.

———

A. Introduction

The climate throughout the E Mediterranean is dry or subject to annual periods of minimal rainfall, usually from May through September. Palestine proper has quite a significant overall annual rainfall, totaling 300 mm at Gaza, but rising gradually as one moves N and E, to 700 mm near Bethlehem and 600 mm at Acco. The coastline of Lebanon and Syria also receives substantial precipitation. But the rest of the Middle East is far more arid, and 90 percent of the region S and E of Palestine in an average year receives less than 100 mm of precipitation. The lower limit at which drought farming can be carried on is 250 mm. Not only is the rainfall meager in this area, but it is unevenly distributed in space and time, and the total amount that actually falls in a given area can vary dramatically from year to year. This precipitation arrives during the cooler months, so there is no cloud cover or new moisture to moderate the strength of the summer sun. In consequence, the rates of evapo-transpiration are very high. Because of the low levels of precipitation, the protective cover of vegetation in the Middle East is thin and difficult to replace once damaged. The soil, often light and lacking an absorbent cover of humus, is then soon washed away by the winter rain, which, when it comes, tends to fall in short, intense storms.

These factors, combined with topography, have always had a marked effect on the location and density of human populations in this region, and on their activities. Since humans and the plants and animals on which they feed cannot live without water, and since immediate local water resources usually were not sufficient to sustain life in this region, settled populations have always had to interfere with the natural hydrology. From at least the early Neolithic period it was necessary, or at the very least advantageous, to enhance the flow of springs, to divert the local runoff from precipitation, to conduct and store water, and to tap the flow of occasional or perennial streams. These activities were assisted early on by water works: structures or specialized procedures and tools designed to manipulate the flow of water for human benefit. The types of structures involved were spring houses, wells, agricultural terraces, enhanced runoff fields, wadi barriers, conduits, cisterns, reservoirs, dams, and canals. Several simple water-lifting devices were in use by the MB Age, and a wide variety of procedures evolved in tandem with the appearance of the

structures just noted. Not least of all, the crucial importance of a secure water supply, and the vulnerability of most water works, stimulated the appearance in the ancient Middle East of formal law codes regulating the management and use of water. This process was simply the codification of informal rules of ownership, access, precedence, and maintenance that had evolved among earlier nomadic and settled groups in response to the demands of typical local situations. The hierarchy of applications usually applied to the water managed by such ancient societies in this region included drinking, watering livestock, washing, industrial or craft processes, and irrigation. The Greek and Roman cultures applied much the same sequence of needs to water use (see Vitr. 8.1.1, 6.2; Frontin. *Aq.* 2.91; Pl. *Criti.* 117, a-b). Several related topics fall outside the boundaries of this discussion, such as agricultural schedules, harbors and navigational canals, baths and bathing, sewers, sanitation and drainage, the law codes dealing with all the above, and the symbolic value and practical applications of water in the ancient Middle East.

A rich variety of source materials survives for the history of ancient water works in the Middle East. The archaeological evidence is the most extensive, including both the remains of structures, machines, or tools and the contemporary visual representations of such structures or implements in use. Written sources are also important for our understanding of the ancient water works. Literary sources, such as the Bible or the works of Greek and Roman historians, everyday records on clay tablets in palace archives, inscriptions, and Egyptian papyrus documents all provide critical data on the design, construction, use, and social context of ancient water works in the Middle East. It is fortunate that the literary evidence is richest for the cultures of Egypt and Mesopotamia, where the archaeological evidence has for the most part been lost, and that there is much archaeological evidence in ancient Palestine and the adjacent territories, for which the literary evidence is more restricted. Although essentially outsiders, the Greeks and Romans occupied and affected much of the region, and the written comments and sophisticated structures they left behind testify to the special character of problems of water supply in the ancient Middle East. The Greek and Latin texts in particular provide more objective and extensive information than most local sources.

Nevertheless, in this context the biblical evidence will be the point of departure for the discussion. Certainly the author of Deut 11:10–11 identified the major dichotomy that characterized the use of water in the region in antiquity: "For the land which you are entering to take possession of it is not like the land of Egypt from which you have come, where you sowed your seed and watered it with your feet, like a garden of vegetables; but the land … is a land of hills and valleys, which drinks water by the rain from heaven." Hydraulic technology in ancient Egypt and Mesopotamia was governed by the presence of the only three great rivers in the region: the Nile, Tigris, and Euphrates. All three were fed by sources far outside their thickly-settled river valleys: they constituted exogenous water sources in regions where local precipitation was and still is completely insufficient for agriculture or urban life. The rest of the region had to depend on endogenous resources, particularly precipitation and the consequent recharge of local aquifers. Irrigation in the Egyptian sense of the word was impossible here, except on a very small scale for special crops. It was also for the most part unnecessary once structures and procedures had evolved to deal with the typical aridity. Since for the most part the water works of the Egyptian and Mesopotamian cultures differed markedly in character from those in the rest of the Middle East, they will be discussed separately below. Another typical pattern is the contrast, and sometimes the conflict, between the farmer and the herder, embodied early on in the story of Cain and Abel (Gen 4:1–16). Most often the settled and the nomadic ways of life were complementary, enforced by the natural and social resources of specific regions or periods. The two groups did, however, have need of different water works, and distinct resources were available to them. The literary and archaeological evidence reflect this reality as well.

B. Springs

The author of Deut 9:7 optimistically describes the promised land as "a land of brooks of water, of fountains and springs, flowing forth in valleys and hills …" Since perennial streams are rare in the region, most early settlements had to depend on springs for their water supply. These sources are fairly common in the porous limestone landscape that comprises most of Palestine, bursting to the surface of the hilly landscape at points where the percolation of ground water is arrested by an impermeable stratum, but are

far less frequent elsewhere in the region. The clarity and convenience of flowing spring water led biblical authors to use it as a symbol of God's goodness: Pss 87:7; 104:10; 107:35; 114:8; Isa 41:18; 58:11; John 4:14. Springs were particularly welcome in the arid regions of the S and E where other water sources were absent, as at the oasis of Elim on the border with Egypt (Exod 15:27; Num 33:9). In completely waterless regions, long-distance travel required the provision of water depots, such as those Herodotus (3.6) reports were developed by the Persians in the N Sinai: all the empty wine jars in Egypt were sent to Memphis, filled with water there, and carried out to the desert for storage at strategic points. The Pharaohs of New Kingdom Egypt made similar provisions for travel along the critical Wadi Hammamat pass from the Nile valley to the Red Sea by building cisterns along the road.

In certain situations it is possible to increase the flow of water by excavation of the rock or earth around the mouth of a spring. It may be that some such intervention is behind the famous story of Moses striking a rock in the Sinai to release a stream of water (Exod 17:1–7; Num 20:10–11). Some spring houses in the ancient Mediterranean world are merely facades fronting deep galleries cut back along the water-bearing stratum to increase the flow and store the result. The famous Peirene spring in Corinth is an example, and in the early stages of its use the Gihon spring at Jerusalem probably was enhanced in this manner. Certainly at Palmyra, Gezer, and Gibeon the original spring caves were excavated to expose more of the aquifer. Strabo (16.2.13) records an ingenious solution to the problems of exploiting a submarine spring near the small, waterless island of Aradus off the coast of Syria (cf. also Pliny *HN,* 5.34.128). The inhabitants collected the precious flow of water by letting down over it a weighted funnel connected to a leather pipe. The fresh water gradually displaced the saltwater in the pipe and was allowed to pour into containers in waiting boats. Just as the flow of springs could be enhanced, so it could be reduced or stopped altogether. Such sabotage could be inflicted by an invading army on occupied land (2 Kgs 3:25), or be adopted as part of a scorched earth policy by a retreating populace. During his preparations for Sennacherib's siege in 701 B.C., Hezekiah had the springs around Jerusalem stopped up in order to deny water to the invading army (2 Chr 32:2–4).

Although the purity of spring water could generally be assumed in antiquity, there were some exceptions caused by natural or man-made pollution. In 2 Kgs 2:19–22, Elisha is informed that the spring of Jericho causes miscarriage, death, and agricultural infertility, and he purifies the water with a bowl of salt. Vitruvius (8.6.15) recommends the addition of salt to purify and improve the taste of cistern water. Pliny (*HN,* 31.22.36) states that water from certain "nitrous and salty acid" springs in the desert around the Red Sea could be made sweet within two hours by the addition of pearl barley, and that the barley itself could then be eaten. The character of well or cistern water was less reliable, and to the prophet Jeremiah (2:13) perverse faithlessness was symbolized by a preference for leaky cisterns over flowing spring water. Pliny (*HN,* 31.21.31) also notes the superiority of flowing water over still, and there was even a connoisseurship of the varying qualities of spring water in the Greek and Roman world (see Hippoc. *Aër.* 7.58–65; Vitr. 8.1.2; Pliny *HN,* 31.2.4–20.30, 24.41; Frontin. *Aq.* 1.11–12, 2.89–93). Perhaps because of the general scarcity of water in the Middle East, such refinements of judgment generally did not find expression there. The Parthian kings were an exception: they drank only water from the Choaspes and Eulaeus rivers, scorning the Tigris, Euphrates, and all others (Pliny *HN,* 31.21.35).

Most ancient city mounds in the Middle East were located over or near springs, but the earliest stages of development have now nearly always been lost. Since pools of water attract significant human and animal traffic, unimproved springs soon become muddy and polluted. This unpleasant condition is a symbol of wickedness in Prov 25:26, and all the Roman authors concerned with hydraulic technology emphasize the need to keep springs and wells free of reeds, vegetation, and mud (Vitr. 8.4.2; Pliny *HN,* 31.22.36–7; Faventinus 5; Frontin. *Aq.* 2.90; Vegetius *Epitoma rei militaris* 3.2). At Byblos it can be seen that planning was exercised from an early stage in the city's history. Even before 3000 B.C. a small pool was dug out of a marsh below the spring to receive the flow and keep the area around it dry. The area was also kept free of habitations and burials for a radius of ca. 15 m. As the level of the town rose during the mid-3d millennium, the walls of the original pool were reinforced with stone blocks, a second reservoir 25 m in diameter was added, and steps were provided to facilitate access to the water. This sort of structural

protection, including paving and the provision of pools, must have been repeated countless times throughout the Middle East from the Bronze Age onward. Another Bronze Age example survives at Tell Dor, and the remains of the Efca spring at Palmyra embody many of the same features.

Later periods saw the introduction of proper spring houses: architecturally distinct structures designed to collect the water, protect it from the sun and from pollution, provide convenient access to the flow, and—occasionally—to present an impressive facade. These needs usually were served by the construction of a small reservoir hidden behind a protective wall provided with overflow spouts that might be used to fill containers directly, or to fill a basin for dipping. The populist tyrants of 6th-century B.C. Greece first fulfilled these requirements with the monumental public spring houses that appeared in Megara, Samos, Corinth, and Athens. Paving and drainage channels for the runoff were essential. There are two ornate fountains of the 2d century B.C. at the Hasmonean palace of Iraq el Emir, in which water poured through the mouths of panthers cut in low relief in stone slabs set into the facade. The Greeks and Romans expended particular care on the architectural facades of their spring houses, which might resemble a small shrine or an enormous theater building. The most elaborate structure of this type in the ancient Middle East was the Nymphaeum at Gerasa, constructed in the late 2d century A.D. The two-story Corinthian facade was a paradigm of Roman baroque architecture, combining rich architectural decoration with sculpture, jets of water, and a large pool. Similar monumental fountains were built during the Empire at Petra, Miletus, and Corinth.

Structures such as these usually were far removed from their water source and were served by conduits, but a different and more utilitarian solution to the problem of water supply was needed at many of the fortified centers typical of the LB and early Iron Age in the Middle East. At Megiddo, Gibeon, Gezer, Hazor, and Ibleam the springs on which the settlement depended were close by the habitation mound but outside the massive fortification walls. In order to secure their access to water during siege, the rulers of Megiddo built a covered stairway down the side of the mound to the spring early in the 10th century B.C. Since this arrangement was very vulnerable to interruption, a tunnel was excavated during the mid-9th century B.C. in the bedrock below the city, connecting the spring with a shaft 30 m deep inside the walls by means of a stepped tunnel. At first, access to the spring from outside may have been preserved, but later on the whole spring was enclosed, and the sloping tunnel was extended to allow the water to flow of its own accord to the base of the stepped access shaft, a total distance of 75 m. Similar but smaller-scale arrangements were made during the LB or early Iron Age at Gezer and Gibeon, where the springs appeared in caves. At Gibeon, a circular shaft 11 m in diameter and 11 m deep cut in the bedrock provided access through a spiral staircase to a stepped tunnel leading to a spring 14 m below. See Figs. GIB.02 and GIB.03. This complex, possibly the "Pool of Gibeon" mentioned in 2 Sam 2:13, was constructed soon after 1200 B.C., but early in the 1st millennium it had to be supplemented with a stepped tunnel 40 m long that led down to a radically enlarged spring cave outside the city walls. The arrangement in 9th-century Hazor looks similar but reflects a greater understanding of the behavior of groundwater. An enormous shaft 15 m by 19 m was excavated through the earth inside the settlement to a depth of 30 m. Stairs around the interior led to a tunnel 25 m long cut in the bedrock and sloping downwards for another 10 m to a water-bearing stratum. The engineers had apparently observed the level of a natural spring located outside the walls and predicted correctly that the same aquifer could be tapped artificially at a more convenient point. The similar but smaller scale spring shafts dug at Tel Beit Mirsim in the early Iron Age are possibly the *gullôt mayim* mentioned in Josh 15:19 and Judg 1:15 (but see discussion also of DEBIR).

This type of protected access to water provided by a combination of cyclopean architecture and tunneling can be seen throughout the E Mediterranean in the LB, with particularly striking examples at the Mycenaean citadels of Mycenae, Tiryns, and Athens. At Tiryns, two sloping, corbel-vaulted tunnels 20 m long were built at the end of the 13th century B.C. to provide passage to subterranean springs, and at Athens a hidden stairway was constructed down a 35 m deep fissure in the Acropolis to water level. The Hebrew word for such stepped tunnels may have been *ṣinnôr,* a term used in 2 Sam 5:8 when David sends his men into Jebusite Jerusalem through "the water shaft" (cf. 1 Chr 11:6), revealing the innate

vulnerability of such a system. Because of chronological considerations, the shaft mentioned in this passage is probably not the one that led to the Gihon spring, later incorporated into King Hezkiah's complex (discussed below).

C. Wells

Common sense suggests that constantly flowing spring water at ground level was the first type of source to attract the attention of human populations and would have continued to be preferred for its purity, coolness, and convenience. Nevertheless, well water, although inferior to spring water, was still considered high in quality. Pliny, in fact, extols its character (*HN*, 31.23.38–9):

> From which type of source, than is the best water obtained. From wells, of course, as I see them arranged in towns, but from those which through frequent dipping have the recommendation of circulation and that clarity produced by filtration through the earth. This is enough for wholesomeness. For coolness, both shade is necessary, and that the well be open to the sky. Above all, one observation …: the spring should issue from the bottom of the well, not its sides.

This judgment is echoed in Jer 6:7. Because of its high quality and the effort required to draw it, well water was used mainly for human consumption and for watering livestock rather than for irrigation. Exceptions usually involved the use of water-lifting devices (see below). It was a sign to Abraham's servant when he arrived at Nahor in Mesopotamia that Rebekah willingly drew water for both him and his camels (Gen 24:11). The drawing of well water was a proverbially tedious task, and as such it was usually delegated to women. It was this difficulty that stimulated the pathetic eagerness of the Samaritan woman at Jacob's well in John 4:6–15 to obtain the "living" (i.e., "flowing") water that she might "not thirst nor come here to draw."

Vitruvius (8.1.1–5) provides detailed instructions on the selection of a suitable site for a well, and he outlines the proper procedures for safe excavation and lining of the shaft (8.1.6, 6.12–13; cf. Pliny *HN*, 31.26.43–28.49). No such instructions survive in ANE literature, but the basic procedures are based on empirical experience and most undoubtedly were current even in the Neolithic period. They involve the observation of topography, soil, surface moisture, and vegetation. The settled, agricultural character of Neolithic life meant that communities could no longer follow their water supply, as they had once followed animal and plant food sources. The concomitant restriction of nomadic groups herding domesticated species of animals to increasingly marginal land in this arid region meant that they too, although ostensibly more mobile, were hard-pressed to find sufficient water. If springs or streams were not available or were seasonal in character, the easiest method of obtaining an alternative water supply was to tap an aquifer through excavation. The presence of wells has been proposed to explain the success of early Neolithic herding and agricultural communities at Beidha and Wadi Dhobai in Jordan, but at most sites successful early wells probably have been transformed by later enlargement.

The first wells must have been ragged, unlined pits in wadi beds, something even desert animals provide for themselves. Progress would have involved first the provision of a wood, stone, or baked brick lining to prevent collapse of the shaft, construction of a wellhead to keep people and animals from falling into it (cf. Luke 14:5), and—much later—the construction of a roof to protect the pooled water from the sun. Some of these developments may have come about early, for a Neolithic well found in a submerged site off Kefar Samir near Haifa was lined with alternating courses of unshaped stones and wooden beams. The provision of rollers or a pulley wheel to facilitate the lifting of the containers came only after the 9th century B.C., when the earliest such device appears in an Assyrian relief. An inscription of Sennacherib concerning the water supply of the palace at Nineveh mentions posts, crossbeams, cables, and bronze buckets intended to make the supply from the wells more abundant and reliable. In general, biblical texts are reticent about the design of the wells they mention, other than specifying occasionally the presence of some sort of cover (which implies a firm wellhead; e.g., Gen 29:1–3; 2 Sam 17:19) and of a trough nearby to receive the water drawn for animals (e.g., Gen 24:20; 30:38; Exod 2:15–16). These troughs probably were carved out of stone.

Success in well-digging depends not just on an understanding of the local hydrology, but also on the ability of a culture to excavate to a sufficient depth or through hard enough strata to tap reliable aquifers

at a location convenient to the settlement or grazing grounds. In most of Palestine the presence of hard bedrock close to the surface ensured that wells were relatively small and shallow until the advent of metal tools. Subsequent accomplishments were remarkable. Wells of the Roman period in Palmyra were 75 m deep, and a Byzantine well at Eboda in the Negeb was cut 60 m through limestone. Digging all but the most rudimentary wells required skill and the organization of significant amounts of labor, and in the Bible such structures consequently are associated with major personalities who own the well and jealously guard access to it. In typical Near Eastern fashion, the people of Israel in Num 21:17–18 describe the new well at Be'er as "the well which the princes dug, which the nobles of the people delved, with the scepter and with their staves." Since a successful well tended to remain in use for as long as a particular site was occupied, the real or imagined antiquity of wells in Palestine led the inhabitants to connect most of them with the Patriarchs. The most famous was the well at Beer-sheba, called "Well of the Oath" or "Well of the Seven" because Abraham asked Abimelech for an oath over seven lambs "that you may be a witness for me that I dug this well" (Gen 21:30–31). Lapses in use could result in disputes over title, however, as Isaac found when he cleared out old wells in the valley of Gerar that had been stopped up by the Philistines after Abraham's death. The local herdsmen successfully claimed ownership even though they had not participated in the restoration (Gen 26:18–22). During the exodus, Moses asks for permission for the people of Israel to travel through Edom on the King's Highway, first assuring the local king that they would not drink water from any well (Num 20:17), then—more realistically—offering to pay for any water the people or their livestock consumed (Num 20:19; cf. Deut 2:27–28). Numerous Egyptian and Assyrian inscriptions and literary sources mention that armies on the march in arid regions had to dig their own wells to obtain water (cf. 2 Kgs 19:24; Isa 37:25). Some Egyptian representations of such wells show only irregular pools, others neat circular wellheads built of masonry. Hydrostatic pressures encountered in the deep, porous sandstones of oases W of the Nile occasionally provided the Egyptians with artesian wells.

In situations where several families owned rights to a single well, simple mechanisms developed to ensure fair distribution of the supply of water. In NW Mesopotamia, for example, Jacob encountered a group of three Aramean shepherds who shared a well with Laban, his uncle. The wellhead was covered with a stone large enough that only the entire group of co-owners could roll it away, preventing any unsupervised use of the water (Gen 29:1–3, 7–8). In urban situations, wells could be found in the courtyards of private homes (e.g., 2 Sam 17:18; cf. Pro 5:15–17). These presumably were privately owned, but wells in the streets, whatever their origin, seem to have been available to all comers (Gen 24:11; John 4:6–11). Unless very deep, urban wells were subject to pollution through percolation of the contents of adjacent cesspools into the aquifer. Cisterns were more reliable in this regard, and they were most often private property.

Wells have been encountered in archaeological excavations throughout the Middle East, but because of the patterns of preservation and excavation, most are from urban situations. At the palace of Ebla a series of wells and cisterns were dug and built in a courtyard around 2350–2200 B.C. The cisterns were meant to be filled by runoff from adjacent roofs, but the wells tapped the local aquifer. Wells of the 14th or 13th centuries B.C. have been identified inside private homes and in the palace courtyard at Ugarit. The wellheads were made of square or round stone slabs carrying a circular opening ca. 0.50 m in diameter, allowing access to a stone-lined shaft of approximately the same dimensions. At the site of Habuba Kabira on the upper Euphrates, wells were sunk at the same time the site was fortified in the second half of the 3d millennium. The wells, which are spaced at regular intervals inside the line of fortification walls, were apparently intended for the use of refugees and their flocks. More sophisticated wells were found in the palace of Assurnasirpal II (884–859 B.C.) at Nimrud. The shaft of one was round in plan and lined with 330 courses of burnt brick. Another had a stepped platform of bricks waterproofed with bitumen that supported some sort of large pulley for lifting water from the well. Tethering stones standing nearby suggest that the well was designed to water animals.

D. Cisterns and Reservoirs

In the absence of sufficient supplies of running spring water or of well water from an accessible subterranean aquifer, it was necessary to catch and store the runoff from whatever precipitation fell during the wet months. Even in areas that received less than 250 mm of precipitation annually, properly designed catchment fields—anything from a rooftop to a hillside—of appropriate dimensions provided enormous amounts of water. In an area receiving only 100 mm of rain annually, the runoff from a 1.0 ha field is 1000 m^3. If only 20 percent of this water is caught and stored, it still can provide 4 lt/day for over 100 people for a year, or sufficient water for over 700 sheep for the same period. At a site such as Petra, runoff was the only possible source of water for many areas of the settlement and necropolis, and in consequence the cliffs are riddled with cisterns. The high acropolis with its Iron Age settlement contains so many cisterns that it is now called Umm el Biyara, "Mother of Cisterns." But even where wells and springs were available, cisterns were also constructed to provide an emergency reserve of drinking water or a supply of low-quality water for irrigation or craft processes. In some households, cistern water might also have to replace well or spring water that was difficult of access, controlled by hostile families, or sold at too high a price. Even in Jerusalem, which was well supplied with water from both local springs and regional springs connected to the city by aqueduct, domestic cisterns constituted an important supplement. The drying up of the cisterns in Jerusalem represent the ultimate catastrophe of drought in Jer 14:1–6 and the extremity of siege conditions in Bethulia in Jdt 7:20–1 (cf. Vegetius *Epitoma rei militaris* 3.10). In the inscription on the Moabite Stone, set up in Dibon around 830 B.C., Mesha of Moab commemorates his regulation of this aspect of the local water-supply system: "Since there was no cistern inside the city …, I said to all the people, 'Each of you make himself a cistern in his house!' "

Nevertheless, cistern water had a bad reputation among the Greeks and Romans with regard to taste, clarity, and healthfulness. According to Pliny (*HN*, 31.21.34), cistern water was bad for the digestion, and contained more "slime and disgusting insects" than water from other sources. Judging from the lack of complaints in biblical texts, ancient cultures in the Middle East were less fastidious about their water, but Jeremiah 2:13 does imply that a preference for cistern over spring water is foolish. Perhaps the experience of being thrown into Malchiah's cistern in Jerusalem soured him (Jer 38:6), even though "there was no water in the cistern, but only mire …" Although rain water is pure, sediment and pollution can enter the water as it drains off the catchment field. Most ancient cisterns were supplied with a settling tank to allow the heaviest particles to settle out of the water before it flowed into the storage tank, but the sudden intensity typical of rain storms in the Middle East, combined with their generally infrequent occurrence, meant that significant amounts of sediment could enter a cistern each year. The provision of a roof over the storage tank prevented further pollution or the proliferation of animal and plant life (cf. Lev 11:36), and slowed down the loss of the contents through evaporation. Most cisterns had to be cleaned out every year, generally when they went dry in late summer.

In contrast to the supply of water from springs and wells, that from cisterns is frequently associated in biblical passages with agricultural activities as well as stock-raising. Cisterns are mentioned along with houses, vineyards, olive and fig trees as one of the facilities or amenities of a small farm in Deut 6:10–11; 2 Kgs 18:31; Isa 36:16; Neh 9:25; 2 Chr 26:10; and Eccl 2:4–6. Although in 2 Kgs 18:31 and Isa 36:16 the cistern water is to be drunk, its use for irrigation is implied as well.

Cisterns are mentioned frequently in the Egyptian papyri of the Hellenistic and Roman periods, primarily in the context of irrigation, but also in use for stock-raising and various craft processes. Since there is virtually no rainfall along the Nile valley, most of these structures were filled from wells or from canals connected with the Nile, by means of water-lifting devices (discussed below). The papyri from Nessana in the S Negeb include two 6th-century A.D. documents (P.Ness. 31, 32) that mention orchards and vineyards fitted out with cisterns and water channels to allow irrigation. Since there are no rivers or springs in the immediate area, these cisterns must have been filled with runoff water. In exceptional circumstances, even very large cisterns could be filled with water carried in by donkey-trains or porters, as at Masada. In the Jewish world, specially designed cisterns filled at least in part with rainwater that had not been dipped or poured in a broken stream were used as *mikva'ot,* or ritual baths. Cisterns of this type,

provided with a stairway to allow immersion, have been found in large numbers at Jerusalem, Qumran, Masada, Herodium, and elsewhere.

As Deut 6:10–11 implies (cf. Jer 2:13; Neh 9:25; 2 Chr 26:10; Sir 50:3), cisterns usually were cut into the bedrock. This procedure saved on building materials and ensured the stability of a structure that had to resist very substantial internal pressure. Since the limestone bedrock underlying most of Palestine is very porous, it has been suggested that only the discovery of an impermeable plaster made of burnt and slaked lime at the beginning of the Iron Age (ca. 1200 B.C.) made possible the routine construction of cisterns and consequently the spread of habitation to locations distant from springs and wells. Recent archaeological discoveries, however, include much earlier cisterns waterproofed both with clay and plaster. At Tell Ai, the early Iron Age inhabitants cut their cisterns only in deposits of chalk that became impermeable automatically when wet. The simplest and possibly earliest form in the Middle East is the bottle-shaped cistern: a deep, round reservoir with a small entrance hole, all cut in the rock. This design and variations on it, made waterproof with clay or plaster, appears in the EB at Bab edh-Dhraʿ and Taanach, in the MB at Hazor, and in the Iron Age at many other sites. The Augustan historian Diodorus Siculus describes just the same type of cistern in use among the Nabateans of his day (19.94.6–8). Most ancient urban and rural habitation sites in the Middle East located in areas where bedrock was accessible are riddled with cisterns of one sort or another, testifying to the importance of this type of water source: Gezer, Beth-shemesh, and Jerusalem are only a few examples. Built cisterns were not only less common but also less likely to survive.

During the Hellenistic and Roman periods, cisterns tended to take on a more regular square or rectangular shape and were lined with a waterproof plaster made with the addition of crushed potsherds. A very characteristic design found in the regions occupied by the Nabateans was a deep square or rectangular basin cut in the rock or built of blocks and roofed with long flat slabs carried on arches that crossed the cistern on its short axis. This design, well suited to the treeless regions of the desert, probably was borrowed from the Greeks, since examples of the Hellenistic period appear at Delos and Claros. Nabatean examples of the 1st century B.C. or 1st to 2d century A.D. can be seen in large numbers at Eboda, Mampsis, Nessana, Avara, Petra, and Umm el-Jimal. See Fig. UMM.01.

In contrast to cisterns, which tended to be small and private, reservoirs were large, usually unroofed pools designed to store quantities of water for public use or for applications that required significant volume. They could be filled by springs as well as by runoff water. Irrigation is the typical application and is mentioned explicitly in Eccl 2:4–6: "I made myself pools from which to water the forest of growing trees" (cf. Neh 3:15). The upper and lower pools and an associated reservoir mentioned in 2 Kgs 18:17; Isa 7:3; 22:9–11; and 36:2 may have been part of the water system of Jerusalem supplied by the Gihon spring, designed to save surplus water that would otherwise have drained off down the Kidron valley. A primary purpose of this system probably was the provision of drinking water, but the upper pool mentioned in 2 Kgs 18:17 was on the highway to the Fuller's Field, suggesting that it may also have supplied the large volumes of relatively clean water needed for the processing of woolen cloth. Since the sick bathed in the commodious Pool of Bethzatha in Jerusalem (John 5:2), it is unlikely to have been used for human drinking water. But it was located next to the Sheep Gate, so perhaps it provided water for livestock. Around 200 B.C. the high priest Simeon built a reservoir to help Jerusalem withstand siege (Sir 50:3): "In his days a cistern for water was quarried out, a reservoir like the sea in circumference." Other pools are mentioned at Samaria (1 Kgs 22:38), Gibeon (2 Sam 2:13), and Hebron (2 Sam 4:12).

Because of their size, reservoirs usually were at least partly built rather than cut in the rock (but cf. Sir 50:3), the blocks being used to supplement spots where the bedrock was lacking. The inscription on the Moabite stone mentions that King Mesha himself built "the retaining walls of the reservoir … inside the city" of Dibon. They were also usually unroofed. The great vaulted reservoirs built into the platform of the temple at Jerusalem were an exception, and their imperial scale and finish were paralleled only in the covered reservoirs of Byzantine Constantinople. Significantly, reservoirs appear as early in the archaeological record as cisterns: it is their scale and potential application that is different rather than their technology. Already in the late 4th millennium B.C., engineers at Jawa in Syria's basalt desert built a

system of reservoirs with a volume of 75,000 m^3, designed to be filled by runoff. The water was meant for human consumption, for livestock, and for irrigation in an otherwise almost waterless region. Other urban reservoirs of the Bronze Age, built of slabs of stone sealed with clay, have been found in Byblos, Arad, Tell Ai, Ugarit, and Ebla. Reservoirs also formed part of the system of inundation irrigation practiced in Mesopotamia and Egypt (discussed below). During the late 8th century B.C. a great shaft 22 m by 25 m square and 25 m deep was dug into one corner of the city mound of Lachish, possibly to serve as a reservoir, but the project was never completed. The famous Pools of Solomon, a series of three large reservoirs near Bethlehem fed by springs and runoff, were connected to the aqueduct system serving Roman Jerusalem. Some features of the complex may be as old as the Hasmoneans, but there was much expansion in the Roman and Byzantine periods. As preserved, they have a total capacity of 400,000 m^3. Numerous enormous, rain-fed reservoirs were built in the Negeb and Transjordan by the Nabateans and Romans: for example at Sobata, Bostra, Umm el-Jimal, Qasr Hallabat, Petra, Avara, and Quweira.

E. Conduits, Aqueducts, and Qanats

The significant weight and typical liquid form of water provide the advantage that it can be made to flow of its own accord to locations distant from the source. All that is needed is a relatively impermeable conduit with a slope sufficient to overcome the friction along the surface in contact with the water. This adaptability is noted in Prov 21:1: "The king's heart is a stream of water in the hand of the Lord; he turns it wherever he will." The term used is *palgê mayim,* which can also take the significance of "irrigation conduit" (cf. Ps 65:10; Job 38:25). The main problems with water conduits of more than local significance are the investment of time and materials required for their construction, the need for constant maintenance, and their vulnerability. These characteristics meant that in the pre-Roman Middle East, as in pre-Roman Greece, aqueducts on a regional scale were extremely rare. The small and troubled states simply did not have the resources or stability to support aqueducts on the scale later made customary by the Romans. Exceptions were Jerusalem, which was a capital city, the facilities developed within the centralized Assyrian empire, and the subterranean *qanats* of Persia. A unique temporary pipeline in the region mentioned by a skeptical Herodotus (3.9) probably never existed:

> The Arabian king had cowhides and other skins stitched together to form a pipe long enough to reach from the Carys—a large river in Arabia which runs to the Red Sea—all the way to the desert; here he had large reservoirs constructed, filled them by means of the pipe, and so stored the water. The water was brought to three separate places, over a total distance … of a twelve day's journey.

The famous aqueduct of Hezekiah at Jerusalem is mentioned in 2 Kgs 20:20 as a characteristic example of his might (see also Isa 22:8–11; 2 Chr 32:2–4, 30). It was essentially a rock-cut tunnel 533 m long designed to carry the water of the Gihon spring through a limestone ridge to a more protected position at the Pool of Siloam. See Figs. DAV.03; DAV.04; and JER.09. The system's elements are listed in Sir 48:17: "Hezekiah fortified his city, and brought water into the midst of it; he tunneled the sheer rock with iron and built pools for water." The stimulus was Sennacherib's threatened siege of Jerusalem in 701 B.C. An inscription cut into the conduit wall commemorates the accomplishment, which was considered all the more remarkable because the tunnel was cut from both ends at once. Hezekiah's engineers preempted water that previously had been carried around the Kidron valley by open-air conduits built of mortar or cut in the rock, possibly alluded to in 2 Chr 32:30. There were only two similar accomplishments in the Greek world. The first was a tunnel several km long excavated through a mountain sometime in the 14th century B.C. to drain Lake Copais in Boeotia. The second was a water tunnel at Samos cut 1000 m through a mountain by Eupalinos in the third quarter of the 6th century B.C. Tunnels cut in rock were a common feature of some of the extensive water systems constructed by Assyrian kings in the 13th and 9th centuries B.C. to supply their royal cities. The system at Jerusalem was extended 22.5 km S of the city by one of the later Hasmonean kings who built tunnels and a plastered conduit to tap the water of the spring at the lowest of the later "Solomon's Pools." It was only in the early empire that the resources of Herod the Great and then of the Roman procurators allowed extension of the system to its final length of 67 km, including upper and lower aqueducts and the reservoirs later attributed to Solomon.

Herod built a totally new aqueduct system 8 km long to serve his city of Caesarea. It was later expanded by the Romans, who also built aqueduct systems at Antioch on the Orontes, Salamis, Pella, Sebaste, Palmyra, and many other cities in the region. A handbook of the aqueduct system of Rome in the late 1st century A.D., Frontinus' *De aquis urbis Romae*, has survived and provides excellent evidence for the careful design, maintenance, and administration of Roman aqueducts. Such water-supply systems were expensive but could completely alter the natural hydrology of a city. Both aspects are embodied in Josephus' allusion to the aqueduct Herod built to serve his Herodium near Jerusalem (*Ant* 15.318325): the palace was "worth seeing because of the way in which water, which is lacking at that place, is brought in from a distance at great expense." See Figs. HER.05 and HER.07.

The *qanats* of Persia constitute another exception to the local character of water conduits in the pre-Roman Middle East. These were gently sloping tunnels tapping the aquifer of a talus, or debris slope, at the foot of a mountain range. The course of the channel and the proper water level were found by sinking access shafts every 30 to 50 m. These shafts allowed excavation to proceed from two directions at once, provided a means for removing debris, and facilitated maintenance. The subterranean water course could extend from several km up to 20 or 30 km, depending on the depth of the source, surface topography, and the distance from source to intended point of use. The technique probably was developed in Urartu, where the use of *qanats* is alluded to for the first time in the late 8th century B.C. by Sargon II, who was busy destroying them. They became characteristic of Persia and probably spread from there westward. They appear at Damascus, Palmyra, Phasael in the Jordan valley, Jotbata in the Wadi Arabah, and N Africa. The fact that they were cut in the subsoil rather than built, protected *qanats* to an extent from the problems of materials and vandalism that affected conventional aqueducts, but they did require constant maintenance. Systems of this type are still in use.

The earliest small-scale water conduits undoubtedly were simple earth channels connecting a spring or stream with an irrigated field. As long as the soil is not too porous and the stream velocity not high enough to cause serious erosion of the channel walls, earth conduits are perfectly satisfactory for temporary purposes, and they have continued in use up to the present. For the most part these would have been relatively short conduits used in gardens, but the great irrigation systems of Egypt and Mesopotamia depended on earth conduits as well. Xenophon (*An.* 2.4.13) compares the final ramifications of the extensive system of irrigation channels leading from the Tigris in Mesopotamia to the small channels used in Greece to irrigate fields of millet. At Jawa, too, in the late 4th millennium, the conduits of the great urban water system supplied by runoff were simply excavated in the stony soil.

Where erosion or the porosity of the soil was a problem, or permanence was required, conduits were constructed of lines of stone slabs waterproofed with clay, or made of a series of blocks carved with a longitudinal channel, set end to end. Both types are found already in the 14th century B.C. at Ugarit, Knossos, and most other major palace and habitation sites of that period in the E Mediterranean. The long blocks carved with a channel had the advantage of a greater resistance to leaking and collapse, and they continued to appear throughout the region into the Late Roman period wherever raw materials and financial resources allowed. This type of conduit was particularly favored by the Nabateans, who used it in systems of varying lengths, from a single farm to the water supply for a whole settlement. At Avara (modern Humayma) in the Hisma, 26 km of conduit carried the water from three springs to the habitation center. Examples of the Roman period can be seen elsewhere in the E Mediterranean at Corinth and Kourion. An alternative to the monolithic stone conduit was the conduit built of mortared rubble covered with a layer of waterproof plaster. This design was in use throughout the Middle East from the early Iron Age on, and particularly extensive systems have been found serving Qumran and the Hasmonean and Herodian palaces at Jericho. See Figs. QUM.02 and JER.06.

The growing sophistication of ceramic production in EB Mesopotamia suggested to hydraulic engineers the possibility of manufacturing sections of water pipe in clay, and such pipelines appear during the late 2d millennium at Ur and later on at Mari. By the LB, the innovation had spread throughout the E Mediterranean, and examples have been found at Knossos and numerous sites in Egypt. Clay pipelines enjoyed great popularity because they were very effective when the joints between the sections were

properly sealed, inexpensive to manufacture, relatively easy to lay, and provided a clean water supply with the added convenience and security of a subterranean course. Even in early imperial Rome, where lead pipes had become common, Vitruvius notes that terra-cotta pipelines were preferable for the purity of their water and the simplicity of repair (8.6.10–11). Extensive municipal water-supply systems were executed using such pipes in classical Athens, Hellenistic Pergamon, and during the 2d century A.D. at Kourion.

Water in open conduits can flow only downhill, while tightly sealed pipelines, whether of metal, stone, or terra-cotta, can be pressurized systems in which the conduit rises back up almost as high as its source after descending into one or several intermediate valleys. As long as the pipes could withstand the increased pressure at the low points, this procedure allowed conduits to avoid long detours around valleys and other depressions and made it possible for the first time to provide a supply of running water to an isolated acropolis. The first major pressurized system was constructed to serve the acropolis of Pergamum in the early 2d century B.C.; it sustained maximum pressures of 20 atm. This feature reappeared during the Roman period in the water-supply systems of Jerusalem, Philoteria, Hippos, Caesarea, and the baths of Gadara. The technology is described in Vitruvius 8.6.6–9.

F. Terraces, Cleared Fields, Dams

Even in extremely arid regions of the Middle East, runoff water from local precipitation constituted a substantial resource that was often tapped for filling cisterns. The resource was even more substantial if the water was held back by terraces and wadi barriers so that it could sink into the soil and sustain crops. Early man in the Middle East recognized these possibilities, and by at least the MB, terraces had appeared on the hilly areas of Palestine, especially in central Canaan, and in Lebanon. These terraces depended on the action of low, massive stone walls built across the slope to hold back soil and increase its depth, to prevent erosion and allow water to sink into the soil, and to provide horizontal fields for more convenient cropping. In the portions of this area that receive significant quantities of rain (up to 700 mm/year) the procedure was meant as much to avoid erosion as to store up water, but elsewhere it was crucial to the preservation of moisture. S and E of the Mediterranean coast, where the topography was less steep and the soils lighter, the runoff from surrounding hills was often directed by low earth barriers or channels to wide terraces in the more gentle slopes directly below. The Nabateans were particularly skilled in this practice, and terraced farms of this type are common in the Negeb, around Eboda, Mampsis, and Subeita. The runoff fields on the hills sometimes were enhanced by heaping up the small stones on the surface in long rows or regular patterns of piles: this procedure fostered crusting of the soil immediately upon contact with rainwater, inhibited its absorption in the soil, and thus increased the yield of water below.

Low walls, sometimes reinforced with natural vegetation, were also built across small natural watercourses, now called wadis, to hold back the water that surged through them after rain in the surrounding hills. The sudden violence and unpredictability of these watercourses became a proverb, as in 2 Kgs 3:16–17: "I will make this dry stream-bed full of pools … You shall not see wind or rain, but that stream-bed shall be filled with water, so that you shall drink, you, your cattle, and your beasts" (cf. Ps 126:4). Some extensive examples of the 9th to 6th centuries B.C.—one 740 m long—have survived at el-Buqei'a, the ancient Valley of Achor. Hillside terraces and, to a lesser extent, stream barriers were used throughout the E Mediterranean world from the Bronze Age on and are still maintained today. Plato (*Leg.* 761 a-b) describes the practice and its long-term effect on the landscape:

> Concerning the rainwaters, they are to take care that these waters not harm the land, but help it instead. They are to block up with dams and channels the outflows of the runoff which comes down from the heights into hollow torrent glens up in the mountains. By both storing up and causing the water to be absorbed into the ground, thereby making streams and springs for the fields and all the underlying districts, they will cause even the driest spots to become abundantly supplied with water, and good water at that.

Biblical texts do not mention these procedures explicitly, but the allusion to the Israelites destroying fields in the hill country of Moab by piling stones on them (2 Kgs 3:25) may possibly refer to interference with runoff fields, particularly since this action is linked with the stopping up of springs.

Where water requirements were more extensive or greater resources of manpower available, dams were built across watercourses to divert the water to reservoirs or hold it back in a pool. There is very little comment in ANE or classical texts on the construction and function of this type of structure, but the remains of a surprising number of dams have survived in the archaeological record. Very substantial dams were built as early as the late 4th and early 3d millennia B.C. The earliest, at Jawa, were rubble-mound structures designed to divert runoff from several major wadi systems to a series of reservoirs. The enormous dam across the Wadi Garawi in Egypt, built around 2600 B.C., was intended to control flooding: it was 116 m long, 10 m high, and 85 m thick, built of masonry over a rubble core. Unfortunately, a great flood destroyed it during construction. There were other large and more successful Bronze and Iron Age dams in the Fayūm, and across the Tigris 30 km above Nimrud. The knowledge of this large-scale intervention in stream-flow probably spread from the Middle Eastern cultures to the Hittites, who constructed a number of major dams in central and SE Anatolia, to the Mycenaeans, who built a rubble dam near Tiryns and major dykes around Lake Copais in Boeotia (Paus. 8.23.2), and to Urartu, whose kings built dams as part of the extensive, integrated irrigation systems commemorated in inscriptions of the 9th and 8th centuries B.C.

Most of the later dams in the region were built by the Nabateans or Romans, who usually produced more scientific designs executed with cut stone blocks or mortared rubble. Very substantial Nabatean dams for diverting or pooling the flow of wadis survive at Mampsis, Petra, and numerous smaller sites such as Avara. Large Roman dams, sometimes based on Nabatean predecessors, were built along the Arabian frontier to provide drinking and irrigation water for desert settlements. Extensive remains survive at Harbaka, 80 km SE of Homs, of a masonry dam 200 m long and 18 m high. At Homs itself, a dam built by Diocletian still holds back the Orontes to form a large lake: the structure, built of masonry over a rubble core, was 2 km long, as high as 6 m, and as thick as 20 m at the base.

G. Irrigation Cultures: Mesopotamia and Egypt

In biblical tradition, Adam, the first man, was given a typical Mesopotamian pleasure garden to inhabit in Eden (Gen 2:8–14); it was watered by a river that split into four streams, including the Tigris and Euphrates. This idyllic tradition is a reflection of the early awareness of the unique fertility of Mesopotamia: a flat land of deep, rich alluvium, sodden with water. Egypt too was proverbially rich, and during the Exodus, the people of Israel longed for the fleshpots of their former land (Exod 16:3), the fruitful gardens, and its dependable water supply (Exod 17:3; Num 20:5). The author of Deut 11:10–11 succinctly sums up the essential contrast between life in the river valleys of Egypt and Mesopotamia and that in Palestine: in Egypt "you sowed your seed and watered it with your feet, like a garden of vegetables," but Palestine "drinks water by the rain from heaven." The contrast is that between irrigation from perennial sources and drought farming based on precipitation, local runoff, and small-scale exploitation of rain-fed aquifers.

But there were also significant differences in the patterns of irrigation that developed in these two great river-valley civilizations during the Neolithic and Bronze Ages, differences based on the behavior of their rivers. The Tigris and Euphrates, fed by melting snows in the highlands of Armenia and Anatolia, rise suddenly and violently in the late spring or early summer, too late to help a spring sowing, and too early to assist a crop through the summer's heat. In consequence it was necessary to store up water in great reservoirs for flow irrigation of the fields after the flood, or to lift it from an intricate network of irrigation canals to the level of the fields by means of water-lifting devices (discussed below). This irrigation network was vulnerable to damage from the floodwater and could easily be choked by the silt carried by the river, a load five times heavier than that in the Nile. Careful drainage was crucial to prevent salinization of the soil, but difficult because of the low relief and high water table. There is a detailed account of the design, function, and maintenance of this water system in Strabo 16.1.9–10 (cf. Hdt. 1.193).

Increasing centralization of government in the course of the Bronze Age allowed the development of enormous and gradually more sophisticated irrigation networks, attested by bureaucratic records, accounts, and law codes preserved on clay tablets in palace archives. Great canals were dug to harness the

water of the Tigris; the longest, the Nahrwan, was 120 m wide and ran parallel to the river for 340 km. The date of this canal is unknown, but Sennacherib himself recorded his construction of the Jerwan canal in 691 B.C. It brought the water of the Greater Zab 90 km to irrigate fields around his capital at Nineveh. A great weir stored up river water and diverted it into the stone-lined channel, which passed over at least one valley on a stone aqueduct bridge 100 m long.

While in Mesopotamia the objective was storage of the floodwaters to allow irrigation through the growing season, in ancient Egypt the flood came in the heat of summer, and the procedures were designed to ensure that the river itself flooded every possible field. The Nile began to rise gently early in July and reached its maximum in August. At a moment carefully calculated by measurement of the height of the river at the Nilometers (see Strabo 17.1.48; Pliny *HN*, 5.10.58), dykes were breached simultaneously throughout the length of the valley to allow the water to inundate the maximum number of fields. The water was kept in the fields through September to drop its load of fertile silt and to replenish the groundwater, then drained off. The wet fields were then sown with seed, weeded once, and the rich harvest gathered in late spring, before the summer sun parched the fields. Water-lifting devices were used to supplement the reach of the inundation. This strikingly convenient natural cycle was the basis for Egyptian prosperity, and—unlike the author of Deuteronomy—the Egyptians regarded dependence on rain as very risky: "… for learning that the Greek land is watered by rain, and not, like theirs, by river, they said that some day the Greeks would be disappointed of their high hopes and miserably starve" (Hdt. 2.13). Pliny (*HN*, 18.47.167–70) provides a detailed account of Egyptian irrigation (see also Hdt. 2.14). The character of the Nile is noted in Jer 46:8, and Egyptian irrigation works are summed up in Exod 7:19 as "their rivers, their canals, and their ponds, and all their pools of water" (cf. 2 Kgs 19:24; Isa 37:25).

Clearly there was nothing in Palestine to equal these idyllic circumstances. Only the Jordan valley came close, which in Gen 13:10 is compared to both Egypt and the Mesopotamian Eden: "And Lot lifted up his eyes, and saw that the Jordan Valley was well watered everywhere like the garden of the Lord, like the land of Egypt." The Jordan even provided its own inundation (Josh 3:15) but at an inconvenient time, like the Tigris and Euphrates. The water probably was carried to the fields by a combination of water-lifting devices and dirt channels. Outside of the three great river valleys, inundation irrigation on a large scale in the E Mediterranean was always the product of special local circumstances, as at Thisbe in Boeotia. In contrast with the otherwise arid landscape of Greece, this mountain valley without natural exit was inundated with runoff. This resource was used to water the land by flooding half of it each year, on either side of a great earthen dyke (Paus. 9.32.3).

H. Water-lifting Devices

Since water naturally flows downhill, it is necessary either to intercept the flow above the level where it is needed, or to lift it artificially to a higher point after which it is channeled to the target area. Because of the relative convenience of tapping into flowing water and the relative difficulty of lifting it in sufficient quantities, all cultures have tried to intercept water as close to its source as possible: on the slope of a hill, at a spring, or near the headwaters of a river.

Nevertheless, in many situations water must be lifted to the point of use. Wells and most cisterns are good examples: although they were positioned to be filled by freeflowing water, their contents had to be removed by dipping, a circumstance crucial to the meaning of the story of the Samaritan woman at Jacob's well in John 4:6–15 (cf. Isa 30:14; Eccl 12:6). Jars, skin bags, and buckets were the typical containers used (e.g., Gen 21:19; 24:20), which were either hand-held or lowered on a rope. Pulley wheels or rollers were known after the 9th century B.C. as aids for lifting water from wells or deep cisterns, but the cranked bucket roller is not attested until the 9th century A.D. In any case, most wells in the Middle East in antiquity, as today, probably provided only a sturdy wellhead with a circular opening through which the container was lowered directly on the rope. In drawing up the heavy, full container, the rope often was allowed to rub on the sides of the stone curb, leaving sets of abrasion grooves. Exceptions were found in palace situations, such as the well at Nimrud mentioned above, or the water-supply system of the gardens of the Persian king at Susa in the 4th century B.C. Fragments of Ctesias of Cnidus report (*FGrH* IIIC no. 688, frag. 34): "In Susa the king has a large number of cattle, each of which lifts 100 buckets of

water a day to irrigate the drier sections of his parks." Details provided in the rest of the passage suggest that the oxen were working at a water-lifting device now called a *čerd,* a large, self-emptying leather water bag lifted from a well by means of a rope passing over a roller as the animals were guided down a sloping walkway. A similar device is probably intended by Diodorus Siculus' description of the water-supply system of Hanging Gardens of Babylon (2.10.6): "a gallery with shafts from the highest level and water-lifting machines by means of which a quantity of water was drawn up from the river." This original system was modernized sometime in the Hellenistic period by the installation of the series of water-screws mentioned by Strabo (16.1.5).

The only other water-lifting device in use before the Hellenistic period was the *shādūf,* a swing beam with counterweight at the short end and a pole or rope suspended from the other to lift a bucket or skin bag from a well, cistern, river, or water channel. This simple but effective device first appears in Mesopotamian art in the mid-3d millennium and in Egyptian art and literature slightly later. It is still in use today essentially unchanged. Irrigation accounts in ancient archives throughout the Middle East record its use in lifting water for irrigation, livestock, craft processes, and human consumption. Although there is no explicit mention of it in the Bible, the *shādūf* probably was involved in some of the situations involving water-lifting recorded there.

The other mechanical water-lifting devices of the ancient E Mediterranean region probably were invented by scholars or engineers associated with the Museum in Ptolemaic Alexandria: the wheel with compartmented rim or body, the water-screw, the bucket-chain, and the force pump. The water-screw, a rotating tube with interior helix of wooden or copper vanes to lift the water, was invented by Archimedes in the late 2d century B.C. to solve certain irrigation problems in the Nile delta. Agatharchides of Cnidus records its typical application (*FGrH* IIA no. 86, frag. 19):

> Since [the Nile delta] is formed by river alluvium and is well watered it produces fruit of all sorts in great quantity; for the river in its annual inundation always deposits new mud, and the inhabitants easily irrigate the whole region by means of a certain device which Archimedes the Syracusan invented, called the "screw" on account of its design.

The wheel with compartmented rim to lift water is mentioned in the 3d century B.C. by Philo of Byzantium (*Pneumatica* 61), and is probably "the wheel broken at the cistern" in Eccl 12:6. This type of device, which is mentioned in numerous Greek papyri and Greek and Latin literary works, could be worked by men treading on the rim or by water power working on paddles around the circumference. Like the water-screw, the compartmented wheel was used to raise water for irrigation throughout the ancient Middle East. Both devices also found application in water-supply systems for settlements, such as that serving the Roman camp at the later site of Cairo, described in Strabo 17.1.30: "There is a ridge running from the camp down to the Nile along which wheels and screws bring water up from the river; 150 prisoners are kept busy at the work." The early 2d-century papyrus P.Lond. 1177 preserves the account of the water-supply system of a small Egyptian *mētropolis: shādūfs,* water-screws, compartmented wheels, and bucket-chains were used to provide water for a bath, public and private fountains, a brewery, and a synagogue. The compartmented wheel could also be turned by oxen treading a circle and applying their power to the axle through an angle gear made of wooden wheels with peg teeth. This device, now called the *sāqiya* gear, in antiquity the *mēchanē, machina,* or *organon,* was also applied to the bucket-chain.

The bucket-chain allowed a degree of mechanization in the laborious task of lifting water from wells or cisterns too deep or narrow for the *shādūf,* water-screw, or compartmented wheel. It consisted of a series of wood, metal, leather, or ceramic containers on a rope or chain, strung over the water source on a thick revolving axle. Many of the Egyptian papyri mention such devices, and there is a charming description of a gear-driven bucket-chain in use in the Egyptian desert in Sulpicius Severus' *Dialogi* 1.13:

> There was a well at that spot, a very rare thing in those parts. The hermit possessed one ox whose only task was to raise water by driving a machine fitted with wheels, for the well was reputed to be about a thousand feet deep or more. There was a garden there, well supplied with numerous green vegetables … for the copious watering gave such fertility to the sandy soil …

The force pump, invented in the 3d century B.C. by Ctesibius of Alexandria, was used mainly as a fire extinguisher. Many cities of the Roman Middle East kept such devices on hand for use by the local fire brigades (see Hero, *Spir.* 1.28; Apollod. of Damascus, *Poliorcetica* 174.1–7; Pliny, *Ep.* 10.33.2; Pion., *v. Polyc.* 28).

Although mechanical water-lifting devices figure frequently in Egyptian papyri, in various Syrian and Mesopotamian palace archives, and in Greek and Latin inscriptions and literary sources concerning the E Mediterranean, there are only two possible allusions in the Bible: Deut 11:10–11 and Eccl 12:6. The allusion in Deuteronomy, probably 7th-century B.C. in date, is made to agricultural practices in Egypt—"where you sowed your seed and watered it with your feet, like a garden of vegetables." This comment may refer to the labor of raising water to high fields by means of the *shādūf,* but it may also simply allude to the constant work of irrigation agriculture in contrast to the more sporadic tasks of drought farming in Palestine. The proposal of an allusion to a compartmented wheel in Ecclesiastes is more secure, since the context of a cistern and the vocabulary resemble many Greek papyri that concern irrigation with this device. The absence of mechanical water-lifting devices elsewhere in the OT, and in the NT as well, is probably a reflection of the concentration of the narration for the most part on arid rural environments where the wells were used to water livestock and a small population, and on villages in which one would not expect wells to be equipped with devices to provide large-scale discharge.

WAW. The sixth letter of the Hebrew alphabet.

WEAPONS AND IMPLEMENTS OF WARFARE. What distinguishes a butcher knife from a soldier's dagger is the context in which the implement is used. Having been developed for very practical purposes, weapons cannot be understood apart from the context of warfare within which they are employed. The context of warfare, though, is virtually unrestricted because it encompasses military, civilian, domestic, political, religious, technological, economic and other realms of human existence, as well as factors such as geographical location, terrain, climate, and natural resources. Due to the overwhelming scope of this aspect of the discussion, treatment of the context of warfare is deferred to other more thorough technical works (e.g., Yadin 1963).

Taking the Bible as a point of reference, it is apparent that the weapons mentioned there are not unique to the political entities and religious communities which compiled the Bible. ANE civilizations developed weapons long before the nation of Israel was formed; these were utilized in battles with enemies, never in isolation from other people. Several works cover the development of, and archaeological evidence for,

weapons from the dawn of human history through the 2d century C.E. (Maxwell-Hyslop 1946; Goetze 1963; Yadin 1963; Snodgrass 1964; Glock 1968; Gonen 1975; Bar-Kochva 1989; Davies 1989). This ongoing history supplies the background for the more narrowly focused survey developed herein, which is primarily concerned with enumerating and illustrating those weapons that the Bible mentions.

In the Bible, weapons are named or discussed in various literary contexts, and these names may refer to several technically distinct weapons (e.g., Heb *hereb* "sword" may signify several very different types of swords or daggers). General terms like "weapons," "weaponry," or "armor" translate various Hebrew (e.g., *kĕlî; nešeq; šelaḥ*) and Greek terms (e.g., *hoplon; panoplia; skeuos polemikos*); most characteristic of these terms is the use of the plural form, as in 1 Chr 12:34—Eng12:33 "… equipped for battle with all the weapons of war …" The Bible specifies by name individual weapons in such diverse literary contexts as narrative (1 Sam 17:5–7, 38–39), law (Deut 20:19–20), and poetry (Job 41:5–21—Eng 41:13–29).

Broadly defined, weapons and implements are tools or instruments utilized in armed conflict. To organize our treatment, a system based on the function of weapons is employed. More specifically, the functions and uses of weapons allow them to be classified into four groups: (1) projectile; (2) shock; (3) mobile; (4) protective.

David's use of a sling and stones to kill well-armed Goliath (1 Sam 17:40–50) illustrates both the employment and effectiveness of this primitive projectile in combat. Stones can be shock weapons (e.g., hitting an enemy on the head, rolling boulders down a hill), but when hurled from a sling (Heb *qela‘;* Gk *sphendonē*) they become lethal. Similar to the sling stone, the javelin (Heb *kîdôn; sĕgôd; širyâ*) and dart (Heb *massā‘; šēbet;* Gk *belos; kentron*) are thrown. The javelin is hurled by hand, possibly aided by a cord with a loop on the end to increase distance and accuracy (Yadin 1955). The javelin, with its metal head attached to a shaft of reed or wood, was effective because it could penetrate protective armor, as opposed to sling stones. Likewise, metal-tipped darts could penetrate armor, but they were supposedly smaller and therefore could be thrown, blown through a hollow reed, or thrust at close range (2 Sam 18:14, though here Heb *šēbet* could mean "shaft" or "spear"). Eph 6:16 speaks figuratively of the "flaming darts" of the evil one, which might indicate another dimension of this weapon, but Gk *belos* is more frequently translated "arrow," and "flaming arrows" are widely attested as weapons for setting cities on fire.

The sharp metal or stone head of an arrow was designed to pierce armor from long range. Several Hebrew *(ḥēṣ; ḥēṣî; ben qešet; nešeq)* and Greek terms *(belos; schiza; toxeuma)* are translated "arrow." The designation *ben qešet* (lit. "son of the bow") identifies the arrow by its correlate; the other part of an archer's gear is the quiver (Heb *ʾašpâ; tĕlî;* Gk *pharetra;* see Gen 27:3). Aside from the natural wonder of the rainbow after the deluge (Gen 9:13–16), the bow placed in the sky is God's promise of no more war with humanity (Mendenhall 1973: 47–48). Simple "convex" as well as "composite" bows were used with stone- and metal-tipped arrows throughout the 2d millennium (*AncIsr* 1: 243). Armies included corps of expert archers (1 Chr 5:18; 2 Chr 35:23; Jdt 2:15) who might, like Jonathan (1 Sam 20:20–22), have taken target practice. Throughout the Bible, the bow and the arrow signify death and evoke fear.

Most prominent and diverse in the storehouse of weapons was the cache of shock weapons. Shock weapons are generally used in hand-to-hand combat. Though shock weapons can be theoretically divided into thrusting and striking implements, the exigencies of combat blur this distinction. In addition to the sword (Heb *ḥereb; mĕkērâ; šelaḥ;* Gk *machaira; hromphaia*), the spear (Heb *ḥănît; kîdôn; ṣilṣāl; qayin; rōmaḥ;* Gk *gaisos; dory; komax; logchē*), the lance (Heb *rōmaḥ*), the handpike (Heb *maqqēl yād*), and the peg (Heb *yātēd*) fall within the thrusting category.

Various types of sword were developed in the ANE for different purposes: (1) the sickle sword whose convex edge was sharp and intended for striking (Josh 10:28–39); (2) the long, straight-blade two-edged sword which could stab as well as strike the enemy (Ps 149:6); and (3) the short two-edged sword or dagger (Judg 3:16; see Yadin 1963, 1: 10, 44, 60, 78; *AncIsr* 1: 241). To carry the sword a soldier wore a sheath or scabbard (Heb *nādān; taʿar;* see 1 Sam 17:51; 2 Sam 20:8; Ezek 21:3–5). During the late 2d millennium the swords used by most soldiers would have been made of iron (1 Sam 13:19, 22), while other less economical metals were also used (e.g., bronze).

Spears and lances are distinct from javelins in that javelins are thrown, but spears (John 19:34) and lances (1 Kgs 18:28) are thrust at the enemy. Individual footsoldiers carried spears (usually with shields) and a unit or phalanx was outfitted with lances that had longer shafts. Similar, but much shorter, weapons were the handpike (Ezek 39:9) and peg (Judg 4:21). Each of these thrusting weapons, except the peg, had a sharp metal head attached to a shaft of variable length. Depending on the length of the weapon, the soldier would use it to stab or slash the enemy.

Equally common in the arsenal were the striking weapons, the axe (Heb *garzen; qardōm*) and the club (Heb *mēpîṣ; tôtaḥ;* Gk *xylon; hrabdos*). Axes were standard military equipment in the ANE (Yadin 1963), but there are only two biblical occurrences of "axe" in battle contexts, neither of which is narrative: Jer 46:22 speaks of axes cutting down Egypt's forest, Ezek 26:9 refers to Babylonian axes destroying Jerusalem's towers. Like sickle swords, axes slashed and cut the enemy. The club, on the other hand, smashed the helmet and knocked out the enemy. A technically unsophisticated weapon, the club was available to warrior and civilian alike (Matt 26:47, 55 = Mark 14:43, 48). Shock weapons as discussed above are wielded by individual soldiers, but there are other types of shock weapons.

Two pieces of weaponry that might be considered support equipment are the battering-ram (Heb *kar; qĕbōl;* Gk *krios*) and the siege work (Heb *dāyēk; derek; māsôr; mĕsûrâ; sōllâ*). These weapons were intended to overcome fortifications, either by breaking them down (e.g., city gates, walls), or by scaling and mounting them, and because of their magnitude these weapons required teamwork. During a siege the army surrounds a city, builds up siegeworks (2 Kgs 25:1 = Jer 52:4) and uses battering-rams to destroy the fortifications (Ezek 4:1–8). Although the armies of Israel and Judah besieged various cities during their history, the Bible never records their use of battering-rams or siegeworks, only of Israel's and Judah's enemies using these weapons against them (cf. 2 Macc 12:15–16).

Projectile and shock weapons combine with mobile weapons to constitute the full compliment of military firepower. Horses (Heb *sûs; pārās*), or cavalry (Gk *hippeus; hippikos; hippos*), and chariots (Heb *merkāb; merkābâ; ʿăgālâ; rekeb; rĕkûb;* Gk *harma*) are the most versatile weapons. They serve as mobile attack platforms for archers and javelin throwers, and play a major role in battle tactics and strategy (Yadin 1963). Solomon's army had companies of horsemen and chariots (1 Kgs 4:26; 9:19, 22; 10:26), as did the armies of his successors in Israel and Judah. But it was the horses and chariots of Assyria and Babylon that intimidated the entire ANE in their day, and the fear of which gripped Israel and Judah before they were taken into captivity. Nonetheless, horses and chariots play an important part in Israel's early history (Exod 15:1, 19, 21; Judg 5:22) and continue as an important image in later, NT writings (Rev 6:2–8).

Aside from the weapons carried to attack the enemy, soldiers were outfitted with protective gear. A soldier's gear could consist of: (1) a coat of mail (Heb *siryōn; širyôn;* Gk *halysidōtos; thōrax*); (2) a breastplate (Heb *širyôn;* Gk *endyō; thōrax*); (3) scale armor (Heb *debek*); (4) greaves (Heb *miṣḥâ*); and (5) a helmet (Heb *kôbaʿ; māʿôz rōʾš; qôbaʿ;* Gk *korys; perikephalaia*), all of which is referred to as armor (Heb *hăgôrâ; kĕlî; mad*). This armor protects the soldier from the impact of some projectiles and shock weapons, but a shield (Heb *māgēn; ṣinnâ; šeleṭ;* Gk *aspis; hyperaspizō; thyreos; kalymma; hoplon*) or buckler (Heb *māgēn; sōḥērâ; ṣinnâ*) provides the primary defense against projectiles and shock weapons. Long shields, half-shields, and the smaller circular buckler were mostly constructed of a wooden, wicker, or metal frame covered with leather. The equipment issued by Uzziah to his army included "shields, spears, helmets, coats of mail, bows, and stones for slinging" (2 Chr 26:14); the shield probably being a lighter half-shield which allowed for mobility.

The development of projectiles, shock weapons, mobile weapons, and protective gear resulted from successful and unsuccessful military engagements. ANE weapons of warfare were diverse and numerous, the weapons named in the Bible simply bringing to light one segment of the ANE arsenal. Further insight into the design, development, function, and war contexts of these weapons depends on the fortunes of future archaeological excavation.

WEEKS, FESTIVAL OF. In the Hebrew Bible the second of the three pilgrimage festivals is named "the feast of harvest" (*ḥag haqqāṣîr* [Exod 23:16]), "the feast of weeks" (*ḥag šābuʿôt* [e.g. Deut 16:10]), and "the day of the first fruits" (*yôm habbikkûrîm* [Num 28:26]).

A. Definitions and Sources

The holiday was called Pentecost *(pentēkostē)* in the Greek texts of apocryphal books (Tob 2:1; 2 Macc 12:32), the writings of Josephus (*Ant* 3.10.6; 13.8.4; 14.13.4; 17.10.2; *JW* 1.13.3; 2.3.1; 6.5.3), the works of Philo (*Dec* 160; *Spec Leg* 2.176), and the NT (Acts 2:1; 20:16; 1 Cor 16:8). This term, which means "fiftieth," was selected because the rules for calculating the date of the festival prescribe that it be celebrated on the 50th day after the "sheaf of the wave offering" was presented (Lev 23:15–16). In rabbinic texts one meets the name *ʿăṣeret* (*m. Bek* 9.5; *m. Ḥag.* 2.4, for example; cf. Josephus *Ant* 3.10.6: *asartha*)—a word which is used elsewhere for the sacred assembly on the last day of the Festival of Booths (Lev 23:36; Num 29:35; 2 Chr 7:9; Neh 8:18). Use of it may suggest that the Festival of Weeks was regarded as the final day of the harvest season which began at the time of the wave offering. The festival is unusual among holidays in the Hebrew Bible in several respects: it is never assigned a precise date; it is never associated with one of the great events of Israel's history (but see Deut 16:12); and it is never mentioned by name except in lists of cultic festivals (Exod 23:16; 34:22; Lev 23:15–21; Num 28:26–31; Deut 16:9–12; and 2 Chr 8:13). Though it is somewhat surprising that it is named only once in the historical books, it is most remarkable that Ezekiel fails to include it in his calendar for the restored community (Ezek 45:18–46:7).

B. The Festival in the Hebrew Bible

Exodus 23:16 (E), which is part of the Covenant Code, designates the second of the annual festivals "the feast of harvest" (*ḥag haqqāṣîr;* cf. the Gezer Calendar, 1. 5: *yrḥ qṣr*) and refers to the first fruits of crops that are planted in the field. One first meets the name "feast of weeks" in Exod 34:22 (J) where it is associated with the first fruits of the wheat harvest *(bikkûrê qĕṣîr ḥiṭṭîm).* These two passages specify no date for the festival but place it in relation to a part of the spring harvest season.

Deuteronomy 16:9–10a addresses the question of the time of the festival and clarifies why it was named Weeks: "You shall count seven weeks; begin to count the seven weeks from the time you first put the sickle to the standing grain. Then you shall keep the feast of weeks to the Lord your God." Verses 10b–12 stipulate that one is to present a freewill offering whose size depends upon one's ability to pay and that all are to rejoice before the Lord at the sanctuary as they remember Israel's former bondage in Egypt.

Two pericopes from the priestly source provide additional details about dating the festival and about the sacrifices which are to be presented. Leviticus 23:15–16a gives a formula for dating whose working appears to be sufficiently specific: "And you shall count from the morrow after the sabbath [*mimmāḥŏrat haššabbāt*], from the day that you brought the sheaf of the wave offering; seven full weeks shall they be, counting fifty days to the morrow after the seventh sabbath." The day for starting the 50-day count is the one when the *ʿōmer* (Lev 23:9–14) was waved, but, since Leviticus gives no exact date for it, by implication it does not identify the date for the Festival of Weeks. The ambiguity of the phrase "from the morrow after the sabbath" was later to occasion lively debates about the correct times for presenting the wave offering and observing the holiday, though all groups agreed that Weeks fell at some point in the third month of the year.

Leviticus 23:16b–20 and Num 28:26–31 enumerate the sacrifices and offerings which marked the Festival of Weeks. Leviticus 23:16b–17 further describes the new grain offering as consisting of two loaves of bread baked with leaven. The only other place where leaven is required in a sacrifice is in Lev 7:13 which deals with the "sacrifice of his peace offerings for thanksgiving." Both Lev 23:21 and Num 28:26 refer to a holy gathering on this day on which no work is permitted.

C. Later Evidence

The Festival of Weeks was clearly important to many groups in the period after the books of the Hebrew Bible were written, and sources from that time eliminate two of the deficiencies in the biblical treatment of the festival: they frequently relate it to events in Israel's history, and they furnish several specific dates for it.

1. The Targum to Chronicles and the Book of *Jubilees.* These texts indicate that at least two OT passages became associated with the Festival of Weeks: 2 Chr 15:8–15 and Exod 19:1. The Chronicles pericope describes several cultic reforms by King Asa and a large assembly of Israelites and Judeans at Jerusalem in the third month (v 10—that is, the month in which Weeks occurs). Verse 12 says that they entered a covenant with the Lord, and vv 14–15 add that this was done with an oath and with rejoicing. Though the Hebrew text does not mention the date for this covenantal ceremony, the targum to Chronicles places it on the Festival of Weeks.

This targum is late, but it can be shown that the association of Weeks with covenant (or rather renewing of covenant) and oath far antedates the targum in question. The book of *Jubilees* (ca. 150 B.C.) demonstrates that already at the time of its author these connections had been drawn. It seems likely that Exod 19:1, which dates the Israelites' entry into the Wilderness of Sinai to the third month (no date is specified), first suggested a correlation between the covenant and giving of the Law at Sinai on the one hand and the great festival of the third month on the other (later, Exodus 19 became the lectionary passage for Weeks [*b. Meg.* 31a]). *Jubilees* 1:1 implies that the covenant of Exodus 19 occurred on 3/15 (that is, the fifteenth day of the third month) because it has Moses ascending the mountain to receive the Law and testimony on the sixteenth. In *Jubilees* one learns that the Festival of Weeks had been celebrated in heaven from the day of creation on and that Noah and his family first observed it on earth (6:18). On the occasion of the Noachic covenant which was concluded in the third month (see 6:1), Noah and his sons swore an oath that they would not consume blood (6:10), and Moses, to whom the contents of the book are addressed, is told that the covenant which he made with the Israelites occurred in the same month. It, too, was accompanied by an oath (6:11). "For this reason it has been ordained and written on the heavenly tablets that they should celebrate the Festival of Weeks during this month—once a year—to renew the covenant each and every year." The covenant with Abraham likewise fell on this festival (15:1; cf. 14:20; for other references to the festival, especially as a harvest holiday, see 6:21–22; 22:1–5; 44:1–4; and 29:7–8, in which Jacob and Laban swore on 3/15 not to cross over the boundary of the other). The regular

association in *Jubilees* of the oaths which accompany covenants and the Festival of Weeks has led some authors to conclude that in this book the holiday was named, not Weeks *(šābuʿôt),* but Oaths *(šĕbuʿôt).* It is more likely, however, that the author was resorting to paronomasia than that he changed the name of a historic festival.

It can be shown that in the calendar of *Jubilees* the festival was celebrated on 3/15. This conclusion follows from 15:1, where it is said that Abraham celebrated it in the middle of the third month, and from 44:1–5 which implies that 3/15 is the date since Jacob offered a sacrifice on 3/7, waited seven more days, then observed the harvest festival, and received a theophany on 3/16 (cf. also 1:1). If 3/15 is the date for Weeks, it entails that 1/26 would be the time for the wave offering, though *Jubilees* never mentions this rite. The same dates are found in some of the calendaric texts from Qumran (see below) and indicate that the writers of *Jubilees* and the Dead Sea Scrolls did not follow the other known calculations for these days. These authors interpreted "morrow after the sabbath" in Lev 23:11, 15 to mean the first Sunday after the Festival of Unleavened Bread. The Pharisees, however, understood it to refer to the day after the first day of Unleavened Bread (i.e., 1/16) and hence Weeks would occur on 3/6 (see *m. Menaḥ.* 10.3). Still other groups (the Boethusians, Samaritans, and Karaites) took "sabbath" to mean a literal Sabbath and regarded it as the one that fell within the seven days of Unleavened Bread. Their exegesis produced a varying date for Weeks early in the third month (see *b. Menaḥ* 65a).

2. The Qumran Texts. It is now well known that the Qumran covenanters followed the 364-day calendar of *1 Enoch* 72–82 and *Jubilees* 6 (see 11QPs[a] 27.6–7). The evidence from the so-called Mišmārôt texts and from the Temple Scroll allow one to establish that the *ʿōmer* ceremony occurred on 1/26 and the Festival of Weeks was celebrated on 3/15. The Temple Scroll (its section about the festival is found in 18.10–19.10) does add a new dimension of some interest because it makes Weeks only one in a series of four first fruits festivals (including the day of the *ʿōmer* ceremony) each of which is separated from the previous one by 49 days. 11QT 43.3 also mentions that the new wheat may be eaten from the time of Weeks until the same festival the next year. It is often claimed that the Qumran sectarians not only celebrated the festival on 3/15 but also used it as the occasion for their annual ceremony in which they admitted new members and renewed the covenant. 1QS 1.16–2.18 is supposed to describe this ceremony, but nowhere is it said that this ritual was performed on the Festival of Weeks (2.19 does mandate that this be done every year). J. T. Milik has written that the oldest manuscript of the Damascus Document dates the ceremony for renewing the covenant to the third month (Milik 1959: 117). If this is so, then it is very likely that the occasion was Weeks, especially when one considers the close relation between the Qumran texts and *Jubilees.* CD 16.1–5 is also important in this regard. It mentions the covenant and an oath to return to the Law of Moses, refers to *Jubilees* for calendrical details, and notes that Abraham was circumcised on the day when he gained knowledge. *Jubilees* 15 dates his circumcision to the Festival of Weeks (the sequel in the Damascus Document deals with oaths).

D. The Evidence of the New Testament

Pentecost is mentioned three times in the NT (Acts 2:1; 20:16; 1 Cor 16:8). In Acts 20:16 it is reported that Paul, as he neared the end of his third journey, wished to return to Jerusalem by the time of Pentecost, and in 1 Cor 16:8 he writes the Corinthians that he would be staying in Ephesus until Pentecost. The only more extended description of it figures in Acts 2 in which the famous account of the outpouring of the Holy Spirit on the nascent church is dated to Pentecost (2:1). Because of the rich overtones of covenant renewal that the Festival of Weeks had acquired in at least some Jewish circles, it would not be surprising to find some of this reflected by the author as he depicted what could be regarded as the beginning of a new covenant and the inception of a new revelation. In fact, several scholars have maintained that there are subtle reminiscences of the Sinai tradition in the Pentecost story and in its context. For example, it has been noted that there is a parallel of sorts between Moses who disappeared into a cloud on the mountain (Exod 24:15–18) and brought back the divine Law and Jesus who, as he ascended, was hidden from the disciples' view by a cloud (Acts 1:9) and later sent the Spirit with its inspiring power. Also, it is possible that the phenomenon of glossolalia echoes a rabbinic tradition that at Sinai all nations heard, in their 70 languages, the voice from the mountain (*b. Shabb.* 88b). Yet, it must be admitted that the narrative in Acts

2 does not refer explicitly to the Sinai covenant or giving of the Law, nor does the narrative seem to have been influenced to any significant degree by the traditional accounts about them. Peter referred to the Law in his sermon (v 23) but by that term he meant only the specific injunction which those who were responsible for executing Jesus had violated. Patristic authors certainly drew the connection between Sinai and Pentecost, but Acts 2 is largely silent about this.

WEIGHTS AND MEASURES. The origin of weights and measures probably goes back into the paleolithic period, long before people planted grain and herded animals, but about such matters our knowledge is minimal.

A. Overview of Metrology

1. Near Eastern Metrology in General. In the Mesopotamian area measures had already been formed into systems by ca. 3000 B.C., and these may go back as far as ca. 3500 B.C. Parallel developments must have taken place in Egypt about the same time, and highly developed systems of metrology are attested in Syria (at Ebla) from the latter part of the EB Age and for the LB period at Alalakh and Ugarit, as well as for the Hittites in Anatolia. From the 2d millennium on, such systems must have existed all across the Near East, though it is still impossible to describe any of these in detail except for Mesopotamia and Egypt.

2. Mesopotamian Metrology. Attested over a period of almost three millennia (literature and discussion by Powell in *RLA* 7: 457ff.), a consecutive history is possible only for Babylonia, where one can distinguish four eras: (1) to ca. 2200; (2) ca. 2200–1600; (3) ca. 1600–650; (4) after 650 B.C. The 3d millennium is characterized by many local systems structured along sexagesimal lines, a heritage from the Sumerians, but around 2200 B.C., probably under the patronage of one of the Akkad kings, a system of

integrated measures linking length, area, volume, capacity, and weight was created. Completely developed by the end of the Ur III period (ca. 2000), it was incorporated into mathematical instruction as a part of scribal training and became the standard system of calculation and accounting down to the end of the Old Babylonian (OB) period (ca. 1600 B.C.). As a scientific system it continued to be taught and used at least into the Seleucid period and probably later.

Only a few key units of this elaborately structured system can be given here: the "forearm/cubit" (Sum KUŠ, Akk *ammatu*) ≈ 50 cm; the "garden plot" (Sum SAR, Akk *mušaru*) ≈ 36 square m, based on the square of a *nindan*-rod (≈ 6 m) consisting of 2 reeds (Sum GI, Akk *qanû*) or 12 cubits; the "volume garden plot" ≈ 18 cubic m, defined as an area "garden plot" by 1 cubit of height; the SILA (Sum) or *qû* (Akk) ≈ 1 liter; and the mina (Sum MANA < Akk *manû*) ≈ 500 g, consisting of 60 shekels (Sum GIN, Akk *šiqlu*) or 10,800 barleycorns (Sum ŠE, Akk *uṭṭetu*). Sub-units ("fractions") of surface, volume, and capacity are expressed in a system of shekels and barleycorns taken over from the weight system.

The period 1600–650 B.C. shows restructuring of the area and capacity systems, and, for the first time areas of land are expressed in units of capacity, like the surface homer and seah in the OT. Basic norms seem to continue relatively unchanged throughout, but after ca. 650 B.C., there is again restructuring in the systems of length, area, and capacity. Nevertheless, all systems remain primarily sexagesimal, and even the 7-cubit length and area reed is only a device to avoid irrational fractions. The sexagesimal structure of the weight system perseveres intact, but the Semitic system of unit-fractions, already well-known from as early as the OB period, manifests itself in such units as 1/4, 1/5, 1/6, 1/8, 1/12, and 1/24 shekel. The last, identified with the seed of the carob tree (*ceratonia siliqua*), Akk *girû*, appears in the OT as gerah and was to have a long and varied history as the carat.

The Sumero-Babylonian scientific system was exported as a part of scribal training in cuneiform and is attested in upper Mesopotamia at Gasur/Nuzi as early as ca. 2200 B.C.; however, by at least 1800 B.C., we find evidence there of strong non-Babylonian influences. These result in such typically non-Babylonian phenomena as decimal rather than sexagesimal patterns, in the previously unattested and obviously West Semitic "homer," and in much non-Babylonian nomenclature. The scientific system continued to be taught as a part of scribal education, but in Assyria by the 1st millennium most sexagesimal structures had been modified by decimal influences.

3. Egyptian Metrology. The history of measures in Egypt, as in Mesopotamia, runs parallel to the major historical periods (literature and summaries: *LÄ* 3: 1199–1214). The cubit is attested by both textual and monumental evidence at least as early as the Third Dynasty (ca. 2700). From the Old Kingdom also comes textual evidence for the derived system of area and marked specimens of weights (but no textual evidence); capacity measures seem to be unattested, but the Middle Kingdom "sack" is thought to go back to the Old Kingdom. With the Middle Kingdom begins a more or less continuous documentation that continues down into the Greco-Roman period.

The cubit *(mḥ)*, estimated conventionally at 52.5 cm, was composed of 7 palms *(šzp/šp),* each consisting of 4 fingers *(ḏbꜥ/tbꜥ).* The 7-palm cubit, obviously longer than the normal 6-palm "cubit of a man," is, like the Late Babylonian 7-cubit reed, a device to avoid irrational fractions in calculations. The so-called "short cubit" of 6 palms is never attested in Egyptian calculations (*LÄ* 3: 1205, n. 5).

The Egyptian area system is based on squares of the cubit and operates on the same principle as the Late Babylonian system of measurement in reeds: one takes a linear base measure and then extends lines at right angles from each end of this base until a square is reached. Pharaonic land measure seems originally to have used 10 cubits (≈ 5.25 m) as the base and thus arrived at a land unit of 100 square cubits (≈ 27.5625 square m), called *t* or *mḥ-t€* . Higher units corresponded to powers of 10, and lower units were formed by the principle—widely attested in ancient land measure—of halving. Noteworthy is the unit (called *s̲t€ t*) of 10,000 square cubits, formed on a base of 100 cubits, which continues through the New Kingdom into the demotic period (called *st*) and becomes the *aroura* of Ptolemaic times. By the New Kingdom 100 cubits had been defined as the length of the standard measuring rope *(ḫ-nwḥ),* and in the late period a cubit of ground *(mḥ-jtn)* consisted of a base of this length with a side of 1 cubit (i.e., 100 square cubits). This type of mensuration is also well known from Late Babylonian surface measures,

which likewise use the unit of 10,000 square cubits (≈ 2,500 square m), and similar mensurational procedures probably were employed throughout the ANE.

Volume measures were based on the cubic cubit, and, in the Ptolemaic period, volume and capacity measures seem to have been linked, but the absolute norms on which this linkage was based are still obscure. A late text identifies the cubic palm (but probably not 1/7 of the pharaonic cubit) with a hin (*LÄ* 3: 1210, 1212, n. 21; cf. Viedebannt 1917: 49, 129, 151–55).

The Egyptian capacity system was apparently grounded on the hin, now reckoned conventionally at ca. 0.48 liters, with a multiple of 10 hin (*ḥq€ t* ≈ 4.8 liters), from which higher units (not all attested contemporaneously) were formed: 40 hin, 50 hin, 100 hin (*ḫ€ r,* "sack" ≈ 48 liters), 160 hin (*jpt,* Gk *oipe* ≈ 76.8 liters), 200 hin (two "sacks" ≈ 96 liters). Fractions of the basic units of 10 and 160 hin were formed by the principle of halving up to 1/64, with *r* representing 1/320 of the *jpt*/*oipe* (= 1/20 *ḥq€ t* ≈ 240 ml). In the Greco-Roman period, the *artabe* (Persian in name but with varying local norms) plays a major role, varying in size from 29 to 40 of the Greek *choinix* (a capacity unit of ca. 1 liter: Foxhall and Forbes 1982).

The basic unit of the weight system was called deben (*dbn*), for which the Old and Middle Kingdom norm seems to have been ca. 13.6 g and for which a double standard for weighing copper also seems attested. In the New Kingdom, the deben weighed ca. 91 g and was divided into 10 *qdt* of ca. 9.1 g.

4. Biblical Metrology. Which measures the Israelites brought with them, as opposed to which measures they found when they appeared in the region of present-day Israel-Jordan at the end of the LB Age, are questions that two millennia of discussion have not been able to resolve. Lack of contemporary documentation for economic life makes reconstruction of OT systems of metrology heavily dependent upon non-biblical sources, and deportation of thousands of Hebrews into upper Mesopotamia in the 8th century and into Babylonia in the 6th has left an enduring imprint on the metrology of the OT. Even elements from the patriarchal narratives, such as the "three seahs of fine meal" used by Sarah to prepare food for the three strangers in Gen 18:6, like Ur of the Chaldees (Gen 11:28, 31), probably reflect postexilic redactions. For the period after the Macedonian conquest of the Near East, Greek (and later Roman) influence becomes increasingly important and manifests itself particularly in the NT.

Measures have always posed a special problem for translators, for which various solutions have been tried: (1) an approximate equivalent such as the ubiquitous cubit, a choice made already by Wyclif and followed by most subsequent English versions, or the firkin (quarter-barrel) in Tyndale's "two or thre fyrkyns" for the "two or three *metrētai"* in John 2:6 (followed by KJV); (2) a metrological "translation," as in RSV 's rendering of the latter passage by "twenty or thirty gallons"; (3) paraphrase, as in the rendering of seah as "measure" by KJV and RSV in Gen 18:6; 1 Kgs 18:32; 2 Kgs 7:1, 16, 18, and even to the point of using "measure" for entirely different words in one and the same work, as KJV and RSV do in Luke 13:21 (*saton,* "seah"), 16:6 (*batos,* "bath"), and 16:7 (*koros,* "kor"); (4) phonetic transcription, of which ephah and shekel are the best examples.

The first and last methods have much to recommend them. It is almost impossible to translate ancient measures precisely into modern metrological terms. Regardless of how precisely stated, most modern equivalents have a margin of error extending to ±5 percent or even greater, and ancient measures were never able to achieve either the degree of precision or of standardization that characterize modern measures. The ancients themselves encountered great obstacles when they tried to define units of measure in the absence of standardized systems, and the difficulty was especially great when diachronic or cross-cultural definitions were involved, making most ancient "equivalences" only rough approximations.

5. Other Biblical Uses of Measures and Mensuration. The universal lack of precise standards in antiquity left the door wide open to fraudulent use of weights and measures, and the prophets have a rather dim view of measuring associated with buying and selling, typified by Amos' condemnation of those who are anxious for the sabbath to be over so that they can get back to the business of making a profit and who "make the ephah small and the shekel great, and deal deceitfully with false balances" (Amos 8:5). Amos' suspicion of merchants was all too justified, as we know from other biblical passages forbidding or denouncing such deceptive practices or admonishing the use of just measuring practices

(Lev 19:35–36; Deut 25:13–15; Prov 11:1; 16:11; 20:23; Ezek 45:10; Hos 12:7; Mic 6:10–11; Sir 42:4), as well as from the Code of Hammurabi and other Mesopotamian sources (Powell 1979: 83–86). Measurement and measures are also used as literary devices, as in the portent foreshadowing the doom of Belshazzar (Dan 5:24–28), prophetically as an image of divine judgment (Ezek 5:1–12), symbolically in apocalyptic visions (Zechariah 5; Rev 6:5–6), describing human misery (Job 6:2–3), in appeals for divine justice (Job 31:6; 2 Esdr 3:34), in proverbial metaphors (Sir 28:25; Matt 5:15; Mark 4:21; Luke 11:33), and as a means of evoking the power of the divine and the limitations of humanity (Ps 39:6—Eng v 5; 62:10—Eng v 9; Isa 40:12; 2 Esdr 4:5).

B. Length

1. OT Systemic Measures of Length. These include the cubit *(ʾmh),* span *(zrt),* handbreadth/palm *(ṭpḥ),* and fingerbreadth *(ʾṣbʿ).* The probable structure of this system is:

4 3 2

finger → palm → span → cubit

Cubit or ell means basically the forearm and probably usually expressed the length from elbow to tip of fingers. The 4-finger palm and 24-finger cubit is attested all over the ANE and Mediterranean area and may be a widespread convention that goes back to the paleolithic period. It seems likely that this was the structure of the Hebrew cubit. The Egyptians also used a 4-finger palm, but reckoned 7 palms to the cubit, probably to circumvent the irrational fractions that occur in calculating with the number 7. The 30-finger Babylonian cubit is probably also prehistoric, originating in Sumerian sexagesimal counting, though here, too, 6 "hands" (but reckoning 5 fingers each) seem to underlie the cubit. This cubit continued to be used for scientific calculation in Babylonia, but, by the Chaldean period and perhaps considerably earlier, the usual 24-finger composition of the cubit had been reintroduced for normal mensuration (houses, lots, fields, etc.). Probably the restructuring was due to West Semitic influence, but redefinition was accomplished by varying the size of the finger rather than the size of the cubit itself (*RLA* 7, §§ I.3.b–I.4).

In the OT, the cubit is the length measure par excellence, analogous to the shekel in the weight system. The Hebrew system shares with N Mesopotamian systems (*RLA* 7, §§ I–IA.13) the practice of using the cubit to express all long distances that can actually be measured, e.g., the 21,815 cubit perimeter of Nineveh mentioned in an inscription of Sennacherib (actual measurement: ca. 12 km) or the 25,000 cubit length of the holy district in Ezek 45:1 (other examples over 300 cubits in length: Josh 3:4; 2 Kgs 14:13; 2 Chr 25:23; Neh 3:13; Ezek 45:2–6; 47:3–5) or the 1,200 cubit length of Hezekiah's tunnel in the Siloam Inscription. Essentially a West Semitic, decimally oriented system, its tendency to express great distances by large numbers associated with a small unit marks it as a later stage of development than the Sumero-Babylonian system which expresses long distances in sexagesimally structured units with special names (reeds, rods, ropes, stages, etc.: *RLA* 7, §§ I–IA.13).

The foot, so familiar to speakers of English, does not occur in ANE systems. These systems reflect an older tradition of natural measures, whereas the foot (normally 2/3 cubit) is characteristic of later strata of cultural development like the Greek and Roman. Cubits, spans, hands, and fingers are the natural units in which to express the height of a person or of any other object, because objects were measured, by laying on the forearm, the span of the hand, the palm, or the finger. In Babylonia and Egypt, these natural measures had already been transformed by ca. 3000 B.C. into an abstract system, defined by reference to some objective standard, such as a measuring rod, which was, in theory, universally applicable. However, non-systemic, natural measures continued to be used all over the ancient world, and we find excellent examples of this in the OT in the bed of Og of Bashan, four by nine cubits "according to the cubit of a man" (Deut 3:11), and the height of Goliath as "six cubits and a span," i.e., 6.5 cubits (1 Sam 17:4; cf. *RLA* 7, § I.2.d for similar accounts).

For translating cubits into modern metric or British-American terms, division in half gives the approximate number of meters or yards and multiplying this number by 3 gives the approximate number of feet. This yields a very rough approximation, but precision is rarely an issue in the length measures in the Bible.

Many attempts have been made to determine the size of cubits mentioned in biblical and post-biblical Jewish sources (e.g., Petrie 1892; 1894: 73–77; Scott 1958; 1959: 23–27; Ben-David 1978; Kaufman 1984), but none is without problems of method and evidence. Inference of cubit standards from the monuments is fraught with many difficulties, and it seems doubtful that, in the absence of written evidence, reliable standards can be inferred from the archaeological evidence alone.

Varying standards must have existed, since this characterizes the history of metrology until recent times; however, specific demonstration of such standards has proved elusive. In particular, the "short cubit" and the "royal cubit," which have played major roles in modern discussions of biblical measures, are not actually mentioned in the Bible, and neither Mesopotamia nor Egypt has produced unequivocal evidence to support the existence of such standards. Thus, modern scholars conventionally use 50 cm for the Mesopotamian cubit and 52.5 cm for the Egyptian cubit. Given the significant geographic and time dimensions, it is probable that the bounds of these values cannot be reduced below ±5 percent, and ±10 percent may be more realistic. Outside of Egypt, 50 cm recommends itself as a rule of thumb, unless there is reliable evidence to the contrary, because it is the midpoint of values (44 to 56 cm) derived from the "natural" cubit. There were larger "cubits," but these always have special names, e.g., the Babylonian *ammat arê,* "cubit of the pace," which was ca. 75 cm and thus approximately identical with the 40-finger Greek *bēma* (conventional value 74 cm).

In all attempts to determine the structure and size of the Hebrew cubit, the metrological statements in Ezekiel's vision of the New Jerusalem (Ezekiel 40–48) have played a major role, because the cubit is twice defined in parenthetical comment as being "a cubit and a handbreadth" (*bʾmh wṭpḥ* in 40:5; 43:13). From this it has been inferred that the intended cubit consisted of 7 palms. This inference, however, has no direct evidence to support it and is based primarily on two further hypotheses: (1) postulated identity of the structure of Ezekiel's cubit-plus-a-handbreadth with the structure of the Egyptian cubit of 7 palms; and (2) postulated identity of the base cubit, to which the handbreadth is added, with a "short" cubit of 6 palms. These hypotheses have been combined with 2 Chr 3:3 (MT -LXX-Vg differ slightly; KJV: "by cubits after the first measure"; RSV: "in cubits of the old standard") to infer that Solomon's cubit also contained 7 palms. This is an extremely tenuous hypothesis. No archaeological evidence substantiates that the dimensions given in 1 Kings 7 and 2 Chronicles 3–4 are in fact contemporaneous with Solomon himself, and the extraordinary number of sexagesimal ratios in the account of Solomon's building activities, as well as the equally remarkable fact that building of the temple is said to have begun exactly 480 years after the Exodus (1 Kgs 6:1), points to Babylonian influence, making the metrological value of the given dimensions doubtful.

Serious problems arise in attempting to use the metrological statements in Ezekiel, because, even if the professed Babylonian background of Ezekiel is unproven, the context is indisputably postexilic. Thus, the "cubit and a handbreadth" may be nothing but the Babylonian cubit of ca. 50 cm, and "cubit and a handbreadth" may reflect nothing more than the fact that the Babylonian cubit really was approximately equal to the "cubit of a man," measuring from fingertips to elbow, plus a handbreadth. A parallel case is the "royal cubit" of Babylonia, said by Herodotus (1.178) to be 3 fingers larger than the "measuring cubit," where "measuring cubit" may mean nothing more than the OT "cubit of a man" (against Powell, *RLA* 7, § I.4k). Modern treatments of these and other ancient comparisons proceed from the unlikely assumption that the authors of such comparisons were speaking in precise terms.

Clearly of Babylonian origin, but raising even more serious textual problems, is the reed *(qnh),* mentioned in the OT only in Ezekiel (40:3, 5–8; 42:16–19) and said explicitly to be composed of "six cubits in the cubit and a handbreadth" (40:5). This 6-cubit reed must derive ultimately from the Babylonian "scientific" system, standard from ca. 2200 to 1600 B.C. but subsequently replaced in house and field mensuration by other systems. In the Chaldean-Achaemenid period, field measure was based on the square of 100 cubits, and house and lot measure was based on a reed that consisted of 7 cubits, which was created by simply adding another standard-sized cubit to the reed (to avoid problems with the number 7). Thus, Ezekiel's 6-cubit reed can hardly have been borrowed from Babylonian practice in the Chaldean-Achaemenid period. An earlier origin than the Exile is unlikely, because there is no evidence

for preexilic use of the reed. A possible solution is suggested by a metrological table preserved in a Byzantine author of the 14th century A.D. and attributed to a much earlier but otherwise unknown architect Ioulianos (Julian) of Askalon, which gives the length measurements used in Palestine in the late Roman period (Viedebantt 1917: 123–25) and seems to reflect a merging of Greek units with the Babylonian units of the older scientific system (*RLA* 7, § I.2i), making it likely that the 6-cubit reed was spread westward from Seleucid Babylonia. Whether this be true or not, the metrological statements in Ezekiel are of dubious value for preexilic measures.

The span, Heb *zrt,* probably represented the maximum reach of the open hand from the tip of the thumb to the tip of the fingers, and is translated by Gk *spithamē,* a unit of 12 fingers (*Ant* 3.6.3 § 116–119) representing the half-cubit (Exod 28:16; 39:9; 1 Sam 17:4). In describing rims for the altar, Ezek 43:13 uses "span" *(zrt)* in parallelism to and apparently as a synonym of the more common term "half of the cubit" *(ḥṣy hˀmh)* in 43:17.

Handbreadth, Heb *ṭpḥ,* probably the width of the four fingers at their base, occurs in a metrological sense in Exod 25:25; 37:12; 1 Kgs 7:26; 2 Chr 4:5; Ezek 40:5, 43; 43:13. That this "handbreadth" corresponded to the expected 4-finger pattern is indicated by the translation "palm" (Gk *palaistē,* Lat *palmus*) in the LXX-Vg of Ezekiel, and by four "fingers" in the LXX-Vg of Exod 25:25 and the Vg of Exod 37:12, and by three "inches" (*unciae*) in the Vg of 1 Kgs 7:26 (metrologically, 3 *unciae* = $^{3}/_{12}$ of 16 fingers = 4 *digiti*). It is the preferred measure in the Mishnah, probably because it was regarded as less ambiguous than the cubit (cf. Krauss 1911: 388; on the Aramaic synonym *pšk,* see *RLA* 7, §§ I.4b, IA.1a).

Fingerbreadth, Heb *ʾṣbʿ,* occurs only in Jer 52:21, where the dimensions of the bronze pillars carted away by the Chaldeans are said to have been 18 cubits high, 12 in circumference, and 4 fingers thick (*ʾrbʿ ʾṣbʿwt*), and the same thickness is given in the LXX of 1 Kgs 7:15. Smaller units than the finger are not attested in the Bible, but later rabbinical tradition (*HDB* 4: 909) assigned 144 barleycorns to the cubit, making 6 per finger (as in the Babylonian system), and this may have been the ancient Hebrew system also.

2. Non-systemic and Uncertain OT Measures of Length. The day's journey (*drk ywm:* Gen 30:36; 31:23; Exod 3:18; 5:3; 8:27; Num 10:33; 11:31; 33:8; 1 Kgs 19:4; 2 Kgs 3:9; *mhlk ywm:* Jonah 3:3–4) does not usually imply specific length measurements. However, Num 11:31–32, which describes the quails sent to feed the children of Israel as being spread out a day's journey about the camp, suggests some underlying calculation because of the specificity of the other numbers: 2 cubits deep, at least 10 homers gathered apiece, and the 600,000 people mentioned in Num 11:21. Marching patterns of the Assyrian army suggest 40,000 cubits or ca. 20 km as a vague rule of thumb for the day's journey (*RLA* 7, § I.2l). Another natural measure for approximating shorter distance was the bowshot (Gen 21:16), probably about the same length as the *stadion* (see NT below). It is possible that the MT of 1 Sam 14:14 contains a reference to a length measure *ʿmʿnh,* "furrow length"; for parallels, see Krauss 1911: 175; *RLA* 7, §§ I.2i, IA.10, IIC.4), but the variants in the LXX and Vg show that the passage was already obscure in antiquity, and the date of the corruption is uncertain.

The gomed *(gmd)* occurs only in Judg 3:16 as a description of the length of the sword with which Ehud killed Eglon. The word was already enigmatic in ancient times, but "cubit" (KJV-RSV) is impossible, because "cubit" (Heb *ʾmh*) is one of the most common words in the OT, and the LXX translates *spithamēs,* "of a span," the Vg *palmae manus,* "of a palm of the hand." Some Jewish sources (Krauss 1911: 390) interpret it as the length from the elbow to the knuckles (≈ Gk *pygmē,* i.e., 18 fingers; cf. perhaps Akk *kimṣu,* "shin," *RLA* 7, § IA.5). It is uncertain whether the pace or step *(ṣʿd)* in 2 Sam 6:13 is a systemic or indefinite unit of length.

3. Length Measures in the Apocrypha and NT. Among smaller measures, the cubit *(pēchys)* continues (Matt 6:27; Luke 12:25; John 21:8; Rev 21:17), but its precise length is as uncertain as the OT cubit, and the same rules of thumb apply. The fathom, Gk *orguia,* denoted the stretch of the arms from fingertip to fingertip. Reckoned as 4 cubits (ca. 1.8 m) in Greco-Roman usage, 20 and 15 fathoms are used in Acts 27:28 to describe the depth of the sea.

As larger systemic measures, we find the *stadion* (2 Macc 12:9–10; Matt 14:24; Luke 24:13; John 6:19; 11:18; Rev 14:20; 21:16), *milion* (Matt 5:41), and *schoinos* (2 Macc 11:5). The *milion* is a Roman intrusion from Roman *mille passus*, "thousand paces," where the pace equaled 5 Roman feet of ca. 0.296 m each, thus making a Roman mile of ca. 1480 m. In relating the *stadion* to the mile, western Greco-Roman practice normally used the ratio $8^1/_3$ stadia (of 600 Roman feet each) per Roman mile. Near Eastern practice reckoned 7.5 stadia per Roman mile (or 7.5 *rys* in Jewish sources; Krauss 1911: 391–92). This divergence may reflect larger Near Eastern cubits, but the origin of this practice probably lies in reckoning 360 (rather than 400) cubits to the *stadion* (as per Ioulianos of Askalon), and this must ultimately go back to Mesopotamian practice (probably diffused during the Assyrian, Chaldean, Persian, and Seleucid empires), because 360 cubits = 1 Babylonian UŠ (reading unknown) ≈ 1 *stadion* ≈ 180 m; and 60 *stadia* ≈ 1 Babylonian *bēru* (stage) ≈ 10.8 km. The *schoinos,* for which lengths of 60, 48, 40, and 30 stadia are attested, should probably be identified with 30 stadia (≈ the Persian parasang ≈ 0.5 *bēru* ≈ 5.4 km).

The sabbath day's journey (Acts 1:12), the traveling distance permitted by religious law for the Sabbath, is generally reckoned in Jewish sources (Krauss 1911: 391) as 2,000 cubits (≈ 1 km).

C. Surface

This type of measurement is poorly attested in the OT and not at all in the NT. Small areas (houses and lots) were probably expressed in some form of square cubits, but field measure may have been expressed in the whole Levant as early as the 3d millennium in terms of the normal amount of seed used to sow a specific area of ground. The origin of this has often been sought in Mesopotamia, but this cannot be correct. "Seed" mensuration in Mesopotamia (*RLA* 7, §§ II–IIC.6) is first attested in the LB Age and is probably of West Semitic origin, being introduced to some areas of Greater Mesopotamia in the early 2d millennium by the Amorites and spread to Babylonia in the 1st millennium by the Arameans.

A common misconception about biblical surface-capacity systems is that they were somehow vague or only grossly approximate; however, the Mishnah everywhere implies (e.g., *Kil.* 2:9–10, 3:7; *ʿErub.* 2:3; *B. Qam.* 6:2, 4; *B. Bat.* 2:5, 7:1–3) and Mesopotamian sources everywhere demonstrate that areas expressed in "seed" always correspond to precise squares of length measures. "Seed" (Heb *zrʿ*) is merely one ancient way of expressing square measure. This usage of "seed" (Akk *zēru*) is well known from Babylonia and is not very different from "acre" (etymologically, "field"). Surface-capacity systems arose naturally out of agricultural practice, but, metrologically, they served the more important purpose of avoiding the cumbersome fractional terminology associated with squares of length measures.

In the OT, it is almost impossible to draw the line between preexilic and postexilic surface measures. Perhaps preexilic are the "homer" in Lev 27:16 and Isa 5:10 and the "yoke" in Isa 5:10 (perhaps also, to judge by the Vulgate, in the corrupt MT of 1 Sam 14:14). Almost certainly postexilic is 1 Kgs 18:32, describing the area within Elijah's trench on Mount Carmel, where the "house of two seahs" is probably a gloss that has crept into the text.

Leviticus 27:16 prescribes the basis for redemption of dedicated land as 50 shekels per homer of barley "seed." This suggests the 1:1 ratios favored by ancient metrology and perhaps implies a system of surface:money linkages: 1 homer ≈ 1 mina; 1 ephah ≈ 5 shekels; 1 omer ≈ 1 beka (= 10 gerah = 0.5 shekels). If so, the system may not be preexilic (see F below).

Isaiah 5:10, decrying acquisitiveness, predicts that ten yoke of vineyard will produce only a bath of wine, and "seed" (i.e., land) of the size of a homer will produce only an ephah of grain. The parallelism of 10 yoke ≈ 1 bath and 1 homer ≈ 1 ephah suggests a conceptual, though not necessarily metrological, identity of 10 yoke of vineyard and 1 homer of grain land. Both LXX and Vg interpret "yoke" *(ṣmd)* in Isa 5:10 as the amount of land worked by a yoke of oxen in a day, pointing to a "yoke" in the range of the Roman *iugerum* (≈ 0.2523 ha.). "Yoke" *(ṣmd)* and "furrow length" *(mʿnh)* occur together in the MT of 1 Sam 14:14, which is too obscure for precise interpretation; however, the Mishnah (*Ohol.* 17:1) explicitly associates the "furrow length" with 100 (length, not square) cubits (so correctly, Krauss 1911: 175, 559 n. 172) and with 4 seahs (i.e., 10,000 square cubits). This again suggests that, regardless of what the passage in 1 Sam 14:14 originally said, the "yoke" in the MT probably refers to an area of 10,000 square cubits.

This in turn indicates that the 10 yoke in Isa 10:5 are probably 100,000 square cubits; the homer may have been about the size of the postexilic surface kor (see below).

The postexilic surface system is almost identical in structure to the Late Babylonian systems and was surely derived from them, but the proportions of seed reckoned per unit of land are different, indicating that, like the late Hebrew capacity system, a lot of adaptation and adjustment of norms has taken place. Two Late Babylonian systems are known (from Babylon and Uruk; *RLA* 7, § IIB.2). Both used the square of 100 cubits, but their systems of calculation were sexagesimal and the technique of halving was not vital as in the more traditional Hebrew system. The postexilic Hebrew system identified 2,500 square cubits (1/4 of the base square formed on a length of 100 cubits) with a unit, the seah, and the rest of the system was constructed around this identity:

6 30

kab → seah → kor = 75,000 sq. cubits

Modern approximations for the postexilic system are obtained by using a cubit of ca. 50 cm: seah ≈ 625 sq. m, homer/kor ≈ 1.875 ha. This is similar to the homer of ca. 1.8 ha. known from the Nuzi texts, which is based on 80 × 100 "legs" or "strides" (Akk *purīdu*) of land (= 240 × 300 cubits = 72,000 square cubits; *RLA* 7, § IIC.6). The structure of the postexilic seah system is sexagesimal, whereas the preexilic structure of the surface homer was probably decimal, as Isa 5:10 perhaps implies. See E below.

D. Volume

Sparsely attested in the ANE and in the Bible only indirectly, volume measure is well known only from Egypt and Babylonia, where both documents and mathematical texts have survived.

The Bible does, however, imply a linkage of length, area, volume, and capacity in the accounts of Solomon's famous "molten sea" in 1 Kgs 7:23–26 and 2 Chr 4:2–5. The shape of this vessel has been debated since antiquity, but both accounts merely say that it was "round," and the simple, integer dimensions (30 cubits in circumference, 10 cubits in diameter, 5 cubits in height) point to the common approximative value 3 for pi (explicit in the Mishnaic prescription, 3 palms of circumference = 1 of width, *ʿErub.* 1:5) and to a cylindrical shape for the intended figure.

Its contents are given in baths, 2,000 in 1 Kgs 7:26, 3,000 in 2 Chr 4:5. Various theories have been proposed to explain the divergent number of baths in these accounts, but most of these lack ancient evidence. Sophisticated values for pi and the formula for finding the volume of a hemisphere are not common knowledge today and are not likely to have been a part of the intellectual repertoire of the authors of either Kings or Chronicles and, in any case, are not likely to antedate the Hellenistic period. Josephus' statement that it was hemispherical, 10 cubits in diameter, and contained 3,000 baths (*Ant* 8.3.5 §79–80) is completely at odds with his statement (*Ant* 8.2.9 §57 also discussing the works of Solomon) that the bath contained 72 *xestai/sextarii* (≈ 36 liters), indicating that he, like the author of the 3,000 baths in Chronicles, was not capable of thinking through the implications of the metrological and mathematical realities.

It is highly probable that Kings presupposes a cylindrical "sea" of 375 cubic cubits or 5 layers of 75 cubes each. Thus, 2,000 baths would imply 5 layers of 400 baths each and a volume: capacity ratio of 1 cubic cubit ≈ $^{1}/_{35}$ baths or $^{7}/_{81}$ cubic cubit ≈ 10 baths, i.e., $^{15}/_{8}$ ≈ 10. Where pi ≈ 3, 8:1 is the ratio between the area of a square inscribed within a circle and the area of one of the four segments of the circle, and eighths (i.e., 3 finger sections) of a cubit cube have a remarkable set of integer correspondences with the bath: 15 eighths ≈ 10 baths, 30 eighths ≈ 20 baths, 60 eighths ≈ 40 baths, etc. A peculiar sexagesimal "reciprocal" turns up in the ratios 60 eighths ≈ 7.5 cubic cubits. Higher ratios have integer relationships between the cubic cubit and the number of baths: 15 cubic cubits ≈ 80 baths, 30 cubic cubits ≈ 160 baths, etc.

Sexagesimal ratios always suggest Babylonian connections and a postexilic date, but the metrological evidence seems to favor preexilic tradition for this account in 1 Kings 7. Assuming a cubit in the 50±2.5 cm range and allowing a 3–3.16 range for pi, the bath would fall into the 19–27 liter range, with a median of 23 liters, close to the postulated value based on fragments of marked jars, on unmarked but measurable

jars about double this size, and on similar evidence from the Greco-Roman period (Scott 1959: 29–30). If the archaeological evidence is sound, then the measures in 1 Kings 7 probably reflect a reliable metrological tradition about the size of the preexilic bath.

The 3,000-bath "sea" of 2 Chronicles 4 is likely to be the result of metrological miscalculation, perhaps by misapplying the "rule" for the ratio (2:3) of liquid to dry capacity known from Jewish sources (Krauss 1911: 392), formulated as 40 seahs liquid = 2 kors dry (*Kelim* 15:1; *Ohol.* 8:1), which expresses the approximate weight ratio between water and barley (reminiscent of Babylonian "coefficients"). The 3,000 baths in Chronicles may be an intended "modernization" of the more ancient text in Kings, based on identification of an "old" bath, supposed to be about 2 seahs, with a "new" bath composed of 3 seahs. This is mathematically impossible, but, just as mathematics did not prevent Josephus from making a hemisphere out of the molten sea, it will not have prevented the Chronicler from drawing this conclusion, and, if this is the origin of the 3,000 baths, it also points to a preexilic bath in the 24 liter range.

Volumetric calculations may be embedded also in the size of the Ark of the Testimony in the P tradition (Exod 25:10; 37:1), which corresponds to the volume of 30 of the baths in 1 Kings 7. The unusual number ratios (5:3:3) are striking (interpreted by Josephus *Ant* 3.6.5 §135 as spans). Volumetric arithmetic may also have played a role in the dimensions of Noah's ark (Gen 6:15): 300 cubits long by 50 wide by 30 high. These ratios, $10{:}1^2/_3{:}1$, are typical of a sexagesimal calculation with strong decimal overtones, and the base of the Ark just happens to be equal to 50 Chaldean-Achaemenid *qû* of "seed" in the Babylonian system (or 6 Hebrew seahs), and the volume just happens to correspond (in cubic cubits) to 5^5 Babylonian volume *sar* (12 by 12 cubits by 1 high). Perhaps all coincidences, but Utnapishtim's "ark" (in the Gilgamesh Epic) was a cube with an edge of 10 *nindan* (= 120 cubits), and the authors of these dimensions appear to have been little concerned about whether the boat would sail or sink, but they do seem to have had an abiding interest in numbers and number ratios.

E. Capacity

1. OT Capacity Measures. These are, in approximately descending order of size: kor (*kr*, cor in KJV-RSV), homer *(ḥmr),* letech *(ltk),* ephah *(ʾph, ʾyph),* bath *(bt),* seah *(sʾh),* hin *(hyn),* kab (*qb*, cab in KJV), issaron *(ʿśrwn)* / omer *(ʿmr),* log *(lg).*

Some of these belonged originally to distinct systems of liquid (bath, hin, log) and dry (homer, letech, ephah, kab, issaron/omer), while others (kor, seah) reflect Babylonian systems and probably belong to a postexilic stratum. In the postexilic period, probably under Babylonian influence, there seems to have been an attempt to merge dry and liquid measures into one system by identifying the absolute capacities of kor and homer and of bath and ephah, as explicitly stated in Ezek 45:10–14. Divergent systems and norms nevertheless persisted, as Ezekiel 45 tacitly admits by insisting that the bath and ephah should be identical but then names them together (45:10), showing that by custom, and probably by shape, they were distinct.

Ancient editors and commentators in the postexilic period who attempted to interpret preexilic measures were confronted with the same kind of obstacles that plague the modern metrologist: lack of preexilic measuring vessels and lack of documents from the preexilic period with which to interpret the preexilic metrological systems. A more serious obstacle was this: they possessed traditions, but they did not have access to the complex set of information and techniques which makes it possible for the modern scholar to make history rather than story out of the ancient evidence. Many of the problems in the ancient sources arise from the postexilic identification of the homer with the kor and the inability of ancient authors to see that different structures and norms distinguished preexilic metrology (primarily decimal structures and western norms) from postexilic metrology (strongly influenced by sexagesimal patterns and Babylonian norms).

It is inherently probable that there were a number of preexilic systems of capacity measure, but it is not now possible to reconstruct any of these except the system of dry measures, which seems to have had this structure:

10 10

omer/issaron → ephah → homer

Though the structure of this system is deducible from evidence in the OT (Exod 16:36; Ezek 45:11), there is no OT occurrence of the homer itself that can be assigned unequivocally to this system, and its range of values must be inferred from indirect evidence. If one takes diachronic and political circumstances into consideration, it seems likely that there could have been a number of homer norms in the preexilic period, which perhaps accounts for the rather contradictory statements in the later sources.

Instructive as a paradigm for the "natural" homer is the N Mesopotamian homer, which also had (originally) a decimal structure (*RLA* 7, §§ IVA.4–IVA.5):

10 10

qû → *sūtu* → *imēru* ≈ 100 liters

Unknown in Mesopotamia prior to the Amorite invasion, the homer is clearly a West Semitic import, making it likely that the norms of the Hebrew system were similar. The term homer derives ultimately from the "assload," and the weight which a donkey can carry lies somewhere in the 90 kg range, fixing the assload of barley at ca. 150 liters or the assload of wheat at ca. 120 liters. Even allowing for uncertainties and upward adjustment by redefinition of norms, the "natural" assload can hardly have exceeded 200 liters.

Also pointing to a smaller size for the preexilic homer is Josephus' identification (*Ant* 3.6.6 §142) of the issaron in Lev 24:5 with 7 Attic *kotylai* (≈ 1.75 liter). Since the issaron was one-tenth of the ephah and since, in the postexilic system, one-tenth ephah would be ca. 3.6 liters, modern opinion has long regarded this as an error. However, Josephus was well aware of what the postexilic norms were and consistently translates the entire postexilic system into Greek units via the basic approximation 1 log ≈ 1 *xestēs (sextarius).* Much more likely is that this estimate goes back to some oral tradition that the "showbread" (containing 2 issaron) consisted of about 7 log (i.e., 14 *kotylai*).

Josephus' estimate would bring the homer down to ca. 175 liters, still above the range of the "natural" assload, but not wholly improbable if the system was no longer directly tied to the natural assload. Greek sources of the Roman period speak of a "little *gomor*" of 12 *modii* (≈ 96 liters) and a "big *gomor*" of 15 *modii* (≈ 120 liters), which is identified by Epiphanius, perhaps rightly but more likely wrongly, with the letech. These values are similar to large capacity measures known from Mesopotamian metrology where West Semitic influence is strong (*RLA* 7, §§ IVA.2–IVA.5). The parameters of the probable for preexilic OT dry measures can therefore be represented schematically as follows:

10 10

1–2 liters → 10–20 liters → 100–200 liters

omer ephah homer

However, that early Hebrew norms for the homer may not have been very different from the Mesopotamian homer of ca. 100 liters is suggested by the omer (*ʿmr*, LXX-Vg *gomor*), named as a measure in the OT only in the story of manna (Exod 16:13–36). The omer is explicitly identified as the daily ration of "bread" (*lḥm* in Exod 16:15, 22, 32), and the preservation and dedication of precisely one omer of manna (Exod 16:32–34) probably reflects the character of this capacity measure as a daily food ration. The ancient norm for a daily food ration seems to have been widely regarded as ca. 1 liter, usually of barley, e.g., one SILA (Sum) or *qû* (Akk) throughout the entire history of Babylonia and two *sextarii* (Roman) or one *choinix* in the Mediterranean area (Foxhall and Forbes 1982). The basic meaning of omer is probably "sheaf" (as in Lev 23:10; Deut 24:19), thus the quantity of grain threshed from an average sized sheaf (cf. Josephus *Ant* 3.9.5 §251), known elsewhere as a traditional agricultural measure.

The usual term for this unit in the OT is issaron (Exod 29:40; Lev 5:11; 6:13—Eng6:20; 14:10, 21; 23:13, 17; 24:5; Num 15:4, 6, 9; 28:5, 9, 12–13, 20–21, 28–29; 29:3–4, 9–10, 14–15), *assarōnos* in Josephus (*Ant* 3.1.6 §30 as an interpretation for omer in Exodus 16; *Ant* 3.9.4 §233 on Numbers 15), which means something like "one of a group of ten" (analogous to the Roman *sextarius*). It is sometimes specified in the MT as the tenth part of an ephah (e.g., Num 28:5; Lev 5:11), for which the corresponding

espressions in LXX and Vg are *dekaton tou oiphi* and *decima pars ephi.* Not really a fraction but an archaic term reflecting a concept of number to which fractions are alien, it is rendered in KJV and other early translations as "tenth deal," whereas RSV and later translations opt for "tenth of an ephah."

Also suggesting smaller norms for the older system are: a loaf (probably a flatcake) of bread made from a tenth of an ephah (Lev 23:17; 24:5); Gideon makes cakes for the angel from an ephah of flour (Judg 6:19); Ruth (2:17–18) gleans and threshes about an ephah (reflecting late tradition, Vg adds, *id est, tres modios*) of barley in one day and carries it to her mother-in-law; Hannah takes to Shiloh her just weaned son along with a bull, an ephah of flour, and a skin of wine (1 Sam 1:24); and David carries an ephah of parched grain and 10 loaves to his three brothers and 10 cheeses for their commander (1 Sam 17:17–18).

The decimal structure of the homer also reflects this older system, and Ezek 45:11 explicitly defines the homer as 10 ephah but merges dry and liquid measures and divides the ephah into 6 parts (45:13; 46:14), reflecting postexilic metrology. Decimal structure probably underlies also the surface homer in Lev 27:16 and Isa 5:10 (see Surface) as well as Hosea's purchase of the slave girl for "fifteen (shekels) of silver and a homer and a letech of barley" (Hos 3:2). The letech, which occurs only here in the OT, is rendered by the Vg as *dimidio coro* (LXX has: "a *gomor* of barley and a *nebel* of wine") and is treated in the Mishnah as half a homer. One expects the slave girl to cost 30 shekels (as per the price scale in Lev 27:1–8), which suggests that the underlying homer had 10 parts and the letech 5, i.e., 15 ephah, and that 1 ephah ≈ 1 shekel. This seems a high price for barley, but 2 seahs of barley sell for a shekel in 2 Kgs 7:1, 16, 18 after the siege of Samaria, seemingly as a "good buy," and 2 seahs (in postexilic tradition) is ca. 24 liters. Thus, if the story in 2 Kings 7 means that barley was selling for half price (at a rate of 1/2 shekel per seah ≈ 12 liters), and if the seah in 2 Kings 7 is a postexilic "translation" of a preexilic ephah, then Hos 3:2 would imply 1 ephah ≈ 1 shekel ≈ 12 liters and 1 homer ≈ 10 shekels ≈ 120 liters, placing this homer within the expected range.

Preexilic liquid measures are likewise uncertain. Attested, in ascending order of size, are log (Lev 14:10, 12, 15, 21, 24, all probably referring to a vessel of standard size and shape), hin (Exod 29:40; 30:24; Lev 19:36; 23:13; Num 15:4–7, 9–10; 28:5, 7, 14), and bath (1 Kgs 7:26; 2 Chr 2:9—Eng2:10; 4:5; Isa 5:10). Under "Volume" (sec. D above), evidence for a 20–30 liter bath was cited. This size is similar to large liquid capacity measures in Mesopotamia (*RLA* 7, § IVB.1c) and corresponds to what one expects in terms of the weight of such vessels (cf. the Roman amphora of ca. 26 liters). If the preexilic log was, like its postexilic counterpart, about 0.5 liters, i.e., ca. 1 *sextarius,* as implied in the Mishnah (*Kelim* 17:11), and if the preexilic log:hin ratio was 12:1 like the postexilic ratio, then the structure and size of the preexilic capacity system probably looked like this:

$$\text{log} \approx .05 \text{ liters} \xrightarrow{12} \text{hin} \approx 6 \text{ liters} \xrightarrow{4} \text{bath} \approx 24 \text{ liters}$$

This fits the evidence of the Pentateuch, which links fractions of the hin with the tenth-part (issaron) of the ephah but in such a way as to show that the hin cannot have had the decimal structure of the dry capacity system: one-fourth (Exod 29:40; Lev 23:13; Num 15:4–5; 28:5, 7, 14), one-third (Num 15:6–7; 28:14), and one-half (Num 15:9–10; 28:14), but never one-tenth or one-fifth. Ezekiel's prescription (46:14) for the morning cereal offering of "one sixth of an ephah, and one third of a hin of oil to moisten the flour," i.e., a 3:1 ratio, seems to be based on a different ratio from those in the Pentateuch. However, the prescribed portions of fixed offerings in Ezek 45:13–15, seem to be $^1/_{60}$ for grain, $^1/_{100}$ for oil, and $^1/_{200}$ for sheep. Thus, the mention of one-tenth bath in Ezek 45:14 does not necessarily mean that the bath was ever fractioned into tenths.

The function of the ephah and hin as the primary measuring vessels for dry and liquid capacity, as well as their similarity in size, is indicated by Lev 19:36: "you shall have just balances, just weights, a just ephah, and a just hin." Mesopotamian parallels suggest that, for practical reasons (handling, pouring, etc.), the hin ought to lie in the range of the *sūtu* (minimum 4, maximum 12 liters).

Postexilic systems are better known, but distinguishing between competing norms mentioned in late Jewish sources remains problematic. The main postexilic system is an adaptation of the Late Babylonian capacity system:

6 3 10

kab → seah → ephah/bath → kor/homer ≈ 360 liters

6 6 5

qû → *sūtu* → *pānu* → *kurru* ≈ 180 liters

This system seems to have merged the ephah and bath and redefined them to coincide with the Late Babylonian *pānu* of ca. 36 liters (a vessel into which one poured a commodity to be measured). The Hebrew kor, twice the size of the Late Babylonian *kurru,* may reflect decimal counting (10 × 36), a year's rations, the size of the seah, or all of these. The Late Babylonian *sūtu* was taken over as the seah but was doubled in size from ca. 6 to ca. 12 liters, probably to replace the functions of the preexilic ephah (a vessel size easily handled in the process of mensuration). Since the Jews arrived in Babylonia as prisoners of war, it is not likely that they brought along a whole array of large measuring vessels but very likely that the absolute values of the late system were built up from smaller measures by identifying 2 log with one *qû* and 2 *qû* with a kab (identified with 4 *xestai* in Josephus *Ant* 9.4.4 §62, on 2 Kgs 6:25).

The kab (probably of Egyptian origin) occurs in the OT only in the story of the siege of Samaria (2 Kgs 6:24–7:20), where its use together with seah points to a postexilic date (compare perhaps the "dove's dung" in 2 Kgs 6:25 with Akk *zē summati,* "seeds of the false carob"; Josephus, *Ant* 9.4.4 §62, guesses use as salt). The kab probably goes back to some preexilic norm in the 2 liter range, perhaps belonging to a system distinct from that of the preexilic homer.

The Babylonian system did not distinguish between dry and liquid capacity, and the Hebrew liquid capacity system seems to have identified the hin with the Late Babylonian *sūtu:*

12

log → hin ≈ 1 sūtu ≈ 6 liters

Approximate ancient equivalences deducible from Josephus and the Babylonian evidence are: 6 *qû* ≈ 1 hin ≈ 12 *sextarii* (= 2 Attic *choes: Ant* 3.8.3 §197, 3.9.4 §234), 12 *qû* ≈ 1 seah ≈ 24 *sextarii* (*Ant* 9.4.5 §85), 36 *qû* ≈ 1 bath ≈ 72 *sextarii* (*Ant* 8.2.9 §57). Divergences from this system in Josephus are probably due to text corruption or, less likely, to miscalculation (*Ant* 3.15.3 §321) and to the same kind of gross approximation that is ubiquitous in modern "translations" of ancient measures (10 Attic *medimnoi* = 1 kor, *Ant* 15.1.2 §314).

Given the nature of our evidence, it behooves us to follow ancient practice and identify the log with half a liter. Or if one prefers the "pint," one has a variety of choices, surely fewer than those which confronted the ancient writers on metrology: US liquid ≈ 0.473 liters, US dry ≈ 0.550 liters or British imperial ≈ 0.568 liters. These modern choices illustrate how futile it is, given our limited evidence, to argue about whether the *xestēs* was 0.544 liters or 0.453 liters or whether the log was identical with the Egyptian hin (e.g., Viedebannt 1917: 127–32). Small measures like the log and the *sextarius,* when linked with dry capacity, are usually tied to daily rations, like the Greek *choinix* (Foxhall and Forbes 1982) and the Babylonian *qû,* both ca. 1 liter.

Preexilic systems must have continued in Palestine after the Exile, accounting for the various norms mentioned in late Jewish sources, which attempt to relate these older norms to the new system via integer ratios (e.g., 2:3 and 5:6).

2. Capacity Measures in the Apocrypha and NT. Most of these are essentially the postexilic system described above, but with Greek names. The *artabē* is Persian in name but, like the daric, seems to have been shaped by Babylonian norms as it migrated westward, though it is obvious that many "bushel" sized capacity norms came to be called "artabe." Thus, in Bel and the Dragon 3, twelve *artabai* and six *metrētai* are offered by the Babylonians to the god Bel. The *artabe* and *metrētēs* are attested in Greek and Egyptian sources in sizes estimated at ca. 20 to 50 liters. However, the measures in Bel and the Dragon 3 probably

originated in 12 and 6 Late Babylonian *pānu* of ca. 36 liters (≈ 72 log ≈ *xestai*) each. The same is true of the jugs of water in John 2:6 which hold "two or three *metrētai* (i.e., baths of ca. 36 liters each). The *choinix* (RSV "quart"), describing famine prices in Rev 6:6, is a day's ration (≈ 1 Babylonian *qû* ≈ 2 log ≈ 2 *sextarii* ≈ 1 liter), and the *modios* (Matt 5:15 ≈ Mark 4:21 ≈ Luke 11:33), translated "bushel" in KJV-RSV, would be ca. 8 liters (i.e., 16 log/*sextarii*) if it were a measure, but here it merely means "measuring vessel."

F. Weight

Weight-pieces were called "stones" in Hebrew (*ʾbn*, e.g., Lev 19:36; Deut 25:13, 15; Prov 11:1; 16:11) as in Akkadian *(abnu)*, reflecting a tradition that is at least as old as the EB Age. Thousands of weight stones incorporating a plethora of norms have been recovered from all over the ANE, but systematic, scientific investigation of these remains a work for the future. Aside from Egypt and Mesopotamia, there is only sporadic evidence to show how Near Eastern weight systems were structured (Ebla, Alalakh, and Ugarit are quasi exceptions), leaving one to guess at these structures by analyzing the weight specimens themselves, which often leads to erroneous conclusions. Most surviving weight specimens are small and deviation from a given norm increases as the size of the weight decreases. Where diachronic and foreign factors come into play, correct interpretation of small specimens becomes almost a matter of chance. The difficulty of the problem is well illustrated by the deviant norms attested among over sixty weights found in a single goldsmith's cache from Old Babylonian Larsa (literature in *RLA* 7, § V).

1. Weight Measures in the OT Period. Insofar as the names of these are known, these are, in approximate order of descending size: talent *(kkr)*, mina *(mnh)*, shekel *(šql), ns\p* (only known from marked specimens), pim *(pym)*, beka *(bqʿ),* and gerah *(grh).* The kesitah *(qśyṭh)* in Gen 33:19, Josh 24:32 and Job 42:11 is more likely to be a sheep than either a weight or a "piece of money" (as in KJV-RSV), which is a modern anachronism.

The talent probably originated in the "load" that a man could carry, as indicated by the etymologies of Akkadian *biltu*, Greek *talanton*, and probably Sumerian GUN. West Semitic words for talent seem to reflect a later stage of evolution (< **krkr* or **grgr*, a prehistoric, non-Semitic, word for something that rolls?). By the LB Age, however, the talent had become a trade weight, reflected in the widespread occurrence of talent-sized copper "oxhide" ingots in the 28–30 kg range. This norm may reflect, in part, accommodation to the Sumero-Babylonian "load" of ca. 30 kg, but W of the Euphrates, by the LB Age, it seems to have been widely defined as 3,000 shekels, attested at Alalakh and Ugarit (Parise 1970–71: 14–15; Zaccagnini 1978) and in the OT (Exod 38:25–26).

That talents had a sexagesimal structure had become a basic tenet of western metrological theory by the Hellenistic period, formulated by an Alexandrian writer thus: "every talent has its own 60 minas" (Viedebantt 1917: 73 n. 4). This has also been the general opinion of modern scholars, but the Near Eastern evidence is equivocal about this.

The Sumerian mina with its typical sexagesimal structure, is attested in the 3d millennium at Ebla, but in the 2d millennium the mina is an elusive unit W of the Euphrates. Counting in hundreds and thousands of shekels without any mention of minas characterizes not only Alalakh and Ugarit but also the OT (Gen 20:16; 23:15–16; Exod 30:23–24; 38:24–25, 29; Num 3:50; 31:52; Judg 17:2–4; 1 Sam 17:5, 7; 2 Sam 14:26; 1 Kgs 10:29). The mina, on the rare occasions that it occurs in the OT, appears only in the postexilic contexts of Ezra 2:69, Neh 7:71–72 and Ezek 45:12, and in 1 Kgs 10:17, where it is probably also postexilic (along with weights associated with the stories about Solomon, which have too many sexagesimal numbers: 1 Kgs 9:14, 28; 10:10, 14, 16, 29, etc.). Ezek 45:12 has been interpreted as implying a sexagesimal structure for the mina, but the metrology of the MT-LXX-Vg versions is so muddled and so at odds with the other straightforward metrological statements in Ezekiel that the text cannot be in order and, standing alone as it does, is of no evidential value for the structure of the mina.

In the 1st millennium, Assyrian practice seems to have equated 2 Mesopotamian minas with 100 western shekels thus creating the "strong" (Akk *dannu*) shekel and mina norms, versus older norms which were referred to as the "lesser/lighter" (Akk *gallu*) norms. "Strong" talents, however, are not clearly attested (against *RLA* 7, § IVB.4; cf. also the 30 talents of gold, as tribute from Hezekiah in both 2 Kgs

18:14 and in Sennacherib's annals). This "strong" standard is not attested in Assyria until the 1st millennium (and never in Babylonia) and was probably never more than a mechanism designed to facilitate, for tax purposes, transformation of weights normed on a western decimal system into the Mesopotamian sexagesimal system.

Consequently, arguments about whether the Ugaritic or other western minas contained 50 shekels or 60 shekels may not be pertinent to the problem. The OT treats the shekel as the primary unit of weight metrology, even to the point of omitting the word shekel entirely (Gen 20:16; 37:28; Judg 17:2–4, 10). Parallel uses of the shekel are abundantly documented at Ugarit (Heltzer 1976: 17–73) and Alalakh (Zaccagnini 1978; Parise 1970–71: 14 n. 11, also with earlier examples from Mari).

It seems likely that *nṣp,* inscribed on Israelite weights (also attested in documents from Ugarit), incorporates the shekel norm that lies behind the Assyrian "strong" mina, because the norms deducible from marked Israelite specimens lie in the 10 g range (literature and examples in Ben-David 1979: 41–45), and 100 such shekels would indeed be roughly 2 Mesopotamian minas. The root *nṣp* has been compared to Arabic *nṣf,* but, although this root does produce words in Arabic meaning "half," the basic meaning may have been something like "divide into equal parts" (cf. Akk *mišlu,* "half" < *mašālu,* "to be like/equal"). Thus, the "double-shekel" of which the *nṣp* has been supposed to be the "half" is probably just another metrological phantom. Geographically, marked *nṣp* weights from excavations, like the *pym* weights, seem to be primarily from the kingdom of Judah (Ben-David 1979: 45). One small weight (2.54 g) marked *rbʿ nṣp,* "quarter *nṣp,*" was purchased in 1890 near Samaria and bears on one side a bungled inscription sometimes interpreted, but improbably, as "quarter shekel" (*HDB* 4: 904; Pilcher 1912: 180–81; Diringer 1942: 85). To summarize: the *nṣp,* the Ugaritic shekel, and the Alalakh shekel were probably all in the 9–10 g range, corresponding approximately to the 100th part of 2 Mesopotamian minas.

A distinct norm seems to be represented by the *pym* (literature and examples in Ben-David 1979: 30). Mentioned in the OT only in the corrupt 1 Sam 13:21, where the Philistine fee of a *pym* seems to be associated with the plowshare or the mattock and, if the generally accepted emendations are correct, one-third shekel with the goad. In both cases these charges probably refer to smithing costs for covering the wooden share of the plow, the wooden blade of the mattock, or the end of the goad with a thin sheet of iron and reflect the precipitous drop in the price of iron that took place beginning about the 11th century.

The meaning of *pym* is not certain. Possibly a Semitic expression for "two-thirds" (Pilcher 1916; Diringer 1942: 87–88; Ben-David 1979: 35–37), it is certainly not derived from Sumerian but could be of foreign (Philistine) origin. It is not impossible that it represents "two-thirds" of the "shekel" norm in the 11–13 g. range, but both the philological and the metrological evidence is too tenuous to use this as the basis for entire metrological theories (with Ben-David 1979; *contra* Parise 1984: 129 n. 11). The Ugaritic text (Ben-David 1979: 29–35) around which the metrological part of this controversy now revolves is a bit obscure, but it does seem to translate 7 talents of Ashdod into 5 talents 1,800 shekels of Ugarit, and, if so, it probably means 10 shekels of Ashdod ≈ 8 shekels of Ugarit (i.e., 21,000 ≈ 16,800).

To summarize, the *pym* probably denotes the "shekel" of Ashdod. In the LB Age this "shekel" seems to have weighed about 80 percent of the Ugaritic shekel, i.e., 5 shekels of Ashdod ≈ 4 shekels of Ugarit. Since the Ugaritic shekel seems to have been in the 9–10 g range (Ben-David 1979: 30, 42), this suggests that the *pym* should be in the 7.2–8 g range.

Other "shekel" norms are more elusive. However, it seems clear from surviving weight specimens that there was yet another weight norm, distinct from and heavier than the *nṣp.* This heavier norm seems to have fluctuated (perhaps diachronically and geographically) in the 11–13 g range. Marked weights of this norm are characterized by a symbol which looks like an unfinished figure 8, usually interpreted as "shekel," but its meaning is obscure. Distinctive also is the use of Egyptian hieratic number symbols, where 5, 10, 20, 30, and 40 denote 4, 8, 16, 24, and 32 multiplies of a norm that usually lies in the 11–12 g range. Here again, there is a curious 10:8 ratio. These facts have usually been interpreted (since Aharoni 1966) to mean that the underlying standard of reference is the *qdt* (theoretically ca. 9.1 g), implying a shekel norm of ca. 11.4 g. This seems to be a workable rule of thumb, but much remains obscure about how this system functioned, and even quite large weight specimens (e.g., Pritchard 1959: 30 from Gibeon,

51.585 g, marked "5" [= 4]; Kerkhof 1966 from Shechem, 188.5 g, marked "20" [= 16]) deviate considerably, leaving the underlying norm of reference in doubt.

Weight specimens marked *bqʿ* leave no doubt that the beka (Gen 24:22; Exod 38:26) was the half-shekel of the 11–13 g norm (Shany 1967). The arithmetic of Exod 38:24–26 also makes it clear that the beka was regarded as the half-shekel; however, neither the arithmetic nor the parenthetical explanation "a beka a head (that is, half a shekel by the shekel of the sanctuary)" can be dated with certainty. It seems not improbable that this 11–13 g norm is the one implied by the "shekel of the sanctuary" (Exod 30:13, 24; 38:24–26; Lev 27:3, 25; Num 3:47, 50; 7:13, 85; 18:16), but neither the metrological evidence nor Talmudic calculations make this a certainty (against Ben-David 1968; see the evidence for *māʿāh* cited in *RLA*, 7, § VA.1d).

This problem is associated with the history of the gerah, which occurs in the OT only in connection with the shekel of the sanctuary in the Priestly Code (Exod 30:13; Lev 27:25; Num 3:47; 18:16) and in Ezek 45:12, both of which identify 20 gerahs with one shekel. The origin of the gerah is still obscure, but both Babylonian and Greco-Roman sources point to 1/24 as the original division and 1/20 as the derivative (*RLA* 7, §§ VA.1c–d). The LXX translates "shekel of the sanctuary" as *to didrachmon to hagion*, "the sacred didrachma," but whether this hearkens back to a tradition identifying it with the daric and the Babylonian shekel of 8.3–8.4 g (i.e., a didrachma of the 5th century B.C.) or whether it reflects the identities that emerge in the Roman period is unclear. Josephus (*Ant* 3.8.2 §195 on Exod 30:13) identifies the shekel of the sanctuary with 4 Attic drachmas (≈ 13.6 g), probably only an approximation, but nevertheless suggesting that no reliable knowledge of ancient weight metrology survived in the 1st century A.D. (against Ben-David 1968).

Whether the "shekels" of Neh 5:15 and 10:33—Eng v 32 belong to this system or refer to the Achaemenid daric (i.e., Babylonian shekel) remains uncertain, but the latter cannot be excluded, because Aramaic papyri from the Jewish community at Elephantine already reflect a mingling of Babylonian, Greek, and Persian standards by ca. 450–400 B.C. (see *RLA* 7, § VA–VA.1j).

Special norms have sometimes been seen in the "shekels of silver current with the merchant" (Gen 23:16) and in the story that the annual cutting of Absalom's hair yielded "two hundred shekels by the king's weight" (2 Sam 14:26). However, the first story probably means only that Abraham went to a local merchant and had him weigh out 400 shekels to Ephron, and the point of interest in the second story was probably not the "king's weight" (royal standards can hardly have been remarkable in David's time) but rather the heaviness of Absalom's hair: about twice the wool produced by an average sheep.

2. Weight Measures in the Apocrypha and NT Period. With the Apocrypha begins an era in which "weights" of precious metals often refer to monetary units, rarely to actual weight (talents expressing the weight of silver vessels: 1 Esdr 8:56). Almost all weight units in the NT are monetary in nature. Thus, the "ten thousand talents" owed by the unforgiving debtor in Matt 18:24 would be at least 204 metric tons of silver but probably reflect the fabulous sum of 60 million denarii (versus the mere 100 denarii which he tries to squeeze out of his own debtor in 18:28). The "pound" *(litra)* of ointment used by Mary on Jesus' feet in John 12:3 and the "hundred pounds" of embalming ointments brought by Nicodemus in 19:39 are not intended as precise measures but are expressed in weight because ointments and perfumes, being expensive, were usually reckoned in weight rather than capacity; the underlying conceptual unit is probably either the Roman pound of ca. 326.4 g (= 96 denarii) or the mina of ca. 340 g (= 100 denarii). No precise weight is intended by the talent-sized hailstones poured out of the bowl of the seventh angel in Rev 16:21, but they would have been formidable, weighing, even by the late Jewish definition of the talent, at least 20.4 kg.

The metrology of the Near East during the Greek and Roman periods is still poorly understood. Coins bring additional evidence but complicate matters enormously because we do not have the evidence to control either the effect of prices or politics. Most remarkable is the survival of the Bronze Age definition of the talent as 3,000 shekels, reflected in a weight inscribed in Latin which identifies 125 "pounds" with a talent of 3,000 shekels (*pondo CXXV talentum siculorum <M> III*, also known from Epiphanius, *HDB* 4: 906), where the "shekel" is probably the Tyrian tetradrachma (theoretically, ca. 14.1666 g), which

plays an important role in Talmudic money and metrology (Ben-David 1968; 1971), and this talent seems to be intended by a weight discovered in Jerusalem about a century ago weighing ca. 41.9 kg (*HDB* 4: 906). Mention of "125 pounds" is noteworthy, because Josephus (*Ant* 3.6.7 §144 on Exod 25:39) translates Heb *kkr* as "100 minas" and adds "*kinchares* is the Hebrew word that means *talanton* in Greek," where he is probably thinking about the Roman *centarius* of 100 "pounds," but elsewhere (*Ant* 14.7.1 §106) he relates that Crassus took a bar of gold "of three hundred minas," noting that "our mina is two and a half *litrai*." This *litra,* usually interpreted as a Roman pound, is probably the "mina" of 100 denarii (≈ 340 g), and 125 such "minas" would be the mass of a Tyrian talent (≈ 42.5 kg), suggesting that the Tyrian talent may have been divided in Josephus' time into 50 "minas" (340 g × 2.5 × 50 = 42.5 kg). Thus, the "shekel" of NT times probably refers to the Tyrian tetradrachma (so Ben-David 1966). This seems to be based on a "mina" of 100 denarii (100 × 3.4 g), corresponding to the Roman pound plus 4 denarii, divided into 24 parts, yielding a "shekel" of ca. 14.1666 g and a 3,000-shekel talent of ca. 42.5 kg. Thus, Josephus was probably speaking only in approximate terms in identifying the "shekel" with 4 *drachmai-denarii* (*Ant* 3.8.2 §195, 18.9.1 §312, *JW* 7.6.6 §218; likewise Matt 17:24).

The denarius was eventually identified in Jewish tradition with the *zūz,* originally a Babylonian term denoting the half-shekel (*RLA* 7, § VA.1j), and 3,000 of these "shekels" were identified with the "talent." However, in the Galilee area another system obviously prevailed, and the term called *šql* in the S was called *sl*ʿ in the N, perhaps recalling an old "half-shekel" norm in the 6–7 g range (the OT beka) but more likely based on the mass of the Tyrian tetradrachma of ca. 14 g. The weight norms therefore remain uncertain, but the approximate, relative ratios are fairly secure: 100 drachmai-denarii ≈ 1 mina *(mnh),* 6,000 drachmai-denarii (= 3,000 *šql*) = 1 talent (*kkr*) ≈ 20.4 kg (denarius standard) or 21.25 kg (Tyrian standard), 3,000 Tyrian tetradrachmas (i.e., southern *sl*ʿ) ≈ 42.5 kg.

WEST. The direction of the setting sun, which in both Hebrew *(mābô› [haš]šemeš)* and Akkadian *(erēb šamši)* provided one of the common phrases for the direction. In many of its uses, west is contrasted with east, and the rising and setting sun serve as indicators of the two directions. In this usage, the phrase often becomes a merism representing a totality.

The Hebrew words for west include, in addition to *mābô› (haš)šemeš, ma‹ărāb* (literally, the place of evening or sunset), and *›aḥărôn* (literally, behind or after). This last word for west shows how the Hebrews used their body for orientation. They faced east; west was the direction behind them. West was the location of the Western Sea (*yam ›aḥărôn*) also called the Great Sea, which is known today as the Mediterranean Sea. Also the Philistines were the people who lived to the west of the Hebrews.

Like the Hebrews, the Akkadians used the phrase "the setting of the sun" to refer to west, but they also used the word *amūrrū,* which referred to the cardinal direction west. In addition, *amūrrū* referred to the people who lived in the western regions, the westerners, probably a term related to the Amorites mentioned in the OT.

JOEL F. DRINKARD, JR.

WEST SEMITIC LANGUAGES. See LANGUAGES (INTRODUCTORY SURVEY).

WESTERN SEA (PLACE) [Heb *hayyām hā›ăḥărôn* (הַיָּם הָאַחֲרוֹן)]. A body of water to the W of the promised land. The phrase appears twice in the Pentateuch (Deut 11:24; 34:2) and twice in the Minor Prophets (Joel 2:20; and Zech 14:8). In the former it depicts the ideal W border of the promised land, and in the latter, it designates the edge of the occident.

The LXX and the Vulgate render the term *hayyām hā›ăḥărôn* (Deut 34:2; Joel 2:20; Zech 14:8) as *tēn thalassan tēn eschatēn* and *mare Novissimum,* respectively. (For Deut 11:24, Field 1964: 290). While the W orientation of the sea is derived from the general content of the verses, the unique adjectives modifying *thalassa* and *mare,* clearly connote a remote location. Modern renderings have missed this sense completely. They translate the term as "western sea," i.e., the Mediterranean, and even modern commentators who sense the singularity of the phrase nevertheless choose to explain the term as the "western sea" and identify the geographical location as the Mediterranean Sea. See MEDITERRANEAN SEA.

The evidence, however, from the ancient sources and traditions prevalent among E Mediterranean peoples, indicates that *hayyām hā›ăḥărôn* is a cosmic body of water, located to the far W, leading to the Abode of the Dead.

The literal meaning of *mare Novissimum* is the farthest sea, referring to the water at the rear, the edge of the sea. Ugaritic literature calls these waters *nbk; mbk nhrm;* "the source of the two rivers" (*UT* 19.1957). The Bible, which incorporated the phrase *nibkê yām* into its sea nomenclature (Job 38:16), paralleled it to *tĕhôm,* the cosmic place of the Deep, known to the ancients as the watery abode of Ugaritic El (Gordon 1965: 51:IV:21–22). The Vulgate rendered *nibkê yām* and *tĕhôm* with Lat *profunda maris* and *novissimis abyssi* "the sources of the sea" and "the edge of the Deep" respectively. It would seem therefore that the Vulgate's use of the term *novissimum* is both literal and figurative and suggests that the Vulgate comprehended *hayyām hā›ăḥărôn* as the edge of the cosmic sea.

The standard Aramaic translations render *hayyām hā›ăḥărôn* as *yamā› ma‹arbā›āh* literally the "western sea," while other manuscripts of the Aramaic translate it as *yamā› batrā›āh* (Deut 11:24; 34:2), literally the "rear" or "hinder" sea. Pseudo-Jonathan (Clarke 1984: 223) specifically identifies it with the

ocean sea, the primordial waters of creation in the W. The equation with the primeval ocean places the sea in the cosmographic realm, reminiscent of the Homeric tradition about the ocean surrounding the world (depicted graphically on the shield of Achilles [*Il.* 18.606–7]), a perception cited by the Targum (Eccl 1:7). The conception of the extreme W direction is always balanced by an extreme E bearing. See EASTERN SEA.

The cosmic aspect of *hayyām hā›ăḥărôn* is further supported by the Greco-Roman term *Acheron* (Lubetski 1978: 73–74). The phonetic similarity between Greek *Acheron* and the Hebrew *(hayyām hā)›ăḥărôn* is remarkable. Yet, it does not end there. *Acheron* lacks a Greek etymology and is likely to be a Semitic loan word. Both words indicate a body of water located in the W. Greek literature views *Acheron* as a cosmic river flowing around Hades (*Od.* 10.511–14), a river of gloom and misery. While Greek *Acheron* clearly was known to be the Abode of the Dead, the biblical term was not perceived to bear this characteristic. The Midrash, however, associates *hayyām hā›ăḥărôn* with the "last day," the time of the resurrection of the dead (cf. *Sipre* Deut. 357). The clearest relationship of the Abode of the Dead with the cosmic ocean located in the uttermost W is found in post-biblical pseudepigraphic literature (see *1 Enoch* 17:1–7). Enoch's journey to the nether world, the place where no humans walk, provides us with a full description of the cosmographic location and description. *Acheron,* common to Greeks, retains the original meaning of *hayyām hā›ăḥărôn.* While familiar to those who borrowed it, it became obscured to the originators.

WESTERN TEXT. The term "Western Text" refers to a particular textual tradition or "text-type" in the NT manuscript tradition that is longer, less homogeneous, and generally less polished than the Alexandrian (Egyptian or "Neutral") textual tradition. Since the "Western" and Alexandrian are the earliest identifiable NT "text-types" (though this is disputed by Aland and Aland 1987: 54–56, 64–69) and both were widespread in their use, some scholars have argued that the less homogeneous "Western" text more closely represents the original text, though most consider it to be a secondary and aberrant tradition.

"Western Text" is applied first and primarily to a text of this kind in the gospels and Acts, represented most prominently by the 4th or 5th century Greco-Latin Codex Bezae Cantabrigiensis (given the symbol D), and secondarily to a similar textual complexion in the Pauline Epistles, represented preeminently by the 5th century Greco-Latin Codex Claromontanus (given the symbol D_p). See CODEX (BEZAE CANTABRIGIENSIS); CODEX (CLAROMONTANUS). A number of other Gk mss attest the same general textual tradition, e.g., P5, P69 (3d century) and 0171 (3d/4th century) for the gospels; P38 (ca. A.D. 300), P29, P48 (3d century), 0165 (5th century), 614, 383 (13th century) for the Acts; and F_p and G_p (9th century) for the Epistles. In addition, it is attested by numerous Old Syriac (especially the Harclean marginal notes), Old Latin, and other ancient versional mss. It is of great importance also that most of the earliest Church Fathers who quote the NT reflect the "Western" text substantially, such as Marcion, Tatian (= Diatessaron), Irenaeus, Tertullian, and Cyprian. Ephraem of Syria (4th century) is a notable witness for Acts.

The term "Western" is placed in quotation marks because it is largely a misnomer, for the supporting witnesses are only partially western in their provenance. Codex Bezae, first thought to have originated in Gaul (where it was found) or in Sicily, actually might have originated in the East (Jerusalem or Egypt [Clark 1933]). Moreover, the various supporting witnesses are from both the West (North Africa, Italy, S France) and the East (Egypt, Syria). The "Western" textual tradition's actual place of origin is likely to have been Syria (Aland 1986).

The term "Western text" reaches back to the very beginnings of modern scholarship, for Richard Bentley in 1720 viewed Greek NT mss as transmitted from three areas: Egypt, Asia, and the West. It was

J. A. Bengel, however, who (in 1734 and 1737) pioneered the division of extant mss into two classes (he called them "syzygies"): the "African family," which included the oldest Gk mss and versions (Codex A, the Greco-Latin codices, and the Ethiopic, Coptic, and Latin versions), and the "Asiatic family," consisting of the more recent Gk mss and versions. The "Western" tradition was included in his African group, along with other early witnesses. J. S. Semler, who (in 1766) appears to be the first to apply the term "recension" to a group of mss, regarded the "western" family as one of three old recensions. Then J. Griesbach (beginning in 1777) developed his theory of three recensions: the Alexandrian, the Western, and the Constantinopolitan. The term "Western" text was firmly established in scholarship, however, by its use in the influential work of Westcott and Hort (1881–82) and by numerous scholars up to the present. Others, however, tried to replace it with more neutral terms, such as the "D-text" (from the symbol for its most famous representatives), used today by most scholars; or the "d" or "δ" *(delta)* text, used by F. G. Kenyon (1949: 213) to refer to his fourth important text-type, but at the same time linking it with the "D" mss; or the "non-committal" (and unexplained) symbol "Z," used by A. C. Clark (1933).

Though the "Western" text (from the time of Semler, to Friedrich Blass in 1896–97, and to J. H. Ropes in 1926) was considered a product of systematic revision, this is less certain now, especially because of the lack of homogeneity among its extant witnesses. Thus, H. A. Sanders (1934: 282) called the "Western" text a "group of related texts"; D. W. Riddle (1936: 230) called them "popular texts"; and E. G. Colwell (1969: 53, 166) referred to them as "the uncontrolled, popular text of the second century." Recently, Barbara Aland (1986) has attempted a developmental hypothesis for the "Western" textual tradition.

The "Western" text is usually longer or more expansive in its language than the Alexandrian text (one-eighth longer in Acts). There are substantial additions, including those in Matt 20:28; Luke 6:4; 23:53; Acts 1:2; 4:18, 32; 5:15, 39; 6:10–11; 8:24; 10:25; 11:2; 12:10, 23; 14:2–7; 15:2, 12, 20, 29; 16:4, 35, 39; 18:4, 8, 19, 27; 19:1, 9, 14; and 21:16 among many others (most are discussed by Metzger [1971] and, for Acts, by Ropes [1926] and Epp [1966]). The Bezan addition at Luke 6:4 provides an otherwise uncanonical saying of Jesus to a man found working on the Sabbath: "Man, if you know what you are doing, you are blessed; but if you do not know, you are accursed and a transgressor of the law" (Delobel 1985). There are, however, some celebrated instances where the "Western" text is shorter and lacks certain phrases or clauses which do occur in the otherwise shorter Alexandrian text. The most prominent examples are Matt 27:49; Luke 22:19b–20, 62; 24:3, 6, 9, 36, 40, 51, 52. These passages are designated "Western Non-Interpolations," a confusing term applied to them by Hort (Westcott and Hort 1881–82, 2: 175–77), who used this odd circumlocution (rather than the more proper phrase, "Neutral interpolations") because of his conviction that the "Neutral" (Alexandrian) text-type was pure and could have suffered no interpolations. Unfortunately, no alternative terminology has been established for this interesting group of textual variants (Snodgrass [1972]; Parsons [1986]).

Various explanations have been offered to explain the origin of this aberrant "Western" text. "Hort (Westcott and Hort 1881–82, 2:112–13) had demonstrated that "Western" readings can be identified in some abundance in early Church Fathers like Marcion, Justin Martyr, Tatian, Irenaeus, and Cyprian in the 2d century, and like Clement of Alexandria, Hippolytus, and even Origen in the 3d century. With such demonstrable roots in the 2d century, the "Western" text's early origin was assured, and any arguments for its secondary nature had to be based on grounds other than date.

Its "love of paraphrase" and its penchant for assimilation led Hort (Westcott and Hort 1881–82 2:122–25) to describe it as a "corruption" of the "Neutral," derived from the "Neutral" by a freely creative reviser. Hort, and many after him, therefore treated the "Western" text as secondary. J. H. Ropes (1926: ccxxxi–ii; ccxliv–v) argued that it was expanded by a single reviser before A.D. 150, who used the Alexandrian text as a base in an unsuccessful effort to improve its literary character. More recently, Hanson (1965–66) has argued that an "interpolator" with no strong connections to Judaism produced the "Western" text in Rome between A.D. 120 and 150. The dual features—its early and widespread use and its lack of homogeneity—suggested to others that the "Western" text might represent very early "unrevised" textual traditions of the NT, perhaps even the original text. A. C. Clark (1933: xxiv–xxxii),

argued that the longer "Western" text of Acts, which is "more picturesque and more circumstantial," was the original and was systematically abbreviated to form the Alexandrian version, which is "more colorless and in places more obscure."

Another explanation for the "Western" text of Luke-Acts is that their author wrote two "editions" of his work. Friedrich Blass (1896; 1897; 1898), building on older suggestions, proposed that the longer, "Western" Acts was written first in Rome, followed by the shorter, Alexandrian edition in the East. He was forced, however, to argue on the same grounds that the slightly longer Alexandrian edition of the gospel of Luke was written first, in Rome, followed by the shorter, "Western" edition. This theory, though not widely accepted, has been revived recently by Boismard and Lamouille (1984) and by Delebecque (1986); Schneider (1987) offers a critique of both works.

After many generations of scholarship, there is still no definitive answer as to whether the Alexandrian or the "Western" text better represents the original text of the gospels, Acts, and Pauline letters, though the vast majority of textual critics hold that the Alexandrian is more likely original. The lack of finality is due, primarily, to the recognition that the origins of both the Alexandrian and "Western" traditions are lost somewhere in the 2d century: the Alexandrian is attested by 2d century papyri and 3d century Church Fathers, while the "Western" is attested by 2d century Church Fathers and 3d century papyri. The preference for the Alexandrian text is based primarily on its presence in the "best" mss (Codices Vaticanus and Sinaiticus as well as P75) and on arguments that numerous "Western" readings can be shown to be secondary to Alexandrian readings. Rather than seeking to demonstrate the originality of either the Alexandrian or the "Western" text *in its entirety*, the predominant approach currently is the eclectic method which separately assesses each variation-unit in the NT text to determine the likelihood of an *individual reading's* originality. Under this methodology, a fair number of "Western" readings are judged to be original, but far more are judged to be secondary. See TEXTUAL CRITICISM (NT).

The question of originality is not the only kind of assessment made of the "Western" text. J. Rendel Harris (1891) hypothesized that its Greek form, as in Codex Bezae, was due to Latinization; F. H. Chase (1893; 1895) proposed, rather, that it was influenced by re-translations from Syriac; C. C. Torrey (1941: 112–48) tried to demonstrate that it had been translated from Aramaic; and A. J. Wensinck (1937; see Black 1967) maintained that Aramaic influenced its textual transmission. Another approach is the attempt to identify a distinctive ideological flavor or theological bias in the "Western" text by studying the variations between it and the Alexandrian. For example, Harris (1891: 148–53, 221–34) claimed that the "Western" text had been both "Montanized" and influenced by Marcion. An anti-Judaic bias was suggested as early as 1896 by Peter Corssen and in 1897 by Blass, who pointed to a few instances in Acts; more were noticed by P.-H. Menoud in 1951, and the view was developed fully by Epp (1966), then documented in Luke (Rice 1979–1985) and explored in Paul (Eshbaugh 1975), but disputed for Acts by others (Hanson 1965–66; 1967–68; Barrett 1979; Wilson 1979; see the surveys by Grässer 1976: 175–81, and Martini, 1980: 165–79) and found absent from Matthew (Holmes 1984). The "Western" text's treatment of the apostles has been explored by Martini (1980: 103–13; 181–88) and Rice (1984), and recently the themes of women and anti-feminism have been treated by Witherington and Pervo.

In spite of extensive study over many generations, the last word has yet to be written on the origin, development, nature, value, and significance of the so-called "Western" text of the NT. (For literature prior to 1966, see the works of Klijn [1949; 1969] and the extensive bibliography in Epp 1966: 172–85.)

WILDERNESS WANDERINGS. Following the exodus from Egypt and the giving of the law on Sinai, the wilderness wanderings are the traditional "forty years" which the people of Israel spent in the wilderness of Sinai, on account of their unfaithfulness to Yahweh, before they entered Canaan.

D. Historical Questions
E. Theology

———

A. In the Bible

The main wilderness narratives are found in Exod 15:22–17:15 and Num 10:33–22:1; 33:1–49, with a preliminary "exposition" in Exod 13:17–22 (Coats 1972a). The status of the sea-narratives (Exodus 14–15) and especially the speeches located in "the plains *(ʿarbōt)* of Moab" (Num 22:1–Josh 2:24) is somewhat ambiguous and transitional, and they will be left out of the account here, as is the Sinai-complex, which is dealt with separately. See EXODUS, THE; and SINAI, MOUNT. Further accounts are found in Deut 1:19–3:29 (cf. 8:2–5, 15–16; 9:22–24; 10:6–7; 29:5–8), in several Psalms (78; 105; 106; see also 81:7; 95:8–11; 114:8; 135:10–12; 136:16–22), and in prophetic literature (e.g., Jer 2:2–6; Ezek 20:10–26; Hos 2:14–15; 13:4–5; Amos 2:10; 5:25). The expression "wilderness wanderings," though common, is misleading, as the itinerary framework of the narrative suggests an orderly journey through the wilderness: indeed the closest literary analogies are descriptions of armies on the march (see below). Only in the latter stages is the idea of aimless wandering present, where it is regarded as a divine punishment for the Israelites' failure to make a direct assault on southern Palestine (Num 14:33–34; 32:13; Deut 2:1–3). In the wilderness itinerary in Num 33:1–49 the notion of "wandering" is completely lacking.

B. Literary Analysis

Structurally the wilderness narratives consist of a sequence of episodes and laws more or less loosely attached to an itinerary "chain," which describes a journey from the borders of Egypt to the river Jordan (Coats 1972b). The Sinai-complex is one such episode that has been elaborated more than any other. The other episodes mainly describe the Israelites' experiences of various physical problems posed by life in the desert environment, such as lack of food, lack of water, disease, earthquake, snakes, but also warfare and attempts to enter the cultivable land of E and W Palestine (for their theological motifs see below, E). The legal material is mainly found in Numbers 15; 18–19 (see also Exod 16:22–36) and deals with sacrifices, the remuneration of priests and Levites, and a ritual for purification after contact with a corpse.

The distinction between Priestly and non-Priestly material is generally straightforward, with longer sections of the former only occurring in Exodus 16 and Numbers 13–20. In addition to the legal material mentioned above it comprises most of the "manna" story in Exodus 16, sections of the spies' story (Num 13:1–17a, 21, 25–26, 32; 14:1–2, 5–7, 9–10, 26–38), the rebellion of the Korahites (16:1–11, 16–24; 17:1–15—Eng 16:36–50; 17:16–28—Eng 17:1–13, the "water" story in Num 20:1–13, and the story of Aaron's death in Num 20:22–29. Much of the itinerary-material is normally also attributed to P (Walsh 1977), but there are good reasons for ascribing most of it to an earlier redactor and only a few verses to P (Davies 1983).

Despite its relatively late incorporation into the main Pentateuchal narrative, the itinerary-material appears mainly to derive from a source, Num 33:1–49, whose origins lie in the monarchic period and

whose form is closely comparable to that of official documents from the ANE (Davies 1974). The attempt (Noth 1940) to isolate an earlier form of this document, in which the names paralleled in Exodus and the rest of Numbers are regarded as secondary additions, must be regarded as misguided: the parallels are more likely to be due to the inclusion of extracts from this document in the main narrative.

The early wilderness narratives apparently consisted of a series of episodes loosely linked together, with notes of movement from place to place only sporadically included at major points of transition (Exod 13:17–18, 21–22; 15:22; 19:2b; Num 10:33–36; 21:12–20; 25:1). Although the attempt has been made to separate this material into two or even three sources (Eissfeldt 1922), it is in fact impossible to find clear evidence of more than one (Fritz 1970). The order in which the episodes were recounted was apparently variable, as can be seen from a comparison of the early narrative strand, the Priestly material and the Psalms (see also Deut 9:22). This is only to be expected where clear geographical indications were generally lacking and thematic connections might be given greater weight. The individual stories take their departure from well-known desert phenomena (manna, quails, water-resources, sickness, conflicts with tribes, attempts at sedentarization), and in a few cases from place-names that were presumably still known in later Israel. In the latter instances an aetiological function is recognizable, but the remaining features evidently derive from acquaintance with conditions in the desert itself. Noth (1972: 127–34) perhaps too quickly discounted the possibility that this knowledge could be rooted in the actual experiences of Israel's ancestors in the pre-settlement period (see further below, D), but it remains likely that some features of the stories derive from later elaboration.

C. Geographical Aspects

The area to which these traditions refer is defined by their narrative framework as the Sinai peninsula and S Transjordan. The place-names in the early narratives and the phenomena described in them fit for the most part what is known of these regions, though some of the place-names (e.g., Taberah, Num 11:3) are otherwise unknown. The attempt had been made to restrict the range of the allusions to the N or the S of the peninsula, but this is impossible, and even narratives which are closely associated in the book of Exodus (e.g., those concerning Amalek [Exod 17:8–16] and Mount Sinai [Exodus 18ff.]) may refer to widely separated areas (confirming that the order of the narrative is not geographical). A possible problem is the reference to Midian (Exodus 2–3; 18:1; Num 10:29), because in later times at least this was located E of the Gulf of Aqaba in NW Arabia. However, the Israelites are never said to have entered Midian, and there are also reasons for thinking that in biblical times the Midianites occupied a wider area.

Later elements in the texts give a more precise indication of where the Israelites were thought to have traveled. Secondary passages in Deuteronomy (2:8, 26) and some related passages (Num 20:14–20; 21:4, 13, 18; Judg 11:17–18) take the Israelites around the areas in Transjordan later settled by Edom and Moab, through the wilderness to the E; although the basic Deuteronomic narrative, as well as Num 21:12–20, implies a journey through these territories. The more circuitous route is probably influenced by anti-Edomite polemic. Num 33:1–49 is a much more detailed account of the journey, and extracts from it inserted in the main narrative of Exodus and Numbers have imposed its conception of the route on the more loosely associated stories there. The end of the passage (vv 42–49) clearly describes a northerly journey through Moabite territory to a point just N of the Dead Sea. Its beginning can be related to place-names in NE Egypt, but there are two distinct theories about the route described: the "northern" route leads to Lake Bardawil on the Mediterranean coast, where Baal-Zephon and the Red Sea (or "Reed Sea") are said to be located, while the "southern" route passes by the Bitter Lakes in the S part of the Isthmus of Suez. The topographical evidence is complex and not entirely clear, but some important factors favor the "southern" route (see Davies 1979: 79–83 and fc., against Cazelles 1955 and Anati 1984: 139–151). Discussion of the central part of the passage has been influenced by Noth's theory that embedded in it is a list of pilgrimage stations which pointed the way to a location of Mount Sinai in NW Arabia (Noth 1940; cf. Koenig 1964, 1971; Gese 1967). In fact there are serious difficulties with the sequence of identifications proposed in the more southerly section of this route, and the routes indicated should be sought within the limits of the Sinai peninsula (Davies 1979: 84–89). Complete certainty is impossible, as most of the names have no parallel in the modern Arabic names of the region, but a framework is

provided by the beginning and end of the passage and by those places whose location is more or less certain (e.g., Mount Sinai, Kadesh, Ezion-Geber). As it stands the passage seems to imply a route leading to the S massif of the Sinai peninsula, then N toward Wadi Arabah, which is then followed S to Ezion-Geber at the head of the Gulf of Aqaba. From there the route turns NW to Kadesh and then crosses E to Punon S of the Dead Sea. This is very similar to the view of the route implied by the Priestly sections of the main wilderness narrative. Ewald (1864–68: 2.283–5) suggested that a more plausible route would be obtained if Num 33:36b–41a were transposed so as to stand between the first and second halves of v 30 (cf. *BHS*); this produces an inland route to Kadesh, then a SE journey to Ezion-Geber, from where Wadi Arabah is followed N to Punon, which corresponds exactly to the route implied in Deuteronomy 2 (without the secondary additions). The present order of the list can be plausibly attributed to the Priestly editing which is evident elsewhere in the chapter. It is clear that this relatively late material does not present a unified picture of "the wilderness journey." Its origin can only be conjectured, but it may derive from the knowledge of traders and others who used these desert routes. The recent discoveries at Kuntillet ʿAjrud have confirmed that at least one section of the route reconstructed here was in use in the period of the Israelite monarchy.

D. Historical Questions

Noth's influential account of the history of Pentateuchal tradition left him with no basis for any historical discussion of the wilderness tradition (1972: 58–59). Most recent histories of early Israel, likewise, give it little if any space, whether because of the presumed unreliability of the biblical sources or because of a dominating interest in the "emergence" of Israel in Canaan (Gottwald 1979; Soggin 1984; Miller and Hayes 1986; Donner 1987). It must of course be recognized that many aspects of the tradition, particularly in the Priestly account, are greatly exaggerated or even entirely fictitious, and that a majority of the elements which made up later Israel probably never went near the Sinai peninsula. But if, as seems difficult to deny, a group whose later significance greatly exceeded its size had been in Egypt and adopted the worship of Yahweh of Sinai, it is highly likely that the Pentateuch preserves some relics of their existence in the desert. There is room therefore for the kind of constructive discussion of the evidence presented by de Vaux (1978: 419–425) and Herrmann (1975: 69–85). Egyptian references to Shasu in the desert and the archaeological finds at Timna, especially the so-called "Midianite shrine" of the 12th century B.C., provide some external points of comparison (Giveon 1971; Rothenberg 1972). In the biblical tradition the role of Moses as a leader with both social and religious power over the group, and perhaps of other individuals such as Aaron and Miriam, can be recognized, but it is clear that his authority was challenged, though not overthrown; the story of Dathan and Abiram in Numbers 16 probably gives the most authentic account of such rebellion (cf. Coats 1968: 156–184). The oasis area of Kadesh is of some importance, both as the burial place of Miriam and as a natural gathering-point for an (at first unsuccessful) attempt to penetrate into Canaan (de Geus 1977). But theories which identify it as the focus of the wilderness period go well beyond the available evidence. It is likely that the "proto-Israelites" from whom the wilderness tradition chiefly derives lived, like the modern bedouin, in separate small encampments for a period (Meshel 1980) before moving into Transjordan and subsequently W Palestine, where they apparently joined (or rejoined) other groups who were in the process of establishing a society which was largely independent of the remaining Canaanite city-states. On this view the historical period referred to will lie in the 13th and 12th centuries B.C. The recent suggestion by Anati (1984) and Cohen (1981: 104) that the wilderness narratives derive from a population that lived in the N of the Sinai peninsula ca. 2000 B.C. is fanciful.

E. Theology

The theological development of the wilderness theme, both in Exodus-Numbers and elsewhere, is unusually rich. The simple distinction between a "positive" and a "negative" interpretation of the wilderness period is in danger of obscuring this richness, and "negative" motifs are already present in the earliest surviving narratives (Barth 1966: 14–23; Coats 1968). Yahweh is repeatedly portrayed as providing for Israel's needs in the desert in the most dramatic ways: these include guidance by the pillar of cloud and fire (Exod 13:21–22) and by the movement of the ark (Num 10:33), as well as the provision

of food and drink. Even the hardships of the journey are seen positively as divine discipline (Deut 8:3–5). To this divine care, according to one tradition, Israel responded with exemplary devotion (Hos 2:15; Jer 2:2), which is contrasted with her later apostasy. According to a different view, the divine gifts were received by a complaining people, an attitude which reaches its climax in the rejection by the majority of the opportunity to enter Canaan itself (Numbers 13–14) and, in the Priestly narrative, in Moses' own rebellion against Yahweh which debarred him from entering the promised land (Num 20:2–13; 27:12–14). It has been suggested that, as in Psalm 78, the murmuring motif was developed as a Judean polemic against the N kingdom (Coats 1968: 251). This may be correct, but it should also be noted how it serves to confirm the authority of a number of individuals and groups over the common people, and particularly that of Yahweh. In the older material it is the authority of Moses, the seventy elders and prophecy that is chiefly involved (Numbers 11–12), but in the Priestly material it is naturally the conflict between Aaron and his sons and the rest of the Levites which is mainly in view (Numbers 16–17).

G. I. DAVIES

WILL OF GOD IN THE OT. In every text where God is the speaking/acting subject one has to deal with issues relating to the divine will. Every word God speaks and every deed God does would be understood by the author of the text to be in accord with the divine will; given convictions regarding divine integrity, God would not have spoken or acted in ways contrary to God's own will in the matter. The divine activities closely related to the decision-making process, such as choosing, judging, and

appointing, would provide more focused perspectives. More general reflections on God's activity (e.g., Exod 34:6–7 and its parallels) would also give us clues to Israel's understanding of God's will. Thus, a wide range of texts become pertinent for the discussion.

———

A. Basic Principles
B. The Vocabulary of Will
C. Experiencing the Will of God
D. Knowing the Will of God
E. Doing the Will of God

———

A. Basic Principles

The focus for this article, however, will be on those words which are informed specifically by Israelite reflection on the will of God. (A full study would also need to consider certain purpose clauses and prepositional phrases; cf. Exod 9:16; 1 Chr 13:2; Job 10:13.) The fact that no single Hebrew word or phrase for the divine will predominates may mean that Israel's reflection on the matter was not as focused as more modern discussions have been. Yet, the diversity of language may mean a level of complexity not yet understood. This is reflected in the variety of English translations. In fact, English versions do not commonly use the word "will" in their translations. Other verbs and nouns which belong to the same semantic field are: determine, desire, want, choose, plan, swear, judge, decide, resolve, intend, command, take pleasure in, delight in, thought, purpose, way.

This language regarding the divine will is used in a wide range of genres, though it is especially prominent in the direct divine speech of prophetic oracles. The language is also used in a variety of traditions, from the Deuteronomistic history to wisdom to apocalyptic. It is most frequent in Isaiah and Jeremiah. It is least common in the pentateuchal traditions.

To speak of the will of God is to use an anthropomorphic metaphor; language pertaining to the human will is used to speak of God. Crucial to a proper understanding of a metaphor is the recognition of both similarity and difference between the human and divine spheres. Thus, with respect to the divine will, one must speak of both continuities and discontinuities with the human will. The latter may be said to focus on the decisiveness, steadfastness, responsibility, and integrity of the divine will when compared to the human.

Generally speaking, the will of God refers to the considered and deliberate divine purpose, intention, or determination; it mobilizes and focuses the power of the divine self toward others, both within and without the community of faith. It thus assumes reflection, judgment, and a directedness toward certain ends or objectives in the world. It is God's resolve to move toward a certain kind of future for others. Inasmuch as willing implies not-willing, it assumes that God is faced with choices and rejects or accepts alternative possibilities. God's will is always freely exercised at the divine initiative and motivated by love toward the other and by faithfulness to God's own promises (cf. Deut 7:8; 1 Kgs 10:9). God moves resolutely and decisively to action (or non-action) on behalf of that which is willed; God's will may not always be realized in individual instances, however, for it is resistible by the human will. Negatively, the divine will is not capricious, double-minded, blind, driven, drifting, compulsive, or oppressive (as the human will often is).

The divine will is the will of one who has willed to be in genuine relationship with the world. It is thus not a static will, but living and active. This is seen in the law as it is shaped ever anew by changes in Israelite society. God's will for the people moves with their times and places; new occasions teach new duties. This is also characteristic of the word of the prophet, which speaks to particular historical circumstances. The will of God expressed through the word of the prophet takes one form, e.g., in Amos, another in Second Isaiah. Yet, in every change of law or prophecy, the word of God is informed by a will which is faithful and constant, namely, God's will for life for those in relationship: "for our good always, that he might preserve us alive" (Deut 6:24), "that it may go well with you, and that you may live long" (22:7), "that you may live" (Amos 5:14).

One must thus speak of the will of God as both constant and changing. This necessitates a distinction such as that between the absolute and the circumstantial will of God (cf. Weatherhead 1944). The absolute will of God for his creatures remains always and everywhere the same: life, blessing, salvation. It is exercised on behalf of others. While unconditional and freely exercised, once having so willed God is eternally resolute and committed to that end. The circumstantial will of God is also freely exercised, but it is not set from eternity on every matter; it is open to the future and will often be shaped in interaction with a changing world. Alternative future possibilities will shape the divine directedness (cf. Jer 22:1–5). At the same time, while God might will judgment in a specific instance, it is for the sake of the absolute divine will for people and world. The circumstantial will of God is always in the service of the absolute will of God; they remain closely connected.

The will of God in relationship is not only expressed actively in word and deed. It is also expressed more passively in an appropriate receptivity; God lets things happen to himself. God's eyes and ears are open to the world (2 Kgs 19:16); God chooses to receive the world into the divine life. God's will is so much for others that suffering comes to be in God himself (cf. Isa 42:14).

B. The Vocabulary of Will

1. *lēb,* heart. Also *nepeš,* soul, mind. Understood as the seat of the human will, the heart is often mentioned as the "organ of God's distinct will" (Wolff 1974). David praises God "because of thy promise, and according to thy own heart, thou hast wrought all this greatness" (2 Sam 7:21). God commends Jehu for "carrying out what is right in my eyes … according to all that was in my heart" (2 Kgs 10:30; cf. 1 Kgs 9:3). In other words, God's will was done. What is (not) "right/good in [God's] eyes" is often used alone elsewhere, especially in the Deuteronomistic traditions (cf. Deut 12:25, 28; 2 Sam 10:12; 15:26; 2 Sam 11:27; 1 Kgs 11:33, 38; Isa 65:12). God's resolve to be faithful to his people is similarly expressed: "with all my heart and all my soul" (Jer 32:41).

Other phrasings used are "after my/his own heart" (1 Sam 13:14; Jer 3:15) and "in my/his heart/mind" (Gen 8:21; 1 Sam 2:35; Isa 63:4; Jer 7:31; 19:5; 32:35; 44:21). On *nepeš* in Job 23:13, cf. below. It is important to see in a number of these texts how the people's actions are explicitly said not to have been willed by God (though God willed that such actions would be possible). God does not will all that happens, though God's will may be said to be active *in* all that happens. Especially striking is the statement that God does not "willingly [lit. from his heart] afflict or grieve people" (Lam 3:33). Suffering is not (at least) the absolute will of God for Israel either. God's will is thus explicitly excluded as the initiating factor in certain events (suffering; sinful activity) and included in others (raising up leaders; keeping promises; as obeyed by certain individuals).

One can see how some of these words function in relationship to one another in Ezek 38:10–11: words/thoughts arise in the *lēb* and (evil) plans are devised, issuing in the announcement of a decision.

2. *zāmam; mĕzimmâ,* to intend; purpose, intent. This word and the next *(ḥšb)* are particularly prominent in Jeremiah. The noun is used with *lēb* to express the purpose or intent of the divine will (Jer 23:20; 30:24). The prophet as a member of the divine council has been made privy to the divine will for judgment (cf. its application to Babylon in Jer 51:11–12). The will of God is here circumstantial, directed to a specific historical moment; it cannot be generalized or considered atemporal. When the judgment has been executed, the will of God has been accomplished. It is also to be noted that these texts make a clear distinction between the divine (preliminary) decision and the execution thereof. The use of the verb in Jer 4:28 and Zech 8:14 with *niḥām,* repent, implies that it is possible to consider God's will not moving through to its execution; but not in this instance (cf. Lam 2:17). God's not repenting with respect to God's own will for judgment on this occasion becomes the basis for assuring the post-exilic community that God's will for good will stand (Zech 8:15). The use of the noun in Job 42:2 suggests that the will of God cannot (finally?) be thwarted, but it is pertinent only to God's purpose in Job's situation and cannot be generalized.

3. *ḥāšab; maḥăšābâ,* to plan; purpose. The noun is used with *lēb* in Ps 33:11 to contrast the eternality of God's purposes for good with the ephemeral purposes of the nations. God's (good) purposes are also contrasted with the (evil) purposes of Joseph's brothers in Gen 50:20. It is not that the good end for

Joseph and his brothers was predetermined by God, only that God's will for life was at work in the situation and came to prevail (cf. Jer 6:19, where the evil purposes of the people bring a judgmental end).

God's devising of a plan against Israel is met with Israel's own plans and plots rather than repentance (Jer 18:11–12, 18). The shaping of the divine purpose toward judgment is intended as preliminary, as is God's intention in Jer 26:3 and 36:3. Israel's response will affect whether those plans move to execution or God repents. In Lam 2:8 God no longer restrained God's hand and let the plans for destruction go forward (cf. Mic 2:3). Jer 51:29 states that the divine purposes against Babylon will stand (cf. 50:45; 49:20; Mic 4:12). On the far side of the destruction of Jerusalem, God's absolute purposes for Israel come into view; they are for peace rather than judgment, to give them a "future and a hope" (Jer 29:11). Such purposes are praised along with God's wondrous deeds in Ps 40:6—Eng v 5 (cf. 92:6—Eng v 5).

Generally speaking, God's purposes are not those of human beings, indeed they are of a different order (Isa 55:8–9). It is not that God's purposes are beyond human understanding, indeed they have just been articulated in 55:6–7 and elsewhere in Second Isaiah. Nor is there complete discontinuity between divine and human purposes, only that human purposes could not have made the gracious move God here makes. God's will for Israel's salvation is a matter of the divine initiative and will come to pass for those who "return to the Lord."

These words are common in Wisdom Literature, with primary reference to human plans. Divine plans stand in some tension with those of human beings. The plans of the righteous are considered just (Prov 12:5) and those of the diligent lead to abundance (21:5) and can succeed (*qûm*) with counsel (15:22; cf. 20:18). Yet, Prov 19:21 suggests that while human plans may be many, the purpose (*ʿēṣâ*, cf. below) of God shall be established *(qûm).* It is not that human and divine plans are inevitably at cross-purposes; human plans (*not* divine plans) will be established *(kûn)* if they are committed to the Lord (16:3). Prov 16:9 suggests this relationship: human plans are of no little importance, but are dependent finally on God's work to bring them to completion *(kûn).* This suggests not only that God works in and through human beings in the establishment of the divine purpose in the world, but also that human involvement is real and effective to that end (cf. 16:1). God wills that this be so. Hence, wicked human plans are an abomination to the Lord (6:18). It makes a difference to God what the human plans are.

4. *yāʿaṣ; ʿēṣa,* to counsel; plan, purpose. These words sometimes appear in parallel constructions with *ḥāšab* (cf. Ps 33:10–11; Prov 19:21; Jer 49:20, 30; 50:45; Mic 4:12). They are especially common in the prophets' oracles against the nations. In the oracle against Tyre, Isaiah speaks of God's purpose in its judgment, "to defile the pride of all glory" (Isa 23:8–9). These words are piled up in the oracles against Assyria (Isa 14:24–27), where special attention is given to God's not reversing the decision for judgment. Against Egypt (Isa 19:1–17), the Lord will confound its plans (v 3) while fulfilling God's own (vv 12, 17), which cannot be discerned by Egyptian planners (v 11). Jeremiah speaks of comparable divine purposes against Babylon (50:45) and Edom (49:20), prompted not least by the "pride of your heart" (49:16) and the "proud defiance" of the Holy One of Israel (50:29). The same language is used for Nebuchadrezzar against Hazor (Jer 49:30), suggesting that he is the instrument for God's plans. Mic 4:12 speaks of God's plans for judgment against the nations in general; such a world-wide divine purpose is also voiced in the Psalms (33:10–11) and by Isaiah (14:26) and Jeremiah (50:46).

These passages demonstrate that the will of God has to do not simply with the people of Israel; it has a scope which is universal. God is at work among all peoples effecting God's purposes. God uses the nations as the instruments of the divine purpose, even though they may not know it (cf. Isa 10:7; 46:11). Whatever plans they may have, they are nothing compared to the purposes of God; the divine will endures while theirs will fail (Ps 33:10–11; cf. Prov 19:21).

Israel itself often neglected or spurned God's purpose, carrying out their own plans, thinking that they could be the beneficiaries of God's will regardless of their evil ways (Pss 106:13; 107:11; Isa 5:19; 29:15; 30:1). Because of this, God could purpose judgment (2 Chr 25:16). Even then, on the far side of judgment, God's will is to act on behalf of Israel's salvation, and this God will do through "the man of my purpose" (i.e., Cyrus; Isa 46:10–11; cf. 44:26). These long-standing purposes effected in wondrous deeds are faithful and sure, deserving of praise (Isa 25:1; 28:29) and confession (Jer 32:19).

The verb *dāmah (Pi‘el)* is used twice in this sense (Num 33:56; Isa 14:24).

5. *rāṣāh; rāṣôn,* to be pleased with, accept; favor, will. The noun may be as close a word as any to what is often called the will of God. In Ps 40:9—Eng v 8, the will of God in which the psalmist delights is in parallel with the torah of God; in Ps 103:21, doing the will of God is parallel to doing God's word. In Ps 143:10 the psalmist asks God: "Teach me to do thy will" (cf. the phrases "the way I should go" and "a level path" in the context). In Ezra 10:11, doing the will of God appears to be synonymous with obedience. The will of God is here understood as something more objective, available to the community of faith; it can be learned and indeed done, the doing of which is considered a delight and not a burden. While obedience to the law may be in view in some texts, the will of God is more broadly conceived than embodied in an external code.

The verb (and some uses of the noun) relates to the above in that God is pleased with that which is in accord with the divine will. Thus, God is (not) pleased with certain persons, occasions, or matters because they do (not) conform to the will of God. For example, God is pleased with the servant (Isa 42:1), with David (1 Chr 28:4), with those who trust God rather than other sources of power (Ps 147:10–11), with uprightness (1 Chr 29:17; Prov 11:20; 12:22), with justice (Prov 11:1), with a joyful life (Eccl 9:7), with the prayer of the upright (Prov 15:8), and with the rebuilding of the temple (Hag 1:8). God finds unacceptable those who do not worship well (Mal 1:10–13; cf. Lev 22:17–29) or who do, but ignore kindness and justice (Isa 58:5–6; Jer 14:10–12; Amos 5:22; Mic 6:7), contrition (Ps 51:18–19—Eng vv 16–17; Hos 8:13), or faithfulness in human relationships (Mal 2:13–14). It is apparent from such a list that God's will for Israel encompasses the full range of their daily lives, from specific matters to general behavior. The will of God thus often has a quite particular focus. There is a special concern for the practice of worship and its relationship to personal conduct.

To speak of God's taking pleasure is a striking anthropopathism. It makes clear that God is not conceived in unfeeling terms. God's good pleasure is the interior, dynamic side of the divine will. God's will and the world's response to it are a matter of deep, living concern. The will of God is thus not an external, objective matter of volition unrelated to more subjective dimensions of the divine life.

6. *ḥāpēṣ; ḥēpeṣ,* to be pleased with; delight. These words are sometimes used in parallel constructions to those just noted (cf. Pss 51:18–21—Eng vv 16–19; 147:10–11; cf. also *‘ēṣâ* in Isa 46:10).

The words play a central role in Second Isaiah. The absolute will of God is focused on the future salvation God has in store for Israel and the means by which that will is to be accomplished. God says regarding that future: "I will accomplish all my will" (Isa 46:10); Cyrus is the one chosen to "fulfill all my will" (44:28), specifically with respect to Babylon (48:14). The servant is also a means for the accomplishment of God's will for Israel. It was God's purpose to work through his suffering; in his hand the will of God would prosper (53:10; cf. 42:21). God's word regarding this future will not fail; "it shall [finally] accomplish that which I purpose" (55:11). Hence, God uses human beings, both within and without the community of faith, to carry out the divine will in the world. Moreover, that will is accomplished through means as disparate as victory over the forces of evil and individual suffering at the hands of those who oppose the purposes of God. Suffering as related to God's will is here understood in specifically vocational terms and cannot be utilized to speak of suffering in general.

To speak of the Lord delighting in someone is to speak of the will of God in relationship to that person (the verb often has the sense of "desire" or "wish" when human beings are the subject). Thus, to say, "If the Lord delights in us" (Num 14:8) is to say, in effect: if it is the will of God (or God's good pleasure) for us. For God to delight in the welfare of his servant (Ps 35:27) is to will his vindication. David was delivered and Solomon enthroned because God delighted in them, that is, it was God's good pleasure so to do (2 Sam 22:20; 1 Kgs 10:9). God acts favorably toward others when it is his good pleasure so to do, for example, David (2 Sam 15:25–26). On the other hand, God has no pleasure in the death of anyone, even the wicked (Ezek 18:23, 32; 33:11, where the oath formula is used); such is not the will of God. These passages would seem to stand in contradiction to 1 Sam 2:25 (cf. Judg 13:23), which states that it is God's will to slay the sons of Eli because of their wickedness. It may be suggested that the Samuel

passage belongs with those which speak of God's purpose in judgment in specific circumstances, while Ezekiel articulates God's absolute will with respect to death.

God himself practices steadfast love, justice, and righteousness in the earth, and God's will in his own actions conform to the divine will for all (Jer 9:23–24; Mic 7:18; cf. Gen 18:25; Ps 5:5—Eng v 4; Eccl 5:4). God desires these qualities of life rather than sacrifice (Hos 6:6; Ps 51:8—Eng v 6; Isa 1:11; Ps 40:7—Eng v 6; cf. 51:18, 21—Eng vv 16, 19). It is this line of thought that may help explain those passages where it says that God does what pleases him (Pss 115:3; 135:6; cf. Prov 21:1; Jonah 1:14; Eccl 8:3, used of human kings). These texts may mean nothing more than whatever God does conforms to God's own will. However true that is, they likely claim more, namely, that God does whatever it pleases God to do. Compared to idols, God does what God wills to do. The concern is with God's freedom of action. It goes beyond the text to suggest either that God chooses to do everything that gets done in the world or that God's will prevails over every resistance in everything that God undertakes.

God is (not) pleased with those who make certain choices in life (Isa 56:4; 65:12; 66:4; Pss 16:3; 37:23) because it does (not) accord with the divine will (though Mal 2:1 indicates that there were doubters of this in Israel). God is pleased with the newly redeemed Israel, so in accord with the divine will is this new bride (Isa 62:4). In this passage, *ḥāpēṣ* is parallel with *śûś* (62:5). The latter verb is used to speak of God's delight in doing good to Israel, multiplying and prospering them (Deut 28:63; 30:9; Jer 32:41, where *lēb* is used), but also bringing ruin upon them in judgment (Deut 29:63).

7. *yāʾal (Hipʿil),* to be pleased. 1 Sam 12:22 is an especially pointed statement of the divine will: "The Lord will not cast away his people, for his great name's sake, because it has pleased the Lord to make you a people for himself." God puts the divine reputation behind this commitment. God's will is to have this people in relationship with himself forever. God will not cast them off. In the context of the divine promise to David (2 Sam 7:29), God's good pleasure on behalf of the Davidic dynasty is appealed to.

8. *yāṣar,* to frame, devise in the mind, purpose. This verb is used in parallel with both *ḥēpeṣ* and *ʿēṣâ* in Isa 46:10–11, stressing that through Cyrus God will bring God's long-standing redemptive purpose for Israel to pass. God's will for Israel is sure and it will be fulfilled. The verb is also parallel with *ḥāšab* in Jer 18:11, indicating God's plan for judgment against an Israel following its own plans. The use of this verb for both salvation and judgment should be related to the distinction between the absolute and circumstantial will of God. The expression of God's will for judgment is conditional, is tied to very specific circumstances, and is in the service of God's will for salvation. God's will for the salvation of God's people has been declared from the beginning, is unconditional in character, and will prevail.

In Isa 37:21–29 Sennacherib is indicted for his prideful arrogance in presuming that his victories were entirely his own doing. He failed to recognize that he was an instrument in a long-standing divine plan to bring judgment (37:26) and hence would himself be the object of judgment. This divine plan, however, does not imply that the course of these events has been predetermined by God. The planning and bringing to pass are distinguished here as elsewhere (cf. above), so that the judgment remains conditional upon the nature of historical developments. The situation of Isa 22:11 is comparable, with Israel's trust in military means rather than God being the focus for the indictment.

The translation of Jer 33:2 is uncertain but may speak of the will of God to create the world. Ps 139:16 in the RSV, "the days that were formed for me," would appear to be pertinent to this issue, but NEB is the preferred translation.

9. *ʾāwāh, ʾawwâ,* to desire; desire. This highly anthropopathic term expresses God's desire for Zion as the divine dwelling place (Ps 132:13–14). The depth of commitment in God's will for the divine presence in Zion is strongly indicated in its repetition. Job states that whatever God desires, that God does (23:13); come what may, God will complete what God has in store for Job. It is difficult to draw general theological conclusions from this passage, however, given the futility felt by Job in his struggle with God's seemingly oppressive presence.

10. *ʾābāh,* to be willing. This verb is used to indicate God's unwillingness to destroy Israel in the wilderness (Deut 10:10; 23:5; Josh 24:10) and during the monarchy (2 Kgs 8:19; 13:23; 2 Chr 21:7), or to pardon stubbornly disloyal individuals (Deut 29:20) or Israel before the fall of Jerusalem (2 Kgs 24:4).

11. Two Aramaic words also speak of the will of God. The word *rĕʿû* occurs in a general way in Ezra 7:18. The word *ṣĕbāʾ,* in Dan 4:14, 22, 29—Eng vv 17, 25, 32 (cf. 5:21), refers to God as one who gives the kingdom to whomever he pleases. Nebuchadnezzar also refers to the will of God in his prayer (Dan 4:32—Eng v 35), that God "does according to his will" in heaven and on earth. This apocalyptic view appears to state that God's will is accomplished in the world come what may, and is perhaps best understood in terms of God's absolute will.

C. Experiencing the Will of God

God's work and God's word are expressions of God's will, and all God's creatures experience the effects of this divine will. God wills to be involved in all the world in creation and redemption.

1. Creation and Providence. Creation is not simply a thought or a deed, it is an act of will. The concrete word bringing the creation into being (Genesis 1) is the outward expression of the will of God. Creation thus is not accidental or arbitrary, it is a deliberately formed purpose of God. In its order and structure, the creation bodies forth the will of God. The language of divine command, *ṣāwāh (Piʿel),* also has an important place in both creation (Isa 45:12; Pss 33:9; 148:5) and continuing creation (Isa 34:16; Ps 78:23; Job 37:12). All creation and its life is continually grounded in and permeated by the providential will of God; it remains within the scope of the ongoing divine will of blessing for the world. As such, the creative order witnesses to God's will for the world; it is a source of Israel's knowledge of that will. Moreover, because God does not confine God's willing activity to the people of Israel, God's will is experienced and known, at least in part, in places where God's name is not explicitly confessed.

2. Promise and Salvation. Promise is most closely associated with the divine will in the use of the verb, *šābaʿ,* swear (cf. its association with verbs of planning in Isa 14:24). This refers to a solemn divine oath; God in effect lays his own life on the line for the sake of the promise. God swears by himself that the will articulated in the promise is sure. God's oath to the ancestors is fulfilled in the covenant relationship, in the Exodus deliverance, and the establishing of Israel in their own land (Gen 22:16; Deut 4:31; 7:8; Josh 21:43; Ps 105:9; Jer 32:22; Ezek 16:8; Mic 7:20). God swears that the promise to David is God's sure will; God will not lie (Ps 89:4, 36, 50—Eng vv 3, 35, 49) or repent concerning this matter (110:4; cf. 2 Sam 7:21). God's will for David and God's will for presence among the people are combined in Ps 132:11–14. The them of divine election *(bāḥar)* is also pertinent to the divine will in these contexts (cf. Pss 89:4—Eng v 3; 132:13; Deut 7:6). God swears concerning the certainty of that will for the salvation of Israel (Isa 62:8; cf. 54:9), indeed of all people (Isa 45:23; cf. 49:6). The universality of the divine will for salvation is also evident in other traditions (cf. Exod 9:16; 1 Kgs 8:43; Ps 67:3—Eng v 2; Isa 12:4–5). God also swears an oath with respect to matters of judgment (cf. Amos 4:2; Jer 22:5; 49:13).

D. Knowing the Will of God

God wills to be known. God's will is to reveal God's will (cf. Isa 65:1–2). The OT testifies that God has in fact made God's will known. While the word of God in theophany is the primary and most articulate way in which God discloses that will at the divine initiative, every divine act is disclosive of that will and hence a potential source of the knowledge of God. See THEOPHANY IN THE OT. The prophets are also understood to be participants in the divine council *(sôd)* in which they hear the divine will (cf. Jer 23:18, 22; Amos 3:7; cf. Job 15:8).

In addition, God has provided for means by which God's will can be sought *(dāraš)* by the community of faith. Various leaders are given specific responsibilities in this matter. Moses is one to whom the people come to inquire of God; he in turn conveys the will of God to them (Exod 18:15–20), or Eleazar the priest so functions for Joshua (Num 27:21), or the prophets for kings (e.g., 2 Kgs 3:11; Jer 21:1–2; cf. Hag 2:11–13), or David himself (1 Sam 23:2; 2 Sam 2:1; 5:19–25). Such a wide range of texts shows that the will of God was understood not to have been made known to Israel in all of its particulars; it needed to be sought out in ever new life situations, at which times it was thought to be available from God.

Generally, divination is condemned in Israel, though it is practiced at times and becomes the object of prophetic indictment (cf. Deut 18:10–14; Ezek 13:9, 23). In early Israel, however, some instruments are used to inquire of God: Urim and Thummim (lots), kept in the pocket of the Ephod, a liturgical vestment. However, no description or theological interpretation of the procedure is given (cf. 1 Sam 14:41–42;

23:9–12). At times a direct word of God is heard, which seems redundant (1 Sam 23:9–12; 30:7–8); at other times an answer is not forthcoming (1 Sam 14:37; 28:6).

It is uncertain whether Israel understood the casting of lots (a commonplace in the ancient world) in a deterministic sense, with God controlling the outcome. Prov 16:33 suggests this (but cf. above on *ḥašab* in Proverbs for another way of viewing related texts), as does 1 Sam 10:16–26 (though there are doubters, v 27). In many passages it seems to be more like the toss of a coin, a randomizing device for eliminating human will and bias that might obscure the divine will in the situation (cf. Lev 16:9; Num 33:54; Josh 18:6, 10; Judg 20:9; Neh 11:1; Ps 22:19—Eng v 18; cf. Prov 18:18). That such procedures were fair would be based on cumulative experience that no systematic biases took place (on early theories of probability, cf. Rabinovitch 1973). It is a way in which God could work in and through a situation of neutrality, without the contrariness so common to the human will. In other words, genuine randomness or chance for the sake of fairness was the will of God in the situation, which would in turn provide greater opportunity for God to be at work according to God's own will. Eccl 9:11, "time and chance happen to them all" (on chance see 1 Sam 6:9; cf. Ruth 2:3; 1 Sam 20:26; 2 Sam 1:6), testifies to a neutral natural order. The lots were an expression of that neutrality and fairness which is characteristic of random phenomena, such as the weather (see Matt 5:45), in and through which God could work.

E. Doing the Will of God

The people of God are called upon to obey the will of God and to be the agents of God's will in the world. In some traditions this is referred to as God's way (*derek; ʾōraḥ;* cf. the parallels with *rāṣôn* in Ps 143:8–10 and *ḥāšab* in Isa 55:8–9). God's people are to "walk in all his ways" (cf. Deut 10:12; Josh 22:5) and are taught that way (Gen 18:19; Exod 33:13; Pss 5:9—Eng v 8; 25:4, 9–10; 27:11; 86:11; Isa 2:3; cf. Pss 18:31—Eng v 30; 44:19—Eng v 18; Jer 5:4–5). Even non-Israelites are called upon to be such divine instruments (cf. Cyrus), though they may not realize the source of their calling.

The law for Israel is grounded in a relationship to a personal and gracious will. God's will as expressed in the law is not arbitrary, unrelated to worldly reality. It is always intersecting with life as it is. It moves with the times, taking human experience and insight into account, while remaining constant in its objective: the best interests of people. The law, therefore, is not considered right simply because it embodies God's will. It is right because it can be seen to serve life and well-being. It is right because it contributes to wisdom and understanding and can be recognized as such by those who are not a part of the community of faith (cf. Deut 4:6).

In the law God's will for people's lives is both personalized and particularized. It is personalized by the way in which it is conveyed to Israel within the context of an already established personal relationship. Hence, Israel is to understand the law in comparably personal terms. It is particularized because God's will for human life does not remain at the level of general principle. Because God has Israel's best interests at heart, God has a will for the ordering of life in its particulars, while recognizing that they may change because of the historical character of human life. Israel's obedience to that will does not come from the pressure of the law but in the knowledge that that will is instruction for life in all of its fullness, that it is motivated by love, and that in having experienced salvation in the Exodus event Israel has already experienced first-hand the divine will for them. The divine will in the law thus has a gracious objective: it is for the purpose of extending into all aspects of one's own life, and the lives of others, the already experienced salvific intention of that will: life and well-being (cf. Deut 4:40).

WILLOW. See FLORA.

WILLOWS, BROOK OF THE (PLACE) [Heb *naḥal hā‹ărābîm* (נַחַל הָעֲרָבִים)]. A stream mentioned in an oracle against Moab (Isa 15:7). Though the precise location of this watercourse remains uncertain the flight pattern in the oracle of the fugitives who cross the brook appears to be in a S direction. A S location would argue against identifications of this watercourse with the *Wâdī Gharbeh,* the southernmost tributary of the Jordan (e.g., Odelain and Séguineau 1981: 383) or with one of the tributaries of the river Arnon (van Zyl 1960: 56). The predominant view is that the Brook of the Willows [or "of the Arabim" or "of the Poplars"] should be identified with the *Wâdī el-Ḥesā* (see ZERED, BROOK OF) which flows from the SE into the S end of the Dead Sea and formed the ancient boundary between Moab and Edom (Kaiser *Isaiah 13–39* OTL, 69; Wildberger *Jesaja* BKAT, 616).

WISDOM IN THE OT [Heb *ḥokma* (חָכְמָה)*;* Gk *sophia* (σοφια)]. "Wisdom" is a term that can be used to indicate certain books which deal particularly with (biblical) wisdom, or it can refer to a movement in the ancient world associated with "teachers" or sages, and it can also suggest a particular understanding of reality which presents some contrasts with other biblical books.

A. Introduction

1. Terminology. The Hebrew term for wisdom *(ḥkm)* occurs in one form or another 318 times in the OT, and over half of these (183) are found in Proverbs, Job, and Ecclesiastes (*TWAT* 2: 558). Hence these three books, along with Sirach and the Wisdom of Solomon (in these two apocryphal books forms of *sophos/sophia* occur over 100 times), have come to represent Israel's "Wisdom Literature."

In itself the root has a fairly wide range of meaning (*TDNT* 7:476–92). "Wise men" are associated with the diviners and magicians of Egypt (Gen 41:8; Exod 7:11), and in the book of Daniel with the interpretation of dreams (Dan 2:27). The basic meaning of "skill, ability" appears in the designation of Bezalel and the workers on the desert sanctuary as "wise" (Exod 36:2, 8). The term is applied artisan

skills such as metalwork (1 Chr 22:15–16) and carpentry and weaving (Exod 35:35). More often wisdom is used in the sense of cleverness or cunning. The actions of even the smallest animals betray their "wisdom" in surviving (Prov 30:24–28). Cunning can be employed wickedly, as by the "very wise" Jonadab (2 Sam 13:3), or benevolently as in the case of the wise woman of Tekoa (2 Sam 14:2).

The "wisdom" or skill of sailors (Ps 107:27) is matched by the "steering" (*taḥbulôt,* Prov 1:5) which the wise are able to provide for the voyage through life. The goal of their teaching is to enable one to cope with life, and to impose a kind of order on the myriad experiences which surround a person. The wise know when to speak and when to be silent (esp. the latter; cf. Prov 17:27–28). This orientation to proper action is fundamental, for wisdom is practical, not theoretical. Even when the sage describes some aspect of reality as "the way it is," the purpose remains practical. The commands and the prohibitions make this explicit, and even most of the sayings are filled with value judgments that urge a given course of action. Truthfulness, fidelity, kindness, honesty, control of the appetites—these are staple topics in the instructions in Proverbs and Ecclesiasticus. There is in fact a striking parallelism between *ḥkm* and *ṣdq* ("righteous") in both works.

Further understanding of wisdom can be supplemented by the broad semantic range of terms associated with *ḥkm: byn* (understand), *yʿṣ* (advise), *ykḥ* (reprove), etc., as well as by the opposites, *ʾwyl* (fool), *ksyl* (fool), etc. (Scott 1971: 121–122; Whybray 1974: 121–150).

2. Date and Setting. Solomonic authorship is explicitly claimed for three wisdom books: Proverbs, Ecclesiastes, and Wisdom of Solomon. This "authorship" might be better understood as patronage, as in the case of Davidic "authorship" of Psalms. Solomon came down in the tradition as the wise man par excellence, and that is the reason for the attribution of these later works to him. The passage in 1 Kgs 5:9–14 (—Eng 4:29–34) ascribes to Solomon a wisdom that surpassed the wisdom of all the people of the East and all the wisdom of Egypt. The fact of the matter is that only portions of Proverbs (especially in chaps. 10–31) can be considered as coming from the preexilic period, and it is not possible to date these, although Prov 25:1 mentions the "men of (King) Hezekiah," as being engaged in some kind of scribal activity. Ecclesiastes was certainly written in the postexilic period, probably in the 3d century. Ben Sira can be securely dated to the first part of the 2d century, probably 200–180. Although a majority opinion considers Job as postexilic in date, a preexilic origin cannot be excluded (Pope *Job* AB, xxxii–xl). The Wisdom of SolomonSolomon is generally assigned to the last half of the 1st century B.C. (Larcher 1983–85: 141–161). Thus, the Wisdom Literature, as literature, is largely a postexilic phenomenon, even if its origins are in the preexilic period.

Its origins are not easy to determine (Murphy 1981a: 26). At one time Israelite wisdom was widely considered to be the work of the court school in Jerusalem, because of the similarities that it presented with Egyptian wisdom, which was the work of a royal or scribal class. But origins in family and tribal wisdom must also be considered (Gerstenberger 1965). Probably both school and tribe contributed to the wisdom movement. The existence of the institution of a "school" in Israel remains only a reasonable inference (Hermisson 1968: 113–136; Golka 1983: 257–270; Lemaire 1981; 1984; Crenshaw 1985b). The precise setting *(Sitz im Leben)* of the Israelite sages cannot be determined. Qoheleth is described as a "wise man" who taught the people knowledge (Eccl 12:9), but we know nothing of his situation. Ben Sira refers to his "school" (Sir 51:23), but concrete details are lacking. Because it is difficult to get a clear picture of the "wise men" in Israel, Whybray (1974: 54, 69) has denied that a class of sages existed, and has tried to explain the movement as the product of "the activity of men of superior intelligence." However, such texts as Isa 29:14, Jer 8:8, and the activity of the *yôʿēṣ,* or counsellor (de Boer 1955: 42–81), would suggest that they constituted a recognizable group. Further research on the various roles of sages in Israel and the ANE will sharpen their sociological profile (Gammie and Perdue 1990).

3. Wisdom Genres. The definition of "proverb" is notoriously difficult. The Hebrew term *māšāl,* commonly translated as "proverb," has a wide range of meanings (indicating even the taunt song in Isa 14:4ff.). Etymologically it seems to be connected with comparison and with rule or power. Another term for the sayings in the Wisdom Literature is "aphorism." J. Williams (1980: 38–40) enumerates several features of aphoristic speech exhibited by the biblical proverbs: the speech is assertive, apparently self-

explanatory, and says something as though it is *a priori;* it is frequently paradoxical; it is brief and concise; there are frequent plays on words; the comparison is a basic feature. It appears that the word "proverb" should be used for sayings that have come into popular *use,* whatever their origins (Hermission 1968: 33; J. Williams 1981: 78–80).

The basic wisdom saying is usually composed of two lines in parallelism, a common feature of Proverbs 10–31. Very often there is simply a juxtaposition, without a verb, as the following illustrates: "A gatherer in summer—a wise son; a sleeper during harvest—a disgraceful son" (Prov 10:5). The juxtapositional style, which is not evident in the usual translations, enables the author to put things together (synonymous parallelism), and also to contrast them (antithetic parallelism). But even the "identity" of two subjects is more or less an implicit comparison. Sometimes the comparison is made explicit: "Like a bird straying from its nest—a man straying from his home" (Prov 27:8). The style of the sayings varies considerably. One can have "not good" sayings (Prov 19:2), or "abomination" sayings (Prov 11:1), or "better" sayings (Prov 22:1), or "numerical" sayings (x-number, plus 1; cf. Prov 30:18–19), or "impossible questions" (Job 8:11; Crenshaw 1979). In English, or in any other vernacular translation, it is practically impossible to convey the striking alliterations, assonance, and wordplay which generally characterize the collections of Hebrew proverbs (McCreesh 1982). Two examples must suffice: *bāʾ zādôn wayyābōʾ qālôn* (Prov 11:2a, "comes pride, then comes disgrace"); *ṭôb šēm miššemen ṭôb* (Eccl 7:1a, "a good name is better than good ointment"). Such sayings deal with a vast array of topics. Sometimes they register a paradox (Prov 20:17), or convey an observation: "a rich man's wealth—his strong city; destruction of poor—their poverty" (Prov 10:15). The latter saying merely registers a fact: money makes a difference. It does not of itself draw a moral (contrast 15:16). However, most proverbs are value-laden and hence explicitly didactic, attempting to influence action.

An admonition is clearly such an attempt, and it can be expressed positively (16:3; contrast 16:20), or negatively. Negative admonitions are common in Proverbs 1–9 and 22–24, and throughout Sirach. Very often a motive clause is appended in order to persuade the audience: "Injure not the poor … For the Lord will defend their cause" (Prov 22:22–23).

The obvious contrast between the disparate sayings in Proverbs 10ff., and the consecutive poetry in Proverbs 1–9 and in Job and in many parts of Sirach suggests that one may speak of "wisdom poems." These may be structured along alphabetic lines, such as the 22 lines in Proverbs 2, with its *alep* and *lamed* stanzas (Murphy 1981b: 52), or as the deliberate acrostic in Psalm 34 (Ceresko 1985), or the acrostic poem on the valorous woman in Prov 31:10–31. P. Skehan detected several alphabetic factors entering into the speeches of Job (1971: 96–123). Although the speeches in Job have been called "disputation speech" (Crenshaw 1974: 253–255), it must be admitted that they have also incorporated other genres from law and wisdom.

As the structure of Ecclesiastes is highly disputed (Wright 1968; 1980), so also the literary forms are difficult to capture. The several sayings in the book (e.g., chaps. 7, 10) are obvious. For the rest, the author seems to utilize reflections on various turns in life (Ellermeier 1967: 66–79; Braun 1973: 155–158). Ben Sira ranges over the whole gamut of literary genres including hymns and prayers in his 51 chapters (Baumgartner 1914). Various genres have been suggested for parts of the Wisdom of Solomon: apocalyptic, the Hellenistic syncrisis, midrash, epideictic, and encomium (Larcher 1983–85: 109–114; Bizzeti 1984). At least the structure seems to have been adequately established by the recognition of inclusions (Wright 1967a).

4. The Thought World of Wisdom. Gerhard von Rad (1972: 6) was the first to raise the question of the "understanding of reality" reflected in Israelite wisdom. The answer depends partly upon the understanding of straightforward wisdom doctrine, and partly upon inferences and reconstruction of the world of thought in which the sages moved. Several of these deserve explicit treatment.

The most striking characteristic is the absence of elements generally considered to be typically Israelite: the promises to the patriarchs, the Exodus experience, the Sinai covenant, etc. It is true that Sirach identifies wisdom with Torah (Sirach 24) and provides a catalogue of Israel's heroes (Sirach 44–50), and Wisdom of Solomon presents a midrashic consideration of the plagues (chaps. 11–19). But these

exceptions prove the rule: salvation history is absent from the realm of wisdom. Another way of putting this is to say that wisdom is an international heritage in which Israel had a share (see the treatment of extra-biblical Wisdom Literature below).

One result of this characteristic has been a tendency to push wisdom to the perimeter of OT theology, or even to exclude it as a legitimate topic for biblical theology (Preuss 1974; 1987). Hence there has been much discussion of "Yahwism" as opposed to "Wisdom" (Murphy 1975; Collins 1980). But the opposition between these two entities is more conceptual than real. One can indeed distinguish between saving history (Exodus, covenant, etc.) and an experiential attitude toward life's daily events. But this distinction existed in the one Israelite individual who worshipped *yhwh* and denominated *yhwh* as God. Those same Israelites ultimately canonized the Wisdom Literature as a genuine expression of their traditions. There was no conflict for them. Even when Sirach eventually identifies wisdom with Torah (Sir 24:23), this is achieved not with a sigh of relief, or as if by some sleight of hand a major division in Israelite religion had been healed. The fact of the matter is that there is no incompatibility between the saving God of history and the God of human experience. The Psalms show this perhaps most clearly. The psalmists usually ask for salvation in the concrete order of things, not for an intervention in national history. They seek *šālôm* from the hostile agents they recognized in daily life. It is this same *šālôm* which the sages held out to their readers: the good life. Indifference to Israel's historical experience does not indicate that wisdom is any the less "Israelite" or "religious."

One of the distinctions made by von Rad has contributed to the unnecessary dichotomy between Yahwism and wisdom. Using the terminology of Martin Buber, he distinguished between the "pan-sacral faith" implicit in the early narratives about divine intervention into human affairs (from patriarchs to Philistines), and a "worldly sphere" in which humans have a more independent role, as the so-called Succession Narrative (2 Samuel 6–1 Kings 2) illustrates. But one must be fair to von Rad. He is not talking about faith and the lack of it. He is reconstructing "an understanding of reality, a conception of the environment, which has fundamentally altered *vis-à-vis* that of 'pan-sacralism' " (von Rad 1972: 59). It is true that the mentality behind the Samuel narrative recognizes the distinctiveness and independence of human motivation and action. Such a recognition is blurred in other narratives (the stories of Joshua or Gideon, for instance), where divine intervention is highlighted. Perhaps the transition from one mentality to the other is not the way to put the question. The issue is the relationship between divine intervention and human independence. These two factors are *always* operative in the biblical story. Sometimes one, sometimes the other, is emphasized; but both are at work. Moreover, there is no discernible point in time where Israel passed from one mentality to the other. Neither denies the other; they complement each other. We shall see a similar balance in the consideration of the problem of retribution (divine intervention *vis-à-vis* "destiny-producing" deed).

Biblical wisdom is basically religious, not secular. The fateful distinction between religious and secular, sacred and profane, so widely accepted in modern culture, has been applied in much too wholesale a fashion to the Bible. In particular, the classification of the sayings according to the absence or presence of "God-language" (McKane *Proverbs* OTL, 451) or by the appearance of the sacred name *yhwh* (Whybray 1979) is too facile. The categories of religious and secular are not to be defined merely by content. It is only too easy to contrast the advice about table manners (Prov 23:1–3; Sir 31:12–31) with statements about fear of the Lord (Prov 1:7; Sir 1:11–30). This differentiation does not get to the heart of the matter. The rules of wisdom cover all areas of life from a perspective that is ultimately religious; the fear of the Lord is the *beginning* of wisdom (Prov 9:10). For some scholars the basic goal of wisdom is to live by the order of the world posited and guaranteed by the Lord, and in the circumstances of everyday life (Skladny 1962: 93). Even if one demurs at the notion of "order," there can be no denial that the wisdom perspective is governed by an understanding of creation and activity as reflected in Israel's tradition. Here attitude tells us more than content. G. von Rad has expressed this aspect very well: "Thus here, in proverbial wisdom, there is faith in the stability of the elementary relationships between man and man, faith in the similarity of men and of their reactions, faith in the reliability of the orders which support human life and thus, implicitly or explicitly, faith in God who put these orders into operation" (von Rad 1972: 62–63).

There seems to be a general consensus that biblical wisdom connotes a search for "order" (Murphy 1978: 35–36; Gese 1958: 198–199). That is to say, the sages held that there was a fundamental order in the world, discernible by experience, and the teachings were designed to bring about conformity with this order that had been determined by God. No one would deny that his is a modern reconstruction of Israelite mentality. Nor can one deny that the ancient recognized a certain order in creation. This understanding is reflected in such passages as Amos 6:12 ("does one plow the sea with oxen") or Jer 31:35. There is an order to natural events, and to the day by day activities of human beings. But does "search for (objective) order" adequately describe the wisdom enterprise? At most the sages perhaps impose an order on experience; they present conclusions drawn from observation. Despite the dogmatic form of their statements they were also aware of mystery and uncertainty (see below on the limitations of wisdom).

The emphasis on "order" in scholarly research is at least partially due to the existence of such a view among the Egyptians (the concept of *ma›at* discussed below). Although Egyptian influence upon Israelite Wisdom Literature is undeniable, more caution should be exercised in reconstructing the mentality of each people.

In this connection the famous study of Koch (1955) is to be noted. On the basis of several biblical passages (Prov 26:27–28 can provide an example) he reconstructed a specific mentality behind biblical reward/punishment. For him there is no retribution or intervention by God; rather, deed and result are mechanically related. An evil deed produces an evil result; a good deed produces a good result. Hence Koch speaks of a "destiny-producing" deed; the Lord does not intervene. In Koch's metaphor, God is a kind of "midwife" watching over events and their results, good and bad. This is the nature of the "retribution" that God has established. Again, we are faced with an inherent "order" of things. In fact, some scholars (Gese 1958: 45) have argued that the books of Job and Qohelet demonstrate that the influence of Yahwism broke through this ANE idea of the fate-producing action. That seems to be too easy a victory for Yahwism. Instead, one should recognize that the OT sources present retribution from two points of view: *both* divine intervention and destiny-producing action. There is no evidence that one view is earlier than the other or, for that matter, more religious than the other. Certainly a cardinal affirmation in the Bible is the primary activity of the Lord in all that happens.

The doctrine of the sages, especially as expressed in Proverbs and in the speeches of Job's three friends, easily give the impression of a rigid dogmatism. This is misleading. The sages believed in their teachings, and like all teachers expressed themselves in such ways as to gain adherents. Exaggeration is one mode of convincing students. When one turns to the books of Job and Ecclesiastes, there is no escape from the hard questions that are put to the reigning wisdom orthodoxy. But even here one has to acknowledge that these hard questions arise from within the wisdom movement. If it is undergoing a crisis, at the same time it remains true to its aims. A fair understanding of the traditional doctrines of the sages has to be achieved for a correct assessment of the development that takes place.

C. Fontaine (1982: 54) quotes the saying of a modern paroemiologist that "the proverb in a collection is dead." Any attentive reader of OT wisdom soon realizes the cost of the mental struggle to revivify the sayings as they appear in collections. Modern literary studies insist on illuminating the "proverb performance" (Fontaine 1982: 57–63), an attempt to capture the context of the saying and the interaction which accompanies it. This is very difficult to do for proverbs that have been transmitted in collections. N. Lohfink (1980: 50–51) has thrown new light upon Eccl 7:1ff. by his attempt to establish a dialectic between traditional wisdom and Qohelet. If 7:1a is a traditional praise of good reputation, then 7:1b–4 cuts in to say that one cannot lay claim to it before death. Here is interaction within sayings that have in the past been merely viewed as collections of disparate proverbs. For the most part, however, the biblical proverbs do not manifest such a dialectic. The juxtaposition of "answer not a fool according to his folly" with "answer a fool …" (Prov 26:4–5) is a striking reminder that the sayings are more subtle than they appear to be at first sight. Even the seemingly most banal proverbs have a certain evocative power if they are approached perceptively.

In view of the imposing array of confident sayings in the collections, from Proverbs down to Sirach, one may ask if the sages were aware of their own limitations. Many sayings reveal such an awareness (von Rad 1972: 97–110). Perhaps the most telling is Prov 21:30, "There is no wisdom, no understanding, no counsel, against the Lord." This radical statement points to the mystery over which the sages had no control: the activity of God. All their careful thoughts about success and the good life deserved to be expressed, but there were certain "limit situations" which they recognized. They recognized the importance of advice and planning for any venture, especially for war (20:18), but no matter the number of horses, "victory belongs to the Lord" (21:31). The realm of experience to which the sages constantly resorted, also indicated to them that certainty was not always to be had.

One may make plans in the heart
but what the tongue utters is from the Lord.
All the ways of a person may be pure in his own eyes,
but it is the Lord who proves the spirit.
In his mind one plans a course,
but the Lord directs the steps (Prov 16:1–2, 9).

The sages allowed a large margin of error because they had experienced mystery as well as certainty.

The most striking expression of this awareness comes in sayings which even warn about the possession of wisdom. Because wisdom can blind a person to reality:

You see a person wise in his own eyes?
There is more hope for a fool than for him (Prov 26:12).
Be not wise in your own eyes,
fear the Lord and turn away from evil (Prov 3:5).

In the same direction is the admonition of Jeremiah against glorying in one's wisdom (Jer 9:23–24). So great were the possibilities of self-deception, that even the possession of wisdom turns out to be tenuous.

It can be said that the Israelite sages expressed the mystery of God and life even more effectively than the rest of the biblical writers. Zophar (Job 11:7–8) reads a lesson to Job (however insensitively and ultimately unjustifiably):

Can you penetrate the designs of God?
Dare you vie with the perfection of the Almighty?
It is higher than the heavens; what can you do?
It is deeper than the nether world; what can you know?

And despite the bombastic introduction to his speech, Elihu (Job 36:22–26) is also aware of the limit situation:

Behold, God is sublime in his power.
What teacher is there like him? …
Lo, God is great beyond our knowledge;
the number of his years is past searching out.

Israel experienced the mystery of God more radically in the area of wisdom than in the traditions of its own history!

B. Wisdom and OT Theology

"The integration of wisdom into Old Testament Theology is an unsolved task that remains for the future" (Reventlow 1982: 201). One might reply to this statement by asking if this is more of a problem for OT theology than for wisdom. Wisdom presents a theology of its own kind, although with certain resonances in the rest of biblical theology. The statement of Reventlow points up the difficulty which current scholarship is having with the notion of biblical theology itself. It would appear that a conceptual unity has not yet been achieved for biblical theology. The recent discussion on the center or *Mitte* of OT theology has yielded no clear result (Hasel 1972: 49–63; Reventlow 1982: 138–147), and to say that God is the center is to return to square one. There are in fact several theologies within the OT, and there seems to be no line of thought that can bind them together into a neat package (Murphy 1984: 65–71).

1. Wisdom and Creation. The situation is best illustrated by showing the problem that the standard OT theology has had with the notion of creation. G. von Rad entitled this the "Theological Problem of the Old Testament Doctrine of Creation" (*PHOE*, 131–143), and he underlined the opposition between the doctrines of election/redemption and creation. A literary analysis of texts dealing with creation supposedly shows that they are not central to Israelite faith as this is expressed, for example, in Deut 26:1–11. They are absent from most of the prophets (the creation doxologies in Amos 4:13; 5:8–9; 9:5–6 are "theological accretions, arising from the reflections of a later writer" [*PHOE*, 135]). There are many powerful passages concerning the Lord's victory over chaos in Deutero-Isaiah (e.g., 44:24–28; 51:9–10), but here creation is clearly subordinate to the redemption which the prophet is proclaiming to the exiles: "Your husband is your Creator … your Redeemer is the Holy One of Israel" (54:5). Psalms 8, 19, 54, 104, in which creation is treated rather independently, are considered to be secondary and derivative, dependent upon outside influence, especially Egyptian. Even the Priestly portrayal of creation (Genesis 1) is interpreted as motivated by the theology of salvation history. In short, "the doctrine of creation was never able to attain to independent existence in its own right" (*PHOE*, 142).

The approach of C. Westermann (1978: 58–117) is similar but different. In his view, the first article of the Apostles Creed which affirms a belief in God the Creator is not genuinely biblical. Westermann thinks that faith must allow for alternatives, to believe or not to believe, and Israel supposedly had no other alternative to the fact of creation. Hence there can be no conflict between a scientific explanation of creation and biblical faith. As with von Rad, Israel's fundamental experience focuses on God as savior. This is then expanded to include creation and other areas of life. Creation is seen as fitting into God's *blessing* upon all the divine handiwork. Blessing is the continuous, unobtrusive, working of God which is different from the once-for-all saving actions. Westermann's view of creation dictates his understanding of wisdom: "The theological position of *wisdom* is thus to be determined from the perspective of creation and primeval history" (1978: 100). The blessing of humanity in Gen 1:28 is correlated with wisdom: "When Adam and Eve are commanded during creation to cultivate and maintain the garden, wisdom as a coming to terms with life is implied in this commission" (1978: 99).

W. Zimmerli (1963) had already anticipated the thought of Westermann. He approached it from a slightly different point of view: how does wisdom fit into OT theology? His solution was also found in Gen 1:28. The command to be fruitful and have dominion is the divine authorization for the wisdom enterprise of going out to master the world. Thus the position of wisdom within the OT is again justified from the point of view of a text in the Torah, as though wisdom cannot speak for itself. It is in this essay that Zimmerli also stated that wisdom theology is creation theology. That conclusion is something all can and do agree with. Wisdom does work within this sphere, rather than in the area of the covenant tradition.

The studies of von Rad, Westermann, and Zimmerli show that wisdom and creation are mirror images of each other (Murphy 1985). Where creation doctrine is not valued in and for itself, there also wisdom is treated as marginal. The way out of the impasse demands a broader view which holds salvation and wisdom together. Such a view can be illustrated in the psalter. The cult is not a frequent topic in the Wisdom Literature, but neither is it foreign (Perdue 1977). The prayers of the psalter (laments of the individual, especially) are highly focused on the present life, the experience of the individual. The hymns rehearse the events of salvation history, but quite frequently also the creative activity of the Lord. No conflict exists between these themes in the psalms. Psalm 93 moves easily from creation (v 1ff.) to the divine decrees and temple (v 5). So also Psalm 95. In Psalm 96 the movement is from the Lord's salvation to an invitation to nature to rejoice in his work. In the laments and thanksgiving psalms the Israelite prays for *life:* to be delivered from Sheol (the state of non-being or death which is the prime metaphor for the distress afflicting the psalmist). Here appears the personal experience, the existential struggle, which is characteristic of wisdom. The same Lord who saved the people is now invoked to deliver the psalmist.

Thus it is the experience of Israel that suggests the inadequacy of the theological conclusions based on literary analysis on the style of von Rad. Inferences from literary texts relative to the centrality of wisdom/creation remain highly subjective. The God of immediate experience, i.e., the wisdom experience, is the creator who is also the *gôʾēl* or redeemer of Israel. He is the "personal god" of

patriarchal religion. Theologians have come to understand the "god of the fathers," who is continuous with *yhwh* (*CMHE*, 3–75). There is a reflection of this in the book of Job. He and three friends are all identified as non-Israelites, although they argue from the point of view of Israelite wisdom. Moreover, there is a certain air of the patriarchal period about their life-style as well as their religion. Job does not appeal to the God of Sinai, *yhwh,* but to "El Shaddai," although the framework (chaps. 1–2, 42) of the book provides a yahwistic context. The flavor of the patriarchal religion, the "god of the fathers," is seen in his frequent recourse to God, over and beyond his words to the friends: "I will say to God: Do not put me in the wrong! Let me know why you oppose me. Is it a pleasure for you to oppress, to spurn the work of your hands, and smile on the plan of the wicked … Your hands have formed me and fashioned me; will you then turn and destroy me? Oh, remember that you fashioned me from clay! Will you then bring me down to dust again?" (Job 10:2–9). Janzen (1985: 5–14) has shown how Job's relationship to God is "covenantal."

2. The Wisdom Experience. One cannot describe the biblical Wisdom Literature without trying to understand the experience that lies behind it. The sayings, or the "wisdom teaching," are the encoding of a lived experience, and only facets of this encounter with reality can be captured in words. It is the encounter which generated the insights into the world and human beings. As Aristotle (*Metaphysics,* I.ii.19) remarked about philosophy, wisdom also can be rooted in wonder. The sage called attention to the mysterious wonder of sexual attraction by comparing it to "ways" like the "way" of an eagle in the air (Prov 30:18–20). God and king can be compared: the glory of God in what he conceals, the glory of the king in what he understands (Prov 25:2). On the other hand, wisdom goes with smallness, as in the case of the ants who store up their food in the summer (Prov 30:24) and whose "ways" are a model for wisdom (Prov 6:5). Job can taunt his friends to learn lessons from beasts and from the birds of the air (Job 12:7). Qoheleth can compare even a little folly to the fly that spoils the perfumer's ointment (Eccl 9:18). This openness to nature, and to the experiences involved with human beings as well, is characterized by the insistence upon "hearing" (Prov 1:8, 33; 4:10; 12:15, etc.). In 1 Kgs 3:9 Solomon asks for a "listening heart" so that he might govern his people. The ideal of listening had already been underlined by Egyptian sages. Ptahhotep even speaks of the "master-hearer" in the epilogue to his work (*AEL* 1: 73–76). In contrast is the fool who fails to listen, who is not docile: "The way of the fool seems right in his own eyes, but he who listens to advice is wise" (Prov 12:15).

The experience is guided by the extraordinary claim that fear of God/Lord is indispensable:

The fear of the Lord is the beginning of knowledge;
wisdom and instruction fools despise (Prov 1:7).
The beginning of wisdom is the fear of the Lord,
and knowledge of the Holy One is understanding (Prov 9:10).

"Fear of God" is not lacking in the literature of the ANE (Barré 1981); reverence before the numinous is practically a given in the ancient world. But in Israel it describes the basic orientation toward wisdom, "in a nutshell the whole Israelite theory of knowledge" (von Rad 1972: 67). The issue here is not the presence or the frequency of the notion; "fear of God/Lord" is common in the Bible and indeed it has acquired various nuances (Becker 1965). But it is a key concept for wisdom (Murphy 1987: 451–56). Only in this fundamental attitude is progress in wisdom possible. It is glossed with "discipline" (*mûsār,* Prov 15:33), which is itself a "path to life" (Prov 10:17). The concept is briefly mentioned in Job (avoidance of evil, 1:1; 28:28; cf. Prov 3:7), but it is central to the book of Ecclesiasticus (Haspecker 1967). It is also important in Ecclesiastes, but without the soft and consoling aspect that Ben Sira gives it. Qoheleth uses the verbal form, not the nominal. Human beings are to "fear" God because of the inscrutable and mysterious divine ways (Eccl 3:14; 5:6).

The doctrine of "fear of God/Lord" indicates that the wisdom experience has an unmistakable religious quality which G. von Rad (1972: 62) expressed thus: "Israel knew nothing of the aporia which we read into these proverbs. It was perhaps her greatness that she did not keep faith and knowledge apart. The experiences of the world were for her always divine experiences as well, and the experiences of God were for her experiences of the world." In effect, the wisdom experience provides a model for living; the

literature prescribes the way one should live. The wisdom experience is found in the "mysticism of everyday things" (K. Rahner), where the Israelite found God (not without also bewailing the divine absence). To know God, in the Wisdom Literature, is to be in, and to do, the truth. This is as much a faith experience as any of the cultic acts in the Jerusalem temple.

3. Wisdom and Moral Action. Akin to the wisdom experience is the "way" which wisdom urges the Israelite to walk in. The most common word is *derek* (about 75 times in Proverbs), but it is often interchangeable with *ʾōraḥ,* as in the phrase, "way of life" (Prov 2:19; 5:6; 6:23; 15:24). This is the way that leads to, or secures, life in the full sense, prosperity and a relationship to the Lord. The way itself is the conduct which incarnates the teachings of the sage: honesty, diligence (Prov 10:4; 26:14), self-control (14:17; 15:1), a sense of responsibility (10:26; 27:23–27), etc. While there is often a certain overlap with the Decalogue (e.g., the frequent warnings against adultery), most of the sayings deal with the grey area of forming character and integrity of action. The approach of wisdom to morality is much broader than that of the Decalogue in that it aims at character formation. It is also deeper in terms of the motivation it supplies. Whereas the Decalogue simply invoked divine authority (thou shalt not!), the sages develop specific motivations, and anticipate temptations. Thus the famous description of seduction in Proverbs 7 is a strong motivation. It aims to anticipate a stressful situation, and to strengthen resolve. If one may designate the codes in the OT as "law," the wisdom rules are better described as "catechesis," or moral formation. It seems likely that both the wisdom lessons and the legal commands ultimately go back to a family or tribal setting, before "law" separated from wisdom counsels (Audet 1960; Couturier 1980).

The sages use specific motivations, often those of enlightened self-interest, to achieve their end. Here the charge of eudaemonism or pragmatism has been made: moral action is determined by what is good for the individual person. This charge has been softened somewhat by the claim that the purpose of wisdom teaching is to bring the individual into harmony with the underlying "order" established by the Lord. In a similar way, the Egyptian understanding of action in accordance with *maʾat,* has been defended against pragmatism (Frankfort 1961: 62–72). However, it is difficult to escape the appearance of self-interest. Indeed all human action is prompted by complicated motives; eudaemonism is not absent, but neither is it the only motive. Moreover, the sages recognized the danger of self-interest, as the question of Satan in Job 1:9 shows: "Is it for nothing that Job is God-fearing?"

A characteristic and striking move within the Wisdom Literature is the identification of the righteous *(ṣaddîq)* with the wise person *(ḥākām).* The frequent division of humanity into the wise and the fools is matched by a division into just and unjust. This is particularly conspicuous in Proverbs 10–15, but it is not lacking in Job and Sirach. "The fear of the Lord prolongs life, but the years of the wicked will be short" (Prov 10:27); wisdom is identified with virtue and its rewards, and folly with wickedness *(rśʿ)* and its deserts. "Treasures gained by wickedness do not profit, but righteousness delivers from death" (Prov 10:2). Morality and wisdom cannot be separated, although biblical wisdom is not to be reduced to a moral code.

4. Wisdom and Scepticism. The confident tone of the sage has been adverted to above. It was the confidence of one who plunged into the events of life with verve (a spirit that was not lacking even in Qoheleth! Eccl 9:10). And even if, as has been seen, the sages were aware of the limitations of their teaching, they did not dwell upon these overmuch. Obviously the mystery that was God was not a defeat for the sage, nor embarrassing. That the Lord was beyond wisdom (Prov 21:30) was an easy admission to make.

The rub came when things did not turn out as expected. There is always the (apparent?) triumph of the fool and the knave. It was against this that the author of Psalm 37 spoke: "Be not vexed over evildoers, nor jealous of those who do wrong" (37:1). It was such a problem that nearly brought the downfall of the author of Psalm 73. A temporizing kind of answer to this difficulty is to be found in Prov 3:11–12.

The discipline of the Lord, my son, disdain not;
spurn not his rebuke;
For whom the Lord loves he reproves,
as a father the son he favors.

Adversity, or the failure of things to work out the way they were supposed to, is seen here as the disciplining of a father. This perspective is to be found elsewhere. The medicinal aspect of adversity is held out by Eliphaz and by Elihu (Job 5:17–21; 33:19–30), where, however, it never becomes independent of a presumed guilt, as supposedly to be found in Job. Suffering thus could be viewed as a step taken by the Lord in the conversion of a sinner (hence there could be no understanding, but only astonishment, at the suffering of the servant in Isaiah 53). In other words, it had to be fitted into the overall view of retribution as taught by the sages.

It is remarkable that the problem of divine justice (or retribution, or whatever term one might choose) becomes *the* problem for the sages. One need not be surprised by the admission of Agur (Prov 30:1–6) that he is stupid and ignorant. That is the human condition. But it is hard to deal with adversity that can find no reasonable explanation. A human standard of justice is applied to God, and it does not work. This situation is often termed the "crisis" of wisdom (Crenshaw 1985a: 381), and the books of Job and Ecclesiastes are the prime evidence. But it can be just as well argued that these works prove the resilience of the wisdom movement, which did not skirt problems, even if it could not solve them. The "scepticism" of these books is in conflict with the retribution theory of Proverbs (and of Deuteronomy and other books, one may add). But the real thrust is to purify an overconfident wisdom, to make the sages more aware of the limitations which they acknowledged only too theoretically.

The book of Job does not cancel out the book of Proverbs. It is in a dialectical movement with it, surely. And it obviously corrects any rigid interpretation of the sapiential message of life as something humans can simply achieve. Proverbs 2:6 finally acknowledges that wisdom is a gift of God. This was not a conclusion that was easily come by. The sages had to travel the path of Job and Qoheleth. Wisdom does not become futile because it is challenged and modified. The witness of Job and Qoheleth is treasured by the community which also retained the book of Proverbs (Wilson 1984: 189–192).

If the author of Job broke through a simplistic understanding of divine justice, Qoheleth succeeds in safeguarding the inscrutability and freedom of God (Zimmerli 1963: 155–158). Time after time he affirms that one cannot know what God is doing (3:11; 8:17; 11:5). Here too wisdom has the boldness to confront the divine mystery, and the confrontation is made possible on the basis of the honesty and integrity of the wisdom movement: "even if the wise man says that he knows, he is unable to discover it [all God's work]" (Eccl 8:17).

5. The Personification of Wisdom. Participating in the divine mystery is the figure of Lady Wisdom which appears in Job 28; Proverbs 1, 8, 9; Baruch 3:9–4:4; Sirach 24; Wis 7:7–9:18. It is better to speak of personification than hypostasis (Marcus 1950–51). Personification is no stranger to the Hebrew Bible. Justice leads Israel out of Babylon (Isa 58:4); in Ps 84:11 kindness and truth meet, justice and peace kiss. Wine is arrogant (Prov 20:1). But the personification of wisdom is simply unique in the Bible, both for its quantity and quality.

The personification of wisdom in Job 28 is sudden and unexpected. The message is simple: humans can find hidden treasures in the earth, but they cannot find wisdom (28:12, 20). It is inaccessible, known only to God. The description of God's relationship to wisdom is obscure. Apparently he knows wisdom's place because he sees everything (v 24). It was in the creation of the wind and the rain (vv 25–26) that he became actively involved with wisdom: seeing, appraising, establishing and searching her out (v 27). This is all very tantalizing. What did God do with wisdom? The author has not answered that question clearly, but wisdom is certainly involved with the divine creative activity. The precise manner of this is difficult to state. Is it merely in the divine mind, a master plan (cf. Prov 3:18), or is it somewhere in the universe? For N. Habel (*Job* OTL, 400) it is "the fundamental principle which governs the design of the world." For J. G. Janzen (1985: 197–198), wisdom is "in" the creative act. G. von Rad (1972: 146–148) thought that it must be in the world, while being separate from created things—"something like the 'meaning' implanted by God in creation" (p. 148). It seems as though wisdom remains inaccessible in this very text of Job! While many scholars regard 28:28, associating fear of the Lord with wisdom, as a spurious addition, it can make sense in context. It affirms that piety is the (only) way to wisdom available to humans. On the lips of Job it must be ironic, or perhaps it serves as a kind of inclusion with 1:1. The personification does

not emphasize the female characteristics of wisdom (*ḥokmâ* is a feminine noun), in contrast to the picture that emerges in Proverbs.

In Prov 1:20–33 Lady Wisdom is portrayed in the style of an OT prophet, threatening her audience (out in the public streets) with ridicule and doom. Only at the end of her public speech does she offer peace and security to those who obey her. In Prov 9:1–6 she changes her tone, and invites the "simple" to the banquet of bread and wine. This description is in deliberate contrast to that of Dame Folly in 9:13–18, who issues another invitation to the "simple" to partake of bread and water (stolen, v 17!)—an invitation that the author characterizes as a trip to Sheol.

Once more, and with great flourish, Lady Wisdom appears in Prov 8:3–36. Again, she addresses the "simple" in public places. Her proclamation is encouraging: truth, more precious than silver or gold (8:10–11, 19); love, for those who love her (8:17). Then she begins the famous description (vv 22–31) of her relationship to God and to creation:

The Lord begot me, the firstborn of his ways …
From of old I was poured forth …
When there were no depths I was brought forth …
Then was I beside him as his craftsman,
  and I was his delight day by day.
Playing before him all the while,
  playing on the surface of his earth;
and I found delight in the sons of men.

She emphasizes (six times!) her existence before creation, and describes herself as *ʾāmôn* (v 30) at the side of God. The meaning of that term is uncertain, either crafts (wo)man or nursling (Rüger 1977). Perhaps she was actively engaged in the creative activity (cf. Prov 3:19). But she clearly has a role with God and human beings. She describes herself as "delight" (v 30; "his delight" in the LXX), and speaks of "playing" before God, much like David "played" before the Lord when he brought the ark into Jerusalem (2 Sam 6:14–16, 21; Keel 1974). Moreover, her delight is to be with human beings (8:31); presumably this engagement involves her speeches in the previous chapters, and especially the promise of life with which she concludes her present speech (8:32, "the one who finds me finds life").

Who is Lady Wisdom? Many identifications have been offered (Lang 1975: 147–176). She seems to be something of God, born of God, in God. Usually she is said to be a divine attribute, a personification of the wisdom with which God created the world (Prov 3:19; Whybray 1968). This identification is explicitly denied by von Rad (1972: 156–157), who sees wisdom as an attribute of the world, "by virtue of which she turns towards men to give order to their lives." God did not merely found the earth by wisdom (Prov 3:19); he built it into wisdom. Wisdom is the mysterious order of the world which beckons to human beings. However, one may ask if this identification with order does justice to the divine origins, and to the role Lady Wisdom occupies relative to human beings. Is Wisdom not the Lord, who turns toward creatures and summons them through creation, through the wisdom experience? (Murphy 1985). She certainly seems to be a communication of God. Ben Sira recognized this aspect, and identified Wisdom more clearly for his generation.

Ben Sira begins his long work on a note of wisdom: "All wisdom comes from the Lord …" (1:1). The poem on Lady Wisdom in chap. 24 is clearly modeled on Proverbs 8 (Skehan 1979). She is now presented as speaking "in the assembly of the Most High," i.e., in the heavenly court, and not merely to "simple" earthlings. Yet she has the same old concern for humans, and invites them to her banquet (again! 24:19–22 and Prov 9:1–6). She describes her journey throughout the cosmos (v 5, "the vault of heaven," "the depths of the abyss"). Like God, she seems to possess the whole world (v 6). Yet she has no fixed residence, until the Creator bids her to take up her dwelling in Jacob (v 8). So she settles in Jerusalem where she performs liturgical service (v 10, *eleitourgēsa*). In an elaborate comparison she describes her life there: like a tall cedar, fruitful olive tree, balm and myrrh (vv 13–17), and she issues an invitation to her meal (v 21), where paradoxically eating will only increase the appetite for more.

At this point Ben Sira makes the identification:

All this is the book of the covenant of the most High God,
the law which Moses commanded us (24:23).

Lady Wisdom is the Torah, an identification prepared for by the postexilic vision of the Torah (Psalms 19 and 119; Deut 4:6–8), and reflected in the apocryphal work of Baruch (Bar 3:9–4:3).

It is clear from the above that Lady Wisdom is a complex figure, whose traits accumulate as one goes on through the Wisdom Literature. And this enables individuals to make concrete identifications, as Sirach did for his generation. As a general comment, which respects the mystery in which Lady Wisdom is cloaked, the words of von Rad (*ROTT* 1: 444) are worth quoting: "None the less it is correct to say that wisdom is the form in which Jahweh's will and his accompanying of man (i.e. his salvation) approaches men … the most important thing is that wisdom does not turn towards man in the shape of an 'It,' teaching, guidance salvation or the like, but of a person, a summoning 'I.' So wisdom is truly the form in which Jahweh makes himself present and in which he wishes to be sought by man."

6. Wisdom and Immortality. It has been observed often enough that the goal of wisdom is *life* (Murphy 1966). That is to say, life in this world, marked by prosperity and blessing, a fullness of days until one was finally buried with the fathers. The Hebrew world displayed a remarkable resignation to the inevitability of death (e.g., Psalm 49). Nonetheless it gradually became a problem with the sages. The thought of Job is constantly hovering between life and death, light and darkness (3:2–23; 10:18–22; 14:10–20). The most poignant lament of Qoheleth is his cry, "How is it that the wise man dies as well as the fool!" (2:16). The issue was exacerbated by the problem of injustice and suffering in this life. It was not an adequate answer to point out that the unjust person dies a premature or painful death (Psalm 37). Qoheleth is crushed by the fact that there is the same lot (death—the "evil time") for the just and the wicked (9:2). But there is an eventual breakthrough, and in typically wisdom style.

It seems that the period of the martyrs (Maccabean era) gave rise to a firm belief in the resurrection of the body (Dan 12:2–3; 2 Maccabees 7). Hence it is often said that the doctrine of bodily resurrection is the "typical" Hebrew response to the issue of immortality. While this is obviously the view indicated in the book of Daniel, another approach is expressed in the Wisdom of SolomonSolomon and perhaps in the literature of the Essenes. In Wis 1:15 righteousness *(dikaiosunē)* is said to be undying *(athanatos)* and many times eternal blessedness is mentioned for the just (Wis 2:23–3:4; 5:5). What is interesting here is that the author who clearly is aware of the Greek doctrine of soul and body (Wis 1:1–4; 9:15) does not conclude to personal immortality on the basis of the nature of the human composite. That would have been a Greek solution. He may have shared such an idea, but he does not reason about immortality in that fashion. Instead, blessed immortality flows from righteousness (1:15), from the wisdom that is the gift of God (Wis 7:7; 9:4). It lies in the nature of the relationship between God and those who follow him. Immortality consists in a relationship that death cannot sever. The old doctrine of Sheol (Eccl 9:10), where a loving contact with God was missing (Pss 6:6; 30:10), now yields to an enduring presence (Ps 73:23–28). The presence is not limited to God and the individual; the blessed one is accounted among "the sons of God" or "holy ones" (Wis 5:15), i.e., the members of the heavenly court. The association of the just with the angels is also made in the Qumran literature (1QS 11:8–9; 1QHod 3:20–22; 11:10–14), and this seems to suggest a kind of immortality. The description of a blessed immortality in terms of association with the heavenly court is a logical development. The old lament was that no one could praise God in Sheol. Now one will praise him with the other members of the heavenly court.

C. Wisdom Influence in OT Literature

Paradoxically, recent studies have underscored the presence of wisdom throughout the rest of the Bible, even if wisdom and creation have been given a perilous perch within biblical theology. Modern scholarship has become aware of what has been called "wisdom influence" on specific books. Among these are Psalms (Mowinckel 1955; Murphy 1963; Kuntz 1974); Amos (Wolff 1973); Isaiah (Whedbee 1971); Esther (Talmon 1963); the Joseph story in Genesis 37–50 (*PHOE*, 292–300); the Succession Narrative in 2 Samuel–1 Kings 1 (Whybray 1968); and Deuteronomy (Weinfeld 1972). These works are not to be considered Wisdom Literature (Crenshaw 1969), but it is reasonable to speak of wisdom influence in one or another instance (Morgan 1981).

The problem lies in the manner in which "wisdom influence" is conceived, and the means by which such influence was exerted on particular writers. The following observations should be borne in mind:

(1) The distinction between a specific literary genre and wisdom influence must be maintained. A lawyer may write a short story that reflects legal background, but the work remains a short story, not a legal document. It is an exaggeration to affirm that the "Joseph narrative is a didactic wisdom-story" (*PHOE*, 300), or that the Succession document is a deliberate attempt "to illustrate specific proverbial teaching for the benefit of the pupils and ex-pupils of the schools" (Whybray 1968: 95). In both instances one is dealing with a genre of history, not wisdom.

(2) The notion of wisdom influence should be narrowly conceived. A common culture and world of ideas was shared by all classes in Israelite society. The sapiential understanding of reality (described above in "thought world") was not a mode of thinking cultivated exclusively by a small group. Hence it is to be expected that it can appear as it were unconsciously in various types of expression. One cannot speak meaningfully of "wisdom influence" because a prophetic judgment speech contains a saying or a comparison (Isa 1:2–3). Such expressions belong to educated speech in general and are not confined to Wisdom Literature. Although a certain type of vocabulary may suggest wisdom influence (Whybray 1974: 121–154; Hurwitz 1988), a mere linguistic criterion is weak. It was not only the sages who used this vocabulary. Similarly, wisdom motifs could have circulated and would not be the exclusive possession of a given class. The wisdom heritage must have constituted a common fund of knowledge experience for each Israelite.

(3) The appearance of a didactic purpose or a wisdom theme does not suffice to categorize a work as "wisdom." Thus the book of Hosea remains prophecy, even if the editors may be responsible for the wisdom tag ("let one who is wise understand these things") in 14:10[—Eng 14:9]. Similarly, the problem of the suffering of the just person is the concern of all people (e.g. Jer 12:1–5), not simply the sages.

Finally, the Song of Songs has been recently associated with wisdom (*IOTS*, 573–575; Würthwein 1969: 31). This is rather a unique case. All scholars would admit that the Song is love poetry with its own genres (Murphy 1981b: 98–124). The only wisdom element in it may be the lines which speak of love as strong as death (8:6; Tromp 1979). However, this does not change the genre. Nevertheless, it may be that the sages were responsible for the transmission and editing of the Song (and its attribution to the wise Solomon), because it was in line with the societal values (fidelity, etc., of Prov 5:15ff.) which the sages treasured.

D. Extra-biblical Wisdom

During the last century and a half the discoveries of the literatures of Israel's neighbors have had a great impact on the understanding of the Bible. This has been particularly the case for the Wisdom Literature, which has been illumined by the wisdom of ancient Mesopotamia and Egypt (Buccellati 1981; R. Williams 1981). "Wisdom" may be a misnomer as applied to these ancient literatures (*BWL*, 1), since the designation derives from biblical studies. But there is enough similarity in the works of international wisdom to justify this convenient term.

1. Egypt. Many "teachings" or "instructions" *(sebayit)* have been handed down over a period of about 2500 years, from that of Prince Hardjedef (or Djedefhor, of the Fifth Dynasty) down to the Insinger Papyrus which dates from the Ptolemaic period. The style of the *sebayit* is standard: a teacher, often a high official if not a king, hands down rules of conduct: "the beginning of the instruction which X made for his son Y." The rules cover such areas as truth and integrity, generosity and moderation, proper and timely speech, the need to "hear" (and obey), a correct relationship with officials, women, one's household and friends. By and large a certain upper class morality, eventually democratized, is evident. Warnings are given against pride and any lack of discipline. The model person is the "silent" one. Silence is a sign of self-control and thoughtfulness, a characteristic of one who is master of the situation, in contrast to the rash, impetuous person. All these ideals are held together by the Egyptian concept *ma›at.* The word cannot be easily translated; it designates order, truth, justice (Frankfort 1961: 54). It is the divine order in the world into which a human being is to be integrated by his conduct. Success in this

process of integration means prosperity; failure means chaos. This harmonious integration into *ma›at* underlies the teachings.

"Wisdom" is not an important term in the teachings, but biblical scholarship (Schmid 1966: 159) has made a correlation between Egyptian *ma›at* and Hebrew *ṣĕdāqâ* (justice) and *ḥokmâ*. To a certain extent this is justified, insofar as the description of wisdom in Proverbs 1–9 reflects some of the attributes of *ma›at.* But it is not to be exaggerated. For one thing, *ma›at* is deified as a goddess in Egypt. Moreover, Hebrew wisdom has its own characteristic orientation to tradition and experience. It is not to be interpreted simply out of the Egyptian mentality concerning order.

The Egyptian instructions are fairly integrated and consecutive pieces (thus comparable to Proverbs 1–9), abounding in if-clauses, imperatives, negative admonitions, and motive clauses. Gnomic sayings are mixed in, but they become conspicuous only in the later Demotic writings. Here the single sentence or monostich (as in Onkhsheshonqy 11:10, "he who sends up spittle to the sky, upon his face it falls"; *AEL* 3: 76) prevails as the stylistic medium. As in Hebrew, parallelism is a common feature in the *sebayit.*

The more important instructions are those associated with Phahhotep, Merikare, Amenemhet, Ani, Amenemope, and the Demotic writings of Onkhsheshonqy and the Papyrus Insinger. The explicit similarities between Prov 22:17ff., and the teaching of Amenemope are indubitable (Bryce). This is not the place to attempt a summary of the contents of the various instructions; they are best appreciated by examining the English translations (*ANET*; Simpson 1973; *AEL*).

Several other Egyptian works of a more "speculative" nature have been compared to biblical wisdom, but there seems to be no evidence of an "Egyptian connection." The "Harper's Songs" and the "Dispute of a Man with his Soul" present passages that reflect universal human experiences that are naturally enough found in Ecclesiastes and other biblical works. In a similar way, the love poetry of ancient Egypt provides broad parallels to the biblical Song of Songs (White 1978; Fox 1985).

2. Mesopotamia. Here, as in Egypt, writing and schools flourished already in the 3d millennium B.C. In the Sumerian *e-dubba* ("house of tablets") or school, the scribes copied out in cuneiform signs many types of literature, some of which may be compared with Hebrew wisdom. Several collections of proverbs (many bilingual, in both Sumerian and Akkadian) have been published (Gordon 1959; *BWL*, 222–275), along with various literary types such as fables (Lambert *BWL*, 150–212). Comparable to the Egyptian instructions are the Instructions of Šuruppak (Alster 1974), which contain the advice of a king to his son Ziusudra, the hero of the flood as remembered in the Sumerian tradition. Similar in style is the Akkadian *Counsels of Wisdom* which treats of proper speech, avoidance of bad companions, etc. (*BWL*, 97–107).

As was the case with Egypt, there is a reflective literature in ancient Mesopotamia that has suggested comparison with Job and Ecclesiastes. Discussed in this literature, the issue is a perennial one, namely that of suffering, and especially the suffering of the righteous. A Sumerian text, "Man and His God" (*ANET*, 589–591) and the Akkadian *Ludlul bēl nēmeqi* ("I will praise the Lord of Wisdom," *ANET*, 596–600) provide two examples. H. Gese (1958: 63–78) argued that the Akkadian work exemplified the literary form of Job: a paradigm of an answered complaint. But the book of Job provides no "answer" in the way that the *Ludlul* does. Both works describe the situation and complaint of a suffering devotee. In the end the Babylonian sufferer is restored by the intervention of Marduk. There is no exploration of the raw and poignant depths of suffering as in the Hebrew work.

With more justice the "Dialogue of Pessimism," an Akkadian work dated around the 12th century B.C., has been compared with Ecclesiastes (*ANET*, 600–601). A slave and his master hold a conversation about several areas of life. The master expresses an opinion and the slave at once agrees, even adding further reasons to justify the master's declaration. Then the master states the opposite, and the slave again falls in line and gives reasons for this decision. It is this ability to look at extreme positions, to search out contradictions, that reminds one of Ecclesiastes. Assyriologists have debated whether this is a farce or a serious work (*BWL*, 139–141). The work ends on the topic of death, and perhaps by suicide. This grim note is of course not present in Qoheleth, for whom death is unwelcome but simply inevitable (Eccl 11:7–12:7); it is never envisioned as a salvation to life's problems.

Another poem, "The dialogue about Human Misery" (also called "The Babylonian Theodicy," *ANET*, 601–604) is an acrostic work in 27 stanzas of 11 lines each. The characters in this dialogue are the sufferer and a sympathetic (unlike Job's "friends") listener. They range over many topics that reflect upon the justice of the gods. Although the friend never finds fault with the main speaker, his consolation is anemic. He thinks that the common belief in the reward of piety still holds. But there is a rather surprising ending, for he admits that the gods have made humans evil. They "gave twisted speech to the human race. With lies, and not truth, they endowed them forever" (*ANET*, 604). W. Lambert (*BWL*, 65) has justly remarked that this conclusion removes the problem; if the gods are responsible for evil in humans, there can be no dialogue.

One of the most famous compositions of the ancient world is the story of Ahiqar, which traveled across many cultures and has been transmitted in about a dozen languages (Lindenberger 1983: 4–7; Küchler 1979: 319–41). The most ancient version extant is the Aramaic, which appeared among the 5th century B.C. papyri that were discovered on the Elephantine island in the Nile and published in 1911. The work was perhaps written a few centuries before the date of the papyri, either in Aramaic or in Akkadian, and it tells the story of the betrayal and restoration of a certain Ahiqar, a court official during the reign of Sennacherib of Assyria. The pertinence of the work lies in the proverbs which Ahiqar transmits in the story. In general these resemble the proverb collections of the ANE, but J. Lindenberger has pointed out that "genuinely close parallels between the Aramaic proverbs and the Bible are few" (1983: 25); he indicates lines 81–82 concerning corporal punishment (Prov 23:13–14) and line 207 about pride (Jer 9:22). There is a tantalizing statement about wisdom in lines 94–95 which has been interpreted as referring to its divine origin and eternal reign. But the text is too fragmentary to support definite conclusions (*ANET*, 428; Lindenberger 1983: 68–70). See also AHIQAR, BOOK OF.

3. Hellenistic Literature. *Sophia*, or wisdom, is of course a well-known concept in Greek philosophy and literature. Alexander's conquest of the Fertile Crescent in the 4th century B.C. ensured the flourishing of Hellenistic culture which had already begun in the area (Hengel 1974). Without the Greek cultural background that blanketed the Mediterranean world a book like the Wisdom of SolomonSolomon would never have been written. Although it remains an intensely Jewish book, it is to be read in the light of Hellenistic culture (Larcher 1969: 179–236; Reese 1970), and especially of Philo (Larcher 1969: 151–178; Mack 1973: 108–184).

Considerable debate has raged over the relationship of Qoheleth to Hellenistic culture. O. Loretz found Mesopotamian influence in the book (1964: 90–134), but R. Braun has argued just as vigorously for parallels between Ecclesiastes and Hellenistic philosophy (1973). Different points of view have also been expressed about Ben Sira. Hengel (1974: 131–175) recognizes some dialogue with Greek thought, but not as much as T. Middendorp (1973: 13–24) who argues for strong dependence upon Theognis. But this is another intensely Jewish work, written in Hebrew probably in Jerusalem before the Maccabean outbreak; its dependence on earlier biblical works is undeniable, whatever it may owe to the Hellenistic period.

ROLAND E. MURPHY

WISDOM OF BEN-SIRA. One of the earliest and certainly the longest of the deuterocanonical/apocryphal books of the OT. The Wisdom of Ben Sira provides the most comprehensive example of wisdom literature preserved in the Bible. The book is also known as Sirach (the name found in the Greek mss) or Ecclesiasticus (the Latin title, which probably means "the ecclesiastical [or church] book," since it was used extensively in the liturgy). It is consciously modelled on the book of Proverbs; but unlike the latter, which is a compilation of materials by different authors spanning several centuries, it is clearly the work of a single author, Ben Sira, who wrote in Jerusalem during the early 2d century B.C. The book contains moral, cultic, and ethical maxims, folk proverbs, psalms of praise and lament, theological and philosophical reflections, homiletic exhortations, and pointed observations about life and customs of the day. For that reason it has been popular with both Jews and Christians; and it has left its impact on the proverbial literature of the West. All citations from the Wisdom of Ben Sira are taken from the AB translation (Skehan and Di Lella *The Wisdom of Ben Sira* AB 39), which uses the chapter and verse numbers found in the critical edition of the Greek (Ziegler 1965) in order to avoid the confusion that still prevails with these numbers in most modern translations of the book.

3. Sin and Free Will
4. Retribution
5. Ritual, Social Justice, and Morality
6. Attitude toward Women

A. The Book

1. Title. In English Bibles the Wisdom of Ben Sira (or "Sirach" for short) is known by several other titles. In the NAB the title is "The Book of Sirach"; in the NJB, "Ecclesiasticus," a word taken directly from many Latin Vulgate mss; in the NEB, "Ecclesiasticus or the Wisdom of Jesus son of Sirach," a title similar to that in the NRSV. The Wisdom of Ben Sira is one of the rare books of the OT that was actually composed by the author to whom the book is ascribed. Since the extant Hebrew mss begin at 3:6b, we do not know the original superscription or title of the book. In the corrected text of 50:27 (Cairo MS B), however, the author identifies himself as "Yeshua [or Jesus] ben [son of] Eleazar ben Sira." The name appears in the same form in the subscription of MS B (Skehan and Di Lella *Sira* AB, 579–80). The subscription reads: *ḥokmat yēšûaʿ ben ʾelʿāzār ben sîrāʾ*, "The Wisdom of Yeshua son of Eleazar son of Sira," apparently the original Hebrew title of the work. The Greek title is similar: "The Wisdom of Jesus son of Sirach." Among the Jews the work was called "The Book of Ben Sira," "The Instruction of Ben Sira," and "The Proverbs of Ben Sira."

2. Author. Though the author's proper name was *Yēšûaʿ* or Jesus, as the grandson states in the foreword to his Greek translation of the book, he is generally called Ben Sira. Using the name of one's grandfather (as our author did) or earlier male ancestor as a patronymic with "Ben" prefixed was not unusual,

especially when the name of one's father was not sufficiently distinctive (Box and Oesterley *APOT* 1: 271, 292).

3. Date. The date of the book can be calculated on the basis of information provided by the grandson in the foreword to his translation. He states that he arrived in Egypt in the 38th year of the reign of King Euergetes, and that he spent many sleepless hours of hard work in preparing his Greek translation for publication. The epithet "Euergetes," which means "Benefactor," was given to only two of the Lagid kings, Ptolemy III Euergetes I (246–221 B.C.) and Ptolemy VII Physkon Euergetes II (170–164 and 146–117). Since the former reigned only 25 years, the latter must be the Euergetes in question, for he began his rule in 170 conjointly with his brother Ptolemy VI (181–146), and he died fifty-three years later, in 117. Calculating from 170, Ptolemy VII's official accession year, the 38th year (when the grandson migrated to Egypt) would be 132.

The grandson made the Greek translation in the following years, publishing the work after Ptolemy VII's death in 117 B.C. (Skehan and Di Lella *Sira* AB, 8–9). Allowing sufficient time between grandfather and grandson (who presumably was an adult when he migrated in 132), we come to a date in ca. 180 for the composition of the book. This date is confirmed by the book itself. In 50:1–21, Ben Sira has a panegyric on the high priest Simeon II (219–196 B.C.). From the detailed and graphic descriptions of the vestments and liturgical actions, we may conclude that Ben Sira personally witnessed Simeon celebrating the elaborate rituals of the Daily Whole-Offering in the Temple (Ó Fearghail 1978: 301–16). Ben Sira gives the clear impression, however, that Simeon was already dead. Moreover, Ben Sira does not even allude to the disastrous events that occurred in Palestine during the reign of Antiochus IV Epiphanes (175–164 B.C.), the archvillain in Daniel 7–12. We may rightly assume that if Ben Sira had composed his book during those troublous years, he would have made some reference or allusion to the atrocities pious Jews suffered. Thus it is reasonable to conclude that Ben Sira had died before 175, or at least had published his book by that date.

B. Ben Sira and His Times

1. Occupation. Ben Sira was a professional scribe (Heb *sôpēr,* Gk *grammateus;* cf. 38:24), which at that time meant wise man or sage (Heb *ḥākām*). He has in fact been called the last of the wise men of Israel and the first of the scribes (Hadot 1970: 76). The grandson writes in the foreword that Ben Sira devoted himself to the diligent study of the Law, the Prophets, and the other Writings—all of which we now call Sacred Scripture. Hence the book sediments and articulates Ben Sira's lifelong reflection on the traditions and inspired literature of Israel that form the core of his teaching.

Doubtless Ben Sira was describing his own life when he writes of the life and work of the Jewish scribe:

How different the person who devotes himself to the fear of God
and to the study of the Law of the Most High!
He studies the wisdom of all the ancients
and occupies himself with the prophecies;
He treasures the discourses of the famous,
and goes to the heart of involved sayings;
He studies the hidden meaning of proverbs,
and is busied with the enigmas found in parables (38:34c–39:3).

Though Ben Sira held a position of honor in his society, he was also keenly aware of his responsibilities to the community:

Take notice that not for myself only have I toiled,
but for every seeker after guidance (33:18)

He utilized the talents, which he acknowledged he received from the Lord, not for personal gain or glory (cf. 51:25) but for the common good. He lived in Jerusalem (50:27 Gk), where he had a school or academy. His students were young Jewish males; hence he often introduces a proverb or section of discourse with the expression "My son." He traveled widely in order to gain experience, often at great risk to his personal safety (34:12–13; cf. 8:15–16 and Luke 10:29–37).

2. Hellenization of the Near East. The world in which Ben Sira lived had been thoroughly Hellenized. It was a society dominated by Greek ideas and ideals, customs and values, art and excellence. The Jews in Palestine were not politically free but subject to Egyptian (Lagid) or Syrian (Seleucid) kings who fought repeatedly against each other for control of that strategically significant territory. Ben Sira's prayer expresses the intense feelings many other pious Jews must have felt toward their gentile overlords:

Come to our aid, God of the universe,
and put all the nations in dread of you!
Raise your hand against the foreign folk,
that they may see your mighty deeds (36:1–3).

Palestine had been under Persian domination from 539 to 332 B.C. at which time Alexander the Great gained control. After his death in 323, his enormous empire was split up among his generals, called the Diadochoi. Only two of these men are of interest here: Ptolemy I Lagi of Egypt and Seleucus I of Syria. Palestine became a bone of contention between the Hellenistic dynasties founded by these two monarchs. In 301 Ptolemy I (323–285) finally gained control, and for a century afterward his successors maintained sovereignty over the Holy Land. The Ptolemies apparently adopted the enlightened Persian administrative system under which the Jewish high priest was not only the spiritual leader of his people but also a kind of secular prince, for he had the duty of collecting the tribute owed to Egypt. Because for the most part the Jews remained submissive and paid the taxes due to the Egyptian crown they lived in relative peace and enjoyed many of the advantages of improved agricultural methods and trade with Egypt (Bright *BHI*, 414).

Meanwhile the Seleucid kings strove to gain control of Palestine but with little success until Antiochus III the Great (223–187 B.C.) smashed the army of Ptolemy V (203–181) at Panium (Caesarea Philippi of the NT), near the headwaters of the Jordan. The Holy Land now came under Seleucid sovereignty. Josephus (*Ant* 12.3.3) writes that the Jews, presumably under the leadership of the high priest Simeon II, welcomed the Syrians, even giving them supplies, including elephants (the battle tanks of antiquity). Antiochus rewarded the Jews for their help. Timber for the repair of the Jerusalem temple, apparently damaged in the war, was exempt from toll charges. In 50:1–4, Ben Sira praises Simeon II for renovating and fortifying the temple precincts. Temple personnel were exempt from the poll tax, crown tax, and salt tax. As a group the Jews were exempt from taxes for three years and from a third of their tribute. Antiochus III was done in by his ambition. Foolishly, he crossed swords with Rome by advancing into Greece. The mighty Roman armies quickly defeated him at Thermopylae in 192 B.C. Finally, in 190 at the decisive battle of Magnesia, between Sardis and Smyrna, the Romans overwhelmed Antiochus (cf. Dan 11:18), forcing on him humiliating peace terms and a huge indemnity. He was assassinated in 187 while sacking the treasury of Bel (one of his own gods) in order to pay his tribute to Rome. He was succeeded by his son Seleucus IV (187–175), a weak and ineffective monarch (cf. Dan 11:20), who was also murdered. His successor was his younger brother Antiochus IV Epiphanes (175–164), of whom we spoke earlier.

These were the times in which Ben Sira lived. If, as we may rightly assume, he was an old man when he published his book in ca. 180, then we can safely conclude that he was born ca. 250. Palestine was under Ptolemaic rule for most of his life, from his birth to 198, and under Seleucid control for the remainder, from 198 till his death, probably some time after 175.

3. Purpose of the Book. Both Ptolemies and Seleucids vigorously promoted the policies of Hellenization instigated by Alexander the Great. Hence it mattered little whether a Seleucid or a Ptolemy held sway over Palestine. At home as well as in his travels abroad, Ben Sira must have witnessed the baneful effects of Hellenization on the faith and practices of the Jews. He must have encountered many Jews whose faith was rocked by the questions and doubts that arose from Greek philosophy, religion, and lifestyle. To strengthen the faith and confidence of his fellow Jews Ben Sira published his book. His purpose was not to condemn Hellenism as such, but rather to demonstrate to Jews and even gentiles of good will that true wisdom is to be found primarily in Jerusalem and not in Athens, more in the inspired literature of Israel than in the clever writings of Hellenistic humanism (Di Lella 1966a: 140–42). Yet Ben

Sira himself often read pagan literature and incorporated many of its insights and values in his own book. Totally secure in the faith of his ancestors, Ben Sira had nothing to fear from exposure to gentile influences and writings. He did not even hesitate to borrow gentile thoughts and expressions as long as these could be reconciled with the faith and traditions of Israel (see F.3 below).

C. Canonicity

The Wisdom of Ben Sira is listed among those books which Jews and Protestants call apocryphal, but which Roman Catholics call deuterocanonical, for they believe it to be part of the canon of the OT.

1. Jewish Attitudes to the Book. Several facts are to be taken into account when one examines Jewish attitudes to the book. First, in pre-Christian times Greek-speaking Jews in Palestine and in the Diaspora considered the Wisdom of Ben Sira as one of their sacred writings, for it was included in the LXX, a Jewish work. Second, the 1st-century B.C. Jewish group at Masada had a Hebrew copy of the book that had been written stichometrically, i.e., each bicolon (or poetic line) is written on one line, the first colon (half-line) appearing on the right-hand side of the column, and the second on the left-hand side (Yadin 1965: pls. 2–4, 6–8). The same style of writing was used in 2Q18, two small 1st-century B.C. Hebrew fragments of the book from Qumran (Baillet, Milik, and de Vaux 1962: pl. 15). This procedure, which was usually reserved for books that were later received into the Jewish canon, is another indication of the reverence the Essenes and others who were Palestinian Jews accorded the book. (The medieval Cairo Geniza mss B, E, and F of the book were also written stichometrically.) Third, at least some Jews apparently accepted the book as sacred and inspired, for from early in the 1st century B.C., the book underwent successive Hebrew and Greek recensions in Palestine (see D below).

Ancient rabbinical tradition itself is inconsistent. Rabbi Akiba (d. ca. A.D. 132), e.g., placed the book among the "outside" or noncanonical books (*y. Sanh.* 28a). In like manner the Tosefta (*Yad.* ii 13, ca. A.D. 250) states that "the books of Ben Sira and all other books written after the prophetic period do not defile the hands," i.e., they are not canonical (Box and Oesterley *APOT* 1: 271). Nonetheless the book remained popular among the Jews despite its official exclusion from their canon. Even the Talmud, the Midrashim, the *Derek Ereṣ*, and similar tractates show traces of Ben Sira's influence. Some 82 times the book is quoted approvingly in the Talmud and other rabbinical writings. Sometimes passages are even introduced by the words "it is written" (e.g., *Nid.* 16b; *y. Ber.* 11c), a formula reserved only for quotations from the canonical scriptures (Smend 1906b: xlvi–lxi). Yet near the end of the 1st century A.D. the Pharisaic rabbis officially excluded the Wisdom of Ben Sira from the Jewish canon. The probable reason is that the Pharisees disliked some of Ben Sira's teaching (e.g., his denial of retribution in the hereafter), which resembled the theology of their adversaries, the Sadducees.

2. Christian Acceptance of the Book. Till about 1960, the commonly held view was that there were two Jewish canons of the OT in antiquity: the so-called Alexandrian (or Septuagint) canon that included all the deuterocanonical books and the shorter Palestinian (or Hebrew) canon that excluded the deuterocanonical books. It was the Alexandrian canon, in this theory, that the Christian church eventually adopted as its own official list of OT books. Jerome (d. 420) distinguished between "canonical books" and "ecclesiastical books," but only after he had come under the influence of Jewish teachers in the Holy Land. He did not accept as Sacred Scripture the "ecclesiastical books" that later were called deuterocanonical. St. Augustine (d. 430), disagreeing with Jerome's distinction, insisted on the ancient tradition of the church that all books in the LXX collection are equally authoritative. In the 16th century, however, Martin Luther broke with the church's tradition by accepting Jerome's view of the so-called Palestinian canon as alone being the list of Scriptures used by Jesus and the early Christians. In his German translation of 1534, Luther was the first to remove the deuterocanonical books from their logical and traditional places in the canon (e.g., the Wisdom of Solomon and the Wisdom of Ben Sira from the Wisdom books) and to locate these books, to which he gave the inaccurate label "Apocrypha" (= "hidden away"[!]), in a separate section between the OT and NT. Most Protestant translations of the Bible, if they include the "Apocrypha" at all, follow Luther's lead in segregating these books.

The hypothesis of the Alexandrian or LXX canon has been successfully challenged by A. C. Sundberg (1964; 1966; 1975). He has shown that in Jesus's day there never was a shorter Hebrew canon in Palestine

and a longer LXX canon in Alexandria. At least by the turn of the era, there were many Greek-speaking Jews in Palestine who used the LXX as a collection of undifferentiated religious writings long enough even to make a revision thereof. Thus there never was an actual Alexandrian (LXX) canon or a Palestinian (Hebrew) canon before ca. A.D. 90, at which time the rabbis drew up their list of sacred books. Obviously, the rabbis could not decide the limits of the Christian canon. But the church did receive "scriptures" from Judaism, if not a canon. The determination of the Christian OT canon took place in the West at the Council of Hippo (A.D. 393) and two Councils of Carthage (A.D. 397 and 419). That ancient canon includes all the books of the Jewish canon as well as the Wisdom of Ben Sira and the other deuterocanonical books, but not 1–2 Esdras and Prayer of Manasseh (Sundberg 1975: 356–57).

3. Place in the Canon. In Roman Catholic editions of the Bible, the book is located among the Wisdom books of the OT; the order is the following: Job, Psalms, Proverbs, Qoheleth, Song of Songs, the Wisdom of Solomon, and the Wisdom of Ben Sira. The Latin Vulgate has the same order as does also the 4th-century Codex Vaticanus, one of the oldest copies of the LXX, with the exception of Job, which is found after the Song of Songs. In Protestant editions of the Bible, the "Apocrypha," if included at all, are located either between the OT and NT (as in Luther's German translation and the NEB) or at the end of the NT (as in the NRSV). The Wisdom of Ben Sira is found in these editions after the Wisdom of Solomon and before Baruch.

D. Text and Versions

Ben Sira wrote his book in Hebrew, as the grandson states explicitly in the foreword to the Greek translation. The original Hebrew text began to disappear, however, after the rabbis excluded the book from the Jewish canon (see C.1 above). For centuries the Hebrew text was known from only a few quotations found in the Talmudic and rabbinical literature. The Greek and Syriac versions, from which all other translations (ancient and modern) had been made, became the principal witnesses to the book.

1. Original Hebrew Text. Between 1896 and 1900, many fragments of the book were identified from the vast collection of materials recovered from the Geniza (storage room for worn-out or discarded mss) of the Qaraite Synagogue in Old Cairo. These were parts of four distinct mss (A B C D); a fifth ms (E) was discovered by J. Marcus (1931). These mss were dated from the 10th to the 12th centuries. In 1958 and 1960, a few more leaves of mss B and C were identified (Di Lella 1964). Qumran Cave 2 yielded two small pieces of the book, 2Q18 (Baillet, Milik, and de Vaux 1962: pl. 15) from the second half of the 1st century B.C. Qumran Cave 11 produced 11QPs^{a} (Sanders 1965), dating from the first half of the 1st century A.D.; it contains 51:13–20, 30b. Y. Yadin (1965) published the important Masada fragments (39:27–44:17) that date to the first half of the 1st century B.C. Finally, A. Scheiber (1982) found, among the Geniza materials of the Taylor-Schechter Additional Series collection at Cambridge University Library, a new leaf of Ben Sira and the corner fragment of a damaged leaf of ms C (first published in 1900). Scheiber (1982: 179–80) states that the new leaf (containing 31:24–32:7 and 32:12–33:8) is from ms D. This identification, however, is wrong for two reasons: (1) the new leaf is written stichometrically (like mss B and E and the Masada ms) whereas ms D is not so written; and (2) the handwriting is different from ms D. The leaf cannot be from ms E either, for ms E (a single leaf containing 32:16–34:1) has some of the same bicola found in the new leaf, and the hands are not the same. Hence I conclude that what Scheiber has found is a portion of a sixth manuscript, hitherto unknown. I give the name ms F to this new leaf (Di Lella 1988). About 68 percent of the book is now extant in Hebrew: some 2,200 cola of the 3,221 that are found in Codex B of the Greek (Swete 1907: 754).

Not long after the discovery of the original Hebrew of the book at the turn of the century, a few scholars began to doubt the authenticity of the Cairo Geniza mss. Some argued that the Geniza text was retroverted from the Syriac. Others proposed that it was translated from Greek or from Greek and Syriac. I. Lévi (1904), after several changes of heart, maintained that the Geniza text is substantially authentic although it contains some retroversions from the Syriac. Today the controversy has abated, thanks primarily to the discovery of the Masada scroll (Yadin 1965: 7, 10), which supports the authenticity of Cairo ms B and indirectly the other mss as well. The scholarly consensus is that the Geniza mss are essentially authentic (Di Lella 1966b: 20–105).

Kearns (*NCCHS*, 547–50) has shown that there are two basic forms of the Hebrew text: HTI, the Hebrew original of Ben Sira, and HTII, the expanded Hebrew text of one or more recensions. GI, the grandson's Greek translation, was made from HTI; GII, the expanded Greek translation, from HTII. The Geniza mss seem to bear witness to both HTI and HTII. GII corroborates this conclusion as do the Talmudic and rabbinic quotations. HII differs from HTI primarily by additions, some of which are simply alternative readings of HTI while others are doctrinal, comparable to the additions in GII (see 11:15, 16; 15:14b, 15c; 16:15, 16; 31:6d; 51:1).

Though Kearns is generally convincing in his analysis of the confusing textual witnesses, he fails to account for the existence of retroversions from Greek and Syriac that Ziegler, Lévi, Skehan, and Di Lella have proposed (Skehan and Di Lella *Sira* AB, 57–59). The hypothesis that the Cairo mss contain some medieval retroversions is compatible with the theory that these mss (especially ms B) witness to more than one recension of the Hebrew text, viz., HTI and HTII. In fact, some of the passages that have been analyzed as retroversions do not have the same kind of Hebrew as HTII (or "the secondary Hebrew text-form," as Rüger [1970: 1–11] calls it), which supposedly dates to the 1st century B.C. The diction and grammar of these retroversions are often demonstrably mishnaic (Di Lella 1966b: 115–19, 134–42) and quite different from what one would expect in HTII.

2. Greek and Other Versions. GI is found, for the most part, in the uncials A B C S and their dependent cursives. In his splendid critical edition, Ziegler (1965: 74–75) notes that GII is not preserved in any single ms, not even 248. The witnesses to GII, generally the Origenistic or hexaplaric mss (*O:* 253 Syrohexaplar V S^{c}) and the Lucianic mss (*L:* 248–493–637; and *l:* 106–130–545–705), transmit the text of GI, which was then expanded under the influence of one or more other mss. The translator of GII did not produce an independent translation but used mss of GI and translated from HTII only in those cases where he thought it to be necessary. Many readings of GII mss go back to a Hebrew *Vorlage*, a recension of HTII, which differed from HTI. The additions found in the mss do not give the complete contents of GII but only a selection. Over the centuries, the transmission of the Greek text has suffered a great deal and often is mutilated in the mss. Hence the textual critic must take great pains to remedy these corruptions with more or less success. GII has about 300 cola not found in GI; Ziegler prints these extra cola in the text itself, but in smaller letters.

The Old Latin (OL) is an important witness to GII, either directly or indirectly. OL, however, preserves the correct order of chapters after 30:24, whereas in all the extant Greek mss two sections, 30:25–33:13a and 33:13b–36:16a, have exchanged places. OL supports many of the GII additions, but it also contains 75 bicola peculiar to itself (Smend 1906b: ic–cxiii). OL, which was eventually incorporated into the Vulgate because Jerome did not make a fresh translation of the book, was made from a GII text type probably in the 2d century. Because of a complicated textual history, OL of Sirach has more doublets, variants, and interpolations than any other book of the Latin Bible. Nonetheless it is of great importance for the textual criticism of the expanded text of the book.

The Syriac was translated no later than the 4th century, probably by Ebionite Christians, and was revised in the late 4th century by orthodox Christians who gave it its present form (Winter 1977). It was translated directly from a Hebrew *Vorlage* that had combined HTI and HTII. In choosing between doublets in his *Vorlage*, the Syriac translator was often guided by what he saw in his copy of the Greek text, which was not identical with GII but which had many of its readings. Syriac has 70 of the approximately 300 extra cola found in GII, as well as several shorter additions in common with GII. It also contains 74 cola and other shorter variants proper to itself. Many of these are probably of Christian origin, but several others show the doctrinal trends of GII and OL (Kearns *NCCHS,* 548).

The textual criticism of the book is, as should be obvious from the above, enormously complicated, especially when the critic attempts to understand the relationships that exist between and among the various witnesses. No other book of the OT is as textually complex and difficult to work with. Though the theory of two recensions of the Hebrew text (HTI and HTII) seems most probable, it is not always clear when an addition to the text should be seen as evidence of HTII or as a gloss or as a retroversion from the Syriac or Gpeek. Though GI remains the most reliable form of the book as a whole, it too has many

scribal errors and other corruptions as well as mistranslations due to the grandson's failure to understand the Hebrew *Vorlage.* Hence, there are no iron rules or golden rules for the textual criticism of the book. The careful critic must take into account all these bewildering features and then make a judgment that seems most reasonable for the passage under consideration.

E. Contents

The Wisdom of Ben Sira belongs to the Wisdom Literature of Israel, together with Job, Proverbs, Qoheleth, the Wisdom of Solomon, and several wisdom Psalms. Except for chaps. 44–50, which in ms B are entitled "Praise of the Ancestors of Old," the book, like Proverbs, manifests no particular order of subject matter or obvious coherence. This is not surprising since the book seems to be a compilation of lecture notes that Ben Sira used with his young Jewish male students. But unlike Proverbs, which consists of mainly one-line aphorisms, the book has larger units, usually from 10 lines to the classic 22- and 23-line lengths. Ben Sira learned the 22- and 23-line convention from such pieces as Proverbs 2; 6:20–7:6; 7:7–27; 31:10–31; Psalms 9–10, 25, 33, 34, 94, 145. The book contains several poems in praise of Wisdom and its Author as well as exhortations and advice for the young. It is a kind of handbook of moral behavior for the early 2d-century B.C. Jew.

1. The Grandson's Foreword. The foreword or prologue resembles the classical historical prefaces by Herodotus, Thucydides, and Polybius, and may be compared also to the Prologue to Luke (1:1–4). Found in most mss, including GII, the foreword to the Greek translation has three paragraphs: (1) the grandson explains why Ben Sira composed the book; (2) he invites readers to study the book with indulgence for any failure on his part to render the Hebrew faithfully; and (3) he gives autobiographical information about his arrival in Egypt and his hours of hard labor to produce the translation (see A.3 above). He refers to "the Law, the Prophets, and the other books of our ancestors;" this is the first mention of the threefold partition of the OT (cf. Luke 24:44). He also speaks of the third part as "the rest of the books," which later came to be known in Hebrew as *kĕtûbîm,* "the Writings."

2. First Major Division (1:1–23:28). All wisdom (personified as a woman) comes from the Lord who imparts her as a gift to those who love him (1:1–10; cf. Marböck 1971: 17–34). Cf. Prov 8:22–31; Wis 7:27–29; 9:4, 6. The first major poem is in praise of wisdom as fear of the Lord (1:11–30); it has 22 bicola, the number of letters in the Hebrew alphabet. The book closes (51:13–30) with an alphabetic acrostic of 23 bicola, thus forming a literary *inclusio,* which supports the unity of authorship. (The reason for 23 bicola, as a variation, instead of the usual 22 is this: the opening bicolon has ʾ*alep,* the middle bicolon *lamed,* and the last bicolon *pe,* the three letters thus forming the verb ʾ*alep,* "to learn.")

2:1–4:10: Fidelity to fear of the Lord and steadfastness in the face of trials as well as hope and trust in God (2:1–11) are hallmarks of the true believer. Compromise with Hellenism (2:12–14) leads to disaster. Children must honor and respect their parents, especially when they are old and feeble (3:1–16). Humility (3:17–29) keeps you from delving into matters that are too sublime (i.e., the pretensions of Greek philosophy and science). Almsgiving, like filial piety (3:3), atones for sin (3:30). The poor, the oppressed, the orphan, and the widow are to be treated with courtesy and compassion (4:1–10).

4:11–6:17: Those who love Wisdom love life and are loved by the Lord (4:12, 14). Avoid false shame and favoritism (4:20–22, 27; cf. Jas 2:1–4); never tell lies. Do not rely on deceitful wealth or presume on the Lord's mercy (5:1–8; cf. Isa 1:18–20). "Be swift to hear, but slow to answer" (5:11, a proverb quoted in Jas 1:19). Unruly passion has been the downfall of many (6:2–4). Test your friends lest they take advantage of you (6:5–17).

6:18–8:19: The search for Wisdom begins in youth and continues till old age (6:18–37, a 22-line poem). Avoid political ambition, for it brings many moral dangers (7:1–7)—a warning to Jews who served in the royal courts (cf. 2 Macc 3:4–13). Beware of empty formalism in prayer (7:14; cf. Matt 6:7). Be kind to a sensible wife and members of your household (7:18–21), but be firm in disciplining your children (7:23–24). In all areas of your life, "remember your last days, and you will never sin" (7:36). Be prudent in dealing with others, and take advantage of "the tradition of the elders" (8:9).

9:1–11:6: Be on your guard in associating with women, especially those of questionable virtue (9:1–9). Hold on to your old friends. "A new friend is like new wine" (9:10); it needs to be aged (cf. Luke 5:39).

Cf. also 6:5–17; 7:18; 37:1–6. The wise make the best friends and the best rulers (9:17–10:5, a tract on government [Prato 1975: 369–72]). Pride and arrogance are detestable and cause utter ruin (10:6–18). Fear of the Lord is the glory of people in every social class (10:19–11:6; cf. Di Lella 1982b).

11:7–14:19: Avoid rash judgment and useless arguments (11:7–9). The pursuit of wealth can lead to sin; and the miserly rich will leave their wealth to others (11:10–19; cf. Luke 12:16–21). Use caution in choosing your friends and watch out for your enemies even when they seem friendly (11:29–12:18). Do not associate with those who are wealthier or more influential than you, lest you suffer grief; associate with your own kind (13:1–14:2). "Wealth is good where there is no guilt" (13:24). But it should be used wisely on oneself and shared generously with others, for "death does not tarry" (14:3–19).

14:20–19:17: Happy indeed are those who through fear of the Lord seek Wisdom and ponder her ways; "like a young bride" she will embrace them (14:20–15:10). Since God made humans free to choose between good and evil, he is in no way responsible for sin (15:11–20; cf. Wis 11:24; Jas 1:13). It is better to "die childless than have impious children" (16:3). The wicked are punished, for they alone bear responsibility for their sins (16:5–14). No one can hide from God's all-seeing eye (16:17–23). God's wisdom can be seen in the order and providence of creation; every creature exists in harmony with the rest of creation (16:24–30; cf. Wis 11:20). Humans, made in God's image, have received the largest share of divine bounty; fear of the Lord enables them to marvel at his works and to "praise his holy name" (17:1–24). But humans must repent by turning again to the Most High (17:25–31), for he is a kind and merciful judge (18:1–14). Do not spoil the gift, you give, with harsh words (18:15–18; cf. Jas 1:5). Watch your tongue, honor your responsibilities in all matters, and do not indulge your desires (18:15–19:17).

19:18–23:27: Wisdom consists in fear of the Lord and keeping the commandments (19:20). Not all knowledge is wisdom, as the Greeks thought. It is better to be thought a fool, free from sin, than a savant, detested by God (19:22–30). Learn when to speak and when to keep silent (20:1–8). Appearances can be deceptive: misfortune can bring success and vice versa (20:9–17). "Favors and gifts blind the eyes" (20:29). Flee from sin, a two-edged sword (21:1–10). Personal behavior distinguishes the wise from the foolish (21:11–22:5). Weep for the fool: he is worse off than the dead (22:11–12). Act responsibly and kindly toward your friends; make amends if you have hurt them (22:19–26). Beware of destructive sins, especially of the tongue and the flesh (22:27–23:26). "Nothing is better than the fear of the Lord, nothing sweeter than obeying his commandments" (23:27).

3. Second Major Division (24:1–43:33). This division, like the first, begins with a lengthy poem on Wisdom. Chap. 24 has 35 lines, exactly the number in Proverbs 8 that served as model (Skehan 1979). After a brief introduction, personified Wisdom delivers a 22-line speech (24:3–22), in which she describes her origin from God and her heavenly and earthly activity. Though she holds sway over all peoples, she dwells in Jerusalem, having Israel, "the portion of the Lord," as her inheritance. Ben Sira, now the speaker, identifies Wisdom with the Law or Torah of Moses. He then speaks of himself as being a channel of divine inspiration (24:23–33).

25:1–26:27: Harmony among kindred and neighbors and mutual love of husband and wife are pleasing to the Lord and humans. But the proud, the rich, and the old lecher are loathsome. Whoever finds wisdom is great but not greater than the one who fears the Lord (25:10). Do not choose a wife on looks alone or marry for her money (25:21). Blessed is the husband who dwells with a sensible wife and has joy in his children. Nothing is worse than an evil wife, "a chafing yoke." Rival wives who cannot get along cause heartache and grief. But a good wife, "choicest of blessings," brings happiness to her husband.

26:28–29:20: Beware of hazards to your integrity. Many have sinned for the sake of profit, "and the struggle for wealth blinds the eyes" (27:1). Your faults appear when you speak. "Birds nest with their own kind" (27:9); so associate with the wise and not with fools, i.e., evildoers. Keep faith with your friends, for betraying a secret destroys confidence and friendship (27:16–21). Whoever digs a pit falls into it. Wrath and anger are loathsome; the vengeful will suffer the Lord's vengeance. So forgive your neighbor and hold no grudges; "then when you pray, your own sins will be forgiven" (28:2–7; cf. Matt 6:14; Jas 2:13). Avoid strife; the quarrelsome kindle disputes leading to bloodshed. Cursed is the gossip, the meddler, and the double-tongued; they destroy the peace of many. "A blow from the tongue smashes

bones" (28:17). So keep a seal on your mouth, for the tongue can be a raging fire (28:8–26; cf. Jas 3:5–6). Be quick to lend to those in need and go surety for others if you can, but also be cautious to avoid loss (29:1–7, 14–20). Do not keep the poor waiting for your alms; almsgiving is spiritual treasure that will save you from every evil (29:8–13; cf. Tob 4:7–11; Matt 6:20).

29:21–33:18: A simple meal at home is better than a sumptuous banquet with strangers (29:21–28). Be strict in disciplining your son; whip him if necessary. Otherwise he will bring you to heartache (30:1–13). Good health is better than wealth. Envy, anger, and anxiety shorten life (30:14–24). The lover of gold is a fool with no peace. But the rich who are blameless are praiseworthy (31:1–11). Watch your manners at a banquet and curb your appetite lest you suffer distress and lose sleep. Wine in moderation is joy of heart and good cheer (cf. Ps 104:15); when abused, it leads to disgrace (31:12–31). If you preside at a banquet, be considerate and sensitive to others; and when it is time to leave, do not linger (32:1–13). If you fear the Lord and keep the Law, you will never be put to shame; but the sinner (= the fool) suffers loss (32:14–33:6). God planned the polarities or opposites in creation (Prato 1975: 13–61): he exalts certain days and lists others as ordinary; he blesses some people and others he brings low (33:7–15; cf. 15:11–20). Ben Sira reminds the reader that he has toiled not for himself alone "but for every seeker after guidance" (33:16–18).

33:19–38:23: Keep control of your property as long as you live, lest you become subject to others (33:19–24). Treat a lazy slave harshly and give him plenty of work; but never be unjust or unkind (33:25–33). Put no trust in dreams; they have led many astray (34:1–8). Travel, though dangerous, helps the wise gain wide experience (34:9–13). The tainted sacrifices of the wicked are an abomination. "He sheds blood who denies the worker his wages" (34:27; cf. Lev 19:13). Prayer and fasting are futile if one does not turn away from sin (34:28–31). Keeping the Law, giving alms, refraining from evil are meaningful offerings (35:1–5). Be generous and cheerful when you make an offering to the Lord (35:6–13). You cannot bribe the Lord for your sins of injustice against the poor (35:14–26). Ben Sira begs God to rescue his people from domination by the gentiles and to bring back to Palestine all the scattered Jews (36:1–22). Foods vary in quality as do women. A good wife is a husband's richest treasure (36:23–31; cf. Prov 31:10–31). Not all friends are true. Seek counsel with care, but in the end follow your own conscience (37:1–15). Gluttony makes you sick (37:27–31). The physician has his calling from God. So if you are sick, first pray to God who heals and then go to the physician and take the medicine he gives you (38:1–15). Mourn for the dead but not to excess (38:16–23).

38:24–41:13: Though manual laborers make essential contributions to society (cf. *ANET,* pp. 432–34), it is the scribe who has the leisure to devote himself to the study of the Law, the wisdom of the ancients, and the prophecies. He is in attendance on the great; he travels to foreign lands. The congregation speaks of his wisdom and declares his praises (38:24–39:11). Ben Sira now extols the goodness and purposefulness of creation and of God's providence. Everything ultimately fulfills God's will and plan (39:12–35). But life can be miserable and painful for rich and poor alike (40:1–10). Each person will receive his due, in this life: disaster for the wicked; long life and prosperity for the virtuous. A series of "better than" proverbs culminates in fear of the Lord, "a paradise of blessings" (40:18–27). The life of the beggar is no life. Death is bitter for one who prospers, but sweet for one who is old and feeble. The reprobate and their children are cursed; but a good name will never be annihilated (41:1–13).

41:14–43:33: Be ashamed of immorality, lying, disloyalty, theft, refusing an alms, lusting after another's wife, and other sins. But never be ashamed of the Law of the Most High, justice, honesty in business, training your children strictly, bargaining with merchants, sharing expenses, and other good activities (41:14–42:8). You have reason to worry about your daughter; so keep watch over her lest she go astray. "Better a man's wickedness than a woman's goodness" (42:14)—the meanest of Ben Sira's harsh comments about women (see G.6 below). The glory of the Lord shines through all the marvelous and stupendous works of creation. God is revealed as the one who knows all things and is almighty. He made all things in twos, "one corresponding to the other"—light and darkness, hot and cold, etc. The heavens, the sun, moon, and stars, the rainbow, hail, rain, thunder, lightning, storm-wind, snow, ice, frost, and every sea creature—all do God's bidding. In this splendid lyric poem, similar to Job 38–41 and Prov

30:15–31, Ben Sira admits that not even the holy ones (= angels) are capable of praising God as he is (42:15–43:33).

4. Third Major Division (44:1–50:24). This is the only unified section of the book. In Cairo ms B, it has the title "Praise of the Ancestors of Old"; in most Greek, Latin, and Syriac mss, "Praise of the Ancestors" (cf. Mack 1985 and Lee 1986).

44:1–49:16: "I will now praise those godly people, our ancestors, each in his own time": rulers of royal rank, counselors, seers, governors, lawgivers, sages, framers of proverbs, composers of psalms, and lyric poets; their "virtues will not be forgotten … their glory will never be blotted out." Even those who have left no obvious memorial are remembered for their fidelity, and their names and their families live on and on. Enoch heads the list of ancient worthies (44:16) and appears again by way of *inclusio* in the conclusion of this section (49:14). Ben Sira extols the early patriarchs Noah, Abraham, Isaac, and Israel; Moses, "dear to God and humans," Aaron, who receives the lion's share of attention because Ben Sira loved the cult and levitical priesthood, and Phinehas; Joshua, Caleb, the judges as a group, and Samuel, the last and greatest of the judges; Nathan the prophet, David, and Solomon, who is acclaimed for his wisdom and for building the temple but is blamed for his sins with foreign women; the prophets Elijah and Elisha; pious King Hezekiah and Isaiah, the prophet of his reign; good King Josiah, Jeremiah, Ezekiel, Job, and the Twelve (minor) Prophets, Zerubbabel, Jeshua, Nehemiah; and finally Enoch, Joseph, Shem, Seth, Enosh, and Adam, the first human.

50:1–24: This lengthy panegyric serves as an appendix to the preceding section. Simeon II, son of Johanan, was high priest from 219 to 196 (cf. Josephus, *Ant* 12.3.3). He renovated the temple, fortifying its precincts, built a large reservoir, and strengthened Jerusalem. Ben Sira gives a lyrical description of the ceremonies of the daily whole-offering, and not of the Day of Atonement, as often thought (Ó Fearghail 1978).

5. Conclusion and Appendixes (50:25–51:30). Ben Sira detests the Edomites (cf. Ezek 25:12–14), Philistines (proverbial enemies of Israel), and Samaritans (who were despised by Jews; cf. Ezra 4:1–24). Then in a postscript he declares happy those who take to heart what he has written in his book (50:25–29).

51:1–12: The first appendix is a skillfully crafted prayer, classified as a declarative psalm of praise for deliverance from a major peril (Di Lella 1986).

51:12 i–xvi: Found only in Cairo ms B and in none of the versions, this hymn is probably inauthentic but old, prior to 152 B.C. (Di Lella 1966b: 101–5). Modelled on Psalm 136, it is completely biblical in orientation.

51:13–30: The second appendix is autobiographical; it is an elegant alphabetic acrostic, like the conclusion of Proverbs (31:10–31), in 23 lines (Skehan 1971). Ben Sira tells how he kept seeking Wisdom from his youth, resolving to tread her paths without relenting. He prayed with purified hands outstretched and thus attained to her. He invites the untutored to come aside with him and to lodge "in the house of instruction (or discipline)" (so Greek and Syriac; ms B: "in my house of instruction," an inferior reading), so that they also may gain wisdom, without money.

F. Composition

In composing his book, Ben Sira utilized the forms of expression and literary styles he found in the older books of the OT, especially the Wisdom Literature, of which Proverbs was by far his favorite book.

1. Literary Genres. The principal literary genres in the book are these: *māšāl,* hymn of praise, prayer of petition, autobiographical narrative, lists or onomastica, and didactic narrative (Baumgartner 1914).

a. *Māšāl.* The noun *māšāl* may have one or more of the following meanings: "proverb, aphorism, maxim; comparison, similitude; paradigm, model, exemplar; byword; word play; taunt song; allegory; didactic poem" (Duesberg and Fransen 1966: 65–68; von Rad 1972: 25–34).

A well-crafted proverb has shortness, sense, and salt. Written in memorable language, often with alliteration, assonance, and rhyme, it also heightens one's awareness. "Wealth makes wit waver." The proverb rings true to the listener. "The greatest wealth is contentment with a little." The proverb stretches the mind and captivates the imagination. "Better wit than wealth." The proverb may be amusing or

satirical. “He has great need of a fool that plays the fool himself.” A good proverb exemplifies Lord John Russell’s classic definition: “A proverb is one man’s wit and all men’s wisdom.”

Ben Sira composed many memorable proverbs: “Like an arrow lodged in a person’s thigh is gossip in the breast of a fool” (19:12). “A blow from a whip raises a welt, but a blow from the tongue smashes bones” (28:17). “Whoever touches pitch blackens his hand; whoever accompanies a scoundrel learns his ways” (13:1). “Tainted his gift who offers in sacrifice ill-gotten goods” (34:21). “A person may purchase much for little, but pay for it seven times over” (20:12). Often Ben Sira uses a single *māšāl* to introduce a series of other proverbs that develop a theme from several points of view. See, e.g., 2:1–6; 16:1–4; 18:30–19:3; 26:1–4; 28:12–16.

The numerical *māšāl* of the type *x/x*-plus-one (as in Job 5:19–22; 33:14–15; Ps 62:12; Prov 6:16–19; 30:15b–16, 18–19, 21–23, 29–31) is also found in Ben Sira: 23:16–18; 25:7–11; 26:5–6, 28; 50:25–26. Proverbs of this kind apparently served as pedagogical devices to aid in learning (von Rad 1972: 35–37). The increasing numbers in such proverbs go from one-two (e.g., Job 33:14–15) to nine-ten (e.g., Sir 25:7–11). Similar in form and function is another type of numerical proverb in which certain things are said to total up to a single number given at the beginning of the text (cf. Prov 30:7–9, 24–28). Ben Sira gives two examples (25:1–2).

The *māšāl* may also be an exhortation or warning, in brief or extended compass, stated in positive or in negative terms. The purpose was to urge readers to practice appropriate behavior and right thinking. See, e.g., Sir 28:1–7 and 51:25–27.

b. Hymn of Praise. Basically there are two modes of calling on God: praise and lament/petition. The Psalms, with few exceptions, may each be reduced to one or both of these modes. Hymns of praise occur with some frequency in Ben Sira: 1:1–10; 18:1–7; 39:12–35; 42:15–43:33; 50:22–24; 51:1–12.

c. Prayer of Petition/Lament. This kind of prayer is not common in Ben Sira. But it is found in at least two places: 22:27–23:6 and 36:1–22. These prayers have the same features as petitions in the Psalms.

d. Autobiographical Narrative. This type of narrative or confessional statement occurs in the Wisdom Literature when the sage appeals to his own authority and experience in order to emphasize a point for his students or readers (von Rad 1972: 37–38). This literary genre originated in Egypt; cf. the “Instruction of King Merikare” (*ANET*, pp. 414–18) and the “Instruction of King Amen-em-het” (*ANET*, pp. 418–19). It is found often in the OT; cf., e.g., Prov. 4:3–9; 24:30–34; Ps 37:25, 35–36; Qoh 1:12–2:26; 4:7–8; Wis 7:1–9:18. Ben Sira uses this genre to make the point that his search for wisdom was not for himself alone but for all who seek her (33:16–18). The long autobiographical poem (51:13–30) that concludes the book is primarily didactic, as is clear from its alphabetic acrostic form.

e. Lists or Onomastica. Lists of geographical, mineralogical, cosmic, meterological, and other natural phenomena became a literary genre in ancient Egypt and Mesopotamia and were later utilized in the Wisdom Literature of Israel. See, e.g., Job 28; 36:27–37:13; 38:4–39:30; 40:15–41:26; Psalm 148; Dan 3:52–90 (NAB), Wis 7:17–20, 22–23; 14:25–26. Ben Sira uses onomastica in his hymns in praise of God the Creator (39:16–35; 42:15–43:33). In the latter poem, he lists the splendors of God’s creation in the heights (sky, sun, moon, stars, rainbow, hail, lightning, thunder, winds, snow, frost, rain) and on the earth (the sea and its amazing creatures, islands in the midst of the sea, monsters of the deep). The purpose of this long list is stated at the end of the poem:

Let us praise him the more, since we cannot fathom him,
for greater is he than all his works (43:28).
It is the LORD who has made all things,
and to those who fear him he gives wisdom (43:33).

f. Didactic Narrative. An excellent example of didactic narrative is the long poem (44:1–50:24), entitled in Cairo ms B “Praise of the Ancestors of Old.” The didactic purpose of this composition is made clear in the opening and closing lines of the introduction:

I will now praise those godly people,
our ancestors, each in his own time (44:1).
At gatherings their wisdom is retold,

and the assembly declares their praises (44:15).

2. Ben Sira's Poetry. As regards metrics, Ben Sira wrote most often in 3 + 3 accents per bicolon (or poetic line). There are, however, many cola that have two as well as four accents. On occasion he also wrote in the *qînâ* meter (3 + 2); see 12:14 and 36:18–19. Most of Ben Sira's longer poems have a reasonably clear strophic structure (see the NAB and the AB translation [Skehan and Di Lella *Sira* AB]). Ben Sira made extensive use of such poetic and rhetorical devices as assonance, alliteration, rhyme, chiasm, rhythm, and *inclusio* in order to enhance the quality and power of his poetry (Di Lella 1982a). Like the great Hebrew poets before him, he often composed units of twenty-two and twenty-three lines and used these to signal the opening or closing of a major portion of the book, to show the unity of a section of text, or simply to add elegance to his work. See 1:11–30 (the opening poem of the book); 5:1–6:4; 6:18–37 (the opening poem of a part of the book); 12:1–18; 13:24–14:19 (the closing poem of that same part); 21:1–21; 29:1–20; 29:21–30:13; 38:24–34; 49:1–16 (the closing unit on Israel's great ancestors); 51:13–30 (an alphabetic acrostic poem that closes the book). Ben Sira learned this technique of composition from such OT texts as Deut 32:1–14, 15–29, 30–43; Prov 2; 6:20–7:6; 7:7–27; 31:10–31 (the final poem of the book); Pss 9–10; 25; 33; 34; 37; 94; 111; 112; 119; 145; and Lamentations 1–5 (Skehan and Di Lella *Sira* AB, 74).

3. Jewish Sources. In his prologue, the grandson writes that Ben Sira spent a lifetime studying the Scriptures of Israel. Before becoming a wisdom teacher, Ben Sira immersed himself in the Torah (Law), Prophets, and Writings that had already become the nation's literary and religious heritage. Not surprisingly, Ben Sira adapted the older Scriptures in order to make them relevant to the new Hellenistic age in which he and his people lived. Though he often quotes or alludes to a sacred text, he usually alters it or changes its wording so that there is a new emphasis or a different meaning. Compare, e.g., Deut 6:5 and Sir 7:29–30; Job 29:21 and Sir 13:23; Isa 51:3 and Sir 15:6. Ben Sira cites or alludes to the Pentateuch, Joshua, 1–2 Samuel, 1–2 Kings, 1–2 Chronicles, Nehemiah, Psalms, Job, Isaiah, Jeremiah, Ezekiel, Haggai, and Malachi. He also mentions the Judges (46:11–12), the Twelve Minor Prophets (49:10), the Psalms as compositions of David (47:7), and Proverbs as the work of Solomon (47:14–17).

Ben Sira often bases his didactic discourse on a single text from the Torah. See, e.g., 3:1–16 on the honor due to parents, a section that explains Exod 20:12 (or Deut 5:16), the commandment to honor one's father and mother. But the work that Ben Sira comments on most frequently is Proverbs, the book most like his own. He did not merely quote or paraphrase a maxim from Proverbs but explained and developed its implications for his own day and world. His dependence on Proverbs can be seen in almost every part of the book. Compare, e.g., Prov 8:22 and Sir 1:4; Prov 1:7 and Sir 1:14; Prov 8:18–19 and Sir 1:16–17; Prov 17:3 and Sir 2:5; Prov 3:5–6 and Sir 2:6–9; Prov 3:34 and Sir 3:18. There are of course differences in subject matter and emphasis between Proverbs and Ben Sira, for the social matrix and political situation had changed considerably. Nonetheless both books reflect the same type of wisdom traditions and the same religious heritage. By commenting and reflecting on Proverbs and other parts of the OT, Ben Sira created a new synthesis that served the needs and preoccupations of the Jewish community of his day. Herein lie Ben Sira's genius, significance, and lasting contribution to the thought of Israel's sages.

4. Gentile Sources. Though Ben Sira opposed vigorously any compromise of Jewish values and pronounced a curse on those who forsook the Law (41:8), he himself learned a great deal from the world in which he lived, a world that included non-Jews. He traveled extensively abroad (cf. 34:9–13) and doubtless met many gentile sages; we may assume that he read their literature (cf. 39:2–4). It is not unreasonable to believe that he would incorporate some of what he read into his own book. Proverbs itself, Ben Sira's favorite source, provided a legitimate precedent for borrowing from gentile literature. Prov 22:17–24:22, a section that may be called "The Thirty Precepts of the Sages," is modelled in part on an Egyptian work entitled "Instruction of Amen-em-ope" (*ANET,* 421–24).

There can be little doubt that Ben Sira also derived material from gentile sources. Compare, e.g., Sir 14:18 and *The Iliad,* vi 146–49. T. Middendorp (1973: 8–24) provides a good overview of evidence adduced by scholars who have seen parallels between Ben Sira and various Greek authors. He claims there are about a hundred texts in Ben Sira that have clear parallels in Greek literature. J. T. Sanders

(1983: 29) rightly criticizes Middendorp for exaggerating Ben Sira's dependence on Greek sources. Then Sanders (1983: 33–38) shows that there are many convincing parallels between Ben Sira and Theognis. He explains (1983: 55–59) that Ben Sira used Hellenic materials only when it suited his Jewish purpose, in which case he claimed it for Judaism. Thus despite the use of Greek ideas, what Ben Sira wrote was an essentially Jewish book. Apparently, Ben Sira knew Egyptian Wisdom literature as well, for "The Satire on the Trades," also called "The Instruction of Duauf" (*ANET,* 432–34), seems to be the source, directly or indirectly, of many ideas found in Sir 38:24–39:11 (Skehan and Di Lella *Sira* AB, 449–53). The most important source, however, is *Phibis,* of which over 15 per cent, according to Sanders's calculation (1983: 98–99), is reflected in Ben Sira. But Sanders (1983: 102) rightly insists that Ben Sira never quotes exactly from *Phibis* material; rather, "Ben Sira derived *gnomic insight* from *Phibis.*"

Ben Sira's dependence on several gentile sources seems beyond question. But it must be observed that Ben Sira utilized certain gentile expressions and aphorisms only because he judged these to be true and hence, in his mind, conformable to Jewish doctrine. What he does, in effect, is to make his gentile sources as Jewish as possible; and this procedure is far more important and significant for our understanding of his book than the fact that he borrowed or adapted such material in the first place. Though he employed foreign authors, what he writes comes out as something completely his own, and accordingly can be described only as something thoroughly Jewish and compatible with earlier biblical tradition. That is why his maxims, even when they parallel material from Theognis or *Phibis,* have more the tenor and theology of Proverbs than of either pagan source. Ben Sira made use of gentile materials, not because he gave in to the spirit of compromise and syncretism that was rampant at the time, but because he felt he had to show his fellow Jews that the best of foreign thought is no danger at all to the true faith but could even be incorporated into an authentically Jewish book, the purpose of which was to encourage fidelity to the ancestral religion (Skehan and Di Lella *Sira* AB, 49–50).

G. Theology

Like other biblical authors, Ben Sira had no intention of offering a systematic theology. As noted above (E), there is little discernible order or obvious coherence in the topics he chose to discuss. What is offered here is not exhaustive or strictly systematic, but rather selective in an attempt to show the dimensions and grandeur of Ben Sira's theology. But I shall also point out his considerable limitations. For similar surveys, cf. Burkill (*IDB* 2: 19–21), Duesberg and Fransen (1966: 53–64), Kearns (*NCCHS,* 543–46), and Skehan and Di Lella (*Sira* AB, 75–92).

1. Wisdom as Fear of the Lord. There is dispute about the primary theme of The Wisdom of Ben Sira. J. Haspecker (1967: 87–105) argues that fear of the Lord is the total theme *(Gesamtthema)* of the book whereas G. von Rad (1972: 242) and J. Marböck (1971) insist that wisdom is the fundamental theme. R. Smend (1906b: xxiii), however, suggests the best approach when he writes: "Subjectively, wisdom is fear of God; objectively, it is the law book of Moses (chap. 24)." Hence I would contend that Ben Sira's primary theme is wisdom *as* fear of the Lord, and that his fundamental thesis is this: wisdom, which is identified with the Law, can be acquired only by one who fears God and keeps the commandments. Ben Sira puts it this way:

The whole of wisdom is fear of the Lord;
  complete wisdom is the fulfillment of the Law (19:20).

The expression "fear of God," or its equivalent, occurs fifty-five to sixty times in Ben Sira. In the rest of the OT, only the Psalter, where the expression is found 79 times, has a larger number of occurrences (Haspecker 1967: 82). Clearly, fear of the God is a paramount concern of Ben Sira. But so is wisdom (Gk *sophia*), a noun that occurs 55 times in the Greek translation. The opening chapters (1:1–2:18) contain the thematic introduction to the book; these give a detailed treatise on wisdom as fear of God, an expression found 17 times. But the word "wisdom" occurs 11 times in chap. 1 alone.

At the outset Ben Sira states his argument:

All wisdom is from the Lord,
  and with him it remains forever (1:1).

He restates the same idea at the beginning of the second half of the book where he has personified Wisdom say:

From the mouth of the Most High I came forth,
and mistlike covered the earth.
In the heights of heaven I dwelt,
my throne on a pillar of cloud (24:3–4).

Wisdom, says Ben Sira, existed before all other creatures and will be everlasting:

Before the ages, from the first, [God] created me [Wisdom],
and through the ages I shall not cease to be (24:9).

Ben Sira derived many of his ideas about wisdom in 24:1–22 from Prov 8:22–31. Wisdom is something God alone possesses fully (1:8); only he can pour "her forth upon all his works" (1:9).

God confers the gift of wisdom solely "upon his friends" (1:10b), i.e., those who "keep the commandments" (1:26) of the Law and fear him (15:1; 43:33). Ben Sira calls fear of the Lord "the beginning of wisdom" (1:14a; cf. Prov 9:10a), the "fullness of wisdom" (1:16a), "wisdom's garland" (1:18a), and "the root of wisdom" (1:20a). Hence fear of God is the essence of wisdom. It is also "glory and exultation, gladness and a festive crown … [It] rejoices the heart, giving gladness and joy and length of days" (1:11–12). Fear of the Lord and wisdom make life meaningful and satisfying and full of days (1:20b; 34:14–20; cf. Deut 6:24; 30:15–20).

Nothing is better than the fear of the Lord,
nothing sweeter than obeying his commandments (23:27cd).
Whoever finds wisdom is great indeed,
but not greater than the one who fears the Lord.
Fear of the Lord surpasses all else,
its possessor is beyond all compare (25:10–11).

Although Wisdom holds sway over every land, people, and nation (24:6), she received the divine command to strike root in Jacob, her inheritance in Israel (24:8, the glorious people (24:12a). Hence true wisdom is to be found "in Jerusalem" (24:11b), and not in Athens or Alexandria. All of which is to say that Israelite wisdom is incomparably superior to Hellenistic wisdom and culture. Ben Sira makes his most emphatic statement that wisdom is the Law of Israel in 24:23a: "All this [what Wisdom says about herself in chap. 24] is true of the book of the Most High's covenant."

Though wisdom is a free gift from God, the faithful must do their part in order to receive it. They are to fear the Lord and keep the Law, but they must also expect affliction as a test of their fidelity (2:1–10; 4:17–19). In time of trial, the faithful will be saved by the Lord (2:10–11). They must also strive for discipline if they hope to attain wisdom (6:18):

Put your feet into her [Wisdom's] net
and your neck into her noose.
Stoop your shoulders and carry her
and be not irked at her bonds (6:24–25).

The struggle to obtain wisdom is great, but her rewards are many (6:29–31). Despite the varied and marvelous benefits wisdom confers (4:11–16), many do not strive for her because of the prerequisite discipline (6:22).

After coming to wisdom by loyalty to God and the Law, the believer must be careful not to sin, for sin drives away wisdom (4:19). That is why sinners or fools—the terms are synonyms in Ben Sira's dictionary—never attain wisdom (15:7–8). But the virtuous or the wise person—these terms in Ben Sira are also synonyms—pursues wisdom "like a scout" (14:22a) and then "pitches his tent beside her and lives as her welcome neighbor" (14:25). The result is that "motherlike she will meet him, and like a young bride she will embrace him" (15:2). It is to be observed that Ben Sira, despite his many negative comments about women (see G.6 below), personifies wisdom as a woman: Wisdom is teacher (4:11–19), mistress (6:18–31), welcome neighbor, mother, and wife (14:20–15:8), and lover to be wooed (51:13–21). These are daring images for an inveterate misogynist.

Fear of the Lord, in Ben Sira's theology, is synonymous with love of the Lord (2:15–16). In general, Ben Sira subscribes to the great Deuteronomic equation: to fear God=to love him=to keep his commandments=to walk in his ways (cf. Deut 10:12–13; 30:16). Thus wisdom as fear of the Lord puts one in a right relationship of trust and love with God and with one's neighbor.

2. Doctrine of God. Ben Sira, like his predecessors, has much to say about God. God is one and not many—the basic tenet of Israel's theology; and Ben Sira prays that all nations may come to recognize him as true God (36:1–2, 4–5). God "is from eternity one and the same" (42:21b). "He is the all" (43:27b), or as the Old Latin puts it, "He is in all," i.e., God reveals himself in all his creatures. Thus God is not only transcendent but also immanent in creation.

God is the Creator of all things, including wisdom, as noted above (G.1). He created by uttering his all-powerful word (39:17–18; 42:15; cf. Gen 1:3–24). He knows everything, for he calls into being the deepest mysteries of the cosmos; and he sees all things, even before they come to be (15:18–19; 23:19–20; 39:19–20a; 42:18–20). The amazing order and astounding beauty of the heavens as well as all the ordinary and awesome elements of nature are due to God's wisdom and might (43:1–26). Each creature exists, in God's plan, in harmony and equilibrium with the rest of creation (16:26–30). It is such splendor that prompts Ben Sira to exult in creation and to exclaim:

How beautiful are all his works,
  delightful to gaze upon and a joy to behold! (42:22)

God is merciful not only to the people of Israel but to every people as well (18:13; cf. also 17:29). But God is, above all, righteous; accordingly he punishes the evil of Jews and gentiles alike. The unrepentant sinner can expect only divine wrath (5:5–6; 11:26; 16:6–13; 35:15bc). The faithful, however, because they have a filial relationship with the Lord, may address him confidently as Father and savior (23:1a; 51:10).

3. Sin and Free Will. Texts like Exod 11:10, "Yahweh made Pharaoh obstinate, and he would not let the Israelites leave his land," seem to imply that God was responsible for Pharaoh's sin (cf. also 2 Sam 24:1–10), whereas other texts state clearly that humans have free choice to obey or disobey the Law (e.g., Deut 11:26–28; 30:15–20). As regards the question of free will, however, Ben Sira has made significant advances over the earlier biblical books. He states explicitly that God is in no way involved in human sin:

Say not, "It was God's doing that I fell away";
  for what he hates, he does not do.
Say not, "It was he who set me astray";
  for he has no need of the wicked (15:11–12).
It was he, from the first, when he created humankind,
  who made them subject to their own free choice (15:14).
Before each person are life and death;
  whatever he chooses shall be given him (15:17).

See also 15:15–16, 20. Since all humans have freedom of choice in moral decisions, they are responsible both for their good deeds and their sins (cf. Hadot 1970: 91–103).

Elsewhere, however, Ben Sira seems to suggest that God predestines some people for blessing and others for cursing (33:11–13). But Ben Sira stops far short of saying that human sin was caused by God and that predestination negates freedom of choice. The most probable meaning of 33:12cd—"Others [God] curses and brings low, and expels them from their place"—is that God curses some humans because they have already chosen to do evil; they are not wicked because God has cursed them.

With respect to the "historical" origin of sin, Ben Sira follows the traditional teaching:

In a woman was sin's beginning;
  on her account we all die (25:24).

This text was derived from Gen 3:1–6 and 2:16–17 (cf. 2 Cor 11:3; 1 Tim 2:14). In the Genesis story the woman in the Garden of Eden sinned before the man. Later Jewish theology, however, generally taught that Adam was the real cause of sin and death (Box and Oesterly *APOT* 1: 402). Paul says the same thing in Rom 5:12, 14–19; 1 Cor 15:22; cf. Wis 2:23–24.

Though Ben Sira does not present a systematic discussion of sin and free will, we may conclude from the texts given above and others such as 4:26; 7:1–3, 8, 12–13; 8:5; 21:1–2; 23:18–20; and 27:8 that he held to the reality of sin, on the one hand, and on the other, that humans have the freedom of choice to be good or bad.

4. Retribution. Ben Sira subscribed to the traditional doctrine of retribution (as spelled out, e.g., in Deuteronomy 28) according to which reward for fidelity to the Law and punishment for infidelity were meted out in this life to each individual. There was thought to be no retribution in the afterlife. Adversity and suffering could serve, however, also as a test of fidelity (cf. Judg 2:22–3:6). After death, saint and sinner alike went to Sheol (the netherworld) from which the dead would not rise again (cf. Job 14:12). Hence Sheol cannot be considered a place of retribution. Its inhabitants were said to share alike a dark, dismal, and dull survival separated from God (Di Lella 1966a: 143–46).

Ben Sira states repeatedly that reward for virtue and punishment for vice take place only in the here and now:

Opt not for the success of pride;
remember it will not reach death unpunished (9:12).
Give, take, and treat yourself well,
for in the netherworld there are no joys to seek (14:16).

Humans must, therefore, seek their complete meaning and fulfillment only in the present life; there is nothing else to hope for. Survival in Sheol is gloomy and pointless:

Who in the netherworld can glorify the Most High
in place of the living who offer their praise?
No more can the dead give praise than those who have never lived;
they glorify the Lord who are alive and well (17:27–28).

For the Jew, there was no life worth living without the worship and praise of the Lord.

Suffering may come to the faithful as a test of their loyalty or as a means of purification:

My son, when you come to serve the Lord,
prepare yourself for testing (2:1).
For in fire gold is tested,
and those God favors, in the crucible of humiliation (2:5).

In the long run, however, the upright will enjoy long life (1:12), good health (1:18), a good marriage (26:3), happiness (26:4), joy in their children (25:7c), and a good and lasting name (37:26; 39:11). Being a keen observer of real life, Ben Sira was, however, painfully aware of the anomalies involved in this theory of retribution: often enough good people did die young and in agony, and bad people did prosper till the end of their lives. But, writes Ben Sira, disaster awaits the sinner though it be delayed till the last hours of life:

It is easy for the Lord on the day of death
to repay a person according to his conduct.
Brief affliction brings forgetfulness of past delights;
the last of a person tells his tale (11:26, 27).

After death, a person lives on in his children and in his good, or bad, name. A virtuous parent can approach death with calm assurance:

At the father's death, he will not seem dead,
since he leaves after him one like himself (30:4).

But the wicked parent faces a grim future, for he will receive only reviling from his children:

Children curse their wicked father,
for they are in disgrace because of him.
When you stumble, there is lasting joy;
and when you die, you become a curse (41:7, 9cd).

A good reputation or name also insures one a form of survival after death:

Have respect for your name, for it will stand by you

more than thousands of precious treasures;
The good things of life last a number of days,
but a good name, for days without number (41:12–13).

The original Hebrew text of Ben Sira does not even mention the possibility of rewards or punishments after death. But the grandson's Greek translation does make definite allusions to retribution in the afterlife; see, e.g., Gk 7:17b and 48:11b. This fact is not unexpected, for the grandson made his translation of GI (see D.2 above) in Alexandria after the publication of the book of Daniel, in which a blissful resurrection is promised to the faithful (Dan 12:1–2a), whereas apostate Jews "will become everlasting objects of contempt and abhorrence" (Dan 12:2b, AB). GII has even more references to retribution in the hereafter; see, e.g., 2:9c; 16:22c; 19:19. The Syriac also has explicit references to life beyond the grave (cf. 1:12b, 20; 3:11b) as does OL, a Christian translation (cf., e.g., the glosses after 18:22b and 24:22b). Cf. Skehan and Di Lella (*Sira* AB, 86–87).

5. Ritual, Social Justice, and Morality. Ben Sira has a high regard for the priesthood and temple worship (cf. 7:29–31). He delights in describing Aaron decked out in his liturgical vestments performing his priestly functions (45:6–22). The glowing panegyric of the High Priest Simeon II (50:1–21) officiating at the ceremonies of the Daily Whole-Offerings suggests that Ben Sira attended the temple rituals with some regularity. He praises David for his constant prayer (47:8a) and for making music a major part of the temple ritual (47:9–10).

But prayer, temple sacrifice, and liturgy are utterly worthless if one's personal morals are not what they should be, especially in the area of social justice:

Tainted his gift who offers in sacrifice ill-gotten goods!
Presents from the lawless do not win God's favor.
The Most High approves not the gifts of the godless,
nor for their many sacrifices does he forgive their sins (34:21–23).

The Law is essentially a moral law, for which there are no substitutes. Like the great prophets (Amos 5:21–25; Isa 1:10–20), Ben Sira states categorically that sacrifice itself is an abomination when offered by one who has trampled on the rights of the poor:

Like one slaying a son in his father's presence
is whoever offers sacrifice from the holdings of the poor.
The bread of charity is life itself for the needy;
whoever withholds it is a person of blood.
He slays his neighbor who deprives him of his living;
he sheds blood who denies the workingman his wages (34:24–27).

In contrast, observance of the moral law is the highest form of sacrifice and worship of God:

To keep the Law is a great oblation,
and whoever observes the commandments sacrifices a peace offering.
In works of charity one offers fine flour,
and when he gives alms he presents his sacrifice of praise.
To refrain from evil pleases the Lord,
and to avoid injustice is an atonement (35:1–5).

Although the offering of sacrifice is enjoined by the Law, only "the just person's sacrifice is welcomed" (35:9a). The Lord refuses the oblations and contributions of those who are guilty of injustice (35:14–15). Ben Sira teaches that concern for social justice is the absolutely indispensable precondition for one who wishes to please the Lord in the temple cult. In Ben Sira's theology, concern for social justice is far more significant and central to authentic religion than any prescribed ritual, no matter how colorful, inspiring, and emotionally satisfying it may be (Snaith *Ecclesiaticus* CBC).

Thus personal morality must take precedence over all else; without it religious practices, even the most sublime, become exercises in hypocrisy. Ben Sira's principal moral concerns are social justice and almsgiving.

Give a hearing to the poor,

and return his greeting with deference.
Deliver the oppressed from his oppressors;
let not right judgment be repugnant to you.
To the fatherless be as a father,
help the widows in their husbands' stead;
Then God will call you a son of his,
and he will be more tender to you than a mother (4:8–10).

Teaching of this kind Ben Sira learned from biblical tradition: e.g., Exod 22:22; Deut 24:17–22; Lev 19:9–10; Job 29:11–16; Prov 14:13; Amos 5:10–15. Ben Sira insists that the poor must be treated kindly and generously for this very good reason:

As water quenches flaming fire,
so alms atones for sins (3:30; cf. Prov 10:12; 1 Pet 4:8).

In caring for the needy and the oppressed, you must never delay or behave in a patronizing way, for such conduct is insulting and may anger them, and they may hurl at you a curse that their Maker will hear (4:2–6; cf. also 7:10b; 29:8–13; 35:3–4).

6. Attitude toward Women. Contemporary Western readers will be repelled by much of what Ben Sira has to say about women. See these texts that deal with woman as wife, mother, daughter, adulteress, or prostitute: 3:2–6; 7:19, 24–26; 9:1–9; 19:2–4; 22:3–5; 23:22–26; 25:1, 8, 13–26:18; 28:15; 33:20; 36:26–31; 40:19; 23; 42:6, 9–14. At the outset, it must be noted that Ben Sira was a typical oriental Jewish male who wrote his book in a patriarchal society and culture in which a woman had few rights as a free and sovereign human being and was subject in almost every aspect of her life to either her father or her husband. In most of the OT, woman was regarded as man's chattel, whom he could dispose of for his personal advantage (cf. Gen 12:12–20; 19:8; Judg 19:24–30). In Exod 20:17, one form of the conclusion of the Decalogue, the wife is listed with a man's property. It was legal, hence moral, for a man to sell his daughter as a slave, and she could not be freed (Exod 21:7), as could a male slave, at the end of six years' service (Exod 21:1–2). This was the religiously validated social order Ben Sira lived in. Thus we could hardly expect that he would write about women in a way that would appeal to us in a Western social order in which, for the most part, women are socially and politically equal with men, at least in law if not in fact.

Ben Sira was not motivated by a personal, negative bias against women, as W. C. Trenchard (1982) attempts to prove. Rather he simply reflects the typical male-oriented mind-set and outlook of his time and culture. This fact, however, does not mitigate his intemperate comments that are often chauvinistic (e.g., 25:13–26) or even downright gross (e.g., 42:14a); such remarks are to be deplored. But it must be remembered that in the patriarchal society in which Ben Sira lived and taught, such remarks would not have occasioned any serious criticism or rebuttal, for women were viewed only in their sociologically legitimated roles, i.e., in their various relationships to the significant men in their lives, and never as autonomous human beings or the equals of men. Moreover, Ben Sira wrote his book only for the instruction of young men in a male-dominated society; hence his vocabulary and grammar are masculine-oriented. Like the other biblical wisdom writers before him, he simply had no intention of instructing young women. When we take such factors into account, we can see why Ben Sira wrote about women the way he did. But that does not make his distressing and often cynical, even caustic, comments about women any more acceptable for us today. See Bailey (1972) and McKeating (1973–74).

WITNESS, ALTAR OF (PLACE) [Heb *lammizbēaḥ kî ʿēd hû*ʾ (לַמִּזְבֵּחַ כִּי עֵד הוּא)]. An altar the Transjordan tribes erected to show that they also worshiped the Lord and were part of his people (Josh 22:34). The KJV simply transliterates the name of the altar calling it "Ed." The best Hebrew mss do not give the name of the altar. Many reasons have been advanced for this: the name may have been considered too holy to mention, too scandalous, or it could have been dropped through a copyist's error. Most later mss and versions supply "witness" as the name of the altar, compare the LXX *(martyrion),* Syriac, and Targums. The name was probably inferred from the context (Josh 22:27–34) or perhaps influenced by Isa 19:19–20. Rashi also said to supply "witness" as the name of the altar.

Soggin (*Joshua* OTL, 213) suggested that the altar may have been more than an altar; it could have been a defensive structure to help control access to Gilgal. He further suggested that the name "witness" may conceal an original "pact or alliance" between the tribes on either side of the Jordan.

WIZARD. See MAGIC (OT).

WOE. An interjection denoting pain, discomfort, and unhappiness. It is a distinctive form of prophetic speech, and is found both in the OT and in the NT.

A. OT "Woe" Oracles

1. Forms and Usage. This distinctive form of prophetic speech is often found accompanying an accusation or threat which immediately preceded an announcement of judgment. The particle *hôy* occurs approximately 50 times in the OT. It is closely related to the less frequently occurring *ʾôy,* as well as the particle *hāh.* All three particles are onomatopoeic in origin, expressing a sharp outburst of feeling, sometimes of anger, sometimes of grief, and sometimes of alarm. In its most striking occurrences in prophecy *hôy* is followed by a descriptive definition, frequently couched in participial form, of the persons and activities against which this feeling is directed. It is characteristic, therefore, that the woe cry should be used in an impersonal formulation expressing intense anger and directed against certain types of activity which are strongly disapproved of: "Woe to those who do …" We may cite Isa 5:8 as a typical example of the prophetic use of the formula:

Woe to those who join house to house,
who combine field with field,
until no more room is left,
and you are left, dwelling alone in the midst of the land.

The judgment that is merited by such anger, which is expressed prophetically as conveyed by the mouth of God, is then set out in the pronouncement which follows (v 9 see also Mic 2:1–3).

Accepting this to be the fullest and most typical form of the prophetic woe oracle, we can note the following features. It is an intense outburst of invective directed against wrongdoers, conveying a note of threat, which is then more fully spelled out in the pronouncement that follows.

Problems have arisen in connection with the woe oracles because this full form is not adhered to in any uniform way. Attempts to draw all the main occurrences under a single heading have proved difficult to maintain. Similarly most modern English translations have found it impossible to establish any uniform

English equivalent; the use of "Woe to …" has sometimes appeared archaic, with a consequent concern to avoid using it as far as possible (so NEB), and there is disagreement whether *hôy* and *ʾôy* should be regarded as identical in significance (Wanke 1966). Most of all, however, uncertainty has arisen over whether the prophetic usage is to be connected with the use of the *hôy* cry in a funerary lamentation (Janzen 1972: 3–39).

The prophetic usage of the *hôy* cry as a threat appears in three major clusters: Isa 5:8, 11, 18, 20, 21, 22; 10:1; Amos 5:18; 6:1, 4; and Hab 2:9, 12, 15, 19. In the book of Isaiah there are other instances of the *hôy* cry evidencing a somewhat different usage and significance (Isa 1:4; 10:5; 17:12; 18:1). The LXX usually translates with *ouai*, but occasionally varies this by using *ō*. Janzen (1972: 18) comments that "Biblical *ouai* does not occur outside of the LXX and the New Testament." Ugaritic includes the interjection *y* and *ya* which appear to be closely related to the Hebrew *hôy* (cf. also Akkadian *uʿa*). Both in Ugaritic and Akkadian the cry is followed by a vocative, as it is in the biblical funerary lament (e.g., Jer 22:13–15).

2. Origin and Development of the Woe Oracle. Initial attempts to understand the form and significance of the prophetic woe oracles proceeded on the assumption that they were adaptations from the cultic curse formula (Westermann 1960: 137; Deut 27:15). This would carry the conclusion that the woe oracle was simply a by-form of the curse, or had been consciously modified by prophets from the more commonly occurring curse formula.

Such curse-formulae, however, show some points of contact with didactic conventions, indicating that "Cursed is the man who …" could have been used in a weakened fashion as a means of expressing disapproval of certain types of conduct. From this it is then possible to explain the widespread use in didactic contexts of the benediction formula (*ʾašĕrê* …), which in several respects represents a close formal parallel to usage of the woe cry. Although the sense is opposite there would then be a simple contrast: "Woe is he who …./Blessed is he who …" If this were the case, it would strengthen the claim that the woe-cry originated as an educational device delineating reprehensible forms of conduct (Gerstenberger 1962: 249–263; Wolff 1964: 12–23).

A very different line of explanation for the origin and development of the prophetic woe oracle has also been proposed and has received a considerable measure of support and attention. In this theory the prophetic *hôy* formula is regarded as a development and adaptation from the use of the identical cry *(hôy)* in funerary lamentation, such as Jer 22:18 (Clifford 1962: 458–64; Janzen 1972: 40–80). The use of the woe oracle would then contain an indirect allusion to funerary usage, clearly intended by the prophet, suggesting the fatal consequences of the actions condemned (Vermeylen 1978). There are, however, two major problems. The first of these concerns the syntactical point that, in the funerary usage, the cry is followed by the vocative, whereas in the prophetic invective it is followed by an impersonal third-person formulation. This feature is regarded as a major objection by Kraus (1973: 15–46), but is much alleviated by several observations concerning usage in cognate languages by Hillers (1983: 185–88). The second, and potentially more fundamental, problem is that in the funerary lament the *hôy* cry expresses grief, whereas in the prophetic invective it clearly expresses intense anger. How has one emotion been transformed into the other? A solution to this question is put forward by Janzen in suggesting that the emotion of grief passed over into a desire for vengeance against the cause, whether human or supernatural, which had occasioned death. Consequently, from this desire for vengeance there arose an expression of intense anger (Janzen 1972: 27–39). It has to be noted that this requires a rather speculative and difficult emotional transition in order to connect the prophetic use of *hôy* with that of funerary lamentation. It is possible, however, that nothing more was intended by the prophetic usage than to suggest, even perhaps vaguely, a funerary situation. On the other hand, it may be noted that the use of *hôy* in prophetic contexts to convey grief and commiseration (Isa 1:4; 17:12 etc.) would serve to strengthen the belief that the cry of lamentation and the cry of anger were originally separate. The use of a very simple onomatopoeic particle to express both emotions has given rise to the notion that the one originated from the other. In reality the two originally separate cries have come to be associated with each other.

RONALD E. CLEMENTS

B. "Woe" in the NT

At the start of an oral statement, the Gk *ouai*, "woe," denotes pain, discomfort, or unhappiness. It is then followed by an indication of the person/thing (in the dative, nominative, or accusative case) to whom the unpleasant reality relates. Woes are found in biblical and extra-biblical literature, including intertestamental and rabbinic texts. Thirty-seven woes are found in the NT, especially in the gospels of Matthew (13 woes) and Luke (15 woes).

With the exception of Matt 18:7 (the world), Luke 10:13 (Chorazin and Bethsaida = Matt 11:21), and Rev 18:10, 16, 19 (Babylon), the NT woes are directed to persons or groups of persons. Paul's hapax use of a woe (1 Cor 9:16) is the only NT woe that is directed to the speaker/writer himself.

1. Revelation. The use of "woe" in the book of Revelation—none are found in the other books of the Johannine corpus—is also unique. Revelation contains the only NT woes where the initial interjection is doubled for emphasis' sake (Rev 18:10, 16, 19; and 8:13, where *ouai* is trebled), a rhetorical device also attested outside the bible.

Ouai is used as a noun only in Revelation (four times, twice each in Rev 9:12 and 11:14). In each instance the noun *ouai* is qualified by an ordinal. The first woe is described in Rev 8:12–9:12, a series of plagues on the inhabitants of the earth, introduced by a blast of the fifth angel's trumpet. The second woe is described in Rev 9:13–21 where, at the sound of the sixth angel's trumpet, three additional plagues are let loose upon humankind. The third woe is yet to come, but, according to the apocalyptic vision of the seer, it is to come soon (Rev 11:14). These enumerated woes are introduced by an announcement from a screeching eagle, "woe, woe, woe to those who dwell on the earth" (Rev 8:13). The triple *ouai* may not only be a case of repetition for emphasis' sake; it may also serve as an announcement that three woes are to follow.

2. Synoptics. The majority of the woes found in the Synoptics derive from the Q source (Luke 10:13; 11:42, 43, 44, 46, 47, 52; 17:1 [with their parallels in Matthew]; Matt 18:25 [= Luke 11:39]; and possibly Luke 6:24–26). They are found principally in three major collections: the seven woes of Matt 23:13–33, the four woes of Luke 6:24–26, and the six woes of Luke 1:42–52.

The presence of isolated woes such as Luke 10:13 and 17:1 (from Q) and 21:23 and 22:22 (from the triple tradition) indicate that the woes were originally uttered as independent sayings. As is the case with the beatitudes, their collection is a literary phenomenon. It is quite likely that Jesus made use of woes in his speech—as a kind of negative prophetic oracle—but the actual formulation of the woes in the Synoptic Gospels as well as their literary context generally reflects the editorial hand of the respective evangelists.

The two Markan woes (Mark 13:17; 14:21; par.) are eschatological sayings. The seven woes of Matt 23:13–33 are derived from Q (cf. Luke 11:42–52), but the designation of those to whom the woes are addressed, "scribes and Pharisees, hypocrites," in all seven woes is clearly an element of Matthean redaction and reflects the situation of his community, trying to define its existence with respect to Pharisaic Judaism. In the Textus Receptus there is an eighth woe in the collection (Matt 23:14), but this is not found in the older majuscules and seems to have been a scribal formulation under the influence of Luke 20:47.

Except for the four woes appended to the beatitudes (Luke 6:21–26), all of the woes in Luke have a parallel in Matthew. The woes of Luke 6:24–26 accentuate Luke's social interpretation of the beatitudes. They appear to have been formulated by Luke on the basis of extant Q material (not, however, in the form of woes). The presence of these four woes in Luke's Sermon on the Plain is consistent with some antithetical formulations in the tradition of the sermon. Ecclesiastes 10:16–17 provides a biblical precedent for the juxtaposition of a beatitude and a woe. In terms of content, these woes are consistent with some prophetic elements in the Jesus tradition (cf. Luke 11:37–44). Their Lukan formulation is congenial with Luke's own views on the poor and the marginalized.

WOMEN. This entry consists of three articles that survey aspects of women's lives and social status in the world of the Bible. The first focuses on women in Mesopotamia, the second on women in the OT, and the third on women in the NT.

MESOPOTAMIA

Information on the lives of Mesopotamian women is available in a rich, though uneven, assortment of sources: excavated artifacts, works of art (reliefs, sculptures, seals), literary texts (love poetry, epics, wisdom literature), and contemporary documents (administrative, legal, and epistolary texts). The last have been the focus of most Assyriological study regarding women, especially the many law codes which devote much space to marriage and divorce (Driver and Miles 1955).

Despite the views of some to the contrary (e.g. Kramer 1976), Mesopotamian civilization, consisting of Sumerian, Babylonian, and Assyrian traditions, was throughout its long history patriarchal in structure orientation. The greater prominence of female and mother goddesses in the very early period, the proliferation of female figurines, and even the possible existence of female polyandry do not constitute evidence of matriarchal rule. Socioeconomic and political changes, so characteristic of Mesopotamian history, were the significant factors that must have impinged upon and affected the status of women. But study of these in relation to women's lives is still in its infancy. Furthermore, the accidental nature of textual and archaeological finds should not be overlooked as it so frequently skews the evidence.

The Mesopotamian woman was, with few exceptions, defined either as the daughter of her father or as the wife of her husband. Women rarely acted as individuals outside the context of their families; those who did were members of royal and elite families. The quality of the lives of ordinary women can be guessed at with some accuracy. Especially revealing for this are the administrative texts found throughout Mesopotamian history.

B. Economic Role
C. Cultic Roles
D. Royal Women
E. Images of Women

———

A. Marriage, Divorce, Widowhood

The laws of Mesopotamia, which may or may not represent the actual legal realities, nevertheless mirror ideal rules to govern spheres of prime concern to women (and men): marriage, divorce, and inheritance.

Because these have been the subject of much writing by generations of Assyriologists, they are here treated summarily.

From a Sumerian proverb it would appear that child marriages were frowned upon ("I will not marry a wife who is only three years [old] as an ass [does]"). Girls, and possibly boys too, were expected to marry not long after reaching puberty. Elopement was not regarded favorably. The permission of parents was necessary for marriage to be recognized. Betrothal arrangements were made by fathers (at times along with the mother). If the father was dead, the mother alone or the oldest brother would initiate the proceedings. It can be assumed that the girl's consent was not unsolicited. Except in dynastic marriages arranged to cement political alliances (see D below), love may often have played a role in the match. For although there was a double standard in Mesopotamia it was assumed and expected that love and sexuality would be confined to the conjugal relationship, that the husband would not seek out slave girls and prostitutes for sexual gratification.

Marriage, with some differences depending on time and place, was formalized by the exchange of gifts between the two families. The bride was usually given a dowry (described variously as *šeriktu, širku, nudunnu*) by her father. This was of supreme importance to the girl for should her husband divorce her, she took this back with her. Otherwise, at her death it belonged to her heirs. The father of the bride in return received a bridal gift from the groom or the groom's father *(terḫatu, zubullu, biblu).* On occasion a husband might, if he wished, provide his wife with a gift *(nudunnû)* to insure her support after his death. Rites of passage, such as anointing, making the transition of the bride from unmarried to married status, are attested mainly in early Sumer and late Assyria. Bathing and libations might also have such significance in Babylonia (Greengus 1966). Veiling the bride is mentioned in Assyrian laws.

By and large, except among royalty, monogamy was the rule. However, in certain cases, such as sterility or disease, a man might take a concubine as a secondary wife to bear children. The primary wife's superordinate position might then be spelled out in a contract. Exceptional are the examples in the Old Assyrian period of traders who have a native wife in Assyria and a foreign wife abroad.

Marriage and divorce contracts, relatively common in the earlier period, become rarer in time. It is difficult to say whether this is accidental or reflects a deterioration in women's position. Virginity, which may well have been an expectation at all times, is explicitly referred to in later marriage contracts.

Mothers, like fathers, were to be treated respectfully, the son accused of filial impiety to mother or father was to be punished. Children, daughters included, were expected to make funerary offerings to deceased parents. Childbirth and menstruation made for impurity which was removed by bathing.

Divorce was probably never a common occurrence. If a man divorced a woman without a legitimate reason once she had had children, he would have to forfeit all his property, at least in certain periods. Prior to the birth of offspring, he might have to pay her a limited sum in compensation. Only in the Old Babylonian period does it seem that a woman might have the right to divorce her husband if he ill-treated her, a situation which she would have to prove before witnesses.

Adultery was of course a most serious charge and grounds for divorcing one's wife. It should be noted that adultery was always defined in terms of extramarital relations on the part of the wife, never of the man. In Assyria punishment of the adulteress lay with the husband. He, and not a legal body, meted out punishment to his wife and her lover, or to her lover only if he had been aware of the woman's marital status.

The love poetry of Mesopotamia speaks only of the love between men and women and the sexual pleasure of both sexes. Women shared with men similar symptoms when they were "lovesick" *(muruṣ râmi).* There was no body/soul dichotomy and no formula as there was for the Greeks, that body/nature/woman ranked below soul/culture/man. Sexuality was enjoyed by both sexes. Male sexual dysfunctions of impotency and premature ejaculation were recognized, as evidenced by the ŠA.ZI.GA incantations recited to cure these problems.

The powerlessness of solitary women was taken into consideration by the laws. A woman deserted by her husband might usually after five years legally remarry. Under certain conditions, cohabitation with a widow was considered a common-law marriage. Sons were responsible for maintaining widowed

mothers, for arranging marriages for sisters when parents were dead, and for providing dowries for sisters who were not provided for in their father's will. Women without living male family members or possessions had few avenues for survival: slavery or prostitution. However, perhaps at most times, the two great economic centers of Mesopotamia, the temple and the palace, served as welfare institutions providing food and shelter to homeless women (and children), who thereby became part of their huge work forces.

The vulnerability and plight of widows (and orphans) are proverbial in the literature of the ANE. Nevertheless, widowhood for the well-to-do might offer the only opportunity for true independence. Even in Assyria, notorious, perhaps fallaciously so, for its mistreatment of women, the widow *(almattu),* without a male guardian, without father-in-law or sons, was given the right to "go wherever she pleases" (Saporetti 1979). There is even the rare occurrence of a widow having the primary right of inheritance of her husband's estate, even to the exclusion of her children.

B. Economic Role

Ordinarily the wife was expected to take care of her family and home. Most women, unless there were household slaves, spent their time at the traditional feminine tasks: grinding grain and baking bread (various millstones might be part of the dowry), spinning and weaving clothes for the family, cleaning, etc.

Women of independent means, though always few in number, are found at all times purchasing and selling real estate and slaves, hiring and renting out slaves and houses. In certain periods women owned general stores and taverns. In the Old Babylonian period the woman tavernkeeper *(sabītu)* was an important moneylender to her clientele. Special mention should be made of the wives of the Old Assyrian traders, some of whom managed a kind of textile cottage industry, hiring transporters to deliver their goods. The remarkable instance of a Nuzi mother, apparently head of her family, who was involved in more than thirty land purchases should be noted (Grosz 1983: 203). But these are special and limited examples of women's high economic position.

Large numbers of women of the lower social classes were employed in temple and palace workshops. Some were free, many slaves. Here too they worked in traditional feminine occupations, in the kitchen as cooks, pastry makers, and menials; in the textile industry as spinners and weavers. Usually all were under the supervision of men. Free women might have brought their children with them. Women of the poorer classes must have helped their husbands in whatever occupation they were in, for there was no sequestering of women. Women might also have worked in various agricultural jobs in palace and temple fields and with animals.

Women are well attested as midwives *(šabsūtu)* and wetnurses *(mušēniqtu).* For the well-to-do and royal households there were nurses *(tārītu)* to feed and care for children once they were weaned (traditionally at the age of three).

Rarely do women appear who belong to professions outside those related to cultic functions (see D below). But there were women sufficiently educated to serve as scribes in the Sumerian and Old Babylonian periods and even, rarely, as physicians. Here mention should be made of the literary works of Enheduanna and of the LUKUR women of the Ur III period. Women trained as musicians, singers, and dancers were part of the palace staff as well as that of the temples.

C. Cultic Roles

From the very earliest periods women appear in visual and written sources as participants in the cult. The priestess of the highest rank was the NIN.DINGIR; below her the LUKUR and NU.GIG. The last two may have been involved with sacred prostitution (Renger 1964). Priestesses are shown in reliefs and seals participating in rituals connected with the building of temples and attending banquets associated with religious fesitivals (Asher-Greve 1985). One of the major functions of the NIN.DINGIR priestess was to represent the goddess Inanna in the sacred marriage ceremonies.

From earliest times, women, presumably of high rank, dedicated votive offerings to the gods and left statues of themselves in prayerful stance in the temples as signs of their piety.

Especially in the Sumerian period, the wives and daughters of rulers represented the ruling families in temple ceremonies. In Lagash the queen traveled to temples and shrines in different cities of the kingdom to participate in festivals and give offerings.

A high point in the institution of NIN.DINGIR (Akk *entu*) is reached under Sargon, the founder of the Semitic Old Akkadian dynasty, with his appointment of his daughter, Enheduanna, as the high priestess of the Moon God at Ur. Hallo (1976) has suggested that he did this so as not to offend Sumerian sensibilities, as would have happened had he "arrogated both the political and cultic titles of the great Southern cities." Enheduanna, unquestionably one of the outstanding women in Mesopotamian history, authored several original works which served as models for later writings. For the next 500 years a succession of thirteen princesses was appointed to this position, holding office for an average of 35 to 40 years, a lifespan which probably points to their celibacy. These women, apart from cultic and literary functions, probably also specialized in dream interpretation.

The Old Babylonian period was characterized by a variety of special classes of women. Most prominent and richly documented is the institution of the *nadītus,* who were unmarried virgins. The *nadītu* of Marduk of Babylon might marry but was prohibited from bearing children, and so might provide her husband with a second wife. According to Stone (1982), the *nadītu* of Nippur, "daughter of tribal leaders, constrained by endogamy and rank, often had difficulties finding a suitable spouse." Harris (1964) stresses the concern of well-to-do families "to maintain the integrity of the paternal estate."

In Sippar, the *nadītu* of the god Samaš participated in a ceremony of the god's festival at which time "the rope of Shamash" was placed on her arm, thus marking her change in status to daughter-in-law or bride of the god. At times a *nadītu* might assume a religious name, signifying special devotion to the god or his consort Aja. The letters of *nadītus* abound in pious phrases, and they and other texts allude to their participation in religious ceremonies and the efficacy of their prayers on behalf of family members. Once a year, the living *nadītus* remembered the childless dead, thus assuming the filial obligation of living progeny. Most striking are the hundreds of legal and epistolary texts from Sippar which attest to the central importance of the *nadītu* to the economic life of the city for a major part of this period. In Nippur their business activities were not of such significance.

Also remarkable was the full share of the inheritance, equivalent to that of a male, assigned to the *nadītu* in the Laws of Hammurapi. The "ring money" usually given to them by their fathers was theirs to dispose of as they wished. And since many had to provide for themselves when they grew old, they adopted younger *nadītus,* sometimes relatives, to support them.

There are far fewer references to women characterized as *ugbabtu, kulmašītu, ištarītu,* and *qadištu.* The *ugbabtu* apparently was also not to marry and had to be sequestered in the cloister. The others were not confined and might marry and bear children. The religious functions of these women are unclear, although they were devoted to various gods and goddesses. The *qadištu* is known to have functioned as a wet nurse, and from Sumerian texts seems to have played a role in childbirth. The question as to whether any of them were involved in sacred prostitution cannot be answered at this time. See PROSTITUTION. Interestingly, in the late incantation series *Maqlu,* these women of special status are associated with witchcraft and elsewhere with prostitution. In the patriarchal society of Mesopotamia, groups of women living outside the conventional norms were anomalies and therefore suspect.

Note should be made of those women who at various times functioned as dream interpreters *(šāiltu).* They are attested throughout Mesopotamian history, but they functioned outside and below the arena of official temple religious life. Marginal too are the prophetesses, ecstatics who appear sporadically in the texts. Best known are the professional and lay prophetesses of Mari, the former attached to specific deities and temples, the latter coming from all walks of life. They are described by various terms: *āpiltu, muhhūtu, qabbātu* (Batto 1974). There are even occasional references to female diviners *(bārītu).* But only in Mari may they have enjoyed equal status with their male counterparts. See also PROPHECY (ANCIENT NEAR EASTERN PROPHECY).

D. Royal Women

Queens and princesses deserve special mention, for some of them because of their high position, and others perhaps because of exceptional personal qualities, acted more independently than other women of Mesopotamia. Here again the name of Enheduanna should be noted, and the institution of *entu* priestesses.

The names of queens and princesses, especially from Lagash, are known, and their active participation in temple administration and festivals is specified. They are represented on reliefs and inlays. Queens sat beside husbands in banquet scenes, equal in status, it would seem. The well known tomb of Queen Pu-abi of Ur of Early Dynastic times with her luxurious personal possessions and accompanying staff of 74 people give evidence of her rank and wealth. With the growth of city states, women formed "an important link in legitimating the succession" (Hallo 1976). Princesses continued to be used as instruments to cement political alliances throughout Mesopotamian history. And as is so apparent from the Mari archives, royal women had little to say about these arrangements.

Ku-bau, the one woman who became queen of Kish in her own right in Early Dynastic times, was viewed as an anomaly. A late omen text associated her rule with a hermaphroditic birth.

The archives of Karana and Mari are exceptional in giving information not only about the activities of their queens but in providing rare glimpses into the individuality and personal lives of these women (Dalley 1984). Shibtu, queen of Mari and wife of Zimri-Lim, may have given birth to eleven daughters (some perhaps were born to concubines). She was an unusual woman, well informed about various matters of state and cult. When her husband was away she managed palace personnel and distribution of food supplies. She wrote to male officials and spoke with them directly. Shibtu's concern for her husband's health and welfare is revealed over and over again in her letters.

The correspondence of Iltani, queen of Karana, also shows her to have been a person of high administrative skills. She managed the palace enterprises, especially of textile and food production, and even received appeals against injustice, taking the usual role of the king. Hers was a far less pleasant and assured personality than was Shibtu's.

Less direct, though probably no less influential, were the positions of certain queen mothers. The inscription of the Babylonian Sammuramat, wife of the Assyrian Shamshi-Adad V and mother of Adad-Nirari III, appears on a stela, a rare occurrence for a woman. She may have been responsible for the increase in the popularity of the Babylonian god Nabu in Assyrian royal circles.

Another Babylonian married to an Assyrian king, Zakutu (Aram "Naqia"), wife of Sennacherib, may have played a crucial role in the harem plot that led to her husband's death and the ascent to the throne of her son Esarhaddon.

Finally there was the incredibly long lived (104 years) mother of Nabonidus, a devotee of the god Sin, of Harran in Syria, who was probably an important religious influence on her son, an influence that led to his exceptional devotion to Sin and to his attempt to reinstitute the long dead institution of *entu* priestesses of the Moon God. His special devotion to Sin resulted in the bitter hostility of the Marduk priesthood, who welcomed his downfall at the hands of Cyrus. See also QUEEN.

E. Images of Women

The literary texts of Mesopotamia are a still underutilized source for learning about male attitudes toward women. Here one finds evidence of the high value placed on the nuclear family and on the hoped-for reciprocity between husband and wife, as well as the expected ambivalence of male toward female (the last especially in the Wisdom Literature).

The Gilgamesh Epic, for example, displays images of women, even of such an outsider as the prostitute, as nurturing, caring, and encouraging. Women were regarded positively when they gave advice and supported men in achieving their goals. Only Ištar, who acts like a man by proposing marriage, wanting to bestow gifts, and making threats, is rejected. Her behavior was unacceptable for a female.

A popular Sumerian text, translated by the ancients into Akkadian and Hittite and purporting to be a message sent by a loving son to his mother, portrays the ideal Mesopotamian woman as "beautiful, radiant, productive, gracious, joyous, sweet-smelling" (Kramer 1976), and, it might be added, as one always concerned with husband and children.

RIVKAH HARRIS

OLD TESTAMENT

The common Hebrew term for "woman" is *ʾiššâ* (constr. *ʾēšet*), which may also be translated "wife" (the corresponding masculine term, *ʾîš* "man," is used analogously for "husband," along with *baʿal* "master," "lord"). Women characterized by particular attributes are designated by descriptive nouns, adjectives or participles, used either alone or as a qualifier to *ʾiššâ:* e.g., *(ʾiššâ) zônâ* "prostitute," *hôrâ* "pregnant woman," *ʾiššâ ḥăkāmâ* "wise woman," *(ʾiššâ) zārâ* "strange/foreign woman," *zĕqēnôt* "old women," *mĕyallĕdôt* "midwives" (lit. "birthing women"). Other nouns describing women of particular age, state or position, include *bat* "daughter"; *kallâ* "daughter-in-law," "bride": *ʾāḥôt* "sister"; *ʾēm* "mother"; *bĕtûlâ* "young woman," "virgin"; *ʿalmâ* "young woman"; *naʿarâ* "young woman," "girl"; *ʾāmâ* and *šipḥâ* "female servant or slave"; *malkâ* "queen"; *gĕbîrâ* "lady," "queen mother." The term for the female of human as well as animal species is *nĕqēbâ* (typically paired with *zākār* "male," as in Gen 1:27).

A. Introduction: Methodological Considerations

In the Hebrew Bible women appear for the most part as minor or subordinate figures; yet they play an essential role in the record of Israel's faith and include some of the best remembered actors in the biblical story. The names of Sarah, Rebekah, Rachel, Miriam, Deborah, and Ruth are indispensible to the rehearsal of that story, as are Jezebel, Esther, and Eve. Behind these, however, stand thousands of

unnamed, and unnoted, women who have engaged the attention of recent biblical scholarship. Through new literary and sociological analyses attempts are being made to reconstruct Israel's history and reinterpret its literature with an aim to restoring a glimpse of the missing women and reassessing the surviving portraits.

Key to understanding the roles, images, and limited appearances of women in the OT literature is the patrilineal and patriarchal organization of Israelite society and its family-centered economy. Although the patriarchal character of the society has long been recognized, recent scholarship (summarized in Meyers 1988: 3–46) has given new insight into the economic, social and psychological dimensions of gender relations in patriarchal societies and, more specifically, into women's lives in premodern agrarian and pastoral societies, bringing a new comparative perspective to the biblical data.

The OT is the product of a patriarchal world, and more specifically, of a literate, urban elite of male religious specialists. Whatever the ultimate origin of its traditions in family worship, clan wisdom, popular tales, or the songs of women, the present form of the Hebrew Bible is the work of male authors and editors, whose views created or reflect the dominant theological perspectives. Women in the biblical texts are presented through male eyes, for purposes determined by male authors. This does not mean that women are necessarily suppressed in the account or portrayed unsympathetically. It does mean, however, that women are not heard directly in the biblical text, in their own voices; the OT gives no unmediated access to the lives and thought of Israelite women. (For implications and strategies in interpreting androcentric texts see Russell 1985; Tolbert 1983; Collins 1985; Sakenfeld 1988; 1989; Trible 1989; and Day 1989.)

Women in the biblical text provide the primary clues to women behind the text. But interpretation of these clues requires knowledge of women's lives in comparable societies, ancient and modern, where fuller documentation of the private and economic spheres offers a broader view of women's roles and activities within the context of the larger society. New archaeological investigation focusing on family and village life (size and arrangement of dwellings, density of settlement, diet, mortality rates, etc. [Stager 1985; Meyers 1988: 47–71]) together with documents from surrounding cultures relating to the domestic realm (e.g., personal letters, marriage and adoption contracts, inheritance stipulations, and other economic and legal documents [Lesko 1989; Durand 1987]) enable construction of a more adequate picture of women's roles, activities, and authority within ANE patriarchal society and, more particularly, within the family, which is the primary sphere of women's activity.

To these data from the social world of ancient Israel comparative anthropology brings a cross-cultural perspective of gender roles and relationships that correlates patterns of gender interactions with technoeconomic and sociopolitical variables, such as differences between pastoral and agrarian societies, between intensive irrigation agriculture in lowland plains and cultivation of new or marginal upland areas, and between tribal federations and centralized monarchic states. Such differences within the broad category of patriarchal societies are reflected in differing demands for women's productive and reproductive labor and differences in the value of women's services, range of activity outside the home, and authority within the family (Whyte 1978; Meyers 1988: 24–46, 189–94). Anthropological study of gender reveals complex patterns of male-female relationships within patriarchal societies, involving distinctions of formal and informal power and recognition of spheres of influence and authority, which require qualification of many commonly held views of women's lives in ancient Israel.

The OT does not yield a single portrait of women in ancient Israel. Its millennium-spanning traditions and the differing purposes and perspectives of its authors have produced a kaleidoscopic image, whose distinct components require note. A common status or life style cannot be assumed for the woman of an Early Iron Age pioneer settlement, the wife of a wealthy merchant or large landowner in Samaria or Jerusalem, the daughter of an indebted 8th-century peasant, the foreign wife of a returned exile, a priest's daughter, queen mother, palace servant, childless widow, or prostitute. Nor can one expect a common portrait from narrative compositions, proverbial sentences, prophetic oracles, and legal stipulations.

Behind the disparate images and distinct life histories, however, lies a common set of expectations and values that govern the life of every Israelite woman of every period and circumstance. These are rooted in

the need for women's labor in the domestic sphere, and more specifically in childbearing and nurture, broadly described as "reproductive" work. To this primary work, which was the expectation of every woman, are joined the major tasks of household management and provision. The importance of this work in a society in which the family, rather than the individual, was the basic social, economic, and religious unit (at least during significant periods of Israelite history), is evidenced in the honor and authority given to women in their role as mother. Fulfillment of that socially demanded, and rewarded, role also meant self-fulfillment for most women, for whom barrenness was a bitter deprivation.

It is the woman's primary and essential role within the family, with its multiple demands of time and skill, that accounts for her highest personal and social reward—but also for her restriction in roles and activities outside the family and her hiddenness in documents from the public sphere. It also accounts for changes in women's status and roles over the course of Israel's history as the size, autonomy and economic status of the family changed. And it provides clues to the interpretation of women's roles and activities outside the family, which may be understood in large measure as extensions or adaptations of women's primary roles within the family.

B. The Israelite Family

The Israelite family was in all periods a male headed household (called *bêt ʾāb* "house of the father"), in which descent and transmission of property (in particular, the patrimonial land, *naḥălâ* "inheritance") were reckoned through males. In early Israel, family associations (lineages, or "clans") and tribes based on patrilineal descent exercised primary political as well as social functions. Although the monarchy deprived the lineage system of most of its political power, the Israelite family continued to function as the basic social and economic unit and to bear a patrilineal and patriarchal stamp, exhibited in patterns of organization and authority, marriage, place of residence, and inheritance.

One consequence of patrilineal organization is that women are to some extent either aliens or transients within their family of residence. Married women are outsiders in the household of their husband and sons, while daughters are prepared from birth to leave their father's household and transfer loyalty to a husband's house and lineage. Preference for endogamy seems to have operated in certain periods as a means of reducing the strains associated with the "alien" wife (Gen 24:4; 28:1–2). When the woman was a foreigner, the strain might be perceived as a threat, as seen in the repeated condemnations of foreign marriages (Deut 7:3; Ezra 9:12; 10:2). Underlying this attack is the assumption that the foreign wife will maintain her alien ways, and more particularly her religion, undermining the religious ethos and solidarity of the family and the nation (Exod 34:16; Num 25:1–2; Deut 7:4; Judg 3:5–6; Neh 13:23–27; Meyers 1988: 185).

The OT attack on foreign wives is indirect testimony to the independence and power of women within the family sphere despite the formal structures and symbols of patriarchal power. It reflects the power of influence that wives may exert over husbands (Judg 14:17; 1 Kgs 1:15–21) as well as the important educational role of the mother in transmitting basic religious values and wisdom essential for life (Prov 1:8; 31:1). It also reflects fear of foreigners, and more particularly the foreign woman *(ʾiššâ zārâ, nokrīyâ),* who in Proverbs becomes a symbol for the immoral, seductive, and predatory woman, an embodiment of evil (Yee 1989: 54). Admonitions against intermarriage with foreigners may include reference to sons as well as daughters, but only the foreign daughter is described as a threat (Deut 7:3–4; cf. Ezra 9:2).

Another consequence of patrilineal family organization is that women do not normally inherit land. Exceptions treat daughters as placeholders in the absence of sons (Num 27:1–11), bridging the gap between the generations until their sons can resume the paternal line and legacy (insured, according to Num 36:6–9, by requiring the daughter to marry within her father's tribe). Similar concern for the preservation of the patrimony appears to underlie the institution of levirate marriage, which obligated a man to marry the wife of a deceased brother (Deut 25:5–10; Gen 38:8) or close kinsman (Ruth 2:20; 4:5–6) in order to continue the brother's "name."

The importance of patrilineal organization in ancient Israel may be seen in the prominence of genealogies and genealogical narratives in the OT. The genealogies, which serve a variety of social,

political, and literary functions, account for the majority of personal names recorded in the OT and for the great preponderance of male over female names (1212:108, approx. 12:1). As lists of those who "counted" in the society, these normally all-male lists provide dramatic testimony to the androcentrism that characterizes the formal structures of patriarchal societies. A different picture is obtained, however, by comparing the common nouns for "man" *(ʾîš)* and "woman" *(ʾiššâ),* whose ratio of occurrences is 2160:775 (KB), or roughly 3:1. Excluding the many generic uses of *ʾîš* (as, e.g., in Ps 1:1, "Blessed is the one *[ʾîš]* who walks …") increases the relative weight of references to women, suggesting the importance of women as a social category, if not as named individuals.

A characteristic feature of patriarchal societies, illustrated by the disparity of ratios between named and unnamed men and women, is asymmetry of gender roles and symbols, including language. Male genealogies, male oriented legal codes and cultic stipulations, masculine forms for generic speech, and the predominance of males in historical records and recollections all reflect the male dominance of Israel's public life and formal structures. The primary social and economic unit, however, which provided the basis for life in the public sphere, was the family, in which women exercised significant formal and informal power, at times equaling or even exceeding that of men, according to some scholars (Meyers 1988: 181, 187). Even in its reduced economic role under the monarchy, the family continued to play a dominant role in socialization.

Asymmetry between male and female-centered spheres of life may be seen in the fact that the family was represented in the public sphere by its male head or adult male members—and it is this male-dominated sphere that is the locus of the major overarching and integrating institutions of the society. Here women are to some degree always outsiders, characterized by temporary appearances (e.g., marketing, legal process, payment of vows) or marginal roles (e.g., prostitutes and cult attendants). At the same time, men are given legal authority over women, even in the sphere of women's primary activity, the family. Moreover, since the legal and religious institutions that give expression to the society's values and attempt to regulate behavior belong to the public sphere and are designed and governed by men, the values they articulate and seek to enforce are essentially male values, though formulated in general or universal terms. Thus asymmetry between the primary spheres of male and female activity has the character of encapsulation and penetration of the domestic sphere by the public sphere.

C. Primary Roles and Images

1. Wife and Mother. The life and work of the Israelite woman centered in the home and duties to family. The ideal portrait of the adult female depicts her as the mother of many children (or sons; Heb *bānîm* [pl. of *bēn* "son"] may have either meaning) and the wise and industrious manager of the household, providing for the welfare of husband and children (Prov 31:10–29). This latter image, which gives rare attention to the role of wife, is the product of Wisdom reflection designed to counsel men concerning the path of success in life, in which knowledge of women and their ways plays a critical role. Thus the book of Proverbs warns against the loose or foreign woman and especially the adulteress, who can cost a man his life (Prov 5:3–5; 6:24–35; 9:13–18), while counseling fidelity (5:15–19) and extolling the "woman of worth" *(ʾēšet ḥayil)* in detailed and extended commendation (Prov 31:10–29). Such a wife will "do him good, and not harm" (v 12). Emphasis in this portrait is on skill, resourcefulness, industry, wisdom, and charity, rather than fertility or beauty (the latter characterized in v 30 as "deceitful" and "vain").

The role of wife is rarely separated from the dominant role of mother, appearing outside the Wisdom Literature primarily in tales of courtship, conflict, and conquest (Judges 14; 1 Sam 18:20–27; Genesis 34). Here sexual attraction plays a role, but also wit and will (1 Samuel 25)—and often family or ethnic ties. Behind many scenes of courtship lies a genealogical theme, which points to an ultimate role of mother. The woman as wife also describes a fundamental biosocial category, designating the one who provides the essential sexual and social complement to the man, creating the pair that represents the species (Gen 1:27; 2:18–23) and assures its continuity (thus Noah and his sons [named] enter the ark together with his wife and sons' wives [unnamed], Gen 7:13). Here, too, the wife is usually a mother.

The role of mother dominates OT references to women. Motherhood was expected and honored, reflecting social need (Judg 21:16–17) and divine sanction (Gen 1:28). Desire for many children, and especially sons, is a prominent OT theme (1 Sam 2:7; Gen 30:1; Pss 127:3–5; 128:3–4), attributed to women as well as to men, despite the pain and dangers of childbirth. Rooted in the economic needs of subsistence agriculture and social need for perpetuation of the lineage, the demand for childbearing was rewarded with security and prestige (Deut 5:16; 27:16). As a consequence, women identified children with status (Gen 30:20; 1 Sam 1:2–8) and sometimes vied with one another in childbearing (Gen 30:1–24).

Barrenness was viewed as the ultimate disgrace, understood as a sign of divine disfavor (Gen 30:23; 2 Sam 6:20–23). (The literary theme of the barren wife—who subsequently bears—assumes this negative expectation in order to reverse it.) The barren, or childless, woman suffered not only lack of esteem, but also threat of divorce or expulsion from her husband's household at his death. Unable to continue his line, she cannot claim his inheritance, and she has no sons to support her in old age.

The role of mother included primary care of children of both sexes at least until the time of weaning (ca. age three), the education and disciplining of older children, and provision of food and clothing for the entire household. The latter required arduous and time consuming labor: sorting, cleaning, parching, and grinding grain, as well as kneading and baking bread; drawing water and collecting fuel (a task of both sexes); cleaning and butchering small animals; milking, churning butter and making cheese and yogurt; tending vegetable gardens and fruit trees; and preserving fruits and meat for storage. Women may also have produced at least some of the common ceramic ware, as suggested by cross-cultural study of ceramic production (Meyers 1988: 148). If so, OT references to male potters (Jer 18:2–4; 1 Chr 4:23) may be seen as an example of a widely attested pattern of male professional specialization of crafts originally practiced exclusively by women. Such crafts may continue as female occupations within the domestic context while men dominate commercial production (e.g., weaving, sewing/tailoring, cooking and baking).

Clothing the family involved not only spinning, weaving, tailoring and sewing, but also preparation of raw wool or flax fibers (Prov 31:13). Spinning and weaving are identified throughout the ancient Mediterranean world as symbolic of female domestic activity and skill, so that even queens and wealthy women are depicted holding a spindle (*ANEP*, 43 [pl. 144]; Prov 31:13, 19; Judg 16:14; cf. English "spinster" and "distaff side"). The mother, together with other females of the household, also bore the burden of washing and cleaning.

The mother's role in the socialization and moral instruction of small children was critical for both sexes, but her instruction seems also to have had a more formal and extended character, even in the education of sons, as attested in the Wisdom Literature (Prov 1:8; 31:1; Meyers 1988: 151–2). An extension of the mother's role as teacher and counselor may be seen in the "wise woman," whose skill (in negotiation and persuasion) commands public recognition (2 Sam 14:1–20; 20:16–22). The mother also had a special role in educating daughters in the traits and competencies expected of the adult woman (wife), as well as in specialized female skills.

Among the features that make up the OT's portrait of women there appears to be a primary cluster of attributes and images that derive ultimately from association with birthing and nurture, or womb and breasts (cf. *ANEP*, 162, pl. 469; Luke 11:27; 23:27). The pain and danger of childbirth has stamped itself on the consciousness of the OT's male narrators and poets, who employ images of women in labor as symbols of anguish and helplessness (Isa 13:8; 21:3; Jer 48:41; Mic 4:9–10). A different type of maternal pain is associated with the death of a child, formalized in the ritual wailing of women at funerals and in the specialized female profession of keener, performer and composer of dirges (Jer 9:16, 19—Eng9:17, 20). The mother's bond with the fruit of her womb is understood as deep and persisting (Isa 49:15), overriding self-interest (1 Kgs 3:16–27) and extending even beyond death, as exemplified in Rizpah's vigil over her slain sons (2 Sam 21:8–14), protecting them in death (a female role) as she could not do in life (a male role). It is also evidenced in the customary roles of women in preparing the dead for burial and in visits to tombs (Mark 16:1; cf. Luke 23:55–24:1).

Care for the dead may be seen as an extension of the mother's primary role in care for the living, initiated in the nursing of infants (1 Sam 1:22; cf. Num 11:12; Isa 45:15) and continued in nursing of the sick and infirm (2 Sam 13:5; 1 Kgs 1:2; 2 Kgs 4:18–30). If the feeling of tenderness toward the weak expressed as "compassion" or "pity" is attributed to fathers (e.g., Ps 103:13) as well as mothers, the Hebrew etymology of the term identifies it as "womb-feeling" (*raḥămîm;* verb *rāḥam* < *reḥem* "womb").

As the female head of a household or family unit within an extended household, the mother supervised the work of dependent females, including daughters, daughters-in-law, and servants. Although there is no direct evidence for the way in which multiple wives shared responsibilities of household management (narrative and legal texts focus on rivalry and favoritism: Deut 21:15–17; Gen 29:30–31; 1 Sam 1:6; cf. Exod 21:10), some form of seniority system may be assumed, especially where a second wife had the status of a concubine. Each woman, however, would have control over her own children. Normally a woman gained authority with age, together with a measure of freedom and leisure, although there is no recognized role for women comparable to that of the male "elders." It is likely that many of the specialized roles and activities of women outside the home or involving public recognition and action (prophets, mediums, wise women, keeners, midwives) were performed by older women no longer burdened by the care of small children (e.g., the wise woman of Tekoa plausibly presents herself as a widow with grown children [2 Sam 14:4–7]). Cross-cultural studies attest increased religious activity and authority, including new religious roles, on the part of post-menopausal women or women with grown children.

2. Virgin Daughter or Bride. Alongside the image of the mother is another image that represents both a prior state and an alternative or complementary ideal of the feminine, viz. the virgin daughter or bride. In this portrait female sexuality is described in erotic rather than maternal terms. The subject is the young woman who is sexually ripe and ready for love, who may be designated *bĕtûlâ* "virgin," *ʿalmâ* "young woman," "maiden," *kallâ* "bride" or, in the conventions of ANE love poetry, *ʾāḥôt* "sister" (Cant 4:9). She may be a young wife or an unmarried woman. She is described as the object of male desire (Canticles 4), but also as one who seeks a man's embrace (Cant 3:1–4). The ultimate tragedy of the death of Jephthah's daughter is expressed in the notice that "she had never known a man" (Judg 11:39). The bride is praised for her beauty (Gen 12:11, 15; 24:16; 1 Sam 25:3; Cant 4:1–5), fragrance and adornment (Cant 4:10–11; Isa 61:10; cf. 3:16, 18–24), in which she also takes delight (Cant 2:1–2; Jer 2:32). Although little of the rich erotic metaphor of the love songs is found in the restrained language of the courtship narratives, both share the ideal of the virgin bride as ripe and unblemished fruit, or fair and chaste (Cant 4:10–13, 16; Gen 24:16). The same ideal viewed from the perspective of male control underlies the legal stipulations regarding women's sexuality.

In the love poetry of the Song of Songs sex is free and freely given; but in Israelite society, as every society, it was not free. Patrilineal and patriarchal interests demanded exclusive right for men to their wives' sexuality. A woman's sexuality was consequently guarded before marriage by her father (Deut 22:13–21, 28–29; cf. Gen 34:5–7) and after marriage by her husband (Num 5:11–31). Adultery was the most serious of women's crimes, though both partners received the same sentence—death (Lev 20:10; Deut 22:22). Proverbs identifies the adulteress with the evil/dangerous woman (Prov 5:2–4; 7:10–23; Yee 1989: 61)—while the adulterer is portrayed as a weak and foolish victim, succumbing to her advances (Prov 6:32; 7:7–13, 21–27; 9:13–18). In prophetic metaphor the promiscuous bride, likened at times to a professional prostitute, becomes a symbol of apostate Israel (Hosea 1–3; 4:10, 12, 17–18; Jer 3:1–3; Ezekiel 16; 23).

Prostitution in ancient Israel (Gen 38:13–26; 1 Kgs 3:16–27; Amos 7:17; Prov 23:27) is characterized by the same ambivalence attested in other cultures (Bird 1989: 121–2, 131–3). It exemplifies the asymmetry of sexual relations in patriarchal societies, also exhibited in the "double standard" respecting premarital sex (Deut 23:28–29) and the male prerogative of divorce (Deut 24:1). Prostitution allows men to maintain exclusive control of their wives' sexuality while providing opportunity for sexual relations with other women without violating another man's rights. The prostitute, who supplies this service for her

livelihood, is a social outcast, who is generally forced into the profession by destitution or loss of parents or spouse (Bird 1989: 120–22, 129–33).

D. Roles and Activities Outside the Family

Women's roles and activities outside their household-centered work were of two types, assistance in the basic tasks of production (agriculture and animal husbandry), and specialized professions and services. Women's contribution to the primary work of production is difficult to determine; it fluctuated not only in relation to seasonal need, but also to geographic, demographic, technological, and political factors (e.g., drought, war, and disease). Meyers (1988: 50–63) argues that the peculiar ecological conditions of a frontier society demanded intensification of female labor in both productive and reproductive tasks during the early settlement period—with corresponding heightening of female status. Radically altered circumstances in later periods will have produced different patterns of participation and reward. Scanty data for all periods, however, make inferences hazardous. There is textual evidence for women's involvement in harvesting (Ruth 2, where male and female workers form distinct groups) and in tending flocks (Gen 29:9; Exod 2:16).

Women's work in clothing their households or in other types of domestic production may lead to limited commercial development in manufacture for sale (Prov 31:24); women's cottage industry may be associated with urban growth. Specialized female labor was also employed by the palace, whose workforce of female slaves or impressed servants included perfumers, cooks and bakers (1 Sam 8:13). One well attested type of professional specialization is service to other women, best exemplified by the midwife (Exod 1:15–21), who in other ANE cultures was a religious specialist as well as a medical technician.

E. Religious Life

Little is known of women's religious life in ancient Israel, except what is depicted in conjunction with men's activities (1 Sam 1:13–18) or highlighted by explicit mention of women in collective references (Neh 8:2; cf. Deut 16:11, 13, where the wife is assumed in the masculine singular address to the male househead). Inferred participation of women in activities ascribed to the "people" or "congregation" or formulated in "generic" masculine terms expands the picture, but may not represent women's actual participation, which may be limited or peripheral. Women's religious activity may also take other forms hidden from the communal record (Bird 1987: 408–10). One area of women's lives given explicit ritual attention is that related to procreation, with prescriptions for purification following menstruation and childbirth (Lev 15:25–30; 12:1–8).

Evidence of women's magic, or devotion, is seen by many scholars in the small clay plaques or figurines of a naked female found throughout Iron Age excavations. Interpreted either as amulets to aid in conception or birth (especially those depicting a pregnant woman) or as representations of a "mother goddess," these mass-produced images appear in both domestic and (peripheral) cultic sites. Although generally identified with women's practice, their precise meaning and use remains uncertain, due to the variety of forms, changing styles, and lack of clear correspondence to objects mentioned in the biblical text (Pritchard 1943; Fowler 1985: 334–5; Holladay 1987: 275–80; Winter 1983: 96–134).

Within the sphere of public religious practice women specialists are attested in several roles, especially in sources for the premonarchic period. They include women who ministered at the entrance to the tent of meeting (Exod 38:8; 1 Sam 2:22); prophets, of whom three are named: Deborah (Judg 4:4–16), Huldah (2 Kgs 22:14–20), and Noadiah (Neh 6:14); and "consecrated women" *(qĕdēšôt),* usually described as "cultic prostitutes" and associated with Canaanite type cultic practices (Hos 4:14; Deut 23:19–20). See PROSTITUTION (CULTIC). Miriam, though identified as a prophet in Exod 15:20, appears to have exercised some form of cultic leadership (Burns 1987: 39–79).

F. Legal Status

Women's legal status is a function of the larger system of social values and needs, and it cannot be isolated or absolutized. As it can be inferred from the OT's disparate and partial sources, it may be characterized as generally subordinate to that of males. This is evidenced in women's "hiddenness" as legal persons behind the male citizen or husband addressed by the law (Exod 20:3–17; Deut 16:4); in

indirect (3d person) reference to women within masculine formulated direct address (Exod 20:17), or in literary subordination to a male subject (Exod 21:3; Jer 44:25); in limitation of women's rights in conflicts of interest (Num 30:3–8), and in generally circumscribed rights and duties in the public sphere. Apart from the treatment of vows and suspected adultery (both cases involving extrafamilial interests), OT laws do not generally treat intrafamilial relationships. Parental authority over unruly children was invested in both parents (Deut 21:18–20) and also, apparently, responsibility for a daughter's chastity (Deut 22:15)—though the father alone represents his daughter "in court." As a general rule, women within the family were subject to male authority, either as daughters or wives. Only widows, divorced women (Num 30:9), and prostitutes (Josh 6:22) had legal status unmediated and unqualified by males. Although wives, together with children, slaves, and livestock, were counted among a man's possessions (Exod 20:17; cf. Deut 5:21), neither wives nor children were understood as property.

G. Literary and Symbolic Representation

While legal subordination reflects the formal structures of power, it is an inadequate measure of women's actual power or even recognized authority. Hints of the wider influence and power exercised by women in Israelite life may be seen in the OT's literary presentation of women, which depicts them as more complex and forceful than their legal status suggests and gives them leading roles in some of the critical biblical dramas (e.g., Sarah and Hagar, Rahab, Deborah, Jezebel, Huldah, Esther). The expanded role of women in literature, however, especially in family sagas and novellas, reflects artistic need as well as lived reality. Behind this need is a more general pattern of gender symbolization, exhibited in linguistic as well as literary forms.

Woman as symbol plays an important role in the OT literature and must be distinguished, at least conceptually, from woman in history or society. Important examples of female symbolization in the OT include the female as goddess or symbol of divinity (most prominently exhibited in Asherah and the *ʾašerîm*), representation of the capital city or nation as virgin, mother, or bride (Amos 5:2; Isa 40:2; Jer 31:21; Hosea 1–2), and the hypostatization of Wisdom in Proverbs 8. The negative symbolization of woman is represented in Dame Folly (Prov 9:13–18), apostate Israel (Hosea 1–2; Jer 2:20; 3:2; 4:30; Ezekiel 16; 23), and fallen Tyre (Isa 23:15–18; cf. Rev 17:4–5), all portrayed as a harlot or adulteress.

H. Conclusion: Hermeneutical Considerations

Within the OT, viewed either as canonical text or historical testimony, the women who emerge as actors testify to the essential and active role of women in the formation and transmission of Israel's faith. Despite its overwhelmingly androcentric and patriarchal orientation, Israelite faith was a woman's faith—cherished, defended and exemplified by women. But the text also exhibits a tension between the statement made by the leading female figures and that made by the nameless and voiceless women "offstage." Acknowledging their presence and incorporating their voices into the message of the OT is part of the new hermeneutical task, requiring new interpretive strategies and techniques.

Various forms of literary criticism (including rhetorical and structuralist approaches) have provided feminist interpreters with a tool for re-presenting the women of the OT in relation to contemporary concerns. As a counter or complement to historical exegesis, such interpretation focuses on the received form of the text, tracing the sexual dynamics of its narrative portraits and inviting identification with its female subjects. Depicted according to contemporary norms as victims (Jephthah's daughter)—and challengers (the Hebrew midwives; Ruth and Naomi)—of patriarchal ideology and power, or simply as survivors in a man's world, the women of the ancient text reflect and prefigure modern struggles and ideals. While interpreters such as Trible (1978; 1984), Bal (1987; 1988), Exum (1983), and Fuchs (1985) represent differing aims and approaches to the patriarchal text, they share a common reader orientation that invokes response to their retold tales: celebration for unsung triumphs, mourning and rage for unlamented victims and unnamed crimes. These literary-constructive readings present the mothers and daughters of ancient Israel as sisters "heard into speech" by modern feminist interpretation. See FEMINIST HERMENEUTICS.

PHYLLIS A. BIRD

NEW TESTAMENT

In order to understand the position and roles of women in the NT era, it is necessary first to examine the historical and social context in which 1st century women lived. The primary matrix for assessing women's roles in the Jesus movement and in early Jewish Christianity is the status and roles women had in early Judaism, especially in Israel. The position and roles of women elsewhere in the Roman Empire is also of relevance in assessing the place of women in the Pauline communities and in the communities of the gospel writers.

E. Conclusions

———

A. The Historical Setting

1. Women in Early Judaism. The Palestinian Jewish culture was one of the most patriarchal in the Mediterranean crescent. The home and family were basically the only spheres where women could play significant roles in early Judaism. This was true not only because of the extensive power that a father had over both his wife and daughters in determining their activities and their relationships, but also because various levitical laws were interpreted in such a way that women were prohibited from taking significant roles in the synagogue due to their monthly period of levitical uncleanness.

Women could not make up the quorum that constituted a synagogue, could not be counted on to recite the daily *Shema* or make the pilgrimages to Jerusalem for the major feasts, nor are there any known examples of women reading the Torah in the synagogue in Jesus' era (cf. *m. Hag.* 1.1, *m. Ber.* 3.3). Mishnah *Qidd.* 1.7 teaches: "The observance of all the positive ordinances that depend on the time of year is incumbent on men but not on women …" Women did receive and pass along some basic religious education in the home. There were, however, various teachers in early Judaism that frowned on women being given anything more than a rudimentary religious education, especially in regard to the oral *halakah* (Witherington 1984: 6–7). Furthermore, there is no evidence that prior to Jesus' ministry Jewish women were ever allowed to be disciples of a great teacher, much less travel with such a teacher, or to instruct anyone other than children. In such a restrictive context, Jesus' relationship to women must have seemed radical indeed, though on the wider scale of 1st century Mediterranean culture it seems not to have been unprecedented. In fact, seen from the broader cultural context, Jesus can be described as a reformer of patriarchal society, but not as one who outright rejected a patriarchal orientation.

In regard to the legal position of a woman in early Judaism, her testimony was considered valid by some early Jewish teachers, but suspect by others (cf. *m. Ned.* 11.10). In practice, women were entrusted with much responsibility and their word was normally accepted, especially in the home. The legal position of a woman even in a family, however, was seriously restricted in regard to the right of inheritance (she was basically entitled only to maintenance not inheritance) and the right of divorce (strictly speaking only the male could divorce, though a woman could precipitate a divorce). Furthermore, a woman was often passed from the control of her father to that of her husband with little or no say in the matter, not least because Jewish women in this era married at or soon after the time they came of age. The laws which were later codified in the Mishnah say that a woman, like a gentile slave, could be obtained by intercourse, money, or writ (*m. Qidd.* 1.1), though normally marriage was transacted by the heads of the households who would make an agreement and settle on a bride price.

These facts should not cause us to overlook the positive statements made by early Jews about honoring and respecting women, nor should we ignore the extensive responsibilities placed on a Jewish husband in regard to his wife and daughters, nor forget that much of what we have discussed resulted from the attempt by an occupied people to preserve their culture and religious way of life. Nevertheless, the dominant impression left by our early Jewish sources is of a very patriarchal society that limited women's roles and functions to the home, and severely restricted: (1) their rights of inheritance, (2) their choice of relationships, (3) their ability to pursue a religious education or fully participate in the synagogue, and (4) their freedom of movement.

2. Women in Other Mediterranean Cultures. Within the patriarchal framework that existed throughout the Roman Empire, there was a surprising degree of variety in the roles and positions women could and did assume from culture to culture. For example, in Rome women could at most be the power

behind the throne, whereas in Egypt women could openly rule. Or again, in Athens married citizen-women seem to have been confined to domestic activities, whereas women in Asia Minor, Macedonia, and Egypt engaged in their own private businesses, served in public offices, and had prominent roles in various religious cults.

Note that with the rise in popularity of the Isis cult came also the rise to prominence of all sorts of women in various significant religious roles, besides the traditional ones of being a Vestal Virgin (in Rome), or an oracle (e.g., at Delphi) roles open only to a few women who led atypical lives. Since Corinth in Paul's day was a Roman city, and Rome was generally suspicious of imported oriental religions, allowing only an indigenous religion to receive official sanction, it is difficult to assess whether the oriental cults (e.g., Isis) played any significant role in Corinthian life. More certainly, in various places in Greece and elsewhere in the Mediterranean world in the 1st century women were allowed: (1) to be the organs of revelation; (2) to have prominent roles in the Dionysian cult; (3) to take the lead in the mystery plays, and the agricultural and fertility rites (Farnell 1907, 3: 106–16).

The degree that the father/husband controlled the family varied somewhat from culture to culture in the Mediterranean world. In Asia Minor women could dispose of their own property, and their dowry remained their own. This was also true in Egypt, but in Athens women's property rights were more restricted.

In Rome, the *patria potestas* had been attenuated by laws that allowed marriage without the traditional patriarchal *in manu* procedure. Women as well as men could also end a marriage even on very flimsy grounds in Roman society. In general, a Roman woman's property rights and freedom in marriage were greater than that of women elsewhere in the Empire, with the exception of Egypt and perhaps Asia Minor and Macedonia.

It is notable that in Roman society, unlike some parts of Greece, the education of women was considered important and desirable. Even among poorer families both daughters and sons received at least a rudimentary education, while in wealthier families all children regularly had tutors (Balsdon 1962: 252). Yet this did not lead Romans, even during the age of the Empire, to allow women to vote or hold public office, unlike the case in Asia Minor.

In summary, in terms of personal, property, and educational rights the women of Rome, Egypt, Asia Minor, and Macedonia faired better than the women of Greece or Judea, but in terms of political rights Roman women were at a disadvantage when compared to Egyptian or Macedonian women (and those women in Asia Minor, Egypt, and elsewhere who inherited the benefits of Hellenism). In terms of roles and status in religious settings, women in Egypt, Asia Minor and Macedonia had more possibilities than Greek or Roman women in general, until the coming of various Oriental cults and Hellenistic ideals into Rome and the Roman colony cities in the Empire.

B. Women in the Ministry of Jesus

On a cursory examination of the gospels it might be possible to see Jesus as just another advocate of a patriarchal society, since he chose twelve men to be his personal followers, and since he probably exhorted his listeners to follow the OT commandment about honoring parents (Mark 7:10; 10:19 and parallels). In fact, it appears that he taught that for two people joined together by God divorce is not a legitimate option (Witherington 1984: 18–28). This is only one side of the story, however, for the gospels also portray Jesus as one who accepted women both as followers and as traveling companions (Luke 8:1–3). This same Jesus is said to have preferred for a woman to listen and learn from him as a disciple would, rather than to serve him in a woman's traditional capacity (Luke 10:38–42). It seems that Jesus rejected many levitical laws about clean and unclean since he apparently fellowshipped with the unclean, allowed unclean women to touch him, and was willing to touch a corpse and stop a funeral procession to help a woman (Mark 5:25–34 and parallels; Luke 7:11–17, 36–50). Nowhere is it recorded that after such occasions Jesus went through the regular levitical procedures to make himself clean again.

Further light is shed on Jesus' attitude toward women by the radical sayings which suggest that among his followers the family of faith supercedes the physical family as the primary group of identification (Mark 3:34–35 and parallels; Matt 10:34–39= Luke 14:26). One must also bear in mind a saying like Matt

19:3–12, which may have been Jesus' vindication of his own celibate lifestyle, but which also allowed for both women and men to remain single for the sake of the Dominion of God. Such a teaching was foreign not only to the Jewish ethos where marriage and procreation were considered obligations (Gen 1:28), but also to the larger context of the Roman Empire where writers from Greek and Roman cultures were known to expound on the duty of marriage and procreation (Daube 1977). This teaching about being given the ability to be single for the sake of the Kingdom opened the door for women to assume roles in the Jesus movement other than the traditional domestic ones. It is not accidental that the gospel tradition records that women were among the witnesses of Jesus' crucifixion, burial, empty tomb, and resurrection. Herein we see the liberating effect the teaching and life of Jesus had on women, and the loyalty with which they responded to that life.

Taking all the probably authentic material in the gospels together, it would appear that Jesus was a reformer of patriarchal society, sometimes making suggestions that would have been considered radical in a Jewish context. This applies both to what he said and to what he allowed in regard to women's religious roles in his movement. Also his teaching about marriage, divorce, and singleness would have been seen as radical not only by Jews but also by various people outside a Jewish context in the Roman Empire (Witherington 1984: 49–52, 77–79, 123–31).

C. Women in the Pauline Communities

When one investigates the letters of Paul, one finds concepts already in evidence in the Jesus tradition. On the one hand, there is an affirmation of marriage and family (1 Cor 7; Eph 5:22–31; Col 3:18–25; 1 Cor 11), and a modified, Christianized patriarchal structure seems to be advocated. On the other hand, the family of faith is seen as the primary unit of identity and there is a clear advocacy of women assuming important roles in the Christian community including proclamation roles (1 Cor 11:5; 16:19; Rom 16:1, 3, 7; Phil 4:2–3).

The "occasional" nature of Paul's letters must be taken into consideration when evaluating such difficult texts as 1 Cor 14:34–35, or its parallel in 1 Tim 2:8–15. In both cases, Paul and/or the Paulinist who wrote these verses is dealing with problems in the Pauline communities. The rulings given apply to specific problems of women disrupting the worship service, or usurping authority over others. In both cases, the abuses are being ruled out, but this does not foreclose the issue of whether or not women who did not abuse their privileges might speak or exercise authority if it was done in a proper and orderly manner (Witherington 1988: 90–104, 117–24). In fact, in view of the evidence that various women were Paul's co-workers in the Gospel ministry it is unlikely that these texts were ever intended to do more than rule out certain abuses.

Many recent interpreters have seen in Gal 3:28 the Magna Carta of human equality (Stendahl 1966). However, closer attention to both the baptismal context of this saying (which suggests that it is about entrance requirements for being "in Christ"), and the specific wording of the text (which reads "no male *and* female" *not* "no male or female"), suggests a different interpretation (Witherington 1981: 593–604.). Paul says that neither one's racial nor social nor marital status should determine whether or not one can be in Christ. In Christ such distinctions as Jew and gentile, or married and unmarried, still exist (Romans 9–11; 1 Corinthians 7), but they have no inherent salvific value, nor do they determine whether or not one can be in Christ.

It is striking how Paul, in his assessment of marriage, divorce and singleness, seems to be drawing directly on the Jesus tradition in several ways. First, Paul agrees that there is a creation order that God used to set the pattern for proper marital relationships that supercedes Mosaic legislation (1 Cor 11:3–15; Matt 19:3–12 and parallels) (Witherington 1985: 571–76.). Second, Paul prohibits divorce for marital partners who are both believers (1 Cor 7:10–11; Mark 10:11). Third, he prefers the single status and states that the ability to lead a celibate life is a gift from God not given to all (1 Cor 7:7 and Matt 19:11–12). Furthermore, Paul seems to have had a healthy respect for marriage and human sexuality, as did Jesus, for he believes marriage is not merely a *remedium concupiscentiae* (1 Corinthians 7). This becomes especially clear if Ephesians 5 was written by Paul as seems probable. Finally, we may note that Paul's constant use of family language to refer to his fellow believers indicates that he, like Jesus, saw the family

of faith as the central and controlling social reality. Paul certainly does not warrant the title of chauvinist, but he was also no radical feminist. Rather, as was the case with our investigation of Jesus, what we see in Paul is: (1) an affirmation of new religious roles for women, and (2) a reaffirmation—with some Christian modifications—of the traditional roles women had been assuming in the family. In some contexts, particularly among Jews and Jewish Christians, both (1) and (2) would have made Paul appear to be radical. In other contexts, among some gentiles, Paul's moral conservatism and reaffirmation of traditional roles for women would have appeared too confining (this appears to have been the case in Corinth). 1 Corinthians 11 and 14 seem to be Paul's reaction to those whom he perceived to be overly "liberated" women. For Paul, the family of faith was central (as it was for Jesus), and this meant that the structure and roles of the physical family would be affected, and in some ways transformed, by the transcending practices of the family of faith. Paul walked a difficult line between reaffirmation and reformation of the good that was part of the creation order on the one hand, and the affirmation of new possibilities in Christ on the other (Witherington 1988: 125–26).

D. Women and the Third and Fourth Evangelists

Apparently, various 1st century churches struggled with the teaching of Jesus, Paul, and others about the new roles women could assume in the Christian community. This can be inferred from the fact that when the Third and Fourth Evangelists set down their gospels in the last quarter of the 1st century they felt it important to stress the new roles of women and the equality of women with men as objects of God's grace and gracious endowments.

This stress is especially apparent in Luke–Acts where we find as part of Luke's redactional agenda a tendency to pair parables and stories about men and women to show their equal place in God's new activities through Jesus. Thus, for instance, we may point to such parables as Luke 13:18–21, or 18:1–14, or the pairing of the story of Aeneas and Tabitha in Acts 9:32–42 (Witherington 1988: 129). One may also note how the paradigmatic sermon of Jesus in Luke 4:18–19 seems to structure how Luke presents the liberation of various women from diseases or infirmities in Luke 4:38–44 or 8:1–3. H. Flender (1967: 10) rightly concludes: "Luke expresses by this arrangement that man and woman stand together and side by side before God. They are equal in honor and grace; they are endowed with the same gifts and have the same responsibilities …" Luke is also not reluctant to portray a woman as a prophetess (Acts 21:9), a religious teacher of a notable male Christian leader (Acts 18:1-3, 24–26), a hostess for a house churches (Acts 12:12–17), the first convert in a new region (Acts 16:12–40), and as assuming the roles deaconnesses were later to have (Acts 9:32–42). It is not accidental that Luke clearly mentions church meetings in the homes of women (Acts 12:12; 16:40). Luke has carefully chosen five vignettes to show the different roles women were assuming in the early Christian communities. In fact, these five stories show how the Gospel progressed through the female population across the Empire from Jerusalem (1:14; 12:12–17), to Joppa (9:36–42), to Philippi (16:11–15), to Corinth (18:1–3), to Ephesus (18:19–26), to Thessalonica (17:4), to Beroea (17:12), and to Athens (17:34). In this way, Luke not merely chronicles the effect of the Gospel on women in the early churches, but also provides a written precedent for women to continue in such roles.

In the Fourth Gospel there are at least five episodes which feature women and their roles: (1) Mary, Jesus' mother (John 2, 19); (2) the Samaritan woman (John 4); (3) Mary and Martha (John 11–12); (4) the mention of the women at the cross (John 19); and (5) the appearance of Jesus to Mary Magdalene. Taken together, these tales reveal women on their way to becoming Jesus' disciples, progressing in understanding and faith in Jesus. Thus, for instance, while Jesus clearly disengages from his mother's parental authority in John 2, nonetheless they are reunited at the cross where Mary is accepted into the family of faith. Or again, in the story of Mary and Martha we find women who believe in Jesus, but inadequately, and who learn to fully confess who Jesus is. The same can be said of the detailed account of the Samaritan woman in John 4 where the immoral woman is portrayed as one who better understands and shares Jesus' real "food" than the disciples who are still operating on a more material level. This woman bears witness about Jesus in the community in a way the disciples are not portrayed as doing.

John 20 is very important for here we find not only that a woman received the first appearance of the risen Lord, but also that she was commissioned to be an evangelist to the Eleven, proclaiming the Good News to them. The witness list mentioned in John 19 also indicates that the testimony of women was critical in regard to another crucial element in the Christian creed—Jesus' death. Since it is improbable that early Christians would have invented the idea of women being the key witnesses to the concluding events in Jesus' earthly career, it is more likely that the Fourth Evangelist is basing at least some of these narratives on historical data.

One may wish to ask why the Fourth Evangelist felt a need to stress a positive portrayal of how women responded to Jesus. At the end of the 1st century A.D. the role of women in the Christian community was probably still being debated, and in order to further the teaching of Jesus and other early Christians on these matters the Fourth Evangelist has presented various women as models of the process of coming to faith, and bearing witness to that faith in various ways.

E. Conclusions

There seems to be a consistent trajectory from the life and teachings of Jesus to the life and teachings of various of the earliest Christians including Paul. The authors addressing the earliest churches argue for the new freedom and roles women can assume in Christ. However, evidence shows an attempt at *reformation*, not *repudiation*, of the patriarchal structure of family and society evident in the 1st century. This reformation must take place "in Christ." Therefore, we find no call to social revolution or to the overthrow of a patriarchal society outside of the Body of Christ. This reformation, however, led to greater stability and equality in the marriage structure, and to greater roles in the church both for married and unmarried women. Understanding the tension between the family of faith and the physical family was key to understanding the new roles women could play in the Church. Men, too, found that greater freedom meant more responsibility, not more privilege.

This affirmation of women was not quickly or universally accepted in the fledgling Christian Church. The writers of the New Testament documents had to argue for these new ideas even as late as the end of the 1st century. In fact, a review of post-NT and pre-Nicene material suggests that the resistance to both the reformation of the roles of women, and the affirmation of women in general, intensified. The modern debate on the role of women continues, but the starting point for each discussion should continue to be the biblical material.

WORD OF GOD. The word of God in the OT is both a word about God and a word from God. It is a word about God, however, only because it is a word from God, that is, it is a word in and through which God discloses himself. While the word of God does have a content which deserves careful attention, the primary subject of this article has to do with the word as the medium of such a content.

The most important Hebrew term for the word of God is *dābār.* No conclusions can be drawn regarding its meaning on the basis of etymology, concerning which there is no fundamental agreement. Moreover, efforts to connect its basic meanings of "word" and "thing" do not sufficiently take polysemy into account. The term is used in all periods of Israel's history and in every type of literature. It is used of both human beings and God, with the latter usage predominating in the prophets. There are nearly 400 references to the word of God in the OT, with the phrase, "word of the Lord," appearing over 240 times. Other words used, *ʾēmer, ʾimrâ* and *millâ,* are much less frequent. The verbs, *ʾāmar* and *dibber (Piʿel),* "to say, speak," with God as the subject, are also an important resource for this discussion, as are verbs which imply speaking (e.g., to call, command).

The meaning of the Hebrew terms is basically an articulate and intelligible utterance. When used of God it refers to a medium of divine communication, a verbal encounter between God and individual(s) whereby the divine will becomes operative in the lives of those concerned. Common formulations are: "The word of the Lord came to …;" "Thus says the Lord;" "Hear the word of the Lord."

English translations of the terms vary somewhat. In certain contexts it is thought possible to translate with somewhat greater precision than "speak" or "word." For example, the NAB translates *dābār* with "promise" and "command" in a number of texts (e.g., Josh 23:14–15; Deut 1:18).

While consideration will be given to some specific traditions, the focus of attention will be on more general OT perspectives.

A. Word of God as Metaphor

To speak of the word of God is to use the language of metaphor. Such language is drawn from human experience, specifically the experience of speaking and hearing. As with all metaphors, both the differences and similarities with respect to the human analogue need to be kept in mind. On the one hand, God's speaking cannot be reduced to the limits of human speaking; on the other hand, there are genuine similarities between human and divine speech. The former can be seen in the testimony of the biblical authors to the manifold vehicles for the speech of God. God's word is conveyed in and through dreams, visions, voices out of clouds, and encounters with strangers, as well as directly to the human mind. At the

same time, human beings apprehend and understand the word of God in a way not dissimilar from human speech; the word of God is an intelligible word to human minds.

There is no word of God to human beings apart from the words and other symbols by which human beings communicate. There is thus no pure, unmediated word of God. But the finite is capable of the infinite; human words can bear the divine word. One cannot finally sort out the divine word from the human, however; they are bound up together in every reported word of God in the OT. But the word, nevertheless, is called the word of God.

There is no speculation as to how this communication is possible, nor any apparent concern to distinguish between internal and external hearing. God's speaking is sufficiently common so that normally it is not understood to be an extraordinary event, though it may occasion surprise or fear in some instances, especially in communal contexts (cf. Exod 20:19 with Deut 5:24). Yet, divine speech is never understood to be unambiguously divine, so that, for example, Samuel can mistake it for a human voice (1 Samuel 3) and false prophets can make claims to have heard it (Jer 28:2). The word of God is believed to be from God and sufficiently clear and effective to shape faith and life, but no criteria are available to demonstrate beyond a reasonable doubt that such speech had a divine origin. The claim to have heard a word of God is not a self-authenticating claim.

B. Word of God as Speech-Act

A magical understanding has been a prominent feature in the study of the word of God in the OT. That is, the spoken word in and of itself was believed to possess an autonomous power, even a quasi-material identity, which ineluctably worked to bring about what had been articulated. But contrary to popular understanding, this is not a theological consideration; it has its roots in a particular view of language in general.

The recently developed field of speech-act theory, building on the work of J. Austin (1962) and others, has shifted this discussion to a new level and demonstrated the inadequacy of the above-noted understanding. This is the study of language-use which is understood to be, or to be a part of, the doing of an action, hence the designation "performative speech." Such words not only express ideas or convey content, they do something. It is the performance of an act *in* saying something as opposed to an act *of* saying something. In many such instances the utterance of the word itself coincides with the act (has an illocutionary force), while in other cases the word seeks to have an effect on reality (perlocutionary force); in many cases words have both forces. Examples would be: promises, vows, wagers, verdicts, namings, warnings, blessings and curses.

Unlike magical understandings, however, these words are not effective because of some inherent, independent power in the words themselves. Nor can all words be so described. Rather, these words produce effects because of certain societal understandings regarding the function of such speech-acts. These words must be spoken in a particular situation by the appropriate person in the proper form to be so effective; in fact, if these factors are not present the words may have the opposite effect intended (e.g., Prov 27:14).

This is certainly the case with blessings and curses. Thus, for example, the blessing of Jacob in Genesis 27 is not a magical transfer by word power, but reflective of cultural understandings of the effectiveness and legally non-rescindable character of such testaments. The fact that modern legally attested oaths would be comparably understood is illustrative of the fact that Israel's understanding of word was not particularly unique. Both in ancient and modern societies certain words immediately produce effects because they are spoken by individuals exercising authority in certain conventional or institutional situations. No magical understanding of word is implied.

The importance of the one who speaks these words deserves special mention when the speaker is God or God's representative. The power of the words spoken by God directly or through a prophet is to be related not to some mysterious power which the spoken word itself possesses, but to the power of the speaker. It is God, who has an ongoing relationship to a word spoken, who brings about the fulfillment of the word, not the word in itself in some autonomous way. Fulfillment is a testimony to God's work, not to a word's power.

This is evidenced negatively by the phenomenon of false prophecy and the reality of divine repentance. While the words of the false prophets may well have an effect—they could be believed by those who heard them—the words are not fulfilled (cf. Deut 18:22; Jer 28:9; cf. Isa 44:26). Moreover, the fact that God occasionally is said to have repented of a word spoken (cf. Jer 26:19; Jonah 3:10) means that God's ongoing relationship to that word is such that it may or may not be fulfilled. It is also to be noted that God can change intended curses to blessings (Deut 23:6; Josh 24:10; Neh 13:2; cf. Mal 2:2).

In view of these perspectives, certain passages commonly cited to illustrate the autonomous power of the word are to be explained in other terms. When it is stated that the "word of the Lord came to" a prophet (e.g., Joel 1:1), it probably means nothing more than that the word became an active reality in the life of the prophet from a source other than the prophet's own mind. 1 Kgs 13:9, 17 are certainly instances of poetic personification. Jer 1:9–10 has reference to the word of God as embodied (cf. below). Isa 55:10–11, "my word shall not return empty," would say little about God that is remarkable or informative if this were true about words in themselves. The same may be said with respect to the creative word of God (cf. Ps 33:6, 9).

Only because the word is the word of God can it be spoken of in such powerful terms. The word of God will endure forever because its speaker is God himself (Isa 40:6–8). Metaphors for the word of God such as weapon (Hos 6:5; Isa 9:7—Eng v 8 cf. Zech 9:1), fire (Jer 5:14; 20:9), hammer (Jer 23:29), messenger (Pss 107:20; 147:15, 18), and rain and snow (Isa 55:10–11) are simply striking ways in which the swift and powerful effect of the word of God can be made more vivid. Later tendencies to view word as an hypostasis (Wis 18:15–16?) can be viewed as an extension of this use of language. In general terms, this objectifying language serves to show that the word of God is not a product of human minds; it is a reality which comes from outside the self.

Generally, the lack of an independent power for words is shown by the fact that words may be ineffective, and cannot in and of themselves compel response (Prov 2:3–4; 17:10; 29:19; cf. Judg 17:2). Moreover, words are no substitute for deeds (Prov 14:23). The common magical understanding of the use of words in the OT is thus rooted in a mistaken view of language. Such words are rather to be seen in a double light, in terms of the dynamics of performative speech and the identity of the speaker.

This understanding of the word finds parallels among Israel's neighbors in the ANE. The creative word of the gods is a common theme in both Mesopotamia and Egypt. The Enuma Elish (e.g., 4.22–26; see *ANET*, 66) speaks of the power of the word of Marduk. Also it is said of Sin in "Hymn to the Moon-God": "Thy word goes out from above like a wind, it makes pasture and watering place luxuriant … Thy word causes justice and righteousness to arise" (*TDOT* 3:93; cf. *ANET*, 386). Egyptian literature speaks often of creation through the word and of "the word of God." For example, it mentions Amon, "who spoke with his mouth and there came into existence all men, gods … cattle" (*ANET*, 371). On the other hand, accounts of a god speaking directly to human beings is rare.

These commonalities between Israel and the surrounding societies, most common in later OT literature, are probably not due to explicit borrowing. Rather, it is more likely that Israel's understanding of the word was reflective of a general cultural understanding in that part of the world. In any case, these connections should be positively viewed; at least some of the truth about God's relationship to the world is not unknown outside Israel.

C. Word and God

Central to the OT understanding of the word of God is a certain view of God. Israel's God is a God who speaks. It is not only that God can speak, but that God has spoken. Indeed, Israel testifies to a God who is in ongoing conversation with the world. This God has not only spoken in the past, with that word now on deposit, as it were. This God continues to speak in every new present. Moreover, the new creation will be characterized by intimate divine-human conversation (Isa 58:9; 65:24). Israel's God is not a silent God, in past, present, or future.

Israel's God, therefore, differs from idols "who have mouths but do not speak" (Pss 115:5; 135:16; Jer 10:5). 1 Kgs 19:26–29 is an especially sharp statement of this point: "Answer us, Baal! But there was no

sound, and no one answering." Speaking and responding is one of the distinctive characteristics of the God of Israel compared to the idols of other peoples.

D. Word and Will of God

The word of God is always an intentional, never an idle word. The word of God is the vehicle for the will of God; the word expresses what God intends. The intention of the word of God is to serve the purposes of God in the world, to move the world along toward the objectives God has for it. The word activates the will of God; it represents a decision by God to accomplish what God wants to accomplish in a specific situation. It does not simply add something to the situation, it renders a divine decision concerning it. Having been addressed by the word of God, that situation is decisively altered. The word does not make God present in that situation, but seeks to clarify and direct the shape of God's will within that already pervasive presence. The word makes available to the world what would not otherwise be available—an experience (including knowledge) of the will of God. The result is that the will of God can be discerned in the world; the will of God can be known to the extent that God has let it be known through the word.

The word as reflective of the will of God tells the truth about God and the world (2 Sam 7:28; Ps 119:43). God is not deceptive in his speaking; the word is reliable (Ps 119:140; 2 Sam 22:31). God's word is characterized as good and upright (Josh 21:45; 23:14–15; 1 Kgs 8:56; Ps 33:4; Isa 39:8), correspondent to the will of God.

It is important to note that the will of God is not defined in a singular way in the OT. See also WILL OF GOD IN THE OT. One must distinguish between the circumstantial and the absolute will of God. God's absolute will as expressed in the word has to do with God's will for the salvation of the community. While the word of God brings light and understanding (Ps 119:130), its goal and effect are more wide-ranging: it is a life-giving word upon which people depend for their very existence (Deut 8:3; 30:11–20; 32:46–47; Ps 119:25, 50, 116, 154). If the word is not heard, it is as if there were a famine in the land (Amos 8:11–12). God's circumstantial will is also expressed in the word; for example, God can speak of judgment (cf. Ps 50:7; Zeph 1:1–18). But this word of God is in the service of God's absolute will for the salvation of as many as possible (Ezek 18:23, 32; 33:11).

The will of God is also reflected in the commanding word of God. As such, the word of God can refer to the Decalogue (Exod 20:1; 34:28), individual ordinances (Deut 15:15; 24:18, 22), and the entire Torah (Deut 30:14). Israel is called upon to obey this word because it is the will of God. But God's will as expressed in this commanding word is not arbitrary, nor is it unchanging; its intent is to serve life and well-being in ever-changing circumstances (cf. Deut 28:11–14; 30:11–20). This word is for the purpose of extending into all aspects of one's life, and the lives of others, the intention of that will already experienced in the Exodus. Hence, this commanding word is in tune with the absolute will of God for Israel.

The word of God, therefore, is a word in which the people place their trust and hope (Pss 56:5, 11—Eng vv 4, 10; 106:12; 119:42, 74, 81, 114, 147; 130:5). The word is a basic means by which the people can be comforted and assured because it expresses God's will for their salvation. Hence, it is something in which they rejoice (Ps 119:161–162; Isa 66:2, 5).

E. Word and Situation

God's speaking is always a temporal event. Every word of God has its time, and God knows the proper time for a given word. The word expresses the will of God with respect to a particular moment in the life of the world. The word of God always arises in a specific situation, is spoken into that moment, and is designed to make a difference in that situation. The word of God thus always fits the situation is some particular way; it consists of words of judgment, promise, instruction, command, and blessing as they are pertinent to the moment and in consonance with the will of God for that moment. Therefore, if a word no longer seems applicable in view of changes in the situation, God can repent of that word (see below).

At the same time, the words of God are commonly believed to be applicable across situations. For example, existing commands of God in older law codes such as Exodus 21–24 are picked up and reinterpreted in Deuteronomy. Certain promises are also repeated (cf. Isa 2:1–5 with Mic 4:1–5; Isa 11:6–

9 with 65:25). The word of God is a living word that has enduring meaning across centuries (Isa 40:8; 59:21; Ps 119:89, 160).

Yet, the use to which Deuteronomy puts the law indicates that the word of God was not necessarily considered an enduring reality in a literal sense. The word is not only handed down within the community of faith, it is reused, elaborated, and creatively applied in ever new situations in life. This adaptation of the word no doubt often occurred in Israel's worship life (cf. Exod 33:7–11; Psalms 50; 81). Within this context, the continuing proclamation of the word of God played an integral, ongoing life-giving function for Israel.

Eventually this leads to the word of God being written down and enduring in that form. The beginnings of this process are occasionally visible in pre-exilic texts (cf. 2 Kgs 23:1–3; Isa 8:17; Jeremiah 36); the written form of the Decalogue and other laws may also be noted (Exod 20:1; 34:27–28; cf. Josh 8:34–35). Some concern arises for a fixed form of the word to which the community can repair and which can function as an authoritative word (cf. Deut 4:2; 31:24–26; Prov 30:6; 2 Chr 34:21; 35:6). The word thus assumes a form which the community can study and meditate upon (Ps 119:148). For the postexilic community the Law of Moses most commonly functions in this way (cf. Ezra 7:11; 9:4; Neh 8:9, 13; cf. Job 23:12; Ps 119:9, 17, 105).

F. Word and World

God's word is directed primarily, but not solely to Israel. God's speaking to the world is centered in Israel, and is most articulate there (Deut 4:33; Ps 147:19–20; Isa 51:16). Israel, however, is not unique in being the recipient of that word. God's word to Israel is a special instance of God's more wide-ranging word to the world. Gen 1:28 (cf. 9:1) testifies to a speaking of God to the wider human creation. The word of God spoken through the prophets is at times directed to other peoples (cf. Jeremiah 46–51; Jonah); Jeremiah is in fact called to be a prophet to the nations (Jer 1:5). Indeed, God's word to Israel is for the sake of that word being more fully declared to the entire world (e.g., Exod 9:16; Ps 96:3, 10; cf. Ps 138:4).

Even more, God's speaking is said to include an audience among the nonhuman creatures. God addresses the earth (Ps 50:4; Isa 1:2; Hag 1:11), speaks to/with natural entities (Gen 1:22; 3:14; Isa 45:8; Job 37:6; 38:35), and calls them by name (Isa 40:26; Ps 147:4). God's call to the waters and the earth to participate in the creative activity (Gen 1:11, 24) suggests that the relationship is such that there can be a responsiveness to the word of God on the part of that which is nonhuman. This nonhuman order can in turn become the medium for God's word to the world (Ps 19:1).

God's speaking is also said to be characteristic of relationships within the heavenly realm (cf. 1 Kgs 22:20–22; Job 1:7–12; Psalm 82; 103:20–21; Isa 6:8). It is the word of God spoken in the heavenly council which the prophet "overhears" and conveys to Israel (Jer 23:18–22).

G. Word of God as a Relational Category

Generally, word is a verbal event which, like love, involves at least two parties. The basic structure of the word, therefore, is not a bare statement but involves a relationship, communication by one and reception by another. In any talk about God's word, therefore, a certain understanding of the relationship God has established with the created order is assumed. This relationship is of such a nature that God and the creatures can communicate with one another. Words are integral to such communication, at least to divine-human interaction (cf. above on God's word to the nonhuman creation). While other forms of communication might be cited, speaking and hearing, listening and responding, are central to the divine-human conversation. God can speak and the creatures can hear and understand; human beings can speak to God (e.g., in prayer) and God can hear and respond.

Even more, certain texts suggest that God is eager to be in communication with the people (Isa 65:1–2); indeed, God expresses a sense of obligation to speak with those who are chosen (Gen 18:17; Amos 3:7). The knowledge of God and his ways on the part of the human party is deemed essential if the relationship is to be real and genuine. God's speaking, however, is here seen not simply as a matter of the conveyance of a certain content, but important in itself as integral to God's faithfulness within a relationship. The

word of God is therefore fundamentally a relational category by means of which the relationship between God and people can be realized more fully.

The word of God is spoken most directly to leaders within Israel, who in turn convey that word to the larger community. Occasionally, in a theophanic encounter (cf. below) God will speak to other individuals (cf. Hagar in Gen 16:11–14; Manoah in Judg 13:9–23). But, most commonly, it is leaders like Moses who mediate the word of God to the community (Deut 5:5).

The content of the word of God also is to be understood in relational terms. God does not simply speak about more objective realities, as if it were simply a matter of data or information that constitutes the word of God. The various texts reveal a divine concern about a considerable range of matters that bear on the relationship (cf. Num 12:1–8; Zech 7:9–10; Gen 35:10). The word also includes the conveyance of divine emotions or feelings (cf. Num 14:10–11; Jer 31:20; Hos 11:8). Indeed, God's word will include the revelation of inner-divine reflections (cf. Gen 2:18; 8:21; Ps 95:10–11; Jer 3:7, 19–20). God's own self is thus not removed from the word. The word is truly revealing of the God who speaks it, and this for the sake of a fullness of relationship.

This relationship has a fundamental integrity to it. It is not only what God says that affects the relationship; how the creatures respond affects the relationship as well. God's word is not spoken into a void (even in Genesis 1 the word is addressed to existing material) or to unthinking creatures; it assumes that there is an audience for that word, those who can hear and interact with that word. God's word is not a monological reality. While God's word is always freely spoken, it calls for response on the part of those to whom it is directed. As a result, God's word may not always be the initiating word; it may be respondent to, indeed in dialogue with, the creaturely party to the relationship (cf. Num 14:11–25). God's word may bring into being, but it is not thereby done with that which is created. Interaction with those addressed is essential for the creation to be what it is called into being to be: in genuine relationship with its Creator.

Human response can thus affect what is heard when God speaks. Finitude and sin may lead to the misunderstanding of the word of God; faithfulness to the relationship and alertness may lead to insight. Indeed, even when it is understood, human response to the word may range widely. The relationship is such that, however powerful God's word may be (like fire and a hammer crushing rocks, Jer 23:29), believing is not the only response available to those who hear. God's word does not overwhelm those to whom it comes; it is resistable (Ezek 2:7). The word of God can be challenged (Exod 32:9–13) or questioned (Jer 1:6–7) or rejected (Zech 7:11–12) or ridiculed (Gen 18:12–13) or scorned (Jer 6:10) or despised (Jer 23:17) or disbelieved (Ps 106:24) or doubted (Judg 6:13–17) or freely obeyed (Exod 24:7; cf. Jer 35:17). The word of God is therefore not only powerful, it is vulnerable. Such a seeming contradiction can only be made coherent if the word of God is understood fundamentally in relational terms.

While a few prophetic passages suggest a certain compulsion to speak the word of God which has been received (Jer 20:7–9; Amos 3:8), prophetic freedom is not finally compromised (Jer 15:16, 18–19; 23:28). A certain freedom in the transmission of the word of God can also be noted in the Deuteronomistic history. One of Elisha's disciples assumes much freedom in conveying the word of God (cf. 2 Kgs 9:3 with 9:7–10). Joshua exhibits comparable freedom in transmitting the word of God he received (Josh 6:2–5) to others (Josh 6:6, 7, 10, 16–19).

H. The Creative Word of God

It might be suggested that the word of God in creation constitutes an exception to this relational understanding, with magical understandings of word near to hand. The spoken word goes forth and brings into being what has been commanded. The command seems to be without an addressee; there is no receptor of the word, let alone any response on the part of that which is created. But, this would be the case only if the creation account were understood in terms of creation out of nothing.

Most scholars now understand Genesis 1 in terms of the ordering of already existing material. There is thus a receptor of the word. It is true, that which is commanded is that which is done, not only at the beginning (Genesis 1; Pss 33:6, 9; 148:5) but also more generally in the natural (Pss 105; 31,34; 104:7;

147:18) and historical (Ps 107:20; cf. Wis 16:12) realms. It is important to note, however, that God's saying and doing are distinguished in the creation account (as also in Isa 45:12; 48:13); God's creative activity is not solely comprehended in terms of what is said (cf. also Ezek 37:4–6; Isa 48:3). The work of the Spirit of God in Gen 1:2 must also be considered in combination with the word of God (cf. Isa 34:16; Job 37:12).

The fundamental purpose of the word in these contexts is to indicate that creation was not accidental or arbitrary, but a deliberate act of the divine will. The word alters the situation of chaos decisively, but it is not suggested that there was no divine activity apart from speaking. God's spirit and power follow in the train of the word and produce certain effects.

In addition, the divine word is not unrelated to creaturely responsiveness, as the earth is called to bring forth vegetation and living creatures (Gen 1:11, 24), the beasts and human beings are commanded to be fruitful and multiply (Gen 1:22, 28), and human beings are commanded to subdue the earth and have dominion over it (Gen 1:28). Elsewhere, various aspects of the created order are responsive to the divine command (Pss 148:8; cf. 78:23; 107:25; 147:15; Isa 5:6). Moreover, the common use of *ʿāśāh* in Genesis makes it clear that God's creative work is not without analogy in the human sphere.

The use of the word of God in Ps 147:15–19 may provide a clue to the interpretation of these texts. This passage speaks of word both in terms of the law and of God's work in nature and history, suggesting that word is a way of speaking of God's providential governance. To so speak of the word of God is a way of personalizing the active will of God at work in the world. Generally, because the will of God is evident in the effects produced by the word in the creative and historical orders, one can read something of the will of God off those realities. To speak of word emphasizes this point.

I. Word of God as Personal Encounter

It has been most common in recent generations to claim that God reveals himself in history. See THEOLOGY (OT). This view tends to stand over against an understanding of revelation which stresses God's speaking directly to individuals. By history is usually meant key events such as the Exodus in which God has decisively acted on behalf of his people. By the way in which God so acted, it is thought, Israel was able to infer certain things about God and God's ways with the world. In such formulations, the word of God is fundamentally an external event, though the event in and of itself is inarticulate and its significance highly ambiguous.

Whatever continuing values such a "revelation in history" perspective may have, there are severe inadequacies in its usual formulation: the neglect of the nonhistorical material (e.g., wisdom); the emphasis on historical event to the virtual exclusion of both natural and liturgical event; the ignoring of God's more unobtrusive activity in Israel and among the nations; the emphasis on God's interventionist, intrusive work highlighting images of God of a more virile sort; the emphasis upon story to the exclusion of generalization; the failure to recognize the variety of modes God uses to reveal himself.

The most important critique for these purposes is that the word of God as verbal event, particularly associated with the theophany, has been neglected. Theophanies are in fact the vehicle for the most common and most articulate revelations from God. See THEOPHANY IN THE OT. Usually this entails the speaking of words by God, appearing often if not always in human form (cf. Genesis 18; Judg 6:11–18; Isaiah 6; Jeremiah 1), even in those contexts where the divine presence is veiled by fire or cloud (cf. Exod 3:2; 24:9–11; see Fretheim 1984 for details). The word of God is thereby delivered through personal encounter in a quite direct way through a verbal communication, often "face to face" (cf. Exod 12:6–8).

However important an event such as the Exodus was, the texts make very clear that it was the prior appearance of God to Moses (Exodus 3) that provided the proper interpretation of what was to happen. Discerning the appropriate meaning in the event, inarticulate and ambiguous in and of itself, was dependent upon the prior word received in the theophany. Only in such verbal communications were the divine purposes made clear. This is also true for the prophets; their call narratives indicate that it is the word of God received in more direct, verbal ways that provides the hermeneutic for the proper interpretation of history.

The reception of the word of God in vision and dream is only a variation of the theophanic mode of revelation (cf. Gen 28:12–13; 1 Kgs 3:5; 9:2; cf. Gen 31:11–13; 15:1). These appearances are referred to later in the respective narratives without reference to dream or vision (cf. Gen 35:1, 9; 48:3; 1 Kgs 11:9). Apparently they are recognized as no different in kind from appearances which occur during wakefulness. Num 12:6–8 suggests some differences, but in clarity not in kind; this may be the case because of the fuller functioning of the person in wakefulness. At the least, there is no diminishing of the form which God assumes in these appearances (cf. Gen 28:13, 15:5). The negative assessment of dreams in Jer 23:25–29 is not typical, no doubt reflecting a particular conflict with false prophets. References to prophets seeing the word (cf. Amos 1:1; Mic 1:1; Hab 1:1) seem best understood as a word received in vision (cf. NAB). The word of God in dream and vision thus retains its character as personal encounter.

A common element in the theophanies is the promise of presence (e.g., Gen 26:24; 28:15; Exod 3:12; Jer 1:8). This continuing divine presence in the world is necessary not simply for the people involved, but also for the sake of the word spoken. While some words of God are illocutionary and may be effected immediately (e.g., naming), others are more future oriented. In such instances, the God who gives the word does not, as it were, leave the word to do its own work, however forceful that may be. Word of God and presence of God must always remain together. If the word is to accomplish God's intended aim, God must continually be at work in the world to see to its life (cf. Ps 105:42; Deut 9:5; Jer 29:10). And hence the word of God must not finally be separated from subsequent events, in which God is active. But this is not to be understood in the sense that the word takes on a quasi-material existence and in independent ways works itself out in the world. God continues to be active with that word, working in ways to make that word effective.

But, while God continues to work on behalf of the word, the word is now not only in God's hands. It has been received by those who can misuse the word, who can twist it toward ends not consonant with God's purposes, and prevent it from having its intended effect. For example, Exodus 32 witnesses to what happened to the word given at Sinai. Further divine appearances, beyond continuing presence, were deemed necessary to correct the course that the recipients of the word had taken with it, or even to propose more drastic measures (Exod 34:1–7; Num 14:10; 16:19).

In view of the importance of the theophany in any understanding of the word of God, one can say that the word of God so given is an embodied word. God assumes human form in order to speak a word in personal encounter. The word spoken is the focus for the appearance, but the fact that the word is commonly conveyed in personal encounter is of considerable significance. "Visible words" have a kind of import that merely spoken words do not. They render the personal element in the divine address more apparent and give greater directness and sharper focus to the word spoken. Words so spoken have the capacity of being more persuasive and effective. They also make clearer that the source of the word is not "of their own minds" (Jer 23:16) but outside of the human self; God *appears* in order to speak.

This understanding of word is also seen in the fact that it is conveyed to the larger community in and through a human figure such as a prophet, who not only embodies the word of God but also engages in certain symbolic acts which give flesh to the word (e.g., Isaiah 20). The prophets, however, move beyond the theophanies at one point in particular. God does not just appear, speak a word, and then leave. God leaves the word behind imbedded in the prophet.

The idea of the embodied word becomes particularly apparent in Jeremiah and Ezekiel. In Jer 1:9 (cf. 15:16; Deut 18:18) the word of God is placed by God's hand directly into Jeremiah's mouth; the word is conveyed into his very being without having been spoken. This is graphically portrayed in Ezek 3:1–3; the prophet ingests the word of God. The word of God is thereby enfleshed in the very person of the prophet. It is not only what the prophet speaks but who he is that now constitute the word of God. The prophet conveys the word in a way that no simple speaking or writing can. The people now not only hear the word of God from the prophet, they see the word enfleshed in their midst. The word of God is not a disembodied word; it is a personal word spoken in personal encounter.

For the times beyond the theophanies, therefore, God chooses human instruments as the primary means by which his word is to be faithfully conveyed to the people, whether they heed or resist (Jer 23:28; Ezek

2:7). The word of God spoken by the prophet has a fundamental continuity with both the content and the form of God's word in theophany, a word spoken in direct personal encounter with individuals. The word of God thus remains a highly personal matter throughout the revelatory process, from God through prophet to people. Historical events may indeed be a vehicle for divine revelation, and hence indirect words of God, but they are ambiguous with respect to meaning without the verbal/mental encounter both before and after the event.

This entire grouping of factors may be called a complex word-event. A typology of a typical word-event according to the testimony of the OT itself would thus consist of the following four components.

1. The religious heritage and tradition in which the receiver of the word of God stands. Presuppositional to all of this is the word of God to Abraham in Gen 12:1–3, canonically represented as the initial word of God to Israel. From that point on, the present text speaks of a gathering of traditions around that initial word—the building up of the heritage.

2. The reception of the word of God by the prophet or other spokesperson on one or more occasions through verbal encounter. Because the prophet's mind receives, processes, and contextualizes this word, it is thereafter no word of God in a pure sense. The word of God has been internally interpreted by the prophet; yet, it remains the word of God.

3. The occurrence of key events in the life of individuals or the community, in both history and nature.

4. The spokesperson's interpretation of the meaning of the event to the larger community in view of the prior interaction of the tradition and the personal encounter. In patriarchal and prophetic traditions, because the word of God is often about events in the future, (3) may also occur after (4); the interpretation of the event is announced before it occurs.

Thus the word of God finally has reference not simply to the word received on the part of the spokesperson, but to the conveyance of that word by the individual to the larger community with past, present, or future events in view. Because for the prophets the key event has often not yet occurred, the word which they speak does not need the actual occurrence of the future event in order to be designated the word of God. This makes it clear that the verbal communication is the primary matter in any definition of word of God. Moreover, because the event announced will sometimes not occur—God may repent—more than the word spoken is necessary for the fulfillment of that word. It is not the case, however, that the word takes on a quasi-material identity, going forth to inevitably accomplish that which has been articulated. The post-word interaction among God, word, and receptors of the word, will shape the effects of the word in the world.

J. Word and Fulfillment

There are a number of passages, however, which suggest that God's word once spoken will move to fulfillment irrespective of such human response or human resistance. But it seems clear that, while the interpretive issues are difficult, a more qualified statement must be made. A closer look at a number of OT traditions should help clarify this.

1. The Deuteronomistic History. This historical corpus is often cited in terms of such an understanding of the fulfillment of the word (cf. von Rad 1953). It is commonly suggested that one of its most basic perspectives is that God's word shapes Israel's history. With respect to God's word of judgment, one can point out many instances of the word spoken through the prophets being fulfilled later in the history (cf. Josh 6:26 with 1 Kgs 16:34; 1 Sam 2:31 with 1 Kgs 2:27). In fact, fulfillment is specified as the standard by which one determines if the word is from God (Deut 18:21–22). It is certainly true that the word of God as judgment moves toward fulfillment throughout Israel's history, and that it has a powerful effect on the people's life. But that is not the only story to tell.

Now and again, the judgment word of God spoken through the prophets is not fulfilled or not literally fulfilled. Isaiah announces to Hezekiah: "You shall die; you shall not recover" (2 Kgs 20:1–6). The word of God does have some effect, but then, in response to Hezekiah's prayer, God responds and reverses the prophetic word (but even then not independent of human medical efforts, 20:7). Similarly, when Ahab responded in repentance to the word of the Lord spoken by Elijah, God delayed the fulfillment of the word (1 Kgs 21:27–29; cf. 2 Chr 12:1–12). God's word to Elijah in 1 Kgs 19:15–18 is only partially

fulfilled in the ministry of Elijah; some of it remains for another to accomplish (2 Kings 9). In addition, God's merciful interaction with the people would affect the course of history, even in the face of contrary prophetic words (cf. 2 Kgs 13:23). The fact that some of the judgment words of God are not fulfilled or not literally fulfilled means that in every case the future is understood to remain open until the fulfillment actually occurs.

With respect to God's word of promise, the Deuteronomistic history specifies it as an unconditional word, either to David or to the people of Israel (Deut 4:31; Judg 2:1; 1 Sam 12:22; 2 Sam 7:16). The fulfillment of that promise in Israel's history is noted (1 Kgs 8:20, 56), though it is stressed that it is not simply the word which has gone forth to fulfillment; God has fulfilled it by his own hand (1 Kgs 8:15, 24; cf. 2 Sam 7:25). But even when fulfillment is said to have occurred, a literal fulfillment may not be in view. For example, the strong words of Josh 23:14 (cf. 11:23; 21:43–45; 1 Kgs 8:56) that every word of God regarding the land of promise had been fulfilled stands in some tension with other notices that territory remains to be taken (cf. 15:63; 23:4–13; Judges 1). These tensions may be reconciled by suggesting that all the words of God did come to pass, not with the kind of precision one might like, but a decisive fulfillment nonetheless.

A comparable perspective on fulfillment of words of promise may be present in the Davidic texts. While the promise would appear to be conditional in 1 Kgs 2:3–4 (cf. 9:5–7), this is limited in scope, and the promise is reiterated in these more limited terms (1 Kgs 11:11–13, 32–38). At the end of the Deuteronomistic History, however, the fulfillment of the promise is stated somewhat ambiguously (2 Kgs 25:27–30). While the word of judgment on Judah is stated in unequivocal terms (2 Kgs 23:26–27), the promise articulated in earlier texts is not denied. It is still there for the believing to cling to, but it is not suggested that all Israel would experience its fulfillment.

Generally, it can be said that God's word of promise will not fail; it will never be made null and void as far as God is concerned. The promise can be relied on; but a rebellious generation might not live to see the fulfillment because they have rejected God. The word of promise remains in force; the faithful can know that God will ever be at work to fulfill it. For such faithful ones, God's word will not return empty, but will prosper in the ways God has purposed (cf. Isa 55:10–11).

2. The Prophets. A comparable perspective can be discerned in the prophets. The primary perspective is certainly that God's words of both judgment and promise will move toward fulfillment (cf. Isa 46:11; Jer 1:12; 33:14; Ezek 33:33; Hab 2:3). In fact, at least with respect to announcements of salvation, the divine origin of such a word is certain only upon fulfillment (Jer 28:9). At the same time, many texts indicate that any talk about the inevitability of the fulfillment of the word must be qualified.

With respect to words of judgment, one must reckon with the possibility of divine repentance. God may repent, *niḥām,* in response to prayers from the people themselves (Jonah 3:10) or an intecessor (Amos 7:3–6), or for God's own sake, without human mediation (Jer 42:10). That is to say, God may reverse himself with respect to an announced judgment, whether or not that announcement was stated in conditional terms. The constant availability of divine repentance is made clear in Jer 18:7–10 and Jonah 4:2. In later Israel, this theme becomes such an important dimension of Israel's understanding of God that it is incorporated into credal and hymnic formulations (Joel 2:13; Ps 106:45). This becomes a confession of God's openness to change directions with respect to the future, even if it means that a prophetic word will not be fulfilled.

For example, in Jer 26:18–19, Mic 3:12 is quoted as an example of a prophecy that was not fulfilled in view of Hezekiah's response to the word. In Jonah 3:9–10 we learn that such divine repentance has been made available even for non-Israelites. In Jer 26:3, 13, the prophet is asked to proclaim God's decision for judgment. But the purpose for the prophetic word is clear: to elicit Israel's repentance. If the people repent, God will turn from the decision for judgment. The fundamental motivation for such talk about divine repentance is that God's desire is for life, not death. In fact, it may be said that God desires that the words of judgment *not* proceed to fulfillment, so that God's salvific will can be realized. God's will is done, it would seem, when words of announced judgment fail.

There does come a point in the history of Israel, however, where the divine judgment must fall. The situation has progressed to such a point that the fulfillment of the word can be delayed no more (Ezek 12:25, 28); the divine repentance is no longer available (Ezek 24:14; Jer 4:28). Yet, even after the judgment falls, divine repentance is available to stop it from proceeding to total destruction (Jer 42:10). In Joel 2:13–14, in the midst of a tragedy for Israel, the possibility of divine repentance is held out as a hope.

In certain other prophetic texts, the passage of time may affect the shape of the fulfillment of a word. Hence, Ezekiel's prophecy with respect to Tyre is adjusted in view of events (cf. 26:1–21 with 29:17–21). Adjustments are also made in Isaiah's oracles against Moab (Isa 16:13–14).

With respect to words of promise, the issue is comparably complex. Jer 18:9–10 is unique in the prophets in that it envisions the divine repentance of an announced good. Israel cannot rely on the divine declaration of a promise while neglecting its own response to that word of God. In fact, Israel's unfaithfulness makes this negative possibility a near reality. God's promise may be relied upon absolutely, but neither Israel nor any other community can be guaranteed participation in the reality of fulfillment irrespective of its response. God will remain true to God's promises, but not in some universalistic sense. Those who reject God's word will suffer the consequences of self-removal from the sphere of the promise, a move which God will honor.

It is just such a perspective that should inform the assessment of passages such as Isa 55:10–11, "my word shall not return empty." In the first instance, this text does not have a general reference to the word of God, only to the promise of return from exile (cf. 55:12–13; Isa 44:26). Secondly, it is a strong statement on the efficacy of the word, but not in some autonomous way. The reference is to the words of the prophets being confirmed by God (cf. Isa 44:26). Finally, the word of the Lord will be fulfilled for those who are spoken of in vv 6–7, those who "return to the Lord." Those who are forgiven and faithful will experience the fulfillment of this word. The salvific will of God will not fail for them; God's word will indeed prosper.

The history of Israel is thus shaped by more than the word of God; how individuals and community respond to that word also shapes that history. Even more, the word of God is open to change by God himself. The word of God is never a matter of fate once spoken. God can revoke a word, not carrying it into effect, or adjust a word in view of changing situations. In view of the interaction of divine word and human response, Israel's history is open to a variety of turns. God is not trapped within his own word, as if the word spoken had a life of its own and would move inexorably to its fulfillment. Yet, any divine movement away from this word would only be in the interests of God's absolute salvific will for Israel and the world. The issue for God, finally, is not the fulfillment of a word, but the salvation of as many as possible.

TERENCE E. FRETHEIM

WORDPLAY, HEBREW. Use in proximity of words that display similarity of sound with dissimilarity of meaning. The Hebrew Bible in both its prose and verse abounds in various types and degrees of explicit and implicit wordplay, with the total number of instances far exceeding the 502 explicit examples enumerated in the fundamental study by Casanowicz (1894). It is rarely captured in translation.

A. Definition and Terminology

In classical rhetoric, "paronomasia" generally refers to words whose form is similar but whose meaning is different. In biblical studies, it is the term most often applied to perceived wordplay. The Bible itself has no term for this phenomenon, but extended plays on series of place-names (e.g., Amos 5:5; Mic 1:10–16) and personal names (e.g., Gen 49:3, 8, 16, 19), as well as multiple plays in such passages as Isa 27:7, convince readers that paronomasia was an important convention of ancient Hebrew composition. The evidence of plays on personal names is particularly compelling. In Ruth 1:20 Naomi interprets her own name etymologically: "Do not call me Naomi [Pleasant One], call me Mara [Bitter One], for the Almighty has dealt very bitterly [*hēmar*] with me." In 1 Sam 25:25 Abigail connects the name of her feckless husband with his character. His name, *Nābāl,* as a common noun means "rogue" or "fool." "As his name is," she explains, "so is he. Nabal is his name, and folly is with him." If biblical characters perform wordplay (between a proper noun and a common usage), it would seem likely that biblical authors did, too.

In the 6th century C.E. the rabbinic midrash Genesis Rabbah (18:4; 31:8) describes such biblical wordplay as the derivation of *ʾiššâ,* "woman," from *ʾîš*, "man" (Gen 2:23) and the juxtaposition of *něḥaš,* "serpent (of)," and *něḥōšet,* "bronze" (Num 21:9) as "language falling on top of language" *(lāšôn nôpēl ʿal lāšôn),* i.e., two different locutions (at least partly) coinciding in sound. This understanding of biblical wordplay is similar to the classical definition of paronomasia and was adopted in such early expositions of biblical rhetoric as Moses ibn Ezra's "Poetry of Israel" (ca. 1135, in Arabic) and Judah Messer Leon's "Book of the Honeycomb's Flow" (1475, in Hebrew).

Casanowicz restricts his analysis of paronomasia to the classical definition, excluding such common biblical phenomena as plain repetition (which is used for a variety of grammatical and rhetorical functions; see Eitan 1920), the figura etymologica (because the repetition is grammatically conditioned), and sheer coincidence (because it is presumably unintentional). That approach will be followed here.

B. Forms

Paronomasia may involve the entire sound-shape of words or only a part of them; it may be explicit or implicit; and there are different types of paronomasia.

1. Complete and Incomplete Sound Repetition. Paronomasia may entail the repetition of the same word, which is called "antanaclasis." In Judg 5:6, for example, the word *ʾŏrāḥôt* occurs twice, once in the sense of "caravans," and once in the sense of "byways." The proverb in Qoh 7:6, "For as the crackling of thorns under a pot, so is the laughter of fools," has fun with the homonym *sîr,* which serves as the word for both "thorn" and "pot." Samson's boast that he slew a "mass" (lit., "pile") of 1,000 men with the jawbone of an ass plays on the homonymy of *ḥămôr,* "mass" and "ass" (Judg 15:16).

Much wordplay capitalizes on the polysemy (multiple meaning) of words, creating puns. In Gen 48:22, for example, Jacob blesses Joseph with a "shoulder" (mountain) over and above his brothers. The Heb term *šĕkem* denotes not only the common noun "shoulder" but the city of Shechem, which is located in Joseph's territorial inheritance. Polysemy poignantly enriches the poetry of Job 7:6: "My days are swifter than a weaver's shuttle, and come to their end without hope." The word for "hope," *tiqwâ,* has the root meaning of "cord," so that the metaphor and its reference coalesce: the course of life and the shuttle both run out for lack of *tiqwâ.* The meaning of an entire sentence can be doubled through polysemy. Such sentence-long polysemy, called "amphibology," though rare, seems to occur, e.g., in Gen 4:13. Cain's exclamation "My punishment is greater than I can bear" can also mean "My sin is too great to bear," by dint of the word *ʿawôn's* polysemy. In fact, because the expression *nāśāʾ ʿawôn* means "to forgive" as well as "to bear sin," the statement can also mean, "My sin is too great to forgive."

Hebrew wordplay often exploits the nature of Semitic morphology by which inflection of a verb-stem alters sense. In addition to the example of Isa 27:7 cited above, note, e.g., Isa 1:19–20: "If you are willing and obedient, you shall eat the good of the land. But if you refuse and rebel, you shall be devoured by the sword." "You shall eat" and "you shall be devoured" are conjugated from the same verbal root, *ʾ-k-l,* producing an ironic choice, to eat or be eaten. Jeremiah plays a number of times on different forms of the verb *šûb,* "to turn (forward or back)" (cf. Carroll 1981: 75, 120, 211).

More often than not, biblical paronomasia operates with words that are not identical in root or sound but are strikingly close. Because Hebrew words comprise a consonantal root interspersed with changing vocalic schemes, we generally demand of wordplay that at least half the consonants, usually two of the common root's three, are identical or phonologically similar. A parade example is Isa 5:7b, where the antonymous terms ironically sound alike: "he looked for justice [*mišpāṭ*], but behold, bloodshed [*miśpāḥ*]; for righteousness [*ṣĕdāqâ*], but behold, a cry [*ṣĕʿāqâ*]!" Typical are pairs of near-synonyms that alliterate or otherwise echo one another; e.g., *nāʿ wānād,* "a wanderer and meanderer" (Gen 4:14); *ʿāpār wāʾēper,* "dust and ashes" (Gen 18:27); *pālîṭ wĕśārîd,* "fugitive and survivor" (Jer 44:14). Note in the last example that the two nouns share a vowel scheme and that the second and third root consonants are close (*l* and *r* are liquids, *t* and *d* dentals) though distinct.

A special case of such pairs is "farrago," where two terms combine to give a joint meaning and at least one of the terms is contrived in order to rhyme (cf. in English: hocus pocus, helter skelter, etc.). Examples are *tōhû wābōhû,* "wild and waste" (Gen 1:2) and *šeṣep qeṣep,* "for a moment's wrath" (Isa 54:8).

Frequently the play on words involves a metathesis (cf. Tur-Sinai 1959). In Isa 61:3 a transposition of consonants reinforces a replacement of sense: "to give them a garland [*pĕʾēr*] instead of ashes [*ʾēper*]."

Incomplete paronomasia, in which the operative words differ in consonants or their sequence or in the vowel scheme (see above), often characterizes plays on personal names. The name Cain *(qayin)* is apparently etymologized in Gen 4:1 from the root *q-n-y,* "to make, acquire" (note metathesis). The biconsonantal name Noah *(nōaḥ)* is connected with the triconsonantal verb *nîḥēm (Piʿel),* "to comfort" (Gen 5:29). In one of its two etymologies in Gen 30:20, the name Zebulon *(zĕbūlûn)* is derived from *zābad,* "to bestow (a gift)."

2. Explicit and Implicit Wordplay. Paronomasia is most explicit when a proper noun is overtly etymologized. This may occur through a naming formula; e.g., "And Leah said, 'Happy am I [*ʾŏšrî*]! For the women will call me happy [*ʾiššĕrûnî*];' so she called his name Asher [*ʾāšēr*]" (Gen 30:13). Or it may take the form of a blessing or doom prophecy; e.g., "Dan [*dān*] shall judge [*yādîn*] his people" (Gen 49:16); "for Gilgal [*gilgāl*] shall surely go into exile [*gālōh yigleh*]" (Amos 5:5).

Name derivations sometimes lack a formula, but their reference seems clear from context. Moab [*môʾāb*] is not only the eponymous "forefather of Moab [*ʾăbi-môʾāb*]" (Gen 19:37) but a son whose mother conceived him "by (her) father" (*mēʾāb;* cf. *mēʾăbîhen* in v 36). Similarly, Job *(ʾiyyôb)* would seem to be implicitly interpreting his name in the light of his experience when he accuses God of regarding him as an "enemy" (*ʾôyēb;* Job 13:25). When Noah condemns his grandson Canaan *(kĕnaʿan)* to be subservient to his brothers (Gen 9:25–27), we may find an implicit play on the verb *kānaʿ,* "to kneel, be subservient."

Names may also play on synonyms. The naming of Sitnah (*śiṭnâ,* "hostility") in Gen 26:21 follows from the "contention" *(rîb)* between Isaac's men and the men of Gerar. The "kings of peoples" that "shall come from" Sarah (Gen 17:16) may involve a play between "king" *(melek)* and the name Sarah, which derives from *śār,* a near-synonym of "king." Similarly, the epithet "blessed" *(bārûk)* in the blessing of Asher (Deut 33:24) may implicitly interpret the name Asher, from the root *ʾ-š-r,* "happy, blessed."

If so, we may identify plays on synonyms or "synonymous substitution" (Strus 1978: 62; cf. generally Garsiel 1987; Zakovitch 1980) in even subtler usages. In Deut 33:22 Dan is called "a lion's whelp"; the earlier name of the northern town of Dan was Laish (cf. Judg 18:29), and *layiš* is a poetic word for "lion."

3. Types of Wordplay. We may classify forms of biblical wordplay in a variety of ways. Illustrations of the following types are cited above. One may distinguish between play on proper names and on common nouns (cf. Strus 1978, Garsiel 1987), or between explicit and implicit derivations (e.g., Zakovitch 1980). One may taxonomize according to the sound patterns involved (cf. Glück 1970). Alternatively, one may differentiate between polysemy in the strict sense and paronomasia, in which slightly dissimilar sounds or words are entailed. Such a distinction is not hard and fast, for a pun may work in either way.

The pun proper, a form of witticism, includes a "double entendre" in which the audience catches the second meaning by way of a delayed surprise or double-take. Naming formulas, since they rarely involve surprise, do not typically pun. When a very upset Esau exclaims, "Is he not rightly named Jacob? For he has tricked me *[wayyaʿqĕbēnî]* these two times …" (Gen 27:36), he is punning on Jacob's name. At first the name was related to the noun *ʿēqeb,* "heel," when Jacob emerged from the womb grasping Esau's foot (Gen 25:26). Here, Esau discovers a second meaning by which he accounts for his brother's guile.

C. Functions

Wordplay would seem to serve diverse functions in biblical literature. For convenience of organization, we shall divide the functions between paronomasia in general and the case of the proper noun alone.

1. General. A number of functions involve both common words and proper names.

a. Euphony. On occasion paronomasia would seem to serve no function but an aesthetic one. The nuts-and-bolts passages describing the plans and construction of the tabernacle in the wilderness, for example, are enlivened by such rhyming wordplays as *lĕbātîm lĕbaddîm,* "as holders for the poles" (Exod 25:27), *ʾet-qĕrāsā (y)w wĕʾet-qĕrāšā (y)w,* "its hooks and its frames" (Exod 35:11), and *paʿămōn wĕrimmōn paʿămōn wĕrimmōn,* "a bell and a pomegranate, a bell and a pomegranate" (Exod 39:26).

b. To Highlight an Idea or Association. Repetition of sound between juxtaposed words within or even between clauses reinforces the sense they share (cf., e.g., Saydon 1955). A common image of destruction is evoked by *paḥad wāpaḥat wāpāḥ,* "terror, and the pit, and the snare," in Isa 24:17. In Judg 5:4 the verbs in the roughly synonymous parallel clauses sound alike: *bĕsēʾtĕkā,* "when you went forth," *bĕṣaʿdĕkā,* "when you marched." The line of development from Jonah's descent into the ship and on into an oblivious sleep is underscored by the play between *yārad,* "he went down," and *wayyērādam,* "he went to sleep" (Jonah 1:5; cf., e.g., Halpern and Friedman 1980: esp. 84).

c. The Leading Word. The last example illustrates the phenomenon Buber (1936) called the "Leitwort," or leading word. Its recurrence within a passage may underline a theme; its appearance within or between passages, if sufficiently striking, erects an exegetical trajectory. When Laban justifies his deception of Jacob by saying, "It is not so done in our country, to give the younger [daughter] before the firstborn [*bĕkîrâ*]" (Gen 29:26), the reader, according to Buber, should recall the birthright *(bĕkōrâ)* and blessing *(bĕrākâ)* that Jacob wrested from Esau (see Gen 27:36) and interpret Laban's act as indirect divine retribution to Jacob. Note, too, that the verbal stem *r-m-y,* "to deceive," appears prominently in both Gen 27:35 and 29:25.

d. Allusion. Wordplay may serve to allude to another passage, adding an association to the present one. Tur-Sinai (1959:113), for example, has suggested that the Golden Calf incident evokes the apostasy at Baal Peor [*pĕʿôr*] (Numbers 25) when it says "Moses saw that the people had broken loose [*pārūaʿ*], for Aaron had let them break loose [*pĕrāʿōh*]" (Exod 32:25).

e. Irony. Paronomasia is by its nature most efficient for producing or reinforcing irony. It is a favorite device of the prophets; e.g., "You said, 'No! We will speed upon horses [*ʿal-sûs nānûs*],' therefore you

shall speed away [*tĕnûsûn*]" (Isa 30:16); "I will cut off [*wĕhikrattî*] the Cherethites [*kĕrētîm*]" (Ezek 25:16). The Garden of Eden's irony in that a clever serpent talks and a human couple goes naked is driven home by the homonymy between the word for "cunning," *ʿārûm* (Gen 3:1) and "naked," *ʿărūmmîm* (2:25). See also HUMOR AND WIT (OT).

f. Satire. A pun can target a person or place for abuse, as satire. A classic example is Isa 5:22, which plays on an ironic use of the regular terms for military heroes, *gibbôrîm* and *ʾanšê ḥayil*, respectively: "Woe to those who are heroes at drinking wine, and valiant men in mixing strong drink."

2. Proper Names. There was a belief in the ancient world that, on the one hand, names signify certain essential characteristics of their bearers and, on the other, names betoken a fate or destiny. This belief would seem to underlie plays on the names of persons and places in the Hebrew Bible. We shall organize our treatment of plays on names with reference to past (etymology), present (essence), and future (fate or destiny) associations.

a. Etymology. Explicit and implicit naming generally relates the denominated person or place to one's or its background or the circumstances in which he, she, or it came into being (etiology). The first human being was called *ʾādām* for having been formed from the earth (*ʾădāmâ;* Gen 2:7). Babylon *(bābel)* was named for the confusion (verb *bālal*) of language that effected its collapse (Gen 11:9). The twelve sons and daughter of Jacob were nearly all named by Leah and Rachel to reflect their personal struggles to bear children (Genesis 29–30, 35). Pharaoh's daughter named Moses *(mōšeh)* for her having drawn him out of the Nile: *mĕsîtîhû*, "I drew him out" (Exod 2:10). The morphology of Heb *mōšeh,* however, ironically signifies his role, or destiny, as the "one who draws out" Israel from Egypt through the Sea of Reeds.

b. Essence. As Abigail suggested of her husband Nabal (see A above), and as we now see with Moses, names may represent the character or role of the bearer. David, whose name means "beloved (of YHWH)," epitomizes divine chosenness; cf. the throne-name of Solomon, Jedidiah *(yĕdîdyâ)*, whose name is a synonymous substitution (see B.2 above) for "and the Lord loved him" (2 Sam 12:24–25). Isaiah would seem to have satirized the name of the Moabite city Dibon, transforming it to Dimon so that it would embody the "blood" *(dām)* with which its "waters" were "full" (Isa 15:9). In Isa 37:17–25 the name of the Assyrian king Sennacherib *(sanḥērîb)* is interpreted through paronomasia by Heb *ḥereb,* "sword," and the verb *ḥērēp,* "to mock (God)," thereby defining his character. Ruth's noble helper is unsurprisingly Boaz, whose name evokes *bô ʿōz,* "in him is strength." The wordplays on places in Mic 1:10–16 relate names to the nature or conduct of the locations.

c. Fate or Destiny. Words, like visual symbols, often bear the seeds of future meaning in the biblical world. The branch of the almond tree *(šāqēd)* that YHWH shows Jeremiah mantically suggests the participle *šōqēd,* "watching," and betokens God's commitment to fulfill his prophecy: "for I am watching over my word to perform it" (Jer 1:10–11). Similarly, the "summer fruit" *(qayiṣ)* that YHWH shows Amos conjures up the "end" *(qēṣ)* that "has come upon my people Israel" (Amos 8:1–2). The polysemy of language, as in these symbolic visions, conceals revelation. Consider the writing on the wall in Dan 5:24–28, *mĕnē› mĕnē› tĕqēl ûparsîn.* It can be read coherently as a jingle: "a mina, a mina, a shekel, and (two) half (-shekels)." Daniel, the gifted interpreter, reads each item as the key to a different though related sentence.

When Jacob blesses his sons in Genesis 49, or a prophet condemns a nation, by interpreting their names through paronomasia, they may be more than merely playing with words. They may be releasing a hidden fate. For Jeremiah, the geographic name Madmen presages the silence or desolation *(tiddōmmî)* that will befall it (Jer 48:2b). The Moabite sisters-in-law, Orpah and Ruth (Ruth 1), each fulfill the destiny implicated in her name. Orpah turns her back (*ʿōrep,* "back of the neck") on Naomi, and Ruth brings fertility (from the root *r-w-y*) to Naomi's household (see Ruth 4:15–16). The coincidence of similar names may convey a sense of destiny. The fact that Jacob *(yaʿăqōb)* is engaged in struggle *(wayyēʾābēq)* by a man at the Jabbok *(yabbōq)* ford (Gen 32:23–25), appears as though it was fated to be.

D. Bilingual Wordplay

There would seem to be some wordplay between Hebrew and neighboring languages in the Bible (cf., e.g., Rendsburg 1988). In Exod 10:10, the narrator may inject a satirical allusion to the Egyptian god Ra

in Pharaoh's accusation: "Look, you have some evil purpose [*rāʿâ*] in mind." The name of the manna *(mān)* is (implicitly) explained in Exod 16:15 by Aramaic *mān hˇ,* "What is it?"

EDWARD L. GREENSTEIN

WORDS OF THE LUMINARIES (4QDibHam). Three fragmentary manuscripts from Qumran Cave 4 (4Q504–6) contain prayers for the days of the week; the (probable) original title of the work (Hebrew *Dibrê Hammĕʾôrôth*), also translated as "Words of the Heavenly Lights," was written on the reverse of one of the fragments. The composition probably contained prayers for each day of the week, and most of the preserved text (1:1–7:3) is apparently prescribed for Friday, since 7:4 reads "praises for the Sabbath day." The extant text is a penitential prayer, comprising confessions of past sins and appeals for divine grace, with extensive use of biblical quotation. In the OT this genre is also found in 1 Kgs 8:46–53, Nehemiah 9 and Daniel 9, as well as 1 Bar 1:15–3:8. The similarity of form, content, and language to the ancient *taḫanun* ("supplication"), still part of daily Jewish liturgy, has been demonstrated by Lehmann (1964). The 4QDibHam prayer recalls the election of Israel, its past sins culminating in the destruction of the First Temple, and the dispersion, and specifically asks for restoration from that dispersion, which is emphasized as Israel's present plight.

The editor of the fragments, M. Baillet, dates them paleographically to the mid-2d century B.C.E., though the origin of the various component prayers may be considerably earlier. An important question is whether this text is "sectarian." It contains no specific indications of Qumran ideology, and has been classified by Baillet as "pre-Essene" (by which he means strictly "pre-Qumranic"), and as a product of "Hasidean piety" in the Maccabean period. However, few scholars now identify the Qumran community precisely as a whole, and it is increasingly acknowledged that the ideological roots and probably the formation of the Essenes predate the Maccabean period. The ideology of 4QDibHam, with its stress on Israel's past sins and its exilic perspective, is strikingly similar to the *Admonition* of the *Damascus Document,* although 4QDibHam, unlike CD, carries no implication of a sectarian community as its setting. Hence the prayer may have been non-Essene in composition, but used by Essenes, including the Qumran community. It is thus one of a number of Dead Sea scrolls which raise the question of what criteria define a Qumran manuscript or its contents as "sectarian."

PHILIP R. DAVIES

WORKS OF GOD. In this precise form the phrase appears only twice (John 6:28; 9:3), but the idea appears often in cognate forms. An author may use the noun "work" in the singular rather than the plural without a clear shift in meaning (John 6:28–29). In many cases, "work" is a verb in the present tense with God as the subject who is invisibly present in the activity of a human being (John 5:17). When a human person is the subject of this verb, God's role may be indicated in a prepositional phrase, the work being done by, through, or in God. Of course, many other verbs than work are used with God as subject: he calls, speaks, sends, reveals. Various antonyms appear: God's works are set over against the works of darkness, of the flesh, of the devil. Accordingly, the concept points to a hidden warfare between God and Satan in which an author believes the stakes are final judgment and salvation (John 3:19–21).

There is only limited reference to OT usage, although we find occasional mention of God's works in the six days of creation (Heb 1:10; 4:4) and to the rescue of Israel from Egypt and the gift of manna in the wilderness (Heb 3:9; Rev 15:3). Authors refer more frequently to the present vocation of individuals, whether of Christ (John 17:4), of the apostles (Acts 13:2), of Epaphroditus (Phil 2:29), or of members of the church in Thyatira (Rev 2:26).

The Johannine tradition makes major use of this idea. Here the works of God become visible in the work of Jesus who reveals Him. The will/words/works of the divine sender are synonymous with the will/words/works of the human messenger. The same linkage defines the paternal/filial image; whatever the Son does the Father does. A wide range of the Son's activity is placed within this context: giving sight to the blind (John 9:3–40), giving life to the dead (John 5:19–24), giving bread to the hungry (John 6; 28–33), or relaying the words of God (John 14:10). To believe in the one whom God sends is itself a work of God (John 6:29). The blind man who is healed becomes a work of God (John 9:3–4). The works of those whom Jesus sends become his works and in turn the works of God (John 14:12–14). These greater works are made possible through the gift of the Holy Spirit, whom God sends to the disciples at the request of Jesus (John 14:15–26). By completing the work that God gave him to do, Jesus glorifies God and is glorified by Him (John 17:4–5). This work is then continued in and through believers (John 17:20–26).

The pattern is less prominent in the Pauline tradition but the underlying perspective is similar. Paul assumes the identity of Jesus' mission with God's works but speaks more often of the works of Jesus Christ as Lord or of the work of the Holy Spirit. The existence of the church in Corinth is an example of work done *in* the Lord (1 Cor 9:1); as such the church itself has become a work *of* the Lord (1 Cor 16:10). Members of that congregation, by doing the work of the Lord, are assured that their work is not futile (1 Cor 15:58). Paul views the entire story of the Philippian congregation as bracketed between the beginning and the completion of God's work, and this view gave him both gratitude and confidence (Phil 1:6). Participation in God's work, of course, involves believers in a conflict with the works of darkness and the devil (Rom 13:12; Gal 5:19–21; Eph 5:11). When Paul uses the phrase "the work of God," it is sometimes difficult to be sure of the exact reference. In Rom 14:20, for instance, he may refer (1) to an individual believer whose faith is threatened, (2) to the cohesion of the community as a whole, (3) to the "righteousness, peace, and joy in the Holy Spirit," or (4) to all of the above.

Throughout the NT certain attitudes are constant. Apart from God, human works are evil and ephemeral; when done in God they are good and enduring (Acts 5:38–39). To accomplish God's work is "to do the will of him who sent me" (John 4:34). This is to do everything in the name of God so that one name binds together the activity of the Father, the Son, and all who serve them. This activity points back toward an origin in a new creation (Gal 6:15) and forward toward a completion "at the day of Christ" (Phil 1:6). Such attitudes are expressed in language that is meaningful only to community members; it is a prophetic and liturgical language that conveys a strong sense of communal identity and of historical vocation (2 Cor 5:16–6:2).

PAUL S. MINEAR

WORLD, ON THE ORIGIN OF (NHC II,5). The title given to the fifth tractate of Codex II from Nag Hammadi. It is written in Sahidic Coptic with some influences of Subachmimic. The treatise covers 30 pages of approximately 36 lines each. The text is generally well preserved, except at the bottom

corners. The tractate is untitled and is sometimes referred to as the "Untitled Work." A variant of the opening lines survives from Codex XIII (NHC XIII, *2* 50, 22–31).

Orig. World opens with a polemical introduction which claims to refute the opinions of those who hold that nothing existed prior to chaos (97,24–98,10). This opinion may be traced back to Hesiod (*Theog.* 116). The Hesiod text was allegorized by Stoic philosophers and is discussed in Theophilus (*Ad Autol.* ii,6). Thus *Orig. World* claims that only gnostic cosmologies can provide the truth about the origins of the world. Other elements of cosmological speculation corrected by the author include the doctrine of providence and the fiery destruction of the world. On the former, the author insists on a distinction between a heavenly Providence and the rule of Fate over the lower world (111,32–112,10; 121,16; 123,12–16; 125,27–32); on the latter, that in the end-time the material world and its ruling Fate are completely destroyed (125,23–127,17).

The author is familiar with philosophical debates of the mid-2d century C.E. and has also made extensive use of other gnostic expositions of Genesis. The treatise appears dependent upon a version of that tradition that is very close to *Hypostasis of the Archons* (NHC II,*4*), the work which immediately precedes it in Codex II (cf. *Orig. World* 98,11–23 with *Hyp. Arch.* 94,5–10; 99,2–22 with 94,10–14; 100,1–14 with 94,14–19; 100,19–26 with 87,11–14; 103,2–15 with 86,30–31 and 94,21ff.; 103,15–32 with 94,23–26 and 87,1–4; 103,32–107,17 with 95,13–96,15; 107,36 with 94,27f.; 112,32–113,2 with 87,23–26; 113,12–114,15 with 95,18–35; 114,8–15 with 89,15–17; 114,15–20 with 88,17–18; 114,24–115,3 with 87,23–35; 115,3–15 with 88,3–4; 115,15–30 with 87,35–36; 115,30–116,8 with 89,4–6, 14–15; 116,33–117,15 with 89,26–27; 118,6–119,19 with 89,31–90,19; 119,19–120,3 with 90,19–31; 120,3–12 with 90,30–91,3; 120,17–121,13 with 88,19–21 and 91,3–11). Further examples of the type of Genesis exegesis presupposed in these treatises are found in *Apocryphon of John* (NHC II,*1*). *Orig. World* has expanded its inherited mythic story with other myths, most notably an extensive account of the origins of Eros and the offspring of Eros and Psyche (108,14–111,29) and the origins of the Phoenix in Egypt (121,35–123,1). Thus, this work is a rich source for 2d century cosmological speculation, for gnostic traditions of Genesis exegesis and for other elements of popular mythology.

Orig. World holds that Fate, working with the demonic powers, has led the world astray into magic, bloodshed, idolatry, false sacrifices, and injustice (123,2–24). The appearance of the "True Man," the Savior, the Logos sent from the Immortal Father has taught the gnostics the truth about the rulers of Chaos. The gnostics "put to shame all wisdom of the gods and their Fate was shown to be condemnable, their power dried up, their rule destroyed and their foresight and glories became empty," (125,27–32). At the end of the age everything which belongs to the lower world will be destroyed and all will return to the primordial world of light (125,32–127,17).

PHEME PERKINS

WORM. See ZOOLOGY.

WORMWOOD. The popular name for any of several plants which belong to the genus *Artemisia,* named after the Greek goddess Artemis. Several species of *Artemisia* grow in Palestine and Syria. The wormwood mentioned in the Bible is likely *Artemisia herba-alba* Asso (also called white wormwood), a small, heavily branched shrub with hairy, gray leaves. It is the most common variety of *Artemisia* in Israel and neighboring countries, found even in dry, desolate areas. Other possible species included in the biblical references to wormwood would be *Artemisia judaica* and *Artemisia absinthium.* The wormwood plant, known for its extremely bitter taste, is eaten by goats and camels, and its leaves are dried and steeped by Bedouins to make a strong aromatic tea. Wormwood has also been used widely in folk

remedies, one of which is as a treatment for intestinal worms. This practice probably explains the popular name for the plant.

In the Bible, wormwood (the usual translation of the Heb *laʿănâ*) is always used figuratively for bitterness and sorrow. Though itself not poisonous, wormwood is often linked with the Hebrew word *rōʾš,* sometimes translated as "gall," which refers to a bitter and poisonous plant. Deut 29:18 warns against the fruit of idolatry which is gall and wormwood (RSV: poisonous and bitter fruit). The prophet Amos describes perverted justice and righteousness as wormwood (5:7; 6:12). Jeremiah declares the judgment of God against the people of Judah, saying, "Behold, I will feed this people with wormwood, and give them poisonous water to drink" (9:15; cf. 23:15). The author of Lamentations compares his distress over the destruction of Jerusalem to being filled with bitterness and wormwood (3:15, 19). In Proverbs the loose woman is portrayed as a deceiver whose lips drip honey, but who in reality "is bitter as wormwood" (5:3–4). The only NT usage of the term occurs in Revelation as a description of the effects of one of the trumpet judgments. When the third trumpet is sounded a great star named Wormwood falls into the waters on the earth and "a third of the waters became wormwood, and many men died of the water, because it was made bitter" (8:10–11).

MITCHELL G. REDDISH

WORSHIP, EARLY CHRISTIAN. Early Christianity differed strikingly from other religions in the Roman world in that it had no cult statues, temples, or regular sacrifices (whether of animals or produce), or the customary musical accompaniment. Christian worship had a primarily verbal character, and in this respect it was similar to synagogue Judaism, with which it had strong historical ties. Yet Christians did have religious gatherings where various types of rituals were practiced. Christians gathered to eat together (i.e., to celebrate the Lord's Supper), to baptize new members, to read Scripture, to listen to God speak to them through other Christians, to experience healing, to pray and sing hymns of praise and thanksgiving to God. These activities were not tied to particular places but could be practiced virtually anywhere. The primary unifying feature was temporal rather than spatial (cf. Smith 1987: 94f.): Christian worship occurred primarily on Sunday, the day commemorating the resurrection. Narrowly viewed, not all of these activities can be characterized as the worship of God (Marshall 1985), though all are part of the distinctive Christian conception of divine service. Despite the fact that Christian baptism, prayer, and sacral meals were rooted in Jewish traditions, the choice of new times and places for worship were means whereby Christians distanced themselves from Judaism (*Ign. Magn.* 9:1; cf. Perrot 1983). Christian worship can be understood as the reverent homage paid to God and Christ in the context of a Christian assembly. Christians assembled for various reasons, and each type of assembly was a complex of several kinds of ritual behaviors and celebrations all combined into a unified whole. Thus while particular features of religious services may not in themselves constitute a ritual of worship, the context in which they are set means that they are part of the constellation of activities which constitutes Christian worship. In this article the focus will be to describe what can be known about religious activities which characterized Christian assemblies.

A. The Problem of Method

The sources for our knowledge of the various aspects of early Christian worship are exceedingly incomplete and fragmentary until the end of the 2d century A.D., and are difficult if not impossible to synthesize. The evidence which does exist has been manipulated by scholars on the basis of a variety of theological biases. The major methodological problems and issues involved in the study of early Christian worship and liturgy include the following. (1) There has been a marked tendency to read early, fragmentary evidence anachronistically in the light of later, more detailed accounts of Christian liturgical practices. (2) There has been a strong inclination to read a chronological and geographical uniformity of development into the history of early Christian worship practices, though the evidence strongly suggests that great variety existed at various places and times during the first two centuries of Christian history. (3) While the quest for origins (particularly in connection with the ritual of the eucharist or Lord's Supper) often assumes the validity of the single-origin theory, i.e., that various eucharistic rites are descendants of a single original archetype, developments in the study of Jewish liturgy suggests that such "original forms" cannot be shown to have existed (Heinemann 1977; Sarason 1978; Reif 1983; Bradshaw 1987). (4) The tendency toward "panliturgism," i.e., the discovery of supposedly liturgical texts or fragments of liturgical texts throughout the NT wherever parallels to later liturgical texts are found (Moule 1961: 7), must be restrained. (5) The first time that a particular phrase occurs in a liturgical text does not mean that that is the first occurrence of such a phrase. (6) The widespread views that Jesus was a radical critic of traditional Jewish worship (Hahn 1973: 14–31), that early Christianity did not have a cult in the proper sense of the term (*BTNT* 121f.; Conzelmann 1969: 46f.), and that Christianity eliminated the usual distinction between the sacred and the profane (Hahn 1973: 38–39), are exaggerated claims based on modern theological biases with tenuous historical support in early Christian literature. (7) It is no longer viable to treat the history of early Christian worship in terms of overlapping religious and sociocultural categories of Aramaic-speaking Palestinian Christianity, Greek-speaking Jewish Christianity, and gentile Christianity (the procedure of Hahn 1973: *TRE* 14: 28–39).

B. The Morphology of Christian Worship

While the basic function of religious ritual is to act on the other world for the purpose of influencing this world, the more specific functions of ritual depend on many variable factors including the relationship of the religious group to the social context within which its members live. For early Christianity, a minority group within an often hostile religious and cultural environment, group ceremonies and ritual functioned in a way which tended to dramatize and actualize the new, distinctively Christian norms and values. The use of such terms as "brother" and "household" suggest that Christians attempted to overcome social rejection by creating a surrogate family. Further, the isolated character of individual Christian

communities was overcome by the maintenance of links with other similar communities which culminated in the development of the conception of the Church universal.

Religious rituals exhibit several general features throughout the religions of the world (Grimes 1982: 55f.): (1) they are repeated, (2) they are sacred, (3) they consist of formalized or stereotypical words, gestures, and actions, (4) they are traditional, and (5) they are intentional. All these elements mean that ritual activity is a way of ceasing regular activity and of focusing attention on matters of intense importance which are of common interest (Smith 1987: 103).

Worship, as distinguished from religious ritual, has several phenomenological characteristics (Smart 1972: 51): (1) worship is relational, (2) the ritual of worship expresses the superiority of the focus of worship to the worshipper, (3) worship performatively sustains or is part of the power of the focus of worship, (4) the experience worship expresses is that of the numinous, for the object of worship inspires awe, (5) the focus of worship is unseen and transcends particular manifestations, (6) the superiority of the focus give it greater power than the worshipper, and (7) worship involves praise directed to the focus of worship. The core of Christian worship was ritual combined with the intention or beliefs of the worshippers (Smart 1972: 5). Christian worship functioned in two primary ways: (1) it was not only a model and celebration of the distinctive religious and moral ideals of Christians, but (2) it also had an anticipatory function in that it provided a vehicle for actualizing the perfect future realization of these religious ideals in the present.

The terms "ritual" and "worship" are largely synonymous with the term "cult," a designation no longer widely used in English (though *Kult* and *Kultus* continue to be used in German). Nineteenth-century Idealism, which negatively assessed the external characteristics of religion, has had a significant impact on the way in which NT scholars have used the term "cult." Bultmann, for example, suggests a restrictive and implicitly pejorative three-part definition of cult (*BTNT*, 121): (1) human action (particularly sacrifice) intended to influence the deity to act in the interests of the group; (2) the action occurs at fixed sacred times in sacred places and in accordance with sacred regulations; (3) the action is performed by religious specialists (primarily priests) who mediate between the community and the gods. Earlier, Adolf Deissmann (1957: 114–18) reacted to von Dobschütz' view that the external signs of cult were temple, priest, and sacrifice, and the purpose of cult was to influence the deity by distinguishing between "acting" cults (those which try to influence the deity) and "reacting" cults (those in which human action is in response to a prior action of the deity). According to this schema, early Christianity was a "reacting" cult. However, "cult" may be defined in a much more objective and useful manner, with Mowinckel (*RGG* 4: 120f.), as "the visible, socially arranged and ordered, efficacious forms through which the religious experience of communion between the deity and the 'community' is actualized and its effects expressed." The term "cult," then, is virtually synonymous with "ritual" and "worship" to the extent that all three terms simply refer to the corporate religious activities of Christians.

Early Christian worship focused on God, but particularly upon the salvific benefits of what God had done for humanity through Jesus Christ. The focus of Christianity, both theologically and ritually, was therefore salvation. While salvation had been inaugurated in the past through the first coming of Christ (focusing on his incarnation, death, and resurrection), it had yet to be fully consummated in the future through the second coming of Christ, the Parousia. Many features of Christian worship, such as the celebration of the eucharist (Wainwright 1981) and the singing of hymns, often combined historical features (aspects of the past mission and achievement of Jesus) with eschatological elements (centering on the future completion of eschatological salvation). For Christians God was present in worship in a variety of manifestations and degrees (Smart 1972: 11f.). Though Christians worshipped the same God as Jews, the role of Christ in defining God is an essential and distinctive feature of Christian worship.

C. Evidence for Liturgical Sequences

While many separate features of Christian worship, such as the celebration of the Lord's Supper, baptismal liturgies, hymns, doxologies, and creedal formulas, have been preserved in the NT and early Christian literature (particularly in letters), there is often little indication of the original liturgical setting within which such individual traditions were set. Thus while Paul preserves a short account of the Lord's

Supper in 1 Cor 11:23–26, and later discusses many features of the Corinthian services of worship in 1 Corinthians 14, there is little indication of how these separate elements fit together as a whole. There have been a number of attempts to piece together the fragmentary evidence to reconstruct a liturgical setting for separate elements of worship services. Since Christian worship retained an elasticity and flexibility well into the 2d century A.D., the structures of Christian worship described below exhibit little uniformity nor are they variants of a single order of worship.

1. The Order of Worship in 1 Corinthians. In 1 Corinthians 8–14, Paul deals with a number of issues, including the problem of food and worship. One of the methodological issues in interpreting this section is the problem of distinguishing the actual practices of the Corinthians from Paul's notions of the ways in which they ought to behave. In 1 Cor 11:23–26, Paul provides the earliest extant account of the Lord's Supper, framed by discussions of the proper decorum for eating the Lord's Supper (vv 17–22) and the necessary attitude one must have when participating (vv 27–34). Paul does not suggest that the words of institution in vv 23–26 are or should be recited at the Lord's Supper, but he uses those words in order to convey the true meaning of the meal (cf. 1 Cor 10:16–17). Paul does not tell us the context in which the Lord's Supper is eaten, though it would appear from 1 Cor 11:20–21 that the communal meal occurred first. After a discussion of spiritual gifts in 1 Corinthians 12–13, Paul focuses on the role of tongues and other activities in Christian worship in 1 Corinthians 14. This description is important and has become the basis for describing the characteristics of the Service of the Word (Bauer 1930: 17–39). For Paul, glossolalia consisted of praying, singing, and blessing with the Spirit, to which the response "amen" is ordinarily expected (1 Cor 14:15f.), and is an activity which takes place in the context of a Christian assembly (v 23). Paul wants those present to be edified, and so emphasizes the value of the interpretation or explanation of glossolalia in ordinary human language (vv 13f.), and particularly stresses the value of prophecy (vv 24f.). Paul recommends that when Christians assemble, each one comes with a previously prepared hymn, lesson, revelation, tongue, or interpretation (v 26); the accent is thus on individual participation for mutual benefit. This suggests that the Corinthian practice is to make extemporaneous contributions to the service and to disregard the issue of comprehensibility and edification. Paul recommends that a maximum of three people be allowed to speak in tongues, accompanied by interpretation (v 28), and that a maximum of three prophets be allowed to prophesy (v 29). The other prophets present should evaluate what individual prophets say (v 29).

Several conclusions can be drawn from Paul's discussion. (1) The general sequence at Christian assemblies appears to begin with the Lord's Supper, and continue with a variety of activities involving hymns, lessons, revelations, glossolalia, interpretation of glossolalia, and prophecy. This sequence roughly corresponds to the structure of Greek symposia. (2) The Corinthian worship service appears to have been relatively free and unstructured; Paul's recommendations have the force of introducing order, decorum, solemnity, comprehensibility, and male dominance (vv 33b–35) into the proceedings. (3) In Paul's brief description of a number of activities which took place in worship services at Corinth, the only element reflecting a Jewish origin is the mention of the responsory "amen" (1 Cor 14:16). (4) Paul does not mention readings from Scripture, homilies, the kiss of peace, or other rituals or activities of Christian worship, though a detailed description of the structure and activities of worship was not his main purpose.

2. Reconstructed Liturgical Sequences in NT Letters. Many scholars have speculated that the beginnings and endings of NT letters may reflect various aspects of early Christian services of worship. Some NT letters were expressly written to be read before Christian congregations (1 Thess 5:27; Col 4:16; Rev 1:3; Acts 15:30; cf. Polycarp *Phil.* 3:2), and may have been intentionally designed to fit into an order of service through incorporating a variety of liturgical forms and sequences. The salutation found at the beginning of many letters, for example, "Grace to you and peace from God our Father and the Lord Jesus Christ" (Rom 1:7; 1 Cor 1:3; 2 Cor 1:2; Gal 1:3; cf. Rev 1:4), may have been adapted from the introductory greeting used to open a Christian assembly for worship (Delling 1962: 48–49). Similarly, it is possible that the prayer of thanksgiving which usually follows the epistolary prescript may also have been modeled after prayers in the opening part of such worship services.

Many NT letters conclude with a sequence of features which have led scholars to suggest that they reflect a liturgical sequence linking one part of a service, the service of the word, with the celebration of the eucharist (Lietzmann 1979: 186f.; Robinson 1953; Bornkamm 1969: 169–76; Gibbs 1977–78). The following elements in this hypothetical liturgical sequence, present in a relatively complete form in 1 Cor 16:20–24 and *Did.* 10:6 (but also present more fragmentarily at the end of several other letters, e.g., Romans and Revelation), have been identified: (1) the holy kiss, (2) the invitation for believers to come, (3) the exclusion of the unworthy, (4) the *marana tha* ("our Lord come!"), and (5) the promise of grace. This sequence, the theory goes, led to the celebration of the eucharist. The strength of the proposal lies in the fact that *Did.* 10:6 is clearly part of a liturgical sequence which either introduces or concludes the eucharist (complete with the *marana tha* formula), and the kiss of peace found at the conclusion of five NT letters (Rom 16:16; 1 Cor 16:20; 2 Cor 13:12; 1 Thess 5:26; 1 Pet 5:14) concludes the prayers offered just prior to the eucharist in Justin (*1 Apol.* 65.2), ca. A.D. 155.

A simpler proposal, though just as speculative, is that there is a basic three-part pattern found at the conclusion of Romans which reflects the conclusion of a worship service at which the eucharist was not celebrated (Cuming 1975): (1) a peace wish, e.g., "The God of peace be with you all. Amen" (Rom 15:33), (2) the holy kiss, e.g., "Greet one another with a holy kiss" (Rom 16:16a), and (3) the grace benediction, e.g., "The grace of our Lord Jesus Christ be with you" (Rom 16:20b); cf. 1 Thess 5:23, 26, 28; 2 Cor 13:11, 12, 14; 1 Cor 16:20, 23; Phil 4:9, 21, 23).

3. The Evidence from the *Didache.* The *Didache,* or "Teaching of the Twelve Apostles," is a pseudonymous treatise on "church order," of composite origin, containing an extensive section of ethical exhortation arranged in the pattern of the "Two Ways" of virtue and vice (*Did.* 1–6), and a manual of instructions relating to baptism, fasting, prayer, the agape and/or eucharist, and the roles of prophets, bishops, and deacons, with a concluding eschatological scenario (*Did.* 7–16). The date of the *Didache* is disputed, and is placed by scholars anywhere from A.D. 60 (Audet) to ca. A.D. 125, though a date ca. A.D. 100 is in many ways the most satisfactory. See also DIDACHE.

It is reasonable to suppose that the general sequence of topics in *Did.* 7–10 reflects the order of Christian services of worship at the place and time when this section of the *Didache* was formulated, a supposition confirmed in part by the order of worship found in Justin *1 Apol.* 61–67 (see below). Since the extensive ethical instruction in the Two Ways tradition in *Did.* 1–6 immediately precedes the instructions on how to administer baptism (*Did.* 7), the specific setting for such paraenesis appears to be the baptismal liturgy itself. Baptism is to be administered "in the name of the Father and of the Son and of the Holy Spirit" (*Did.* 7:1), a formula derived from Matt 28:19, where it is already explicitly connected with baptism. Those who actively participate in the ritual of baptism should fast one to two days beforehand (*Did.* 7:4; cf. Hippolytus *Apost.* 20.7). The Lord's Prayer, in a version close to that found in Matt 6:2–4, is found in *Did.* 8:2, where it is required to be prayed three times each day. Though the plural pronouns and verb forms suggest a corporate setting for the Lord's Prayer, the frequency with which it is used also suggests a setting of private prayer in which it is a conscious substitute for Jewish prayers. Eucharistic prayers with no reference to the sacrifice of Jesus are then given (*Did.* 9:1–4), before a regular meal, followed by a prayer prescribed for the conclusion of the meal (*Did.* 10:1–5). The latter is similar in form and content to the standard Jewish grace following meals, the *birkat haz-zimmun* (Heinemann 1977: 115–22). Since only those who have been baptized may eat the eucharist together (*Did.* 9:5), those two rituals very probably occurred in that order when baptisms were held. The miscellaneous statements which conclude the final prayer (*Did.* 10:6) are problematic and have been thought by some to indicate that the meal just eaten was the agape, while the eucharist itself is being introduced but not actually mentioned:

> Let grace come and let this world pass away.
> Hosanna to the God of David!
> If anyone is holy let him come. If not, let him repent.
> Our Lord, come!
> Amen.

The prophets are given latitude to celebrate the eucharist in their own way (*Did.* 10:7), a statement which seems to confirm the impression that the prayers prescribed in *Did.* 9:1–4 were in fact intended as eucharistic prayers. In a section describing the inspired utterance of prophets (*Did.* 11:7–12), a congregational setting seems presupposed, a setting which is certainly true for the freely worded eucharistic prayers of prophets (*Did.* 10:6). In *Did.* 14 it is recommended that on the Day of the Lord, i.e., Sunday, the congregation assemble to break bread and give thanks, following the confession of sins. Using imagery from the OT (Mal 1:11, 14), the eucharist is considered a sacrifice *(thysia)* in *Did.* 14:2–3.

To briefly recapitulate, the order or worship enjoined by the *Didache* consists of the several features in the following possible, but hypothetical, order: (1) fasting in preparation for baptism (7:4), (2) baptism "in the name of the Father and the Son and the Holy Spirit" (7:1–3), (3) recitation of the Lord's Prayer (8:2), (4) exclusion of those who have not been baptized (9:5), (5) confession of sin (14:1–2), (6) celebration of the Eucharist, consisting of prayers of thanksgiving over the cup and the bread (reversing the usual order) following by the meal proper, and concluded with a final thanksgiving (9:1–10:5), (7) inspired words and actions of prophets who are present (11:7–12; cf. 10:7). No mention is made of the holy kiss, the reading of Scripture, or the giving of a homily, though none of these features may have been a matter of concern for the author in the present context.

4. The Evidence from Pliny. One of the oldest descriptions of what Christians did when they gathered together is found in a letter of Pliny the Younger which he wrote to the emperor Trajan, ca. A.D. 108 (*Ep.* 10.96.7). This text is important because it provides the perspective of an outsider based on information derived from Christian informants, but which for that reason may be incomplete or distorted. Pliny provides the following details: (1) Christians met on a regular basis on a fixed day *(statio die)* before dawn (i.e., in the free time before beginning work, though *statio die* does not necessarily mean Sunday, nor indeed any particular day of the week); (2) they sang hymns honoring Christ as though to God (probably humns of praise); (3) they bound themselves by an oath *(seque sacramento … obstringere)* to abstain from immoral behavior (perhaps referring to baptismal vows or possibly even the eucharist, to which the term *sacramentum* may refer, though this is more likely a way of referring to the content of Christian prayers generally); (4) they assembled again after an interval (probably after a day's work) to share a communal meal together, probably the eucharist (if it was not included in the *sacramentum*). The dawn service is commonly understood to be a service of the word, while the evening service appears to consist primarily of the eucharist.

5. The Evidence from Justin Martyr. The evidence for the order of worship preserved in Justin *1 Apol.* 61–67 contains several points of agreement with the *Didache* and reflects the most complete order of worship before the *Apostolic Tradition* of Hippolytus (ca. A.D. 215). Justin (ca. A.D. 100–165) was born in Flavia Neapolis (ancient Shechem) in Palestine, taught at Ephesus, and later moved to Rome, where he taught as a Christian philosopher. In *1 Apol.* 61–67, in which he explains Christian worship practices to outsiders, we have the first relatively complete descriptions of Christian services which can be set in a specific geographical and chronological setting: Rome, ca. A.D. 155. Justin describes two services, the first a baptismal service followed by a eucharist (*1 Apol.* 61–66, with a lengthy apologetic excursus in 62–64), and the second a regular Sunday worship service (67.1–8). In describing the first service, Justin reports that the ritual of baptism (called *photismos,* "illumination," *1 Apol.* 61.12), is preceded by prayer and fasting by everyone in the relatively small group present, and the candidates are washed "in the name of God the Father and Master of all, and of our Savior Jesus Christ, and of the Holy Spirit" (*1 Apol.* 61.3). The newly baptized are then brought to the assembly of those called "brothers," where prayers are offered centering on themes appropriate to baptism, i.e., that Christians who have been illuminated will obey the divine commands (65.1). After the conclusion of the prayers, those present greet each other with a ritual kiss (65.2). The president of the assembly then offers prayers of thanksgiving at some length over the bread and a cup of water mixed with wine, at the conclusion of which the congregation says "Amen" (65.3). The deacons (a title used for those who distributed sacrificial meat at pagan religious festivals, cf. Hatch 1881: 50) then distribute the bread and wine to those present and take bread and wine to those who

are absent as well (65.4). Only practicing Christians are allowed to take part in this sacral meal called "eucharist" (66.1), which is based on the gospel traditions of the Last Supper, where it is reported that:

> Jesus, taking bread and having given thanks, said, "Do this for my memorial, this is my body." And similarly taking the cup and giving thanks he said, "This is my blood." And he gave it to them alone (66.3).

The second section describes the type of service regularly held on Sunday (67.3), a day which Justin claims commemorates both the creation of the world and the resurrection of Jesus (67.7). At this meeting the Gospels or the Prophets are read "as long as time allows" (67.3), followed by a homily based on the reading given by the president, which concludes when all present stand and pray. Then bread and a mixture of wine and water are brought and the president offers prayers of thanksgiving, to which the congregation responds, "Amen!" (67.5). The bread and wine are then distributed and taken by the deacons to those absent. A collection is then taken up for distribution for those in need, i.e., widows, orphans, the sick, prisoners, and visitors (cf. 1 Cor 16:2).

Several summary observations can be made about these two worship services which Justin has described with some care and attention to detail. (1) The eucharist is an essential element in both services. (2) Baptisms, which apparently can be held on days other than Sunday, are always linked to a celebration of the eucharist. (3) Scripture readings and homilies based on them occur only in the context of the Sunday service. (4) Prayers in the Christian assembly which follow the ceremony of baptism appear to be thematically linked to baptism by emphasizing the pursuit of virtue and the avoidance of vice (cf. *Did.* 1–6). (5) The holy kiss is mentioned only in connection with the baptism-eucharist service. (6) While the "president" of the assembly is not identified it would appear to be a role exercised by the bishop, since deacons are specifically linked with the distribution of the eucharist. (7) The eucharistic bread and wine are not part of an actual meal, yet are understood as a symbolic reenactment of the Last Supper. (8) Though Justin knows the gospel tradition of the words of institution, he does not say that they are recited in connection with the eucharist itself, mentioning only the lengthy prayers of thanksgiving (similar in function to those prescribed *verbatim* in *Did.* 9:1–10:6).

D. The Origins of Christian Worship

Since Christianity arose within Judaism, quickly spread to the major urban areas of the Roman world and attracted increasingly large numbers of pagans which soon outnumbered Christians of Jewish origin, Christian worship must be understood against the background of both Jewish and Greco-Roman religious practices.

1. Judaism. Christianity originated within Judaism and was considered a "sect" *(hairesis)* of Judaism (Acts 24:14), and according to Acts the spread of Christianity throughout the Roman world tended to begin with the evangelization of diaspora synagogues (Acts 13:5, 14; 14:1; 17:2, 10, 17; 18:4, 19: 19:8). There was therefore both contact and continuity between Christianity and synagogue Judaism. The Aramaic term for synagogue is *by knyst›,* "place of assembly," while two widely used Greek terms are *synagōgē* (derived from the LXX), means "assembly," and *proseuchē,* "place of prayer," probably referring to a synagogue (Acts 16:13, 16). Synagogue worship was entirely verbal in character and was largely dependent on congregational participation. The essential features of synagogue worship were Scripture reading and prayer, neither of which was dominated by specialists. Synagogal prayers focused on praise and thanksgiving rather than on petition, and so were appropriate for a worship setting. While synagogue worship undoubtedly had a profound impact on early Christian worship, very little is known about the specific nature of Jewish worship and ritual before the codification of the Mishnah toward the end of the 2d century C.E. The recitations of the Shema, now consisting of three passages from the Torah (Deut 6:4–9; 11:13–21; Num 15:37–41), but probably much shorter originally (Dugmore 1964:18–20), and of the Eighteen Benedictions go back at least to the 1st century A.D., though no corresponding statutory prayers were characteristic of early Christian worship. There is clear evidence that the Torah was read regularly on the sabbath by the 1st century C.E. (Acts 13:15; 15:21; Josephus *AgAp* 2.175; *Ant* 16.43; Philo in Eusebius *p.e.* 8.7.359d), and also strong evidence that the Torah reading was often followed by a homily. Exegetical preaching was practiced in synagogue Judaism before A.D. 70 (cf. Luke 4:16–30; Acts

13:15; Philo *Vita Mos* 2.215f.; *Spec Leg* 2.62). In Judaism, two characteristic types of homiletic forms developed, the *Yelammedenu rabbenu* form, which began with the formula "May our Master teach us," and the proem homily, which began with a biblical text from the Writings (Kethubim) and related it to the Torah lection of the day (Heinemann 1977: 994–98). NT scholars have isolated a number of proem homilies in the NT (John 6:31–58; Acts 13:16–41; Rom 1:17–4:25; 1 Cor 1:18–3:20), but in every instance the structure of these passages, which focus on the exegesis of the OT, conforms to neither the *Yelammedenu rabbenu* or the proem form of homily.

2. Hellenism. Despite the admitted connections between Jewish synagogue organization and the organization of some Christian churches (the role of "elder" is certainly of Jewish origin), Hatch (1888: 26–55) has shown that the terms "bishop" and "deacon" were important designations in Greco-Roman associations.

While there were many types of sacred meals in the Greco-Roman world (analyzed by Klauck 1982), one often overlooked the type that took place within the context of a symposion. The symposion, or "drinking party," was a social and religious custom widespread in the Greco-Roman world, set in the context of the main meal of the day (Greek *deipnon;* Latin *cena*), which was framed with prayers, libations, and food offerings and thus had the character of a sacral meal. Symposia were also the main social activities of Greek clubs *(thiasoi, eranoi),* pagan organizations which lend themselves to comparison with early Christian religious associations which held sacral meals as a central part of their activities. Pliny considered the Christians under his jurisdiction as members of a *hetaeria* (*Ep.* 10.96.7). The symposion was essentially a sacral meal which began with food offerings to the appropriate divinities (Athenaeus *Deipn.* 5.179), and concluded with the pouring of libations and singing of hymns to the appropriate deities (Athenaeus *Deipn.* 5.149). Meat from sacrificial animals was preferred (Athenaeus *Deipn.* 4.140, 173; 11.459; 12.534). After the meal itself was concluded, the tables were removed and the *potos,* or after-dinner drinks, the symposion proper, was begun with three libations to the Olympian deities generally (followed by a hymn to Dionysus), to the Greek heroes, and finally to Zeus Savior. As a drinking party, the symposion could often end in intoxication (Lucian *Symp.* 17; Athenaeus *Deipn.* 2.36). For many ancients the question of order and decorum at symposia was a matter of central concern (Plutarch *Quaest. conv.* 614F–615A; Athenaeus *Deipn.* 10.420). The activities at symposia ranged from intellectual conversations, storytelling, dancing, and recitations of various types; brawls and sexual promiscuity were not unknown.

Paul explicitly compared Christian and pagan sacred meals with regard to their mutual implications for the participant (1 Cor 10:14–22). The structure, customs, and decorum of Christian meals at Corinth exhibit a number of similarities with the corresponding aspects of the symposion, particularly as practiced in religious societies. Paul strongly disapproves of the lack of decorum at meetings where Christians eat together (1 Cor 11:17–22), just as Plutarch and other ancients were concerned about the problems of disorder at symposia. Just as at Greek symposia, the meal *(deipnon)* constitutes the initial stage of the festivities and involves the "sacrifice" of a portion of the food to be eaten and concludes (1 Cor 11:25) with a ceremony involving wine. The various features of Christian worship which Paul discusses in 1 Corinthians 14 have parallels with the kinds of activities engaged in at Greek symposia.

E. Christian Assemblies

One of the most pervasive practices of early Christians was their assembling at various times for various purposes. In fact, one of the primary terms used for such assemblies or congregations, *ekklesia,* by a remarkable extension of meaning came to refer to the totality of Christian assemblies or congregations, i.e., all Christians everywhere. In Greek and Roman cults, in contrast, a temple was ordinarily intended not as a meetingplace for congregations of the faithful, but rather as a house for the god, where the cult statue of the god or goddess was placed (altars where sacrifices were made were not located within the temple but were situated in the open air outside). The notion that Christians chose the term *ekklēsia* in order to differentiate themselves from the Jewish *synagōgē* (Bauer 1930: 10), however, cannot be substantiated. Early Christians met in homes (1 Cor 16:19; Rom 16:5; Col 4:15; cf. Acts 2:13), and Acts presents Paul as using private homes to proclaim the Gospel (Acts 18:7–11; 20:20; 28:23). The earliest

known church building at Dura-Europas is a private home adapted for Christian gatherings (before A.D. 256). Though some have claimed that all Christian assemblies centered on the celebration of the eucharist (Cullmann 1953: 29), such a claim clearly goes beyond the evidence. It is far more likely that Christians held religious meetings for a variety of purposes. Acts 2:46 reports that Christians in Jerusalem both attended the temple and gathered daily "to break bread" in their homes. Though the evidence is meager, it is likely that many Jewish Christians participated in the services of existing synagogues until they were forced out (cf. John 9:22; 12:42; 16:2), while others may have founded synagogues of their own (Js 2:2; Ign. *Polyc.* 4:2; Hermas *Man.* 11.9, 13, 14; Justin *Dial.* 63.5). The term "synagogue" continued to be used to refer to a congregation of Christians (Dugmore 1964: 5). There is evidence suggesting that some Jewish Christians observed the Jewish Sabbath as well as the Christian Sunday (Eusebius *Hist. Eccl.* 3.27.5; cf. Rordorf 1968: 216–18).

Christians gathered together for a variety of religiously motivated purposes. There were three primary ways in which the religious gatherings of the earliest Palestinian Christians differed from the practices of synagogue Judaism (Bauer 1930: 10): (1) the "teaching of the apostles" was a matter of central concern (Acts 2:42), (2) the exercise of prophetic gifts characterized the early community from the very beginning (Acts 2:1–14; 11:27–30; 13:1–2; 15:32; 21:8–11), and (3) the earliest community ate a sacral meal at its gatherings called "the breaking of bread" (Acts 2:42).

One distinctive form of Christian assembly, an oracular consultation, is described in Hermas *Man.* 11, a section of the larger composition which originated ca. A.D. 125 or earlier. The author describes what he considers a deviant type of Christian service which could be designated as a séance, or prophetic service. The prophet is presented as seated before a group of Christians who ask him questions about the future (11.2), and, it is implied, pay him for answering them (11.12). The author insists that the spirit which is from God cannot be asked questions, but speaks spontaneously through the true prophet (11.5). The true prophet, or man "with the divine spirit," is one who, when he is present at a Christian assembly, speaks to the congregation whatever God wishes to communicate as a result of the prayers of those present. The false prophet, on the other hand, avoids such Christian assemblies (11.13). When he does attend such an assembly he is powerless to speak forth, since the earthly spirit which inspires him flees (11.14). There is little evidence to suggest that such Christian oracular consultations were widespread in the period before the middle of the 2d century A.D. The evidence provided by Hermas *Man.* 11 is important because it indicates that prophetic speech, often a subordinate activity in Christian services of worship, could be elevated to the focal activity. The language of Hermas *Man.* 11 suggests the influence of Hellenistic magical divination, which may account for the opposition to such oracular consultations expressed by the author.

F. The Days for Worship

It is widely perceived that early Christianity, which had emerged from Judaism, abandoned the Jewish special day of rest and worship by transferring those functions to Sunday in commemoration of the resurrection of Jesus (Beckwith and Stott 1978). That perception is both oversimplified and incorrect. Yet there is no unambiguous evidence in the NT that Christians abandoned the Sabbath (too much is often read into Gal 4:8–11 and Col 2:16–17). While the Sabbath was a day of worship and rest in Judaism, Sunday began as a Christian day of worship but became a day of rest only by a series of laws promulgated by the emperor Constantine beginning on March 3, 321 (Rordorf 1968: 154–73).

The Jewish term for "Sunday" was simply "the first day of the week," and this was also its Christian designation until comparatively late in the 1st century. The earliest references to the "first day of the week" as a day of worship in the NT are found in 1 Cor 16:2 (written ca. A.D. 54 or 55), and Acts 20:7 (written ca. A.D. 90). In the first passage, Paul suggests that Corinthian Christians put away a contribution on the first day of every week so that he will not need to take a special collection himself when he arrives. The passage refers not to the collection of money at public worship (a later development), but to the individual Christians who lay aside money to be collected when Paul himself arrived in Corinth. Acts 20:7f. contains a great deal of information regarding Christian worship on the first day of the week: "on the first day of the week when we had gathered together to break bread, Paul talked to them, intending to

leave the next day. There were many lights in the upper room where they had gathered together." Here the phrase "to gather together" is a technical term referring to the assembly of Christians for worship, and is frequently combined with the phrase "to break bread" in Christian literature (1 Cor 11:20; *Did.* 14:1; *Ign. Eph.* 20:2). Although the "breaking of bread" spoken of here could be either a common meal or the eucharist, it is more probable that the latter is meant. The time of the gathering is certainly Sunday evening rather than Saturday evening, although this question is dependent on whether one uses the Jewish method of reckoning time (sundown to sundown) or the Roman method (sunrise to sunrise). The time of the gathering appears to have been Sunday evening until early in the 2d century, when for various reasons the major service of worship was moved from Sunday evening to Sunday morning, before dawn. Since Sunday was in no sense a day of rest, Christians, as all other inhabitants of the Roman Empire, had to work during the daylight hours of Sunday. Two other characteristics of this description of the Christian day of worship may be significant. First, there is the reference to Paul's lengthy sermon, and second, there is the observation that there were many lights in the upper chamber where there were meetings. Finally, the resuscitation of Eutychus by Paul may reflect the practice of performing miracles of healing during the worship service.

We have yet to determine the reason why many Christians abandoned the seventh day, the Jewish sabbath, for their worship services and selected an entirely different day, "the first day of the week." Since there is no evidence for a pre-Christian use of this day for religious worship on a weekly basis among Greco-Romans or Jews, the only convincing reason seems to be that worship on the first day of the week was a celebration of the day on which Jesus had risen from the dead (Mark 16:2, 9; Matt 28:1; Luke 24:1; John 20:1, 19: Justin *1 Apol.* 67.7). Though the phrase "first day of the week" is a Semitic expression, it quickly became a quasi-technical term in early Christian communities.

The phrase "the Lord's day" is found just once in the NT in Rev 1:10: "I was in the Spirit on the Lord's Day." The Greek adjective modifying day, *kyriakē,* occurs only rarely in early Christian literature, where it means "belonging to the Lord," or "the Lord's." In Greco-Roman inscriptions and papyri, however, it means "imperial," and refers to the Roman emperor. While some contend that the expression "the Lord's Day" originally referred to Easter Sunday and only later was applied to the weekly service of worship, it seems more probable that the term always referred to the weekly day of worship observed by Christians, as it does in modern Greek. Indeed, in the *Gospel of Peter,* the adjective *kyriakē* is applied twice in the narrative to the day on which Jesus rose from the dead (9.35, 12.50).

That "the Lord's Day" refers to the weekly day of worship and not merely to Easter Sunday is suggested by other evidence. *Did.* 14:1 contains the exhortation "On the Lord's day of the Lord come together, break bread and hold eucharist, after confessing your transgressions that your offering may be pure." Here "the Lord's Day" is certainly the weekly day of worship, whatever the reason for the strangely redundant phrase "the Lord's day of the Lord." Again, in *Ign. Magn.* 9:1, the parallel between the phrases "keeping the sabbath" (which Ignatius opposes for Christians) and "the Lord's Day" indicates that the expression can only refer to the weekly Sunday.

The precise meaning of the phrase "the Lord's day," however, needs clarification. Some consider it equivalent to the Septuagint expression "the Day of the Lord," but this meaning is unlikely. More popular is the view that "the Lord's Day" refers to the day on which the Lord (i.e., Jesus) rose from the dead (Justin *1 Apol.* 67.7). A clue to its meaning may be provided by the only other occurrence of the adjective *kyriakos* in the NT, 1 Cor 11:20, where Paul refers to the Lord's Supper *(kyriakon deipnon).* Since the breaking of bread, i.e., the Lord's Supper, was the central ritual of Christian worship, it is possible that this very early way of referring to the ritual as "the Lord's Supper" was later used to designate the day of worship itself.

G. The Language of Worship

The primarily verbal character of Christian worship was characteristically expressed in hymns and prayers which say things about God which are well known to the worshipper, but are nevertheless repeated because they are thought to have a performative significance, particularly if the words

mimetically narrate a foundational sacred event. This ritual repetition of a sacred event of the past serves to reactualize the event in the imagination of those present.

1. Prayers. Prayer was a central group activity of the earliest Palestinian Christian community as described in Acts (1:14; 2:42; 4:23–31; 6:4), and it is natural to suppose that these prayers were derived from those used in daily private and synagogue prayer in early Judaism, although no traces of a Christian adaptation of such statutory prayers as the Eighteen Benedictions has been found (Bradshaw 1982: 28f.), though such Jewish prayers had not achieved fixed form by the 1st century A.D. (Dugmore 1964: 75–77). While many prayers have been preserved in early Christian literature, their present literary context often reveals little about their actual setting in services of worship. In the letters of the NT, prayers of petition and intercession occur frequently (Wiles 1974: 297f.). The Jewish *bĕrākâ* ("benediction") style of prayer, in which God was blessed for what he had accomplished for his people, occurs rarely in the NT and early Christian literature (Luke 1:68; 2 Cor 1:3; Eph 1:3; 1 Pet 1:3; Ignatius *Eph.* 1:3; *Ep. Barn.* 6:10), and in the case of the NT passages is followed not by petitions but by praise, suggesting a liturgical setting (Bradshaw 1982: 30). The Jewish *hodayah* ("thanksgiving") pattern of prayer, which characteristically began with the phrase "I/we thank you," is frequently found in the NT and early Christian literature (Luke 2:38; Heb 13:15; Rev 11:17–18). This type of prayer is also frequently used in Paul to introduce petitions and intercessions (Rom 1:8; cf. Phil 4:6; Col 4:2; 1 Thess 5:16–18). A third type of prayer which Christianity inherited from Judaism begins directly with an *anamnesis* ("recollection") of the mighty works of God and lacks an introductory formula (Acts 4:24–30; Bradshaw 1982: 15, 33f.).

The Lord's Prayer was certainly the most widely used of all ancient Christian prayers. It is preserved in a longer version (Matt 6:9–13 and *Did.* 8:2, with the addition of the doxology) and a shorter version (Luke 11:2–4). In addition, it appears likely that the prayer of Jesus in John 17 is a paraphrastic elaboration of the longer version of the Lord's Prayer (Walker 1982). The shorter Lukan version is generally considered the more original with regard to length, while the longer Matthean version is often considered as preserving the more original wording (Jeremias 1978: 89–94). In its original Jewish setting in the teaching of Jesus, the Lord's Prayer exemplified major features of Jewish private prayer (brevity, addressing God in the second person singular, opening with epithet for God, "our Father"; cf. Heinemann 1977: 179–92), and at least in its present context in Matthew (6:5–6) and the *Didache* (8:2–3) it functioned as a Christian substitute for the Eighteen Benedictions. The brevity of the Lord's Prayer in Matthew and Luke, together with the fact that both versions end abruptly without a doxology, suggest that in early Christianity they were incorporated into longer prayers. In its original setting, the Lord's Prayer appears to have functioned as a private supplement to the recitation of the Eighteen Benedictions (Sigal 1984: 73). The Lord's Prayer quickly became, at least in some circles, a statutory public Christian prayer; *Did.* 8:3 commands that it be prayed three times daily (cf. *Apostolic Constitutions* 7.24), doubtless as a substitution for the Jewish practice of praying thrice daily (cf. Dan 6:10, 13; cf. Acts 3:1; 10:30). Though there is little doubt that the Lord's Prayer was part of the liturgical tradition of early Christianity from the mid-1st century A.D. on, there is no explicit evidence until the mid-4th century A.D., when Cyril of Jerusalem quoted it in a catechetical lecture as a prayer used immediately before the eucharist. The Lord's Prayer is essentially a petitionary prayer, with seven petitions in the longer version, rather than a prayer of praise or thanksgiving.

The brief Aramaic prayer *maranatha* occurs in an untranslated form in a liturgical setting in *Did.* 10:6 and probably 1 Cor 16:22 as well. This formula can be translated either "our Lord, come!" (preferred by most scholars) or "our Lord has come." A slight variation of this formula occurs in Rev 22:20, where it is translated "Come, Lord Jesus," and may also be reflected in the phrase "the Lord is at hand" (Phil 4:5). While *maranatha* can be translated in either of the two ways mentioned above, the first translation has two possible meanings. "Our Lord, come!" may be an eschatological prayer uttered in expectation of the imminent return of Jesus, as in Rev 22:20 and Phil 4:5 (Schulz 1962), or it may be a prayer which is intended to effect the cultic presence of the exalted Jesus. Yet it can also be argued that the formula can refer *both* to the cultic and eschatological coming of Jesus at one and the same time, i.e., an eschatological expectation can have dimensions which can be realized in present experience (Audet 1958: 411f.).

2. Creeds and Confessions. Creeds and confessions, if defined as brief formulas summarizing the essentials of the Christian faith and promulgated with ecclesiastical authority, are not found in early Christianity before the mid-2d century. Nevertheless, within the literature of the NT and the Apostolic Fathers there are creedlike statements and rudimentary confessional formulas which reflect the developing tradition of the early Christians with widely varying degrees of fixity.

Since creeds such as the Apostles' Creed (the earliest evidence for which appears in A.D. 390 in Ambrose *Ep.* 42.5) were believed to have originated with the twelve apostles, earlier scholars were bent on finding evidence for later creeds in the NT by identifying various creedal statements scattered throughout the writings and by assuming their basic unity. More recently, and particularly using form-critical methodology, this approach has been reversed. Rather than beginning with later creeds and tracing their ancestry back into earlier Christian literature, scholars have developed various criteria for identifying the existence of early creedlike statements and confessional formulas which have been embedded in the NT. One of the weaknesses of this more recent approach, however, is the tendency to consider one or another such isolatable confessional formulas as the "earliest" or the most "primitive" formula, and subsequently to arrange other formulas along a trajectory of evolutionary development from the most simple and primitive to the most complex and developed forms.

Some scholars have isolated numerous creedal formulas in the NT and other early Christian literature but have limited the possible original liturgical setting of these forms to the rite of baptism. The complexity of early Christian life and worship makes this simplistic approach improbable. Cullmann has isolated six types of contexts in which confessions and creeds were used and developed in the early Church: (1) baptism and catechetical instruction, (2) worship, (3) exorcism rituals, (4) persecution, (5) opposition to heretical teachers and teachings, and (6) preaching. Since very few of the confessional formulas discussed below can be firmly fixed in any of these settings, it is important to avoid rigid insistence on specific religious settings.

The shortest confessional formula in the NT contains the name of Jesus together with a title in the predicate. In 1 Cor 12:3, Paul wrote, "I therefore want you to know that no one who speaks by the Spirit of God ever says 'Jesus is accursed!' and no one can say 'Jesus is Lord!' except by the Holy Spirit." Since Paul is primarily concerned with the worship services of the Corinthian church in 1 Corinthians 12–14, the latter acclamation had its primary setting in communal worship. This tersely abbreviated confession means "Jesus [who was rejected and crucified] is [risen from the dead and exalted to the right hand of God, and therefore] Lord." The negative confession "Jesus is accursed!" may belong to other settings, such as one of persecution where Christians were encouraged to revile Christ (cf. *Mart. Pol.* 9:3; cf. Pliny *Ep.* 10.96) and to proclaim "Caesar is Lord!" (*Mart. Pol.* 8:2). Another possible setting is in controversies between Christians and Jews. Justin Martyr observed that some Jewish converts to Christianity had subsequently returned to Judaism and cursed Christ. However, in 1 Cor 12:3, it is more probable that some Corinthian Christians thought themselves inspired by the Spirit when they made that statement, perhaps making a sharp distinction between the heavenly Christ (the Christ party of 1 Cor 1:12?), and the earthly Jesus. The confession "Jesus is Lord!" is also found in Rom 10:9–10, where it means the confessor believes that God has raised Jesus from the dead. This is very likely pre-Pauline, perhaps belonging to a baptismal context. The combination of the terms "confess" *(homologein),* "believe" *(pisteuein),* and "be saved" *(sodzein)* suggests the setting of baptism.

Another important passage in which the primitive confession "Jesus is Lord!" occurs is at the end of the Christ hymn in Phil 2:5–11, where the phrases "every knee should bow" and "every tongue confess that Jesus Christ is Lord" almost certainly indicate a liturgical setting. The hymnic setting of this confession is significant, for it suggests the eschatological context in which the confession could be used.

Another brief confession which links the name of Jesus with a significant religious title is "Jesus is the Messiah!" Some regard this as the oldest of the confessions, though "Jesus is Lord" may be equally early. The appropriateness of the confession is dependent on which ascription, messiahship or lordship, was the most religiously meaningful to the individual or congregation.

3. Doxologies. A doxology is a short liturgical formula which characteristically ascribes glory to God. Though rare in Judaism, doxologies are relatively common in early Christian texts (Deichgräber 1967: 40–43). They consist of four stereotypical elements: (1) the mention of God or Christ, usually in the dative, (2) the mention of specific attributes ascribed to them, with "glory" *(doxa)* the most common, (3) a formula describing the eternal validity of the ascription, usually "forever," or "for ever and ever," and (4) a concluding "Amen." The fact that doxologies are used to conclude a religious text (*1 Clem.* 64:2; *2 Clem.* 20:5) or a unified section of a religious text (Rom 11:36; 1 Tim 1:17; *1 Clem.* 20:12) suggests that they were similarly used to conclude a liturgical sequence in Christian services of worship. This is confirmed by the use of doxologies to conclude a liturgy narrated in a text (Rev 4:9; 5:13f.; 7:12; Tob 14:15; *1 Enoch* 39:10; *Did.* 8:2; 10:2).

4. Hymns. Several NT texts suggest that the singing or chanting of hymns of praise was an important part of Christian worship (1 Cor 14:15, 26; Col 3:16; Eph 5:19; cf. Acts 16:25; Pliny *Ep* 10.96.7). Col 3:16 refers to singing "psalms, hymns, and songs, all inspired by the Spirit, with thankfulness in your hearts to God." Though we cannot distinguish the nuances of difference which may have existed among these three terms, the phrase "in your hearts" (cf. Eph 5:19) apparently means that such songs are not merely mechanical liturgical practices but are meant to express the inner devotion of the worshipper (Quasten 1983: 78). Specific examples of such hymns occur very rarely in early Christian literature. Important examples include (1) the three hymns in Luke 1–2, the Magnificat (Luke 1:46–55), the Benedictus (1:67–79), and the Nunc Dimittis (2:29–32), which appear to be psalms of Jewish Christian origin (Farris 1985: 86–98); (2) the sixteen hymns or hymnlike compositions in Revelation, presented as two single hymns (12:10–12; 15:3–4) and as seven antiphonal units (4:8–11; 5:9–14; 7:9–12; 11:15–18; 16:5–7; 19:1–4, 5–8); and (3) the *Odes of Solomon* (Aune 1982). The hymns in Revelation present special problems. While some scholars have proposed that they were drawn from contemporary Christian liturgy, it rather appears that the author composed them himself for insertion in their present context. While some of the hymns make use of Jewish liturgical elements, e.g., the hallelujah, the amen, the trishagion (Rev 4:8), the doxologies (5:13; 7:10, 12; 19:1), and the acclamations (4:11; 5:9, 12; cf. Hahn 1973: 47), many other parts of the hymns appear to have been modeled after Roman imperial court ceremonials which included the singing of hymns to the emperor and the shouting of acclamations in his honor (Dio Cass. 59.24.5; Suet. *Ner.* 20.3; Aune 1983).

The form-critical analysis of NT epistolary literature has revealed the presence of a number of hymns which have been quoted or adapted to their present literary contexts, though they are never explicitly identified as hymns. Some of the more important text-units which have been identified as hymns focus on the incarnation of Christ in the framework of his preexistence and exaltation: Phil 2:5–11; Col 1:15–20; John 1:1–18; 1 Tim 3:16; Heb 1:1–3; 1 Pet 3:18–19, 22; cf. Deichgräber 1967: 118–55). Two other hymns have been identified in Heb 5:7–10 and 7:1–3, 26, though there is less scholarly consensus on the validity of the identification (Zimmermann 1977: 60–100). More specific liturgical settings have been suggested for several of these hymns, although such hypotheses far exceed the evidence. Col 1:15–20, for example, has been connected with a baptismal liturgy (Käsemann 1964b). Other hymns and fragments of hymns have been preserved in the letters of Ignatius of Antioch, the most extensive of which is found in Eph 19:1–3 (Deichgräber 1967: 155–60).

There is little concrete evidence for the actual role which singing and musical accompaniment played in early Christian worship during the 1st and 2d centuries A.D. (Quasten 1983: 103–10). Rev 5:8 mentions that the 24 heavenly elders accompanied their song on harps, and Ignatius speaks of being attuned to the bishop as strings are to a harp (i.e., zither) and of singing harmoniously to God the Father through Jesus Christ (*Eph.* 4:1–2). Though these are metaphors, they may nevertheless reflect the use of instruments and choral singing in Christian worship during the time of Ignatius (Quasten 1983: 104).

5. Prophecy. One of the features of early Christian worship which clearly distinguished it from the forms of worship typical of synagogue Judaism was the inclusion of various forms of inspired speech uttered by Christians who were regarded by themselves and others as prophets. The term "prophet," from the Greek word *prophētēs,* literally means "spokesperson," and in a religious context refers to a

spokesperson for a deity. In the LXX the Greek term *prophētēs* was the regular translation of the Hebrew word *nābîʾ*, customarily translated "prophet" in English. Though the term *prophētēs* was applied almost exclusively in Greek-speaking Judaism to biblical prophets or prophets expected to appear in the eschaton, the term was widely applied by early Christians as a designation for those inspired persons who were regarded as human channels for messages from the exalted Jesus or the Spirit of God.

In Paul's description of aspects of congregational worship at Corinth, various forms of prophecy (including speaking in tongues and the interpretation of tongues, since unintelligible utterances were often considered to be a type of prophetic speech in the ancient world) played an important role (1 Cor 14:1–5, 23–32, 39). Paul considers prophecy to be a gift of the Spirit bestowed on particular individuals (1 Cor 12:10; Rom 12:6), and indicates that prophets are, together with apostles and teachers, community leaders (1 Cor 12:28–29; cf. Eph 2:20; 3:5; 4:11). Some of the leaders of the Christian congregation at Antioch were prophets and teachers who exercised their gifts within the setting of public worship (Acts 2:1–21; 8:14–17; 10:44–46; 19:1–6). According to Acts 15:30–32:

> So when they were sent off, they went down to Antioch; and having gathered the congregation together, they delivered the letter. And when they read it, they rejoiced at the exhortation. And Judas and Silas, who were themselves prophets, exhorted the brethren with many words and strengthened them.

Apart from 1 Corinthians 12–14 and Acts, prophecy is only rarely mentioned in early Christian literature as an activity appropriate for Christian worship (*Did.* 10:7; 11:7–12; *Herm. Man.* 11.9). The author of Revelation implies that he is a prophet (Rev 1:3; 22:9f.), and he intends his revelatory book to be read before each of the seven congregations (Rev 1:3), perhaps as a substitute for his presence. Hermas (*Man.* 11) argues against prophets who hold private oracular consultations (i.e., séances), and in so doing describes the appropriate role for a prophet in a congregational setting (*Man.* 11.9):

> When a person with the divine Spirit attends a meeting of righteous men who have the faith of the divine Spirit, and prayer is directed to God by the assembly of those men, then the angel of the prophetic Spirit who rests on him will fill the person, and the person so filled with the Holy Spirit speaks to the assembly whatever the Lord wishes.

Prophets who speak to Christian congregations were also subject to some kind of evaluation (1 Thess 5:19–22; 1 Cor 12:10; 14:29; *Did.* 11). Paul's language in 1 Cor 14:29–32 suggests that prophets constituted an identifiable group within the Corinthian congregation and that they evaluated the prophetic utterances of prophets in their group.

What was the substance of prophetic speech within a congregational setting? Paul indicates that they performed a diagnostic function by revealing the secrets of those present, thereby proving the presence of God (1 Cor 14:24f.). The seven proclamations of Revelation 2–3, which are prophetic messages to be read before the seven congregations, contain censure, demands for repentance, threats of judgment, and promises of salvation. *Did.* 10:7 indicates that prophets were permitted to offer extemporaneous prayers over the bread and wine of the eucharist.

6. Sermons or Homilies. When Justin speaks of the reading of the Gospels or the Prophets as one of the activities characteristic of regular Sunday worship (*1 Apol.* 67.3), he says that after the Scripture reading is concluded, "the president in a discourse urges and invites the imitation of these noble things" (67.4). In *2 Clem.* 19:1, often erroneously thought to refer to the public reading of the OT in worship, the author reveals that he is reading an exhortation to his congregation, i.e., a previously prepared homily. The practice of following the reading of Scripture with a homily which elaborates on some aspect of the biblical lection is clearly derived from Judaism. While it is highly likely that many sections of NT epistolary literature reflect the oral style of Christian preaching, no stereotypical patterns have yet been successfully identified which reflect types of early Christian sermons.

H. Scripture Reading

One important feature of Christian worship with close parallels in synagogue Judaism is the practice of reading aloud from sacred texts, usually accompanied by a homiletic explanation of the meaning and significance of the reading. Such reading is not in itself worship, though the context in which it is done is. However, if worship is regarded as communication between God and his people, then the reading of

Scripture must be construed as one important mode whereby God's word is mediated to those assembled. The first mention of the liturgical reading of Scripture is found in 1 Tim 4:13, which can be dated ca. A.D. 100 or slightly later: "Give heed to the public reading of scripture, to preaching, to teaching." The earliest clear evidence for the reading of Scripture in a regular Sunday service is found in Justin *1 Apol.* 67.3, where Justin mentions a reading "from the memoirs of the apostles [i.e., the gospels] or the writings of the Prophets" (not both). There is no clear evidence that the OT was read in Christian worship before ca. A.D. 155 (Bauer 1930:39–47). Paul doubtless intended that at least some of his letters be read aloud in Christian assemblies (1 Thess 5:27), a practice followed by at least some communities (2 Pet 3:16). Further, Paul appears consciously to have designed them to fit in with a service of worship (see C.2 above). Col 4:15 reflects the practice of different churches exchanging the letters of Paul and reading them publicly. Yet the partial contents of some letters appears inappropriate for any but the leaders of the community, e.g., Galatians (cf. 3:1: "O foolish Galatians!") and 2 Corinthians (Bauer 1930: 62f.). Nevertheless, the regularity of reading apostolic letters before the community assembled for worship made it possible for the author of Revelation to frame his apocalyptic message as a letter intended for public reading in each of the seven churches (Rev 1:3; 21:18–19). By the middle of the 2d century, Justin attests the regular practice of reading from the Gospels and the Prophets (*1 Apol.* 67.3): "the memoirs of the apostles or the writings of the prophets are read as long as possible."

I. Sacred Rituals

Rituals usually involve physical action on the part of the worshipper, i.e., conventional, symbolic gestures, postures, or behaviors, often accompanied by stereotypical words. The two primary rituals of early Christianity are the eucharist and baptism, both of which exhibit great variety of form and significance during the first two centuries A.D. In addition, there are a number of less prominent rituals which are also characteristic behaviors of Christians worshipping together.

1. Eucharist. In early Christianity the central ritual is that of the sacred meal, often called the eucharist, a ritual which exhibits great variation of form and significance during the 1st and 2d centuries A.D. The term "eucharist" is a transliteration of the Greek word *eucharistia,* meaning "thanksgiving," and originally referred to the prayers that were offered before the distribution of the bread and wine in early Christian sacral meals. By the early 2d century A.D., *eucharistia* had become a technical term for the meal itself, i.e., the liturgical commemoration of the Lord's Supper (Ign. *Philad.* 4; *Smyrn.* 7:1; 8:1). Since the eucharist or Lord's Supper continues to be celebrated in most forms of Christianity, anachronistic theological conceptions of the significance of the eucharist are often unwittingly read back into the earliest evidence. Augustine defined a sacrament as a visible form of an invisible grace. By the early 3d century, the Church held that the sacraments were the material instruments and vehicles through which divine power was transmitted. There is no unambiguous evidence that the eucharist or baptism had this theological significance until well into the 2d century A.D. While the eucharist appears to have been held on Saturday evening during the 1st century A.D. (Rordorf 1968: 179f., 200–205, argues for Sunday evening), but on Sunday morning from the 2d century on (Rordorf 1968: 250–52).

a. Meals in Early Christianity. There is abundant evidence in the NT to suggest that early Christians often gathered to eat communal meals (Acts 2:46; 1 Cor 11:20–32; Jude 12). The sharing of common meals was one activity which characterized Jesus' followers before and after his crucifixion. The gospels depict Jesus as an itinerant preacher who was accompanied on his travels by a band of followers. Since they were often away from home, they undoubtedly ate meals together, although on this point the gospels are strangely silent. The gospels therefore contain many references to Jesus eating meals with a variety of people, including social outcasts (Matt 9:11–16; Mark 2:15–17; Luke 15:2; 19:1–10), those who came to hear him preach (Mark 6:35–44; 8:1–10), and Pharisees (Luke 7:36–50; 11:37–54; 14:1–24). Meals eaten by Jesus and his disciples, however, are not found in gospel tradition, with the exception of the Last Supper and the legendary meals of the resurrected Jesus with his disciples. These meals had an inherently religious character since pious Jews began and ended all meals with table prayers (Petuchowski and Brocke 1978: 50). Though wine was drunk only on festive or solemn occasions, all Jewish meals began with a blessing said over the bread (Mark 6:41; 8:6; John 6:11; Acts 27:35) of the type "Blessed art thou

who bringest forth bread from the earth" (*m. Ber.* 6.1). If wine is served after the meal, one should say the benediction for all of the type "Blessed art thou who createst the fruit of the vine" (*m. Ber.* 6.6). The frequent suggestion that the meals of Jesus and his followers were analogous to the meals of the Pharisaic *haburot* ("communities") is problematic, since the evidence for such meals is late. Though Jeremias argued that such meals never existed (1966: 29–31), Heinemann has shown that they were both important and ancient (1977: 116–21).

Food was a focal problem in early Christianity (Mark 7:1–30; Acts 15:12–29; Rom 14:1–23; 1 Cor 8:1–13; Gal 2:12; Col 2:16; Rev 2:20). The issue of table fellowship between (Christian) Jews and (Christian) gentiles is one prominent aspect of this problem (e.g., Gal 2:11–14), one which was particularly emphasized by the author of Luke–Acts (Acts 10:1–11:18; 16:31–34; cf. Esler 1987: 71–109). Just as the meals Jesus shared with those of various social classes who responded to his message symbolized his full acceptance of them, so in early Christianity, meals shared by Jewish Christians and Hellenistic Christians dramatized the fact that they "are one body, for we all partake of one bread" (1 Cor 10:17).

b. Accounts of the Last Supper. Paul preserves the earliest account of the institution of the Lord's Supper in 1 Cor 11:23–26 (ca. A.D. 54). Each of the Synoptic Gospels (ca. A.D. 70–90), contain parallel accounts of the words of institution (Mark 14:22–25; Matt 26:26–29; Luke 22:15–20). John omits the words of institution from his account of the Last Supper (John 13–16), but inserts them after the miraculous feeding of the 5,000 (6:25–40) in the guise of a discourse interpreting that event (6:41–59). The Last Supper may originally have been a Passover meal (Jeremias 1966: 41–88), as each of the Synoptic Gospels suggests (strongly emphasized in Luke 22:15, where the author has Jesus refer to eating the Passover lamb which is before him). According to John, however, Jesus' last meal was held on the day before Passover (cf. John 19:14), a view also reflected in the *Gospel of Peter* (2.5). Nevertheless the Synoptic Gospels do not describe the food and liturgy typical of Passover meals, but rather that characteristic of ordinary Jewish meals, the breaking of bread and the blessing over the cup. It is likely that each evangelist has superimposed a later liturgy of the Lord's Supper over the historical account of the Last Supper, thus blending the foundation event with particular forms of its ritual repetition.

(1) 1 Cor 11:23–26. The earliest evidence for the liturgy of the Lord's Supper is found in 1 Cor 11:23–26. Paul, however, reveals very little about the relation of this sacral meal to other features of Christian worship services. There are several distinctive features in Paul's recital of the words of Jesus at the Lord's Supper. (1) The prayer of thanksgiving over the bread and the cup frame an actual meal, as the phrase "after supper" in v 25 indicates, following the pattern of Jewish meals. Arguments that the phrase "after supper" is simply an old liturgical formula (Bornkamm 1969: 142) and that at Corinth a regular meal was eaten prior to the eucharist (Neuenzeit 1960: 71f.) are not convincing. (2) Paul interprets the cup as "the new covenant in [Jesus'] blood" (vv 24–25), i.e., as a covenant sacrifice rather than as an atoning sacrifice (as in Mark 14:24; Matt 26:28). (3) The phrase "do this in remembrance of me" (v 24) after the bread and the phrase "in remembrance of me" (v 25) after the cup have no parallel in the Synoptic Gospels. The fact that Paul transmits these sayings of Jesus to the Corinthians suggests that they were unfamiliar with them. Paul does not recommend that these words of institution be repeated whenever the Lord's Supper is celebrated. The primary reason for mentioning them at all is to underscore the gravity and solemnity of the occasion, an implicit criticism of the deportment of the scandalous behavior of the Corinthians when they dine together (1 Cor 11:17–22).

(2) Mark 14:22–25; Matt 26:26–29. The account of the Last Supper in Mark 14:22–25, followed closely by Matt 26:26–29, begins with Jesus taking bread and blessing it "as they were eating" (v 22a), i.e., the ritual over the bread and cup is presented as occurring at the conclusion of the meal rather than as framing the meal, as is the case in 1 Cor 11:23–26. Further, the close association of the words over the bread and the cup in Mark appear to have influenced the phraseology of the latter. Whereas Paul speaks of the cup as "the new covenant in my blood" (1 Cor 11:25), Mark has Jesus interpret the cup as "my blood of the covenant" (Mark 14:24), i.e., more parallel in form and content to the formula pronounced over the bread.

(3) Luke 22:15–20. Of the many types and contexts in which sacral meals were eaten in Greco-Roman religious cults, one type is reflected in the many papyrus invitations to attend a dinner with the god Sarapis (13 such invitations are known, the most recent of which is *P. Oxy.* 3693; cf. 1 Cor 8:10). *P. Köln* 57 is an example: "The god summons you to a banquet being held in the Thoereion tomorrow beginning with the ninth hour." These invitations imply that the god is understood as present at the dinner, which was probably attended by seven to ten people. A second type of sacral meal is the kind prepared by magicians either to summon a god or daimon to establish a permanent bond or for divination (*PGM* I.1–42, 42–95, 96–195; IV.1840–70; XIa.1–40; XII.14–95).

c. The Eucharist in the *Didache.* The liturgical prayers in *Didache* 9–10 and the procedure enjoined in *Did.* 14 (in a document written ca. A.D. 100) are both important and problematic for understanding the history of the eucharist. The term *eucharistia* (with the generic meaning "thanksgiving") is explicitly used (*Did.* 9:1), and the verb *eucharistein* (with the generic meaning "to be thankful") occurs probably with the more specific meaning "to celebrate the eucharist" (*Did.* 9:7; 14:1). Yet scholars disagree on whether or not these terms are used in a technical sense, in part because of the possible early date of the *Didache* (Audet dates it to ca. A.D. 50–70, while most scholars place it ca. A.D. 100). Further, since the traditional form of the words of institution is absent, some have argued that the eucharist is not in view in *Did.* 9–10 (Jungmann 1959: 37). It is also unclear whether the prayers are used specifically in connection with the eucharist or simply in connection with the ordinary meals of the community. There are several views on the significance of *Did.* 9–10. (1) *Did.* 9–10 refer to the eucharistic prayers followed by a regular meal, the so-called *agape* (*Did.* 10:1); *Did.* 9–10 reflect no divorce of the agape from the eucharist. (2) *Did.* 9 refers to the eucharist, while *Did.* 10 refers to the agape. (3) *Did.* 9–10 refer to an agape meal, while *Did.* 14 refers to the eucharist (Dibelius 1938; Rordorf 1978); cf. *Did.* 14:1: "break bread and celebrate the eucharist." The view that *Did.* 9–10 refer to the eucharist is probably correct and has the strongest arguments (Lietzmann 1979: 188–94; Vööbus 1968: 63–171). Those who argue that these table prayers are not eucharistic prayers point to the fact that the thanksgiving over the cup precedes the thanksgiving over the bread, an order supposedly not used in any Christian celebration of the Lord's Supper (Jeremias 1966: 118, n. 5). Yet Paul discusses the significance of the "cup of blessing" before the significance of the bread in 1 Cor 10:16–22, and the shorter version of the Last Supper in Luke 22:17–19a reflects an ancient liturgical order in which the cup precedes the bread. For the same order from a Jewish sphere, cf. *Sib. Or.* 4.24–26: "Happy will be those of humankind on earth who will love the great God, blessing him before drinking and eating." Further, it is important to note that while the accounts of the Lord's Supper in the gospels and 1 Cor 11:23–26 mention the fact that Jesus gave thanks for the bread and the cup, the substance of those prayers of thanksgiving are never given. The words of institution themselves are not part of the prayers of thanksgiving. The prayers for the eucharist described by Justin (*1 Apol.* 65.3–4; 67.4; *Dial.* 41.1) also lack any allusion to the words of institution and are similar to those found in *Did.* 9–10, though Justin does allude to the words of institution in *Dial.* 41.4 and 70.4, while the sacrificial character of the eucharist is also mentioned in *Dial.* 41.3 and 117.1–3. Dibelius (1938) argued that *Did.* 9:1–10:5 contain the prayers used before and after the agape meal, while 10:6 introduced the eucharist itself. *Did.* 9–10 is widely understood in this way (Jeremias 1966: 117f.; Rordorf 1978: 1–23 = 1986: 187–208).

d. The Origin of the Eucharist. The problem of the origin of the eucharist has been a matter of some speculation. Cullmann (1958: 8–16) argued that the element of joy in the "breaking of bread" or the common meals in which the earliest Christian community in Jerusalem participated (Acts 2:42, 46) originated neither in the Lord's Supper nor in the fellowship meals which Jesus shared with his disciples during his lifetime, but in the meals which the risen Jesus ate with his disciples when he appeared to them (Luke 24:30, 41–43; John 21:9–13; Acts 1:3–4; 10:41). Similarly, Rordorf (1968: 215–37) argues that the breaking of bread in the earliest Christian communities was a continuation of the disciples' actual table fellowship with the risen Lord on Easter Sunday evening. He vainly attempts to prove that the breaking of bread took place only on Sunday evening, discounting clear evidence to the contrary (e.g., Acts 2:46). These proposals have generally been rejected (Bacchiocchi 1977: 85–89; Bauckham 1982: 234f.). First, it

is doubtful that such comparatively late and legendary expressions of Easter faith, such as the meals reportedly shared by Jesus and his disciples, could have become the basis for the radical institution by the earliest Christians of a new ritual meal to be enacted on a new sacred day. Second, the meal motif is entirely missing from the resurrection narratives of Mark and Matthew. Third, meals are not a central focus of the resurrection narrative, and when they are mentioned they tend to function in a very different way (e.g., Luke 24:41–43 is not depicted as a meal; the disciples reportedly gave Jesus broiled fish, and no mention is made of bread, wine, or a blessing).

One of the more influential attempts to account for the origin and development of the eucharist was proposed by Hans Lietzmann. Lietzmann (1979: 204–208) distinguished two types of sacral meals in early Christianity, the "breaking of bread," and the Lord's Supper. The first, which Lietzmann called the "Jerusalem" type, originated in the table fellowship which Jesus enjoyed with his disciples, and it was continued after his death. It was a rite of communion consisting of a meal of eschatological joy with no reference to the death of Jesus. This type is reflected in the *Didache* (9–10), the shorter Lukan account of the Lord's Supper (which omits Luke 22:19b–20), perhaps reflecting 2d century liturgical practice (Schürmann 1951), and is in harmony with the supper ritual generally in Luke–Acts. The Egyptian liturgy is later exemplified by Serapion. It was characterized by the breaking of bread at the beginning of the meal; while water was drunk, and occasionally wine, no cup was passed around at the conclusion of the meal. The second type (the "Pauline" type, because it is first attested in 1 Cor 11:23–32, and so existed at least as early as A.D. 50), exemplified in the eucharistic liturgy of Hippolytus, arose only after the death of Jesus and was not a continuation of the daily table fellowship of the disciples of Jesus with their Lord, but rather was connected only with Jesus' final meal, the Lord's Supper. This meal is repeated as a rite of atonement by the community as a memorial to the death of Jesus. This meal was framed by the breaking of bread at the beginning and the passing of the cup of wine at the end, symbolizing respectively the body and the blood of Jesus.

e. Meaning and Function of the Eucharist. In the various fragmentary liturgies of the Lord's Supper found in the NT and in early Christian literature, despite the particular features of each which reflect developed Christian practice in a particular region, it was often thought essential that the worshipper perceive the basic unity between the celebration of the Lord's Supper and the original Last Supper at which Jesus officiated. The latter is a foundational event which authorizes the former. In earliest Christianity the eucharist was celebrated within the setting of a meal, though different patterns developed. The earliest pattern was to frame the meal with the eucharistic elements of bread and wine (e.g., 1 Cor 11:23–32), the pattern typical of Jewish meals, though not of Sabbath meals, which began with a blessing over the wine. Later the eucharist was placed at the conclusion of the meal (e.g., Mark 14:22–25; Ethiopic text of *Epistula Apostolorum*), or separated from the meal on Sunday morning (Justin *1 Apol.* 67). The meal itself was called the *agape* (Jude 12; Ign. *Smyrn.* 8:2; *Ep. Apost.* 15; *Acts Paul* 25; Clem. *Paed.* 2.1.4; Tert. *Apol.* 39; cf. Pliny *Ep.* 10.96.7). The agape (from which the eucharist is not distinguished in the NT) originated in Jesus' practice of having fellowship meals with his disciples, the last and most dramatic of which was the Last Supper (Matt 8:11f.; Luke 13:29; Matt 11:16–19; cf. Perrin 1967: 102–108).

2. Baptism. "Baptism," transliterated from the Greek term *baptismos,* meaning "dipping, washing," and the term *baptisma,* meaning "[Christian ritual of] baptism," is a Christian designation for the ritual of washing or bathing in water which functioned as an initiation rite for entry into the Christian community. Water is widely used in religious rituals to symbolize death (i.e., dissolution), life (i.e., regeneration), and purification (Eliade 1958: 188–215). In early Christianity, baptism is a polyvalent ritual which is assigned not only all three meanings (though rarely in the same context), but also variations in each main category of meaning: (1) death (ritual imitation of the crucifixion of Jesus with a moral application; cf. Rom 6:1–3; Luke 12:50), (2) life (ritual imitation of the resurrection of Jesus with a moral application, regeneration or rebirth, bestowal of the Spirit), and (3) cleansing (moral purification, forgiveness of sins). Paul, following an earlier Christian theological conception, understands baptism as a ritual reenactment of the death and resurrection of Christ in which the believer experiences death to the old life of disobedience to God and

resurrection to the new life of obedience (Rom 6:3–11; cf. Col 3:1–3). According to Hermas *Sim.* 9.16.4, "they go down into the water dead and come up alive." The cleansing properties of water are often extended to refer to the notions of purification (Heb 10:22) and the forgiveness of sins which repentance followed by baptism provides (Acts 22:16; 1 Cor 6:11; *Ep. Barn.* 11:1; *Acts Thom.* 132; *Clementine Homilies* 11.27.1). This is perhaps the view of John the Baptist (Mark 1:4) taken over by early Christianity. Baptism is also linked with the conception of regeneration or new birth (John 3:5; Titus 3:5; Justin *1 Apol.* 61.3; *Acts Thom.* 132; *Clementine Homilies* 11.26.1), and is also connected with the bestowal of the Spirit of God (Mark 1:8; John 1:33; Acts 10:44–48; 11:16; 1 Cor 12:13; 2 Cor 1:22; Eph 4:30). A new conception of the meaning of baptism is introduced by Ignatius of Antioch, who regards Christian baptism as based on the historical baptism of Jesus, who purified the water (*Eph.* 18:2). Historically, the ritual of baptism as a once-and-for-all initiation ritual was adapted from the practice of John the Baptist by Jesus (though the evidence is fragmentary; cf. John 3:22; 4:1–2; *Pistis Sophia* 122), and by the early Palestinian Christian community.

Acts contains several brief narratives of baptisms which function as a rite of acceptance into the Christian community after the proclamation of the gospel is responded to with repentance and baptism (Acts 2:38). Baptism is performed in two slightly different settings: (1) publicly, as part of a positive response to the proclamation of the Gospel (2:41; 8:12–13; 16:15; 18:7–8), and (2) semi-privately, in situations in which the baptizer and those who are baptized are present (8:36–38; 10:44–48; 19:1–5; 22:16). Though this pattern may appear to be a Lukan construct, it is also found in Hermas *Vis.* 3.7.3, as well as in Hermas *Sim.* 9.16.5, where baptism is referred to as "the seal of the preaching." Though very little of the character of the baptismal ceremony is revealed in these brief narratives, the interpolation found in the Western text of Acts 8:36–38 (quoted in italics) shows the influence of an early baptismal ritual:

> [36] And as they went along the road they [Philip and the Ethiopian eunuch] came to some water, and the eunuch said, "See, here is water! What is to prevent my being baptized?" [37] *And Philip said, "If you believe with all your heart, you may." And he replied, "I believe that Jesus Christ is the Son of God."* And he commanded the chariot to stop and they both went down into the water, Philip and the eunuch, and he baptized him.

Here the phrase "what prevents x from being baptized?" appears to have been a stereotypical ritual question used in some baptismal liturgies (cf. Acts 10:47; 11:17; cf. Matt 3:13f.). Similarly, the confession "I believe that Jesus Christ is the Son of God" (added in the Western text) appears to have had a fixed place in early baptismal liturgies (cf. Acts 22:16; Neufeld 1963: 62, 144f.), although it was also used in other settings (e.g., exorcism, healing, worship, persecution). In Rom 10:9f., the confession of Jesus Christ as Lord is accompanied by the confession that God raised him from the dead.

The most widespread liturgical formula used in connection with baptism is the phrase "to be baptized in the name of Jesus Christ" (Acts 2:38; 8:16; 10:48; 19:5; 1 Cor 1:13; Gal 3:27; *Did.* 9:5), or "to be baptized in the name of the Lord" (*Herm. Vis.* 3.7.3). This formula was later expanded to a three-part trinitarian formulation, "in the name of the Father and of the Son and of the Holy Spirit" (Matt 28:19; *Did.* 7:1; Justin *1 Apol.* 61.3, 13; *Acts Pet.* 2.5; *Acts Thom.* 119; *Clementine Homilies* 11.26.3). Several later texts indicate that fasting was practiced, both by baptismal candidates and by others present (*Did.* 7:4; Justin *1 Apol.* 61.2; Hippolytus *Apostolic Tradition* 20.7). Several texts from the 2d and 3d centuries indicate that candidates removed their clothes before baptism and put them on again afterward (Hipp. *Apost.* 21.3, 20), and it is possible that the earlier "put off"/"put on" language of the vice and virtue lists in Col 3:5–17 and Eph 4:22–23 may reflect baptismal paraenesis.

The practice of following the rite of baptism with the eucharist is hinted at by the sequence in *Did.* 7–9 (cf. 9:5), and specifically described in several early sources (Justin *1 Apol.* 65 and *Acts Pet.* 2.5; *Acts Thom.* 119, 132f.). One of the reasons for linking baptism with the eucharist was precisely because participation in the latter was general forbidden to the unbaptized (*Did.* 9:5; Justin *1 Apol.* 66.1), and immediate participation on the part of the newly baptized would dramatically affirm their membership in

the Christian community. By the time of Tertullian, in the late 2d century A.D., baptism was a special service held at Easter and Pentecost (*De bapt.* 19).

The lack of evidence for the specific character of the ritual of baptism has not discouraged scholars from discovering baptismal liturgies embedded in early Christian literature. Several scholars have proposed that 1 Peter, which has a relatively large number of cultic terms, contains a baptismal liturgy in 1:3–4:11, though baptism is explicitly mentioned only in 3:21. Cross (1954) argued the presence of a baptismal liturgy in 1 Peter by comparing it with the Easter baptism and confirmation rite, followed by the eucharist, in Hippolytus *Apost.* 21–23. Boismard (1956–57) has discerned the following elements of baptismal liturgy in 1 Peter:

1:3–5 Baptismal hymn

1:13–21 Homily preparatory to baptism

1:22–2:10 Homily following baptism

2:11–3:7 Charge to newly baptized on Christian living

5:1–5 Charge to newly baptized on Christian living

5:5–9 Baptismal hymn.

3. Lesser Ritual Actions. a. Bowing or Prostration. One of the simplest and most basic actions connected with worship is that of "bowing down." Various forms of bowing, whether bending forward at the waist with eyes downcast, kneeling, or prostration, are all symbolic actions which indicate subjection or subservience, i.e., the inferior status of the one who bows in comparison with the one to whom one bows. The ritual expressions of superior/inferior status, such as bowing, are often identical with social expressions of such status. Further, bowing gives behavioral expression to the experience of religious awe. Frequently the term *proskunein* + dative has been thought to be used in the sense of "to worship" (i.e., God or the Dragon; Rev 4:10; 7:11; 11:16; 19:4, 10; 22:9), while *proskunein* + accusative is thought to mean "to bow, prostrate oneself," or "to do homage to," i.e., before the Animal and his image (Rev 13:4, 12; 14:9, 11; 20:4). The difference is between "worship" and physical "prostration." However, J. Horst has shown that this distinction is untenable (*Proskynein,* 33–43). Conclusion: in every instance but Rev 3:9, cultic worship is in view, and the supposed contrast between the attitude of worship and adoration and that of external physical bowing or prostration is untenable. The role of "bending the knee" in the Christian embedded in Phil 2:5–11 suggests that this ritual mode of acknowledging the Lordship of Christ was practiced in at least some of the Pauline churches. Early Christians accepted both standing and kneeling as acceptable postures for prayer (Acts 7:60; 9:40; 20:36; 21:5; Eph 3:14; the only reference to standing, however, is Mark 11:25).

b. The Kiss of Peace. At the conclusion of four letters, Paul urges the recipients to greet each other with a holy kiss (Rom 16:16; 1 Cor 16:20; 2 Cor 13:12; 1 Thess 5:26). This ritual appears to have dramatized the relationship of Christians to one another in terms of a surrogate family. This ritual expression of affection is called the "kiss of love" in 1 Pet 5:14. Later it was called the "kiss of peace" (Tert. *De orat.* 18: *osculum pacis;* Hipp. *Apost.* 4.1; 18.3; 22.6). By the middle of the 2d century it is clear that the kiss was used to mark the conclusion of the service which preceded the eucharist (Justin *1 Apol.* 65.2; Origen *comm. in Rom.* 16:16; *Apos. Con.* 8.11.9). Yet since a century separates Paul from Justin, it is not completely clear that Paul regarded the holy kiss as part of the ritual introduction to the eucharist. It may, for example, have functioned as a conclusion to a service of the word (Cuming 1975–76).

c. Anointing with Oil. This ritual is mentioned in Mark 6:13, where the disciples are said to have driven out many demons and healed many sick by anointing them with oil. James 5:14 recommends that the elders visit the sick, pray for them, and anoint them with oil "in the name of the Lord." It is also possible that what appears to be a secondary interpolation between *Did.* 10:7 and 11:1 may at first have been part of the original text (Wengst 1984: 57–59): "Concerning anointing oil, give thanks as follows: 'We thank you, Father, for the fragrance of the oil which you made known to us through Jesus your servant. Glory be to you for ever. Amen." By the end of the 2d century A.D., the practice of anointing a

newly baptized person with oil begins to be attested widely. The bestowal of the Holy Spirit is associated with this postbaptismal ritual. In the NT, Paul associates the terms "anointing" and "sealing" with the gift of the Holy Spirit (2 Cor 1:21f.), though there is disagreement regarding whether or not baptism is in view. If it is, it would appear that Paul knew that the gift of the Holy Spirit was bestowed by the rite of a material anointing with oil (Ysebaert 1962: 262). The ritual of postbaptismal anointing follows the ancient secular practice of anointing the body with oil after bathing.

d. Laying on of Hands. This ritual gesture is a ceremonial act which functions to heal, consecrate, or anoint the individual who is touched. Jesus is frequently depicted as laying hands on, or touching, afflicted individuals as part of the healing process (Mark 1:41; 5:23; 6:5; 7:32), and this practice is continued by the early Church (Acts 3:7; 5:12; 28:8). The laying on of hands functions as an ordination ritual (Acts 6:6; 13:3; 1 Tim 4:14; cf. 5:22), and as a means of bestowing the Holy Spirit (Acts 8:17f.). The ritual of anointing with oil and that of the laying on of hands may be different ways of referring to the same rite, for after oil is poured on an individual's head, the ritual of anointing may simply involve touching the person at that place.

WRATH OF GOD. A combination of philosophical presuppositions originating in classical Greek thinking has left Jewish and Christian theologians having to wrestle with the frequent biblical references to God "becoming angry." Among such presuppositions is the notion that every emotion, especially anger, is aroused by "evil spirits" dwelling in the soul; to act upon emotion in general—or upon anger specifically—is therefore seen as a sign of either weakness or sickness. Other presuppositions are based upon the Platonic distinction between reason and emotion: subsequent Hellenistic notions about God tended to emphasize divine mind and thought, which altogether transcend joy and sorrow. In this prevailing view, God comes to be viewed as indifferent to humanity and oblivious of the world, possessing a fundamental will and consciousness that is impassive and aloof; the important point in this context is that God possesses no emotions that cause him to be moved or affected by mortal conduct and affairs.

OLD TESTAMENT

In the study of the Hebrew Bible, an ongoing theological problem has been to reconcile these essentially non-Semitic philosophical presuppositions with the OT text which portrays Israel's god Yahweh in

blatantly "anthropopathic" terms (i.e., possessing human emotions). This problem was confronted early on by Jewish philosophers such as Philo, and it was subsequently addressed by medieval Jewish scholastics and by Maimonides. Early Christian theologians like Clement of Alexandria, Marcion, Tertullian, Arnobius, and Lactantius also wrestled with the philosophical issues presented by the OT texts depicting divine wrath. (For more general treatments of philosophical issues related to anthropopathism and divine wrath, see esp. Heschel 1962, vol. 2, chaps. 1–6; also Berkovitz 1964; Micka 1943; Otto 1923, chap. 4; and Creel 1986.)

Current theological discussions continue to focus primarily upon two important issues that preoccupied earlier Jewish and Christian thinkers: (1) whether "the wrath of God" is a rhetorical figure of speech or an ontological reality; and (2) if anger is an ontological reality, whether it constitutes a permanent attribute of God co-equal with love, or something more transient that is precipitated by man's behavior.

———

A. Terminology

Nahum 1:6 lists some nouns frequently used to designate God's "wrath" *(ʾap, ḥēmâ, ḥārôn, zaʿam),* and there links the notion of divine wrath with the notions of divine jealousy and vengeance. Deut 29:18–28, which comment on the curses contained in the preceeding chapter, also provide a rich catalog of words and images associated with divine wrath.

The noun most frequently used to refer to "anger," whether divine (140 times) or human, is *ʾap* (dual *ʾappayim*), which literally means "nose" or "nostrils." Derived from **ʾnp* ("to become angry"), it originally may have referred to "snorting"; nevertheless, it suggests that the nose is the seat of anger (Ezek 38:18; Ps 18:9 [—Eng 18:8]). God's anger is depicted as "burning" (*ḥrh,* see below), "blazing" (**bʿr,* Isa 30:27), and "fuming" (*ʿšn,* Deut 29:19 [—Eng 29:20]). The verb **ʾnp,* whether in the *Qal* or the *Hitpaʿel,* always (14 times) refers to God "becoming angry" (Deut 1:37; Isa 12:1; cf. also Ps 2:12).

The incendiary character of anger is also clearly conveyed by another noun frequently used to refer either to divine (almost 90 times) or to human "wrath," *ḥēmâ* (from **yḥm*, "to be hot"). In Nah 1:2 God is said to be *baʿal ḥēmâ,* "lord of wrath." God's wrath can be "kindled" (**yṣt*, 2 Kgs 22:13, 17) and is said to "go forth like fire" (Jer 4:4; 21:12), to "blaze like fire" (**bʿr,* Ps 89:47 [—Eng 89:46]), or to be "poured out like fire" (Lam 2:4; Nah 1:6). The notion of wrath being "poured out" (*špk, ntk,* esp. in Jeremiah and Ezekiel) apparently led to the notion of God's "cup of wrath" (Isa 51:17, 22; Jer 25:15; cf. Hab 2:15–16). "Wrath" *(ḥēmâ)* appears parallel to or in conjunction with "anger" *(ʾap)* almost three dozen times (e.g., Deut 29:22 [—Eng 29:23]; Mic 5:14 [—Eng 5:15]; Ps 90:7), and over one-third of its occurrences are in Ezekiel.

A noun used exclusively (41 times) for divine "rage" is *ḥārôn.* It too has incendiary connotations (it literally means "burning"), and it is also used about three dozen times in association with "anger" (*ḥarôn ʾap,* "flare up/rage of anger" or simply "fierce anger"). The related verb *ḥrh* ("to ignite") either appears with divine anger *(ʾap)* as the subject (God's anger "flares up/rages" about three dozen times, e.g., Exod 22:23 [—Eng 22:24]; Num 22:22) or is used impersonally, *ḥārah l-,* "he (God) became enraged" (Gen 18:30; Ps 18:8 [—Eng 18:7]). Since the object of this rage is almost always Israel (except Hab 3:8 and Ps 18:8 [—Eng 18:7]), and since the source of provocation often is "transgression of the covenant" (Josh 7:1; 23:16; Judg 2:20) or "pursuit of other gods" (Deut 6:14–15; 11:16–17; 31:16–17), *ḥrh* and *ḥārôn* seem to have a specialized use designating the legitimate rage of a suzerain against a disobedient vassal.

The noun *qeṣep* is generally used (26 times) to refer to God's "ire" (Num 17:11 [—Eng 16:46]; Deut 29:27; Jer 10:10), and it refers to human ire only in two very late texts (Eccl 5:16 [—Eng 5:17]; Esth 1:18). About half of the occurrences of the verb *qṣp* in either the *Qal* or the *Hipʿil* refer (16 times) to God "becoming irate" (Deut 9:7, 8, 19, 22; Isa 57:16–17).

The noun *ʿebrâ* usually (24 times out of 30) refers to divine (as opposed to mortal) "fury," often in association with "anger" (Hos 13:11; Hab 3:8). Ezekiel refers to "the fire of (God's) fury" (21:36 [—Eng 21:31]; 22:21, 31; 38:19). The *Hitpaʿel* of **ʿbr* usually (5 times) refers to God "becoming furious" (Deut 3:26; Pss 78:21, 59, 62; 89:39 [—Eng 89:38]).

Yet another noun, *zaʿam,* almost always (21 times) refers to divine "indignation." It appears primarily in the prophets, where it is also used along with other words having incendiary connotations (Isa 10:5; 66:14–15; cf. also Isa 30:27; Ezek 22:31). In Ps 78:49 it appears alongside *ḥărôn ʾap* and *ʿebrâ* in a list of the various malevolent forces God loosed against the Egyptians. Divine indignation, like divine wrath, can be "poured out" (*špk,* Ps 69:25 [—Eng 69:24]; Ezek 21:36 [—Eng 21:31]; Zeph 3:8). No precise distinction seems to have been drawn between *zaʿam* as emotion or as "curse" (Isa 30:27; Mic 6:10). When the deity is the subject of the verb *zʿm* (6 times), it clearly refers to God "becoming indignant" (Isa 66:14; Zech 1:12; even Num 23:8). In Ps 7:12 (—Eng 7:11), God is referred to as *ʾēl zōʿēm,* "God of indignation."

The noun *kaʿas (kaʿaś* in Job 10:17) occasionally (8 times) refers to divine "aggravation" (e.g., 1 Kgs 15:30; 21:22), although occasionally (7 times) it refers to that of humans (e.g., 1 Sam 1:6). Other words for wrath are rarely connected with it, leading some to translate it "grief" in certain contexts (e.g., Ps 6:8 [—Eng 6:7]). The Deuteronomistic Historian, however, perhaps building upon notions found in the archaic poem Deuteronomy 32 (vv 19, 27), used the *Hipʿil of kʿs* (43 times) to portray God regularly being "aggravated" (RSV "provoked to anger") by Israel's repeated apostasies (Deut 4:25; 2 Kgs 17:17, etc.; see McCarthy 1974: 100, 108 n. 5 for these Deuteronomistic "provocation formulae").

The noun *zaʿap* is used only twice to refer to divine "vexation" (Isa 30:30, Mic 7:9). The root *rgz,* meaning "to be agitated," sometimes refers to divine irritation (Job 12:6; Hab 3:2; cf. also 2 Kgs 19:27–28). The noun *rûaḥ,* "breath, spirit," denotes divine "exasperation" (Isa 30:28) as well as that of humans (Judg 8:3; Prov 29:11). (More complete treatments of these various terms can be found in *TDOT* 1: 348–60; 4: 106–11, 462–65; 5: 171–76; *TWAT* 4: 298–302; 5: 1033–1039.) Beyond this specific terminology, one might be able to infer divine wrath in almost any biblical reference to divine punishment or vengeance.

B. "Passion" or "Pathos"?

Any attempt to outline how divine wrath is depicted in the OT must first concede the overall anthropopathic character of Hebrew descriptions of Yahweh, a fact reinforced by the terminology above. But even though analogies are drawn from human anger, the wrath of Yahweh is portrayed somewhat differently from human anger in the Hebrew Bible. In some respects this is essentially the difference between "passion" and "pathos" (see Heschel 1962, vol. 2, esp. chap. 1).

"Passion" can be understood as an emotional convulsion which makes it impossible to exercise free consideration of principles and the determination of conduct in accordance with them. Although the OT discusses human anger much less frequently than divine wrath, it tends to portray human anger as such as a loss of self-control and then censures it, particularly in the wisdom writings (Prov 14:29; 16:32; 19:19;

29:22; 30:33; Eccl 7:9; cf. Sir 1:22–24; 28:3), thereby echoing Egyptian wisdom teachings (cf. also Gen 49:7; Amos 1:11).

"Pathos," on the other hand, is an act formed with care and intention, the result of determination and decision. It is not a "fever of the mind" that disregards standards of justice and culminates in irrational and irresponsible action; it is intricately linked to "ethos" and approximates what we mean by "righteous indignation" (Heschel 1962, 2: 5, 63). The wrath of God tends to be portrayed in this way in the OT, especially in the prophets; it seems not to be an essential attribute or fundamental characteristic of Yahweh's *persona* but an expression of his will; it is a reaction to human history, an attitude called forth by human (mis)conduct.

C. Divine Wrath in the Ancient Near East

Attempts to understand the wrath of Yahweh as it is depicted in the OT must also compare that depiction with the many portrayals of divine anger found in numerous ANE texts. Here, we note that the anger of a particular god is often portrayed as an idiosyncratic aspect of that god's *personality,* generally resembling the "passion" type described by Heschel. Sometimes, however, a god's anger is portrayed more as a legitimate exercise of his/her *"office,"* generally resembling the "pathos" type of anger.

1. "Passion" of the Gods. The most blatantly "mythological" texts of the ANE focus primarily upon the divine world and the interrelationships of the gods. In such texts, the anthropomorphic and anthropopathic portrayals of the gods tend to be especially heightened: deities become drunk, or sexually aroused, or frightened, or surprised, or overjoyed, or sullen and resentful, etc. Because of the apparent popularity of such myths in the ANE, there is good reason why deities in the various cultures surrounding Israel "are often represented as aimless, fitful, and arbitrary, acting without purpose" (Albrektson 1967: 89), and why those gods could often be portrayed as becoming angry "for no good reason." In such mythological portraits, the wrath of the pagan gods approaches a malicious and uncontrolled type of "passion" which is often characteristic of an implacable personality (cf. Sophocles and Herodotus, who attributed to the Greek gods an almost whimsical inclination to harm mortals gratuitously, and Aeschylus and Pindar, who detailed the sexual passions that gripped Zeus and Poseidon).

Only a few examples from ANE mythic texts need to be called as illustration. In the Myth of Atrahasis (*ANET,* 104–106), the distemperate gods, led by Enlil (the storm-god), decide to obliterate humanity by means of a flood because the human race had multiplied to the point that its noise kept the gods (and particularly Enlil) awake at night. Similarly, in the Epic of Gilgamesh (*ANET,* 72ff.), it was Enlil who, "unreasoning, brought on the deluge" and who was "filled with anger" when he saw Utnapishtim's boat and realized that his plans had been thwarted (XI: 168, 171). Indeed, in a recurrent ANE mythological type-scene, the angry god (in this case, Enlil) must be calmed down by other deities who fear that his anger is getting out of control (XI: 180ff.). Also in the Gilgamesh Epic, the goddess Ishtar (goddess of love/war) is portrayed as a spoiled adolescent who, when spurned by Gilgamesh, angrily yet tearfully implores her father Anu to destroy Gilgamesh because, in her words, "he has heaped insults upon me (by) calling attention to my odious behavior" (VI: 80f.).

The Egyptian gods also had their passionate tirades. In the Contest of Horus and Seth (*ANET,* 14–17), the goddess Neith vows to get angry and cause the sky to collapse if her favorite (Horus) is not chosen to succeed Osiris; furthermore, the god Re-Har-akti goes off to brood when another god reminds him that no one worships at his shrines anymore. In yet another myth (*ANET,* 10–11), the bloodthirsty goddess Hathor/Sekhmet goes beserk and almost annihilates the human race which is saved when other gods intervene, tricking her into believing that red-colored beer is human blood. In fact, in Egyptian mythological texts the god Seth is so vividly portrayed that he came to be known as "the raging one" whose irrational anger against the ideal order (implied in the myth of Horus and Osiris) seems to represent all the chaotic aspects of the world (Te Velde 1967: 23–24, 101).

In the Telepinu Myth of the Hittites (*ANET,* 126–28), the god Telepinu becomes so angry that he cannot put his shoes on the correct feet before running away from home. The consequence of his anger is clear: drought and famine throughout the world. The reason for his anger, however, is not clearly stated,

although it may have been prompted by a disagreement with his father. Regardless, his anger was only intensified when a bee found him asleep and stung him to awaken him.

In Canaanite mythology, Anath appears to resemble Hathor as a goddess whose bloodthirst can scarcely be sated. In the Myth of Baal's Defeat of Yamm (*ANET*, 129–31), the god Baal, worried that he may be required to become subservient to the god Yamm, scornfully rebukes those gods who bow down to Yamm's emissaries; when El orders him to submit to Yamm, he becomes so enraged (Ug *ʾanš*) that he impulsively grabs a knife to slay Yamm's emissaries. Significantly, he has to be restrained by Athtartu/Ashtoreth. (For further discussion of the wrath of the Canaanite gods, see Gray 1947–53.)

In these and other ANE myths, gods and goddesses are anthropomorphized so vividly that it is often possible to describe (even in some psychological detail) their idiosyncracies and personal characteristics. In the mythological texts, their anger often seems a natural extension of their personalities. In light of the caprice often attributed to these ANE gods, it is not surprising that magic and incantations to secure protection against their ragings were prevalent in the ancient world.

2. "Pathos" of the Gods. However, other ANE texts—particularly those that (like the Bible) attempt to relate historical events to divine will—often portray the wrath of the gods as a type of "pathos" legitimately occasioned by human offenses against the righteous will of those gods (see Albrektson 1967; references to divine wrath can be found on almost every page of chaps. 1 and 6). In these texts, the anthropomorphisms are more restrained, and the anger of the pagan deities comes close to approximating that of the Israelite god Yahweh. The matter can be summarized as follows:

> "If a defeat or the fall of a dynasty is regarded not only as the manifestation of divine anger but as anger at some transgression or negligence, then this implies also the view that the universe is in some way governed according to the laws of justice: it rules out the conception that the god's actions are nothing but arbitrariness and whimsicality … In Mesopotamia, as in Israel, the idea of historical events as a revelation of divine wrath or mercy for sins or godliness presupposes both that the deity acts in history and that the universe is ruled with justice" (Albrektson 1967: 103).

In these texts, two types of human transgressions tend to provoke a god's legitimate and "official" wrath: contempt for that god's temple, and violation of solemn oaths.

a. Anger Prompted by Cultic Sacrilege. In some Mesopotamian texts (discussed by Albrektson) the historical devastation of a particular city (Akkad, Ur, Babylon, Uruk) is attributed to a deity (Enlil, Irra, Ninurta, Ishtar, or Marduk) who becomes angry, usually over some cultic offense (e.g., kings desecrating that god's shrine). Thus, at least on a superficial level, one can say that these are examples of divine *pathos* insofar as the gods can legitimately insist that their places of worship be respected. The important Weidner Chronicle, in which the rise and fall of historical kings and dynasties are interpreted in terms of divine punishment, is a good exemplar of these texts. As Albrektson observes (1967: 103), "the norm according to which these rulers are judged is their relations to Babylon and above all to the cult of Marduk in the central sanctuary, Esagila" (cf. the book of Kings, where N Israel is repeatedly condemned and eventually destroyed in part because it embraced the "sin of Jeroboam, son of Nebat," who set up temples rivaling that of Jerusalem).

Yet the distinction between divine *pathos* (righteous indignation) and *passion* (resulting, for example, from a bruised ego) is not always so clearcut when a god's own cult is concerned. In some respects, the cult in the first place exists for humans to influence and manipulate the god, thus some degree of divine egocentrism is implied by the simple fact that a shrine exists (even in Israel; see Roberts 1975). To what extent, then, does its desecration constitute primarily a violation of a divine ordinance (eliciting legitimate, divine pathos) or an insult to a divine personality (eliciting vitriolic passion)?

In fact, these various Mesopotamian texts themselves often blur the distinction. For example, in the "Curse of Akkad," which attributes the Gutian destruction of Akkad (ca. 2150 B.C.) to Naram-sin's destruction of the Ekur (Enlil's temple), eight deities must intervene to "cool Enlil's heart," a possible indication that, as far as these other gods were concerned, Enlil's anger was moving beyond legitimate and "official" pathos to unreasoning and "personal" passion (cf. Enlil's behavior in the various ANE flood stories). Similarly, in the Irra Epic, which may attribute the long and chaotic "dark age" of Babylonia

(early 1st millennium B.C.) to the sins of prior Babylonian kings, the god Ishum intercedes to appease Irra's rage. Lambert (1962: 119), however, concludes that this text ultimately suggests no grounds for Irra's rage—it was simply *"in the god's nature"* (emphasis added; Irra was, significantly, a plague god). This type scene (others deities interceding to placate a god's wrath) suggests that even when the ancients believed that their gods had legitimate reason to vent anger, they nevertheless harbored deep anxieties about whether those gods had any *internal* motivation to control or limit that anger: undoubtedly the mythological texts elaborating on divine distemper lingered in the backs of their minds. Indeed, such anxieties may have been further heightened by the traditional associations of these various gods with nonrational and often violent natural phenomena (storm; plague; love/war). It is perhaps also significant that most Near Eastern and biblical terms for anger—whether of the passion- or pathos-type—were drawn from another, often violent natural phenomenon: fire.

b. Anger Prompted by Broken Oaths. In certain other ANE texts (e.g., the Plague Prayers of Mursilis, *ANET,* 394–96), momentous historical catastrophes are attributed to a deity who becomes angry because people (almost always political leaders) break certain solemn oaths they are sworn to keep. For example, in the Tukulti-ninurta Epic, which seeks to justify the Assyrian conquest of Babylon (ca. latter third of 13th century B.C.), the Babylonian gods become angry because the Babylonian king has repeatedly violated a border agreement with Assyria; consequently, the Babylonian gods abandon their shrines in Babylon and defect to the Assyrian side (cf. Ezekiel 9–11). Similarly, in the account of Ashurbanipal's 9th Campaign, the king of the Arabian tribes becomes the object of divine wrath because he violated his loyalty oath to Ashurbanipal.

There is a strong formal similarity between these ANE depictions of divine pathos and that of Yahweh, who in the OT prophets and historical narratives is portrayed as being angry at Israel for its repeated violation of its covenant obligations. However, these ANE texts have obvious ideological functions that the OT lacks: they are self-serving documents written by kings seeking to legitimize their policies. In other words, in the Bible no political entity ever profits from the wrath of Yahweh. But the important point of similarity is that in these portrayals the "personal" feelings of the god are not the force driving the anger; the driving force is rather the god's "official" duty to uphold the moral foundation for human political and social life.

c. The Mesha Stele. The one ANE text that portrays a god's anger in language most reminiscent of the Bible is a Moabite text (*ANET,* 320–21). See also MESHAʿ STELE. There it is stated that Chemosh, god of Moab, became angry with his own land and handed it over to Omri, king of Israel, until Mesha became king and liberated Moab from Israelite control. The text does not state what precipiated Chemosh's anger, but like the other ANE texts that are "history oriented" rather than "myth oriented," the implication is clearly that Chemosh had some legitimate reason for being angry with his people. What is not clear is whether the Moabites offended him through some cultic offense or through some moral or political offense.

D. The Wrath of Yahweh

1. Causes of God's Anger. Assuming that anger is directed against its cause, any listing of factors inciting Yahweh's wrath must also specify those against whom it is directed. The following constitutes an attempt toward a theological synthesis of the biblical references to divine wrath, rather than an historical description of Israelite ideas about divine wrath.

a. Inexplicable Caprice. At best, only a very few passages seem to suggest that, like other ANE deities, Yahweh could behave in an irrational manner unrelated to any moral will: Gen 32:23–33 [—Eng 32:22–32]; Exod 4:24–26; 19:21–25; Judg 13:21–23; and 2 Sam 6:6–11 (although only this last passage explicitly refers to divine anger [*wayyiḥar-ʾap YHWH,* 2 Sam 6:7]). The objects of such anger tend to be those who, unfortunately, are simply in the wrong place at the wrong time. Possibly underlying all these passages (particularly the latter three) is the fairly universal notion that the *mysterium tremendum* of deity is intrinsically life-threatening to mortals (Gen 16:13; see Otto 1923, chap. 4, esp. pp. 18–19). If the legends of Gen 32:23–33 (Jacob wrestling at Peniel) and Exod 4:24–26 (Moses as "bloody bridegroom") initially circulated in connection with popular notions of Yahweh's demonic or savage "passion," these

aspects focusing on Yahweh's personality were subsequently censored out, and the legends were transformed to depict Yahweh acknowledging the force of both Jacob's desire for a blessing and Zipporah's solemn act of consecration implied by the circumcision (*ETOT* 1: 261).

b. Human Sinfulness. Because all of history—even chance (Exod 21:13)—is understood to be the domain of Yahweh, any misfortune or unexpected disaster, whether personal (2 Sam 12:15–18; Ps 88:17 [—Eng 88:16]) or corporate (Exod 9:14; 2 Sam 24:21; Amos 3:6) can be regarded as a manifestation of Yahweh's wrath, although the OT does not necessarily regard every misfortune or disaster as such. Here the instruments of divine wrath include natural elements (Isa 30:30; Joel 1), sickness and disease (Num 11:33; 1 Sam 6:4), or famine and pestilence (Ezek 5:13–17; 7:15). Divine displeasure was also thought to manifest itself in cataclysms of seemingly supernatural proportions (cf. Gen 6:17; 19:24).

As in other cultures, especially ANE ones, the proximate cause for such a display of divine anger was generally felt to be some specific human sin (Josh 7:11–12; 1 Kgs 17:18). When such could not be readily identified, it was tempting to attribute the misfortune to the unstable and temperamental personality of the god. Yet this seems not to have been the case in Israel, where the aniconic tradition helped assure that Yahweh would remain a fairly nondescript personality (also note that magic and incantations to secure protection against divine rage appear not to have existed in Israel). The Eden narrative (Genesis 2–3), by associating the miserable aspects of human life with some fundamental act of disobedience by the prototypical human being, effectively acquits Yahweh of any charge of capricious "passion" from that point on: specific misfortunes and even death are attributed to generic human sinfulness (in theological parlance, "the Fall"), an interpretation still widely held. In this perspective, the divine wrath beneath misfortune is still considered a justified "pathos," not capricious "passion": thus adversity becomes the expected and deserved norm for such flawed human life (Job 14:1f.; also Ecclesiastes), while experiences of good fortune become instances of undeserved divine favor [see *ISBE* 4: 154–59].) In the end, however, because the metaphysical "cause" of misfortune remains an enigma, so must the operation of divine wrath; at least two biblical texts suggest that the appropriate response is simply to bow to the possibility that misfortune indicates divine displeasure (2 Sam 15:26; Job 42:6).

Curiously, despite much provocation by human sin, God in Genesis is never explicitly said to have "become angry." God curses the serpent (3:14), expels Adam and Eve (3:23), refuses Cain's offering and subsequently curses Cain (4:5), regrets *(nḥm)* making human beings and sends the flood (6:6), thwarts the pretentious labors of the people of Babel (11:5), afflicts plagues upon Pharaoh's house (12:17), destroys Sodom and Gomorrah (18:20; see vv 30, 32), threatens Abimelech, king of Gerar (20:6), terrorizes cities (35:5), and slays Onan for doing what was wrong in God's eyes (38:10); but none of this is explicitly tied to divine "wrath."

It is perhaps significant that the first OT occurrence of God exhibiting anger appears in passages intimately tied to Yahweh's deliverance of the Israelites from Egyptian bondage. Yahweh's anger *(ʾap)* is kindled for the first time against Moses when the latter attempts to back out of his special calling as deliverer (Exod 4:13–14), and subsequently God's rage *(ḥārôn)* is celebrated poetically as the force that simultaneously consumed the pursuing Egyptians and delivered the fleeing Israelites (Exod 15:7). Thus divine anger first appears as Yahweh's response not to generic human sinfulness but to whatever would impede efforts to free the Israelites from Egyptian enslavement.

c. Covenant Trespass. It is also significant that the very next reference to Yahweh displaying anger occurs *after* the Sinai covenant: the reference is embedded in a casuistic law outlining the consequences of Israel's failure to do justice (Exod 22:21–24). In one sense this passage sets the tone for almost all subsequent references to divine wrath that address preexilic Israel (the emphasis is different in passages that address later contexts; see below). From Sinai on, Israel is in covenant with Yahweh; therefore, the major cause of divine anger is Israel's failure to abide by the terms of the covenant (see comments on *ḥrh* above; cf. Amos 3:2). This is portrayed literarily by the motif of the "murmuring in the wilderness." On the way to Sinai, the Israelites' complaints about food and water induce Yahweh to respond favorably (Exod 15:22–17:7); however, when they lodge similar complaints on the way from Sinai, Yahweh typically becomes angry and punishes them (Numbers 11; 14; 16). The point is obviously not that

Yahweh underwent some fundamental personality change at Sinai, but rather that from Sinai on, Yahweh and Israel are in covenant, with Yahweh ruling as Israel's king; from that point on, "murmuring" is tantamount to rebellion, and the king (Yahweh) is entirely justified in acting to reinforce his kingship. This anger is clearly of the "pathos" type. See COVENANT.

Israel's rebellion against the kingship and rule of Yahweh is the major cause of divine wrath in the OT, regardless of whether this rebellion is expressed by murmuring against God (cf. Deut 1:26–36; Ps 78:21–22), by flagrantly disobeying God's command (Josh 7:1), by generally scorning God's word (2 Chr 36:15–16), or even by "going after other gods" (Exod 32:1–10; Num 25:1–5; Deut 13:2ff.). The failure to provide the social justice implicit within the stipulations of the covenant also makes Israel liable to divine wrath (Ps 50:21–22; Isa 1:23–24; 42:24–25; Amos 8:4–10; Micah 6). The DH narrative of Israel's past is built around the theme of Israel transgressing the covenant (*ʿābar ʾet-bĕrît,* Josh 23:16; Judg 2:20) and thereby "provoking God to anger" (see comments on *kaʿas* above; McCarthy 1974; Haney 1960). It is interesting to note that Heb *lemaʿan* is used not simply in a resultative sense ("so that") but in a purposive sense ("in order that"), suggesting that covenant violations are (subconsciously?) *intended* to aggravate God (e.g., Jer 7:18), thus compounding the severity of the violation.

The notion that divine wrath is related to covenant trespass is reinforced by a cursory examination of phrases describing the resulting punishment. Especially in the prophets, the wrath of Yahweh is manifested in terms similar to treaty curses from other ANE cultures (Hillers 1964): drought and barrenness (Deut 11:17), afflictions for the land (Deut 29:22 [—Eng 29:23]), being scattered abroad (Jer 32:37), and ultimately destruction (Deut 9:19).

d. Pagan Arrogance. "When Yahweh has completed all his work (of punishment) on Mt. Zion and on Jerusalem he will punish the arrogant boasting of the king of Assyria and his haughty pride" (Isa 10:12). The references to divine wrath that appear in exilic and postexilic contexts envision Yahweh's wrath shifting from Israel onto the nations who oppress Israel, although references to divine wrath directed against foreign oppressors also appear earlier in various depictions of Yahweh as a warrior. The very nations which at one moment are Yahweh's instruments of wrath directed against Israel (Judg 2:11–15; 2 Kgs 13:3; 2 Chr 36:15–17; Zech 7:11–14; Lamentations 2) at another moment are themselves the objects of Yahweh's wrath (Jer 50:25; Ezek 36:1–7; Mal 1:2–5).

There are at least two reasons why God's wrath is directed against the nations. First, Yahweh's vindictive retaliation is directed against those who harmed His people (Jer 10:25; Ezekiel 25; Nahum 1 [—Eng 1:1–2:1]; cf. Jeremiah 50–51; Obadiah). Such passages seem to exude a narrow, triumphalistic nationalism, and in a few rare instances (e.g., Ezek 25:14) the tables are turned and Israel is depicted as God's instrument of wrath against a foreign nation. Second, other passages portray God's anger directed against foreign nations not simply because they oppressed Israel but because they failed to realize that in so doing they were not autonomous, but were merely tools being wielded by Yahweh (cf. Isa 10:5–19; Jer 25:7–14). The self-idolatry of the nations is what kindles the wrath of Yahweh against them.

2. The Day of Wrath. The prevalence of injustice in history led to notions about God's decisive and climactic intrusion into history, when God's saving purpose would be finally accomplished. See DAY OF YAHWEH; APOCALYPSES AND APOCALYPTICISM; ESCHATOLOGY. Apocalyptic texts refer to the "time of (God's) indignation" (*zaʿam;* Isa 26:20; Ezek 22:24; Dan 8:19) and to the "day of God's fury" (*ʿebrâ;* Ezek 7:19; Zeph 1:15, 18; cf. Prov 11:4; Job 21:30). Because the present world is at enmity with God, this eschatological moment is regarded as a day when Yahweh defeats His enemies (Isa 2:12ff.; 13:6ff.; Amos 5:18–20; etc.), and Isaiah envisions it also as a day when wrath is ended, reconciliation achieved, and Yahweh's people flourish (27:1–6).

E. Divine Anger as Royal Prerogative?

When the anthropopathic characterization of Yahweh is compared with that of other ANE deities, one immediately notes that in some fundamental ways Yahweh's anger is significantly different from the often passionate and sometimes petty tirades of other ANE deities: Yahweh's anger never seems to be a function of his personality.

But a comparison of Yahweh with other ANE kings may lead to some important nuances in our understanding of divine emotion. For example, on several occasions Sargon II is said to have acted "in a sudden rage" (*ANET,* 286), and a rather stylized expression repeated by Ashurbanipal was "I became very angry on account of these happenings, my soul was aflame" (*ANET,* 294, 296). In these and other (especially Neo-Assyrian) royal inscriptions and annals, "anger" is depicted as a royal prerogative essentially synonymous with "exercise of sovereignty." The same can be said of the rage of the Egyptian Pharaoh, who "is Sekhmet against those who transgress his command" (*ANET,* 431; on Sekhmet, see C.1 above). Yet even though the subjects here are all mortal kings, still we are cautioned against taking too literally these references to anger. "Wrath" is not necessarily the king's personal disposition but instead often appears to be a figure of speech referring to the king's unapologetic intent to extend his domain into hostile territory. Royal "wrath" is not necessarily a personal or idiosyncratic emotion but rather a programatic orientation and, indeed, duty; it is a matter more of official policy than of private sentiment.

Because royal policy is often met with opposition and accompanied by (sometimes brutal) violence and warfare, one many infer that personal and emotional distemper is a factor. However, it may be that these references to royal "wrath" actually served rhetorically not to humanize and familiarize the king by focusing on his emotionalism but rather to aggrandize and distance him by suggesting that royal policy is accountable to no factor other than the king himself (cf. Ezek 20:8–9, 13–14, 21–22). The wrath of the king is not to be viewed like the wrath of other mortals; it is not one of the vicissitudes of being human, it is one of the prerogatives of being king: it is not of the *passion* type, but of the *pathos* type.

Indeed, some references to the wrath of pagan deities seem to make sense in this regard—these ANE gods could also exhibit a type of *pathos* legitimately linked to their "official" responsibilities for maintaining the just government of the universe (see C.2 above). Thus, Jacobsen has noted that already in the 3d millennium B.C. "the gods, *seen as kings and rulers,* were no longer powers in nature only, they became powers in human affairs—in history" (1963: 479; emphasis added). In other words, their ragings were no longer analogous simply to that of the unpredictable and violent storm, fire, plague, war, or emotion; now they could be analogous as well to the calculated and disciplined control over human affairs.

To what extent was Yahweh viewed as a king programatically extending divine rule—the fate of opponents being not a matter of personal enmity between them and Yahweh but a matter of Yahweh exercising the prerogatives of power in truly omnipotent fashion, i.e., without apology or explanation? On the one hand, there is no doubt that in those passages where Yahweh becomes angry at Israel for covenant violations, Yahweh is clearly portrayed as Israel's equivalent to a "king." On the other hand, however, those passages which depict mythological creatures as the object of Yahweh's "wrath" also suggest that Yahweh's wrath is a component not of emotion but rather of omnipotence (Job 26; Ps 89:5–13). God has the prerogative to act "in anger" because, at creation, God was able to extend sovereignty over the powers of chaos (Job 9:4–13). Thus, in order to destroy all his enemies, God "in anger" can deal with creation as a sovereign (Isa 30:27, 30).

In this regard, it is possible to suggest that the anthropopathic portrayals of Yahweh's "wrath" had the effect in ancient Israel not of "humanizing" Israel's god but rather just the opposite, of exalting Yahweh. Such a suggestion perhaps also enables us to understand why some early interpreters (e.g., Philo, Clement) insisted upon the impassibility of God and the nonliteral interpretation of those anthropopathic portrayals (see Micka 1943; Creel 1986). In this sense, we can likewise speak of God's omnipotence as entailing at least a certain type of "apathy" (a "royal aloofness"), thereby necessitating, at least to some extent, a figurative interpretation of the anthropopathic language used of God.

F. Summary

There is no uniform evaluation of divine wrath in the OT. On the one hand, because God's righteousness is called into question when He appears indecisive in opposing evil, divine wrath is viewed positively, as an understandable reaction to human misconduct (Mic 7:9; Ezra 8:22). Indeed, anyone who sins ought to anticipate divine wrath even before it is manifested in punishment (1 Sam 24:6 [—Eng 24:5]; 2 Sam 24:10). Thus, God's wrath is righteous because it destroys the wickedness that impedes

deliverance (Isa 34:2), and for that reason psalmists repeatedly yearn for it (Pss 59:14 [—Eng 59:13]; 79:6).

On the other hand, because God's righteousness is also called into question when divine punishment seems disproportionate (cf. Job), God's wrath can be viewed negatively, especially when it appears to be excessively cruel (Lam 2:4) or unjust (Num 16:22; Job 19:11). Therefore, God is often portrayed tempering his anger against Israel with compassion and love (Exod 32:12–14; Isa 54:7–8; Hos 11:8; Mic 7:18). It is important to note that Yahweh is depicted as having the desire to restrain his own anger, in contrast to the depictions of the various ANE deities, whose ragings often must be restrained (sometimes forcefully) by the intervention of other deities. An ancient liturgical formula that apparently does intend to describe the *persona* or "personality" of Yahweh extols Yahweh as "slow to anger and abounding in steadfast love" (Exod 34:6; Num 14:18; Ps 103:8; Jonah 4:2). Despite its tragic necessity, however, anger is not depicted as an emotion God delights in; instead, it grieves God to be angry (Lam 3:33) and God would prefer to avoid it altogether (Isa 27:2–3; Hos 11:9). Some biblical writers portray God's anger as being restrained until a more propitious moment when the righteousness of the punishment can be seen more readily (although God usually proclaims the punishment in advance through a prophet; 1 Sam 15:23–28; 2 Sam 12:10–14; Amos 7:1–6). By asking "How long?" (Ps 89:47 [—Eng 89:46]; cf. also Ps 77:10 [—Eng 77:9]), the psalmist confesses his own inability to fathom the workings of divine wrath.

There is also no uniform answer for Israel's truly serious concern: how to be delivered from the wrath of its own God. One answer calls for the death of the guilty, either literally (Josh 7:22), vicariously through animal sacrifice (Leviticus) or metaphorically (the exile as "death"). Another relies upon the efficacy of priestly intercession (Num 16:41–50). Yet a third envisions "repentence"—a return to obedient service—as the proper way to circumvent divine wrath (Jer 4:4; 18:7; Amos 5:15). Another answer simply calls upon Israel to appeal to divine mercy and the hope for a new covenant wherein human disobedience and the consequent divine wrath no longer exist (Jer 31:31–34; Ezek 36:26–30).

GARY A. HERION

NEW TESTAMENT

Although divine judgment is a significant theme throughout the NT and is expressed in a wide range of images, references specifically to God's wrath are confined mostly to the Pauline Epistles and the Revelation to John.

A. Terminology

In classical Greek there is a tendency for *thymos* to represent the inner emotion of anger, while *orgē* stands for its outward expression. The LXX uses the two words interchangeably to represent a large variety of Hebrew expressions for "anger." The NT reflects this usage, though when the subject is divine anger Paul shows a marked preference for *orgē:* he uses *thymos* only once (Rom 2:8, where *orgē* and *thymos* are combined in an OT quotation). The author of Revelation, on the other hand, shows a preference for *thymos* (14:19; 15:1, 7) or for both words together (14:10; 16:19; 19:15).

B. The Gospels

Wrath appears in John the Baptist's urgent question to the crowds (Luke 3:7) or to the Pharisees and Sadducees: "Who has warned you to flee from the wrath that is coming?" (Matt 3:7). The reference is to the eschatological day of judgment, when evil will be wiped out (Isa 13:9; Dan 8:19; Zeph 1:15; 2:2; *Jub.* 24:28; *1 Enoch* 62:12; 1QH 15:17; 1QS 4:12–13; 1QM 3:9). On that day, which John belives to be imminent, not even Jews will escape the wrath unless they demonstrate a radical repentance (Matt 3:7–10 = Luke 3:7–9).

In Luke 21:23 Jesus warns of "great distress upon the land and wrath upon this people" in connection with the destruction of Jerusalem (the parallel passage, Mark 13:19, refers to "tribulation"). Although Luke has taken over the apocalyptic discourse of Mark 13, from his perspective the fall of Jerusalem is separated in time from the end of the present age and the coming of the Son of Man. Hence wrath is associated not so much with final judgment as with the expression of divine judgment within history. Probably he intends an allusion to God's wrath in the fall of Jerusalem to Nebuchadnezzar (2 Chr 36:16; Lam 4:11; 5:22).

Occasionally in parables a king who in some sense "represents" God is said to be angry *(orgizomai)* with those who resist his purpose (Matt 18:34; 22:7; Luke 14:21). Jesus himself expresses anger at his critics' hardness of heart (Mark 3:5). But neither in the gospels nor elsewhere in the NT is the adjective "angry" or the verb "to be angry" used with God as subject.

It is probable that the "cup" about which Jesus prays in Gethsemane (Mark 14:36; cf. 10:38) alludes to the "cup of wrath"—an OT image for God's judgment upon sin (Isa 51:17–23; Jer 25:15–29). Hence Jesus is seen as identified with sinners and as bearing in his passion the judgment of God on their sin (Cranfield *Mark* CGTC, 337, 433, 493; Lane *Mark* NICNT, 379–80, 517). Less likely is the view that the cup alludes more generally to a destiny of suffering (Schweizer 1970: 313).

John's gospel has only one reference to wrath: "He who believes in the Son has eternal life; he who does not obey the Son shall not see life, but the wrath of God rests upon him" (3:36). Characteristically, John speaks not of a future, final expression of wrath but of wrath as an ongoing state which arises from the refusal to respond to Christ. Just as eternal life is the present experience of believers, so unbelievers have already chosen for themselves the experience of alienation from God (3:16–21; 5:24).

C. Paul

An evaluation of Paul's 18 references to wrath suggests the following conclusions. First, wrath occurs both within history and at the final judgment. Its association with final judgment is clear in Paul's reference to "the day of wrath when God's righteous judgment will be revealed" (Rom 2:5; cf. 2:8; 5:9; 1 Thess 1:10; 5:9). But the wrath expected on that future day is already experienced by those who resist God's purpose in Christ, just as the hope of eternal life has already become part of the experience of believers. Thus Paul says of Jews who have persecuted Christ and his messengers, "The wrath has come upon them in a final way" (1 Thess 2:16). And God's wrath is now being revealed in his "giving up" people to the consequences of their own wrong choices (Rom 1:18–32).

Second, Paul does not think of wrath impersonally, as has been argued by C. H. Dodd (*Romans* MNTC, 21–23) and A. T. Hanson: "For Paul the impersonal character of the wrath was important; it relieved him of the necessity of attributing wrath directly to God, it transformed the wrath from an attribute of God into

the name for a process which sinners bring upon themselves" (Hanson 1957: 69). They rightly stress that Paul never describes God as angry, and draw attention to the fact that Paul speaks of "the wrath *of God*" only in Rom 1:18, Eph 5:6, and Col 3:6; elsewhere he can speak of "the wrath" in an apparently impersonal way. But against them it may be pointed out that the wrath clearly has its origin in God in 1 Thess 5:9, and in Rom 3:5, 9:22, and 12:19. Also Paul sometimes refers to "grace" without calling it "God's grace" (Rom 5:20–21), but we do not conclude thereby that grace is an impersonal process. And how can wrath be conceived as impersonal in a genuinely theistic universe?

Third, wrath represents no so much a "feeling" *(affectus)* in God as an action *(effectus)* of God—his judgment on sin. While it would be wrong to set these two understandings of *orgē* in opposition to each other, the emphasis in Paul's usage is certainly on wrath as *effectus.* When, for example, he describes wrath as eschatological, he is thinking primarily of God's final judgment on sinners, rather than of God's revulsion towards sin (which would be expressed in the present, when the evil is done).

Fourth, wrath is always directed at unbelievers, on account of their "ungodliness and wickedness" (Rom 1:18). Paul never uses *orgē* in connection with the sufferings of Christians or God's disciplinary judgment on them. The only possible exception to this is Rom 13:4–5, where the governing authorities are described as "the servant of God to execute his wrath on the wrongdoer." The background to this is the OT idea that the nations may be the agents of God's wrath (Isa 10:5; Jer 50:25). So Paul makes the hypothetical point that Christians who became wrongdoers would experience God's wrath through the state's punishment.

Fifth, the wrath of God is expressed as a spiritual condition of alienation from God. It is said of those who refused to enter into relationship with God that "God gave them up" (Rom 1:24, 26, 28)—God allows people to experience the consequences of their refusal to live in relationship with him. "The enterprise of setting up the 'No-God' is avenged by its success" (Barth 1933: 51). A similar meaning is probably intended in 1 Thess 2:16: the wrath which has come upon the Jews is their separation from Christ, the inevitable outcome of their rejection of him. Condemnation at the final judgment will be a consummation of this alienation. Thus is the wrath of God contrasted with salvation (1 Thess 5:9), eternal life (Rom 2:7–8), justification (Rom 1:17–18; 5:9), and membership of the kingdom of God (Eph 5:5–6).

Sixth, God's wrath must be understood in relation to his love. Wrath is not a permanent attribute of God. For whereas love and holiness are part of his essential nature, wrath is contingent upon human sin: if there were no sin there would be no wrath. In the structure of Romans, the warning of God's wrath (1:18) follows immediately the announcement of the gospel of justification through faith (1:16–17). God's opposition to people's sin exposes them to his wrath, but he offers in Christ the way of deliverance from wrath. L. Morris has argued forcefully that Paul's description of the work of Christ as a "means of propitiation" (Rom 3:25) includes the idea of the averting of God's wrath (1965: 179–202). But this is not the pagan idea that an angry god may be appeased by sacrifice: for God himself provides the means of propitiation and justification. In Christ, God himself absorbs the destructive consequences of sin. Hence the gospel creates a division between those who are freed from wrath through trust in God's merciful love (1 Thess 1:10; 5:9; Rom 5:9) and those who remain under wrath because they despise his mercy (Rom 2:4–5, 8; 9:22–23; Eph 2:3; 5:6; Col 3:6).

Finally, the background of Paul's understanding of wrath lies mainly in Jewish apocalyptic eschatology. Hanson's opinion that "we need look no further [than the Chronicler's impersonal view of wrath] for the origin of Paul's doctrine of the wrath of God" (1957: 23) is to be rejected. For regularly in the Chronicler's work God's people Israel is the object of wrath, whereas Paul shares the apocalyptic perspective that wrath is reserved for unbelievers (or "sinners," or "the wicked," though this may for Paul include unbelieving Jews), whereas the true people of God ("believers," "the righteous") are safe from wrath. And whereas the Chronicler speaks of wrath operating in historical events, Paul shares the apocalyptic focus on a final day of wrath. Of course, Paul differs from apocalyptic literature in believing that wrath is at work already. But that is all of a piece with his conviction that because the Messiah has come, the characteristics of the age to come (the Spirit, justification, eternal life, etc.) are already being experienced.

D. The Revelation to John

C. G. Jung found in the book of Revelation "a veritable orgy of hatred, wrath, vindictiveness, and blind destructive fury" (1954: 125). Hanson, however, can claim that "the concept of the wrath in the Book of Revelation is more profoundly Christian than that which is found in any other part of the New Testament" (1957: 178). The allusive and paradoxical character of the book's language and imagery requires that any interpretation of its theology must be somewhat provisional. But the following insights may be suggested.

John, like Paul, sees wrath as an eschatological phenomenon which already casts its shadow in the experience of history: historical events such as the impending doom of Babylon (Rome) herald the coming of Christ and the end of the present age. Thus wrath is associated with the sixth seal just before the end (6:16–17); with the seventh trumpet, which signifies the end itself (11:18); with the judgment on Babylon (16:19); and with the coming of Christ to "tread the wine press of the fury of the wrath of God the Almighty" (19:15). More generally, in chap. 16 the whole sequence of events leading up to Babylon's destruction is described as "the seven bowls of the wrath of God" (16:1).

John sometimes speaks of a battle between the wrath of God and the wrath of rebellious nations and the devil whom they serve (11:18; 12:12, 17; cf. Psalm 2), but it is more characteristic of him to say that God uses human wrath to achieve his own wrathful purposes. This is implied in the numerous occurrences of the image of the cup of wrath (14:8, 10; 16:19; 18:3; and the "bowls of wrath" in chaps. 15–16 are probably a variant on this theme). According to 14:8, Babylon has made the nations drink the wine of her impure passion *(thymos)* by seducing them with economic luxury and political security. But that wine turns out (14:10) to be the wine of God's wrath experienced by those who worship the beast rather than the Creator. And this process recoils on Babylon herself, for the harlot is devoured by the evil beast from whom she drew her power and by the nations over whom she ruled (17:15–18). Evil is self-destructive, and God's wrath is his allowing the worshippers of the beast to be involved in that self-destructive process. John is expressing in more mythological language the same thought as Paul expounds in Rom 1:18–32.

John thus combines vivid anthropomorphic language about "the fury of the wrath of God" with a sophisticated theology of divine judgment worked out through the experience of people in history. Wrath is not impersonal, but it is not irrational or vindictive. The paradoxical nature of the wrath is heightened by the description in 6:16 of "the wrath of the Lamb." It is the wrath of one who himself has experienced alienation from God so that those who are faithful to him might be delivered from it. It has been argued that "the wrath of the Lamb" is not as paradoxical as it sounds, since in apocalyptic literature there are predictions of a conquering lamb who will destroy Israel's enemies (*T. Jos.* 19:8; Beasley-Murray 1974: 123–26, 139). But since the Lamb of Revelation 5–6 is specifically the Lamb who was slain to ransom men for God (5:9), surely the paradox remains striking. It is by his death that the Lamb conquers.

Finally, Revelation, more than Paul, makes explicit the idea that God's wrath in history is intended to provoke people to repent (9:20; 16:9). But refusal to repent seals their destiny forever (14:10–11).

E. The Problem of Translation

Modern English versions have not resolved the difficulty of translating *orgē* and *thymos.* The RSV normally preserves the archaic word "wrath" with reference to divine *orgē,* while using "anger" when the human emotion is at issue. *Thymos* in Revelation is variously translated "wrath," "anger," "fury," and "passion." Because "wrath" is not used in everyday speech, its use with reference to divine judgment makes it a semi-technical term. This has the advantage of reducing the risk that God's wrath be misunderstood as an arbitrary emotion, and the disadvantage of distancing the NT from ordinary language. The RSV also adopts the questionable practice of adding "of God" to the reference to wrath in Rom 5:9; 12:19; 13:5.

The NEB prefers to translate *orgē* in Paul by "retribution" (in Romans; 1 Thess 2:16), "dreadful judgment" (Ephesians; Colossians), "terrors of judgment" (1 Thess 1:10; 5:9). In Revelation it has "wrath" often for *thymos,* and for *orgē* it has "retribution" (11:18; 19:15) and even "vengeance" (6:16, 17; 14:10; 16:19). "Retribution" is misleading, since wrath in the NT is not normally retributive in the strict sense of the infliction of an equivalent penalty for deeds done. And "vengeance" introduces overtones of

"taking the law into one's own hands"—which is hardly a true representation of NT teaching on divine judgment.

In the NJB, *orgē* in Paul and Revelation is consistently rendered as "retribution," *thymos* usually as "anger." The earlier JB also had "anger" for *orgē.* The GNB usually has " (God's) anger," though it has "punishment" in Rom 3:5; 13:4–5, and uses "furious anger" where the Greek has *orgē* and *thymos* together.

These examples serve to illustrate the dilemmas faced by translators and the impossibility of separating translation from interpretation. To retain the traditional "wrath" is to hide overcautiously behind a technical term—rather like declining to translate "Paraclete" in the Fourth Gospel. But other approaches have their pitfalls. Translators may either adopt the bold anthropomorphism of "anger"—and risk misunderstanding by those who do not study the nuances of how this term is used in the NT; or they may adopt a more strongly interpretive approach which translates the terms differently in different contexts—and accept that at each point their interpretation is open to challenge.

STEPHEN H. TRAVIS

WREATH. This English word appears five times in the RSV as a translation of three different words, two Hebrew and one Greek. The two Hebrew terms, both found in the temple texts of 1 Kings, are obscure. One of these, *gĕdilîm,* refers to "wreaths of chain work" that were part of the elaborate ornamentation of the capitals surmounting Jachin and Boaz, the two huge bronze pillars flanking the entrance to Solomon's Temple. This word, which is related to Babylonian *gidlu,* "cord," seems to indicate that wreaths were not part of the capitals but were fastened to them. But their exact nature cannot be determined, especially since they are not mentioned in the parallel descriptions of the pillars in 2 Chronicles and Jeremiah nor in the Greek versions.

The other Hebrew term, *loyôt,* is of uncertain derivation, although it may be related to an Arabic word meaning "to twist." It refers to the decorative element of the ten bronze stands that held the lavers in the courtyard of Solomon's Temple (1 Kgs 7:29, 30, 36). Because it has an archaeological parallel on a laver stand from Larnaka in Cryprus, the "wreath" may in fact have been a guilloche design (Gray, *Kings* OTL, 194, 196). See also LAVER.

The Greek word *stephanos* denotes a wreath used as a crown to reward the winner of a footrace (1 Cor 9:25).

Several other terms rendered "cord" or "network" in the RSV are translated "wreath" in other English versions, notably the KJV. See also NETWORK; LAVER; JACHIN AND BOAZ.

WRITING AND WRITING MATERIALS. The Bible consists of a corpus of literature which was set down in writing during a period from the end of the 2d millennium B.C. until the beginning of the Common Era. As such, it has an important place in the history of writing and, more precisely, in the history of the early diffusion of the alphabet. If we want to understand how the Bible was written, we have to situate it in a historical and cultural context; this involves taking into account the writing materials used in its production and the ways in which writings were preserved and transmitted. To appreciate the

significance of this literature for Israelite and early Christian society, it may be useful to observe the history of the diffusion of writing in the ANE and to consider the importance of scribes in this process.

———

A. Early History of Writing

When the first biblical texts were written, writing had already been known and practiced for over two millennia in the ANE. The first evidence of writing appears toward the end of the 4th millennium B.C. in Mesopotamia and Egypt. In both areas writing was originally pictographic. To indicate an object or an animate being a simple picture would suffice. A very ancient written text might be a succession of pictures. Very soon, however, some pictures were used to stand not only for things but also for actions (for instance, a food could mean "to stand" or "to walk") and even sounds (this is called the *rebus* principle). At this stage, writing began to become phonetic, and its expressive power grew. The signs used in writing were able to represent not only objects, actions, and abstractions, but also the sounds of a language.

Writing seems to have developed in Mesopotamia during the 4th millennium in connection with accounting practices of the city-states, probably to meet the administrative and economic needs of Mesopotamian cities. The first step was to incise ciphers and pictograms in tablets of soft clay in order to keep a record of transactions. Early tablets of this type have been discovered at Uruk dating from ca. 3300 B.C. Scribes rapidly developed a more efficient method of writing that indicated not only the objects or animals exchanged in a transaction but also words of the language in which the transaction took place. In such texts, words are analyzed into syllables and represented by syllabic signs. Thanks to this early systematization, we have an idea of the Sumerian language used in S Mesopotamia ca. 3000 B.C.

Sumerian scribes generally wrote with a stylus of reed or wood held in one hand, incising signs in a tablet of soft clay held in the other hand. The inscribed tablet could be baked in the sun or in an oven and then kept for generations (or millennia). Because it is difficult to incise line drawings in soft clay, signs were generally made by a succession of short strokes, the resulting pictures becoming simplified and stylized. The use of a square or round stylus gave these small strokes the appearance of wedges, so this writing is called *cuneiform,* "wedge-shaped." Texts written in cuneiform were at first composed with the signs aligned in vertical columns, but later in horizontal lines, from left to right.

Cuneiform was first used to transcribe the Sumerian language; later (during the 3d millennium B.C.) it was adopted by speakers of Akkadian, a Semitic language. Both changes, the 90-degree rotation of signs and the adaptation of the system to a Semitic language, stimulated an evolution of the shapes and of the phonetic values of the signs, which were about 600 in number. The shape and phonetic value of cuneiform signs varied to some degree with location and time. CUNEIFORM writing remained in use until the first century of the current era.

In Egypt, the first inscriptions appear ca. 3150 B.C. but they are evidence of a developed system of writing which is probably older. By ca. 3080–3040 B.C., Egyptian inscriptions already used several hundred signs, many used to transcribe either full words (ideograms) or words of only two or three consonants (Egyptian writing generally did not indicate the vowels). Other signs, called determinatives, were used to classify the words in order to distinguish between homographs. In addition to these, about twenty "alphabetic" signs were used to represent only one consonant; these signs were used mainly to transcribe foreign names. This system of signs, employed most visibly in texts incised on monuments, is called *hieroglyphic writing.*

Many Egyptian texts were engraved in rock or stone so that they would be preserved, and many of these can still be read after nearly 5000 years. Most Egyptian texts, however, were written on wood, ostraca, or papyrus with a kind of small brush made of reed or rush and black or red ink; red ink was generally used for the titles and important passages (hence the word "rubric"). Papyrus was the commonly employed writing surface. Such a flexible writing system involving drawing or painting lines (linear writing) could naturally evolve toward simplified drawings or signs. While the early hieroglyphic writing remained in use for engraving texts on stones and monuments until the beginning of the Christian era (because it was considered one of the representational arts), a system of cursive and simplified characters for writing on papyrus also had a long history of nearly three millennia. This classical cursive writing system was used primarily to transcribe literary and sacred or religious texts, hence its name, *hieratic.*

Toward 700 B.C., another type of cursive writing, mainly used to transcribe the everyday language of accounts, administrative texts, letters, and contracts, became so different from the hieratic that it must be considered an independent writing tradition: popular or *demotic* writing. Because of its extremely cursive character, demotic writing is sometimes difficult for modern interpreters to read and to understand. These three types of writing (hieroglyphic, hieratic, and demotic) were used concurrently in Egypt until the beginning of the Christian era.

Both systems of writing, the Egyptian and the cuneiform, eventually disappeared because of the widespread use of alphabetic writing, particularly Aramaic and Greek. However, the older systems were very widely used; the Akkadian language of the 15th–13th centuries B.C., written in cuneiform, was for a while an international language and writing system used throughout the ANE as far as Egypt and Anatolia. Cuneiform was employed also in the writing of other non-Semitic languages such as Hittite and Hurrian.

B. Early History of the Alphabet

The alphabet is one of the great discoveries in human history. Reducing the number of written signs from several hundred to twenty or thirty made the system generally accessible. Even a five-year-old child, at least theoretically, could easily learn to read and write. Alphabetic writing was not a completely new invention, for consonantal or alphabetic signs had been used in Egypt for centuries to transcribe foreign names. What was new was the systematization of the use of these consonantal signs so that in alphabetic writing no other signs need to be used.

The early history of the alphabet is not yet completely clear, and some details are still a matter of dispute. So far, the first evidence of alphabetic writing comes from peoples speaking a West Semitic (Canaanite?) language in Palestine and Sinai ca. 16th–15th centuries B.C. The first alphabetic inscriptions were found at Shechem, Gezer, and Lachish in Palestine, and at Serabit el-Khadem in the Sinai. This last site is well known for the forty-five "Proto-Sinaitic" inscriptions that were found there, incised on rock or on stone. Their decipherment is not yet satisfactory, but most of epigraphers agree on the reading *lbʿlt,* "to the Lady" (probably the goddess Hathor), and accordingly think that the signs constitute an alphabetic writing system, dated probably to ca. 1500 B.C. The date and place of discovery could indicate that the first alphabetic writing was used by the Hyksos, a West Semitic people who controlled Palestine and the eastern Egyptian delta in the 17th–16th centuries B.C. (Lemaire 1986a). What is clear is that this alphabetic writing developed under Egyptian influence and employed a linear writing technique. Furthermore, most of the letters were drawn according to the acrophonic principle: for instance, the consonant *m* was a horizontal jagged line represented waves on the surface of a body of water, the word for which begins with the sound /m/ in the West Semitic languages (*mayim/mêm,* "water").

Although the first alphabetic writing was linear, and in this respect like the Egyptian systems, in the 14th–13th centuries B.C. alphabetic letters were also written on clay tablets in a cuneiform script. This is known from several places in Syria-Palestine, mainly from Ras Shamra/Ugarit. Actually, two systems are known: a long alphabet (30 letters) and a short or simplified one (22 letters). The discovery of several abecedaries at Ugarit has revealed the names of the letters and their traditional order, and this confirms that this alphabetic cuneiform writing was an adaptation of the linear alphabet of the 16th–15th centuries

B.C. (Cross and Lambdin 1960). Actually, several "Canaanite" inscriptions in linear script of the 15th–13th centuries B.C. have been found in Palestine, mainly at Lachish and Beth-shemesh.

While cuneiform alphabetic writing ceased with the great upheaval in Syria-Palestine at the beginning of the 12th century B.C., the simplified linear alphabetic script (22 letters) was preserved and used in Phoenicia and Palestine in the Iron I period, as is shown, for instance, by the inscribed bowl found at Qubur el-Walaydah (near Gaza) and inscribed texts from Byblos (ca. 1000 B.C.) as well as by several inscribed arrowheads found at El-Khadr (near Bethlehem) or in Phoenicia.

When Israel appears as a people in central Palestine toward the end of the 13th century B.C. (as indicated by reference to it in the Merneptah Stele), the Israelites occupied a region where alphabetic writing was already known for several centuries. They naturally adopted the "Canaanite" alphabetic linear script as is probably shown by the Raddanan inscribed handle (12th century B.C.), the inscribed ostracon from Izbet Sartah (near Aphek; dated 11th century B.C. [Cross 1980]), and the Khirbet Tannin fragment (end of the 11th century B.C. [Lemaire 1985c]).

Around 1000 B.C., the direction of West Semitic writing is definitively fixed from right to left. It is probably about this time that the Greeks started to adopt the linear alphabetic script from the Phoenicians (or from the Arameans?) with some transformations (writing from left to right, use of primitive "guttural" letters to transcribe vowels, addition of new letters). The Greeks may have taken several centuries in this adaptation of the linear alphabetic script, with several local variants, before they fixed their own tradition (McCarter 1975).

At the beginning of the 1st millennium B.C. in the Levant, various national schools of scribes connected with the state organizations of the Phoenician, Hebrew (see David's kingdom), Aramaic, Ammonite, and Moabite kingdoms started to develop distinctive styles of writing. As a result, while it is still difficult to precisely say whether the Gezer tablet (2d half of 10th century B.C.) is "Canaanite," Phoenician, or Hebrew, the Moabite script of the Mesha stele (ca. 810 B.C.) clearly is different from the Aramaic script of the Tell Fekherye inscription (N Syria, ca. 840 B.C. [Abou Assaf et al. 1982]) or from the Aramaic stele of Barhadad (ca. 797 B.C. [Lemaire 1984]).

During the 8th and 7th centuries B.C., there is evidence of an increasing use of the alphabetic writing system all over the ANE. In Israel and Judah, probably in connection with the development of scribal schools (Lemaire 1981), more and more paleo-Hebrew inscriptions are found, not only in the capitals or main cities (Samaria, Jerusalem) but also in small towns, fortresses, and villages. It is probably because of the destructive dampness of the climate of Palestine that only one paleo-Hebrew papyrus is known to have survived from this period, found in the Wadi Murabba‘at in the Judean desert; but several hundred clay bullae (which were used to seal papyrus documents) show clearly that writing on papyrus was widespread in this period, mainly in Judah ca. 600 B.C. Furthermore seals, seal impressions, ostraca, inscriptions on vases, inscribed weights, and several inscriptions on stone or rock, as well as two inscribed silver amulets, are ample evidence of the paleographical developments of the paleo-Hebrew script during this period.

Around 800 B.C., the Phoenicians expanded W, founding harbors and settlements along the Mediterranean shores of Europe and North Africa and even along the Atlantic coasts of Morocco and Spain. Consequently the Phoenician and later Punic scripts came into use all around the Mediterranean Sea and beyond the Straits of Gibraltar.

By this period there is solid evidence of the use of the alphabetic scripts, originally with various local differences, in Greece and Asia Minor. The Greek script was adopted in Italy with a few modifications, first by the Etruscans and later by the Latins.

In the 9th–8th century B.C. the Aramean kingdom gradually fell under the control of the Assyrian empire, but this did not mean the end of the Aramaic script. See ARAMAIC SCRIPT. There were official Aramaic scribes in the Assyrian administration and the Aramaic script became more and more widespread in Mesopotamia itself. Its use continued in the Neo-Babylonian Empire. During the Persian period (539–332 B.C.), Aramaic became one of the official scripts and languages of the Persian Empire and it was practically the only writing system used in the administration of the western provinces in Egypt and Anatolia. Eastward, Aramaic appears as far away as Afghanistan.

In Palestine, Aramaic became the official language and script of the administration of the province of Yehud (Judah), and is found in seals, seal impressions, and written on ostraca. Paleo-Hebrew script is only attested on a few seals and bullae, and was probably still used in copying traditional literary texts such as the biblical texts. However, even in the writing of biblical manuscripts the Aramaic script superseded, little by little, the use of paleo-Hebrew. It was perhaps in the period following Ezra's mission (probably ca. 398 B.C.) and later on during the Hellenistic period that the Aramaic script came to be used in copying the books of the Torah, which was recognized as the official religious law of the Jews by the Persian administration. The books of Ezra and Daniel have sections in both the Hebrew and Aramaic languages (cf. Ezra 4:6–6:18; 7:16–26; Dan 2:4–7:28).

If we ignore a few Judean coins and several fragments of biblical manuscripts in paleo-Hebrew script and the practice of writing the divine name in paleo-Hebrew characters in other biblical manuscripts, and bracketing the continuation of the paleo-Hebrew script in the Samaritan tradition, we see that during the Hellenistic period the Aramaic script almost completely superseded the paleo-Hebrew script and was used by Jews to write Hebrew as well as Aramaic texts. This Jewish Aramaic script, which developed special forms of certain letters in word-final position, came to be called the "square Hebrew" script.

Meanwhile the Greek language and script started to be used in the higher levels of the Judean administration and in trade. Thus, toward the beginning of the Christian era four kinds of script were used in Palestine. (1) The paleo-Hebrew script was used essentially by the Samaritans and in a few archaizing Judean inscriptions (especially on coins). (2) The Jewish Aramaic script (or "square Hebrew") was the everyday writing style of most Jews from Judea to the Galilee. The Jewish Aramaic script is attested in inscriptions on ossuaries and ostraca, as well as for writing letters and contracts on papyrus and leather. This script was also used in the copying of biblical manuscripts as well as for other newly composed literary Hebrew or Aramaic texts such as those found at Qumran and Massada. (3) The Greek script was used in the official administration, in trade, and among Jews living in the Western Diaspora. It is attested on a few literary manuscripts, on ostraca, and on ossuaries; it was also used to write official monumental inscriptions such as the one forbidding pagans to enter the Jerusalem temple. (4) The use of Latin was restricted to the higher levels of the Roman administration and to the army; it was mainly used in Palestine by foreigners temporarily residing there (e.g., Roman coins and the inscription of Pontius Pilate found at Caesarea).

C. Writing Materials

Virtually any surface can be used as a medium for writing an inscription: one has only to use tools appropriate to the surface. However, certain writing surfaces with their appropriate instruments are more commonly attested than others, and this is especially true in ancient Israel in connection with the writing of biblical texts.

Stone can be used as a writing surface either for monumental inscriptions or for graffiti. Monumental inscriptions on stone, often associated with reliefs, are well attested in Anatolia, N Syria, Persia, Phoenicia, and Egypt. In ancient Israel, several monumental inscriptions were engraved on stone in Jerusalem, among them the famous Siloam inscription and several tomb inscriptions cut into the E slope of the Kidron valley. These latter indicate the place of the tomb, the name of the owner (one has the title *ʾšr ʿl hbyt,* "royal steward" cf. Isa 22:15), and sometimes a curse against a possible violation. Other tomb inscriptions found in Khirbet el-Kôm are not so beautifully inscribed; they were incised or written with ink. Although found in a cave, the Khirbet Beit Lei and Nahal Ishai inscriptions are graffiti, incised or written in ink. See PALESTINIAN FUNERARY INSCRIPTIONS. Depending on the type of inscription, stone might be inscribed with a chisel (for monumental inscriptions; note Job 19:24; Jer 17:1) or a sharp engraving tool of metal or hard stone. Brief texts were written on stone with a pen.

All over the ANE, large stones were set up as steles and inscribed with texts commemorating a significant event, such as the victory of a king or a treaty between two kings. Inscribed steles are attested in Syria and Palestine in the 1st millennium B.C. Important examples of such inscribed steles are the Aramaic steles from Sfire (or from Afis) and the famous stele of Mesha, king of Moab, commemorating his victory over Israel during the 2d half of the 9th century B.C. See MESHAʿ STELE . So far, such

beautiful steles have not been found in ancient Israel or Judah, but a few fragments of monumental inscriptions on stone found in Samaria and Jerusalem may be fragments of such steles or of some monumental building inscription.

Smaller stones could be cut into the shape of a tablet and used in the copying of brief texts, especially school texts. The best example of these stone tablets is probably the Gezer calendar, incised on limestone. Such tablets may be alluded to in the story of writing the Decalogue (Heb *luḥōt hāʾeben;* Exod 24:12; 27:8; 31:18). To write a longer text, such as the text of the Law (Deut 27:2–3; cf. also Josh 8:32?), a stone surface was sometimes coated with a thin layer of plaster. This sort of writing surface is known from a few plaster wall inscriptions dating from the 8th century B.C. Paleo-Hebrew and Phoenician inscriptions that had been written on plaster were found at Kuntillet Ajrud, but the best example is the Deir Alla plaster inscription, probably a copy of an Aramaic book about the seer "Balaam son of Beor" (Lemaire 1985b, 1986c). See DEIR ʿALLA (TEXTS); KUNTILLET ʿAJRUD

Stone was also the usual material for weights and seals, and these were often inscribed. Like most seals from the ANE made of precious, semi-precious, or ordinary stone, the paleo-Hebrew seals could be made with amethyst, turquoise, chalcedony, opal, steatite, amazonite, azurite, serpentine, jasper, agate, carnelian, marble, quartz, or other valued stones, but quite a lot of them, especially toward the end of the Judean kingdom, were of local limestone. See SEALS, MESOPOTAMIAN.

The use of metal as a writing material is rare but well attested. In Mesopotamia, metal tablets of gold, silver, copper, or bronze could be inscribed for special occasions, while objects of metal (bowls, scepters, statues) could be incised with the names of their owners. In Iron Age I Palestine, some arrowheads of bronze were incised with the names of their owners. A few bronze bowls dating from Palestine of the 8th century B.C. have been found inscribed with the name of their Israelite owner. Inscribed weights and seals could occasionally be made of bronze, iron, or silver. Two small silver amulets with incised Hebrew texts have been found recently in tombs near Jerusalem (Barkay 1986); part of the incised text is a variant of the priestly blessing attested in Num 6:24–27. In the Bible, a priestly inscription on gold is mentioned in Exod 28:36, while 1 Macc 8:22; 14:18, 27, and 48 record that treaties and commemorative inscriptions could be engraved on "tablets of bronze." Later on, probably to be dated during the Second Jewish Revolt, a copper scroll found at Qumran contained a list of the hiding places of treasures.

Clay was a common material most everywhere and could be used as a writing surface in many different ways. Clay tablets were the usual medium for writing the cuneiform script in Mesopotamia. The scribe shaped the moist clay and then smoothed the surface, probably with the side of a stylus (a piece of wood or reed); then he inscribed the cuneiform signs with the square or round end of this stylus, working from left to right. As it dried, the tablet hardened; but to make it more durable it could be baked in the sun, or better, in a kiln. Once baked, a tablet could easily travel or be placed in storage. During the Neo-Assyrian and Neo-Babylonian periods, clay tablets were sometimes written in Aramaic or at least given an Aramaic title.

Clay vessels were commonly used in daily life, and they were sometimes inscribed with the name of the owner or a label indicating the contents of the vessel. This could be incised before or after firing, or written with ink on the outside of a jar or jug, especially when it contained wine. In this last case, Lachish and Arad inscriptions show that one could indicate the year, the place, the owner (or producer?), and the quantity. In Iron Age II Judah, many pottery vessels were incised after firing in a special way: by a continuous chiseling.

Writing on ostraca differs from inscribing on vessels because there is no functional relation between the inscription and the potsherd, which is used simply as the medium upon which to write. Since potsherds were very common, cheap, and offered a nearly flat surface, their use as a writing material was widespread in countries using a linear script (Egypt, Syria-Palestine, Greece). Although ostraca do not seem to be mentioned in the Bible as a writing surface, they were commonly so used in ancient Israel, as is shown by the paleo-Hebrew ostraca found in Samaria, Jerusalem, Lachish, Arad, and other places (Lemaire 1977). See also ARAD OSTRACA; LACHISH LETTERS; SAMARIA (OSTRACA). The

scribes usually chose fairly flat sherds and often gave them the rectangular shape of a tablet so they could be held easily in one hand.

Even if a few ostraca were incised with a sharp-pointed tool (nail or flint), most were written with a rush cut obliguely and then frayed at the end to form a brush, or with a reed cut obliguely and split. Traces of both types of pen are discernable on paleo-Hebrew ostraca. Ink was generally black and made of carbon (soot) mixed with an organic gum. The scribe generally wrote first on the outer surface of the sherd (recto) and then, if necessary, on the inner surface (verso). There were small ostraca containing only one name and there were larger ones; the largest one known is ostracon 6 from Kadesh-barnea (ca. 22 × 30 cm), which contains a list of measures of capacity and weights. This inscription reveals that ostraca could be used to write school exercises as well as lists of names, letters, or short messages.

Wooden tablets, often coated with stucco, were frequently used in Egypt, especially for schoolboys' exercises. Such tablets have little chance of surviving in Mesopotamia or Syria-Palestine because of the climate. Only one example is known from Palestine: a letter sent by Bar Kosiba/Kokhba and found in Nahal Hever.

Another kind of wooden tablet was used in Anatolia, Syria, and Palestine, and later on in Greece, Italy, and the whole Roman Empire: the wooden tablet coated with wax. Generally several tablets (probably Hebrew *luaḥ*, and Akkadian *lē›u,* with the determinative for "wood") were hinged together to form a diptych or a polyptych; this type is already well attested in Assyria and N Syria in the 8th century B.C. The most beautiful diptychs or polyptychs could be made of wood or of ivory, as is shown by the ones found in the Nimrud excavations. We also have an idea of the appearance of these diptychs because they are represented in neo-Hittite reliefs of the 8th century, especially on the stele of the young scribe Tarhunpias, probably from Marash, and on a relief from Zençirli representing the king Barrakib with a minister in front of him wearing a diptych. These reliefs also show that scribes wrote on these tablets with a stylus, using the sharp-pointed end to write and the other end to smooth out. Wax makes an excellent writing material because it is very easy to write on, to erase on, and to write on anew; this explains why these diptychs or polyptychs were often used by secretaries and professional scribes as well as by wealthy schoolboys. Scribes used these tablets to write a first draft from dictation and could then copy the text carefully onto a sheet or roll of papyrus or leather.

So far, no wax-coated writing boards have been found from 1st-millennium Palestine, but two biblical texts may allude to this writing material, namely Isa 30:8 and Hab 2:2; both passages seem to describe the way prophetic oracles or visions were recorded. First they were written from dictation onto wooden tablets; then they were carefully copied onto a scroll. This procedure is all the more plausible since these biblical texts are contemporary with the polyptychs found in Nimrud and those represented in neo-Hittite reliefs. With the use of wax as a writing material from the 8th century B.C. on (see also Luke 1:63), one can better understand how the prophetic books were born. Later on, these diptychs or polyptychs, commonly used in the Hellenistic and Roman world, were probably the ancestors of the codex.

Papyrus is a typically Egyptian writing material used from about 3000 B.C. Thin strips of pith were cut from the stalk of the papyrus plant (an aquatic sedge common in Egypt), and the strips were laid in two layers, the first side by side to form a sheet, the second at right angles to the first. These two layers were pressed, beaten, and smoothed to create the writing surface. Individual sheets were then joined together with glue to form a long strip that could be rolled into a scroll. This writing material was light and supple but strong; because of these qualities, papyrus was in great demand as a writing material. Large quantities of papyrus were exported into Syria-Palestine and, later on, into Greece and Italy. The English word "paper" is derived from "papyrus."

The proximity of Palestine to Egypt made papyrus easy to obtain there, all the more so during the LB period, when Canaan was an Egyptian protectorate. Archaeological discoveries directly and indirectly confirm the use of papyrus in the 1st millennium B.C. Because of the climate, papyrus documents from this period are likely to be preserved only if they are in a dry desert and in a cave or shelter. So it is not surprising that the only paleo-Hebrew papyrus (from the 7th century B.C.) was found in a cave in Wadi

Murabba‘at; this sheet is 18 × 8 or 9 cm and was written on twice (that is, it is a *palimpsest*). The first text written on it was a letter; later, the letter was (incompletely) erased and a list of names written.

Later Aramaic papyri were found in another cave in the Wadi ed-Daliyeh. They are 4th century B.C. contracts (Cross 1969; 1985). See DALIYEH, WADI ED-. Other papyri were found in caves around Qumran (1st century B.C. and A.D.) and in Nahal Hever (2d century A.D.). One must also mention the 5th century B.C. Aramaic papyri of the Jewish community of Elephantine in S Egypt.

As is clearly shown by the Elephantine (Porten 1979, 1980, 1983) and Samaria papyri, contracts and letters written on papyrus were usually tied and sealed with one or several bullae. Consequently these bullae exhibit a seal-impression on one side and generally the impression of the papyrus on the other side. Several hundred bullae from the time of the Israelite kingdoms are known today. Some of them were found in regular excavations, others were illicit digs; they have been found at Samaria, Lachish, Tell el-Hesi, Beth-zur, and Jerusalem, and on most of them one can see the seal impression on one side and traces of the string and of the papyrus fibers on the other. Thus the bullae confirm indirectly that sheets of papyrus were widespread in Israel and Judah in the 8th and 7th centuries B.C.

Official documents such as deeds and contracts were frequently written on papyrus. Jeremiah 32:10–14 tells in detail how a deed for the purchase of a piece of land was prepared. A deed of purchase containing the terms and conditions of sale was prepared in two exemplars (v 11); both exemplars were signed by Jeremiah and witnesses (v 10) and only one exemplar was sealed; both texts were then entrusted to the scribe Baruch son of Neriah to be deposited in an earthenware jar for preservation (v 14).

Papyrus was not only used in sheets for the writing of lists, letters, and contracts; literary texts were written on scrolls. In Egypt, inscribed rolls were already known in the 3d millennium B.C. and papyrus scrolls were used to write literary texts in hieratic or even, during the Persian period, in Aramaic. At Elephantine in Egypt the Aramaic proverbs (Lindenberger 1983) and story of Ahiqar, as well as a copy of the Bisitun inscription (Greenfield and Porten 1982), were written on a roll of papyrus in the 5th century B.C. See ELEPHANTINE PAPYRI. The use of papyrus scrolls to copy biblical texts during the First Temple period is probable. Jeremiah 36 concerns the fate of a scroll of prophecies dictated by Jeremiah and written by Baruch, son of Neriah, the scribe. A bulla has recently come to light with the inscription *brkyhw bn nryhw hspr;* it has traces of papyrus on its reverse, and this shows that at least in this case, Baruch, son of Neriah, wrote on papyrus. It is generally more difficult, however, to decide whether a scroll (Heb *měgillâ*) mentioned in the Bible was written on papyrus or leather. There is a great likelihood that both were used to write biblical texts at least until the Persian period (Haran 1982, 1983, 1984, 1985a; Hicks 1983; Lemaire 1985a).

In Egypt, the use of tanned skins as writing material dates, at least, from the early 3d millennium B.C. Leather scrolls were sometimes deposited in temples. Leather was also used in Mesopotamia, at least during the 1st millennium B.C., to write Aramaic, but no leather sheet or roll survived there because of the climate. The use of leather scrolls during the Persian period is attested literarily by Diodorus Siculus *(basilikai diphterai* 2.32.4) and confirmed by the Arsham letters, written in Aramaic on leather, found in Egypt but sent from Persia. The Torah scroll brought by Ezra from Babylon (Ezra 7; Nehemiah 8) was probably a leather scroll; the earlier scroll (of Deuteronomy?) found by Hilkiah in the Jerusalem temple (2 Kings 22) may have been a leather scroll as well. Although papyrus is attested at Qumran, most of the biblical texts found there are on leather. According to Talmudic tradition the Torah must be copied on leather scrolls (see Haran 1985b), and the elegant Torah scrolls mentioned in the *Letter of Aristeas* (line 176 [*OTP,* p. 24]) were of fine leather (the letter was written can. 150–100 B.C., but refers to the period 287–247 B.C.).

Parchment, a fine processed leather whose name derives from the name of the city Pergamum, an ancient center of its manufacture, was prepared by removing the hair from sheep or goat skins and smoothing the hides with lime. Its use in the preparation of books became widespread in the 2d century B.C.

Scrolls, whether of papyrus or of leather, were the form taken by literary texts of all sorts, and biblical books were no exception. A scroll had the advantage of being long enough (often around 10 m) to contain

a whole book in a small volume, once it was rolled up. The scribe wrote on these scrolls in vertical columns (Heb *delet,* Jer 38:18, 23; Lachish ostracon 4:3). A scribe prepared columns by tracing a frame of vertical and horizontal lines either with red ink (as in the Deir Alla inscription) or with an etcher's point. The letters were written with a pen (Heb *ʿēṭ sôpēr;* Ps 45:2), either a rush cut obliquely and frayed to form a small brush, or a pointed reed (calamus) split to form a nib. Black ink (Heb *dĕyô*) was made of carbon and organic gum, and red ink, used sometimes to write the rubrics, was generally made of iron oxide and gum. The scribe prepared these inks by mixing the dry ink with water in an inkwell in his writing case (Heb *qeset hassōpēr* [Ezek 9:2, 3, 11]; this Hebrew word was borrowed from the Egyptian *gśty*). The scribe's writing case was worn tied to a girdle when not in use. The scribe also used a knife (Heb *taʿar hassōpēr* [Jer 36:23]) to cut a sheet from a roll or to erase letters if he made a mistake.

The famous Isaiah scroll found at Qumran provides us with a good example of a leather biblical manuscript dated near the turn of the current era. Such leather scrolls were used for the reading of biblical texts in synagogue services in the 1st century A.D., as is shown by Luke 4:17, where the scroll of the prophet Isaiah is called *biblion* in Greek. The plural *biblia* (2 Tim 4:13) provided the origin of the word "Bible."

If OT books were generally written on leather scrolls, most of the NT books, especially letters, were probably first written on papyrus. Some of these letters are very short and could have been easily written on a single sheet; the first collections of these letters may have been made of several sheets fastened together or copied onto a scroll in the traditional manner.

By 1st century A.D. and probably first at Rome there appeared a new book format, the *codex.* The idea of the codex was probably inspired by the example of the polyptychs, which sometimes had a dozen or more wooden tablets bound together. A codex consisted of individual sheets of papyrus or parchment bound together at one edge so that a text could be written on both sides of a sheet and the pages could be read sequentially. While the Jewish tradition continued to write official biblical texts on leather scrolls, Christians very quickly adopted the new format to copy the NT and even the whole Bible translated into Greek. (The most famous Greek biblical codices are called Sinaiticus, Vaticanus, and Alexandrinus.) However, these codices retained from the earlier scroll tradition the practice of writing two, three or four columns per page.

D. Archives and Libraries

Today we often distinguish archives, which contain administrative documents, contracts, and letters pertaining to private persons or organizations, from libraries, which shelter books. But in the ANE, where all the texts were manuscripts, there does not seem to have been such a distinction. All types of writings presented the same problems of preservation. The major differences among documents were the type of writing material: clay tablets required different storage conditions than papyrus and leather scrolls.

Archives and libraries of cuneiform texts are well attested in Mesopotamia (Uruk, Isin, Larsa, Nippur, Babylon, Nuzi, Mari, Nineveh), Anatolia (Boghazköy, Kultepe), N Syria (Ebla, Emar, Alalah, Ugarit), and even Egypt (El-Amarna), the most famous one being probably Assurbanipal's library in Nineveh (7th century B.C.). These libraries tried to collect most of the technical, legal, and literary texts known in their times (history, astronomy, religion, myths, etc.) so that they could be easily consulted; eventually catalogues of the titles of the texts were compiled to make consultation easier. The tablets themselves were kept in baskets (especially in private or administrative archives) or set up vertically on benches or wooden shelves (especially in large libraries) so that one could read the title on the top of the tablet. Literary texts were often too long to be written on one tablet and a scribe had to continue writing on other tablets; in this case each tablet starts with the last words of the previous one. The scribe might also write his name at the end of the text and give details about the circumstances of the copying process; a scribal note of this type is called a *colophon.* Once a clay tablet was baked in fire, the texts housed in cuneiform libraries could be kept for centuries; but the tablets were heavy and took up much space.

In Egypt, libraries had a different look. Archaeological excavations have not yet discovered any ancient Egyptian library with scrolls still in situ. At Edfu, however, a Ptolemaic building could be identified as a library because there were still wall inscriptions above recesses giving the main themes and sometimes a

catalogue of the scrolls kept in each. Literary texts give further witness to the existence of libraries, probably connected with the "life houses" *(pr ʿnḫ)*, situated generally near temples. Egyptian libraries could be smaller than their Mesopotamian counterparts because a papyrus or leather scroll 10 m long did not take up more space than a small tablet, but its content was the equivalent of ten large tablets. Several literary texts might sometimes be contained on the same scroll. Although much more practical than tablets, scrolls had the great disadvantages, at least for later ages, of rapid disintegration under normal use (requiring that they be recopied periodically) and flammability. This is why nothing is left of the largest library of the ancient Hellenistic world. Founded by Ptolemy I Soter (325–285 B.C.) at Alexandria, this famous library, connected with a museum (a kind of university/academy), collected all the Greek literary texts of its time as well as translations or adaptations of important works written in other languages (such as the histories of Manetho and Berossus). According to the *Letter of Aristeas,* the Greek translation of the Torah called the Septuagint was undertaken for the needs of this library, which probably contained half a million scrolls or volumes (from Lat *volumen* "scroll"). See ALEXANDRIA; SEPTUAGINT.

To this day no library or archive housing documents written on papyrus or leather has been discovered in Palestine. A few small archives of administrative ostraca have been found in Samaria, Lachish, and Arad, however, and groups of bullae from Lachish and Jerusalem are indirect evidence of the existence of paleo-Hebrew papyrus archives ca. 600 B.C. Libraries and archives were probably more numerous in the Persian period, to judge from the archives of Aramaic ostraca from Arad and Beer-sheba and a small private archive containing Aramaic contracts of the 4th century B.C. from Wadi ed-Daliyeh, parallel to the famous Aramaic archives of the 5th century B.C. from Egypt. A further group of bullae from the early Persian period is also evidence of a postexilic Judean archive (Avigad 1976). From the late Hellenistic and early Roman periods, several remains of archives were found in the desert of Judah (Murabbaʿat, Nahal Hever) as well as a significant portion of the holdings of a library probably housed at Qumran. The discovery of the famous Qumran library reveals that, by this time, scrolls were being stored in sealed jars. The scrolls were not found in situ in a library building, but in caves. It can be determined from the many manuscript fragments discovered, especially in Cave 4, that this library contained several hundred manuscripts, most of them written on leather and only a few on papyrus.

These archaeological discoveries confirm a few hints found in biblical tradition. According to 2 Kgs 22:8, there may have been some kind of library in the Jerusalem temple in the 7th century B.C. The existence of libraries in Jerusalem during the Persian and Hellenistic periods is pointed to in 2 Macc 2:13–15 and in later rabbinic traditions. Furthermore, the Aramaic word for an archive or library, *bêt siprayyāʾ,* is attested in Ezra 6:1–2, referring to the royal Persian archives kept in Ecbatana.

E. Diffusion of Writing

The problem of literacy in the modern world is not always very clear because reliable statistics are wanting. The problem is still much more complicated for antiquity, and there may be differences of appreciation among historians. The situation was certainly different for each epoch and countries; for the ANE, literacy varied further according to the systems of writing in use. However, this last point is sometimes overstated. With the discovery of the alphabet any person of average intelligence could learn to read and probably to write within a few weeks, but this does not mean that literacy flared up at once. Historically we do not see anything like that. The alphabetic script that developed around 1600 B.C. had many difficulties asserting itself ahead of the two traditional writing systems in Egypt and Mesopotamia. Even in LB IIB Palestine, excavations have uncovered more Egyptian than alphabetic inscriptions. During David's reign we have no sure evidence of either the Egyptian system or of alphabetic writing.

Even if reading and writing an alphabetic script is much easier than learning Egyptian or Mesopotamian cuneiform, literacy still had to be taught. The problem of literacy is therefore also a social and institutional problem connected with the existence and number of schools. Unfortunately ancient schools did not leave many distinctive archaeological traces, even as late as the Roman period (cf. Huttenmeister and Reed 1977) and one can only identify them from literary indications or epigraphical evidence (schoolboys' exercises, such as abecedaries, lists of names, and tables of measurements). However scanty, this epigraphic evidence shows that there was some kind of system of schooling during the First Temple

period, especially in 8th–7th century B.C. Judah. This fits well with the fact that we now have evidence of paleo-Hebrew inscriptions from this period not only in the capital, but also in villages and fortresses. Most paleo-Hebrew epigraphers agree that literacy was widespread in Judah toward the end of the 7th century B.C.: "Ancient Hebrew written documents, recovered by archaeology, demonstrate both that there were readers and writers in ancient Israel, and that they were by no means rare. Few places will have been without someone who could write, and few Israelites will have been unaware of writing" (Millard 1985b: 308). This seems to confirm a few indications of the biblical tradition, mainly in Deuteronomy (6:9, 11:20, 17, 18, 24, 12), and this probably explains how the Judeans could maintain their own literary tradition while in exile.

After the fall of Jerusalem in 587 B.C., most of the educated populace were taken into exile, while the people left in the country were mainly "wine-dressers and laborers" (Jer 39:10). So although literacy may have been widespread among the exiles, it was probably less common among the poorer class left in the country. This situation was probably more or less the same at the beginning of the Persian period in the province of Yehud. However, with the return of the exiles, the situation improved little by little, but with a big difference: Aramaic writing took the place of paleo-Hebrew writing. At the beginning of the Hellenistic period, Ben Sira's book gives an idea of the high level of education given in the schools of Jerusalem. By the end of the 1st century B.C. there were schools in most of the Jewish towns. According to one Talmudic tradition, the high priest Jesus, son of Gamaliel (63–65 A.D.), ordered schoolteachers to be appointed in every town and children to be brought to them from the age of six or seven. From these indications one may assume that literacy was widespread among the Jewish people in Palestine in the 1st century B.C.; even if Jesus did not attend a high rabbinic school (cf. John 7:15), he was able to read the Scripture in the synagogue (Luke 4:17).

F. The Scribes

Even if literacy was widespread at certain periods in ancient Israel, this does not mean that everyone could read, much less write, with ease. Many Israelites doubtless learned rudimentary reading and writing, but for many this probably meant the ability to write their own names. The average villager probably would have had a difficult time composing a letter and probably did not have the technical skill to draft a will or a contract. Besides the dexterity necessary to write clear letters, an experienced writer had to master the formulaic language of decorum, business, or law. So even in an ancient society with a certain level of literacy, the professional scribe still played a very important role.

This was all the more true in ancient Mesopotamia and Egypt, where writing was more difficult to learn but just as necessary, especially for the administrative needs of an empire. In both countries scribes were highly appreciated and could rise to important positions in the state administration. The scribe's elevated status was the reward of long and tedious training in schools; many wisdom books remind the young schoolboy of these advantages to make him more docile to his master's teaching. These same texts reveal an awareness that the scribe belongs to a higher class, and inculcate in their readers the notion that it is a privilege to belong to the scribal profession. The scribe's calling, like most professions, was generally inherited from one's father, even if most of the training was given in schools.

Appreciative comments on the scribal profession are to be found in several biblical passages, especially in Sir 38:24–34. In ancient Israel scribes played an important role, probably from the time of David's reign, because the king needed scribes for his administration. One of the members of the royal cabinet even had the title "scribe" (2 Sam 8:17; 20:25; 1 Kgs 4:3; 2 Kgs 18:18, 22:3ff) or "royal scribe" (*sopēr hammelek* [2 Kgs 12:11]) and was probably some kind of "secretary of state." During Josiah's reign, scribes are mentioned several times in prophetic oracles as a special group around the king, acting as advisers; and in this capacity they are sometimes criticized as deceitful guides (Jer 8:8). Nonetheless, Jerusalemite scribes were probably the originators of many biblical books, among which may have been Deuteronomy and the Deuteronomistic tradition (Weinfeld 1972). Baruch the scribe appears to have had a role in compiling the book of Jeremiah. The narrative of chap. 36 is very informative because it shows how a written collection of prophetic utterances could be produced in several editions by a single scribe even during the lifetime of the prophet (Jer 36:32). The title *spr*, "scribe," appears on several paleo-

Hebrew seals, as well as on Moabite or Ammonite seals; these seals were undoubtedly used to authenticate the documents written by these scribes. A deed of sale is sealed in Jer 32:10.

Jewish scribes also played a very important role during the Persian period in transmitting the Jewish tradition, as well as in codifying and enforcing it as a law. Ezra, "a scribe skilled in the law of Moses" (Ezra 7:6), was "sent by the king and his seven counselors to make inquiries about Judah and Jerusalem according to the law" of God with which he was entrusted (7:14), now on par with the "law of the king" (Ezra 7:26).

More and more, the title of "scribe" was used not only of professional scribes in daily life but also for people learned in the Jewish law and able to give an official interpretation of it, especially in a difficult religious or political situation (cf. 1 Macc 7:12; 2 Macc 6:18). In the NT, scribes (Gr *grammateus*) appear essentially as "scholars," specialists in the Jewish law and in the interpretation of the Scripture. They are generally associated either with the Pharisees or with the high priests and members of the Sanhedrin. See SCRIBES. Saul/Paul is a good example of these pharisaic scholars learned in the Jewish law (Acts 22:3, 23:6, 26:5; Phil 3:5–6) who eventually became a Christian (Matt 13:52). But even with all his learning, Paul, when he wrote long letters, dictated them to a professional scribe (one is named in Rom 16:22); he wrote with his own hand only one short personal letter (Phlm 19, 21) and the conclusions to the longer ones. On these occasions he writes with pen and ink (cf. 3 John 13) with his own hand (2 Thess 3:17) and in big letters (Gal 6:11).

ANDRÉ LEMAIRE

WYCLIF'S VERSION. See VERSIONS, ENGLISH (WYCLIFFE'S).

X

XANTHICUS [Gk *Xanthikos* (Ξανθικος)]. In 2 Macc 11:30, 33, and 38, the name of the month from the Macedonian calendar cited in official letters preserved there; in 2 Macc 11:30, the name employed in the expiration date of a general amnesty for Jews. Some Lucianic mss (93, 542) read *Xandikos* (see also Bickerman 1980: 20). In v 38 Katz (1960: 15) and others prefer to read *Dioskoridou*, the genitive of *Dioskorides* on the basis of some Latin versions (see DIOSCORINTHIUS), while Vg and 771 integrate the two names into a doublet (de Bruyne 1922: 40). Hanhart (1961: 473–74) rejects the possibility that the latter versions of v 38 could be original readings.

According to Josephus, Xanthicus corresponded to Nisan in the Jewish calendar (*Ant* 1.81, 3.248, 11.109; cf. *HJP²* 1: 596–99). By arguing rather that it is equivalent to Adar, Goldstein can relate the events cited here to the Megillat Taanit reference to the 28th of that month (*2 Maccabees* AB, 418–19).

The authenticity of all four official letters preserved in 2 Maccabees 11 has been upheld in recent scholarship (Goldstein ibid., 408–09; but note Momigliano 1975: 84–85), with the exception of the dates (Habicht 1976). Habicht has raised questions about the coincidence of the dates in 2 Macc 11:33 and 38, as well as the brevity of the span between the date of the granting of the amnesty on Xanthicus 15 in v 33 and its expiration on Xanthicus 30 in v 30, particularly if it came from Antiochus IV while he was in the E portion of the empire. Goldstein (418–21) has responded, arguing that the decree was granted under the auspices of Antiochus V as coregent.

JOHN KAMPEN

XERXES (PERSON). **1.** The Achaemenid king Xerxes I was born in 518 B.C., the first son of Darius and his favorite queen Atossa, born after Darius had come to the throne. He was elevated to official crown prince some years before the death of his father.

The transfer of kingship from Darius to Xerxes in 486 B.C. went smoothly, though at the time Egypt was in revolt. This serious rebellion had begun in June 486 B.C., before Darius's death, and was successfully suppressed some time before January, 484 B.C. Shortly thereafter Babylon also rebelled, and Xerxes suppressed the uprising with a particularly heavy hand. Local temples were destroyed, the statue of the city-god Marduk may have been carried away, and there is evidence for at least a temporary interruption in the Persian imperial policy of ruling conquered peoples with great tolerance.

The most significant events of the reign of Xerxes involved the Persian invasion of mainland Greece in 480/79 B.C. After massive preparations for the campaign in that part of NE Greece already controlled by the Achaemenids, the Persian army advanced southward down the E coast of the peninsula, supported from the sea by a coordinated advance of their fleet. The first battle of the war took place at the famous pass of Thermopylae. The Persians then marched rapidly southward to capture Athens and burn the Acropolis. The Persian fleet, meanwhile, had suffered considerable damage in a storm at sea, but when it reached the Bay of Salamis it nevertheless outnumbered the challenging Greek fleet led by the Athenians. Legend has it that Xerxes sat on a throne on the cliffside and personally watched the complete defeat of the Persian navy in what was almost certainly the greatest naval engagement in history to date. Xerxes then returned to Asia, leaving the Persian land forces under the command of the general Mardonius. Both armies then went into winter quarters. When good weather returned in 479 B.C., after much maneuvering,

the Greeks and Persians came to battle on the field of Plataea. Persian defeat in this battle, after a fairly even fight, came as their morale cracked when Mardonius was slain.

Little is known about Xerxes' reign during the 14 years before his death. We have almost no sources for these years, either primary or secondary. The great king may have been primarily involved with his massive construction works, particularly at Persepolis. Here he not only meticulously finished works begun by his father, he also greatly enlarged the Persepolis platform and constructed several monumental buildings in his own right, including the Gate of All Nations, the Hall of One Hundred Columns, and his own residential place. Xerxes was assassinated, apparently in a very complicated court intrigue, in 465 B.C.

Traditionally Xerxes has been viewed as a weak king, unable to recover from the reverses his army and navy experienced in Greece. While it is true that under him the expansion of the Achaemenid empire came to an end and, indeed, some contraction of Persian territorial control resulted from defeat in Greece, nevertheless Xerxes may not have been so ineffective as tradition would have it. Certainly he was his dynamic father's explicit choice for the kingship and the early years of his reign were marked by vigorous action. In the end a proper assessment of his reign is difficult, given our lack of good source materials.

The setting of the book of Esther is at the court of Xerxes I, who is called Ahasuerus in this story. See AHASUERUS and ESTHER, BOOK OF.

2. Xerxes II, son of Artaxerxes I. He was assassinated only a few weeks after the death of his father (424 B.C.).

Y

YAEL, EIN. See REPHAIM, VALLEY OF.

YAHUDIYA, EL- (PLACE). See JEHUD (PLACE).

YAHWEH (DEITY) [Heb K *yhwh* (יהוה)]. The name of God in the OT. When it stands alone, and with prefixed prepositions or the conjunction *wa-*, "and," the name is always written with the four Hebrew letters *yod, he, waw, he,* and is for that reason called the Tetragrammaton. In this form the name appears more than 6000 times in the OT. (Variation in the Masoretic mss makes it difficult to establish the number of occurrences exactly.) Shorter forms of the divine name occur in personal names. At the beginning of names the form is *yĕhô-* or the contracted form *yô-;* at the end of names, *-yāhû* or *-yāh.*

A. Pronunciation

The pronunciation of *yhwh* as Yahweh is a scholarly guess. Hebrew biblical mss were principally consonantal in spelling until well into the current era. The pronunciation of words was transmitted in a separate oral tradition. See MASORETIC TEXT. The Tetragrammaton was not pronounced at all, the word *ʾădonāy,* "my Lord," being pronounced in its place; *ʾelōhîm,* "God," was substituted in cases of the combination *ʾădonāy yhwh* (305 times; e.g., Gen 15:2). (This sort of reading in MT is called a *qere perpetuum.*) Though the consonants remained, the original pronunciation was eventually lost. When the Jewish scholars (called Masoretes) added vowel signs to biblical mss some time before the 10th century A.D., the Tetragrammaton was punctuated with the vowels of the word "Adonai" or "Elohim" to indicate that the reader should read "Lord" or "God" instead of accidentally pronouncing the sacred name (*TDOT* 5: 501–02).

The form "Jehovah" results from reading the consonants of the Tetragrammaton with the vowels of the surrogate word *Adonai.* The dissemination of this form is usually traced to Petrus Galatinus, confessor to Pope Leo X, who in 1518 A.D. transliterated the four Hebrew letters with the Latin letters *jhvh* together with the vowels of Adonai, producing the artificial form "Jehovah." (This confused usage may, however, have begun as early as 1100 A.D.; note *KB,* 369). While the hybrid form Jehovah has met much resistance, and is universally regarded as an ungrammatical aberration, it nonetheless passed from Latin into English and other European languages and has been hallowed by usage in hymns and the ASV; it is used only a few times in KJV and not at all in RSV.

The generally acknowledged vocalization "Yahweh" is a reconstruction that draws on several lines of evidence. The longer of the two reduced suffixing forms of the divine name, *yāh* and *yāhû,* indicates that the name probably had the phonetic shape /yahw-/ with a final vowel. The vowel is supplied on the basis of the observation that the name derives from a verbal root *hwy,* which would require the final vowel /ē/; this inference is confirmed by the element *yahwī* occurring in names in the Amorite language (see *TDOT* 5: 512; the relevance of the Amorite names is challenged by Knauf 1984: 467). In the Aramaic letters from Elephantine in Egypt (ca. 400 B.C.; *ANET,* 491–92), the divine name occurs in the spelling *yhw,* probably with the vocalization /yahû/ (*TDOT* 5: 505). Instances of the divine name written in Greek letters, such as *Iao* (equivalent to "Yaho"), *Iabe* (known to the Samaritans, Theodoret [4th century A.D.], and Epiphanius), *Iaoue, Iaouai* (Clement of Alexandria [3d century]), and *Iae* also favor the form "Yahweh" (*NWDB,* 453).

B. Meaning

The meaning of the name is unknown. Arguments favoring particular meanings have been for the most part grammatical. The name has long been thought to be a form of the verb *hāwāy,* an older form of the Hebrew verb *hāyāh,* "to be." The reconstructed form *yahwēh* is parsed as either a third-person Qal imperfect of this verb or as the corresponding form of the causative stem. This analysis is encouraged by theological notions of God as one who is, or who exists, or who causes existence. Thus the explanation of

Yahweh in Exod 3:14, "I am who I am," is a folk etymology based on this verb (*ROTT,* 181–82). The analysis of the name as a causative falters on the grammatical point observed by Barr that "the causative of this verb does not occur in Hebrew elsewhere" (*HDB,* 335). However, the name could be a unique or singular use of the causative stem.

C. Origin

The date and origin of the name has been debated. Its earliest appearances are in the Song of Deborah (Judges 5; which has been dated to the 11th century B.C.), on the Mesha Stele (9th century; *ANET,* 320), in an ostracon from Kuntillet ʿAjrud (8th century; Freedman 1987: 246), and in the Arad and Lachish Letters (6th century; *ANET,* 569, 322).

To move outside of the Levant, we find Egyptian name lists which include a Syrian site, *Ya-h-wa* (No. 97), which is identical to Yahweh. A Rameses II (1304–1237 B.C.) list is found in a Nubian temple in ʿAmarah West with six names (Nos. 93–98) following the designation "Bedouin area." Nos. 96–98 have been found at Soleb in Nubia on an Amon temple of Amenhotep III (1417–1379). No. 93, *Sa-ʿra-r,* has been identified with Seir (Edom) and related to the biblical references (Deut 33:2) which associate Yahweh with Seir and Paran. This could be taken as evidence the name was known in Edom or Midianite territory ca. 1400 B.C. (*EncRel* 7: 483–84).

However, Astour (*IDBSup,* 971) notes that the writing "S-r-r" is incorrect as opposed to the spelling in other Egyptian inscriptions. Furthermore, three of the sites, including *Yi-ha,* on Rameses III's temple in Medinet Habu, are in a Syrian context suggesting that *Ya-h-wa/Yi-ha* was also in Syria. Thus the name is not associated with Edom or Midianites but does seem to appear as early as 1400 B.C. in Syria.

From a later time, the 8th century B.C., two Aramean princes have names with the element "Yau." This has been taken to mean that some Arameans may have worshipped Yahweh (Rankin 1950: 95). This could relate to the earlier connection of the Patriarchs with the Arameans, e.g., Jacob's sojourn with Laban, the eponymous ancestor of the Arameans (Genesis 29–31). The divine name is not found in any cuneiform texts.

The formative *-yw* in some personal names from Ugarit (ca. 14th century B.C.) is not a divine element and has no connection with the name Yahweh. Considerable controversy arose over the alleged occurrence of a theophoric element *-ya* in personal names from Ebla. The cuneiform sign NI, read as /ya/ by Pettinato (1980) and others (Dahood 1981: 276–77), is now read IL_x "god" when used in personal names. See EBLA TEXTS.

D. Yahweh in the Bible

In terms of the biblical narrative, some suggest that Moses derived the name of Yahweh from the Egyptians, while others think Yahweh was a Midianite deity worshipped by the Kenite clan. Moses would have been introduced to this new deity when he married the daughter of Jethro (Exod 3:1; 4:18) or Hobab (Num 10:29; Judg 4:11), a priest of Midian (Exod 18:1, 12) or the Kenites (Judg 1:16). See KENITES.

E. The Magical Aspect of the Name

In antiquity, the significance of a name goes far beyond a mere label. In ancient times, the name held magical power. One who knew the name of the deity could wield power over the deity and summon him to his/her aid, e.g., against one's enemies. The importance of the name is underscored by the story of Jacob wrestling with a divine being who was reticent to reveal his name to Jacob (Gen 32:24–30; cf. Judg 14:17–20). Adam's naming of the creatures (Gen 2:20) may be the J writer's version of the Priestly 1:28, "have dominion … over every living thing …" The name also reflects the character of the named, as in Nabal ("fool") in 1 Sam 25:25 and the change from Abram to Abraham (Genesis 17), Jacob to Israel (Genesis 32).

F. Character

While the date and origins of the name are debatable, the character of Yahweh is certainly clear, although multifaceted in the biblical text. He is a storm god who speaks in the thunder, who hurls or shoots lightning (Exod 19:16–19; 20:18; Ps 18:14; Job 37:5; Amos 1:2; Hab 3:11). He is a god of the mountains (Exodus 19; 1 Kgs 20:3). Fire is both a sign of Yahweh's presence and a weapon (Exod 13:21; 1 Kgs 18:38). He is a god of the desert (Judg 5:4). He has control over the waters of the earth—the sea

(Exod 14:21; Jonah), the rivers (Josh 3:16–17), and the rain (Gen 2:5; 1 Kings 17). He is the giver of life and one who brings death. He is a god of war and of peace.

But most important to the biblical tradition, Yahweh is the god of the covenant. Yahweh created, maintains, and sustains the natural world, which includes humanity. There are covenants with Noah which include the natural world, with the patriarchs, with Moses and the people, Aaron and Phinehas and the priesthood, David and the royal house, and others. No matter what the origin of the name or the non-Israelite nature of his epithets, Yahweh had chosen Israel to be his people and had entered into covenants with them. This fact is the central theme of the OT. See also COVENANT.

For further discussion see *TDOT* 5: 500–21.

———

A. Name and Definition

In the historico-critical exegesis of the OT, the term "Yahwist" (abbreviated "J") designates one of the principal literary sources of the Pentateuch. Since these sources are not self-evident but can be reconstructed only by modern literary criticism, it is important to keep in mind that "J," like the other presumed sources of the Pentateuch, represents in fact, and has always represented, a scientific hypothesis. Its name derives from the fact that the texts attributed to this source resort, when speaking of the God of Israel, almost exclusively to the Tetragrammaton YHWH. According to the classical consensus (see C.3 below)—which in the meantime has been severely shaken (see D below)—"J" was seen as the first source presenting the narrative thread of the whole Pentateuch, its inception starting with the "second" Creation story in Genesis 2. Commonly dated to the 10th or 9th century B.C., "J" has been long regarded as the most ancient historiographic work of the Bible.

B. "Birth" of the J Source

1. Beginnings. The discovery of a Yahwist source in the Pentateuch is linked to the early stages of critical research on the Pentateuch in the 18th century (cf. Kraus 1982: §28; Houtman 1980). The idea that the Pentateuch could be composed of several sources was provoked mainly by the existence of two creation stories in Genesis 1–3. H. B. Witter and J. Astruc had both been struck by the fact that the two stories (Gen 1:1–2:3 and 2:4–3:24) were using different names when speaking of God, *ʾĕlōhîm* and *yhwh.* Astruc was led to the conclusion that a "memoir" A had to be distinguished from a "memoir" B. It is the distinctive use of the name YHWH (or, at that time, JHVH) that was soon to accredit the term "Yahwist" (J) to designate Astruc's memoir B. One century later, the siglum "J" was nearly unanimously accepted among critics, one notable exception being A. Dillmann (*Genesis* KEHAT), who continued to designate the different sources as A, B, and C. The "Yahwist's" success came about with the acceptance of the "newer documentary hypothesis" *(neuere Urkundenhypothese),* which is linked to the names of Hupfeld, Delitzsch, Riehm and others. At that stage, however, "J" was not yet considered the oldest of the sources. Among the three sources he admitted, Hupfeld (1853), for instance, distinguished the "primary elohistic document" (*elohistische Urschrift,* = the future "P"), the "younger elohistic document" (*jüngere elohistische Schrift* = the future "E"), and, as the latest source, the "document using the divine name Yhwh."

2. J in the Graf-Wellhausen System. The reversing of the sources' chronology was provoked by the discovery, due to Reuss, Graf, and Wellhausen, that the priestly legislation belongs to the latest—and not to the earliest—stage in the development of Pentateuchal law. As a result, Wellhausen's paradigma of the sources (J-E-D -P, in that chronological order) imposed itself to the majority of scholars, and J came to be regarded as the oldest source of the Pentateuch. The main criterion in attributing texts to the J source remained the distinctive use of the name YHWH, but the existence of doublets or parallel narratives (such as Genesis 15 and 17, or Exodus 3–4 and 6; see the list offered by Seebass [*TRE* 16: 443–44]) also played a role in the argumentation. Holzinger (1893: 93ff.) and Driver (1913: 116–26) tried to establish a "lexicon of J" (peculiarities of vocabulary, style, and grammar). Often, more general features, such as the "anthropomorphisms" in the presentation of God (as opposed to E and P), were invoked. But a complete and specific description of the linguistic features of J—contrarily as to what became possible for P (McEvenue 1971)—was never attempted, and it is not surprising that for Wellhausen and his pupils, "J" remained without a precise profile and functioned mainly as a scientific siglum to designate the remaining text material once the more easily recognizable layers (such as E, P, and D/Dtr) had been subtracted.

Wellhausen himself did not attempt a precise dating of J and contented himself with the general attribution of J to the monarchic period. Even more telling is that Wellhausen (1899) often did not bother to distinguish between J and E, preferring to speak of JE or of "jehowistic" texts.

3. Problem of the Unity of J. For Gunkel, who was more interested in the literary genres than in the sources, J represented not a single author *(Einzelschriftsteller)* but a school of narrators *(Erzählerschule)* (Gunkel 1910: LXXXV; cf. also Smend 1978: 94). Therefore, it may seem only slightly paradoxical that Gunkel joined those scholars who argued for further literary subdivisions within the J source, using such sigla as J^a, J^b, J^e, and J^4. This trend, launched by Budde (1883: 455–57; cf. also Bruston 1885) who had hoped to subdivide J into J_1 and J_2, was developed into a full-fledged theory by Smend Sr. (1912) and

Eissfeldt (1922; 1974). In later years, the theory was still being defended by Simpson (1948: 31–36), Fohrer (1965: 173–79) and Cazelles (*DBSup* 7: 770–803). Eissfeldt called his older source (Budde's and Smend's J_1) "L" (*Laienquelle,* lay source), whereas Fohrer (1965: 173–79) opted for the siglum "N" (*Nomadenquelle,* nomadic source). However, Eissfeldt's 1922 synopsis of the sources of the Hexateuch proved through its sheer complexity to have a discouraging and even self-defeating effect; consequently the theory of two Yahwists did not find many followers in subsequent years. It had become evident that the very real problem of J's coherence could not find its solution through the subdivision of sources into ever more infinitesimal layers.

C. J as the Architect and Theologian of the Pentateuch

If the understanding of the Yahwist underwent a major change in the critical exegesis, it was due notably to the work of von Rad and Noth. For Wellhausen, the (however numerous) authors of the sources were seen as *Schriftsteller* ("writers"). Gunkel (1910: VII–XCII) had shown that the Yahwist and the Elohist had to be understood as collectors of folktales and other oral traditions, and that their work therefore consisted mainly in the writing down and editing of these traditions. Von Rad was the first to ask himself what precisely could be considered as the "personal" contribution of the Yahwist to the inherited tradition, and what was his "theological" purpose in composing such an extensive work. With these questions it was clear that the Yahwist had ceased to be a collective "school," possibly working over decades or centuries, but had become a *person,* a unique thinking and organizing mind. To this day the most crucial issue in the debate remains whether or not, behind the J source, there is to be seen a creative personality. Or, to put the question in other terms, in the genesis of what was to become the J source, at what specific point can the intervention of such a personality be perceived, and what are the clearest textual witnesses to that intervention?

1. Von Rad's Conception. In *Das formgeschichtliche Problem des Hexateuch* (1938), later published in English as *PHOE,* von Rad defends the idea that the Pentateuch—or rather, the Hexateuch—is ultimately the work of J. It is J who creates the "history of salvation" that begins with the creation of the world and ends with the entry of Israel into Canaan. As a basis for his construction, the Yahwist could rely on the ancient "Historical Credo" of Deut 26:5–9, which von Rad considers as the archaic kernel of the future Hexateuch. The merit of the Yahwist, according to von Rad, is not only to have given this ancient "Credo" a narrative form, but also to have initiated three decisive developments: (1) the insertion of the primeval history as a "prologue" to the whole; (2) the development and extension of the story of the Patriarchs (three patriarchs instead of one); and (3) the insertion of the Sinai-tradition (see 1961a: 58–75; *Genesis* OTL).

The Yahwist appeared to von Rad as a man of such creativity and freedom that only one historical period seemed to offer a suitable environment for so remarkable an enterprise: the "enlightened" era of Solomon's reign (*PHOE,* 69). That allowed von Rad to date the Yahwist to 950–930 B.C. Furthermore, such a great literary work could not have been undertaken without a specific ideological or theological purpose. That purpose, according to von Rad, was to reinterpret the ancient traditions of tribal Israel in the light of the Davidic monarchy: it was with the establishment of this powerful kingdom (and empire) that the blessing of Abraham and the promises to the fathers found their true fulfillment.

With that, von Rad presented the Yahwist not only as the first "architect" of the Pentateuch, i.e., the first to conceive the history of the origins of Israel with its basic components (primeval history, patriarchal stories, Joseph, Moses, exodus, Sinai, conquest), but also as *the* theologian *par excellence* of the early monarchy.

2. Noth's Reconstruction. Noth also considered that in terms of theology J "contains the most important testimony found in the Pentateuchal narrative as a whole" (*HPT,* 236), but his main interest was to determine how the traditions, before they came into the hands of the Yahwist, had reached their normative shape, grown together, and found their place in the nascent "hexateuchal" structure. While not resting his case entirely on the "Historical Credo," Noth agreed with von Rad that Israel's normative historical traditions had matured in the premonarchic period, i.e., before the Yahwist set out to write his comprehensive account of these traditions. Noth distinguished five main "themes" which had taken shape

in oral tradition and which the Yahwist had taken over from that tradition (*HPT,* 46–62): (1) the leading out of Egypt; (2) the leading into the land of Canaan; (3) the promise to the fathers; (4) the leading in the desert; and (5) the revelation at Sinai.

Noth postulated that some of these originally autonomous themes had already found their way into a structured document which he labeled "G" (*Grundlage,* the common basis for the Yahwist and the Elohist), leaving open whether this document existed in a written or an oral form (*HPT,* 38–41). The diversity of themes and the inconsistency of outlooks within J confirmed the fact that J had used (written or oral) sources to compile his great work.

After the attempt of Eissfeldt, Noth (*HPT,* 28–32) was one of the rare exegetes to propose a complete enumeration of the texts he considered as belonging to J (compare the lists in Eissfeldt 1974 and Noth, *HPT,* 28–32). It is his reconstruction that served as a basis for all the subsequent discussion on J from the 1950s to the 1970s. Within the general consensus about J as was generated by the work of Noth, the modifications proposed by later authors were of minor importance, the only unresolved issue was where precisely the J source ended (see C.3.e below).

3. The Classical Consensus. Even if the views of von Rad and Noth on J do not always coincide (on the presuppositions of von Rad, see the reservations of Noth [*HPT,* 40–41]), it is nevertheless on their convergences that the consensus of the following twenty years rests.

a. Text and Content of J. According to the unanimous judgment of mainstream exegesis after Noth and von Rad, the J source begins with the story of the creation of man in Gen 2:4b. The Yahwist then sets out to narrate the origins of humanity up to the episode of the Tower of Babel. This first period—which von Rad had placed under the heading "proliferation of sin"—is marked by a pessimistic, or rather realistic, view of human beings. Then comes, as a positive answer to these calamitous beginnings, the story of Yahweh's calling of Abraham in Genesis 12 which is J's starting point in the history of the chosen people. After having dealt with the mythical ancestors in Genesis 12–50, J turns to the birth of the *nation* starting with Exodus 1: the oppression in Egypt and the liberation through the mediation of Moses. The sojourn in the desert is characterized by the constant murmuring of the people, but its main event is the revelation of Yahweh to his people on Mt. Sinai (Exodus 19–24): in spite of Israel's disobedience, Yahweh will lead his people to the promised land.

The confidence of most authors in the possibility of reconstructing the J source was such that several scholars did not hesitate to offer a continuous translation of the Yahwist source (see Schulte 1967; Smend 1967: 24–87; Resenhöfft 1977). The only major problem still remained the riddle of the end of the J source.

b. Date and Origin of J. With von Rad's brilliant staging of the "Solomonic enlightenment," his proposed date of around 930 B.C. was no longer seriously questioned. Some even went so far as to suggest that the priest Abiathar, the companion of David exiled to Anathoth by Solomon (1 Kgs 2:26–27), might be the author of the J source. In fact, the foundations for that early dating were rooted in the vision that Noth (1930; *HPT,* 252–59) and von Rad had developed of premonarchic Israel. Noth especially had insisted on the fact that all the constitutive "themes" of the Pentateuchal tradition, as well as their integration into a normative sequence, were marked by a "pan-Israelite" outlook (*HPT,* 42–51). The advent of this pan-Israelite consciousness presupposed, of course, the formation of a tribal league in the mountains of Palestine. But that the Pentateuchal tradition belongs in its essence to the pre-Davidic period appears from the fact that the monarchic institution is remarkably absent and that the center of gravity of Israel still seems to rest with the tribes of central Palestine (Joseph, Benjamin)—especially apparent in the Jacob and Joseph stories of Genesis and in the conquest narratives of Numbers—and not with Judah (*HPT,* 51, 56, 208–213). The monarchy thus was the necessary condition only for the writing down of the traditions. Symptomatic of Noth's argumentation is the following statement: "As far as I can see, there is nothing in the original material of the J narrative which would force one to place its composition later than the Davidic-Solomonic period" (*HPT,* 230). For this 10th-century dating, the following further arguments were adduced: (1) the J material contains no allusions to the Aramean or Assyrian perils which Israel encountered starting with the 9th century B.C.; (2) there is no hint of the division between Israel and

Judah; the tribes of the N and S are considered a unity; and (3) the cursing of Canaan in Gen 9:26 (J) reflects the situation of the Davidic and Solomonic empire, as do a number of other texts (e.g., Gen 15:18; 25:23; 27:37, 40a; Num 24:15–19).

The geographic origin of J was located in the south (Judah) rather than in the north for the following reasons: (1) in the primeval history, the tradition of Cain (Genesis 4) points to the Negeb; (2) the cycle of Abraham and Lot (Genesis 12–13) is rooted in Mamre, near Hebron; (3) Judah plays a dominant role in the J strand of the story of Joseph (Gen 37:26; 43:3, 8–10; 44:14–34; 46:28); (4) the peculiar material of Genesis 38 concerns Judah; and (5) in the Exodus narrative, J presents traditions connected mainly with Kadesh and the Midianites (e.g., Exod 3:15–22; 18:1 (J?); Num 13:26; 20:1, 14–16). Finally, the absence of specifically Jerusalemite traditions in the corpus of J led some authors to locate the Yahwist in the rural areas of Judah (see Steck 1971: 553).

c. Theology of J. Interest in J's "theology," sparked by von Rad, has grown because the possible *kerygma* of that source is much less explictly stated than that of P or Dtr (Smend 1978: 91). J's primeval history, however, which is commonly regarded as freely composed by the Yahwist, allows the careful reader an insight into some of its author's profound mode of thinking. The major stories in that section (Gen 2:4b–3:24; 4:1–16; chaps. 6–8; 11:1–9) all concern human transgressions, the consequences of which are used to explain the suffering and frustration encountered in life (e.g., hostility between animals and humans, pain of childbirth, aridity of the soil, wearisome work, animosity between brothers). Thus the frustrations of the *conditio humana* are attributed not to God nor to hostile deities or powers but to the fallibility of human beings. The constant human urge to transgress the limits established by YHWH prompts a reaction of the Creator, but beyond punitive interventions, YHWH evermore takes preservative measures to keep humanity from destruction (see Westermann 1964: 51–58).

This very subtle art of storytelling, which avoids supernatural interference and has forsaken all forms of magical or manichaean thinking, bears a distinctive flavor that brings it close to Wisdom Literature. At the same time, the primeval history of J offers a genuine and coherent theology insofar as it portrays a universal YHWH, at the same time almighty and gracious to man, who declares (Gen 8:21), "Never again will I curse the ground because of man, even though every inclination of his heart is evil from childhood." Many of these traits can be found again in other parts of the J source (notably in the Jacob cycle, in the Joseph narrative, and in the desert stories) or, for that matter, in the "Succession Narrative" (2 Samuel 9–20; 1 Kings 1–2) which may come from a similar background. The same message is repeatedly suggested: Whatever good happens to the chosen of YHWH is not due to their own merit, but to the gracious and hidden forbearance of God (see de Pury 1975: 91–116).

Admittedly, the theological intention is less easy to define in the subsequent sections of the J narrative. If, starting with the patriarchal stories, J is not the "inventor" of most of his narrative material, how is it possible to determine the theological purpose of his work? Wolff (1966: 136–37) suggests that there are two areas where the intention of the Yahwist may be recognized: (1) in the "programmatic" passages that are due to his own wording (such as Gen 8:21–22; 12:1–4a; 18:17–18, 22b–33; 32:10–13; 50:20, 24), and (2) in the juxtaposition or rearrangement of previously unconnected narrative units. Very typical of that second possibility might be the insertion of an episode illustrating Abraham's infidelity in Gen 12:10–20 after the promise of the land in 12:7, or the placing of Gen 32:23–33 [—Eng 32:22–32 as YHWH's answer to Jacob's prayer in 32:10–13 (see Stoebe 1954).

For the interpretation of the Yahwist's theology, the key passage has always been Gen 12:1–3. Here both elements—programmatic statement and linking of narrative units—are present. Von Rad (*PHOE,* 65) already gave these verses utmost importance:

> "In this interlinking of primeval history and history of salvation the Yahwist accounts for the intent and purpose of the salvatory relationship that Yahweh has granted Israel. It is the etiology of all etiologies of Israel."

The problem, though, is to know whether this relatively serene universalistic kerygma, extending the blessing of Abraham not only to his offspring but also to "all the clans of the earth," may be translated into a "political" message and interpreted in terms of a Davidic "history of salvation." Von Rad (1961a:

75–81) thought that J had in mind to legitimate the Davidic monarchy as the fulfillment of God's plan (see also Rost 1956: 5; Amsler 1969: 243–45). Others perceived in the Yahwist's message a more critical vein, his intent being not only to accept fully the Davidic turn in Israel's history, but also to lay bare the hubris of the Solomonic court (Henry 1960: 15–20; Wolff 1966: 155; von Soden 1974) and, possibly, to denounce the servitude imposed on "brother" nations like Edom (see Gen 27:40b) or Ammon (on the whole question, see de Pury 1975: 117–65). The second option is more in line with the above reading of Genesis 2–11, but it entails that the Yahwist was not the first narrator to have told the story of Israel's origins in the wake of the establishment of the Davidic kingdom. That brings us to the question of J's antecedents.

d. Sources of J. Since the time of Gunkel (1910: VII–XCII), everyone has admitted that the Yahwist did not invent most of what he narrates in his work. J and E are essentially *tradents* of a lore of tales carried by oral tradition (see also Westermann, *Genesis* BKAT, 11–51). Yet some of the "incoherences" within the thread of the J narrative may be so sharp that the suspicion arises that the Yahwist is not just retelling old tales, but coping with already formulated earlier narratives. We have mentioned Noth's hypothesis of "G" as a first pre-J source of the Pentateuch. In later years, some authors thought there were sufficient indications to reconstruct one or several segments of this pre-J strand. Kilian (1966: 1–35, 220–22, 285–94, 301–06), de Pury (1975: 49–58, 130–33) and Otto (1979: 82–88) found pre-J strands in the Abraham and Jacob narratives, Otto (1975: 241–99) in the Sinai pericope, Fritz (1970: 107–34) in the desert stories, and Richter (1986: 29–57) in the primeval history. Recently, Vermeylen (1989) has proposed the reconstruction of a pre-Yahwist, Davidic narrative extending through the whole book of Genesis (suggested siglum: Dv). These attempts are all rooted in the observation that the texts attributed to J often bear traces of a prolonged redactional elaboration. The main question, then, is: does the Yahwist, from the point of view of his method, represent an analogous phenomenon to that of the Deuteronomistic Historian, i.e., besides being occasionally a narrator, could he be first and foremost an "editor." But in that case, it is not surprising that the arguments invoked for his dating and the determination of his sociohistorical roots call to be reexamined, as will be shown below.

e. Problem of the End of J. In line with his conception of history of salvation, as it had been reconstructed mainly from Gen 12:1–3, J's work had to include the story of Israel's entry into Canaan and, most probably, to end with it. That, at least, was the opinion of practically all mainstream authors. Since the conquest of Canaan is told only in the book of Joshua and in Judges 1, some authors (and among them von Rad) traced segments of the J narrative up into the book of Joshua. Noth thought that the end of J had been suppressed when the Pentateuch (or, rather, the Tetrateuch) had been linked up with the Deuteronomistic History (DtrG) (Noth, *HPT*, 33, n. 127), since that historiographic work already contained an account of the entry into Canaan (for a discussion of that problem, see Auld 1980). But other proposals for the location of the end of J were also defended:

—Num 14:8a (Weimar 1977: 163–64; 1980: 121, 134);
—Joshua 11 (Otto 1975: 95–103);
—Joshua 24 (Seebass, *TRE* 16: 445);
—Judg 1:26 (Eissfeldt 1922: 83–84, 252);
—1 Kings 2 (Budde 1883);
—1 Kings 12 (Hölscher 1952);
—1 Kgs 14:25 (Resenhöfft 1977).

It thus becomes apparent that even at the time of the consensus, the end of J was perceived as a major problem. It is therefore no surprise that it is precisely at that point that some of the critics of the "J" theory entered with their objections.

D. The Calling in Question of J

Starting with the 1970s, the entire research on the Pentateuch was submitted to a radical critique, and it was quite natural that the "Yahwist" stood from the outset in the first line of the debate. After the premonitory motion launched by Winnett (1965), the decisive works in reopening the discussion on the Yahwist were those of Van Seters (1975), Schmid (1976), and Rendtorff (1976). Without retracing here

the antecedents of the discussion (for that, see Whybray 1987; de Pury and Römer 1989), one can say that it is no longer possible today to speak of the "Yahwist" without acknowledging that the former consensus has vanished. The attacks against Noth's and von Rad's Yahwist developed along two main lines: either J was radically "re-dated," or his existence was entirely contested in the course of an overall critique of the Documentary Hypothesis.

1. Redating J. In his *Der sogenannte Jahwist,* Schmid took as his starting point the Yahwist as defined and delimited by Noth. After examining a number of key J texts (in Exodus 3–4; 7–10; 14; 15; 17; 19; 24; Numbers 11; 12; 21; plus the promise narratives in Genesis), Schmid concluded that these "Yahwist" texts were very closely related to the style and the theological preoccupations of Deuteronomistic literature. The call of Moses (Exod 3–4), for example, presupposes the call of the classical prophets, and the theme of the people's disobedience in the desert reflects a mode of thinking known mainly from the Deuteronomistic school. Therefore, the historical context of the Yahwist seems to be a time of crisis rather than that of the glorious Solomonic "enlightenment" (which appears to Schmid as an invention of modern exegesis. The approach of Schmid takes its place in the wake of the (re)discovery of Deuteronomic/Deuteronomistic influences in the Pentateuch initiated notably by Brekelmans (1966), Perlitt (1969), Reichert (1972), and Fuss (1972).

In the same general line, Rose (1981; 1986) takes Schmid's intuition one step further. Whereas Schmid refrained from proposing a specific date for J and left open the exact chronological relationship between J and DtrG, Rose submitted certain Deuteronomistic texts in Deuteronomy and Joshua to a minute comparison with the corresponding episodes in the J narrative, and he concluded that J is later than DtrG. That discovery led him to the thesis that J composed his work in order to provide the historiography of DtrG with a "prologue" and perhaps to correct the somewhat too "legalistic" tendency of DtrG. It should be noted that if J never had an autonomous existence, Rose's thesis would offer an elegant solution to one of the major problems of the "old" J theory: that of its "lost end." Van Seters (1983; 1986) defends a similar approach. In his eyes, the Yahwist is essentially an "historian", i.e., an intellectual comparable to the Greek historians of the Persian period, who "conceived" Israel's prehistory and placed it as an opening of the earlier Deuteronomistic history.

This theory of Rose and Van Seters turns the classical consensus upside down insofar as it considers J, formerly the "oldest" source, now a postexilic work. On the other hand, it preserves unharmed the system of the sources as such (see the critique of Diebner 1985), and it even allows scholars to reclaim some of von Rad's inspiring theological interpretations (theology of grace, anthropological pessimism, the Historical Credo, etc.) by transposing them into the postexilic context. This theory today seems to rally increasing support (see Cryer 1985; Kaiser 1984: 93–96).

2. The Dissolution of J. In his *Überlieferungsgeschichtliches Problem des Pentateuch,* Rendtorff proclaimed an irreversible "farewell to the documentary hypothesis" (1976: 148). First and foremost, that meant abandoning the notion that the Yahwist is a continuous source in the Pentateuch (see also Rendtorff 1977). He tried to show that in spite of appearances, "J" is a very fragile construction. The substance of J is traditionally obtained by way of subtraction of the more easily recognizable other sources (see Smend 1978: 86; Seebass, *TRE* 16: 441), and there are no positive criteria for the attribution of a single text to the J source. Neither is there a consensus on the extension of the Yahwist or on his "theology." A more promising approach is therefore to liberate oneself from the yoke of the source theory and to explain the composition of the Pentateuch on the basis of the "major unities" recognized by Noth (primeval history, patriarchs, exodus, desert, Sinai, conquest). But contrary to Noth, Rendtorff does not consider these "unities" as themes that were carried only by oral tradition: he sees in them autonomous literary works that were transmitted independently from each other until they were reunited by a redactional enterprise of "Deuteronomistic" type. The "promises to the fathers" that were for von Rad the expression of the *ipsissima verba* of the Yahwist become, for Rendtorff, the most visible traces of this "Dtr" redaction. In such a system there is no room any more for a continuous Yahwist.

How are these autonomous "unities" to be imagined? Rendtorff's model was applied to the primeval history by Crüsemann (1981), who tried to show that Genesis 2–11 had not been composed with the

intention of serving as an opening for the Yahwist history of salvation, but instead represented an independent reflection on the origins of humanity, reflecting presumably the point of view of Judean peasantry in the time of the early monarchy. Blum (1984), after having shown (among other things) the weakness of the traditional argument based on the distinction between the divine names YHWH and Elohim, ventured to explain that the patriarchal cycle of Genesis 12–50 had grown as an independent unity during a long redactional process (extending from ca. 1000 to 400 B.C.).

An approach comparable to that of Rendtorff and his students is defended by Houtman (1980: 243–45) who refuses a source-system based on a continuous J and who presents the Pentateuch as the conglomerate of three previously independent unities: Genesis, Exodus-Numbers, and Deuteronomy.

E. J in the Current Debate

After more than a decade of severe attacks against the classical consensus on the Yahwist, there is still no new majority view in sight. Some scholars, perhaps waiting for better days, seem to refrain from writing much on the Pentateuch, and many of those who venture into the field do so with great prudence. In the current publications, four main approaches stand out (see Coote and Ord 1989 for an overview).

1. Defense of the Classical Conception. In spite of all the turbulence, a few scholars maintain categorically their allegiance to the Yahwist of Noth and von Rad. This is the case of exegetes such as L. Schmidt (1977; 1983: 90–95), W. H. Schmidt (1981; 1985: 72–74), Kohata (1986a; 1986b), Scharbert (1986), and Kreuzer (1989: 114–17). Others, like Smend (1978: 92–94), Seebass (*TRE* 16: 445–47), or Stendebach (1987) continue to believe in the existence of the J source, but do no longer find sufficient evidence for a precise datation—like Wellhausen, they are content with situating it generally during the monarchy. Moreover, they do not consider J to be an individual, but take it, once again, as a siglum for a "school."

2. A Solomonic J with a Reduced Substance. Taking heed of the current criticism of an ancient date especially concerning the more "theological" passages of J, some authors such as Weimar (1977; 1980), Zenger (1982; 1985), Vermeylen (1981; 1989), and Peckham (1985) seek a solution in the drastic reduction of the J source. These exegetes admit that many texts commonly attributed to J (e.g., Genesis 15; 24; etc.) are evidently much later than the 10th century, but they remain convinced that there *is* a Solomonic Yahwist comprising at least the primeval story, the Patriarchs, and the exodus, even if the substance of that work may comprise only two or three pages of text. The problem with that position is that it becomes more and more difficult to find palpable arguments to justify the proposed delimitation of the text.

3. An exilic or Postexilic J. As has been shown (see D.1 above), Rose and Van Seters maintain the Yahwist source in its traditional delimitation, but they date it to the Persian period. In the same line, one could mention the studies of Vorländer (1978), who dates the "Jehowist" (he refuses to separate between J and E) to the time of the exile, and Schmitt (1980), who sees in J a postexilic redaction of an earlier "elohistic" version of the Pentateuch. The problem with Rose's and Van Seters' conception is that it does not try to account for the depth of the redactional process that may often be recognized behind a J text. Has not the homogeneous Solomonic Yahwist of von Rad simply been replaced by a Yahwist of the Persian era which is equally homogeneous?

4. A Nonexistent J. As we have seen (see D.2 above), Rendtorff, Blum, and others hold that there are, comprised within what was commonly attributed to J, relatively ancient literary unities, but that a continuous J source never existed. If these views should finally prevail, critical exegesis would either have to renounce entirely the use of the siglum "J" or give that name to the (late) compiler/redactor who integrated the different unities into a coherent—and theologically assertive—whole. That second possibility would bring us again into the vicinity of the solutions of Rose and Van Seters, but with the recovery of an interest for the pre-"Dtr" literary history of each individual unity. The problem with Rendtorff's approach is that the very obvious (and secondary) "Dtr" passages in the Tetrateuch (e.g., Gen 22:15–18; 26:3b–5) are not sufficiently distinguished from the supposed "Yahwist" redaction.

F. Conclusion

The debate on the Yahwist obviously is not closed. No new scholarly consensus is yet in sight. And new research, discoveries, and points of view may bring about yet another turn in the appreciation of this complex literary corpus.

What currently seems to have been most severely shaken is the hypothesis of an extensive J historiography in the time of Solomon as von Rad and Noth had conceived it. In spite of the diversity of expressed opinions, the debate of the last two decades has shown some convergence in drawing the attention of exegetes to two related problems: (1) the apparent autonomy of the major components of the traditional J source, and (2) the apparent fragility of the links that bind together these major components. On these two aspects, a few final remarks are in order.

First, the main components of the traditional J source—the primeval history, the patriarchal saga, and the "national" saga (the birth of Israel in Egypt, exodus, entry into the land, etc.)—are too different from each other, and too autonomous in their outlook and scope, to have been conceived for the purpose of a single historiographic work. Each of these components can stand on its own. The patriarchal saga (and more specifically the Jacob cycle) and the story of the exodus/conquest even offer two rival etiologies for the presence of Israel in Canaan (they are still perceived as such in Hosea 12). There are good chances that these autonomous developments not only belong to the preliterary levels of the traditions, but that they also marked the first stages of their growth as literary works.

Second, the links that explicitly bind together the three components of the traditional J source are rather tenuous, and some of them are manifestly late. That is the case most notably of the story of Joseph (Genesis 37–50), which links the exodus story to the patriarchal narratives. The story itself, held by von Rad (1961b) to be a literary gem of the Solomonic Yahwist, the purest expression of that enlightened era, tends to be considered today by some scholars as a postexilic Jewish diaspora novel (Redford 1970; Meinhold 1975/76). Its function as a bridge between the Jacob and exodus stories might be even later. The P source knows of a descent of Jacob and his sons to Egypt but tells nothing of Joseph (Gen 37:1–2; 46:6–7, 8–27; 47:27b–28; 49:29–33; 50:12–13, Exod 1:1–5a, 13). The same can be said of the Dtr and post-Dtr Credos (Deut 10:22; 26:5; Josh 24:4; 1 Sam 12:8). The only text that mentions the story of Joseph is Ps 105:18–23, a very late psalm that presupposes the final redaction of the Pentateuch (Römer 1987). It is less easy to determine the age of the descent of Jacob to Egypt, but it likewise has all the appearances of a redactional link.

If one considers the question from the side of DtrG, the connection between patriarchs and exodus does not appear before the final redaction of the Pentateuch. As Römer (1988) has shown (after Van Seters 1972), the "fathers" frequently referred to in Deuteronomistic literature never designate the patriarchs but have in mind the successive collective generations of ancestors that came out of Egypt. It seems that DtrG ignores—or intentionally omits—the whole "prehistory" told in Genesis.

There remains the problem of Gen 12:1–3 and of the link between primeval history and patriarchal narratives. That link is evidently older than P, since P also connects a primeval tradition with the story of the patriarchs, but even if it should be relatively old, it does not necessitate a continuation of the patriarchal story in the exodus story. The only few explicit cross-references between the exodus and patriarchal stories (e.g., Gen 15:13–16; Exod 3:6aβ) most probably belong to the final phases of the redaction of the Pentateuch. Thus, if one decides to define the Yahwist as the author of Gen 12:1–3—to whatever period that may lead—one still does not get a corpus that extends beyond the book of Genesis.

What remains to be determined is the precise nature of the connection between the Genesis and the Exodus narratives. Were there any links prior to P? If not, does that make P the true "inventor" of the Pentateuch as a literary project combining the two rival stories of Israel's origins? If the "Yahwist" is defined with Rose as the provider of a prologue to DtrG, did his prologue begin with Genesis 2 or with Exodus 1? In that case, does one have to expect a second Yahwist for the inclusion of Genesis, or was this inclusion brought about by P or R^P? These and many other questions will undoubtedly have to be faced by those who hope to know a little more about that elusive "Yahwist" who has fascinated biblical scholarship for so long.

ALBERT DE PURY

YAʿNIN, KHIRBET. See NEIEL (PLACE).

YAVNEH (PLACE) See JAMNIA (JABNEH), COUNCIL OF.

YAVNEH-YAM (M.R. 121147). An ancient coastal city (Minât Rubin) located some 15 km S of Joppa. According to one theory, Yavneh-Yam was the harbor suburb (or "port") of the city of JABNEEL (M.R. 126141) situated 8 km to the SW. According to another theory, the site was called Heb *mḥwz* (= "port"), which is attested in Egyptian inscriptions as *Mukkazi* (a name that has also been attributed to Tell Abu-Sultan 6 km E of Yavneh-Yam). From the Hellenistic period on, Yavneh-Yam was known by the name *Iamnētōn ... limēn,* which persisted to the end of the Crusader period.

A square enclosure bounded by freestanding ramparts constitutes the most impressive remains at this site. More than half of this enclosure has been eroded due to the slowly rising sea level. However, the entire E rampart (800 m long) and parts of the N and S ramparts are still preserved, and it can be reasonably assumed that the entire enclosure was a square of 640 dunams. A complete square enclosure of this type was first observed at el-Mishrefe in Syria (Mesnil de Buisson 1926; 1927).

The Yavneh-Yam fortifications were excavated between 1967 and 1969 with the purpose of examining the method and materials used to construct the enclosure. Work was concentrated in two areas: in the N rampart (area A), and in the S half of the E rampart (area H). In area A, a vertical cut was made from the top of the rampart down to its base. Apparently the rampart was constructed first by leveling the whitish sand covering the virgin soil along the intended line of the rampart. Then a 12-cm-thick layer of *khamra* (red clay soil of the coastal plain) was laid down along the line to serve as the core of the rampart; it was then encased by a sheath of *khamra.* On the outer face the glacis originally consisted of two layers. The first (or interior) layer was made of heavy clay soil approximately 60–70 cm thick, extending from the top of the rampart down to virgin soil. The second (or covering) layer was made of crushed kurkar 50 cm thick, probably intended to prevent the damp clay from drying out and crumbling. At a later stage an additional glacis (or third layer) was applied over the crushed kurkar layer (see the schematic drawing in *EAEHL* 4: 1217).

On the analogy of the el-Mishrefe enclosure, the Yavneh-Yam fortification was assumed to have one entrance gate on each of its four sides. Indeed, in area H three superimposed gates were uncovered, indicating that the enclosure was entered from the space during each of the periods it was used as a fortification. The two lower gates (II and III) were built of sun-dried brick, were protected on the exterior by heavy walls of rubble, and were flanked by towers. The bottom gate (III) contained three pairs of gate piers. The lower part of gate II, with only two pairs of gate piers, was especially well preserved. The plan of one of the defensive towers of gate II is thus far unattested elsewhere. The walls of the right-hand tower were 2.4 m thick, and the narrow space between its walls and its central massive structure apparently contained a staircase leading to the upper story. Half of a smaller rubble-stone gate (I), dating to LB II, was exposed above the ruins of gate II.

Although this enclosure, like that of el-Mishrefe, was apparently intended to house large numbers of troops and their families and livestock, no traces of occupation were uncovered inside the open enclosure. However, in addition to occupational remains on and around the small mound of Minât Rubin, building remains and graves were found lined only along part of the inner rampart slope. In area A, for example, 9 layers were uncovered along and near the inner rampart slope. The earliest layer (9) contained no building remains and yielded only some MB I sherds. Layers 3–8 yielded sherds and a few vessels dating from MB II–III, while layers 1–2 contained LB I sherds, especially of "Tell el-Ajjul ware." In a small area of virgin soil in front of gate III (area H) were found the remains of hearths. Inside and around them were found MB I sherds, fragments of an incense burner, and a number of ivory plaques incised with designs. MB I sherds were also found on the lowest floor of one of the chambers of the gate towers and in the foundation trench of one of the tower walls.

The Yavneh-Yam excavations have thus furnished information about the construction method of the terre pisee ramparts, glacis, and gate structures of the MB I square enclosures (Kaplan 1975). It is now evident that the square enclosure with the three-pier gates made its first appearance in MB I between 2000 and 1800 B.C. The small quantities of pottery found in the two excavated areas indicate that the Yavneh-Yam enclosure was used intermittently, with alterations and repairs, throughout the remainder of the MB Age, and that the enclosure ceased to function as a fortification at the beginning of the LB Age.

YERUHAM, MOUNT (M.R. 139045). A site in the Negeb highlands, located on the NE spurs of Har Rakhma above Nahal Revivim and the Yeruham Reservoir. Scattered over an area of 5 km^2 are found most of the typical phenomena of the EB IV culture in the Negeb: a central settlement with about 50 habitational units; a cemetery containing about 80 burials in tumuli; a high-place located on a barren hilltop; and scores of isolated buildings, tumuli, and straight-built-lines. Mount Yeruham's nature as a key site for the EB IV in the Negeb was the reason for its excavation, the first excavation from this period in the Negeb. It took place in 1963 and was directed by M. Kochavi. Another expedition, led by R. Cohen, excavated the site in 1973.

Two superimposed strata were discerned in the central settlement, both belonging to the EB IV. Stratum II, the earlier and more substantial one, consisted of rectangular buildings surrounded by a stone fence. Stone pillars made of roughly rounded stone drums supported the roofs. In the lowest area of the settlement were various installations, including a potter's shop with a kiln and a clay storeroom. Stratum I consisted of only a few round buildings and two large enclosures, all built on top of Stratum II remains. Pottery finds from both strata show the same typology fitting into the "Southern" family of EB IV wares. The existence of a few red polished sherds, however, may indicate some connections with Transjordan. Two small animal figurines found by the pottery kiln are unique. A hoard of eighteen copper ingots found in a Stratum I courtyard demonstrate the high level of metallurgy obtained in this period.

The burials in the tumuli consisted of well-built cists in which the skeletons and burial offerings were put to rest on two superimposed floors. Some tumuli, including the eight built on top of the Stratum II remains in the settlement, were built as small step-pyramids, 4–5 m in diameter. All other tumuli, including those from the cemetery, were 7–8 m in diameter, and in each the area between the outer circular wall and the cists was filled with stones. The high-rise tumuli were assigned to Stratum I and the larger filled-in tumuli to Stratum II.

The high-place had a magnificent view from a rocky outcrop on a hill crest near the central settlement. The outcrop had 12 cupmarks of different sizes and a well-built stone wall encompassing about 500 $m.^2$. No building remains were observed near the high-place, but many were discerned on the saddle connecting the high-place and the spur.

Mount Yeruham was one of the main centers of the EB IV in the Negeb. Its first settlers built rectangular houses in a well-organized, defensive settlement. Other spurs near the settlement were designated for burial and for cult. The economy was based on seasonal agriculture in the well-watered riverbanks below and on hunting and herding on the nearby hills. The second wave of settlers belonged essentially to the same culture, but their settlement at the site was ephemeral.

A small Byzantine farmstead, hidden in a small wadi, was the only other ancient remain at the site.

MOSHE KOCHAVI

YIFTAHEL (M.R. 171240). A prehistoric site some 8 km E of Nazareth. Adjacent to this is a small tell, Kh. Khalladiyeh, and a perennial spring. The ancient name of the site is unknown and the modern appelation, Yiftahel, derives from the identification of this small valley with that bordering the land

allotted to the tribe of Zebulon (Josh 19:12, 14). A recent historical-geographical study of this area has challenged this identification, placing the vale of Yiftahel some small distance to the E.

Beneath a heavy alluvial cover, where road construction cut into the valley floor, evidence of a prehistoric occupation was first encountered. Preliminary soundings unearthed only a Pre-Pottery Neolithic B occupation, exemplified by white plaster floors and an extensive flint industry. A large-scale salvage excavation proved the site to be far more extensive, with evidence of several aceramic Neolithic levels and EB I, MB I, and possibly MB II occupations.

The Neolithic strata included several successive buildings with the well-known white plaster floors which the excavator was able to assign to houses of rectangular plans. The best preserved had a central roofed room flanked by 2 open-aired rectangular courtyards, and it resembles dwellings of the same cultural horizon at Jericho. Remarkably preserved organic finds included charred pulses and the earliest instances of horsebean *(Vicia faba L.)* yet encountered (Kislev 1985). In another aceramic level, several long, rambling stone walls, probably of large enclosures, perhaps surrounding tent dwellings, were unearthed. They are unlike anything heretofore unearthed of this period in the S Levant.

In another aceramic Neolithic occupation were found a series of rectangular houses with earthen or cobbled floors, all neatly aligned, suggesting a degree of central planning or organization. Several of these houses had porticoes attached to the entrance. The best preserved had 3 rooms in a linear alignment with a pillar base and plastered doorsill. Its plan is somewhat reminiscent of a Neolithic building excavated by Garstang (1948: 59–60) at Jericho and described by him as a probable temple. A number of primary and secondary burials found in and around these several levels can be assigned to the same horizon.

Directly above the Neolithic layers were the remains of at least 22 whole or partial houses spread over more than 2400 m^2 of the valley floor, all dating to several phases of an EB I occupation, making this one of the largest exposures of any site dated to this period in the S Levant. A peculiarity of this occupation was the apparent avoidance of any form of angularity in building techniques; all structures were oval, sausage-shaped, or circular in plan. See Fig. YIF.01. Pottery of this period included pithoi, amphoriskoi, storage jars, and some small bowls, usually covered in red paint or wash. The absence of grain wash as a painting technique and the presence of a gray burnished carinated bowls with projecting sinuous lines, (apparently an early type of Esdraelon Ware) date this occupation to early in the EB I horizon. Important architectural affinities with these curvilinear structures are found at Byblos (Dunand 1973, Installation Eneolithique) and Sidon-Dakerman (Saida 1979) of the Eneolithique Period as well as at other sites in Israel and Jordan.

Some sparse evidence of a squatter's occupation in the abandoned ruins of the EB I levels was encountered in the field. In the adjacent valley slope a rock-cut tomb of the MB II period attests to human activity. Surface pottery from the nearby tell suggests occupation in the Roman, Byzantine, Arab, and Turkish periods.

ELIOT BRAUN

YIN‘AM, TEL (M.R. 198235). A site located among the fields of Moshavah Yavneel near the W edge of the floor of the Yavneel Valley in the E Lower Galilee, also known as Tell en-Naam. The mound is about 85 m in diameter N–S and has a large terrace settlement. While many researchers have identified the site with Yenoam mentioned in New Kingdom Egyptian texts, this identification has been questioned (Liebowitz 1981: 92, n. 1). In Israelite times, however, the site seems to have been known as Jabneel, a S border city of the Naphtali tribe (Josh 19:33).

While the site was surveyed by the Palestine Exploration Fund in 1973 and sherded by Saarisalo (1927: 44, 49), Aharoni (*LBHG*, 79, 125–29), and Amiran, regular excavations at the site were first begun by

Liebowitz in 1976. With the exception of a small salvage dig conducted on the terrace settlement in April 1978, all excavation has thus far been limited to the mound.

Like many sites in the Near East, Tel Yin‘am had a lengthy history. It was initially occupied in the Neolithic period and yielded sherds, flint blades, and small objects of worked stone paralleling similar material from Shaar Hagolan. The site was also occupied during the late Neolithic and Chalcolithic periods. However, since no one has yet reached the earliest levels of the site, the assemblages from these cultural phases have not been found in stratified contexts.

Early Bronze I material, including a rare terra-cotta bull protome, was found near a small, round cultic installation in the terrace settlement. The tell was subsequently abandoned until the MB II period, though two EB IV tombs were excavated 2 km away in the Moshavah proper.

While no one has found substantial evidence for a MB occupation at Tel Yin‘am, the upper part of a unique, apparently MB jar which had contained a copper figurine recalling those from Byblos, and a unique electrum figurine recalling somewhat a type found in copper at the Nahariyah temple, were found just below the earliest floor level of the northernmost room of building 2. These finds are consistent with the discovery of an earthen surface at the W edge of the mound containing sherds dating to an early phase of MB II. The tell was subsequently abandoned through the remainder of the MB and during the LB IA, LB IB, and early part of LB IIA.

The LB II reoccupation of the site began around 1325 B.C. Like many LB sites, the settlement was not surrounded by a city wall. The major LB structures excavated consist of a palatial building and adjoining secondary buildings. These structures yielded a major assemblage of local pottery, the earliest known bronze ploughshare found in Israel, and rare and unique imports from Egypt, Late Helladic Greece, and Assyria. The NW room of the palatial structure was reused as a primitive iron smelter (Liebowitz and Folk 1984). The LB settlement was destroyed by fire sometime in the mid-13th century.

The site was reoccupied at the beginning of the Iron Age and was continuously occupied throughout the Iron I period. Jug-shaped cooking pots are very prevalent throughout the Iron I period and are a hallmark of the period. Changes are also discernible in the jewelry: shell beads became prevalent and small stone club-shaped pendants make their appearance. The Iron II (10th century) stratum is particularly rich. As in the LB Age the stone sockles of the building are approximately 1 m high and the floors of the side rooms are cobbled. The buildings are well constructed and the pottery is well made. Of the many small objects perhaps the most interesting is a knife consisting of an iron blade, copper rivets, and a bone handle. The Iron IIC level is poorly represented architecturally, but a rich repertoire of Iron IIC pottery (cooking pots, storage jars, jugs, and a lamp) was found in two partially excavated houses in areas B and G.

The Persian Period loci yielded an interesting array of local pottery forms and imported Attic and East Greek pottery. The buildings of the period are well constructed and the walls are more than a meter wide. Although there was a gap in occupation during the Hellenistic period, discovery of Herodian lamp nozzles and coins attest to reoccupation of the site in the Early Roman period. The site was apparently also occupied during the Middle Roman Period. However, the overwhelming majority of the late material dates to the Late Roman/Byzantine period (3rd–6th century). The Roman period architecture yielded evidence for several phases; but the floor levels, close to the modern surface of the tell, were not well preserved, and it is difficult to associate the favious assemblages found on these floors and in pits with specific building phases. Indeed the most important assemblages come from pits dug from uncertain surfaces. In addition to remains of domestic structures, the Byzantine period yielded a well-preserved *mikveh* (Jewish ritual bath) dated by C_{14} to around 525 C.E. By the 6th century, if not earlier, the tell was permanently abandoned.

YIRON (PLACE) [Heb *yir·ôn* (יִרְאוֹן)]. A fortified city listed as part of the inheritance of the tribe of Naphtali (Josh 19:38). The name does not appear elsewhere in the Bible. The LXX renders the name both as *Iarion* (LXXB) and as *Keroe* (LXXA). The town is probably mentioned in the list of towns in Galilee conquered by Tiglath-pileser III: Ak *Ir-ru-[na]*. The ancient toponym is preserved in the village of Yarun (M.R. 189276), which is situated in the Upper Galilee of Lebanon at an altitude of 800 m above sea level and 5 km S of Bint Jibel. Archaeological surveys uncovered there Iron Age sherds. Scholars maintain that the place was founded as one of the Israelite mountain settlements (Abel *GP* 2: 65, 351; Press 1954: 405–406; Garstang 1931: 102 n. 1; *SWP* 1: 258).

RAMI ARAV

YOD. The tenth letter of the Hebrew alphabet.

YOHANAN BEN ZAKKAI. Rabbinic Judaism pictures Yohanan as the person most responsible for the survival of Judaism after the Great Roman War of 66 C.E.–73 C.E., and the destruction of the Jerusalem Temple in 70 C.E. By establishing a school in Jamnia/Yavneh, Yohanan—a legislative innovator, a mystic, and a creative biblical exegete—made it possible for Judaism to survive despite the destruction of its physical and spiritual centers.

Even though Yohanan plays a central role in the rabbis' construction of the history of Judaism, several American scholars have argued for the impossibility of writing conventional biographies of the early masters such as Yohanan, or of establishing the validity of the tradition's claims about them (Green 1978). Unlike other cultures of late antiquity, rabbinic Judaism did not leave us any documents organized around the names or sayings of individual sages (Porton 1981). Rather, Jewish texts are organized around themes, topics, or scriptural verses (Green 1978: 80). Moreover, rabbinic comments "almost always focus on matters of detail, so that they (the rabbis) appear as glossators, never as innovators" (Green 1978: 80). Even the literary features of the rabbinic texts mitigate against our discovering much about the figures who appear in them, for the materials in these documents have been shaped and transmitted in literary patterns which "by [their] nature remove us from a historical figure because they 'package' or epitomize his thought, obscure idiosyncrasy and unique modes of expression, and thereby conceal distinctive elements of personality, character and intellect" (Green 1978: 81). Finally, we lack certainty even about the reliability of the attributions (Green 1978: 83), because we are often confronted with inconsistencies concerning the attribution of a particular saying when we compare the parallel versions of a pericope or the relevant manuscripts (ibid., 84).

It is not surprising, therefore, that the traditions of Yohanan ben Zakkai have been preserved and transmitted according to the frameworks and agenda of the editors of several collections and not as part of a narrative centering on Yohanan's life or career (Neusner 1970: 1). Nor are the inconsistencies which we find among the various parallel accounts of a single event unexpected (Neusner 1970: 5). Furthermore, the lacunae we encounter in our information is not unanticipated (ibid., 5–6).

Neusner's study of the Yohanan-traditions has demonstrated that the different rabbinic collections and the various strata of these texts preserve dissimilar information and paint disparate pictures of Yohanan. Neusner has shown that while the earliest strata of the Tannaitic midrashim contain minimal references to Yohanan's view of the Revolt, his work at Jamnia, his mysticism, and his principles of biblical exegesis, it does not mention his escape from Jerusalem, a story central to the rabbinic view of his importance

(1970: 16–35, esp. 35). The Yohanan-material in the Mishnah, which describe him as a lawyer-judge who exhibits little or no interest in historical or political events, has virtually no relationship to the Yohanan-corpus in the Tannaitic midrashim (Neusner 1970: 62–63) or the Tosefta (ibid., 81). Many passages designated as Tannaitic in the Babylonian Gemara add new information to the picture of Yohanan's activities and teachings found in the earlier texts. In some cases we find different versions of rulings first encountered in the Mishnah, in others we see significant expansions of earlier pericopae, and in still others we discover totally new information (Neusner 1970: 110). The Amoraic stratum of the Palestinian Talmud indicates that only a few of Yohanan's legal sayings were subjected to serious study in the later Palestinian academies (Neusner 1970: 155). Much of the material concerning Yohanan's life first occurs in the Amoraic stratum of the Babylonian Talmud (Neusner 1970: 156), so that a substantial amount of information about Yohanan's career appears for the first time in the stratum of both talmuds created furthest from his lifetime. Because material which occurs in later texts appears to be late (Neusner 1970: 265) and most of the biographical information we have comes from the later strata, it is unlikely that we can construct an accurate biographical sketch of Yohanan ben Zakkai. Furthermore, because the earliest strata of Yohanan's sayings are brief, while much material occurs for the first time or at least is fully developed for the first time in the later strata (Neusner 1970: 273), it is also doubtful that we can paint an historically accurate portrait of Yohanan's intellectual activity.

Even if we ignore the problems outlined above, the traditions about Yohanan ben Zakkai do not yield much information about him. The exact dates of his birth and death are unknown to us, and we do not learn anything about his parents (Neusner 1970a: 12) or his early schooling (ibid., 31). Although Mishnah *ʾAbot* tells us that Yohanan took over from Hillel and Shammai (Neusner 1970a: 33), it is only much later traditions which draw a strong connection between Yohanan ben Zakkai and Hillel (Neusner 1970: 110). It is also striking that Yohanan does not quote Hillel or that neither Hillel's nor Yohanan's disciples juxtaposed the supposed master with his famous disciple (Neusner 1970: 290). Neusner suggests that connecting Yohanan with Hillel reflects "the desire to claim continuity of Pharisaic leadership from Hillel before the destruction [of the Temple] to Yohanan b. Zakkai after it …" (1970: 41–43, quoted from 43). In a comparatively late source we are told that Yohanan was a tradesman (Neusner 1970a: 16), a fact minimally supported by other late material which informs us that he had some knowledge about how the systems of weights and measures were employed in the marketplace (ibid., 17–18).

From passages in the Babylonian Talmud we learn that Yohanan moved with his wife and son to Arav in Galilee; however, we are not informed about why he left Jerusalem for the north (Neusner 1970a: 47). Yohanan was not well known during this period, for it appears that he attracted only one student, Hanina ben Dosa (Neusner 1970a: 50–53). Yohanan returned to Jerusalem after spending perhaps twenty years in Galilee (Neusner 1970a: 47). It is possible that Yohanan's disagreements with the Sadducees (Neusner 1970a: 75–86) and the priests (ibid., 61–75; 86–89; Allon 1977: 318–23) should be set during this period.

Perhaps the most famous event of Yohanan's life is his escape from the besieged Jerusalem, his meeting with Vespasian, and his eventual settling in Jamnia. The story of the escape occurs in relatively late collections: *ʾAvot de Rabbi Nathan A, ʾAvot de Rabbi Nathan B, Lamentations Rabbah,* and Babylonian Talmud *Giṭṭin* (Neusner 1970: 228–34; Saldarini 1975; Schaefer 1979: 44–56). Neusner argues that "[n]one can possibly date from Tannaitic times …" (1970: 228). He believes the versions in *ʾAvot de Rabbi Nathan* are the earliest, while that in the Babylonian Talmud is "clearly a composite" (1970: 228), with the version in *Lamentations Rabbah,* perhaps a post-Islamic text, having been "corrected in important details to conform to the criticism of b. Git …" (ibid., 232). Neusner suggests that "some sort of independent materials circulated widely, and were used by the authors of the several stories independently of one another" (1970: 233). Saldarini argues that "all four versions of the escape story depend upon a *Vorlage,* a basic, original story which then developed through two traditions into the four versions" (1975: 190). He thinks that the original story of Yohanan's escape "runs from his being carried out of Jerusalem in a coffin to his meeting with Vespasian where he predicts that Vespasian will be emperor and Vespasian grants him a school in Jamnia" (1975: 199), so that the original story focused on the founding of the school in Jamnia. The emphasis on the siege and destruction of Jerusalem probably occurred after the Bar

Kokhba War, at which time "many supplementary details and motifs were added" (1975: 199). Although we cannot know what actually happened or whether Yohanan and Vespasian ever actually met, Saldarini states that "a reasonable hypothesis is that Vespasian had ordered escaping Jews to be quartered in Jamnia and that once there Johanan did the natural thing and began teaching. Only gradually did his school become authoritative and central for Judaism. The story of the meeting with Vespasian explains that gradual development by one, critical meeting" (1975: 204).

Schaefer offers the most detailed analysis of the several versions of the escape (1979: 57–58) and concludes that the speculations and theories about which versions are earlier or later are irrelevant (1979: 62). The historical value of the details in each rabbinic source must be established independently and by taking the *tendenz* of each document into account (1979: 98). Further, Schaefer believes that because late sources can contain valid historical information about earlier events, the date of a text's final redaction is not always relevant (1979: 57–62). He argues that on some points the rabbinic materials are dependent on Josephus and other materials from his time (ibid., 92–93). Schaefer concludes that the Romans probably had information about the affairs within Jerusalem and that they controlled the negotiations with Yohanan (1979: 70–72). Although it is impossible precisely to date Yohanan's escape from Jerusalem or discover the reasons behind it, Schaefer suggests that the most important factor was Yohanan's opposition to the war. Schaefer doubts that the burning of the supplies in Jerusalem was the motivating factor behind Yohanan's escape (1979: 62–70; 72–75; 80–82). Schaefer believes that Yohanan was first taken into custody by the Romans in Gophna and then later moved by the Romans to Jamnia (1979: 82–83). He, like Neusner (1970a: 243–45), rejects Allon's (1977a) theory that Jamnia was a Roman prisoner-of-war camp (Schaefer 1979: 88–90). He further rejects the historicity of Yohanan's prophecy about Vespasian's becoming emperor, but Schaefer does suggest that it may go back to an authentic interpretation of Isa 10:34 by Yohanan (1979: 83–88). For this reason Schaefer believes that Yohanan's request to found a school in Jamnia is not a historical fact, but the "foundation myth of rabbinic Judaism" (1979: 98).

By looking at the descriptions of Yohanan and his activity, we can discover what the rabbinic tradition thought was important about itself and its origins. The sayings attributed to Yohanan are not placed in the context of the development of pre-70 rabbinic thought, for he does not quote those who went before him, such as Hillel or Gamaliel I; rather, his laws go back to the biblical prophets or to Moses. Similarly, his exegetical comments always appear as the first example of a rabbinic comment on the particular verse. Thus the tradition pictures Yohanan as standing at the beginning of a new epoch (Neusner 1970: 3). This new epoch saw the foundation of the rabbinic movement, and Yohanan's ritual innovations and his disagreements with the priesthood place the rabbinic usurpation of priestly prerogatives at the very inception of the rabbinic movement. For the rabbis, as symbolized by Yohanan, it was Torah, not military power, which carried the day. Following Jeremiah's advice, Yohanan left the war-torn Jerusalem and retired to Jamnia to study God's word and to teach that word to his disciples. Yohanan was a sage, a lawyer, a mystic, and a biblical exegete. Thus, each of the rabbinic modes of interpreting and expressing Judaism could trace its origin to Yohanan. This meant that nothing was new; it all had been present at the very beginnings of the rabbinic movement. Through the powers he gained from his knowledge of Torah, Yohanan was able to win the respect and admiration of the ruler of the most powerful political and military force of his time. Thus the rabbinic way of life and the activities pursued by the rabbis gave them the ability to conquer all opposition, and this was true from the very inception of the movement. This is probably why Yohanan was described as he was, for by picturing him in this way, the whole of rabbinic Judaism was placed at the origin of the movement and all facets of its being were present from its birth.

GARY G. PORTON

YOKE [Heb *môṭ/môṭâ* (מוֹט/מוֹטָה), *ʿôl/ʿōl* (עוֹל/עֹל), *ṣemed* (צֶמֶד); Gk *zygos* (ζυγος) and related terms]. Most language, vocabulary, and concept studies make it very evident that terms which have come to be considered technical were once in common usage. This is certainly true of the "concept of the yoke" as it developed within the context of ANE, Hebrew, Apocryphal, rabbinic, and Christian literature. In the earliest periods the yoke was the simple instrument which bound animals—singularly, in pairs, or in groups—to a mechanism of production. Such a concept was very visual, concrete, and specific.

The use of a yoke mechanism employed to bind and control animals was transferred very early in ANE usage to instruments used to control and discipline human prisoners. After the fashion of the "yoke" commonly used to carry water, the center of a yoke bar was secured to the prisoner's neck and his hands were fastened at the two extreme ends (see Jeremiah 27–28).

From such early concrete concepts of the yoke, however, figurative ideas began to develop. The term came to apply to the number "2" in the fashion of a pair or yoke of oxen, and to the area of land a yoke of oxen could plow in a day. This figurative interpretation was not limited to the world of animals; it also came to be applied to human beings.

In all of the earliest applications of the yoke concept, the yoke was seen as a symbol of control, ownership, or service. Consequently, the yoke became a symbol quite early of the owner-owned, master-slave, lord-subject relationship. Indeed, even as animals were frequently marked with the symbol of the owner either through branding or through the fastening of a cord or chain to which was affixed an ownership tag, so owners, masters, or lords came to mark their human property either with actual brands (i.e., Cain) or with fastened tags (i.e., at the ear hole). These practices are frequently characterized as or designated by the term "yoke." There is a significant relationship between the continuing development of ornamental pieces such as necklaces, anklets, bracelets, earrings, and the like, and the use of these "slave tags" fastened to cords or chains. Indeed, there would also seem to be a close relationship between the "putting on of the Yoke of the Kingship of God" in Tannaitic Judaism and following, the use of "tefillin" as symbols of one's being marked as the "subject of God," and the wider concept of the yoke.

Out of these very literal attitudes toward the yoke, more and more metaphorical applications were made. Forced economic or political labor (corvée) was regularly designated as "bearing the yoke." To "wear the yoke" indicated one's economic subservience to another. To "wear the yoke" symbolized one's subjugation to one's political or economic ruler, with or without actual yokes or subjugation tags. To submit to the yoke either by allowing a foot literally to be placed on one's neck, by allowing a literal yoke to be placed on one's neck and hands, by wearing a slave tag, or by bringing tribute to one's sovereign or owner (tribute is frequently designated by the term "yoke") was thus to acknowledge the ownership and sovereignty of another. To lay the yoke on someone either by placing one's foot on his neck or by the other real or symbolic means declared the sovereignty of the king or owner.

It is no surprise to find that these symbols at the literal, economic, and political levels would eventually be used to describe and define the relationship between man and his celestial owners or sovereigns, the gods. Even as earthly conquerors and owners declared their sovereignty and ownership of their subjects through "the laying on of the yoke," and the conquered and slaves acknowledged that sovereignty and ownership through "the receiving of the yoke" (frequently accomplished through the bringing of tribute by means of the use of a yoke, in which case the "bearing of the yoke" was transferred in meaning to "the bringing of the tribute"), so attitudes and practices of religion and worship appropriated the familiar patterns related to economic and political life and applied it to relationships between gods and humans.

The yoke concept within the Hebrew literary traditions is strongly related to the idea of the Sovereignty Covenant. God laid his yoke on his people. His people either bore the yoke (an obedient, proper relationship) or broke off the yoke (a relationship of rebellion). God's people might choose to attempt to wear the yokes of other gods, which was the same as throwing off the yoke of Israel's god. Obviously, one could not wear two yokes at the same time.

The wearing of the yoke as viewed in Hebrew scripture was the outward sign of an inward relationship. Thus one might bring the offerings and do all of the things of religion and still not be bearing the yoke in terms of attitudes and relationships. Hebrew scriptures can thus view the bearing of the yoke of God's sovereignty as joy, honor, and privilege rather than tragedy, hardship, and sorrow.

The yoke concept in apocryphal Jewish literature continued to reflect the general secular and religious ideas noted above. The yoke figure underwent a great change during this period, however, as it was coupled with such ideas as Torah, wisdom, and God's instructions. The yoke was evidence of one's acknowledgment of the sovereignty of God, who gave these expressions of his nature and will to the people, and it was the people's expression of their relationship to God. It would seem that this association provided a link between the more general use of the yoke concept in prior material, and the liturgical use in later Tannaitic and perhaps even Christian literature.

When one comes to the Tannaitic material (the rabbinic materials from approximately 200 B.C.E. to 200 C.E.), one finds in place a new and dynamic liturgical and personal employment of the term "yoke." When the Shema was recited twice daily and when tefillin were used, the Jew took upon himself the yoke of God's kingship. He hereby declared God's sovereignty in his choice, direction, discipline, and blessing of Israel. He also declared the oneness of God in contrast to the many gods of the idolaters and polytheists, and, perchance, with the developing proclamation of the divinity of the Christ of the Christians.

Nor is the yoke image absent in the NT. Indeed, the Christian concept of the yoke may well be a reflection both of the background of Christianity in Judaism and the conflicts which developed between these two brother faiths. The synoptic materials speak of taking up the yoke in connection with learning of the Messiah. Such an act is associated with meekness and lowliness. Such a relationship is also associated with restfulness and peace. Certainly, as with the Tannaim, the yoke was seen as an indication of privilege and honor, and not reproach and hardship.

It is also likely that the statements concerning taking up one's cross are to be associated with the Jewish practice of reciting the Shema each day as the sign and symbol of God's sovereignty. Indeed, the use of the term "daily" in association with this Christian concept would make this suggestion even more likely. When one realizes that the term for the cross beam which Jesus is pictured as having carried to the place of execution is the same term frequently used for the cross beam known as the yoke, and when one realizes that at least some of the early Christian interpreters of Jesus' words saw a specific relationship between cross and yoke, the likelihood of there having been a daily assumption of the "Yoke of the Kingship of God" (the term used by the Jews with respect to the Shema/assumption of the Yoke of the Kingship of God) by Christians via some type of recitation becomes more likely. It would seem reasonable to associate such a ritual as including the recitation of the model prayer or some other liturgical formula. Perhaps, also, as the assumption of the yoke was symbolized in tefillin in Judaism, some religious object(s) or symbol(s) were used as a part of this personal worship among the Christians. For further discussion see *TDNT* 1:572; 2: 96–101; *ISBE* 5: 3126–27.

CHARLES L. TYER

YOKEFELLOW (PERSON) [Gk *syzygos* (συζυγος)]. A member of the Philippian church urged by Paul to help Euodia and Syntyche to settle their differences (Phil 4:3). Paul addresses him or her as Gk *gnēsie syzyge.* There has been some speculation that this could be read as a proper name, Syzygus, with Gk *gnēsie* being interpreted as "truly called." In this case Phil 4:3 would offer a parallel to the play on the name of Onesimus in Philemon 11. Thus the propriety of Syzygus' name would be indicated: as one

"truly called" Syzygus (lit. "yoked together") he was to bind these two women together again in accord. But no corroborating evidence exists to confirm Syzygus as a proper name.

If the epithet, however, is rendered as "true yokefellow," based on the literal meaning of *syzygos,* "yoked together," then the question arises as to who this was. Theories have suggested a broad range of candidates, among them: (a) Epaphroditus, as the bearer of the letter, who "seems most probable … for in his case alone there would be no risk of making the reference unintelligible by the suppression of the name" (Lightfoot 1888: 158); (b) Timothy, despite the fact that he is coauthor of the epistle (1:1), since Paul earlier in Phil 2:20 had indicated he was "genuinely (Gk *gnēsios*) anxious" for the welfare of the Philippians; (c) Paul's wife, perhaps Lydia, on the supposition they may have married, i.e., become partners or yokefellows. The host of nominees for yokefellow also includes the husband or brother of EUODIA or SYNTYCHE, Paul's companions Silas or Luke, the chief bishop at Philippi, the whole Church addressed as one person, and even the Lord himself. It does seem rather certain that the person addressed as yokefellow must be male, since one would have expected Paul to address a female as Gk *gnēsia,* but beyond that, as the multitude of suggested names testifies, scholarship has hardly reached a consensus.

ZAANAN (PLACE) [Heb *ṣa›ănān* (צַאֲנָן)]. A village in the Shephelah of Judah (Mic 1:11). While the town is otherwise unknown, it is likely to be identified with Zenan (Josh 15:37), listed in the context of the other Shephelah towns Adullum, Lachish, Achzib, and Mareshah (vv 33–44), which are all mentioned in Micah's dirge (1:10–16). The difference in spelling is an *›alep;* the *nomen proprium loci* could have had variant spellings, the Joshua occurrence could have been written defectively, or Micah could have added the *›alep* to make clear his wordplay on *yāṣĕ›â* "get out." The grammatical situation is not exactly the same but it may be noteworthy that Mareshah is spelled with an *›alep* in the Joshua list and without it in Micah's (Josh 15:44 where variant mss record the defective spelling of Mareshah like Mic 1:15). In Mic 1:11, the Greek versions spell "Zaanan" alternatively *Sennaar, Sennan, Sainnan, Sanaoμn,* and *Saniōn.* Symmachus translates the word *euthēnousa* "thriving, flourishing," evidently reading *ša›ănān* "at ease, secure" as attested by 1 MS Kenn. and 4 de Rossi. Peshitta records Zoan. On the basis of Arabic *el-‹Araq,* some have identified with modern ‹Arâq el-Kharba W of Lachish, but this location has gained no consensus (Abel *GP* 2: 455).

Micah's lament is well known for its paronomasia whereby a town's *nomen* is its omen, and for its personification of the Shephelah towns with their inhabitants [Heb *yôšebet*] as women (verbs and suffixes are feminine). See MAROTH. As mentioned, Zaanan is a pun on the Hebrew word for "get out," and the wordplay is continued with the following Beth-ezel. Therefore, v 11b should be translated, " 'Lady Exiton' [Zaanan] will not get out; mourning in 'Witholdon' [Beth-ezel] will keep her support from you!" The point is that the neighboring village of Beth-ezel will be so busy mourning her own destruction that she will be unable to come to the rescue of her sister village Zaanan. See Elliger 1934; Kellerman 1978.

LAMONTTE M. LUKER

ZAANANNIM (PLACE) [Heb *ṣa‹ănannîm* (צַעֲנַנִּים)]. One of the place-names on the S border of Naphtali (Josh 19:33), and the site of the camping place of Heber the Kenite (Judg 4:11). The complete name of Zaanannim is "oak of Zaanannim" (Heb *›ēlôn bĕṣa‹ănannîm*), and so probably refers to a familiar local geographical feature rather than a town name. Parallels to this type of name are the Diviner's Oak in Judg 9:37 and the well-known oak of Moreh in Gen 12:6 and Deut 11:30.

The site of Zaanannim has not been satisfactorily identified. Nor is it yet clear whether we are dealing with two sites or one; it seems more probable that this is one location. Abel (*GP* 2: 64, 312, 439) accepts them as one site and identifies Zaanannim as Khan et-Tujjar, a caravan station between Beth-shean and Damascus, four miles SE of Adam. This caravan station was part of the Via Maris, and located near Tell Abu Qedeis, which is to be identified with the Kedesh in Judg 4:11.

Aharoni (*LBHG*, 201) places Zaanannim on the border of Naphtali's inheritance in the vicinity of the Jabneel valley, away from the battle zone in Judges 4, toward Hazor, whither Sisera fled. Kallai (*HGB*, 228–34) notes that the site is closely associated with Mount Tabor, and also places it near Tell Abu Qedeis, in proximity to Taanach and Megiddo. He also states that the Kedesh in Judg 4:11 is in no way related to the Kedesh-Naphtali in Judg 4:6, the home of Barak, the son of Abinoam.

Finally, Noth (*Josua* HAT) claimed that Josh 19:33 was a distorted description of Naphtali's N border, but this view is not accepted by the majority of scholars.

It seems best, therefore, to identify Zaanannim as a well-known sacred tree near the S border of Naphtali, on the edge of the territory of Kedesh, in the vicinity of Mt. Tabor. A more exact location cannot be given.

SIDNIE ANN WHITE

ZAAVAN (PERSON) [Heb *zaʿăwān* (זַעֲוָן)]. A clan name in the genealogy of Seir the Horite in Gen 36:27. Zaavan also appears in the parallel genealogical clan list in 1 Chr 1:42 (KJV reads Zavan). In both lists he is described as second of three sons of the clan chief Ezer, and is thus a grandson of Seir. These clans, not to be confused with the Hurrians, inhabited the area of Edom prior to the coming of the Esau clans and are said to have been subsequently dispossessed by these more aggressive peoples (Deut 2:12–22). Their designation as "cave dwellers" may be a reflection of their use of these natural shelters for themselves and their flocks or it may be a disparaging remark by their conquerors to demonstrate how "uncivilized" they were. The conquest of the Horite tribal territories in Edom is paired in the text with the conquest of Canaan by the tribes of Israel.

VICTOR H. MATTHEWS

ZABAD (PERSON) [Heb *zābād* (זָבָד)]. The name "Zabad" can be understood to mean " (Yahweh or God) has made a gift." In the OT, the verb is used only in Gen 30:20 (Zakovitch 1980: 31–50).

1. A descendant of Judah, who shared Israelite and Egyptian ancestry (1 Chr 2:36–37). He was the son of Nathan, grandson of Attai, and great-grandson of Jarha. The Chronicler reports that Jarha was an Egyptian slave, owned by Sheshan, to whom Sheshan gave his daughter as a wife (1 Chr 2:34–35). Zabad was the father of Ephlal.

2. A descendant of Ephraim (1 Chr 7:21). Tensions can be seen in 1 Chr 7:20–29 apparently arising from the literary history of Chronicles. 1 Chr 7:20 begins a linear genealogy characterized by the form "[name 1] and [name 2] his son, and [name 3] his son," etc. Chronicles would thus depict Zabad as the son of Tahath and the father of Shuthelah, Ezer, and Elead. Ezer and Elead were killed when they went down to raid cattle belonging to the natives of Gath (1 Chr 7:20–21). 1 Chr 7:22 reports that "Ephraim their father mourned many days." If "father" is understood to mean "ancestor" some tension may be avoided, but other difficulties remain. Ephraim would be understood as mourning the seventh generation of his descendants. This incident is used to explain the name of another son of Ephraim (v 23), Beriah (Heb *bĕrîʿâ*), so named because "evil had come upon his house" (Heb *bĕrēʿâ hāyĕtâ bĕbêtô*). After a notice about Ephraim's daughter (v 24) the genealogy of the line of Ephraim through Beriah (characterized by the form discussed above, though Resheph is an exception) continues in vv 25–27, culminating with Joshua. Understandings of the literary history of this passage vary, as can be seen in the commentaries.

3. The son of Ahlai, listed as one of King David's outstanding warriors in 1 Chr 11:41b. The warriors of greatest renown were known as "the three": Josheb-basshebeth, a Tahchemonite; Eleazar, the son of Dodo; and Shammah, the son of Agee the Hararite (2 Sam 23:8–12). (1 Chr 11:10–14 mention the exploits of Jashobeam a Hachmonite and Eleazar the son of Dodo.) Other warriors of renown were called the thirty (2 Sam 23:24; 1 Chr 11:15). Neither the list in 2 Sam 23:24–39 nor the list in 1 Chr 11:26–47 contains exactly thirty names, although 1 Chr 11:26–41a parallels the list in 2 Sam 23:24–39 with some variations. The names found in 1 Chr 11:41b–47, on the basis of differences in both form and content, are sometimes considered to have come from another source (Braun *1 Chronicles* WBC, 159–60; Myers *1 Chronicles* AB, 88–91; Williamson *1 and 2 Chronicles* NCBC, 103–104). See also DAVID'S CHAMPIONS .

4. Identified by the Chronicler as a servant of King Joash; he was the son of Shimeath the Ammonitess, who with Jehozabad, son of Shimrith the Moabitess, conspired against Joash because the king had ordered the stoning of Zechariah the prophet (1 Chr 24:25–26). Zechariah was the son of the priest Jehoiada, who had shown great kindness and loyalty to Joash. After the death of Jehoiada, when Joash turned from God to idols, Zechariah had announced God's judgment, "You have forsaken Yahweh and Yahweh has forsaken you" (2 Chr 24:20). Zabad and Jehozabad killed Joash as he lay in his bed wounded from his encounter with the Syrian army (2 Chr 24:23–26). The Chronicler does not report any consequences suffered by these servants for the assassination of the king, but does report that though Joash was buried

in the city of David, he was not buried in the royal tombs. The Chronicler's report of the death of Joash differs from that of 2 Kgs 12:20–22—Eng 12:19–21. The RSV adopts the reading found in the LXX and in many Hebrew mss and identifies the servant first named in 2 Kgs 12:22—Eng 12:21 as Jozacar (Heb *yôzākār*) the son of Shimeath; the MT of *BHS* has Jozabad (Heb *yôzābād*). 2 Kgs 12:22—Eng 12:21 identifies the second assassination as Jehozabad the son of Shomer.

5. An Israelite, and a descendant of Zattu (Ezra 10:27, Gk *Zabad;* 1 Esdr 9:28, Gk *Sabathos*). Zabad is listed as one of those who divorced his foreign wife in accordance with the covenant described in Ezra 9–10 = 1 Esdr 8:65–9:36—Eng 8:68–9:36. The list of those who divorced their foreign wives and disowned the children born to them may seem "extraordinarily small considering the furor and the census figures in chapter ii" (Myers *Ezra-Nehemiah* AB, 87). Myers discusses three possible explanations: (1) the problem was not as serious as it would seem on the surface; (2) the list preserved is only a partial list perhaps reflecting only the upper classes; or (3) the reform was not successful (ibid., 87–88; *1 and 2 Esdras* AB, 99). Stating that the first explanation can be easily dismissed, he favors the second explanation. Blenkinsopp, on the other hand, argues that the reform was not successful (*Ezra-Nehemiah* OTL, 197–201).

6. A descendant of Hashum who divorced his foreign wife (Ezra 10:33, Gk *Zabed;* 1 Esdr 9:33, Gk A *Sabannaious*, B *Bannaious*). See above, no. 5.

7. A descendant of Nebo who divorced his foreign wife (Ezra 10:43, Gk *Sedem;* 1 Esdr 9:35, Gk *Zabadaias*). See above, #5.

KEITH L. EADES

ZABADEANS. Name of an Arab tribe invaded and looted by Jonathan the Hasmonaean in 143 B.C.E. (1 Macc 12:31). Josephus (*Ant* 13.179) made a geographical and ethnic error, stating that Jonathan raided "Arabia" and took "Nabatean" prisoners. However, the additional information (of taking prisoners and selling them in Damascus) is reasonable, although its source cannot be traced.

Jonathan's victory over the Zabadeans is apparently alluded to in *Meg. Taʿan.* "On the seventeenth of it (Adar) Gentiles arose against the surviving scribes in the country of Chalcis and Be-Zabdi (n) and there was a salvation" (Lichtenstein 1931/32: 36). This is probably a dim echo of Jonathan's resourcefulness in rescuing Jewish refugees who had taken shelter in the Lebanon Valley since the persecutions of Antiochus IV Epiphanes. The specific circumstantial background was probably the political rivalry of Jonathan and the Zabadeans during the wars of Seleucid succession. In fact, Jonathan had already carried out similar campaigns in the past together with Judas Maccabeus and Simon (1 Macc 5:9ff). Historically, the evidence of *Meg. Taʿan.* sounds reasonable, but the *Scholion* (i.e., the Commentary) annexed to it does not help to solve the mystery, due to its lateness and medieval atmosphere (Efron 1987: 208–209).

It is difficult to ascertain the precise geographical location of the Zabadeans. Although 1 Macc 12:31 gives two possibilities—the Emesa region and the Chalcis-Damascus area—the second seems to be more attractive as it is supported by *Meg. Taʿan.* If the Zabadeans were related to the Arab ruler Zabdiel (mentioned in 1 Macc 11:16–17), and if Zabdiel was father of Imalkue the Ituraean, we could further reinforce the second possibility (Kasher 1988: 37–41).

The name "Zabadeans" is derived from *Z-B-D* meaning "to give as a present" (Harding 1971: 294–95, Altheim-Stiehl 1964: 279, 296, 356). There was an ancient settlement in the Lebanon Valley called *Kaprozabdaiōn* (*CIG* 9893); to this day, a village called *Zabed* and a region called *Zebdani* may be found along the Beirut-Damascus road, and several other sites whose name include the elements *Z-B-D* are located N to Damascus and in the foothills of Mt. Hermon (Dussaud 1927: 203–4; Abel 1949: 226; Dar 1978: 62–63, 143). This name, known since biblical times (*EncMiqr* 11: 892–893; *EncMiqr* 11: 892), remained fairly common in Jewish circles during the Second Temple, Mishnaic, and Talmudic periods (e.g. Matt 4:20–22; Kosovsky 1985: 208–209).

ARYEH KASHER

ZABBAI (PERSON) [Heb *zabbay* (זַבַּי)]. **1.** A descendant of Bebai and one of the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:28 = 1 Esdr 9:28). Noth claims that Zabbai is a shortened form of a name derived from the Aramaic root *zbd,* "gift"—a name much more prevalent in the postexilic era (*IPN,* 39, 46–47). For further discussion, see ATHLAI.

2. The father of Baruch, one of those who repaired a section of the wall of Jerusalem (Neh 3:20). Clines raises the possibility that Zabbai is also the Zaccai listed in Ezra 2:29 (*Ezra, Nehemiah, Esther* NCBC, 149); however, that is highly conjectural. Myers points out similarities between "Zabbai" and an Assyrian personal name and "Zabe," which appears in the Alalakh texts (*Ezra, Nehemiah* AB, 111).
JEFFREY A. FAGER

ZABDI (PERSON) [Heb *zabdî* (זַבְדִּי)]. **1.** Grandfather of Achan, son of Zerah, from the tribe of Judah (Josh 7:1). Achan sequestered some of the devoted booty; in response to this infidelity, the Lord punished Israel by having them defeated by Ai. Joshua complained bitterly to the Lord and was told to assemble Israel by tribes. The guilty party was revealed by a narrowing process: first the tribe of Judah, then the family of Zerah, and next Zabdi (Josh 7:16). Zabdi presented his family man by man, and his grandson Achan, son of Carmi, was finally identified as the perpetrator. Achan and his household were subsequently stoned by Israel under the direction of Joshua (Josh 7:25).

2. Third of nine sons of Shimei, a Benjaminite (1 Chr 8:19). Shimei (= Shema) was the head of a Benjaminite family from Aijalon which along with Beriah's family routed the occupants of Gath (1 Chr 8:13), an event which is not noted elsewhere. The time period covered by this genealogy is not mentioned. In addition, neither the connection of Shimei/Shema to earlier Benjaminite generations nor that of Zabdi to later ones is indicated.

3. A state official; a Shiphmite. One of twelve stewards of royal property appointed by David, his specific charge was oversight of the produce of the vineyards (1 Chr 27:27). Of the twelve, he is one of seven identified with a gentilic rather than by paternity, indicating perhaps that he was from outside the tribal structure. There is no other occurrence of the term "Shiphmite."

4. A Levite descended from Asaph (Neh 11:17 and 1 Chr 9:15 [read Zabdi for Zichri]). Both lists indicate four generations (beginning with Asaph, then Zabdi/Zichri, followed by Micah, and ending with Mattaniah) and both include this line with several other Levitical lines. The list in Nehemiah is part of the enumeration of the volunteers and draftees who repopulated Jerusalem when Nehemiah restored the walls. In Chronicles the same basic list provides the names of those who first returned from exile and inhabited Jerusalem. For detailed comparisons of the two lists, see Braun (*1 Chronicles* WBC, 129–44) and Williamson (*Ezra, Nehemiah* WBC, 341–54).
RICHARD W. NYSSE

ZABDIEL (PERSON) [Heb *zabdî·el* (זַבְדִּיאֵל)]. The name of three different persons mentioned in the OT. Zabdiel is derived from "God" (Heb *·ēl*) and "gift" (Heb *zābād*), and means "my gift is God" (BDB, 256; cf. *TPNAH,* 132–33).

1. The name of a father of one of David's officers, Jashobeam, son of Zabdiel (1 Chr 27:2). The family was descended from Perez of the tribe of Judah.

2. The overseer of a group of priests in Jerusalem according to Neh 11:14. Zabdiel is described as the "son of the great ones" (Heb *haggĕdôlîm*). This term may be a title or it may represent a personal name. The confusion over the term "great ones" may be seen in the texts of the LXX which either translate the term "son of Haggedolim" or omit it altogether.

3. The Arab who decapitated the Seleucid king Alexander Balas and sent the head to the Egyptian Ptolemy VII (1 Macc 11:17). Alexander Balas had been defeated by Ptolemy in Cilicia on the S coast of Asia Minor and had then fled to the country E of Damascus (*KlPauly* 1: 483) into the hands of Zabdiel the Arab, who presented Ptolemy with the head of his foe. Josephus, knowing the account in 1 Maccabees 11, records that the Arab Zabeilus was responsible for the death of Alexander (*Ant* 13.4.8 §118). Diodorus Siculus (32), however, states that Alexander Balas fled to Arabia and sought refuge with Diocles, a local sheikh, and was killed there by two of his own officers, Heliades and Casius. The accounts in 1 Maccabees and Josephus can be made to agree with that of Diodorus if we posit that the Arabic name of the sheikh was Zabdiel. Diodorus would thus have recorded only the Greek name Diocles (meaning "glory of Zeus"), which was probably not the original name of an Arab sheikh. Evidence does exist for the use of the name "Zabdila" among Arabs in Palmyra (Cooke 1903: 272). Livy (*Ep.* 52) contradicts the accounts of 1 Maccabees, Josephus, and Diodorus by stating that Alexander died in battle with Demetrius, his contender for the Seleucid throne.

MICHAEL E. HARDWICK

ZABUD (PERSON) [Heb *zābûd* (זָבוּד)]. A priest and friend of the king at Solomon's court (1 Kgs 4:5). He was a son of Nathan, but it is not clear if this was Nathan the Prophet, Nathan the son of David (2 Sam 5:14), or another Nathan. The responsibilities of the office of king's friend are not specified, but he was probably a counselor to the king (Jones *Kings* NICOT, 137). A parallel may be found in David's court where Hushai was both king's friend and counselor (2 Sam 15:37; 16:16; 17:5 ff.).

PHILLIP E. MCMILLION

ZABULON. See ZEBULUN.

ZACCAI (PERSON) [Heb *zakkāy* (זַכָּי)]. Var. CHORBE. Head of a family of Babylonian exiles who are listed as returnees under the leadership of Zerubbabel and others (Ezra 2:9 [= Neh 7:14 = 1 Esdr 5:12]). In place of the name Zaccai, the list in 1 Esdras gives the form CHORBE. For discussion of the Ezra 2 list, see AKKUB.

CHANEY R. BERGDALL

ZACCHAEUS (PERSON) [Gk *Zakchaios* (Ζακχαιος)]. Apart from the passage in Luke 19:1–10, Zacchaeus is otherwise unknown. The name is the graecized form of the Hebrew, *Zakkai* or *Zaccai* (Neh 7:14; Ezra 2:9; *Zakchos* in the LXX). It appears as an officer of Judas Maccabees (2 Macc 10:19) and of the father of a famous rabbi from the end of the 1st century, Yoḥanan b. Zakkai. *Zakkay* means "clean, innocent" and is often used in parallelism with *ṣaddiq*, "righteous, upright." It is not to be associated with the name Zechariah. According to later ecclesiastical tradition, the Zacchaeus of Luke 19 became the bishop of Caesarea (Ps-Clem. *Hom.* 3.63–72; *Recogn.* 3.66,4), appointed by Peter against the will of Zacchaeus. Clement of Alexandria identified him with Matthias (*Strom.* 4,6,35).

The story of Zacchaeus cannot be viewed as a later and secondary development of the call of Levi (Mark 2:14–17; Luke 5:27–32), for this theory accounts for neither the name nor such details as the climbing of the tree and the localization of the scene in Jericho (*Luke* AB, 1219,1223; *Luke* NIGTC 695). Moreover, Jericho was a likely city for a toll collector (better translation than tax collector?) of some

standing. The city was an important customs station for the major trade route between Judea and the lands E of the Jordan. It also produced and exported costly balsams (*NIDNTT* 3: 758).

Perhaps the most important question about the Zacchaeus story is its literary form. Is it a legend, a conversion story (Kariamadam 1985: 56–58), a vindication story (White 1979: 93–96), or a biographical apophthegm in which the saying of Jesus is the point of the story and generally comes at the end (Bultmann 1963: 55–56)? The latter seems the most likely. Also, the various biblical criticisms yield different understandings of the passage.

Zacchaeus is portrayed in gentle, humorous fashion, and the "it is necessary" places the whole narrative within God's providence. The portrayal of Zacchaeus is complex. As a chief toll collector (*architelōnēs* occurs only here in the whole of Greek literature), viewed by his fellow townspeople as a sinner and described as "lost," Zacchaeus certainly qualifies as one of the "poor" or disadvantaged to whom the Lukan Jesus is particularly sent.

The dominant thought pattern in the Zacchaeus story is seeking, seeing, and salvation. Zacchaeus sought to see (cf. Luke 9:9; 23:8) who Jesus was and even climbed a sycamore tree to get a better view. But Jesus noticed Zacchaeus in the tree and invited himself to Zacchaeus' house. Exactly as instructed, Zacchaeus made haste and descended and received Jesus joyfully. Once they arrived at the house, Jesus explained that today salvation had come to this house because Zacchaeus, too, was a son of Abraham (cf. Luke 13:16); for the Son of Man came to seek and save the lost (19:9–10). He who sought to see Jesus is really sought, seen, and saved by him. The movement is from the actions of Zacchaeus to Jesus' actions on his behalf.

Zacchaeus also demonstrates a correct attitude toward wealth. The text does not explicitly say that he cheated anyone (but see Salom 1966: 87; Watson 1966: 282–85). At a minimum, Zacchaeus stood in need of salvation; otherwise, Jesus' comments in vv 9–10 would be nonsensical. Zacchaeus did distance himself from his wealth. He gave half of his goods to the poor, and although the normal recompense for money illegally acquired was that amount plus one fifth (Lev 5:16; 6:1–5; Num 5:5–7), Zacchaeus restored the amount plus a threefold penalty, as demanded of those who steal ox and sheep (Exod 22:1; Jos. *Ant.* 16 §3; *Luke* AB, 1225; *Luke* NIGTC 698). This latter might be a reference to the fourfold restitution that David calls for in 2 Sam 12:6 (Grindlay 1987: 46–47). Apparently, similar practices existed in Roman and Egyptian law.

Zacchaeus and his story have been compared to a number of other pericopes in Luke's gospel. For instance, John the Baptist preached that one should share one's possessions with the poor and that toll collectors should not exact more than what was permitted (3:10–14). The cure of the paralytic (5:17–26) and the story of Zacchaeus have the following in common: presentation of Jesus with a journey motif, attempt to see Jesus, prevention of this by the crowd, climbing, positive reaction of Jesus, criticism by some men of Jesus' action, and Jesus' reply with a Son of Man saying about salvation. Moreover, both Levi (5:27–35) and Zacchaeus are identified as toll collectors who responded joyfully to Jesus, took a correct stance toward their wealth, and gave a banquet for him in their houses. Again Jesus was on a journey. He took the initiative; he first saw each of the toll collectors. A crowd was present, and Jesus was criticized by adversaries. He defended himself with a saying about his salvific mission. The story of the sinful woman (Luke 7:36–50) likewise resembles that of Zacchaeus: Jesus becomes a guest, the host is named, there is a presentation of a sinful person, there is murmuring against Jesus, the sinner is converted, Jesus defends his actions, and finally, there is a statement of salvation (Kariamadam 1985: 32–33, 48–53). Furthermore, the prodigal son is described as "lost" (15:24,32; cf. vv 4,6,8–9) as is Zacchaeus (19:9).

Luke 18 is particularly significant for understanding 19:1–10 (Hobbie 1977: 285–87). Thanks to a correct attitude toward God, according to 18:9–14, the toll collector went home justified, but the Pharisee did not. Luke makes the rich magistrate similar to Zacchaeus by explicitly calling him rich (*plousios*) and by emphasizing his social role (18:18,23; cf. 19:1). Besides, each needed to be cured of a blindness associated with his wealth which made it impossible for him to enter the kingdom. But with God, salvation is possible. By way of contrast, the rich magistrate acknowledged only Jesus as "good master,"

clung to his property, and grew sad while Zacchaeus received Jesus with joy, called him "Lord," and separated himself from his wealth.

Between the narrative of the rich magistrate and that of Zacchaeus stands the third prediction of Jesus' death and resurrection and the healing of the blind beggar. Both the story of the blind beggar and that of Zacchaeus begin with a journey notice about Jesus. Like the beggar, Zacchaeus was at first unable to see Jesus, experienced the murmuring of the crowd, remained resolute in his quest and, transformed, acknowledged Jesus as Lord. Is the truly blind man really Zacchaeus who wants "to see Jesus, who he was" (Hamm 1986: 463–65; Kariamadam 1985: 37–38, 62–64)?

The story of Zacchaeus occurs near the end of the travel narrative and reflects its theology. Luke's emphasis is on Jesus' initiative to save the disadvantaged, despite the murmuring of others, and on the divine power present in him to fulfill the promises made to Abraham (Loewe 1974: 330–31). Luke 19:9–10 are probably redactional (Schneider 1975: 278–79) and summarize what is enacted in the story. Furthermore, Jesus incarnates in v 10 the messianic shepherd of Ezekiel (34:2,4,15–16,22; Dupont 1969; 252–53). This overall interpretation is confirmed by the many Lukan parallels to the story of Zacchaeus.

Many Lukan themes appear in the Zacchaeus story. There are God's providence and Jesus, the savior of the disadvantaged, who actually seeks us. Zacchaeus represents persistent effort to seek and to see Jesus, precise and joyful response, hospitality, recognition of Jesus as "Lord," and a correct attitude toward wealth (Kariamadam 1985: 58–72; O'Hanlon 1981: 16–22). Finally, Luke reflects on who really belongs to Israel and makes indirect reference to the journey to Jerusalem.

ROBERT F. O'TOOLE

ZACCUR (PERSON) [Heb *zakkûr* (זַכּוּר)]. The name Zaccur can be understood to mean " (Yahweh or God) has been mindful."

1. A Reubenite, the father of Shammua (Num 13:4). Shammua was one of the spies sent by Moses from the wilderness of Paran to spy out the land of Canaan (Numbers 13).

2. A man listed by the Chronicler as a descendant of Simeon; he was the son of Hammuel and the father of Shimei (1 Chr 4:26).

3. A Levite, a descendant of Merari, belonging to the family of Jaaziah (1 Chr 24:27).

4. A Levite of the family of Asaph (1 Chr 25:2, 10). Zaccur, according to 1 Chronicles, was the leader of a group or family of twelve persons set apart by David as the third of 24 divisions made up of Levites from the families of Asaph, Heman, and Jeduthun to prophesy with musical instruments in the temple. The Asaphites set apart for this duty were under the direction of Asaph, who was under the direction of David (1 Chr 25:1–31).

5. A descendant of Bigvai, listed with Uthai (RSV) as a leader of a group of 70 males who returned from Babylon with Ezra (Ezra 8:14). The consonants and vowels in the body of the MT are *zabbûd.* A note in the Masora parva to be found in the margin of *BHS* indicates that the name is not to be read as "Zabbud" (Heb *zabbûd*) but as "Zaccur" (Heb *zakkûr*). The consonants written in the body of the text and

the consonants written in the note in the Masora parva of *BHS* are designated by the terms Ketib and Qere respectively, derived from the Aramaic passive participles meaning "what is written" and "what is read." In printed editions and most mss, the consonants of the Ketib are pointed with the vowels to be read with the consonants of the Qere note. These notes, which are not used in synagogue scrolls, point to the Masoretic concern to preserve both the consonantal text and the tradition for reading the text—which in these cases were at variance with each other (Yeivin 1980: 52–64). Myers (*Ezra-Nehemiah* AB, 64–67) and Blenkinsopp (*Ezra-Nehemiah* OTL, 159; but p. 234 has "Zakkur" with a reference to Ezra 8:14) read the Ketib "Zabbud," noting that the preposition with a singular objective suffix "with him" (Heb *ʿimmô*) would require the reading "Uthai, the son of Zabbud," and cite 1 Esdr 8:40 "Uthai the son of Istalcurus."

6. The son of Imri who presumably with his family and/or servants worked to rebuild the section of the Jerusalem wall next to that worked on by the people of Jericho (Neh 3:2).

7. A Levite (Neh 10:13—Eng 10:12) who signed the covenant described in Nehemiah 10—Eng 9:38–10:39. In the present arrangement of the material, this covenant is linked ("Because of all this," Neh 10:1—Eng 9:38) to the day of penance described in Nehemiah 9—Eng 9:1–37. The origins and chronology of the materials in Ezra and Nehemiah is, however, a matter of scholarly debate.

8. A descendant of Asaph and an ancestor of Micaiah and Zechariah (Neh 12:35). Perhaps to be identified with #4 above.

9. The son of Mattaniah and the father of Hanan (Neh 13:13). Hanan was appointed by Nehemiah to assist Shelemiah the priest, Zadok the scribe, and Pedaiah the Levite in the distribution of provisions to the priests and Levites.

10. A temple singer listed in 1 Esdr 9:24 (Gk *Bakchouros*) as one of those who divorced a foreign wife. The list of those who divorced their foreign wives and disowned the children born to them may seem "extraordinarily small considering the furor and the census figures in chapter ii" (Myers *Ezra-Nehemiah* AB, 87). Myers discusses three possible explanations: (1) the problem was not as serious as it would seem on the surface; (2) the list preserved is only a partial list perhaps reflecting only the upper classes; or (3) the reform was not successful (ibid., 87–88; *1 and 2 Esdras* AB, 99). Stating that the first explanation can be easily dismissed, he favors the second. Blenkinsopp, on the other hand, argues that the reform was not successful (*Ezra-Nehemiah* OTL, 197–201).

KEITH L. EADES

ZADOK (PERSON) [Heb *ṣādôq* (צָדוֹק)]. **1.** One of the two priests at the Jerusalem shrine during the reign of King David, and the single holder of that position after Abiathar was banished to Anathoth by King Solomon. Most historians have concluded that the descendants of Zadok held a monopoly on the Jerusalemite priesthood from the time of Solomon until the exile (586 B.C.). According to the program which the prophet Ezekiel proposed for postexilic Israel, the priesthood was to be restricted to Zadokites. This restriction did not, however, prevail following the exile, as priestly ordination was extended to the descendants of Aaron.

Zadok is first mentioned in 2 Sam 8:17, where he is listed as the son of Ahitub, but this genealogical information is suspect because of apparent textual disarrangement (see below). He appears in 2 Sam 15:24–29, along with Abiathar, as one of the two priestly custodians of the Ark of the Covenant of God. Eventually Zadok ascends to sole possession of the Jerusalem priesthood when his co-priest Abiathar has the bad fortune to support Adonijah in the contest for the kingship with Solomon and is subsequently banished from Jerusalem by King Solomon (1 Kings 1–2).

Zadok's genealogy constitutes a problem which has long puzzled OT scholars. If Zadok's father Ahitub was the brother of Ichabod (1 Sam 14:3), this would incorporate Zadok into the family of Eli. This would make Zadok brother to Ahimelech and uncle of Abiathar (1 Sam 22:20; cf. Rowley 1939: 113–16; *HAIJ*, 114–15, with genealogical chart). This genealogy, however, conflicts with the point of 1 Sam 2:27–36 and

1 Kgs 2:26–27, which seek to explain how it came about that Zadok's family superseded the family of Eli in the priestly service.

Another tradition, traced in detail in 1 Chr 5:29–34; 6:35–38—Eng 6:3–8, 50–53, also posits Ahitub as Zadok's father but derives both from a line which does not include Eli. In the Chronicler's version Zadok derived from a line descended from Aaron's son Eleazar, and 1 Chr 24:3 specifically contrasts his descent from Eleazar with the descent of his co-priest Abiathar from another son of Aaron, Ithamar.

Most scholars since Wellhausen have considered the pivotal verse 2 Sam 8:17 to be problematic. The reversal of the Ahimelech-Abiathar sequence (contrast 1 Sam 22:20) raises the suspicion of either accidental or intentional alteration of the original reading. Most would restore the text to read "Zadok and Abiathar son of Ahimelech, son of Ahitub" (so NEB: cf. *AncIsr*, 373; contrasts *CMHE*, 212–14), leaving Zadok without any genealogy.

Scholarly consensus has generally regarded these genealogies as patent fictions, intended to create an appropriate lineage for a priest who in fact was not derived from any of the traditional Hebrew priestly families. If this be the case, whence, then, did Zadok enter into such a prominent role in the Hebrew priesthood?

A number of theories have been proposed to account for Zadok's position in the period of the united monarchy. One suggestion is that prior to their joint service in Jerusalem, Abiathar was priest at Jerusalem and Zadok was serving at Gibeon, where we find him in 1 Chr 16:39. Zadok would have been the priest who gave David the fateful oracle of 2 Sam 21:1—which should be relocated in the early years of David's reign—and David showed his gratitude by subsequently bringing Zadok to the Jerusalem sanctuary (Auerbach 1931; 1969: 49–50). There is, however, no conclusive evidence to show that Zadok had ministered at Gibeon prior to the mention in 1 Chr 16:39.

Another theory proposes that the *ʾaḥyô* ("Ahio") in the MT of 2 Sam 6:3–4 should be emended to *ʾāḥiyw*, so that the verses read, "Uzzah and *his brother*, the sons of Abinadab, were driving the new cart with the Ark of God; and *his brother* went before the ark," and that the brother was Zadok (Budde 1934: 48–50). Eleazar, son of Abinadab, who has charge of the Ark according to 1 Sam 7:1, is the same person as Uzzah. Zadok's association with the Ark, of which we are explicitly apprised in 2 Sam 15:24–29, would therefore have begun much earlier. One difficulty with this theory is that the unnamed brother of Uzzah, though associated with the Ark in 2 Sam 6:3, is not mentioned later in 2 Samuel 6 when the Ark is brought into Jerusalem. Furthermore, to put Zadok in the same generation as Eleazar, living at the time of the Philistine capture and return of the Ark, makes it rather unlikely that he would be yet serving some sixty-plus years later in the time of Solomon (1 Kings 1) as a co-priest with Abiathar, whose great-uncle Ichabod (cf. 1 Sam 14:3; 22:20) was born at the time of the Ark's capture (1 Sam 4:19–21).

The theory which has commanded the widest support maintains that Zadok was a priest of the Jebusite cult prior to the conquest of Jerusalem (Jebus) by David (Bentzen 1933; Rowley 1939; Ringgren 1966: 210; Zimmerli *Ezekiel 2* Hermeneia, 457; cf. Cody 1969: 91–93). The installation of Zadok alongside David's own priest Abiathar was a measure designed to placate the Jebusite subjects of David, who constituted a significant portion of the citizenry of the new capital. That Zadok was the pre-Davidic king of Jerusalem (so Bentzen 1933) is not widely held, for it seems unlikely that David would elevate his defeated opponent to such a prominent role in the government.

Several forms of the Hebrew root *ṣdq* occur rather frequently in the OT in connection with Jerusalem (Melchizedek, Gen 14:18, Psalm 110; Adoni-zedek, Josh 10:1; Zedekiah, 2 Kgs 24:17–18; cf. Isa 1:26, Jer 31:23, Ps 118:19; cf. Rowley 1950: 465, Ahlström 1961: 122). Since the word seems to have frequent associations with Jerusalem, its occurrence in the name of a priest (Heb. *ṣādôq*) who appears just after David's takeover of that city suggests that the priest might have been native to the city.

It is suggested (Rowley 1939: 126–28) that Kind David, rather than allowing the Ark to remain throughout his reign in the tent which he prepared for it (2 Sam 6:17), housed it in Zadok's Jebusite shrine after Nathan dissuaded the king from building a temple (Ahlström 1961). The story of Melchizedek and Abraham in Genesis 14 and the enthronement Psalm 110 were created in an effort to legitimate the Jebusite priesthood and to express the mutual recognition between the Jerusalemite priest and the Davidic

ruling house (Rowley 1950). This series of events facilitated the identification of Yahweh with *ʾEl ʿelyôn,* the Canaanite god of Zadok and Melchizedek (Gen 14:18)—an identification attested in OT texts such as Pss 7:18—Eng v 17; 47:3—Eng v 2; 91:9 (Rowley 1967: 74–75).

Zadok's support for Solomon, son of the Jerusalemite Bathsheba, against his rival Adonijah makes especial sense on the supposition that Zadok was a Jerusalemite. The presence of the bronze serpent Nehushtan, which King Hezekiah removed from the Jerusalem Temple (2 Kgs 18:4), becomes, on this theory, a relic of the pre-Davidic Jebusite shrine (Rowley 1939: 132–41).

An additional argument advanced to explain why the appointment of a Jebusite Zadok would have commended itself to David builds on the mention in 1 Chr 12:29—Eng 12:28 of a warrior named Zadok coming among those who repaired to David at Hebron as the latter was building his group of supporters (Hauer 1963; Rosenberg 1965: 168). It is proposed that this was the same Jebusite priest Zadok and that his defection to David at Hebron ingratiated him to the young king sufficiently to warrant the installation of Zadok as priest in Jerusalem upon the capture of the city.

Several recent writers have been critical of the theory of Zadok's Jebusite origins (*CMHE*, 195–215; Olyan 1982). Cross maintains that the *ṣdq* appellative is attested in too many other Canaanite areas for it to be regarded as exclusively Jerusalemite. Moreover, there is no evidence to indicate that David took over an existing Canaanite shrine, and passages such as 2 Sam 6:17 and 7:6 militate against that possibility. The appointment of a pagan priest by a devout Yahwist such as David, who sought to establish his state's link with the traditions of the tribal league, is regarded as most unlikely.

Furthermore, if the Zadokites felt the need for a pedigree reaching back to an ancient noble, why, instead of claiming descent from the ancient figure of Aaron (as the postexilic traditions do), would they not appeal to their lineage from Melchizedek? If the Jebusite contingent was powerful enough to motivate a conciliatory gesture by David, why the need to conceal Zadok's Jebusite lineage?

Recently, several writers have looked for Zadok's origins within Judah. Cross argues (*CMHE*, 211–14) that *ṣādôq ben ʾaḥîtûb* in 2 Sam 8:17 is not necessarily an error which should cause us to discount Zadok's Aaronide ancestry, as traced through Ahitub (1 Chr 5:29–34). Zadok's father Ahitub need not be the same Ahitub who was the grandson of Eli and the grandfather of Abiathar (1 Sam 14:3; 22:20). Cross postulates that Zadok was in fact a scion of the Aaronide family, and that the rift between Abiathar and Zadok represents a conflict between two rival priestly families—a Mushite priesthood descended from Moses and an Aaronide family with roots in Hebron (see Josh 21:10, 13; 1 Chr 6:42—Eng 6:57). Installing the leader of each priestly house as a diplomatic move made by David to avoid alienating either—a tactic later employed by Jeroboam I, who set up an Aaronide temple in Bethel and a Mushite shrine in Dan (cf. 1 Kgs 12:26–30). Since Hebron was David's first capital, it is reasonable that he would install a Hebronite as his priest upon the move to Jerusalem. With the ascendancy of the Zadokites (Aaronides) under Solomon (1 Kgs 2:26–27), they gained a monopoly at the Jerusalem Temple and the priestly traditions which they preserved elevated Aaron more and more to a prominent role.

A somewhat similar hypothesis works from 1 Chr 12:29—Eng 12:28 (see above), but instead of interpreting this text as the report of a Jebusite defecting to David, it proposes that Zadok was the son and aide of the Aaronide Jehoiada, mentioned in the adjacent verse, 1 Chr 12:28—Eng 12:27 (Olyan 1982). This Jehoiada was a priest and was father also of Benaiah (2 Sam 23:20; 1 Chr 27:5), who was to become a warrior for David and eventually the king's commanding general. Zadok, Benaiah, and their father came from the town of Kabzeel (2 Sam 23:20), in the Negeb, where David built a base of support during his sojourn among the Philistines. Both sons of Jehoiada were to rise to prominent posts in David's government, and they worked in tandem to ensure Solomon's succession to David's throne (1 Kgs 1:32–40). The recurrence of the name "Jehoiada" in the line of the Jerusalem priests (2 Kings 11; 2 Chr 22:11) strengthens the supposition of a family connection between the Zadok and the Jehoiada of 1 Chr 12:28–29. However, one must wonder why, if this theory be followed, the actual Aaronide lineage of Zadok was suppressed and an alternative, but fictitious, Aaronide genealogy constructed for him.

Since all of these theories about Zadok's origins are forced to rely on indirect evidence and inferences from texts which often convey the impression of being tendentious, no solution at present claims the overwhelming confidence of OT historians.

It is not so certain as many of the above-mentioned scholars assume that the preexilic priesthood in Jerusalem was monopolized by a family descended from Zadok (whatever his origins might have been). The references in the Deuteronomistic and the Chronicler's Histories to men holding the office of "the priest" or "the high/chief priest" do not at all make it clear that we can assume hereditary succession for them (Bartlett 1968). None of the priests mentioned for the period between Zadok and the exile is explicitly and unambiguously called the son of the previous priest. Other priesthoods are mentioned in Jerusalem (cf. 2 Sam 8:18; 20:26; 1 Kgs 4:5), indicating that there was not in fact a Zadokite monopoly. Moreover, Bartlett's study of some of the terminology relating to the chief priest suggests that the position might have been one to which men were appointed by the king in consideration of their ability rather than hereditary.

The program for the postexilic community which was spelled out in the book of the prophet Ezekiel expressly relegated the "Levites" to inferior temple duties and reserved priestly service at the altar for "the sons of Zadok" (Ezek 44:9–31). Repeatedly in Ezekiel, a distinction is made between those priests "who have charge of the temple" and those priests "who have charge of the altar," with the latter group restricted to the sons of Zadok (Ezek 40:45–46; cf. 43:19; 48:11).

In actual postexilic practice, however, it was not just the "sons of Zadok" who served as priests, but a broader group, the "sons of Aaron." It has been suggested that after the Temple was destroyed and the majority of Zadokites were carried off into exile, makeshift religious services were continued in Jerusalem during the exile and supervised by non-Zadokite priests; upon the return of (mostly Zadokite) priestly personnel from the exile, there was conflict between rival houses, and some sort of compromise proved necessary (cf. *AncIsr*, 395–97; Cody 1969: 156–74; Hanson 1975). In the work of the Chronicler and the Priestly writers, all sons of Aaron have priestly privileges (1 Chr 24:1–6; Exodus 28–29; Num 3:1–4). But even though the postexilic literature extended the priesthood to all Aaronides, the line of Zadok's ancestor Eleazar is given a more prominent role in P (cf. Num 26:1–4; 31:13, 21, 25–31) and is granted the Lord's promise of perpetual priesthood (Num 25:10–13). See also LEVITES AND PRIESTS.

The Zadokites apparently managed to hold the high priesthood until the time of Antiochus Epiphanes, and the origin of the community of the Dead Sea Scrolls likely was related to the loss of that office by the Zadokites (Cross 1961: 127–60; *CMHE*, 334–42).

GEORGE W. RAMSEY

2. The son of Azor and father of Achim, according to Matthew's genealogy tying Joseph, the husband of Mary, to the house of David and Solomon (Matt 1:14). The name does not appear in any other

genealogy or list of Jesus' ancestors (except in Luke in D, where an adaptation from Matt 1:6–15 is substituted in Luke 3:23–31), although Albright and Mann (*Matthew* AB, 4–5) believe the name is characteristic of names used in the last two centuries B.C. Gundry (1982: 18; following Hervey 1853: 133) posits that Matthew's interest in Davidic Christology leads him to incorporate the name of Zadok, who was an "outstanding high priest during David's reign (1 Chr 6:8 [MT 5:34)" (see #1 above), following Azor, short for the Azariah mentioned in 1 Chr 6:9–5:35–36 (—Eng 6:9–10), and preceding Zadok's son, Ahimaaz (shortened to Achim). Gundry's theory is intriguing but difficult to prove, since Matthew's dependence on 1 Chronicles in 1:13–15 is difficult to establish.

STANLEY E. PORTER

ZADOKITE FRAGMENTS (DAMASCUS DOCUMENT).

First discovered in two medieval manuscripts from the Cairo *genizah* by Solomon Schechter in 1886, this sectarian text, abbreviated CD, was later found in several manuscripts at Qumran. It is now considered to be part of the sectarian literature of the Dead Sea Scrolls. See also DAMASCUS RULE (CD).

A. Manuscripts

Schechter's two medieval manuscripts are held in the Cambridge University Library. Ms A (T.-S. 10 K 6), dating to the 10th century C.E., is preserved in 16 pages (cols. 1–16), while ms B (T.-S. 16 32), from the 12th century, consists of 2 long pages (numbered 19–20, skipping 17–18). Much of ms B is a somewhat expanded version of pp. 7–8 of ms A, indicating that the work survived even into the Middle Ages in varying recensions. In addition, Qumran Caves 4, 5, and 6 have yielded a number of copies (*5Q12* and *6Q15* in Baillet, Milik and de Vaux 1962: 128–31, 181). The bulk of the material, that from Cave 4, still awaits publication. Without question, these fragments confirm the intimate link between the *Zadokite Fragments* and the sectarian texts from Qumran, most notably the *Rule of the Community* (1QS, 1QSa and 1QSb). In general, the Qumran fragments which have been published agree with the recension in ms A.

J. T. Milik, entrusted with the publication of these texts, suggests that the Qumran manuscripts require a reordering of the text, and indicate that several pages have been omitted from ms A. J. A. Fitzmyer (in Schechter 1970: 18–19) has presented a revised outline of the text in accord with this evidence, while observing that the Cave 4 material indicates that the text circulated in various recensions reflecting the stages in the history of the Qumran community.

B. Contents

The text as a whole, somewhat like the book of Deuteronomy, consists of two primary units, the Exhortation (Admonition), and the Laws. The Exhortation recounts the place of the sect in Jewish history, arguing that it is the only true continuator of biblical tradition. The sect was constituted by those who perceived the iniquity of their generation, but lacked direction and leadership. The rise soon afterward of the Teacher of Righteousness (or "Correct Teacher") soon filled this gap. Damascus (cf. Amos 5:27) serves as a code word for the sectarian settlement at Qumran (CD 7:19), hence the designation "Damascus Covenant." The Exhortation argues for predestination toward the paths of good and evil, and condemns the evils of the rest of the Jewish community, alluding to the various groups of Jews which existed in the Hasmonean period. The sins of the rest of Jewry are catalogued, and the sectarians are pictured as being the only ones who know the correct interpretation of the Torah, the "hidden" laws, and who properly observe them. Scholars are divided as to whether the text expected one "Messiah of Aaron and Israel" or two separate messianic figures. Parts of the Exhortation must have originated as arguments to join the sect, while other sections must have been designed to maintain the loyalty of members of the group in the face of political, religious, and eschatological disappointments.

The Exhortation quotes *Jubilees* and the *Testament of Levi* and alludes to older traditions of biblical exegesis and to various legends which were part of early Second Temple Judaism. Much of the text

consists of *pesher*-like interpretations of various biblical texts which the members of the sect and their leaders saw as crucial to their self-definition.

The second section is a compilation of laws arranged topically. These laws are composed of biblical phrases which indicate to modern scholars the exegesis which lay behind each legal ruling. Following Fitzmyer's outline, the following topics are covered: rules for entering the sect; laws pertaining to oaths, witnesses and judges; ritual purification; Sabbath laws; miscellaneous laws; relations with non-Jews; additional purity rules; communal organization; and the sectarian penal code. Confirmation of the order will have to await final publication of the Qumran manuscripts.

C. Dating

The text of the *Zadokite Fragments* has to have reached approximately its present form (discounting medieval expansions and scribal errors) by the date of the earliest manuscripts, ca. 75–50 B.C.E. (Milik 1959: 38). This puts to rest the earlier theories which before the discovery of the Dead Sea Scrolls sought to identify this text as medieval Karaite or early Christian. Since the earliest date for Qumran settlement in the Hellenistic period is the reign of John Hyrcanus (135–104 B.C.E.), and since this text represents within it several stages of historical development, we would have to date its final composition to the latter years of John Hyrcanus or the reign of Alexander Jannaeus (103–76 B.C.E.). (Scholars who see the text as emerging from a pre-Qumranic milieu do date the composition of this text somewhat earlier [Davies 1983: 202–204].)

D. Character of the Laws

Both the Exhortation and the Laws present a consistent view of Jewish law, the source of its authority, and the method of its derivation. The laws are of two types. Those laws clearly mentioned in Scripture are termed *nigleh,* "revealed." These prescriptions are known to all the people of Israel who nonetheless violate them. Known only to the members of the sect are the *nistar,* the "hidden" laws, those which are not explicit in Scripture, and which the sect saw as derived through inspired biblical exegesis. All Israel is guilty of violating these prescriptions, which pertain to virtually every area of Jewish law (Schiffman 1975: 22–76). In this way the sect accomplished the expansion of Jewish law beyond its biblical origins, a matter also accomplished in different ways by the Pharisaic "traditions of the fathers," the redaction of the *Temple Scroll* in the form of a direct divine revelation, and the later rabbinic oral Law concept. For the sect, there had been a one-time revelation at Sinai and all further laws, for each and every epoch of history, would be derived from their form of legal exegesis (Schiffman 1983: 14–17).

E. Relation to Other Qumran Documents

Immediately after the publication of the *Rule of the Community* from Qumran, the close affinity of the new material from the caves with the *Zadokite Fragments* was clear. Indeed, the new scrolls confirmed the broad outlines of what Louis Ginzberg had described already in 1911 as "an unknown Jewish sect" (1970). Yet early studies tended to rely on circular methodology. It was assumed that the *Zadokite Fragments* and the *Rule* described the very same community, and that this was the Essene community also described by Philo and Josephus. Only with the advent of more scientific methodologies did scholars come to see these texts as describing a group of related and similar sects (or subsects) within the broad range of groups and approaches which constituted Second Temple Judaism.

With these advances the relationship of the *Zadokite Fragments* to the *Rule of the Community* is now much clearer. The *Rule* prescribes the rules and regulations for those living and studying at the sectarian center at Qumran, whereas the *Zadokite Fragments* legislate for those who join the sect but choose to remain in "camps," sectarian communities spread throughout the land of Israel. The *Zadokite Fragments* provide only for the initial stages of the novitiate, but full entry into the sect, possible only at the Qumran settlement, is described in the *Rule.*

The *Zadokite Fragments* have also been found to have affinities with a variety of other Qumran documents, especially as regards use of the characteristic terminology of the sect, as well as the sharp animus toward outsiders. The relationship of the *Zadokite Fragments* to the *Temple Scroll* (11QTemple) is a more difficult question. Y. Yadin, the editor of the *Temple Scroll,* saw this text as being in substantial agreement with the *Zadokite Fragments* whenever they dealt with similar issues. In fact, while this is

sometimes the case, there are other points at which the two texts diverge or where there is substantial incongruity between them. This is because the provenance of the *Temple Scroll* is to be found in related and perhaps earlier circles, but not in the Dead Sea Sect itself.

F. Significance

The *Zadokite Fragments* occupy a unique place in the history of modern scholarship. Their publication a half century earlier than the Qumran finds opened the eyes of scholars to the existence of what we now know as the Qumran or Dead Sea Sect. In this way it was possible for students of rabbinic Judaism and early Christianity to begin to take into account this sect in the early 20th century. As a repository of written Jewish legal materials organized by subject, the *Zadokite Fragments* quickly became a source for the study of the history of Jewish law and tradition. With the Dead Sea Scrolls, this text has illuminated the existence of various groups in the Second Temple period, and has provided a firm basis for understanding the sect's image of itself and of its fellow Jews, as well as its relation to the heritage of Scripture which preceded it and to the Judaism which followed it.

LAWRENCE H. SCHIFFMAN

ZAHAM (PERSON) [Heb *zāham* (זָהַם)]. A son of King Rehoboam (2 Chr 11:19). Zaham was one of three sons born to Rehoboam and Mahalath. The latter was Rehoboam's cousin who descended from Jesse through the line of Eliab, one of David's brothers. The note on Zaham's birth occurs in an extended passage not found in 2 Kings (2 Chr 11:5–23). This passage seems to be a unit in itself. It begins with a description of cities that Rehoboam fortified and ends with a statement that the king distributed some of his sons among all the fortified cities. Presumably they functioned as part of Rehoboam's governmental bureaucracy. The narrative does not specify which of Rehoboam's sons filled these positions. Zaham's position is therefore left unspecified. His name appears to be connected to the Hebrew root *zhm,* "loathsome." What this designation refers to is impossible to determine.

JAMES M. KENNEDY

ZAIR (PLACE) [Heb *ṣā‹îr* (צָעִיר)]. A site at which a clash took place between King Joram of Judah and the Edomites (2 Kgs 8:21). In the parallel account in 2 Chr 21:9, we find instead of the place-name the phrase *‹im śārāyw* (i.e., "with his generals"). Already in the reign of Joram's father, Jehoshaphat, a Judean superintendent governed Edom (1 Kgs 22:47). In the reign of Joram, however, in the middle of the 9th century, Edom detached itself from Judah's sovereignty and again became an independent monarchy (2 Kgs 8:20–22). The text of 2 Kgs 8:21 assumes that Joram was at least partially successful ("and he defeated Edom"). However, we ought perhaps to assume that the text has been altered (*›t* instead of *›tw:* originally "and Edom defeated him") so as to camouflage Joram's defeat.

It is difficult to say just where this battle took place. Although the LXX reads *Siōr,* Zair has been held to be identical with the Zior (Heb *ṣî‹ōr*) of Josh 15:54 and ultimately with the village of Seir (Ar *se‹īr/sa‹īr*), situated 8 km NE of Hebron (Abel *GP,* 464). This identification is difficult because the shift from Heb *ṣ* to Ar *s* is unusual in place-names. Furthermore, it is difficult to imagine a battle with Edom in the vicinity of Hebron in the early monarchical period. Even less plausible is the assumption of a scribal error which would represent Edom as Heb *ṣē‹îr,* not *śē‹îr* (cf. Gen 32:4—Eng 32:3; Judg 5:4). In 2 Kgs 8:21, Edom and Zair/Seir are simply not interchangeable.

Because of the geographical situation of Edom SE of the Dead Sea, the location of Zair is to be sought at some distance from the heartland of Judah. It is inviting to associate Zair with Lot's hiding place Zoar (Gen 19:20–22), as this name is likewise based on the root *ṣ-ʿ-r* ("to be small") (Borée 1968: 28). According to Gen 19:31–38, Isa 15:5, and Jer 48:34, Zoar is located on the border of the Moabite hill-country (see also Deut 34:3). This would point to a location SE of the Dead Sea, where the site was also posited by Josephus (*JW* 4.482) and the Madaba map of the Byzantine period (Keel and Küchler 1982: 254). Joram of Judah is then likely to have encountered the Edomites somewhere in the vicinity of *ghor eṣ-ṣafije*.

RÜDIGER LIWAK

ZALAPH (PERSON) [Heb *ṣālāp* (צָלָף)]. The father of Hanun who worked to reconstruct the Jerusalem wall (Neh 3:30). It is suggested that the name means "caper-plant," as is attested in Middle Hebrew.

NORA A. WILLIAMS

ZALMON (PERSON) [Heb *ṣalmôn* (צַלְמוֹן)]. One of David's champions, from the clan of Ahoah of Benjamin (2 Sam 23:28). See AHOHI. The parallel name in 1 Chr 11:29, Ilai the Ahohite, may be a corruption of the diminutive form of Zalmon—Zilai. See ILAI. The name Zalmon is a diminutive nominal form of the Heb root *ṣlm,* meaning dark or darkness. The term is related to the Akk *ṣalāmu* ("to be/become black, dark"), and in the dimunitive form probably means "the small, dark/black one." It may also refer to a dark cloud, or clouds, in which sense it could convey the idea of a mountain shrouded in dark clouds; a good vernacular translation might be simply "black mountain." On the basis of the Arabic word *ẓalmūn,* Noth (*IPN*, 223) argued that Zalmon meant "light" or "splendor." It is also possible that Zalmon the Ahohite, a Benjaminite, was named for Mt. Zalmon in neighboring Ephraim. See ZALMON (PLACE).

D. G. SCHLEY

ZALMON (PLACE) [Heb *ṣalmôn* (צַלְמוֹן)]. A mountain in Ephraim in the neighborhood of Shechem. In Judg 9:48, Abimelech and his men are said to have climbed Mt. Zalmon and cut brushwood to burn out the rebels who had barricaded themselves in the Tower of Shechem. It has been suggested that this Zalmon may refer to one of the shoulders of Mt. Ebal or Mt. Gerizim, the two mountains flanking Shechem. Another suggestion is that Mt. Zalmon here refers to Mt. Ebal. Psalm 68:15 (—Eng 68:14) also mentions a Mt. Zalmon, but the parallelism of this text suggests that the mountain is an eminence in Bashan, the territory NE of the Sea of Galilee. On the meaning of the name, see ZALMON (PERSON).

D. G. SCHLEY

ZALMONAH (PLACE) [Heb *ṣalmônâ* (צַלְמֹנָה)]. The word may mean something like "dark" or "shady," and is the name of the Israelite encampment between Mt. Hor and Punon at the time of the Exodus (Num 33:41–42). The location is unknown. Due to its name it may have some reference to a Mt. Zalmon, a mountain covered with brush as in Judg 9:48; Ps 68:14.

JEFFREY K. LOTT

ZALMUNNA (PERSON) [Heb *ṣalmunnāʿ* (צַלְמֻנָּע)]. One of the two "kings of Midian" captured and killed during Gideon's war against the Midianites. See ZEBAH AND ZALMUNNA.

ZANOAH (PLACE) [Heb *zānôaḥ* (זָנוֹחַ)]. **1.** A town situated in the N Shephelah, or lowlands, of Judah (Josh 15:34), within the same district as Socoh and Azekah. This settlement is listed among the

towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster compiled under the Judean Monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise make-up of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). Neh 11:30 records that Zanoah was among the Judean villages reoccupied by those returning from exile in Babylon. Zanoah's inhabitants played a role in rebuilding the wall around Jerusalem, sharing with Hanun responsibility for the Valley Gate and the accompanying wall segment stretching to the Dung Gate (Neh 3:13). Given its location and the obvious similarity in name, ancient Zanoah has most often been identified with modern Khirbet Zanu (or Zanukh), a hilltop site approximately 3.5 km S, and slightly E, of Beth-shemesh (M.R. 150125). The discovery of Iron Age pottery on the surface of the site provides persuasive archaeological support for this identification (Albright 1925: 10–11).

2. A town situated in the S hill-country of Judah (Josh 15:56), within the same district as Maon. As with its northern namesake, it appears in the list of towns within the tribal allotment of Judah (Jos 15:21–62). In 1 Chr 4:18, Jekuthiel, one of the "sons" of Caleb, is referred to as the "father" of Zanoah. The occurrence of several other southern hill-country town names in this context, such as Soco, Keilah, and Eshtaol, suggests that the relationship between a village and its founders is here signified by means of a kinship metaphor. Given the Calebite connection, it seems most likely that Zanoah of 1 Chronicles is to be identified with the hill-country village rather than with that in the N Shephelah. A common identification locates the hill-country Zanoah at Khirbet Zanuta, approximately 10 km SW of Hebron. As Rainey (*ISBE* 4: 1172–73) indicates, this identification is unacceptable for several reasons: the site is much too far to the W in relationship to the other towns of the district, the similarity in names seems to be superficial, and there is no evidence of pre-Roman occupation. A more plausible alternative (*IDB* 4: 934) is Khirbet Beit Amra (M.R. 155095), located approximately 2 km W of Yatta (ancient Juttah) near Wadi Abu Zennakh, which may distantly reflect the ancient name. However, surface remains give no evidence of occupation prior to the Byzantine period.

WADE R. KOTTER

ZAPHENATH-PANEAH (PERSON) [Heb *ṣāpĕnat paʿnēaḥ* (צָפְנַת פַּעְנֵחַ)]. The name in Gen 41:45 (KJV: Zaphnath-paaneah) which Joseph received from the Pharaoh when he was made vizier of Egypt as a reward for his services. Numerous attempts have been made to reconstruct the Egyptian original (Vergote 1959: 151–52; Redford 1970: 230), but most are either unacceptable phonetically or have no sound parallels in Egyptian. As first suggested by Steindorff (1889), the original Egyptian form is now considered by most scholars to be Djed-pa-netjer-iw-f-ankh (**Ḏd-p€ -nṯr-jw.f-ʿnḥ*), "The God speaks and he [the bearer of the name] lives" (cf. Schulman 1975: 240–41). This is a type of Egyptian birth name attested from about the 21st Dynasty on, although invariably a specific deity is indicated where the proposed name has the generic "god" (Redford 1970: 230).

Criticisms have been raised against this interpretation because the name is attested much later than the normally held dates for the Patriarchal age, and because there is no connection between the meaning of the name and the narrative. Both arguments can perhaps be dealt with by assuming that the writer of the Joseph story simply utilized an Egyptian name from his own time to add authenticity to the narrative. Indeed, the use of a characteristic Egyptian birth name at this point in the tale might symbolically underscore Joseph's rebirth as an Egyptian (Humphreys 1988: 163).

No convincing Egyptian original has been found for the LXX form of the name, *Psonthomphanech.* The translation "revealer of secrets" found in Josephus, *Ant* 2.6.1, and the Targums, although contextually apposite, must come from a Hebrew derivation, the first part of which was based on Heb *zâphan,* "to hide."

GARY H. OLLER

ZAPHON (PLACE) [Heb *zāpôn* (זָפוֹן)]. A town located at the S end of an E Jordan valley near Succoth and Beth-Nimrah, taken from King Sihon of the Ammonites, and given by Moses to the tribe of Gad (Jos 13:27). Zaphon (Judg 12:1; Gk *Zephina;* Heb *zāpōnāh*) is also apparently the battleground for the feud between Jephthah and the Ephraimites, who failed to help the men of Gilead fight the Ammonites on the E side of the Jordan.

This movement across the Jordan leads Mitmann (1970) to speculate that Zaphon could be a S site in Gilead, but this seems unlikely. Two locations on the E Jordan side could be proposed (Mittmann 1970: 218–20) for Zaphon: little known Tell el-Mezār (M.R. 207182, 3.25 km NNW of Tell Deir ʿAlla [M.R. 208178]; i.e., Succoth) or Tell es-Saʿidiye (M.R. 204186, 5.75 km "further northwest from the end of Wadi Kufrinje"). Glueck (1943: 20–23) prefers Tell el-Qôs (M.R. 208182, 5 km N of Tell Deir ʿAlla) on the N side of Wadi Rāğib. The talmudic tradition and Josephus seem to support this location (actually a double tell which includes Tell ʿAmmata only 500 m away). Josephus reports that Alexander Jannaeus fought at ʿAsophan (*Ant* 13.12.5), but Mittmann cautions that ʿAsophan should not be identified with ʿAmathous (Tell ʿAmmata) because there are no Hellenistic ruins in this vicinity outside of Tell el-Qôs.

PAUL NIMRAH FRANKLYN

ZAPHON, MOUNT (PLACE). A mountain identified with modern Jebel ʾel-Aqraʿ (35°59′N; 36°00′E), and located near the mouth of the Orontes River in N Syria. Mt. Zaphon was the sacred mountain of the storm god Baal-Hadad in ancient Canaanite mythology. It was also known as Mt. Casius in classical sources, and Mt. Hazzi in Hurrian texts. Aside from the passages discussed below, *ṣāpôn* is usually the general designation for "north" in the Hebrew Bible.

The etymology and semantic development of "Zaphon" has long been disputed. Grelot (1958: 62) sees "north" as the original meaning of "Zaphon." However, most scholars follow Eissfeldt (1932: 16–20), who argued that "Zaphon" was applied to the mountain before it was applied to the point on the compass. Also viewing "north" as a late semantic development, de Savignac (1984) argues that "Zaphon" originally referred to the wind that brought rain and clouds to the mountain, which then assumed the same name. For de Savignac and other scholars "Zaphon" derives from the root *ṣpn*, "to hide." Clifford (1972: 57), among others, derives the term from the root *ṣpw/y* ("to look out, spy out"), perhaps vocalized as *ṣapānu* in Ugaritic. For Clifford (ibid.) the meaning of "simply 'north' " is not found in Ugaritic, and in the Bible it is due to Zaphon's prominent location N of Israel. Grave (1980: 229) argues that "Zaphon" (from *ṣpw/y*) first referred to "clearness of the sky/wind (from the north)," and subsequently to the mountain from which such clearness supposedly originated. Finally it displaced the older *śamʾālu* as the term for "north" in the Northwest Semitic area.

Recent discussion of Mt. Zaphon has focused on the function of sacred mountains in Canaanite religion, especially as exemplified in Ugaritic texts. Along with F. M. Cross (*CMHE*), Clifford (1972) has provided one of the most detailed studies of the association of Mt. Zaphon with the kingship of Baal in the Ugaritic texts. Indeed, the mountain was the site of Baal's royal palace built by Kothar-wa-Hasis, the divine architect. Mt. Zaphon was a feasting place for the gods (*CTA* 4.5.106–117) and the site of Baal's proclamations (e.g., *CTA* 3.3.10–28). It was also where Baal and his archrival Mot engaged in a cosmic

battle (*CTA* 6.6.12–34). The mountain itself appears as a deity in many Ugaritic offering lists and in Phoenician personal names such as *ʿbdṣpn,* "servant of Zaphon."

According to Eissfeldt (1932: 12–15) and other scholars, one of the earliest texts referring to Mt. Zaphon in the Hebrew Bible is Ps 89: 13—Eng v 12, where Yahweh is said to have created *ṣāpôn* along with Mt. Hermon and Mt. Tabor. Ps 48:2–3—Eng vv 1–2 describes Mt. Zion as a sacred mountain of Yahweh, and the use of *yarkĕtê ṣāpôn* ("distant north," "utmost peak of Zaphon," among other renditions) in the phraseology appears to identify Zion with Mt. Zaphon. Divine decrees issue from Mt. Zion (cf., Isa 2:3) as they do from the holy mountains in Ugaritic myths. Baal's theophany on Mt. Zaphon involves stormclouds, lightning, and a thunderous voice which shakes the mountains and the earth itself (*CTA* 4.5.68–71; 4.7.29–35). The theophany of Yahweh at Mt. Sinai (Exod 19:16–19) also involves clouds, lightning, Yahweh's thunderous voice, and earthquakes. Isa 14:13 mentions the *yarkĕtê ṣāpôn* in a poem which apparently describes the actions of a rival deity against Yahweh. Although traditions about Canaanite El and his mountain (Mt. Amanus) may be preserved in this passage, the language and theme is also reminiscent of the struggle between Baal and Mot on Mt. Zaphon. Roberts (*IDBSup*, 977) suggests that reference to *ṣāpôn* being stretched out over the void in Job 26:7 may be due to the effect seen when clouds envelope the base of the mountain.

According to Clifford (1972: 136–37) and earlier scholars, places such as Baal-zephon (Exod 14:2) and Zaphon, a city of Gad (Josh 13:27), may reflect a geographical "translation" of Mt. Zaphon traditions to other areas of the Near East.

HECTOR AVALOS

ZAREPHATH (PLACE) [Heb *ṣārĕpat* (צָרְפַ֫ת)]. A city-state located near the tip of a promontory along the Lebanese Mediterranean seacoast about 14 miles (ca. 22.5 km) N of Tyre and 8 miles (ca. 13 km) S of Sidon. Since Zarephath was located on the coastal road in Phoenicia, it encountered many passing armies and therefore is occasionally mentioned in ancient records, but it never became an important city. An inscription unearthed near the site of Zarepath indicates that its name may have been preserved in the modern village of Sarafand, situated in the hills immediately SE of the rather inconspicuous tell. A 13th century B.C. Egyptian papyrus lists Zarephath as the site of a Phoenician harbor (*ANET*, 477).

At the time of Zarephath's peaceful surrender to Sennacherib in 701 B.C., he described it as a walled city of Sidon named at that date "Zaribtu" (*ANET*, 287). The city was transferred to Tyre's control in the time of Esarhaddon (ca. 680–669 B.C.). Located about 50 miles (80 km) N of Mount Carmel, Zarephath is mentioned in the Bible as the town where the prophet Elijah went during a severe famine in Palestine and was entertained by a poor widow. The prophet miraculously provided her with a constant supply of oil and later raised her dead son as a reward for her unselfish hospitality (1 Kgs 17:8–24; Luke 4:26). The prophet Obadiah envisioned Zarephath as the N boundary of restored Israel (Obad 20).

Recent archeological excavations undertaken by J. B. Pritchard since 1969 have unearthed information showing Zarephath to be a sizable commercial city during both the Phoenician and Roman occupations. They showed the site to have been inhabited during the latter part of the 2d millennium and through most of the 1st millennium B.C. More than 20 pottery kilns were uncovered, showing that the city probably was a center for manufacturing pottery. The city possessed industrial, religious, and residential quarters. The main business was the production of textiles and ceramics. Exports included grain, oil, wine, and a red-purple dye extracted from local shellfish from which both Zarephath and Phoenicia ("red-purple") derive their names. Of the old city, considerable indications remain to this day. A large, technically sophisticated

Roman port was found dating from the 1st to 6th centuries A.D. A shrine of the goddess Tanit was discovered overlooking the Roman port, and scholars have associated the shrine with pagan religious ceremonies calling for the sacrifice of children, a practice strongly condemned in the Hebrew Bible (Jer 7:31; 19:3–6; 2 Kgs 23:10). Pilgrims journeyed to Zarephath as early as the late 4th century A.D. A tower was constructed marking the site of the "upper chamber," in which the prophet Elijah was to have lived (1 Kgs 17:23).

RAY L. ROTH

ZARETHAN (PLACE) [Heb *ṣārĕtān* (צָרְתָן)]. A site on the E side of the Jordan River, about halfway between the Sea of Galilee and the Dead Sea.

Its first reference in the Bible is in Josh 3:16, which describes the stopped flow of the Jordan River when the Israelites crossed the river during the spring flood (v 15). Verse 16 narrates that the waters "rose up in a heap far off, at Adam [i.e., Tell ed-Damiya below the Jabbok], the city that is beside Zarethan …"

Tell es-Sa‹idiyeh (M.R. 204186) is over 11 miles N of the Damiya Bridge. The Jerusalem Talmud (*Soṭa* 7:5, Rabbi Yohanan, 3d century A.D.) locates Zarethan 12 miles N of Adam. Since ca. 11 miles seems a little far for "beside," some look for a Zarethan nearer Tell ed-Damiya (M.R. 201167). One suggestion has been Qarn Sartabeh (M.R. 193167; the Hellenistic Alexandrium, later fortified by Herod the Great) on the W bank, opposite Damiya. However, archaeological survey has found no evidence of occupation here between the Chalcolithic and Iron Ages and no other likely site is in the area.

Albright (1925: 33 n. 37) attempted to resolve the problem by translating "as far from Adamah as beside Zarethan," i.e., the waters backed up as far as Zarethan. Glueck (1943: 6) retranslated "beside" to "fortress" (*msd* to *mesad*) so the waters backed up to "fortress Zarethan." The striking feature of the event was the distance the waters backed up. Similar stoppages of the Jordan have been observed as natural phenomena in 1267, 1906, and as recently as 1927, when the riverbanks at Damiya caved in and blocked the water for 21.5 hours (Garstang 1931: 136–37). These observations, however, have left no records of how far the water backed up in these naturally occurring events.

Zarethan is mentioned in 1 Kgs 4:12 as a reference point to delineate the fifth Solomonic district: the district contained "Taanach, Megiddo, and all Beth-shean which is beside Zarethan below Jezreel …" Beth-shean is 18 miles N of Tell es-Sa‹idiyeh, and on the W bank. Smick (1973: 103 n. 32) claims the reference is to the "district" of Zarethan, and not the town site. But Ottosson reasons that Zarethan was near Beth-shean and suggests its identification with Tell el-Meqberah (on the Wadi Yabis). Once again there is a problem in the interpretation of "beside," since the Valley of Jezreel is W of Beth-shean, while Zarethan is traditionally located to the S in the Jordan Valley.

The localities are further complicated by the second phrase that says Baana's district extended from Beth-shean to Abel-meholah, as far as the other side of Jokmeam (1 Kgs 4:12). Pritchard (1987: 230 and front endpaper map) locates Jokmeam S of Wadi Far‹ah, 25 miles S of Beth-shan, probably at west-bank Tell el-Mazar (M.R. 195171; also Aharoni, *LBHG*, 313). But Smick (1973: 95, 167–68) identifies it with east-bank Tell el-Mazar (M.R. 207181), near Deir ‹Alla.

Abel-meholah has also been located in several places S of Beth-shean and on both sides of the river. Three places are cited on the W bank: Tell Hilu (M.R. 197192), 11.5 miles due S of Beth-shan (Pritchard 1987: 99; 111); Tell Abu Sifre (Soggin, *Joshua* ET, OTL, 144), W of the Wadi Yabis; and Tell Abu Sus (M.R. 203197), at two of the Jordan's fords, 9.4 miles from Beth-shan (Pritchard 1987: 210). Aharoni (*LBHG*, 313) claims the Abu Sus identity can be made with much confidence. Two places cited on the E bank are Tell el-Maqlub (M.R. 214201) in the Wadi Yabis (which some identify with Jabesh-gilead), and

Tell el-Meqbereh or Tell Abu Kharaz (which others identify with Jabesh-gilead) in the Wadi Yabis (Pritchard 1987: front endpaper map).

The passage in 1 Kings 4 could be a chiasm with the two phrases parallel in an a:b:: b:a pattern. Baana's district is described from W to S in the first phrase and from S to W in the second. But this would reveal only that Zarethan and Abel-meholoah are S of Beth-shean.

In this same period Solomon built the temple in Jerusalem, and among the furnishings were various bronze articles which were cast in earthen molds between Succoth and Zarethan (1 Kgs 7:46; 2 Chr 4:17). Succoth is usually identified with Tell Deir ʿAlla (M.R. 208178), two miles N of the Jabbok, 8 miles N of Adam (Pritchard 1987: 247; Aharoni, *LBHG*, 284 n. 224; Glueck 1968: 121–25). The Palestinian Talmud (*Šeb.* 9.2, 38d) says Succoth is Tarʿela or Darʿela, which sounds like Deir ʿAlla. Excavations have found evidence for a bronze smelting industry in the 12th–11th centuries B.C.

Deir ʿAlla's excavator, H. J. Franken, prefers to identify Deir ʿAlla with Gilgal (1 Sam 13:15) and Succoth with Tell Ekhsas ("booths"), 1.5 miles W and a mile from the river (1978: 321). See DEIR ʿALLA(ARCHAEOLOGY). Glueck (1943: 18–19) said Succoth was Tell Umm Hamad (M.R. 205172), SW of Deir ʿAlla. Ottosson says Tell es-Saʿidiyeh, "five miles NW of Deir ʿAlla, is Succoth (1969: 225 n. 60; Pritchard 1985: 2). The area is assumed to have been selected because of the clay deposits in the valley. The copper ore could have been brought up from the Arabah S of the Dead Sea, or bronze loot from raids and wars could have been sent there to be recast (cf. 1 Chr 18:8). The forests of Gilead (Ajlun) could have provided wood for the fire.

There is clearly more textual evidence for Succoth than for Zarethan. Josh 13:27 refers to places in the valley including Succoth and Zaphon, but not Zarethan. The references to Succoth in Judg 8:5, 8, 16, when the people of the city refused to help Gideon with provisions and his later punishment of the inhabitants, is usually interpreted also as the site in the valley near the Jabbok. (The Succoth in Egypt [Exod 12:37, 13:20; Num 33:5, 6] is a different place, of course, but suggests Succoth as a city-name rather than simply the common noun for booths which gave the site its name in Gen 33:17.)

Zaphon (Josh 13:27; Judg 12:1) was another site in the area, and Aharoni (*LBHG*, 34) locates it at Tell es-Saʿidiyeh (Pritchard 1987: 254 and first endpaper map) and in turn identifies Zarethan with Tell Umm Hamad (*LBHG*, 284 n. 222, 313). However, Pritchard (1985: 3; *EAEHL* 4:1028) says that identification of Saʿidiyeh with places mentioned in the Bible has so much uncertainty that "any conclusions about the ancient names of the sites must of necessity remain hypothetical." Ottosson (1969: 216), who was on the excavation staff, agrees: "The excavations … have yielded no results whatever in … favor" of identifying Saʿidiyeh as Zarethan. After renewing excavations for two seasons, Tubb (1986: 124) had no further clues on the identity of the site. However, others claim the excavations confirm or prove that Saʿidiyeh is Zarethan (Soggin, *Joshua* ET, OTL, 62; Glueck 1967: 431). Glueck's initial identification of Saʿidiyeh as Zarethan was based on its prominence at the edge of the Jordan River (1968: 126–30). Ottosson's reasons for identifying Saʿidiyeh as Succoth are that Ps 60:8 refers to the "Vale of Succoth" and such a reference "calls for an eye catching spot …; the most obvious from both north and south is unquestionably *tell es-sa>idije*." See SAʿIDIYEH, TELL ES-.

Tell Qos (Zaphon or Zarethan) is on the Wadi Rajib, 3.5 miles N of Deir ʿAlla and 4.5 miles E-SE of Tell es-Saʿidiyeh (Zarethan or Zaphon or Succoth). Tell Umm Hamad is 3.5 miles SW of Deir ʿAlla and on the N bank of the Jabbok. Hamad is 1.5 miles E of the Jordan and 3.5 miles NE of Damiya. This location would make the backing up of the waters in Josh 3:16 less of a miracle. Its distance from the Jordan River is not a problem (Saʿidiyeh is 1.1 miles from the Jordan), for the backing up would presumably include the Jabbok River as well. And the term "beside" may be loose enough simply to refer to the next big tell. In any event, the "miracle" was not in the backing up of the water as such, perhaps natural in itself, but in the timing of the event.

Pritchard (1987: first endpaper map) also shows Zarethan *south* of the Jabbok, but the archaeological name is not given for the site. The possible location of Zarethan at Qarn Sartabeh was cited earlier. Here we should add the possibility of Tell Sleihat, S of Tell el-Meqbereh, 10 miles N of Deir ʿAlla (Albright

1925: 33; McClellan *HBD*, 1156; Sleihat is a natural hill and not an ancient tell, according to Glueck 1951: 345; 1968: 134–35; but cf. Yassine 1988: 169).

Obviously considerable uncertainty remains on the location of biblical sites like Zarethan, Zaphon, Succoth, etc. Perhaps future excavation of other sites will shed light on the question of Zarethan's identity.

HENRY O. THOMPSON

ZARIUS (PERSON) [Gk *Zarios* (Ζαριος)]. Supposed brother of king Jehoiakim, who seized Zarius in order to deport him to Egypt (1 Esdr 1:38). But the author of 1 Esdras apparently confused 2 Chronicles 36 and 2 Kings 23–24 by conflating the names Jehoiakim and Jehoiakin and by associating the exile of Zarius with that of Jehoahaz (Jeconiah in 1 Esdr 1:34) (Meyers *1 and 2 Esdras* AB, 32–33). The spelling of Zarius probably is due to an orthographic corruption of the *dalet* to a *reš* in Zedekiah (Heb *ṣidqîyāhû*). The name Zarius, variously formed among LXX manuscripts, is otherwise unidentifiable.

CRAIG D. BOWMAN

ZATTU (PERSON) [Heb *zattû* (זַתּוּא)]. The name of a non-priestly family, some of whom returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian exile (cf. Ezra 2:8 and Neh 7:13). Another contingent accompanied Ezra a century later (cf. Ezra 8:5; but note the name is omitted in Hebrew). The later parallel narrative of 1 Esdras mentions both these returns (1 Esdr 5:12; 8:32).

The family of "the sons of Zattu" participated in the reform recorded in Ezra-Nehemiah. They divorced their foreign wives (Ezra 10:27) in obedience to Ezra's ban upon foreign marriages. The head of the family signed the pledge of reform (Neh 10:15—Eng 10:14), which committed the Jewish community to the observance of Yahweh's law.

The Gk versions use a variety of transliterations of this word (Ezra *zathoua/zaththoua*, Neh *zathoua/zathoueia/zaththou (i)a*), but especially in 1 Esdras (*zathoui/zatou/zaton,* 1 Esdr 5:12; *zathoēs,* 8:32; and *zamoth,* 9:28). They are all rendered "Zattu" in the English versions.

STEVEN R. SWANSON

ZAYIN. The seventh letter of the Hebrew alphabet.

ZAZA (PERSON) [Heb *zāzā* (זָזָא)]. Son of Jonathan and a descendant of Jerahmeel by his wife Atarah of the tribe of Judah. Zaza is mentioned once in 1 Chr 2:33 as the brother of Peleth, and his name concludes the genealogy of Jerehmeel. Variant spellings of Zaza are found in the LXX (B *Ozam,* A *Ozaza,* L *Zēiza*). Many speculate that the *omicron* of LXX BA is probably due to misunderstanding the *waw* of the MT as part of the name rather than as the conjunction "and." Many scholars consider the genealogies of the LXX corrupt (especially Codex Vaticanus), but the genealogies of Jerahmeel in the MT

are viewed by most contemporary commentators as being in good order. For further discussion of the provenance and authenticity of the genealogies in 1 Chronicles 2, see MAAZ.

The meaning of Zaza is uncertain. Some commentators suggest that this short form was fashioned by the duplication of one sound from a full word as a term of endearment (*IPN*, 40–41).

W. P. STEEGER

ZEALOTS. The study of zeal and the Zealots focuses on the late Second Temple period in Israel's history from the Maccabean Revolt in 167–142 B.C.E. to the Roman-Judean War of 66–74 C.E. There has been much confusion in the study of zeal and the Zealots because scholars differ in their views and their use of terminology. The issues can be organized around three questions: What was the concept of zeal? Who were the Zealots? Was the Jewish revolutionary struggle of the 1st century a "Zealot Movement?"

A. The Concept of Zeal

During this two-century period, "zealot" became a technical term for a model of piety rooted in zeal for God and the Law (Kohler 1905; Farmer 1956; Hengel 1956). Zeal is behavior motivated by the jealous desire to protect one's self, group, space, or time against violations. In the biblical tradition, human acts of zeal punished idolatrous violations of God's right to exclusive allegiance from Israel. As expressed in the First Commandment, God is a jealous/zealous God who requires the allegiance of the people. Because God's holiness will not tolerate idolatry or other violations against the covenant (Exod 20:5; Deut 5:9), God will punish the whole nation for such offenses unless someone acts on behalf of God—zealous with God's jealous anger—to kill or root out the offenders.

The prototype of such zeal was Phineas, the grandson of Aaron the priest (Num 25:1–15). When God put the Israelites under a plague for their idolatrous relations with the Moabites, Phineas discovered Zimri in the act of sexual intercourse with a Midianite/Moabite woman and, "zealous for his God," stepped in on behalf of God and killed them both with a single spear thrust (Num 31:6). God removed the plague from the land and rewarded Phineas with the covenant of a perpetual priesthood for his descendants. The features of this model of piety included a spontaneous unofficial action taken with the courage of one acting alone, expressing the jealous anger of God against an act of idolatry committed by a fellow Israelite, which "made atonement for the people" by ridding the land of an uncleanness and which turned back God's wrath so that God "did not consume the people of Israel." This act was reckoned to Phineas as righteousness (Ps 106:28–31), God rewarding him with a "perpetual priesthood."

Other biblical figures expressed similar zeal. Simeon and Levi took zealous vengeance by killing the men of Shechem for the rape of their sister Dinah (Gen 34:1–31). Elijah was "zealous for the Lord" in killing the prophets of Baal (1 Kgs 18:36–40; 19:10–18. "In zeal for the Lord" King Jehu slaughtered all who worshipped Baal (2 Kgs 10:16–27). And King Josiah rooted out idolatry from the land (2 Kgs 22:1–23:30).

Throughout the Second Temple period, many Jews venerated these ancient figures. Sirach ranks Phineas "third in renown" after Moses and Aaron for "being zealous" (45:23–24). Sirach also glorifies Elijah for "his zeal" (48:1–2). 1 Maccabees depicts Mattathias showing zeal "as Phineas had done" (2:26) and refers to Phineas as "our father, who never flagged in his zeal" (2:54; cf. 2:50 and 2 Macc 4:2). *4 Maccabees* gives Phineas the epithet "the zealous priest" (18:12). The veneration of Phineas continued into the later rabbinic period (Hengel 1956: 154–78; Klassen 1986). The book of Judith describes Simeon as "aflame with zeal" for God's cause (Jdt 9:2–4). The book of *Jubilees* portrays Levi as "zealous to execute righteousness" (30:17–19; cf. *T. Levi* 6:3; *T. Ash.* 4:2–5). *2 Baruch* holds up Josiah as one who was "zealous with zeal for the Mighty One," because he alone was "firm in the law at that time so that he left none that was uncircumcised or that wrought impiety in the land" (66:5).

During this period, the objects of zeal extended beyond idolatry against God to include all offenses against the Law. Those zealous for the Law would not only personally endure imprisonment, beatings, and death rather than transgress the Law (1 Macc 2:50), such zealots might also maim, kill, or destroy the property of others who disobeyed the Law. They would "root out" transgressors in order to turn back God's wrath because transgressors defiled Israel (*Jub.* 41:25). The literature identifies numerous offenses against which people might take zealous action: idolatry (1 Macc 2:24), intercourse with a heathen woman (*m. Sanh.* 9:6; *T. Levi* 6:3; *Jub.* 30), the profaning of God's name (*Jub.* 30:15), the presence of uncircumcised people in the land (1 Macc 2:44–46), the use of images (*JW* 2.169–74, 195), the misuse of the temple (John 2:17), the stealing of sacred vessels (*m. Sanh.* 9:6), and the presence of a gentile in the sacred court of the temple (Acts 21:8–29; *JW* 5.194; *Ant* 15.417). According to the gospel of John, Jesus acted out of zeal in cleansing the temple (John 2:17; cf. Ps 69:10—Eng v 9). Paul the apostle identified himself as a former zealot who persecuted Christians to death on behalf of the traditions of the forefathers (Gal 1:13–14; Phil 3:6; cf. Acts 22:3 and Rom 10:1–4). Later many Jews and Jewish Christians in Jerusalem who were "zealous for the Law" threatened to kill Paul (Acts 21:20; 23:12–14). Simon the zealot, the disciple of Jesus, had probably earned the epithet by taking it upon himself to punish transgressors (Luke 6:15; Acts 1:13; cf. Matt 10:4 and Mark 3:18). Some writings show a concern that zeal on behalf of God and the community not be an excuse for plunder (*Pss. Sol.* 2:27) and that vigilante actions not be a substitute for the regular procedures of the Law (Salomonson 1966). Nevertheless, as Philo put it, "Thousands are watchful, zealots of the laws, strictest guardians of the institutions of the fathers, merciless to those who do anything to subvert them" (*Spec. Leg.* II: 253).

None of these examples refers as such to actions which were revolutionary, although at times zeal for the Law spilled over into revolutionary action. 1 Maccabees portrays zeal as the driving force behind the Maccabean Revolt. The author describes how Mattathias "showed his zeal for the law, as Phineas had done toward Zimri," by killing a Syrian officer and a Jew who had offered a sacrifice to a pagan god (2:19–28). Mattathias invited others who would be "zealous for the law" to flee with him to the mountains. 1 Maccabees depicts those who subsequently fought in the revolt as striking out at Jewish sinners, circumcising by force, tearing down altars, plundering, and maiming those Jews who did not cooperate with the war against the Syrian Empire (2:44–46). 1 Maccabees also commends those who were willing to suffer persecution for their zealous devotion to the Law in opposition to foreign rule (2:50; *4 Macc.* 18:12). The same kind of zeal seems also to have typified some actions of later revolutionaries who opposed Roman rule, vigilante actions against Jews who cooperated with the foreign powers in order to cleanse the land and thereby to guarantee God's support in their cause against the Roman oppressor (Farmer 1956).

Some scholars assume that citations to zeal and zealots in the 1st century, such as the NT references to Simon the zealot, refer to a Jewish sect of Zealots dedicated to revolution against Rome. Other scholars

disagree. The failure in ancient manuscripts to distinguish formal nouns allows for differing interpretations regarding the use of the term "zealot." It seems clear, however, that Jewish and Christian writings of the period refer to a wide variety of offenses against which private individuals or groups might act in zeal on behalf of the community, some of these actions being revolutionary and others not. Moreover, the diversity of offenses, the cross-section of literature glorifying zeal, and the variety of individuals and groups to which zealous actions were attributed (e.g., Paul the Pharisee was a "zealot") suggest that the term "zealot" was not a sectarian designation but descriptive of a type of piety which was not limited to one group or sect. The evidence from Josephus suggests that it was not until about 68 C.E. during the Roman-Judean War that one of the revolutionary factions came to identify itself formally as the Zealots. Therefore, it is anachronistic to view people acting with zeal before 68 C.E. as members of a sect called the Zealots.

Zeal was only one tradition or model of piety among many in the period before the war, and it usually related to specific actions and did not become a sectarian way of life. Zeal was also only one of many religious factors which inspired the revolutionary activity against Rome. The influence of zeal was limited (Horsley 1987: 129), but it was certainly not inconsequential. Zeal was an intensification of the general Jewish concern for holiness, so central to Israel's cultural identity as a nation. As such, the zealot model of behavior likely influenced many revolutionary actions against Rome.

B. Who Were the Zealots?

Historians disagree whether the title "Zealots" properly applies to all Jewish revolutionaries who engaged in war against the Romans or to only one of many factions active in the resistance movement. Although there are a few scattered references to revolutionaries in Roman writers and rabbinic literature, the debate about the identity of the Zealots focuses on the interpretation of the writings of the Jewish historian Flavius Josephus, the only extant works to offer a comprehensive history of Palestine in this period.

1. Josephus' Perspective. Josephus was born in 37 C.E. in Jerusalem and was an eyewitness of the events leading up to and including the war period. In fact, he fought against the Romans as general of Galilee under the Jewish wartime government. Josephus surrendered to the Romans under Vespasian at Jotapata and subsequently cooperated with the Romans by appealing to the Jews under siege in Jerusalem to surrender to Titus. After the war, Titus took Josephus back to Rome and provided him with house and pension, and the emperor Vespasian commissioned him to write the official Roman history of the war. As an official historian, Josephus wrote three works relevant to the study of the war: *The Jewish War* (75–80 C.E.), *The Antiquities of the Jews* (93–95 C.E.) and the autobiographical *Life* (95–100 C.E.).

Scholars continue to disagree about the reliability of Josephus' writings (Cohen 1979; Moering 1984; Rajak 1984), particularly with regard to the accounts of those events in which Josephus himself was involved. Josephus had a personal history of conflict with the revolutionaries and a desire to malign them, as well as an apologetic need to justify his participation in the war on first the Jewish and then the Roman side. Josephus' own role as Jewish general of Galilee is uncertain, as attested by the fact that Justus of Tiberius, who also participated in the war, wrote a history of the Roman-Judean war (no longer extant) which attacked Josephus for fomenting war against the Romans. As a result of all these factors, Josephus' works are filled with bias. For example, he wrote *The Jewish War* from an official Roman point of view the purpose of which was to dissuade Jews in the Parthian Empire from opposing Rome in the aftermath of the war. In this work he sought to exonerate Romans and Jews in general by blaming the war on a small sectarian minority of Jews and a handful of corrupt Roman procurators (Moering 1984). Josephus penned each of his writings with different purposes and for different audiences (Cohen 1979).

Disagreement about the historical identification of the group called the Zealots centers on Josephus' depiction of Judas the Galilean. Judas enjoined resistance in 6 C.E., when the Romans turned Judea into a province and conducted a census in preparation for tax assessment (*JW* 2.118, 433; 7.253–57; *Ant* 18.4–10, 23–25, 102). Although Judas was from Gamala in Galilee, he was active in Judea, that part of the country which became a province at this time. Disagreement exists over whether Judas merely called for non-cooperation with the census (Horsley 1987: 88) or actually incited people to rebellion against Rome

(Rhoads 1976: 47–60). In any case he enjoined resistance because in his view the land belonged to God, and the Romans had no right to claim the ownership implied by a census. Judas upbraided his countrymen for being willing to submit to Roman slavery and for giving up the freedom they had fought so hard (under the Maccabees) to obtain. Judas and his followers opposed Jews who cooperated with the census, for they considered cooperation with Caesar to be an idolatrous transgression of the First Commandment to have "no other lords before me." Judas' small and unsuccessful revolt was carried out in the belief that if the Jews were faithful to the covenant, God would honor their cause by bringing victory in the struggle against Rome. Judas was apparently killed as a result of his actions.

Josephus' historical accounts show that Judas was followed by a family of leaders who opposed Roman rule. Judas' sons, James and Simon, were executed for revolutionary activity under the procurator Tiberius Alexander (46–48 C.E.; *Ant* 18.102). His grandson (?) Menahem was killed by other revolutionaries in 66 C.E. (*JW* 7.253). And a descendant Eleazar ben Jair was head of the group which died at Masada in 74 C.E. (*JW* 2.447). Furthermore, although the evidence is tenuous, some scholars argue that Judas the Galilean was the same Judas, son of Hezekiah, who according to Josephus led one of the revolts which occurred after the death of Herod in 4 B.C.E. (*JW* 2.56; *Ant* 17.271–72). Josephus tells us this Judas attacked the royal palace at Sepphoris and aspired to rule Israel. His father Hezekiah was a bandit chief, perhaps among the last of the Hasmonean dynasty who fought against Herod early in Herod's reign. If Judas the Galilean was the son of Hezekiah, then he was part of a family tradition of opposition to Roman rule which lasted from the beginning of Herod's reign until the fall of Masada (Kennard 1946).

Josephus refers to Judas as a "teacher" and tells us that with a Pharisee named Zadok he founded a sect which Josephus designates as the Fourth Philosophy in order to distinguish it from Pharisees, Sadducees, and Essenes. This Fourth Philosophy, Josephus tells us, was in all respects like the Pharisees except for the principle of "No lord but God" (*JW* 18.23). This principle represented a novel application of the First Commandment which treated cooperation with Caesar and the Romans as idolatrous allegiance to a lord other than God. Josephus goes on to tell us that after "they had won an abundance of devotees, they filled the body politic immediately with tumult, also planting the seeds of those troubles which subsequently overtook it, all because of the novelty of this hitherto unknown philosophy" (*Ant* 18.9). After the revolt in 6 C.E., however, we hear nothing of Judas' sect for four decades. Judas' sect of followers was either inactive or ineffective (Baumbach 1985) until after 44 C.E., the year when all Israel, including Galilee, became a province of Rome. Then, under the procurator Albinus (62–64 C.E.), the "Sicarii," as Josephus calls Judas' descendants and their followers, began a new form of banditry by assassinating the high priest Jonathan and other notables in Jerusalem and by kidnapping officials to bargain for the release of their compatriots (*JW* 2.254–57; *Ant* 20.165, 186, 204, 208–210). In 66 C.E., Menahem, grandson of Judas, leader of the Sicarii and also a "teacher," briefly took charge of the war effort in Jerusalem. Menahem was, however, assassinated by other revolutionaries; Menahem's followers then fled to Masada, where they remained throughout the war under the leadership of Eleazar ben Jair.

Scholars who embrace the traditional view about the Zealots (Hengel 1974; Brandon 1965) take Josephus' statements about Judas at face value (*Ant* 18.9), concluding that "Judas the Galilean founded the so-called fourth sect, an actual party with quite definite points of view …, a firm organization and unified leadership, which decisively determined the fate of the Jewish people during the next two generations and which formed the stable center-point of the growing Jewish freedom movement" (Hengel 1956: 89). According to this view, Judas' sect caused havoc in the countryside and panic in the city until with its ideology of freedom it dragged the rest of the nation into war. During the war, the group splintered into conflicting revolutionary factions. Scholars who take this position argue that Judas' sect of revolutionaries was called the Zealots. In this view, all revolutionaries were Zealots and the war was a Zealot movement, because zeal for the Law—rooting out from the land all idolators (Romans as well as the Jews who cooperated with them)—was the paradigm for the revolt against Rome.

Recently, however, several scholars have rejected this monolithic picture of the revolutionaries in favor of one that depicts the revolutionaries as a movement which from the beginning was composed of

heterogeneous elements without a unifying ideology (Smith 1971; Rhoads 1976; Horsley and Hanson 1985). The main arguments are as follows: (1) Josephus exaggerated Judas' movement when depicting it as a sect or Fourth Philosophy because he was eager to blame the war on a small, separate, and distinguishable group that embraced an "innovation" in Jewish Law (*Ant* 18.9). Hence Josephus' statements about Judas' innovation indicate only that Judas was "the first to make resistance to alien rulers a religious duty and to set the example for the fanaticism which later led to disaster, not that he founded an organization which produced all the later incidents" (Smith 1971: 6; cf. *JW* 7.262). (2) Josephus' subsequent narrative suggests that Judas' followers had limited influence. They did not emerge until after 44 C.E. In the prewar period, they were only one of many factions, and they did not control other revolutionaries. In the war period, the Sicarii were one of five different revolutionary factions listed by Josephus, factions which had independent origins and did not result as splinter groups of a single movement. Furthermore, the followers of Judas' descendants were rejected early in the war by other revolutionaries and spent the entire war period isolated on Masada. They did not participate with other revolutionary groups in the defense of Jerusalem. (3) In any case, Josephus does not refer to the group led by Judas' descendants as the Zealots. Previous to his account of the events of 68 C.E., Josephus does not refer to any revolutionary group as Zealots. Even then the title refers to only one faction which formed in 68 C.E., made its headquarters in the temple, and overthrew the provisional government. Only in one passage is the term "zealot" connected with Judas' descendants. Josephus depicts Menahem's bodyguards as "a suite of armed zealots" (*JW* 2.444, cf. 2.564, 65). This reference occurs before Josephus explains the other group's adoption of this name and occurs without the definite article. It probably means "zealots" or "devotees" and might best be translated "a suite of armed fanatics" (Feldman 1984: 645). Josephus consistently refers to the descendants of Judas and their followers not as Zealots but as Sicarii. Apparently the Romans referred to some revolutionaries as "sicarii" because they assassinated with a dagger called a sica (*Ant* 20.186). The name was at first an epithet, the "sicarii," but came to be employed as a title which Josephus used to distinguish this faction from other revolutionary groups.

Thus, Josephus' overall narrative belies the bias of his few statements blaming the whole war on this revolutionary faction. Judas' sect did not unify the revolutionaries or by itself bring on the later war. Nor did Judas' Fourth Philosophy provide the dominant ideology for the war, even if other groups were influenced by his teaching. In light of the arguments cited above, it is therefore incorrect to apply the title "Zealots" to the revolutionary movement as a whole. Despite the fact that Judas' followers may have acted often on the model of zeal, they did not bear the title "Zealots." Rather, the Zealots were one of several revolutionary factions active in the war period. What follows is a discussion of the larger revolutionary movement in the pre-war and the war periods, with a characterization of the various revolutionary groups.

2. The Pre-war Revolutionary Period. Once we discard the view that a small sect was responsible for the war, a complex picture of the pre-war period emerges, one which shows broad resistance to Roman imperialism from all quarters. The pre-war period had its roots in the time of Herod. The widespread revolts after Herod's death attest to the popular dissatisfaction with his high taxes, political oppression, and promotion of Hellenism and Roman imperialism (*JW* 2.55–65; *Ant* 17.269–85). These revolts were put down quickly by Varus, the Roman Legate of Syria. Scholars usually mark 6 C.E. as the beginning of the pre-war period. At this time the Romans turned Judea, the S part of Israel, into a province, sent a procurator and Roman troops, and began to collect tribute directly. After the brief resistance movement led by Judas the Galilean, the first procuratorial period from 6–44 C.E. was relatively quiet, perhaps because the Jews were waiting to see whether the procuratorial arrangement with greater autonomy for Israel under a high priest would be effective (see Tacitus' comment that "Under Tiberius all was quiet," *Hist.* 5:9). There were a few popular insurrections at the time of the procurator Pilate (26–36 C.E.; cf. *JW* 2.169–77; *Ant* 18.55–64, 85–89), and in the early 40's there occurred a series of massive protests against Gaius' plan (aborted by his death) to put his statue in the temple at Jerusalem, a crisis which some scholars consider to be a turning point in Roman relations with Judea.

After a brief period under the rule of Agrippa I (41–44 C.E.), the whole of Israel became a Roman province, at which time a few minor protests took place. Then, during this second procuratorial period of 44–66 C.E., a series of incidents caused a deterioration in Roman-Jewish relations. Under the procurator Cumanus (48–52 C.E., cf. *JW* 2.223–46; *Ant* 20.103–36), a Jewish crowd became irate at an obscene gesture made near the temple by a Roman soldier, a Jewish bandit group attacked a Roman caravan, some Roman soldiers caused a riot by burning a copy of the Law, and Cumanus showed extraordinary negligence in failing to deal with a conflict between Jews and Samaritans. Although Cumanus was recalled to Rome as a result of formal Jewish protests, from this point on, law and order broke down in the countryside and bandit groups operated with impunity, a condition which subsequent procurators did little to alleviate. Then, under Festus (60–62 C.E.) and Albinus (62–64 C.E.), the atmosphere also deteriorated in Jerusalem, with conflicts among Jewish high priestly factions jockeying to gain the procurator's favor. The situation in Jerusalem was exacerbated by the atmosphere of terror resulting from assassinations and kidnappings by the "sicarii" (*JW* 2.272–77; *Ant* 20.182–215).

Thus the combination of Roman ineptness and Jewish insurrection led to an atmosphere in the city and in the countryside in which the populace was ready to erupt into conflict at the slightest provocation. Nero's decision to place the governance of Caesarea into the hands of the Greek populace (*JW* 2.284–93) and the action by the last procurator Florus forcibly to extract the tribute money from the temple treasury (*JW* 2.293) provided the catalysts for the war.

Throughout much of this pre-war period there were various forms of resistance to Roman rule (Borg 1984; Rhoads 1976; Horsley and Hanson 1985). There were the official Jewish protests to Caesar, along with delegations complaining of the ineptness of the procurators, which led to the recall of three procurators (*Ant* 18.89; *JW* 2.239–46; *Ant* 20.193–95). These official protests culminated in the 60's with the national refusal to pay the tribute. There were popular protests and riots against the actions of Pilate, the efforts of Gaius to put his statue in the temple, and the failure of Cumanus to act against the Samaritans, ending in the widespread burning and pillage in reaction to Nero's decision about Caesarea (*JW* 2.457–80). Bandit groups such as that led by Eleazar ben Dinai (*JW* 2.235–36, 253; *Ant* 20.121, 161) arose from among dissidents and the economically marginal, attacking Romans as well as wealthy and powerful Jews who cooperated with the Romans (Hengel 1956; Horsley 1979b; 1981). The "sicarii" created terror with their kidnappings, their assassination of the high priest Jonathan, and the attacks on other notables. Oracular prophets such as John the Baptist (*Ant* 18.116–19) and Jesus, son of Ananias (*JW* 6.300–309), stirred up expectations of hope or doom. Action prophets such as Theudas (*Ant* 20:97–98), the Egyptian (*JW* 2:261–63; *Ant* 20:169–72; Acts 21:38), and other figures led people to cross the Jordan or to go into the desert for signs of liberation, actions similar to the liberating events of the exodus from Egypt (Barnett 1980; Horsley 1984; 1985a; 1986c). All the prophetic figures fueled a millenarian atmosphere.

Resistance to Roman rule, both violent and nonviolent, was widespread. Resistance came from virtually every quarter—Pharisees, high priests, peasants, local villagers, Jerusalemites, people of every geographical sector. The causes and motivations varied tremendously—poverty, overtaxation, incompetent procurators, and unruly soldiers, as well as a variety of beliefs, including zeal and commitment to the Law. Far from a single unified sect dragging the rest of the nation into war, there is the picture of much of the nation in resistance, struggling to cope with the foreign occupation by the Romans—a picture which coheres well with what we know otherwise of the diversity in 1st-century Judaism. By the time this turmoil came to a head in 66 C.E., the war was supported by some portions of virtually every sector of the populace, cutting across sectarian categories, economic classes, and geographical regions.

3. Revolutionary Groups in the Jewish War (66–74). The war itself began when the procurator Florus (64–66 C.E.) attempted to seize money from the temple treasury to cover the Jewish tribute (*JW* 2.293–96). Hand-to-hand fighting led to the expulsion of Florus and his troops from the city (*JW* 2.325–32). Herod Agrippa tried unsuccessfully to persuade the Jews to pay the tribute and to restore relations with Rome (*JW* 2.342–407). Then lower-class priests officially ended the relation with Rome by stopping the

daily sacrifices on behalf of Caesar (*JW* 2.409–421). These priests and other revolutionaries took control of the temple and fought the combined forces of the Jewish aristocracy, the royalist troops, and the Roman contingent, all located in the upper city. The insurgents gained enough control of the city (*JW* 2.322–24) to hold off the siege by Cestius, the legate of Syria, who had come with the Roman Twelfth Legion to reestablish Roman control over Jerusalem (*JW* 2.499–561). When Cestius withdrew, probably because of the impending winter, the Jews pursued the Romans out of the country, seized weapons and equipment, and returned victorious to Jerusalem. The event unified much of the country in favor of war.

This initial Jewish victory brought even the aristocracy onto the side of war. In general, the wealthy ruling elite had sought to avoid conflict with Rome because they were responsible to Rome for peace in the nation and because they had the most to lose by war. Nevertheless, they now joined the anti-Roman cause, probably because they knew it was the only way to retain leadership of the nation. Under the leadership of the high priests, then, the Jews formed the provisional government of independence which appointed governors to the various regions to prepare to fight the Romans when they returned to reconquer the province (*JW* 2.562–68). In addition, the provisional government began to fortify Jerusalem and to train troops. It is likely that the high priests and the lay aristocracy sought to establish military strength and to unify the nation in order to negotiate the best terms with the Romans if that became possible or to fight the most effective war against the Romans if that became necessary.

In 67–68 C.E., Vespasian led the Tenth Legion to recapture Israel. He conquered Galilee and Idumea, as well as Judea, and prepared to besiege Jerusalem (*JW* 3.309–4.120, 550–56). Vespasian had to withdraw, however, because of unrest in Rome, and in 69 C.E. he became emperor (*JW* 3.655). Meanwhile, in 68 C.E. a coalition of revolutionaries in Jerusalem overthrew the moderate provisional government. When the Romans returned under Vespasian's son Titus, the Jews were divided by factions, their ranks and supplies depleted from fighting each other. They did combine, however, to offer a valiant and sustained defense of the city. Nevertheless, in 70 C.E. the Romans conquered Jerusalem and razed the temple.

Josephus identifies five revolutionary groups active in the war period (*JW* 7.262–70): the Sicarii, the Zealots, John of Gischala and his followers, Simon bar Giora and his followers, and the Idumeans. These factions differed in origin, goals, methods, type of leadership, and composition. For the most part, when they were not cooperating in opposition to a common enemy, these factions were in conflict with each other. What follows is a description of four of these factions and a delineation of their role in the war; the role of the fifth group, the militia from Idumea, will become clear in the discussion of the other four groups.

a. The Sicarii. The Sicarii were the group led by the descendants of Judas the Galilean. Several leaders were described as "teachers." They had promoted a program of social equality and a balanced distribution of wealth, perhaps based on Deuteronomy 15 and Leviticus 25 (Baumbach 1965). Their actions often exemplified a zeal to cleanse the land. They were prepared to fight and die rather than submit to any other than God as their lord.

At the opening of the war, this group under Menahem, apparently to gain a foothold of power in relation to the other Jews, seized Masada from the Romans by a trick and took over the arsenal of weapons there (*JW* 2.408, 434). Meanwhile, other Sicarii slipped into the temple to join the revolutionaries in Jerusalem who had initiated war there (*JW* 2.425). These Sicarii were probably instrumental in burning houses of the wealthy as well as the Public Archives which held the record of debts in order "to cause a rising of the poor against the rich, sure of impunity" (*JW* 2.426–29). Then Menahem, the leader of the Sicarii and the grandson of Judas the Galilean, entered Jerusalem "like a veritable king" with the arms he had seized from Masada and assumed charge of the revolutionary forces in the city (*JW* 2.433–34). He spearheaded attacks against the upper class and assassinated the high priest Ananias (*JW* 2.435–42). However, Eleazar, the leader of the revolutionaries from Jerusalem and the son of Ananias the High Priest, whom Menahem killed, rose up against Menahem. When Menahem made a play for greater power by entering the temple in royal robes, this was too much for the Jerusalem revolutionaries, who considered this brash Galilean to be "far below themselves." They killed him and drove his followers out of the city (*JW* 2.443–48). The Sicarii fled to Masada, where they remained throughout the war. They had little contact with other

revolutionary groups, raided Jewish villages to gain supplies, and did not participate in the defense of Jerusalem (*JW* 4.400–5, 516).

After Jerusalem fell, Masada held out, along with the fortress cities of Herodium and Machaerus (*JW* 7.163–209). In 74 C.E., after a lenghty siege, Roman troops under the new procurator Flavius Silva made it to the top of Masada, only to find that the defenders of Masada had committed suicide rather than submit to Roman lordship and slavery (*JW* 7.304–406). This same devotion to have "no lord but God" led other Sicarii who had earlier fled Masada for Alexandria and Cyrene to endure great torture and death rather than acknowledge Caesar as lord (*JW* 7.410–419, 437, 444).

b. The Zealots. The Zealots were a coalition of lower priests, Jerusalem insurgents, and refugee bandit groups from the countryside who overthrew the provisional government in 68 C.E. in order to assure the successful prosecution of the war. Their major goal was political independence from the Romans. They opposed Jews with power and privilege, set up their headquarters in the temple, and established an alternative egalitarian government. The Zealots contributed little, however, to the actual battles against the Romans.

Josephus writes that the Zealots emerged as a distinct faction in the winter of 67–68 C.E. Nevertheless this group probably had roots in the events at the opening of the war. In 66 C.E., shortly after Florus was driven out and Agrippa was banished from Jerusalem, some lower priests, probably from Jerusalem and Judea, led by a few upper-class priests and supported by some laypeople from Jerusalem, stopped the sacrifices which the Jewish nation had agreed to provide twice daily on behalf of Caesar as an official sign of allegiance to Rome (*JW* 2.409–417). These lower priests under the leadership of the temple captain Eleazar, son of the high priest Ananias, were cleansing the temple of all gentile influence. Their cessation of these sacrifices withdrew all divine benefits for Rome and was a declaration of independence. Civil war broke out in Jerusalem over the matter (*JW* 2.418–56). The lower priests took control of the temple and confined the high priests, the lay aristocracy, and the royalist troops in the upper city, excluding them also from temple worship. Joined by Sicarii and other revolutionary groups, this coalition gained sufficient control of the city to defeat the remaining Roman troops and to hold off the Syrian legate Cestius Gallus when he came to retake the city for the Romans (*JW* 2.499–562).

Eleazar, son of Simon, was a priest and one of the revolutionaries who had seized money and weapons in the rout of Cestius as he retreated N (*JW* 2.564–65). Because of fear of Eleazar's influence, the provisional government which was established after Cestius' withdrawal excluded Eleazar from appointment to regional posts. As the war progressed, Eleazar became dissatisfied with the progress of the war and sought to gain control of the government. When the provisional government resisted his efforts, conflict erupted. Eleazar and his forces (*JW* 5:5) joined the bandit groups, local militia, and other refugees who fled to Jerusalem from Vespasian's devastating conquest of Galilee and Judea (*JW* 4.138–50); they withdrew into the temple and used it as a fortress (*JW* 4.151–52). At this point in his narrative, Josephus clearly identifies this revolutionary coalition as the Zealots (*JW* 4.161). These Zealots, led in part by priests, set up their own egalitarian government with a collective leadership. They also chose by lot from among the descendants of Zadok their own high priest, an uneducated peasant from Judea (*JW* 4§153–57).

Scholars disagree about the origins and goals of the coalition of Zealots. Some scholars (Baumbach 1968; Stern 1973; Rhoads 1976) argue for a continuity between the early priestly group under Eleazar son of Ananias, who in 66 C.E. stopped the sacrifices for Rome, and the later group of Zealots which formed in 68 C.E.: both groups were committed to war, opposed the aristocracy and the royalists, had their headquarters in the temple (even the inner temple, where only priests were permitted), had priestly leadership, revived ancient traditions, and excluded other Jews from temple worship. These scholars also point to the implied continuity of priestly leadership in Eleazar son of Simon, as well as the possible connection with Eleazar son of Ananias who was appointed leader of the Idumean militia, to whom the Zealots later turned for help (*JW* 2.566). The scholars who support this position emphasize the religious motivations of those who chose to call themselves "Zealots" as Jews who wanted to purify the temple and the city. Other scholars (Smith 1971; Horsley 1986a) claim that the Zealot faction which formed in 68

C.E. had little in common with earlier revolutionaries in the city but comprised refugees and bandit groups who had fled to Jerusalem in the face of Vespasian's conquest of NW Judea (*JW* 4.135, 138). These scholars argue that the Zealots reflected views typical of peasants in their anti-aristocratic attitudes, their establishment of an alternative government, and their egalitarian leadership. The truth may be a combination of both views. It is likely that the Zealots were a coalition of the forces already situated in the city under Eleazar, son of Simon, and the refugee forces from Judea which entered the city. Besides, the lower class priests and the peasants of Judea would have shared a common religio-political outlook.

In any case, there was in 68 C.E. a civil war raging between the Zealots in the temple and the provisional government (*JW* 4.162–207). At this point, John of Gischala told the Zealots, now under siege in the temple, that the provisional government intended to turn the city over to the Romans for terms of surrender (*JW* 4.208–233). So the Zealots sent secret messages to the standing army of Idumea (*JW* 4.224–35). Under cover of a rainstorm at night, the Idumeans entered the city surreptitiously and freed the Zealots from the temple (*JW* 4.283–313). Joined by these Idumeans and the forces under John of Gischala, the Zealots took over the city and began a reign of terror, killing the high priest Ananus and bringing to justice by trials, torture, imprisonment, public shaming, and execution all those upper-class Jews, particularly the Herodian nobles, suspected of treason (*JW* 4.314–344, 355–65). Thus they succeeded in preventing the provisional government from coming to peaceful terms with the Romans.

Eventually the Zealots withdrew to the inner temple (*JW* 5.59). John of Gischala set up his force in the outermost temple (*JW* 4.389–97), most of the Idumean units broke with the Zealots because of their excesses (*JW* 4.345–54), and the surviving Jerusalem nobles who were released by the Idumeans fled to Simon bar Giora (*JW* 4.353). Subsequently John overpowered the Zealots and retook control of the inner temple (*JW* 5.98–103). The remaining core of dedicated Zealots, located in the inner temple, fought under John's command (*JW* 5.20) and cooperated cautiously with Simon's forces in defending the city against the Roman siege led by Titus (*JW* 5.248–51, 358–6.92, 148). When the Romans stormed the walls, those Zealots who were able to flee died fighting the Romans in the forest of Jardes (*JW* 7.210–15).

c. John of Gischala. John of Gischala was a prominent rival of Josephus in Galilee who aspired to command the nation. John showed neither the social radicalism nor the apocalyptic hopes which typified other groups. He appears to have been drawn into the war as events progressed (Rappaport 1983). A realistic nationalist who hoped to defeat the Romans, John used every opportunity to gain power. It is a mistake to identify John as a Zealot (Lake). Nor is he to be characterized as a bandit chief (Horsley 1981), despite Josephus' labeling of him as such in *The Jewish War.*

Although poor at first, John had likely been an impoverished member of the landed gentry (*JW* 2.590; Baumbach 1965). He may also have been a Levite (Baumbach 1986). He initially opposed war against Rome but was goaded into it by nearby gentile cities which attacked and burned his hometown and other cities in N Galilee (*Life* 43–45). John mustered a large force of refugees from these razed cities and retaliated. Then he rebuilt and fortified Gischala with funds raised by marketing the imperial corn he had seized (*Life* 73) and by selling oil to Jews in Syria (*Life* 76), and he made Gischala his headquarters.

John resented the appointment of Josephus as governor of Galilee and had several encounters with him (*Life* 84–103). Since John knew well the leading Pharisee in Jerusalem, Simon ben Gamaliel, and had contact with the provisional government, he appealed to them to remove Josephus from his post (*Life* 89–193). After the provisional government sent a delegation to investigate, the popular assembly in Jerusalem confirmed Josephus in his post (*JW* 3.309–310). John's views were vindicated, however, when Josephus voluntarily surrendered to Vespasian at Jotapata (*JW* 3.340–408). Then when the Romans attacked Gischala, John and his band fled to Jerusalem to take up the war there (*JW* 4.84–120).

With his own fighting force in Jerusalem (*JW* 4.121–28), John had influence with the provisional government, which asked him to negotiate with the Zealots fortified in the temple (*JW* 4.208–215). As we have seen, John's declaration to the Zealots that the provisional government was about to betray the city to the Romans led to the subsequent Zealot takeover of the city (*JW* 4.216–32). John joined in the reign of terror against the upper classes in the hope of gaining greater power. Unable to gain command over the Zealots because of their egalitarianism, John formed his own coalition and took control of the outer

temple (*JW* 4.389–97). However, the arrival of Simon bar Giora in Jerusalem prevented John from gaining control of the whole city. In the end, John's force gained leadership over the Zealots (*JW* 5.98–105) and defended Jerusalem alongside Simon's larger army.

John did not have a social program like the Sicarii and Simon, nor did he have the zealotic concern for the purity of the temple. Also, he did not have messianic aspirations like Simon bar Giora. John was apparently convinced that the Romans would deplete their resources conquering the countryside and that "had they wings, the Romans would never surmount the walls of Jerusalem" (*JW* 4.126–27). John believed God was an indomitable ally in the Jewish struggle. He melted sacred vessels for use as weapons in the conviction that the nation "should not scruple to use divine things on the Divinity's behalf" (*JW* 5.564). When near capture, John requested the Romans to permit his group to leave the city to settle in the desert (*JW* 6.351). Instead, the Romans seized him and later imprisoned him in exile (*JW* 6.434; 7.118).

d. Simon bar Giora. Simon son of Giora was a champion of the lower classes. He rose from obscurity, as David had, to become his country's leader. His name probably means "son of a proselyte" (Roth 1960: 53). From Gerasa in the Transjordan, Simon was a popular "strong man" known for his youth, physical prowess, and courage, similar to Athronges and Simon, a slave of Herod, who each led revolts at the death of Herod in 6 B.C.E. (*JW* 2.57–65; *Ant* 17.273–84; Farmer 1957; Horsley 1984: 488–91). Simon, whose loyal followers obeyed him "like a king" (*JW* 4.510) apparently had messianic aspirations.

Simon was the leader of a band active in the Judean countryside in the pre-war period. He first appears in 66 C.E., attacking Cestius Gallus' troops and seizing Roman supplies (*JW* 2.521). Simon subsequently took control of the Acrabatene region in NE Judea, plundering the wealthy pro-Roman citizens (*JW* 2.652–54). The provisional government in Jerusalem was alarmed by this development and sent a force to disarm him, whereupon Simon fled S to the Sicarii at Masada, with whom he had little in common except antipathy for the Jewish government (*JW* 4.503–513). After the provisional government was overthrown and the high priest Ananus had died, Simon moved out to the hill country and later overran Idumea, with headquarters at Nain (*JW* 4.515–37). He greatly increased the size of his following by a royal-like proclamation of "freedom for slaves and rewards for the free" (*JW* 4.507–508; cf. Isaiah). Also, many nobles fled the Zealot reign of terror in Jerusalem to join Simon (*JW* 4.353, 510). When it became clear to the Zealots in Jerusalem that Simon was preparing to storm the city, they kidnapped his wife, which made him furious (*JW* 4.538–44). Then some Idumeans in Jerusalem who had broken with the Zealots opened the city gates, and, in 69 C.E., the people welcomed Simon as "savior and protector" of the city (*JW* 4.574–75). Although Simon was unable to dislodge either the Zealots or John of Gischala from the temple areas (*JW* 5.23–26), he nevertheless took control of the upper city and part of the lower city with headquarters in the tower of Phasael. He was now "Master of Jerusalem" (*JW* 4.577).

In the defense of Jerusalem, Simon led the largest force, comprising 10,000 men, and under him served the Idumeans, 5,000 strong. In battles against the Romans, these troops cooperated with John of Gischala, who had 6,000 men under him, and the Zealots, who numbered 2,500 (*JW* 5.248–50). As a commander who inspired great loyalty (*JW* 5.309), Simon exerted firm discipline, executing upper-class people suspected of treason, prohibiting assembly, imprisoning suspected deserters, and providing burial for the dead (*JW* 5.527–45, 567, 6.380–81). After Simon's troops were defeated and he and the leaders of his group had fled into the underground passages of Jerusalem (*JW* 7.26–27), Simon emerged alone in white robes and voluntarily surrendered, perhaps to assume his messianic role even in defeat and to prevent further ill-treatment of his troops (*JW* 7.28–29). The Romans obviously considered Simon to be the main Jewish commander, for they paraded him in chains at Rome, where he was executed in the Forum (*JW* 7.153–54).

4. The Aftermath of the War. By the end of the war, the city was destroyed and the temple was completely razed. Most Jewish warriors were killed and their families enslaved. A few fortresses in S Israel held out after the war—Machaerus, Herodium, and Masada—which the Romans subdued by 74 C.E. The economic life of the nation was devastated by the loss of the temple and by the scorched-earth practices of Roman conquest. The temple tax now went to the Romans. The Sanhedrin and the ruling classes were destroyed in the war, and the priests could no longer participate in a sacrificial cult. The

surviving Pharisaic rabbis established a center at Jamnia, studied the Law in hopes of a restoration of the nation, and may even have exercised some jurisdiction in civil cases (*HJP²* 1: 514–28).

The Romans maintained Judea as a province under Roman governors until the Bar Kokhba War of 132–135 C.E. at the time of the emperor Hadrian. When the Romans subdued this Jewish revolt in Palestine, they turned Jerusalem into a Roman colony, renaming it Aelia Capitolina and prohibiting any Jew from entering there. This was the end of Israel as a political entity in the Roman Empire.

C. Resistance Against Rome and the Zealot Movement

Scholars have consistently referred to the revolution against Rome as the Zealot Movement. If they mean by this that all revolutionaries were Zealots or that all revolutionaries embraced the particular ideology of "zeal," then undoubtedly the depiction is incorrect. However, if the Zealot epithet for the movement simply emphasizes a predominance of religious motivations over social or political motivations in the war against Rome, then we must weigh the causes and the motivations of the war, the preconditions, and the precipitating events in order to determine how appropriate it is to refer to the war as a Zealot Movement in this broad sense.

The dynamics of the war were extremely complex. Not only was this a national war against the Romans, who dominated and exploited the Jews politically, economically, and culturally, but it was also a civil war among Jews. In a traditional peasant society like Israel, there was widespread hostility against exploitation by the Jewish ruling elite, especially where the elite ruled on behalf of foreign power. This social situation pitted peasants against the wealthy, lower priests against high priests, rural against urban, populace (including urban laborers) against the aristocracy. These internal conflicts drew the majority of the nation, including the reluctant elite, into the struggle against Rome. In addition, as we have seen, the factions had different ideological bases, conflicting political programs, and a variety of methods to achieve their goals. During the war these Jewish factions made continual war on each other except when constrained to form coalitions in the presence of the common enemy, Rome. In the end, this was a popular war resulting from widespread and longstanding grievances affecting large segments of the population. The causes and motives were therefore many and varied, including the ordinary human drives for survival, honor, wealth, and power. Scholars variously emphasize three major sets of causes for the war: political, socioeconomic, and religious.

1. Political Causes. Some scholars emphasize a political cause (Aberbach; Moering; Rappaport; Smallwood): the Roman Imperial imposition of the Hellenistic-Roman culture upon a local national culture struggling to survive. This Roman domination is evidenced by the emperor Gaius' intention to put his statue in the temple, the establishment of Hellenistic cities and culture in Palestine under Herod, the particular conflicts in Palestine between Jews and Greco-Syrians over control of cities and scarce land, the gradual change in official Roman policy toward the Jews which became more negative as the century wore on and eventually led to the volatile decision by Nero in 66 C.E. to give the Greek populace of Caesarea charge of the city over the Jews who lived there, and finally the massacre of Jews in Hellenistic cities at the opening of the war. Add to these the political mismanagement of the province, including (a) the rapid turnover of procurators who used the position as a means to gain wealth and as a stepping stone to higher rank (cf. *Ant* 18: 172–78), (b) incompetent and corrupt procurators who showed little sensitivity for Jewish customs, (c) erratic procuratorial appointments to the office of high priest which resulted in conflicts among the high priestly houses, (d) the failure to station an adequate number of troops in Palestine, and (e) the Roman use in their auxiliary forces of non-Jewish residents from Palestine who already had a history of hostility toward Jews. Such an ineffective governance of the province, if it did not cause the war, certainly provided the conditions for the rise of revolutionary factions. In addition, there were the military miscalculations of Cestius Gallus at the opening of the war (Gichon) and the harsh Roman prosecution of war—a scorched earth policy and a refusal in the conquest of cities to distinguish between those who favored war and those who did not—which fueled the flames of war throughout.

It should be noted, also, that the Jews were not easy to govern. They had a strong historic commitment to freedom from foreign domination, which in this period had become an article of religious faith (Feldman 1984: 661). Coins of the revolt bore the inscription "The Freedom of Zion." And from the

Roman point of view, Jews had peculiar religious sensibilities, such as the prohibition against images, about which the Jews were adamant. Judea was like "the top of a volcano of Jewish nationalism which might erupt at any moment" (Smallwood 1965: 316). And the conflicts between the ruling high priestly families and their efforts to gain power by bribing the procurators only exacerbated the Roman struggle to control the province.

2. Socioeconomic Causes. Other scholars emphasize socioeconomic issues (Appelbaum; Goodman; Horsley; Kreissing; Rajak): the confiscation of property by the Romans, the foreclosure on property resulting from failure to repay loans to wealthy Jews, the restriction in the size of peasant holdings at a time when the population had burgeoned due to the displacement of Jewish peasants from city territories restored to gentile hands by Pompey, the subordination of peasant holdings to large estate owners, an extremely burdensome system of double taxation for the Jewish and Roman governments, famine in the late 40's, and significant unemployment due to the completion of the temple in 64 C.E. These factors led to peasant indebtedness, indenturing, forced urbanization, and widespread banditry and terrorism against the upper classes—which in themselves contributed significantly to the atmosphere leading to war. The victims of these conditions swelled the ranks of revolutionaries. Revolution arises in peasant societies where the governance is ineffective and the peasantry is economically marginal. In Israel, the result was a class struggle, a peasant rebellion, against both the Romans and the ruling Jewish elite.

3. Religious Causes. Still other historians emphasize the religious motivations of the Jews (Borg; Freyne; Hengel; Stern): an ideology of "no lord but God" which was absolutely incompatible with Roman rule; the belief that God's land should be free of foreign domination; the obstinate defense of the Jewish Law; the commitment to execute God's vengeance; the zealous cleansing of the holy land, city, and temple from profane gentile influence as a means to secure the prosperity and freedom of the nation; and the conviction that when they fought for the Law, as the small group of Maccabees had once fought, God would honor their cause. Add also the widespread eschatological atmosphere fueled by the presence of prophetic figures, the belief that scriptures were about to be fulfilled, and the expectation of a messianic figure (which Josephus states as the main religious motive, *JW* 6.312)—all informed by the conviction that the worse things got, the greater was the likelihood that God would intervene. Many leaders believed God was the ally to guarantee their cause in the course of events: the Jews in Parthia and Abiadene might bring those territories to Israel's aid; the Jews in the Roman Diaspora might rise; unrest in Rome during the year of four emperors which led Vespasian to withdraw in 68 C.E. might cause a breakdown in Roman rule; disturbances among the Gauls and Celts might distract the Romans; or the Romans could wear down their war machines on the fortresses of Galilee and then be unable to overcome the formidable walls of Jerusalem. Many Jews interpreted the withdrawal of Cestius and disturbances in Rome to be signs of God's inevitable victory. Even the coins of the revolt, bearing "Jerusalem the Holy" and "the Redemption of Zion," attest to the fundamentally religious nature of the conflict.

4. Multiple Causes. Given the complexity of the war, it is perhaps not possible to identify any one of these major causes without which the war would not have happened. And while each of these causes is necessary to explain the war, no one of them is by itself a sufficient explanation for the war. The war was caused by the accumulative effect of a variety of factors over a long period of time (Bilde; Harter; Levine; Rhoads). Besides, religion was not a discrete factor in the ancient world, but was deeply embedded in political and economic realities. All understood their political situation and articulated their social hopes in religious terms. Every social, economic, political, and cultural issue was at the same time a thoroughly religious issue. Therefore, in the end it is not appropriate to distinguish the religious from the social, for example, as separate factors causing the war. So the Jewish resistance movement against Rome cannot adequately be capsulized by the phrase "Zealot Movement." It was that, but it was also a "social revolution," a "peasant rebellion," a "quest for holiness," a "clash of cultures," a "millenarian movement," a "national war for freedom," and much more. Only by the use of several depictions can we adequately characterize the complexity of events comprising the Roman-Judean War.

D. The Revolutionaries and Jesus

Historians have proposed that Jesus of Nazareth was a zealot (Reimarus; Kautsky; Eisler) or a Zealot sympathizer (Brandon 1967). This view is based on the notion that the gospels transformed Jesus into a pacifist figure and that the true revolutionary picture of Jesus can be inferred from such details as his execution by the Romans on the charge of being a revolutionary, his inclusion of Simon the zealot (e.g., Luke 6:15) among the Twelve, and his admonition to the disciples to buy swords (Luke 22:36; cf. 12:51). Other historians agree that Jesus was revolutionary in his thinking but that he rejected the Zealots (Hengel 1971; 1973; Edwards 1972), pointing to his rejection of violence (Matt 26:52), his acceptance of Jews who collected taxes for the Romans (e.g., Mark 2:15–17), and his command to love one's enemy (Matt 5:44; Luke 6:27–31, 35).

All of these scholars have tended anachronistically to see Jesus in terms of whether he was a Zealot or not. However, in light of the diversity in Judaism, the multiform character of resistance to Rome, and the late appearance of the Zealot group, scholars will do well to compare and contrast Jesus with various groups, such as the differing schools of the Pharisees, the action prophets, the "zealots," the Fourth Philosophy, and so on (Borg 1984; Horsley and Hanson 1985). in this regard, we can assess Jesus not in terms of whether he was a Zealot or not, political or not, but in terms of his larger vision and strategy for the nation of Israel as God's people, particularly in relation to the issues which came to a head at the end of Jesus' generation in the Roman-Judean War. For example, Jesus shared with some revolutionaries an opposition to the imbalance of wealth and the authoritarian use of power, and he called for renewal at every level of national life based on an egalitarian model of shared wealth and power (Horsley 1987). On the other hand, Jesus' program of renewal was opposed to the ideology of holiness which inspired much of the war, an ideology which called for radical separation from what was considered unclean. By contrast, Jesus' ideology was to spread holiness through mercy so that holiness in the land might be attained not by suppression or exclusion but by the transformation of what was unclean through healing, forgiveness, and a renewal of the temple and Torah (Borg 1984). For Jesus, the fundamental principle for interpreting the law was not "No Lord but God" (the Fourth Philosophy) nor the command to "be holy" (Pharisees and Essenes) nor the concern for proper temple worship (Sadducees) but the command to love God and to love one's neighbor, including one's enemy, as oneself (Mark 12:28–34 and parallels).

While Jesus pursued his activity nonviolently, he was nevertheless a significant threat both to the Jewish authorities and to the Roman governance of the province. In word and action, he challenged and condemned any claim to authority other than that which was an expression of the coming Kingdom of God. His apocalyptic program called for an end to the present order in the expectation that God would soon establish a new Messianic order. These and other factors help to explain why Jesus was condemned by the Jewish leaders and executed by the Roman procurator.

Although some Jewish followers of Jesus after his death were "zealous" for the Law (Acts 21:20) and probably joined the war against the Romans, most early Christians shared Jesus' rejection of violence and therefore opposed the Roman-Judean War. The gospel writers viewed the defeat of Israel at Roman hands as the consequence of the nation's rejection of Jesus and his program of renewal. Paul renounced his former zealous behavior. Although the author of Revelation had great hostility toward the Romans and shared the zealot antipathy to images and to political idolatry, the author believed that God, not humans, would exact vengeance. No early Christian writing extant advocates armed revolution as a way of expressing devotion to God.

E. The Revolutionaries and the Essenes

While most scholars have identified the Dead Sea sect at Qumran as Essenes, a few have equated them with the Zealots (Roth; Driver). The latter base their view on the mutual hatred both groups shared toward the Romans, the correlation of figures in the Dead Sea Scrolls with revolutionaries active in the war, and a calendar held in common with the Sicarii on Masada. However, the evidence for a similarity in calendar is inconclusive, and the tenuous correlation with revolutionary figures in the war is unlikely since the Scrolls were probably written long before the war (Rowley 1959; Vermes 1977). Also, while both groups hated the Romans, the ethic of the Dead Sea sect was contrary to that of the revolutionary groups and the piety of zeal. The revolutionary zealots hated the Romans and wanted to cleanse the land with acts of

vengeance on behalf of God. They were activists who believed they could force God's hand, for God would honor their zeal by removing the Romans. By contrast, the Essenes left vengeance in the hands of God. They withdrew and waited, unwilling to fight until God initiated the eschatological battle, fantastically depicted in the *War Scroll.* Their pacifism is confirmed by archaeologists who have found no weapons for the period prior to the destruction of the Qumran community by the Romans in 68 C.E.

DAVID RHOADS

ZEBADIAH (PERSON) [Heb *zĕbadyâ* (זְבַדְיָה), *zĕbadyāhû* (זְבַדְיָהוּ)]. The name means "Yahweh has given a gift." In the OT, the verb is used only in Gen 30:20 (Zakovitch 1980: 31–50).

1. A descendant of Benjamin (1 Chr 8:15) through the line of Elpaal and Beriah (1 Chr 8:15–16).

2. A descendant of Benjamin (1 Chr 8:17) through Elpaal (1 Chr 18:17–18).

3. A Benjaminite, the son of Jeroham (1 Chr 12:8—Eng 12:7), who with his brother Joelah joined David in Ziklag during the time David could not move freely about because of Saul. The Chronicler describes the Benjaminites who joined David as kinsmen of Saul, who could shoot arrows or sling stones with either their right or left hands (1 Chr 12:2).

4. Listed as a gatekeeper, a Levite, the third son of Meshelemiah (1 Chr 26:2). Zebadiah's father Meshelemiah is identified as the son of Kore and, in the MT, as belonging both to the Korahite family of gatekeepers and to the family of Asaphites. Commentators regard it as unlikely that Meshelemiah and his family are to be linked with the family of the Asaphites who were known as temple musicians. LXX^B has Abiasaphar instead of Asaph. Myers (*1 Chronicles* AB, 174) suggests "Abiasaph" and "Ebiasaph" as possibilities and notes that Ebiasaph appears in 1 Chr 9:19. Williamson (*1 and 2 Chronicles* NCBC, 170) suggests reading Ebiasaph. Braun (*1 Chronicles* WBC, 248–49) reads Abiasaph.

5. The son of Asahel who, according to 1 Chr 27:7, succeeded his father in bearing responsibility for the division of laborers that worked in the fourth month in a twelve-month rotation. Although 1 Chr 27:1–15 intends to depict the administrative structure established by David, Zebadiah's father Asahel was killed before David became king of all Israel (2 Sam 2:18–23). Williamson (*1 and 2 Chronicles* NCBC, 174–75) notes that the mention of Zebadiah acknowledges this difficulty, but does not eliminate the tension raised by the text.

6. One of the Levites, who according to the Chronicler was sent by Jehoshaphat in the third year of his reign, along with the king's officers and two priests, in order to teach in the cities of Judah (2 Chr 17:8). Myers (*2 Chronicles* AB, 99) proposes that the fact that laymen were mentioned as teachers points to a tradition older than the Chronicler, since the Chronicler considered the Levites to have had the primary responsibility as teachers. He considers 2 Chr 17:8 as a possible addition by the Chronicler. The nature of the "book of the law of Yahweh" which the officials, Levites, and priests are reported to have taken with them is not known. Williamson holds that the Chronicler understood it as primarily religious in character, based on what we now know as the Pentateuch (*1 and 2 Chronicles* NCBC, 282–83) but agrees with the suggestion by Myers (*2 Chronicles* AB, 99–100) that the book referred to in the Chronicler's source may have been a royal law code. The possibility that the report of the teaching mission in 2 Chr 17:7–9 represents another version of the report of judicial reform in 2 Chr 19:4–11 has also been discussed.

7. The son of Ishmael, called the governor (Heb *nāgîd*) of the house of Judah (2 Chr 19:11). According to the report of Jehoshaphat's judicial reform (2 Chr 19:4–11) Zebadiah was charged with supervising the judges who were responsible for matters of royal law, while Amariah the chief priest supervised the judges in matters concerning Yahweh.

8. The son of Michael, listed in Ezra 8:8 as the head of the father's house of Shephatiah which included eighty males who returned to Jerusalem with Ezra. Myers (*Ezra-Nehemiah* AB, 67) notes that while 1 Esdr 8:34 has "Zeraiah" (Gk *Zaraias*), the name Zebadiah has been found on a 5th century ostracon from Ashdod.

9. Listed in Ezra 10:20 as a descendant of the priestly family of Immer who divorced his foreign wife (= 1 Esdr 9:21, Gk *Zabdaios*). The list of those who divorced their foreign wives and disowned the children born to them may seem "extraordinarily small considering the furor and the census figures in chapter ii" (Myers *Ezra-Nehemiah* AB, 87). Myers discusses three possible explanations: (1) the problem was not as serious as it would seem on the surface; (2) the list preserved is only a partial list perhaps reflecting only the upper classes; or (3) the reform was not successful (ibid., 87–88; *1 and 2 Esdras* AB, 99). Stating that the first explanation can be easily dismissed, he favors the second explanation. Blenkinsopp, on the other hand, argues that the reform was not successful *Ezra-Nehemiah* OTL, 197–201).

ZEBAH AND ZALMUNNA (PERSONS) [Heb *zebaḥ wĕṣalmunnāʿ* (זֶבַח וְצַלְמֻנָּע)]. The two "kings of Midian" who were captured and executed because they had killed Gideon's (half-?) brothers at Tabor (Judg 8:5ff.; Ps 83:12 [—Eng 83:11]; Knauf 1988: 91). The name Zebah means "sacrifice" (cf. Old S Arabic *ḏbḥm, ḏbḥn;* Palmyrene *dbḥ*). The name Zalmunnah in Hebrew, by popular etymology, means "shadow is withheld." The various versions (LXX *Selmana;* Vulg *Salmana*) have preserved the correct vocalization: the name therefore is a composite with the divine name *Ṣalm* and the verb *mnʿ—ṣalmmanaʿ*, "Ṣalm protects." The name *Ṣlm* ("statue") is already attested as a divine name in the Hittite capital during the LB Age (see *ṣalm* in CAD). It is perhaps worth noting that the Assyrians worshipped deified statues of kings. A god with this name is also attested at Taima as early as the 6th century B.C., and it survives well into the Roman period as far N as Palmyra and Transjordan.

GEORGE E. MENDENHALL

ZEBEDEE (PERSON) [Gk *Zebedaios* (Ζεβεδαιος)]. The father of the apostles James and John (Matt 4:21 par.; 10:2 par.; 26:37; John 21:2) and the husband of Salome (Mark 15:40; cf. Matt 20:20), who herself was a disciple of Jesus (Matt 27:56; Mark 15:40; 16:1). Zebedee and his sons were involved in the fishing industry in Capernaum in Galilee and were closely associated in the business with Simon Peter and his brother Andrew (Mark 1:16–20; Luke 5:1–11). Zebedee was with James and John in the fishing boat when Jesus called them (Matt 4:21; Mark 1:19–20) and was left to fish alone with the hired servants upon his sons' departure (Mark 1:20). The *Gospel of the Nazarenes* 33 calls Zebedee a "poor" fisherman. However, having servants in his employ (Mark 1:20) and a wife, Salome, who may have contributed to Jesus' support (cf. Mark 15:40–41; Luke 8:1–3) indicates he may have been a man of some financial means. It is nowhere recorded that Zebedee actively participated in the ministry of Jesus as did his wife and sons.

JOANN FORD WATSON

ZEBIDAH (PERSON) [Heb *zbydh* (זְבִידָה)]. Mother of Jehoiakim, King of Judah (2 Kgs 23:36). Her name occurs in the regnal formula of her son found in 2 Kgs 23:36 but is omitted from the parallel account in 2 Chr 36:5. She is the daughter of Pedaiah from Rumah. Her marriage to Josiah is seen by some as evidence of Josiah's influence in the N. Zebidah is the Kethib of 2 Kgs 23:36 (*zĕbîdâ*); the KJV follows the Qere and reads Zebudah (Heb *zĕbûdâ*). See also JEHOIAKIM; QUEEN.

LINDA S. SCHEARING

ZEBINA (PERSON) [Heb *zĕbînāʾ* (זְבִינָא)]. A descendant of Nebo and one of the returned exiles whom Ezra required to divorce his foreign wife (Ezra 10:43). The parallel text of 1 Esdr 9:35 omits Zebina completely. According to Noth, the name Zebina means "bought," perhaps because the child was an orphan (*IPN*, 231–32). Zebina was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:29 and Neh 7:33). For further discussion, see BEDEIAH.

JEFFREY A. FAGER

ZEBOIIM (PLACE) [Heb *ṣĕbōyîm* (צְבֹיִים)]. One of the five "cities of the plain." According to biblical tradition, Zeboiim was located near Sodom and Gomorrah and destroyed with them. Zeboiim is cited as one of the towns marking the Canaanite's S border (Gen 10:19). Its king, Shemeber (along with the kings of Sodom, Gomorrah, Admah, and Zoar), was defeated by the Elamite King Chedorlaomer and his three allies (Gen 14:2, 8). The account of God's overthrow of Sodom and Gomorrah (Gen 19:24–28) does not explicitly mention Zeboiim. However, its destruction is assumed in Deuteronomy (29:22—Eng 29:23), where Zeboiim and Admah are presented along with the better known Sodom and Gomorrah as proverbial examples of divine punishment. Hosea 10:8 also recalls Zeboiim's destruction (cf. Wis 10:6).

The historicity of Zeboiim's association with Sodom and Gomorrah is uncertain. Scholarly opinion has ranged from characterizing the story of the existence and destruction of the "cities of the plains" as an etiological creation to accepting the essential historicity of the Genesis 14 account of the league of five cities (Schaub 1982: 18–20). Several scholars hold that the relatively infrequent number of references to Zeboiim and Admah indicates that they have been secondarily added to a core Sodom tradition. The association of these two cities with Sodom and Gomorrah is, however, very strong. Zeboiim and Admah are mentioned apart from Sodom and Gomorrah only in Hosea 10:8. The location of Zeboiim is also disputed. Biblical references suggest that the cities of the plain were located near the Dead Sea (cf. Gen 14:3). However, scholars debate whether their ruins should be sought near the sea's N or S shore. Five EB Age towns found to the SE of the Dead Sea have been hailed as the cities of the plain; however, there is no archaeological evidence directly linking the sites to the biblical cities. See Harland 1942; van Hattem 1981; Simons *GTTOT*, 222–29.

CAROLYN J. PRESSLER

ZEBOIM (PLACE) [Heb *ṣĕbo͑îm* (צְבֹעִים)]. **1.** A valley toward which a reconnaissance party of Philistine soldiers from Michmash was sent at the time of Saul's uprising (1 Sam 13:18). The scouts evidently headed SE along the N rim of the Wadi es-Ṣwenīt toward the desert. Today, approximately 9 km SE of Mukhmas (Michmash), near the conjunction of the Swenit with the Wadi el-Ḳelt, exists the Wadi Abū Ḍibā͑ (Arab: "Valley of the Father of Hyenas"), which seems to retain the ancient Hebrew toponym.

2. A town of the Benjaminites in the period following the Exile (Neh 11:34). It is listed among towns that seem to lie in the W portion of traditional Benjaminite territory. Kh. Sabīyah, N of Lod, is frequently suggested as its location.

PATRICK M. ARNOLD

ZEBUL (PERSON) [Heb *zĕbūl* (זְבֻל)]. Abimelech's appointed governor (Heb *pāqîd* "delegate" in Judg 9:28; *śar-hā͑îr* "ruler of the city" in Judg 9:30; cf. *HALAT*, 904; Reviv 1966: 255) of Shechem, who warned his master of Gaal's sedition and impending revolt. Suggesting that Abimelech ambush Gaal and his men at dawn (Judg 9:32), Zebul first played down Gaal's fears the next morning, and then taunted him to rush out impulsively to defend the city (Judg 9:38). After Gaal's defeat, Zebul denied Gaal reentry to Shechem as a base for continued opposition (Judg 9:41). Throughout the narrative, the only dialogue is between Zebul and Gaal. Abimelech never speaks, but only acts (Soggin *Judges*, OTL, 188). Zebul's title, *pāqîd*, is related to a Hebrew verbal root meaning "to recruit, muster." One of his activities must have been that of "mustering" forces for the universal practice of military and civil forced labor, which could not have increased his popularity with the Shechemites (Boling *Judges* AB, 177). Zebul is the remnant of a sentence name and means "exalted" (Gamberoni *TDOT* 4:30). It probably refers to the "exalted" state of some deity rather than the title of his own political position. It occurs often in Ugaritic texts as an adjective, of Baal and Yam (the Canaanite sea god). It also occurred once as a personal name in an Egyptian inscription (Ward 1963: 426).

KIRK E. LOWERY

ZEBULUN (PERSON) [Heb *zĕbûlūn* (זְבוּלֻן)]. Var. ZABULON. ZEBULUNITE. The sixth son born to Leah and Jacob, and the full brother of Issachar and Dinah (Gen 30:20). Zebulun is also the eponymous ancestor of the tribe whose territory is in the Galilee.

Zebulun is born to Leah after an unspecified period of infertility. The narrative implies that Leah's inability to bear additional children is a result of Jacob's refusal to sleep with her. The circumstances of Leah's isolation change when her firstborn son, Reuben, discovers some mandrakes (an aphrodisiac), prompting Leah's hopes to have intercourse with her husband. Her childless sister Rachel, however, bargains for the mandrakes, but Leah exacts as the price from Rachel that Leah will sleep with Jacob (Gen 30:14–18). This extraordinary account culminates with four births: Leah has Issachar, Zebulun, and Dinah; Rachel gives birth to her first child, Joseph.

Upon bearing Zebulun, Leah poignantly exclaims, "God has given me (*zĕbādanî*) a good gift (*zebed*); now my husband will dwell with me (*yizbĕlēnî*), because I have borne him six sons" (Gen 30:20). Interpreters have posited two sources for the name Zebulun in this popular etymology. Some suggest, for example, that the words *zebādanî* and *zebed*, both of which come from the root *zbd*, is E's explanation for the name, whereas J's explanation is based on *yizbĕlēnî*, which comes from the root *zbl* (BDB, 256–59). The translation of *zbl* as "dwell" is supported by Gen 49:13 with an emendation to the text. The proposed Hebrew reads *zĕbûlūn lĕḥôp yammîm yizbōl* ("Zebulun will dwell by the shore of the sea"), with the substitution of *yizbōl* for MT *yiškōn.* As the narrative in Genesis 30 stands, both *zbd* and *zbl* contribute to the understanding of the name, and it is not necessary to posit two distinct sources for Leah's statement of the significance of Zebulun's name. *Zbd* reflects the name because of the assonance, and *zbl* mirrors the root from which Zebulun comes (*IPN*, 159). The naming is ultimately ironic because there is no indication that Jacob ever ended his disdain for Leah, his less beautiful but more fertile wife. Nonetheless, Leah's naming of the child indicates that she understands the son to be a gift, as are all the children who are given to her because of God's sympathy (Gen 29:31). Whatever the origins of the actual etymology or the popular etymology, Noth suggests that the name was originally a personal name (*NHI*, 66), and Elliger proposes that the name originally referred to a god or a specific dwelling place (*IDB* 4: 941; cf. *TPNAH*, 197, 300).

The very explicit borders of the tribal territory of Zebulun are found in Josh 19:10–16. The territory, found in the Galilean highlands, is alongside the territory of Issachar. The reference in Gen 49:13 to Zebulun dwelling at the shore of the sea probably refers to the tribe's early attempts to possess the shores of the Chinnereth, or it could refer to the tribe's Solomonic borders, which extended to the Mediterranean. Aharoni (*LBHG*, 237) has identified the tribe's borders as including the region bounded by Sarid/Sadud (tell Shadud) on the SE border, to Wadi Musrarah/Kishon on the W, to the Sahl el-Battof on the NE and W. Zebulun, along with Asher and Naphtali, dwell in mountainous and forested terrain, a situation that prompts Gottwald to suggest that they lived in pockets within the territory dominated by Canaanite city-states (1979: 528). Judg 1:30 recounts, "Zebulun did not drive out the inhabitants of Kitron, or the inhabitants of Nahalol; but the Canaanites dwelt among them, and became subject to forced labor." It is possible that Zebulun and Issachar shared some territory, since Deut 33:18–19 implies they had a mountain sanctuary in dual possession and because Moses' blessing to Issachar and Zebulun is given together.

Zebulun usually is listed as the sixth tribe of Israel (Gen 35:23, 46:14, Exod 1:3), although there are deviations. For example, when the tribes and their spies for the land are listed in Num 13:1–16, Zebulun is listed seventh. Not much information is given about the activities of Zebulun. It is mentioned as one of the tribes summoned by Barak of Naphtali when he fought Sisera in the Galilee region at Deborah's request. The song of Deborah praises Zebulun for its courage in the battle. Zebulun also assisted Gideon in battle against the Midianites and Amalekites. Only a few individuals of Zebulun are given distinction. One of its commanders, Eliab son of Helon, represents Zebulon when Moses orders a census of the tribes and commands its troops (Num 1:9, 2:7). Other leaders include Elizaphan, son of Parnach, who divides the territory of Zebulun upon Moses' appointment, and Elon, who judges Israel in the years between

judges Ibzan and Abdon. The only other thing that is known about him is that he was buried at Aijalon in Zebulon (Judg 12:12). Although the cited numbers of the Zebulun's troops cannot be considered historically accurate, the tribe is consistently represented as having a proportionately large population. In Num 1:30–31 it has the fourth largest number of troops of all the tribes, and in 1 Chr 12:33 it provides the single largest army of all the tribes to fight for David's installation as king. Elliger points out, however, that since Zebulun is not included in the enumeration of the Solomonic districts (1 Kgs 4:7), it may be surmised to have been of lesser economic importance (*IDB* 4: 941). In the days of Hezekiah, some people from Zebulun responded to Hezekiah's plea to return to Jerusalem to celebrate the Passover (2 Chr 30:11). Although some did not follow all the prescriptions, Hezekiah's prayers for them were answered (2 Chr 30:17–20). Isaiah speaks of Zebulun's future glory (Isa 8:23—Eng 9:1), and Ezekiel hopes for the restoration of Zebulun alongside Issachar and Gad (Ezek 48:26–27).

SHARON PACE JEANSONNE

ZECHARIAH (PERSON) [Heb *zĕkaryâ* (זְכַרְיָה), *zĕkaryāhû* (זְכַרְיָהוּ)]. Var. ZECHER. Zechariah appears in the biblical writings first as an Israelite name in the mid-8th century B.C.E. (see nos. 1–2). Its etymology, "Yahweh remembers," may explain the rise of the name at this time. In light of the societal pressures caused by the rise of the Neo-Assyrian empire and the developing Israelite traditions of its deity's involvement with the establishment of the Israelite nation, the name may represent a religious plea of the Israelite and Judean nobility to invoke renewed divine aid. The absence of the name in the biblical corpus in the 7th century supports this interpretation. The name becomes most prominent again in the Persian period. Given the development of the biblical traditions and the political and social hardships suffered by the Judean communities in Judah and in Diaspora during this time frame, the etymological significance of the name again was most appropriate, as is seen in the thematic importance of Yahweh "remembering" within the Priestly source (see, e.g., Gen 8:1). The name achieved widespread geographical dispersion in the period. The name is found for historical persons in Babylon (see ## 21–23), in Judah (see ## 20, 26, and 29), and in the Judean military colony in Elephantine Egypt (see Porten 1968: 240–43). In addition, the name represents a favorite for the Chronicler to employ in order to create anachronistically his history of the Jerusalem temple-state (see ## 3–18 and 28–29). The Chronicler was especially fond of utilizing the name for his newly created priestly and levitical personnel (see ## 5–9, 12, and 14–18), reflecting perhaps the particular association of the name within these groups in the 5th and 4th centuries B.C.E. The name persisted in Judah throughout the Hellenistic (see # 30) and Roman eras (see ## 31–32), though it does not seem to have maintained the widespread popularity that it possessed within the Persian period.

1. A king of the N kingdom of Israel in the mid-8th century B.C.E. (2 Kgs 15:8). The son of Jeroboam II (2 Kgs 14:29), Zechariah lasted only six months in office until he was assassinated, ending the dynasty of Jehu (2 Kgs 15:10). The account of his reign in 2 Kgs 15:8–12 is characterized by the stereotypical Deuteronomistic condemnation of the northern kingdom's rulers. Therefore, his reign informs us about the political intrigue and instability of the northern kingdom only in the thirty years before its downfall to the Neo-Assyrian empire.

2. A Judean whom Isaiah of Jerusalem called upon to witness the prophet's prediction of the downfall of the northern kingdom, Israel, at the hand of the Neo-Assyrians (Isa 8:2). Most likely from the aristocracy of Judah, Zechariah, along with "Uriah the priest," served to insure the credibility of the prophet, who took care to inscribe this prophecy upon a large tablet (Isa 8:1). While certainty alludes us because of the fragmentary nature of the evidence, the same Zechariah may also be found in 2 Kgs 18:2 (= 2 Chr 29:1) as the father of Abi, the mother of Hezekiah. This identification takes on increased probability in light of Uriah the priest's presence in the reign of Ahaz (2 Kgs 16:10–16; see Kaiser *Isaiah 1–12* OTL, 180). If so, Zechariah was the maternal grandfather of Hezekiah. His presence in the early

career of Isaiah suggests a long familial relationship between the prophet and Hezekiah, clarifying perhaps Isaiah's influence within Hezekiah's court.

3. According to the Chronicler, a Reubenite kinsmen of Beerah (1 Chr 5:7). The Reubenite genealogy of 1 Chr 5:1–10 contains many difficulties, including the rough transition between vv 1–6 and vv 7–8. While this Zechariah and his kinsmen Jeiel and Bela may represent fragments of an earlier source (Williamson *1 and 2 Chronicles* NCBC, 45–47, 63–64), the vocabulary in the passage and the close association of Zechariah and Jeiel in other artificially constructed onomastic lists (see 1 Chr 8:29–31; 9:35–37; 15:18, 20–21; 16:5; 2 Chr 20:14; 26:5–11; 35:8–9) suggest that the Chronicler may have created Zechariah the Reubenite to fill out his genealogical list.

4. According to 1 Chronicles, a Gibeonite, the son of Jeiel and uncle of Saul (1 Chr 9:37). 1 Chr 9:35–44 essentially duplicates the Benjaminite genealogy in 1 Chr 8:29–40, where the name "Zechariah" appears without the theophoric ending as "Zecher" (1 Chr 8:31). The exact relationship between the two genealogies remains contested. Williamson (*1 and 2 Chronicles* NCBC, 83, 91–92) argues that 1 Chr 9:35–44 depends upon 1 Chronicles 8, itself patched together from independent sources, whereas Braun (*1 Chronicles* WBC, 122) holds the opposite.

5. According to the Chronicler, a prominent levitical gatekeeper during the reign of David (1 Chr 9:21–22). According to 1 Chronicles 9, Zechariah was the son of Meshelemiah (also called Shallum, 1 Chr 9:19 and Shelemiah, 1 Chr 26:14), the chief gatekeeper of David's administration (1 Chr 9:17–19). Appointed to the entrance of the tent of meeting, the Chronicler portrays Zechariah as possessing the chief security and administrative responsibilities for the tent of meeting (1 Chr 9:24–28). During the establishment of a permanent personnel system by David for the soon-to-be temple, Zechariah receives by lot the care of the N area of the temple (1 Chr 26:14). The Chronicler designates him as a "wise counselor," a phrase that indicates Zechariah's high status as a royal counselor in Chronicles (see Wright 1990). This Zechariah illustrates how the Chronicler could personify a common name from his era, place it into an important civil office within the social framework of Judah in the Persian period, and transplant it anachronistically into the era of the united monarchy.

6. A levitical musician whom David appoints to take part in the procession of the ark into the tent of meeting in Jerusalem (1 Chr 15:18). Zechariah received the specific assignment to play the harp in this procession (1 Chr 15:20), an assignment that becomes permanent once the ark is established in the tent of meeting (1 Chr 16:5). Zechariah becomes part of the levitical musical care of the ark under the direction of Asaph. The inclusion of this specifically levitical corpus into the Deuteronomistic ark narrative is unique to Chronicles, and it most likely represents the Chronicler's own ideological invention rather than a historical account of a procession during the reign of David.

7. A priestly trumpeter whom, according to the Chronicler, David appointed to go before the ark in a processional into the tent of meeting in Jerusalem (1 Chr 15:24). Williamson (*1 and 2 Chronicles* NCBC, 126) has argued that Zechariah and his priestly colleagues represent the interests of a later priestly redactor to Chronicles, attempting to redress a levitical bias in the original work. Yet the style of the passage and especially the parallels between 1 Chronicles 15 and the dedicatory processional of Nehemiah 12 suggest that the Chronicler composed the entirety of 1 Chronicles15. The Chronicler either employed Zechariah to expand this scene due to its commonality in his day or possibly because of the presence of Zechariah the trumpeter within the Nehemiah Memoirs (Neh 12:41; see no. 29).

8. The son of Isshiah and one of the "remaining Levites" who, according to the Chronicler, casts lots before David, Zadok, and Ahimelek in order to receive his place among the levitical household leaders (1 Chr 24:25). For a discussion of the historical provenance of 1 Chr 24:20–31, see ISSHIAH. The Chronicler most likely borrowed a common name from his era in order to complete a suitable list of levitical names for the reign of David.

9. According to the Chronicler, a levitical gatekeeper of the house of Merari during the reign of David (1 Chr 26:11). This Zechariah, the fourth son of Hosah, took up his position with his relatives in the W region of the Temple area, providing security on an important road that led outside the city (1 Chr 26:16).

The Chronicler again employed a common name from his day to detail anachronistically a scene in a previous era.

10. According to the Chronicler, the father of IDDO, a prince of the half-tribe of Manasseh in Gilead (1 Chr 27:21).

11. According to the Chronicler, a Judean aristocrat contemporaneous with Jehoshaphat (2 Chr 17:7). Jehoshaphat assigns this Zechariah, along with other Judean leaders and Levites, to travel through the cities of Judah in order to enforce the "book of the Law of the Lord" (2 Chr 17:9). While Albright (1950: 61–82) argued that this government-sponsored religious reform reflects a historical event from the time of Jehoshaphat, it seems more likely that the Chronicler invented the whole passage, including Zechariah, to aid in his portrayal of the "good" reign of Jehoshaphat.

12. According to the Chronicler, the father of Jahaziel, a levitical singer-prophet who prophesied victory for Jehoshaphat's Judean army in an impending battle against the Moabites, Ammonites, and Meunites (2 Chr 20:14). Zechariah, a name that the Chronicler continually associated with levitical personnel, represents the construction of an artificial genealogy for Jahaziel, thereby channeling prophecy into the levitical order (Petersen 1977: 55–87).

13. According to 2 Chronicles, a son of Jehoshaphat, a brother of Jehoram (2 Chr 21:2). 2 Chr 21:2–4 alone describes the misfortune of Zechariah, along with his brothers Michael, Azariah, Jehiel, and Shephatiah. Zechariah and his brothers receive wealth and their own fortified cities from their father (2 Chr 21:3a). Their fortune, however, is short lived. Following Jehoshaphat's death, firstborn and heir-designate Jehoram purges his kingdom of all potential rivals to the throne, including Zechariah and his brothers. For a discussion of the historicity of this scene, see MICHAEL (PERSON). The Chronicler most likely anachronistically retrojected the common postexilic name "Zechariah" into the time of the divided kingdom for his narrative purposes.

14. According to the Chronicler, the son of Jehoiada, a priest who led a palace coup against Athaliah and established Joash as king of Judah (2 Chr 24:20). Absent from the Chronicler's source in 2 Kings 12, Zechariah appears only as a character in the reign of Joash in 2 Chronicles 24. After Jehoiada's death, Joash submitted to the pressure of his nobility and "forsook the house of the Lord … and served the Asherim and the idols" (2 Chr 24:18). Therefore, Zechariah delivers a prophetic oracle against Joash. Despite Zechariah's father's support for Joash, the king orders the execution of Zechariah. Zechariah dies in the court of the temple (2 Chr 24:22), where previously Jehoiada had saved the life of the young prince, Joash (2 Chr 23:9–11, 15–16). Before his death, however, Zechariah utters a curse upon Joash (2 Chr 24:22), setting into motion the Chronicler's theology of immediate divine retribution. Joash is assassinated by his own servants "because of the blood of the son of Jehoiada the priest" (2 Chr 24:25). The significant differences between 2 Kings 12 and 2 Chronicles 24 has caused some commentators (see, e.g., Rudolph *Chronikbücher* 273–74) to posit that the Chronicler utilized an independent source in the composition of this narrative. The Chronicler's own ideology, however, sufficiently explains the differences that exists between the two narratives. Zechariah, therefore, would represent a literary character of the Chronicler's own invention, a priestly and prophetic figure like the restoration prophet of the same name (see ZECHARIAH, BOOK OF), rather than a historical figure. Despite this lack of historicity, it is this Zechariah who is referred to in an early Q saying (Luke 11:51), possibly indicating that Chronicles was considered by this time to be the last book in the Hebrew Bible (see Dillard *2 Chronicles* WBC, 193). Matthew, however, mistakenly interprets this early Jesus-saying to refer to the Zechariah of the prophetic book ("Zechariah the son of Barachiah," Matt 23:35; cf. Zech 1:1). See # 31 below.

15. According to the Chronicler, a mentor of king Uzziah (2 Chr 26:5). The Chronicler credits Zechariah for Uzziah's early success because he taught him "the fear of God," which brought about divine favor (2 Chr 26:5). The identity of this Zechariah is unclear. Williamson (*1 and 2 Chronicles* NCBC, 334) suggests that the Chronicler found a Zechariah associated with Uzziah in an independent source; Dillard (*2 Chronicles* WBC, 208) raises the possibility that the Chronicler referred to the Zechariah of Isa 8:2. Perhaps, however, it is best to understand the Chronicler appealing to the Zechariah

of 2 Chr 24:20 (see # 14). The language of 2 Chr 26:5 mirrors that of Zechariah's speech in 2 Chr 24:20–22, and prophecy (2 Chr 24:20) and instruction (2 Chr 26:5) are closely related in Chronicles (see, for instance, 1 Chr 25:1–8). The Chronicler relates proper royal behavior to the king's obedience to prophetic instruction through the figure of Zechariah.

16. A levitical descendant of Asaph, who, according to the Chronicler, participated in the cultic purification of the temple in Hezekiah's reforms (2 Chr 29:13). The levitical workforce cleaned only the outer areas of the temple, leaving the altar and vicinity for the priests (2 Chr 29:16). While debate exists concerning the compositional history of 2 Chronicles 29 and the historicity of the Chronicler's portrayal of the reforms and Passover of Hezekiah, there is a general consensus that the appearance of this Zechariah and his levitical colleagues are a result of the Chronicler's own ideological tendency, anachronistically portraying postexilic names as persons from the time of Hezekiah.

17. A Levite from the family of Kohath who, according to the Chronicler, supervised work crews during Josiah's temple renovation (2 Chr 34:12). The Chronicler seems to portray these levitical supervisors as temple musicians (2 Chr 34:12b) who also possess other civic duties ((2 Chr 34:13b). It is interesting to note that Zechariah appears with Meshullam in this scene, reminiscent of the proximity of the two names elsewhere in 1 Chr 9:21 and 26:1–19 (see no. 5). Zechariah here again represents the Chronicler's literary imagination retrojecting a name from his own day to construct the history of preexilic Judah.

18. A priestly nobleman who donated sacrificial animals for the Passover festival during the reign of Josiah (2 Chr 35:8=1 Esdr 1:8). This Zechariah is designated as a "ruler" (*nāgîd*) of the temple. This position seemingly generated abundant wealth from which he donated for the special Passover celebration. The Chronicler's own hand is apparent throughout this narrative, indicating that he again drew upon the name of Zechariah to portray a priestly individual who played an important supporting role in the religious reforms of preexilic Judah.

19. According to 1 Esdras, a representative of Josiah who observed the proceedings of the Great Passover celebration with his colleagues Asaph and Eddinus (1 Esdr 1:15). Zechariah here exists as a variant reading for "Heman" in 2 Chr 35:15 (as Eddinus is for Jeduthun). In light of the significant association of Asaph, Heman, and Jeduthan throughout Chronicles (see 1 Chr 16:37–42; 25:1; 2 Chr 5:12; and 29:13–14), it seems that Zechariah may have appeared in the text of 1 Esdras either as the result of assimilation of an association between Zechariah and Asaph found in 1 Chr 16:5 or of Zechariah's important role within the Josiah narrative (1 Esdr 1:8=2 Chr 35:8). This event is altogether omitted in 2 Kings 23.

20. The late-6th century prophet and contemporary of Haggai to whom the book of Zechariah is attributed. See ZECHARIAH, BOOK OF.

21. A 5th century B.C.E. Diaspora Judean in Babylon who led 150 kinsmen back to Judea with Ezra (Ezra 8:3=1 Esdra 8:30). For the historical value of Ezra 8:1–14, see GERSHOM. Zechariah was from the house of Parosh, a family heavily involved in the first repatriation of Judah under Zerubbabel (Ezra 2:3). Members of the contingency led by Zechariah participated in the reforms of Ezra by divorcing their non-Judean wives (Ezra 8:25) and appear, most likely as a literary construct, signing Nehemiah's covenant in Nehemiah 10 (see Blenkinsopp *Ezra-Nehemiah* OTL, 310–14).

22. A 5th century B.C.E. Diaspora Judean in Babylon who led a small group of 28 kinsmen to Judea with Ezra (Ezra 8:11=1 Esdr 8:37). For the historical value of Ezra 8:1–14, see GERSHOM. Zechariah was from the family of Bebai, who also participated in the first repatriation of Judah under Zerubbabel (Ezra 2:11). Members of the contingency led by Zechariah participated in the reforms of Ezra by divorcing their non-Judean wives (Ezra 8:28) and appear, most likely as a literary construct, signing Nehemiah's covenant in Nehemiah 10 (see Blenkinsopp *Ezra-Nehemiah* OTL, 310–14).

23. A leader of the exiled Judeans returning to Judah with Ezra (Ezra 8:16=1 Esdr 8:44). Upon Ezra's discovery that no levitical families existed among the new group of repatriates, Ezra sent a group of leading men, including Zechariah, to Iddo, in order to obtain levitical personnel for the repatriation. There is no way to tell whether this Zechariah is identical with the Zechariah from the family of Parosh, Bebai, or Bigvai, or whether he is unknown in the extant literary sources from the 5th century B.C.E.

24. A member of the family of Elam who lived in Judah during the reforms of Ezra (Ezra 10:26=1 Esdr 9:27). Zechariah had married a non-Judean wife. He agreed to divorce her under the threat of complete ostracism from the Jerusalem temple-state during Ezra's reforms.

25. A Judean official who appeared in Jerusalem with Ezra during the public reading of the "Book of the Law" (Neh 8:4=1 Esdr 9:44). While a later editor seems to have thoroughly redacted this scene of Ezra's reform, the reference to specific individuals may represent the presence of an underlying historical source (see Blenkinsopp *Ezra-Nehemiah* OTL, 284–87). This may have been one of the Zechariahs who returned with Ezra from Babylon (see nos. 21–23). The scribe who added Meshullam to the MT in Neh 8:4 seems to have identified this Zechariah with the Judean leader of the same name that Ezra sent with the embassy to Iddo of Casiphia (Ezra 8:16–17; see # 23).

26. According to the book of Nehemiah, an ancestor, possibly the grandfather, of Athaliah, an inhabitant of Jerusalem in the Persian period (Neh 11:4). Zechariah here appears as a genealogical link between Athaliah and Perez, one of the sons of Judah (Gen 46:12). Zechariah thus "proves" Athaliah's lineage as one of the "sons of Judah" (Neh 11:4).

27. According to the book of Nehemiah, an ancestor of Maaseiah, an inhabitant of Jerusalem in the Persian period (Neh 11:5). Zechariah here appears as a genealogical link between Maaseiah and Shelah (Gen 46:12), who is referred to here as "the Shilonite" (Neh 11:5). Zechariah thus "proves" Maaseiah's lineage as one of the "sons of Judah."

28. An ancestor of Adaiah, the head of a priestly family in Jerusalem in the Persian period (Neh 11:12). The inclusion of Zechariah here illustrates well the process by which an editor, possibly the Chronicler, formed artificial genealogies. The editor of Neh 11:1–24 inserted "son of Pelaliah, son of Amzi, son of Zechariah" (Neh 11:12) between Jeroham and Pashhur in 1 Chr 9:12. He thereby increased Adaiah's lineage from three to six without disrupting extensively the original genealogical framework.

29. A priestly trumpeter who participated in Nehemiah's dedication of the restored walls of Jerusalem (Neh 12:35, 41). Zechariah appears in Nehemiah 12 leading the priestly trumpeters behind Ezra in Nehemiah's dedicatory processional (Neh 12:35). Following the circumambulation of the walls in opposite directions, the two groups, one lead by Nehemiah (12:38) and one by Ezra (12:31b–36) rejoined each other in the temple (12:40). Under the direction of Jezrahiah, Zechariah participates in the musical culmination of the dedicatory ceremony (Neh 12:41–42). This performance of the temple musicians thereby initiated the accompanying sacrifices and subsequent festival (Neh 12:43). The exact lines of the compositional history of Neh 12:27–43 are difficult to discern with precision. An editor, possibly the Chronicler, has carefully redacted the original Nehemiah Memoirs throughout this section (see Blenkinsopp *Ezra-Nehemiah* OTL, 343–48). Thus, while Zechariah's appearance in the temple (Neh 12:41) seems to represent an original part of the Nehemiah Memoirs, his leadership of half the procession around the Jerusalem walls seems to have originated in the redactional work of the editor. Zechariah here receives a distinguished lineage that originated with Asaph (Neh 12:35), an original temple musician according to 1 Chronicles 25. The editor thereby utilized the name "Zechariah" to unify his narrative purposes with his historical source.

30. The father of Joseph, an unsuccessful Judean general during the Maccabean War (1 Macc 5:18, 56). The presence of Zechariah in the 2d century B.C.E. attests to the continued presence of the name in Judah throughout the Hellenistic and into the Roman period. It does not seem to have achieved the popularity, however, that the name possessed in earlier Second Temple times.

JOHN W. WRIGHT

31. Father of John the Baptist, a member of the priestly division of Abijah (Luke 1:5; 3:2; 1 Chr 24:10). Zechariah appears in the infancy narrative in Luke 1 as a witness of the dawn of the messianic age. Zechariah and his wife, Elizabeth, were aged and without children. When Zechariah was serving at the temple, the archangel Gabriel appeared and revealed that God had heard his prayers; he and Elizabeth would have a son, and his name would be John. John's character would be "filled with the Holy Spirit" and his task was to prepare the people in the spirit and power of Elijah. In light of Zechariah's doubt regarding his and Elizabeth's ages, Gabriel provided a sign: Zechariah would be unable to speak for the entire duration of Elizabeth's pregnancy (1:5–25).

Upon the circumcision of John, he confirmed Elizabeth's choice of the name John rather than the customary name of the father or grandfather, by writing it on a tablet. Then his voice returned and he prophesied regarding Israel's messianic hope with what is now called the Benedictus (1:68–79).

Zechariah also appears in the apocryphal *Protevangelium of James* 23–24 as slain in the temple forecourt as a result of Herod's wrath. However, this account is a conflation of Luke 1 with the reference to the prophet Zechariah in Luke 11:51. There is confusion as to the exact identity of the Zechariah in Luke 11:51 (Ross 1987). Luke's passage could refer to 2 Chronicles 22–24 to Zechariah, the son of the high priest Jehoiada (see # 14 above). Filled with the Spirit, Zechariah denounced apostasy and was stoned to death by order of King Joash. His death was avenged by the taking of Joash's life (24:25). Matthew (23:34–36) calls Zechariah "the son of Barachiah," identifying the martyr with the postexilic minor prophet (Zech 1:1; # 20 above). Some think Zechariah may be an unknown prophet who was killed in the temple within a short time of Jesus' ministry.

ZECHARIAH, BOOK OF. The book of Zechariah, in both the MT and the LXX, is the eleventh book of the Twelve Minor Prophets. Many scholars believe that the book is a composite production, made up of First Zechariah, which includes chaps. 1–8, and Second (or Deutero-) Zechariah, which includes chaps. 9–14. First Zechariah is considered to be a product of the late 6th century, contemporary with the postexilic prophets Haggai and Malachi. However, there is no general consensus on the date for the oracles in chaps. 9–14.

ZECHARIAH 1–8

First Zechariah is presumably the name of the prophet who wrote most of Zechariah 1–8 and who was also the redactor of the Haggai-Zechariah 1–8 composite work. See HAGGAI, BOOK OF. Of priestly descent, the prophet is identified in Zech 1:1 with a double patronymic (Zechariah ben-Berechiah ben-Iddo), which suggests the importance of the prophet's family in the restoration period.

A. The Structure of Zechariah 1–8
B. The Structure of the Composite Work, Haggai-Zechariah 1–8
C. Historical Background
D. Features of the Three Parts
1. Zechariah, Part One (1:1–6)
2. Zechariah, Part Two (1:7–6:15)
3. Zechariah, Part Three (7:1–8:23)

———

A. The Structure of Zechariah 1–8

The first eight chaps. of Zechariah can be divided into three main sections, based on date formulas that introduce each: Part One (1:1–6) is a brief introduction connecting Haggai with First Zechariah; Part Two (1:7–6:15) is the heart of First Zechariah and comprises the visionary sequence (seven visions plus a prophetic vision) interspersed with oracular material; and Part Three (chaps. 7 and 9) consists of an introductory section (7:1–6), an address to a delegation (7:7–14), and two sets of oracles (8:1–17 and 8:18–23).

B. The Structure of the Composite Work, Haggai-Zechariah 1–8

Haggai and the first eight chaps. of the canonical book of Zechariah belong together as a composite work. This statement can be justified on thematic grounds alone. Both prophets deal with the reorganization of national life and institutions in the restoration period. The dated prophecies of both Haggai and Zechariah 1–8 take place within a very close time frame (29 August 520 to 7 December 518 B.C.E.). The cast of characters in the two works is virtually the same: the high priest Joshua, the governor Zerubbabel, priests, and the citizenry or representatives of Yehud (Judah). While they diverge to a certain extent in the specifics of their words, the two prophets complement each other, as one might indeed expect of two men of God who are responding to virtually the same questions and quandaries. Together they provide a pragmatic program as well as a world view that looks to the future in the process of dealing with the challenges and opportunities their people confronted at the outset of the reign of Darius I.

Correspondence of Literary Features between Haggai and Zechariah 7–8

Feature	Hag	Zech
date formula	1:1, 15; 2:1, 10, 18, 20	7:1
oracular question	2:11ff.	7:3ff.
"House of Yahweh of Hosts"	1:14	7:3; 8:9
"people of the land"	2:4	7:5
devastation of land	1:6	7:14
"remnant" of the people	1:12, 14, 2:2	8:6, 11, 12
be strong	2:4 (3x)	8:9–10
refound/rebuilt temple	1:2, 2:18	8:9
House = temple	1:2, 2:3, 7, 15, 18	8:9; 7:3
earnings	1:6	8:10
man/beast	1:11	8:10
man/beast	1:11	8:10
prosperous sowing/temple building	1:6–11; 2:18–19	8:12
land/produce; heavens/dew	1:10	8:12
blessing	2:19	8:13
"do not fear"	2:5	8:13
"nations"	2:7, 22	8:13, 22, 23
hem/garment	2:12	8:23
Elohim	1:12 (2x), 14	8:8, 23

Aside from these obvious congruencies of content and context, various features of their literary structure indicate that Haggai and Zechariah 1–8 are a combined work. Furthermore, the individual utterances of these two prophetic leaders of the restoration were apparently delivered and then collected and organized into the present arrangement within a relatively few years. Haggai's words help initiate, or reinitiate, work on the temple in 520, and then draw attention to the significance of the actual ceremony of refoundation, an event related to Zechariah's visionary experiences, which he presents along with his oracles in his prophetic work. Zechariah's last group of oracles comes less than ten months after the refoundation ceremony. The chronological headings provide a span of less than two-and-a-half years for the materials in Haggai and Zechariah 1–8 and indicate that the two works could not have been put together as they stand any earlier than the last date given, 7 December 518. In other words, the latest date in Zechariah 1–8 serves as a *terminus post quem* for the compilation of the whole work.

C. Historical Background

Like Haggai, before him, Zechariah joins the ranks of Israelite prophecy amid the new and unfamiliar circumstances of the beginning of Darius I's rule. More than any other factor, the absence of a realistic opportunity to restore the monarchy influenced his emergence as a prophet and determined the content of his utterances. The hegemony of Persia in all local affairs is presupposed in his oracles. Moreover, the dyarchic pattern of rule in Yehud (Judah), consisting of governor and high priest, is never questioned. Zechariah followed Haggai in giving his prophetic authority in support of the reestablished province of Yehud. He held a realistic, pragmatic viewpoint as he tried to assist his people in the difficult transition back to "normalcy."

But the normalcy of the Second Temple was not the same as that of the First Temple. The premonarchic pattern of dual leadership in civil and religious affairs gained new meaning and cogency in the postexilic era. The two prophets Haggai and Zechariah faced the challenge of assuring their audience of the traditional authority and present feasibility of the dual pattern of leadership.

At the same time, the temple still lay in ruins. Haggai and Zechariah together provided that crucial measure of support for the enterprise of rebuilding that tipped the balance in favor of temple restoration being achieved. The people heeded the words of Haggai and set about their task of rebuilding the temple. Since Haggai and Zechariah overlap in their ministries, and since Zechariah presupposes that temple work had already recommenced, Haggai's exhortations had apparently brought about the building efforts. Whereas Haggai is largely concerned with the reluctance of the people, because of their preoccupation with personal over national affairs, to respond to the Persian mandate, Zechariah addresses the meaning and symbolism of the temple as a legitimate and legitimizing expression of the new pattern of dyarchic leadership that accompanied the temple project. For Zechariah the national focus of Yehud has already been transformed, or revitalized, by the initiation of work on the temple, which he relates to the lessons of the past as evident in the destruction and exile of Judah. It is the progress on the rebuilding of the temple that inspires Zechariah to reflect on the world around him and to advise people how to operate within it.

Part One (Zech 1:1–6), which overlaps in time with Haggai, expresses Zechariah's only reservations about his compatriots. Otherwise, his main focus is to clarify in visions and oracles the contemporary world and to articulate a hopeful view of the future. That world is painted with literary artistry and prophetic authority. The prophet's audience is transported into a visionary state in which the temple and its chief appurtenances signify and legitimize aspects of the existing world order. Like so many of his predecessors, the prophet is an individual of great political acumen; he has correctly perceived the stability and staying power of Persian dominion. Only the Second Vision reflects a concern for potentially negative manifestations of Persian rule.

For Zechariah the key to the establishment of a largely ecclesiastical system of community autonomy under Persian rule is the restoration of the sacred temple in Jerusalem. Without a dynastic power in Yehud, this enterprise ran counter to the pattern of the centuries of the Davidic monarchy in Judah and to the general integration of temple and palace in the political states of the ancient world. Could Yehud countenance a temple without a king? Could internal rule be legitimate, resting on the temple and its leadership alone, without the historically predominant monarchic component of national life? Zechariah provides an affirmative answer to these questions. Chap. 3 offers divine sanction for the expanded powers of the high priest. Chap. 4 and also the Crowning (6:9–15), the final oracular scene of Part Two, justify the presence of a civil leader of the royal line and at the same time interpret how the monarchic kingdom is to be realized only at some eschatological moment. Part Three of Zechariah (chaps. 7–8), which bears the latest chronological marker of the entire Haggai-Zechariah 1–8 corpus, presupposes a Jerusalem ecclesiastical power in full control (7:3), despite the fact, which we know from biblical as well as from archaeological sources, that civil governors continued to function throughout the restoration period.

In terms of religious affairs, Zechariah is concerned with the presence of foreign cults and influence (Sixth Vision) and insists that Persian hegemony must not threaten Yahweh's supremacy. But in his eschatological expectations, he is broad-minded in his view of the role of foreign nations (8:23).

As for Haggai, Zechariah's ground of theological retrospection is the authoritative Law of the Covenant (Fifth Vision) and the influential words of the earlier prophets, to whom he repeatedly refers (e.g., 7:7,

12). Persian efforts to organize the provinces and to encourage local religious leaders to collect and codify their laws, especially during the reign of Darius I (522–486 B.C.E.), clearly had a great effect on Zechariah and his contemporaries. Zechariah's persistent mention of what appears to be a written corpus suggests that the Primary History (Genesis through 2 Kings) together with a prophetic corpus already constituted a body of sacred writings. Indeed, the impetus to combine Zechariah 1–8 with Haggai could well have arisen in part from Darius' policies in this regard. The composite work, perhaps intended to be presented to the people in time for the temple rededication ceremony, thus expressed the ideological basis for the Second Commonwealth. It would have been appropriate to have had it recited at the dedication of the Second Temple, the institutional center of developing Jewish life.

D. Features of the Three Parts

1. Zechariah, Part One (1:1–6). When seen as a part of the compendious work of Haggai-Zechariah 1–8, these six verses emerge as a transitional piece that connects the two sections of Haggai with the two subsequent sections of Zechariah. By echoing some of his language and by referring to his effectiveness in bringing about a change in the stance of the community with respect to temple building, Zech 1:1–6 exhibits an awareness of Haggai's prophecies.

The mixture of genres in Part One—narration with retrospection along with oracular material—accords with the style of Haggai; and the insertion of oracular statements into 1:1–6 has the same general character as the use of oracles elsewhere in Haggai-Zechariah 1–8. However, the layering of oracles in this section is particularly dense, with an intricate series of quotes-within-quotes in just a few verses. No fewer than five, and perhaps six, quotations appear; and they are layered as well as consecutive. This complex arrangement represents several converging influences: Zechariah's sensitivity to previous prophetic activity; the nature of prophecy as the mediated word of God; the growing authority of traditional materials; and perhaps also the highly developed epistolary style of the Persian empire, with its reports of conversations held by government officials.

2. Zechariah, Part Two (1:7–6:15). First Zechariah presents in this section a carefully arranged sequence of eight visions, which together exhibit a number of important characteristics. First, the visions are organized into three subsets. There are three visions in front (nos. 1–3), three visions at the end (nos. 5–7), and two visions in the middle (Vestment Scene plus vision 4):

Vision 1: Horses Patrolling the Earth
Vision 2: The Four Horns and the Four Smiths
Vision 3: The Man with the Measuring Cord
Prophetic Vision: Joshua and the Priestly Vestments
Vision 4: The Lampstand and the Two Olive Trees
Vision 5: The Flying Scroll
Vision 6: The Ephah
Vision 7: The Four Chariots

Second, this sequence is justified and enriched by the fact that there are correspondences and correlations of content and structure between the first three visions and the last three. These connections include subject matter (e.g., the horses of visions 1 and 7), internal structure (e.g., two parts each to visions 2 and 6 and direct inclusion of oracular material in visions 3 and 5), and language. These general correspondences are accompanied by other specific ones, found in each pair of visions though different for each.

Third, the correspondences between the individual units of the first and third subsets are organized in inverse order, with the first and last visions complementing each other, the same for the second and sixth, and also for the third and fifth. The correlations can be established on stylistic grounds for the first three and last three visions. This has the effect of establishing the central pair as a complementary set, although the stylistic correspondences between those two are absent; stylistic contrast (see below), in fact, characterizes the relationship of the central two visions.

Fourth, the stylistic correlations between the first and third subsets are accompanied by thematic relationships. In particular, the scope of one member of the paired visions is comparable to that of the

other member. Figure 2 shows in two ways the purview of the visions. The outer two have a universal dimension, dealing as they do with Yahweh's worldwide scrutiny (vision 1) and power (vision 7). The middle two (visions 2 and 6) are international in scope in that they are concerned with Judah/Yehud and the imperial powers (Assyria, Babylon, and/or Persia) that determined her destiny in the 7th and 6th centuries. The inner two narrow to a national focus, examining Yehud's territory (vision 3) and self-rule (vision 5). As a result of this progressively smaller field of interest, the central subset emerges with the temple in Jerusalem as the center of the prophet's universe. The overall structure, in spatial terms, can be conceived of as a series of superimposed circles (See Fig. ZEC.01) with Yahweh and the whole world as the largest circle, and the temple and the leadership of Yehud at the center. Such an arrangement implies that the smaller circles are inseparable from the larger ones that contain them. Jerusalem at the center is part of Yehud, of the international community of nations, and of the cosmos as ordered by Yahweh.

Fifth, all the above features relate to the existence of a centerpiece: the intricate structure of the visionary sequence has the effect of drawing attention to the central set, the Vestment Scene and the Fourth, or Lampstand, Vision. The prophet's ultimate concern, we learn from this arrangement, lies with the temple and the leadership in Jerusalem. In this sense, the full visionary set can properly be called Zechariah's "Temple Visions." Although only the central two visions deal explicitly with the temple, the fact that the center is an integral part of a carefully constructed whole indicates that the entire sequence emerges from the prophet's acute awareness of the conceptual and political problems surrounding the reorganization of the postexilic community and the reconstruction of that community's institutional core.

All of these characteristics of the eight visions have been presented using a system of numbers whereby the first three are called visions 1, 2, and 3 and the last three are designated visions 5, 6, and 7. In the center are the Fourth Vision and an unnumbered one. In a sense this enumeration is arbitrary, since the prophet himself did not number his visions. However, analysis of 3:1–7 reveals enough (five) distinct characteristics of that passage to warrant its being excluded from the numbered sequence.

Interspersed with the visions are a number of oracles. Although it would be convenient to separate the oracles and consider them as a discrete component of Part Two, their integral relationship with the visionary units invalidates such a separation. The oracles are incorporated into the visions in several ways. In some cases they have been worked into the very fabric of a vision, as in the First, Third, and Fifth Visions. In other places they appear to be more self-contained units, as in the Expansion of the First Three Visions (2:10–17 [—Eng 2:6–13]), the Supplementary Oracle of Chap. 3 (3:8–10), the Zerubbabel Insertion of the Fourth Vision (4:6b–10a), and the oracular portion of the final Crowning Scene (6:9–15) of Part Two.

In these latter instances the words "expansion," "supplement," and "insertion" are to be understood appropriately. These terms are not meant to indicate a separate origin or identity for the material so designated. All of the oracular sections not already incorporated into the actual visions are nonetheless integral to the visionary sequence. The ideas expressed by the oracles are based upon and also amplify themes found in the visions with which they are associated. In other words, vision and oracles complement and supplement each other. They are alternate modes of prophetic communication, employed in tandem by the prophet. Each is peculiarly suited to an aspect of his message, and so the message is communicated in the two modes. But the message is incomplete without the mutuality of these two forms of prophetic language.

The convergence, or more accurately the merger, of vision and oracle in First Zechariah is analogous to, and perhaps also functionally related to, the close relationship of poetry and prose in Haggai-Zechariah 1–8. The language for conveying a visionary experience is normally the prose of narration, whereas the language for communicating an oracle is often poetry. The former describes an indirect communication of the divine will, through the symbolic meaning of objects or persons; and the latter communicates, as only poetry can, the prophet's direct experience of God's word. Since Zechariah's prophetic activity involves both vision and direct "auditions" of Yahweh's word, vision and oracle, narrative and poetic language, are intertwined through the rich and varied expressions of First Zechariah's prophetic consciousness. The presentation of the visions takes on its characteristic dialogic character because of the role of the

Interpreting Angel; but that feature should not deflect us from perceiving the basic narrative structure of those visions.

3. Zechariah, Part Three (7:1–8:23). Chaps. 7 and 8 of the book of Zechariah form a distinct literary unit in the organization of Zechariah. Although composed of four sub-units, these two chaps. exhibit an overall integrity as one of the three major sections of First Zechariah. In addition, their special relationship to the material in Haggai forms a framework for Haggai-Zechariah 1–8 and indicates that Zechariah 1–8 together with the two chaps. of Haggai constitute a composite work.

The independence of chaps. 7 and 8 as a literary whole within Zechariah is apparent first and foremost on stylistic grounds. The use of formulaic clauses or phrases at the outset of this section sets it apart from the rest of Zechariah 1–8. The chief and most obvious example of this is the use of the date formula, which introduces the ensuing prophetic materials in relationship to the regnal year of the Persian emperor. The date formulas create three sections, of which this is the third. While this feature in and of itself might not be sufficient to justify such a division, it is accompanied by an oracular formula ("The word of Yahweh came …"), which likewise is found in Zechariah 1:1 and 1:7. This formula is rather awkward in its present position within the chronological heading, a fact which suggests that it has been inserted there in order to reinforce the impression, already created by the date formula, that Zechariah 7–8 stands as a section distinct from 1:1–7 and 1:8–6:15. Furthermore, Part Three contains no visions and in that way is distinct from Part Two; and it does contain extensive oracular passages and so differs from the terse narration with retrospective that dominates Part One.

The two chapters contain diverse kinds of prophetic and oracular materials that have been shaped into a unit as the result of the event that, according to the information supplied at the beginning of chap. 7, occasioned the prophetic utterance in the first place. A delegation from Bethel came to the temple with a question about fasting. The query provoked a series of retrospectives and oracles, which culminate in an eschatological vision that transforms the original question about fasting into an opportunity to depict the future of Israel and of all the nations. Yet it is the delegation's arrival and query that frame and underlie the prophetic words. The internal stimulus for the prophetic activity recorded in Part Three is accompanied by external conditions implied by the date of this section. All the other dates given in Haggai and Zechariah are in the second year of Darius' reign. Part Three is attributed to the fourth year. The temple building project was the stimulus for the prophecies of Haggai and Zechariah 1–6; and now, two years later, another development in Yehud within the Persian Empire provoked Zechariah's final prophetic outburst.

Part Three itself can be divided into four segments or sub-units on the basis of both content and stylistic features. The latter includes the use of an introductory statement signifying the transmission of a divine message. The formula "The word of Yahweh came (to Zechariah)" occurs as such or with minor variations four times in chaps. 7–8, and each of those occurrences marks a new unit of material. Several features within the units so formed further suggest the integrity of those units. For example, the second unit (Further Retrospection on Divine Justice) begins in 7:7 with a question containing the word "proclaim"; it draws to a close in 7:13 with a sentence featuring "Thus … proclaimed." The response to the initial question has been brought to its conclusion, and an appended oracle (v 12b–14) develops from the second part of the "Thus … proclaimed" statement and serves as a coda to the second sub-unit. For the third and fourth sub-units, the separate oracles within each are distinguished by the use of another formula (in addition to the initial transmission formula noted above) marking the actual delivery of the divine message. "Thus spoke Yahweh of Hosts" introduces the ten (seven in 8:1–17, three in 8:18–23) oracular pronouncements of these units in every case except one (8:3), which lacks only "of Hosts."

These literary features of the sub-units are accompanied by differences in content. The Introduction (7:1–6) provides the setting of time and place, the people involved, and the situation ostensibly responsible for evoking the subsequent collection of prophetic utterances. The next three sub-units follow a time sequence. Further Retrospection on Divine Justice (7:7–14) moves backward from the prophet's day to the preexilic period and then to the trauma of destruction and dispersion. Zion and Judah Restored (8:1–17) has a chronological orientation that includes the prophet's immediate past, his present, and the

imminent future. An eschatological perspective perhaps also colors some of the seven oracles, but they can for the most part be seen as referring primarily to the prophet's own historical period. Finally, Judah and the Nations (8:18–23) looks to the eschatological future. Furthermore, building upon the situation described in the Introduction to Part Three, the prophet expands the demographic focus of interest from Jerusalem to all of Yehud, to the neighboring Palestinian peoples, and—by way of simultaneous climax to Zechariah 7–8, to Zechariah 1–8, and to Haggai-Zechariah 1–8—to all the nations of the world. Zechariah's message ends on a resoundingly universalistic note.

ZECHARIAH 9–14

Because many scholars believe that chaps. 9–14 of the book of Zechariah were not written by the same person who wrote chaps. 1–8, but by a Second (or Deutero-) Zechariah, it is necessary to examine these latter chaps. as a unit.

———

A. Authorship, Date and Literary Unity

Questions regarding the very existence of Deutero-Zechariah, much less its date of origin and authorship are best approached from the perspective of earlier scholarly efforts.

1. History of Research. Discussions of the authorship of Zechariah 9–14 initially arose from reflection upon Matt 27:9–10, which refers to Zechariah 11:12–13 and imputes authorship of these verses to Jeremiah. The issue for earlier interpreters was not so much one of higher criticism as it was the relative authority of the gospel of Matthew over against the book of Zechariah. And, as the definitive review of the research by Otzen demonstrates, it was the same issue, the so-called conflict between the Testaments, which sparked post-Renaissance debate upon the unity of Zechariah. This was first clearly evident in the work of Joseph Mede (1653), who contended that Zechariah 9–11 was written by Jeremiah, whereas Zechariah 12–14 might be attributed to Zechariah. In little more than one century after the publication of Mede's work, the issues of literary unity and date were joined in critical discussions. In 1785, William Newcombe distinguished Zechariah 9–11 as preexilic, material which he deemed similar to much in Hosea, from Zechariah 12–14, which he dated after the death of Josiah. Newcombe's position, that Zechariah 9–14 comprised two distinct parts, was advanced by Bertholdt (1812–19), who argued that Zechariah son of Jeberechiah (Isa 8:2) was the author of Zechariah 9–11 and that these three chapters had

been linked to Zechariah 1–8 because of the authors' identical names. (For Bertholdt, Zechariah 12:1–13:6 and 13:7–14:21 made up yet further components of the book, both dating to the late preexilic period.) H. Ewald (1840) proposed a reordering of Deutero-Zechariah to make Bertholdt's case even stronger. Ewald maintained that Zechariah 13:7–9 belonged originally after 11:7, since 13:7–9 and 11:4–17 both share the notion of indicting bad shepherds. Such a rearrangement allowed for an apparent coherent indictment of Israel's preexilic leaders to fall exclusively in Zechariah 9–11; whereas Zechariah 12–14, without 13:7–9, was eschatological in orientation and, therefore, later in date. The consensus on the dating of Zechariah 9–11 to the preexilic period and of Zechariah 12–14 to a later period began to break fundamentally with the challenges of Eichhorn (1823–24) and Stade (1881–82). Eichhorn theorized that Zechariah 9–10 stemmed from no earlier a time than that of Alexander the Great and that 13:7–14:21 probably derived from the Maccabean period. Stade advanced this argument for a late date of composition and maintained that Deutero-Zechariah was essentially one literary unit, rather than a variety of snippets from various dates in the Hellenistic period. For Stade, Deutero-Zechariah was a literary piece composed soon after the death of Alexander the Great.

With Stade's hypothesis, the basic options for interpreting Deutero-Zechariah were, more or less, complete: literary unity vs. literary diversity and preexilic vs. postexilic dates. These various conclusions in large measure mirrored the differing methods used by scholars; that is to say, some focused on literary style whereas others raised essentially historical questions.

Methodological diversity and remarkable variety in conclusions has continued in the twentieth century. For example, Elliger (*The Twelve* ATD) continued the impulse of Eichhorn by linking Zechariah 9:1–8 with the year 332 B.C.E. Standard introductions to the Hebrew Bible have, however, suggested something like a scholarly consensus: Zechariah 9–11 and 12–14 are separate booklets, each with its own complex literary history. Zechariah 9–11, which may include some preexilic material, achieved its final form in the Persian period, whereas chaps. 12–14 derive from the Hellenistic period.

2. Recent Studies. Diverse methods continue to provide differing ways of understanding Deutero-Zechariah, such that it has become difficult indeed to speak of scholarly consensus. Since 1960 there have appeared five studies, each of which uses a discrete or explicit combination of methods, arriving at conclusions not readily integrated with one another. Lamarche (1961) advocated the use of a literary structuralist method. He discerned an architectonic structure in Zechariah 9–14. Twelve primary units combined to form two entities of six units each: 9:1–8; 9:9–10; 9:11–10:1; 10:2–3a; 10:3b–11:3; 11:4–17 and 12:1–9; 12:10–13:1; 13:2–6; 13:7–9; 14:1–15; 14:16–21. Parallelism and chiasm relate the constituent units to each other in a complex way. A pronounced development of thought occurs throughout the six chapters which make up Deutero-Zechariah, a development which arises out of four primary themes: foreign nations, idols and false prophets, war and victory of Israel, and king and shepherd. Lamarche proposed to date the composition to ca. 500–480 B.C.E.

Otzen (1964) published not only a thorough review of the research but also a volume that focused upon historical-critical inquiry. He identified several units that derived from distinctive historical contexts: Zechariah 9–10, from Judahite circles in the Josianic period; Zechariah 11, from just before the fall of Judah; Zechariah 12–13 (12:2–13:1; 13:2–6; 13:7–9), which are early exilic, and Zechariah 14, which is late postexilic. Otzen's study did more than identify points of historical origin since he treated as well the matters of literary structure and tradition history, the former in dialogue with Lamarche's work when appropriate.

Saebø (1969a) used the form-critical method and identified thirteen primary rhetorical units, the compilation and recasting of which involved a complex process (e.g., the creation of Zechariah 9:1–8). Saebø's approach, as did Otzen's, allowed for the development of the literary history, whereas Lamarche's did not.

In an influential study on the origins of apocalypticism within Israel, Hanson (1975) devoted one chapter to Deutero-Zechariah and advocated the use of three methods: typological prosodic analysis, form criticism, and tradition history. The application of these methods allowed Hanson to identify six units in the text (9:1–17; 10:1–12; 11:1–3; 11:4–17 and 13:7–9; 12:1–13:6; 14:1–21) and to establish a

chronology for them; Zechariah 9:1–17, the earliest text, dates to the mid-sixth century, whereas Zechariah 14, the latest, derives from a period no later than 425 B.C.E. The use of form criticism enabled Hanson to place the Deutero-Zechariah rhetoric within the context of the history of Israelite literature (for example, the use of certain martial hymns) and tradition history enabled him not only to address the use of ANE mythological patterns in Deutero-Zechariah but also to treat the more general issue of the transition from prophetic to apocalyptic eschatology.

Childs (*IOTS*) has used canonical criticism to raise questions and answers different from all the above-mentioned studies. These questions are essentially twofold: what is the canonical (not simply literary) shape of Zechariah 9–14, and what is the relation of Zechariah 9:14 to Zechariah 1–8? Using form critical insights as part of his work, he answers the second question by suggesting that "the effect [of Zechariah 9–14] is to expand, develop, and sharpen the theological pattern of the end time which had begun to emerge in Proto-Zechariah" (p. 483). Whereas Zechariah 1–8 focused on the hope of a second exodus, this time from Babylon, that would constitute the end time, Zechariah 9–14 distinguishes between this new exodus and the anticipated final events. Statements about the canonical shape of Zechariah 9–14 cannot be answered apart from statements about the overall shape of the entire book. However, Zechariah 9–14 does introduce a new note, one "which distinguishes between the return from exile and the coming of the end time" (p. 483).

Methodological pluralism has, in the case of Zechariah 9–14, led to radically diverse assessments of the book. Because of this as-yet-unresolved diversity, the best current approach to the contents of the book is to take our methodological clues from the text itself, since there can be little argument that for the final redactor the book comprises two "oracles": Zechariah 9–11 and 12–14. (Zechariah 9:1; 12:1 and Mal 1:1 each begin with the word *massaʾ,* "oracle.")

B. Oracle One (Zechariah 9–11)

Zechariah 9 begins with oracles against foreign nations, a feature shared by the book of Amos. As is the case with the Amos oracles, in our literature, the states are those of Syria-Palestine: Philistia, Phoenicia, and Syria. Also similar to Amos, the cities within these territories are mentioned prominently, Yahweh's defeat of these nations and cities will enable him to be perceived as a guardian of his "house."

In Zechariah 9:9–13, Yahweh's role as military victor enables him to be construed as king; a royal procession into Jerusalem is envisioned. This kingship will secure peace for Israel and universal dominion for Yahweh (vv 9–10). Moreover, good news may be proclaimed to Jerusalem; its captives will be freed (vv 11–12). Those so liberated will function gloriously as Yahweh's military subalterns (v 13). Nonetheless, it is Yahweh who will perform the necessary military feats (v 14). As a result, those whom he is protecting will drink the blood of those who have been slain (v 15). Such victory will result in fertility and prosperity for the people, here construed as Yahweh's flock (vv 16–17).

In Zechariah 10, the tone shifts. Moreover, one senses less literary cohesion than in the foregoing chapter. In striking the note of fertility, Zechariah 10:1 establishes a link with the last verse of the previous chapter (v 17). Zechariah 10:2 comprises a judgment oracle, linking improper intermediation with current woe expressed in metaphoric terms: the people depicted as a flock without a shepherd. The key word "shepherd" joins 10:2 to 10:3. Although it seems clear that the term "shepherd" refers to the leader, it is not easy to determine whether the leader is Israelite or foreign. Zechariah 10:3–12 appears as an integrated poem which, apart from the indictment in v 3, provides words of weal, especially geographic restoration (vv 6, 8–11) and military victory (4–5, 7), though the foe is ill defined.

Zechariah 11 commences with what appears to be another standard oracle against a nation, here Phoenicia, spoken of as Lebanon. However, imperative rhetoric with an abundance of literary personifications predominate, for example, "O, cypress." What appears as a call to obedience quickly and ironically becomes a call to self-destruction: "Open your doors … that the fires may devour your cedars" (v 1). Zechariah 11:1–3 is filled with tree imagery: cedar, cypress, glorious tree, oak, forest, jungle. These symbols of verdure are consistent with the notion of fertility broached in 9:17–10:1. Here, however, the destruction rather than the commencement of fertility is at issue. The direct discourse in Zechariah 10:1 and 11:1–3, as well as the motif of fertility, create an *inclusio:* 10:1 with 11:3.

The remainder of Zechariah 11, save the woe oracle, v 17, is prosaic in style. Moreover, there is considerable scholarly sentiment in favor of linking Zechariah 13:7–9 with 11:4–17 since both texts condemn shepherds (and this despite the fact that 13:7–9 has a more consistent poetic form than does 11:4–16). Zechariah 11:4–16 is, formally, an autobiographical narrative, though the identity of the individual being described is unclear. Someone is charged with the task of being a shepherd over a doomed flock. Improper gain leads to doom for the "sheep." An individual performed this task (11:7–8) and then rejected it (11:9), since the flock was ultimately destined to die. The termination of the role of the shepherd is recounted in 11:10–14, which details the attendant ritual destruction of the symbols of office. Then, Yahweh again challenges an individual to be shepherd, though this time apparently without success (11:15–16). Within the context of this appeal, the author broaches the image of yet another shepherd, one who destroys. The role of the shepherd is ambiguous, though this metaphor typically refers to the royal office in the ANE. In the postexilic era, the metaphor might refer either to a civil or a religious leader. The tone of this chapter is decidedly negative in its references to both the leader and the people. The woe oracle in 11:17 repeats the notion of a worthless shepherd (so 11:15) and introduces curses upon this figure.

Zechariah 13:7–9 also focuses on punishment of the shepherd; here, however, it is Yahweh's or "my shepherd." But, as with 11:6–9, there is a strong sense of solidarity between the sheep/people and the shepherd/leader and the suffering they all will undergo. In Zechariah 13:8–9, there is provision for a remnant, a group that Yahweh will refine out of the population and that Yahweh will call, following the covenant formulary, "my people." Without these verses, Zechariah 11, as it caps off the first oracle, is negative in its implications; woe overshadows weal.

C. Another Oracle (Zechariah 12–14)

The editorial introduction specifies that this section is a "word of the Lord concerning Israel," unlike the case with Zechariah 9–11, an oracle against foreign nations. It is not surprising, therefore, that with chap. 12 literary style and theme change markedly. Prose overtakes poetry. Moreover, the connective tissue provided by the phrase "on that day" makes the composition appear atomistic. (That phrase appears in Zechariah 12:3, 4, 6, 8 [2x], 9, 11; 13:1, 2, 4; 14:4, 6, 8, 9, 13, and 20.) Despite these features which distinguish chaps. 12–14 from chaps. 9–11, this oracle does begin in a way similar to the first one, namely, by setting the international or cosmic context for what Yahweh is doing. There will be conflict between Yahwist and non-Yahwist (Zech 12:2a, 3, 4). The text includes stock images of judgment, including siege by many nations, to reinforce the severity of punishment that Judah will incur. Moreover, there will be intra-Israelite conflict (12:2b; this verse may be corrupt). The site of this conflict will be Jerusalem, though there is a competing tradition in which Judah suffers the same fate as does Jerusalem.

In 12:5–9, the author seems intent on articulating the special place Zion/Jerusalem and its inhabitants will have: Yahweh will glorify Jerusalem and its inhabitants. In addition, "the house of David" receives special and ambiguous mention. The house of David may not be exalted over Judah, but it will be like God. This section expresses a revised version of the Zion and David tradition, as that tradition is attested in Isaiah and Psalms.

In Zechariah 12:10–13:1, attention shifts to the Davidic house, its past sin and future possibilities. These verses are words of weal, presumably to the Davidides of the postexilic era. However, such promising words are conditioned by the persecution in which they (Davidides) have been involved (Zech 12:10). Moreover, this sin engendered by the Davidides will result in radical lamentation (12:11–14), not only by the Davidic house but by the entire ruling elite, including both priestly and royal elements.

With Zech 13:2–6, the author addresses a new topic—prophecy. One senses here a claim that prophecy in the preclassical or classical model is a thing of the past. If someone claims to be a prophet, "his father and mother who bore him, will say to him, 'You shall not live.' " If Zech 12:10–13:1 strikes a note of continuity with earlier Israelite traditions by allowing for a positive view of the Davidic house, then Zech 13:2–6 strikes a note of discontinuity by disallowing the possibility of prophetic performance.

In the final section, Zech 14:1–21, motifs already broached in Deutero-Zechariah recur, but in a more intense or cataclysmic manner. Many interpreters define this as a chapter more apocalyptic in its

orientation. There is also considerable reference to earlier prophetic literature. As with 12:1–13:6, the material appears fragmented because of the prominence of the phrase "on that day." And again the Zion tradition is adduced, namely, foreign nations will come up against Jerusalem and Yahweh will defend his city. In this attack on Jerusalem, Yahwists will suffer (14:2). Moreover, Yahweh's theophany will involve not only defeat of the enemy but also fundamental disturbance of the natural order (14:2–6). The appearance of Yahweh will also engender living waters, which will lead in turn to marvelous fertility (14:8). All of this results from Yahweh's manifestation as divine warrior, a role that allows him in turn to be acclaimed as king. (In Zechariah 14, the Davidide apparently has no royal role.) The royal city will remain exalted even as "the whole land" recedes, literally, in significance (14:10).

In Zech 14:12–15, the topic reverts to Yahweh's decimation of enemy peoples. Language from Israel's holy war traditions (v 13) as well as more general curse rhetoric (vv 12, 15) predominates in a way that direct language of military combat does not. Intra-Israelite conflict occurs as it had in Zech 12:1. After this ritual cosmic conflict, there is to be an enforced peace. Peace will occur within the context of pilgrimage to Jerusalem and cosmic celebration there of the Feast of Booths. A general threat of drought for those who do not celebrate this festival is provided as is a more specific threat of plague against Egypt. Finally, 14:20–21 underlines the ritual character of the ceremony and eventual resolution. The feast will occur at the temple and with the appropriate ritual paraphernalia. The booklet's concluding verse, 14:21, emphasizes that the requisite ritual purity for the celebration will be achieved.

Important themes which occur in both "oracles" include: (1) the prominence of military conflict, especially with Yahweh as warrior and against foreign nations; (2) criticism of a community's leaders, whether foreign or domestic; (3) future weal for Jerusalem and on behalf of some of Yahweh's venerators; and (4) the anticipation of a future which is very good but not utopian (especially Zech 14:17–19). Despite considerable formal diversity in Zechariah 9–14, there appears to be some thematic unity. Readers discover two versions of a cataclysm which they may construe as having a fundamentally positive outcome for some, although certainly not all, Israelites, and, especially for the city of Jerusalem. Zechariah 9–11 is colored by doom, and Zechariah 12–14 by promise. (For further discussion, see commentaries in TOTC, SB, HAT, CAT, CBC, ATD, and KAT.)

DAVID L. PETERSEN

ZECHER (PERSON) [Heb *zeker* (זֶכֶר)]. See ZECHARIAH (PERSON).

ZEDAD (PLACE) [Heb *ṣĕdād* (צְדָד)]. Part of the line of the N boundary of Israel as described in Numbers 34:8 (from the Priestly source). The boundary extends from the Great Sea to Mount Hor to the entrance of Hamath and the end of the boundary is Zedad (v 8), but v 9 continues the boundary to Ziphron and ends at Hazar-enan. Ezek 47:13 provides another description of the N side of the inheritance of Israel, which passes from the Great Sea by way of Hethlon to the entrance of Hamath and on to Zedad (v 15) and continues to Berothah, Sibraim (on the border between Damascus and Hamath) to Hazer-hatticon on the border of Hauran.

The Great Sea is usually thought to be the Mediterranean Sea, from which the boundary passes to Zedad in N Syria. Zimmerli (*Ezekiel 2* Hermeneia, 528–30), however, points out several variant opinions. Noth draws the line from the headwaters of the Jordan River, curving E into Syria or N Transjordan and then curving back to the E shore of the Sea of Galilee. This is the border of the tribe of Dan. For Noth (*Numbers* OTL, 249–50), the location of Zedad is uncertain, but presumably it is somewhere near the sources of the Jordan River. The Samaritan and LXX have Zerad, located at Kh. Serada in Marj ʿAyun, W of the Hasbany branch of the Jordan and N of ʿAbil. This identification would compel us to draw the ideal boundary along the Qasmiyeh Valley and E to Hermon, much too far S according to Elliger. He claims the description represents the N boundary in the time of David. The correct Zedad is Zadad (M.R. 330420) E of the road from Damascus to Aleppo via Homs, in the vicinity of Riblah, as pointed out earlier by Robinson (1841: 461, App. 171). Eichrodt (*Ezekiel* OTL, 589) describes Zedad as SE of Homs on the way from Riblah to Palmyra, 62 miles N of Damascus. He identifies Hamath with Hamath on the Orontes (Hama, 30 miles N of Homs, 115 miles N of Damascus). He was concerned that Damascus was not in Israelite territory, so he suggested that one might emend the text to Zerada, SW of Mount Hermon, as in the Samaritan version.

While the boundary descriptions may have some reflection in reality, as in the time of David, e.g., 2 Sam 24:1–9, they seem to be more of an ideal than a reality (Simons *GTTOT*, 98). Thus the inclusion of Damascus is not really a problem in locating Zedad or other sites. Zedad is on the edge of the desert, while Hazar-enan is the last oasis in the Syrian desert as one travels toward Tadmor (Palmyra). Cooke (*Ezekiel* ICC, 525) suggested that the Priestly writer (ca. 550 B.C.E.) idealized the past in Numbers, while Ezekiel idealized the future.

HENRY O. THOMPSON

ZEDEKIAH (PERSON) [Heb *ṣidqîyâ* (צִדְקִיָּה); *ṣidqîyāhû* (צִדְקִיָּהוּ)]. Meaning "Yah (or Yahu) is my righteousness," namely, "Yahweh is my right (He helped me to obtain my right)," or "Yahweh is my salvation" (*HALAT,* 944; *TPNAH,* 75, 358).

1. Son of Chenaanah; a prophet who promised Ahab victory against the Arameans at Ramoth-gilead (1 Kgs 22:1–28; 2 Chr 18:1–27). Ahab wishes to reconquer the city and asks Jehoshaphat king of Judah if he will help. Jehoshaphat agrees but suggests first seeking divine counsel by means of an oracle (cf. 1 Sam 23:1–5). Ahab gathers the four hundred prophets together, and they prophesy before the two kings in the *gōren,* here an open public place at the gate of Samaria (Gray *1 and 2 Kings* OTL, 450). While they are chanting a prophecy of victory, Zedekiah, about whom nothing else is known, apparently emerges from their midst and performs a symbolic act. He puts horns of iron on his head, indicating great power, and prophesies the destruction of the Arameans (cf. Deut 33:17; Jer 28:13–14). Zedekiah's prophecy, however, conflicts with that of Micaiah, who is summoned at Jehoshaphat's urging. Micaiah foretells disaster, including the death of Ahab, and attributes the false prophecy of victory to Yahweh's putting a lying spirit in the mouth of the king's prophets (cf. 1 Sam 16:14; Job 1). This divinely inspired power of prophecy lures the king to his destruction (Gray *1 and 2 Kings* OTL, 452–53). Zedekiah now strikes Micaiah on the cheek, so disclosing his anger and frustration. But each prophet believed Yahweh had inspired them both. See MICAIAH.

2. Son of Hananiah, a state official of Judah under King Jehoiakim (Jer 36:12). He was sitting with the other high officials when Micaiah reported on Jeremiah's oracles which Baruch had been reading aloud in the temple. Baruch was then asked to read the oracles to the assembled officials (vv 13–15).

3. Son of Maaseiah and contemporary of the prophet Jeremiah, who accused Zedekiah of prophesying falsely among the people in Babylon (Jer 29:21–23). He seems to have been one of several prophets against whom Jeremiah (Jer 29:8–9) makes the standard charges of prophesying a lie, dreaming dreams, deceiving the community, and not being sent by Yahweh (Carroll 1981: 190–91). Zedekiah is also

condemned for immorality in committing adultery, and therefore Nebuchadrezzar king of Babylon will kill him (v 22). No doubt he was involved in some political offense such as encouraging the people to revolt. He and Ahab son of Kolaiah were executed by roasting in the fire, which was a punishment used in Babylon over a long period (Thompson *Jeremiah* NICOT, 549; see Hammurabi laws 25, 110, 157 [ANET, 167, 170, 172]; Dan 3:6).

4. The last reigning king of Judah (ca. 597–586 B.C.), the uncle and successor of Jehoiachin; he died in Babylonian captivity. His given name was Mattaniah (2 Kgs 24:17).

Zedekiah was twenty-one years old on his accession, and he reigned eleven years in Jerusalem (2 Kgs 24:18; 2 Chr 36:11). His mother was Hamutal, daughter of Jeremiah of Libnah (2 Kgs 24:18). He was Jehoiachin's uncle (2 Kgs 24:17) and a younger brother of Jehoahaz and Jehoiakim. 2 Chr 36:10 calls him Jehoiachin's brother, but this should be understood in the sense of "relative," for the genealogical list in 1 Chr 3:15 makes him the third son of Josiah.

Zedekiah succeeded at a difficult time. In 597 B.C. Nebuchadrezzar had deported Jehoiachin and most of the leading citizens to Babylon (2 Kgs 24:15–16). As a result the new king lacked experienced advisers. The prophet Jeremiah compared those who remained in Judah to rotten figs, unfit for eating, and saw the future as lying with the exiles, whom he likened to the most tasty figs (Jeremiah 24). Zedekiah is portrayed in the book of Jeremiah as too weak to do what he knows is right: three times during the Babylonian siege Zedekiah approaches Jeremiah (Jer 37:1–10, 16–21; 38:14–28), but faced with the opposition of officials, courtiers, and people, the king feels unable to follow the prophet's advice and to surrender to Nebuchadrezzar. Jeremiah nowhere condemns Zedekiah, but he does denounce his advisers. The king, in fact, saves the prophet's life, though he cannot spare him imprisonment.

Kings and Chronicles say little about Zedekiah's reign until the siege of Jerusalem. The Babylonian Chronicle (Wiseman 1956) shows that Nebuchadrezzar had difficulty in subjecting Syria and Palestine. In 595 B.C. a revolt broke out in Babylonia (Garelli and Nikiprowetzky 1974: 153) and was put down with much loss of life. The Chronicle features a gap after Nebuchadrezzar assembles his army to march to Syria in December 594. This rebellion forms the background to Hananiah's words spoken "in the fourth year" (Jer 28:1). Hananiah proclaimed that God had broken the yoke of the king of Babylon and would bring back the exiles, including Jehoiachin, within two years. The "fourth year" is generally understood to refer to that of Zedekiah's reign, i.e., 594–593. Sarna (1978), however, argues that the reference is to the sabbatical cycle designating 597 and harmonizing with Jer 27:1, which places the same event *bĕrēʾšît mamleket yĕhôyāqīm*, translated, "in the beginning of Zedekiah's reign," reading with nearly all scholars "Zedekiah" for "Jehoiakim." Another possibility is to translate "after the completion of Jehoiakim's reign," avoiding the emendation as well as the contradiction with Jer 28:1, and forming a link with Jeremiah 26 which deals with Jehoiakim's reign.

Egypt seems to have been a factor in the opposition to Babylon. Neco II died in 595 B.C. to be succeeded by Psammetichus II, and a number of W nations now banded together to rebel. Jer 27:1–11 shows envoys from Edom, Moab, Ammon, Tyre, and Sidon coming to try and persuade Zedekiah to revolt against the king of Babylon. They failed in this endeavor, partly perhaps due to the attitude of Jeremiah, but also relevant may be the Judean mission to Babylon in the fourth year of Zedekiah (29:3; 51:59), which no doubt confirmed the king in his refusal to rebel at this time. Finally, however, he did rebel against the king of Babylon (2 Kgs 24:20), no doubt after making due preparations (Ezek 17:15).

There is evidence for military cooperation between Egypt and Judah in 593, and the following year Psammetichus II organized a triumphal visit to Palestine (Greenberg *Ezekiel 1–20* AB, 13). The pharaoh died in early 589 and was at once succeeded by Hophra (= Apries). It is against this background that Zedekiah's rebellion should be considered. According to Ezek 17:15, it is Zedekiah's government that takes the initiative in sending an embassy to Egypt and that breaks the alliance with Babylon. Ammon joins the coalition (Ezek 21:20), as does Phoenicia.

Nebuchadrezzar quickly marched to the West and established his headquarters at Riblah on the Orontes (2 Kgs 25:6, 20). He subdued Phoenicia, besieged Tyre, and sent his troops to reduce the Judean fortresses. Ezekiel has preserved a tradition of Nebuchadrezzar's indecision regarding his plan of

campaign (Ezek 21:26–27—Eng vv 21–22). After consulting the oracles, he sent an army to attack Jersualem. He himself remained at Riblah (2 Kgs 25:6, 20).

The account of the siege and fall of Jerusalem in 2 Kgs 25:1–21 is paralleled in Jer 39:1–10; 52:4–30 (cf. 2 Chr 36:13–21). The date of the siege is a vexed question and Fensham (1982: 56–57) counsels leaving the whole issue open. According to 2 Kgs 25:1 and Jer 52:4 (cf. 39:1) the siege began in the ninth year of Zedekiah's reign, in the tenth month, on the tenth day of the month; that is, on January 15th of either 588 (Kutsch 1974) or 586 (Malamat 1975; Vogt 1975) the walls were breached and the city fell. Zech 8:19 mentions that the "fast of the fourth (month)" and the "fast of the tenth (month)" were kept in later times, no doubt in memory of these two events.

The siege was interrupted when news came of an Egyptian advance (Jer 37:5). It is possible that this was in response to an appeal by Zedekiah, perhaps reflected in Lachish letter 3 (lines 13–16) which reports that Coniah, the commander of the Judean army, went to Egypt (*BHI*, 330; *TSSI* 1: 38). The Babylonians successfully countered this threat (cf. Ezek 29:1–16; 30:20–26; 31:1–18), though details of what happened are lacking. The siege was then resumed.

It is in this context that we must understand the oracle of Jeremiah accusing the rulers and people of perfidy (Jer 24:8–10). Zedekiah had entered into an agreement with the people of Jerusalem to free their Hebrew slaves, most probably in connection with the sabbatical law of Deuteronomy 15 (Sarna 1973). After the Babylonians withdrew to meet the Egyptian army, those who had been freed were again enslaved.

When the walls of the city were breached, famine had already brought the inhabitants to desperate straits (2 Kgs 25:3). Lamentations 4 portrays the horrors of the siege. Zedekiah tried to escape by fleeing toward the Arabah, the arid steppe region E of Jerusalem (Jer 39:4; cf. 2 Kgs 25:4–5; Jer 52:7–8) but was overtaken and captured by the Babylonians near Jericho (Gray *1 and 2 Kings* OTL, 765; James *1 and 2 Kings* NCBC, 642–43). Ezekiel describes Zedekiah's flight in graphic terms (12:12), while Obadiah reproaches the Edomites for handing fugitives over to the Babylonians (chap. 14).

Zedekiah was taken to the king of Babylon at Riblah, where sentence was passed upon him for breaking his covenant oath (cf. Ezek 17:11–21). His sons were killed in front of him and he himself was blinded, the ineluctable consequences of breaking the oath of allegiance (Deist 1971); he was then taken in chains to Babylon and put in prison. According to the LXX of Jer 52:11 he was confined in the "house of the mill," where he would have had to perform the degrading task of grinding with a hand-mill (van der Toorn 1986). He died in captivity. The prophecies of Jeremiah (34:2–5) and Ezekiel (12:13) were fulfilled.

There are some apparent discrepancies with regard to the dates in the biblical records. Jer 52:28 dates the first deportation in the seventh year of Nebuchadrezzar, while 2 Kgs 24:12 assigns the exile of King Jehoiachin and his officials to the eighth year. The Babylonian Chronicle seems to support Jeremiah, but it is likely that the Chronicle is simply relating all the events connected with the campaign in Judah to the seventh regnal year, which allows him to begin the eighth year, like the other years, with a new campaign (Vogt 1975: 225–28). 2 Chr 36:10 suggests that Jehoiachin's deposition and Zedekiah's accession took place in the eighth year. Jer 52:29 dates the second deportation to Nebuchadrezzar's eighteenth year, whereas 2 Kgs 25:8 dates it to his nineteenth year. It is possible that Jeremiah's deportation of 832 persons refers to those captured before the fall of the city, as it were its first fruits (Vogt 1975: 223–24).

Zedekiah was in a difficult position. Nebuchadrezzar appointed him king, but many believed that Jehoiachin would soon return and resume his rightful position as king of Judah (cf. Jer 28:4). Jehoiachin himself no doubt bore such a hope (Jer 22:27). Jeremiah, however, emphasized that God had rejected Jehoiachin who would never return (22:27). Yet Ezekiel dated his prophecies according to the exile of Jehoiachin (8:1, 20:1 etc.) and not the reign of Zedekiah. Even the Babylonians allowed Jehoiachin the rank of king (2 Kgs 25:28).

The Bible portrays Zedekiah as a weak ruler who "did not humble himself before Jeremiah the prophet" (2 Chr 36:12), that is, did not repent and so led God to forgive and restore (Williamson *1 and 2 Chronicles* NCBC, 416, 225). As a result, he brought ruin to Jerusalem and Judah. He appears to have

been pro-Babylonian and anti-Egyptian but failed to follow Jeremiah's advice and yield to Nebuchadrezzar. The Deuteronomistic historian passes judgment on the king in the standard formula, "He did what was evil in the sight of Yahweh" (2 Kgs 24:19).

5. An otherwise unknown son of king Jehoiakim (1 Chr 3:16).

6. A signatory to Ezra's covenant and probably an official acting in an unstated capacity (Neh 10:1 [Heb 10:2]).

ROBERT ALTHANN

ZEEB (PERSON) [Heb *zĕʾēb* (זְאֵב)]. One of the "princes of Midian" captured and killed during Gideon's war against the Midianites. See OREB AND ZEEB.

ZEIRAQOUN, KHIRBET (M.R. 239222). An Early Bronze Age site located about 12 km NE of Irbid and about 2.5 km SSE of Tell el-Mughayyir. The site sits on a plateau cut out of the fertile agricultural plain S of Wadi el-Yarmouk by two valleys, the Wadi eš-Šellale and Wadi Rahub.

N. Glueck surveyed the area from 1939–47, and again from 1963–65. Later S. Mittmann conducted an intensive survey which initiated the joint excavation project of Tell el-Mughayyir and Khirbet Zeiraqoun. In 1984 and 1985, excavations were directed at both sites by S. Mittmann and M. Ibrahim.

The area of Khirbet Zeiraqoun (ca. 400 × 300 m) is clearly delimited by the surrounding fortification wall. The area has fortunately remained uninhabited since the EB, which has made investigation much easier. The city wall is ca. 7 m thick and has been exposed for a distance of ca. 30 m. It is strengthened by a bastion at one point, making the defensive mass up to 15 m thick. The construction of the wall is characterized by parallel running seams. Across the wall are a series of niches, perpendicular to the length of the wall and irregularly spaced, in which beams were apparently inserted to reinforce the construction. The wall was used in two main settlement phases that are indicated by two compacted floors in which were small stones. The wall clearly belongs to the EB III, but earlier dates still need to be confirmed, although there is some evidence of Chalcolithic occupation.

Excavations in the inner area of the upper city revealed a stone-built circular platform which clearly seems to be an altar some 7 m in diameter. See Fig. ZEI.01. Its design, size, and date (EB III) correspond to altar 4017 from Megiddo. Cf. Fig. MEG.02. The altar, with steps from the E leading to the top, is located on the W edge of a court. S of the altar is a diagonal wall connecting the altar with a broadroom building which has an anteroom opening onto a court. In the anteroom, as in the main room, low benches of plastered stones border the base of each wall. Found within these rooms were a large, hemispherical stone basin and a rectangular stone platter. Within the broadroom was found a large amount of EB III pottery along with KHIRBET KERAK WARE. In this area was found also a complex of squares ca. 30 × 20 m. According to the ceramic evidence, the wall-like and pavement-like constructions belong to the EB IV.

Three stepped shafts lead to the water table from inside the town; these would attest to the site's importance during the EB Age. One of these shafts measures some 100 m deep, and descends to the base of Wadi eš-Šellale.

SIEGFRIED MITTMANN

ZELA (PLACE) [Heb *ṣēlaʿ* (צֵלַע)]. The name of a city in Benjamin. According to 2 Sam 21:14, it was the location of the ancestral tomb of the Saulides. It is likely that some of the patrimonial estates of the house of Saul and perhaps the clan of Matri lay within the city's limits.

In the Benjaminite city-list in Josh 18:21–28, the place name Zela ha-eleph, "ox-rib," appears (v 28) in a sub-grouping of fourteen cities (vv 25–28). In order to obtain fourteen place-names from the list, one must construe Ha-eleph as a separate site. However, the names Gibʿath and Kiriath grammatically appear to form a single site name, and they too must be counted individually to yield fourteen towns. It seems preferable to recognize two compound names within the group of twelve towns and to suggest that the summary phrase "fourteen cities with their villages" was a later editorial addition based on a misunderstanding of the elements in the older list. LXX a and b preserve different recensions of the list, including names not attested in the Hebrew, and both summarize the final count as thirteen. The former reads Zela-haʿeleph as a single entry, while the latter reads Selekan, and has no entry corresponding to ha-eleph. The city almost certainly is identical with Benjaminite Zela in 2 Sam 21:14.

It has been suggested that another variant of the name occurs in 1 Sam 10:2 in the form *Zelzah.* However, the grammatical construction of the verse favors an adverbial meaning for the phrase *bṣlṣḥ,* rather than representing a place-name introduced by the preposition "in." See ZELZAH.

The site of Zela is unknown. On the basis of presumed preservation of the ancient name, two identifications have been proposed: (1) Kh. Shʿab Salah, just S of Ramallah (Conder 1877: 38); and (2) Kh. es-Salah, immediately NE of Lifta, at the juncture of Wadi Beit Haninna and Wadi es-Somar (Dalman 1930: 61). The latter is the favored choice. Neither has been included in a published archaeological survey to date.

DIANA V. EDELMAN

ZELEK (PERSON) [Heb *ṣeleq* (צֶלֶק)]. Mentioned only in 2 Sam 23:37 (= 1 Chr 11:39), twenty-seventh in the list of "the Thirty," David's corps of military elite (*hagibbōrîm*). See DAVID'S CHAMPIONS . Zelek is identified as an Ammonite, perhaps one of many professional mercenaries attracted to David. Zelek's name stands in the latter portion of the list among non-Israelite entries, perhaps reflecting lower rank as well. It is possible that he should also be linked with the name Naharai/Horai (?) the Beerothite, as a weapon-bearer of Joab (McCarter *II Samuel* AB, 494, following the Kethib, *nôśĕʾê,* in v 37).

DAVID L. THOMPSON

ZELOPHEHAD (PERSON) [Heb *ṣĕlopĕhād* (צְלָפְחָד)]. The son of Hepher, the son of Gilead, the son of Machir, the son of Manasseh, of the tribe of Manasseh (Num 26:33; 27:1, 7; 36:2, 6, 10–11; Josh

17:3; 1 Chr 7:15). Zelophehad died along with the old generation in the wilderness leaving five daughters but no male heirs. In the case which his daughters, Mahlah, Noah, Hoglah, Milcah and Tirzah, presented regarding their legal right to their father's inheritance, they specified that their father did not die because he was among Korah's followers; rather he died because of his own sin (Num 27:2–4). Their request for the inheritance was granted and it became the occasion for the establishment of a new law regarding female inheritance in cases where a man dies without male heirs (Num 27:8–11). However, in order that the property continue in Zelophehad's name and tribe, it was further specified that the daughters must marry within their father's tribe (Num 36:1–11).

The regulations that grew out of the case of Zelophehad's daughters likely did not repeal the principle of levirate marriage (Deut 25:5–10). Weingreen (1966) suggests that the daughters' protestation of their father's innocence was a necessary part of legal procedure, a demonstration to the court that no legal impediment stood in the way of the transfer of property to Zelophehad's legal heirs. Moreover, he posits that the protestation testifies to an ancient law not recorded in the Pentateuch about the property of a person convicted of treason.

Although attempts have been made to cast light on the mysteries surrounding both the name and figure of Zelophehad (Lemaire 1972), he remains an enigmatic figure. Research into questions about the literary and theological purposes of the narratives about Zelophehad's daughters has proved more fruitful (Olson 1985; Budd *Numbers* WBC).

MARION ANN TAYLOR
J. GLEN TAYLOR

ZELZAH (PLACE) [Heb *ṣelṣaḥ* (צֶלְצַח)]. A dubious place name occurring only once, in 1 Sam 10:2.

Samuel predicts that Saul, while en route to his own home, will meet two men by Rachel's tomb at the border of Benjamin *bṣlṣḥ,* "at Zelzah," who will inform him that his father's asses have been found. The meeting constitutes the first stage of a three-part predictive sign by which Saul is to be reassured that his secret anointing is indeed the will of Yahweh. As frequently noted, the locale for the meeting is pinpointed very specifically by reference to the landmark tomb and its situation at the border of Benjamin, so that the appearance of the phrase *bṣlṣḥ,* which appears to function as another geographical indicator, is unnecessary and probably secondary (i.e., Budde *Samuel* KHC, 66; Smith *Samuel* ICC, 69; Driver *Samuel* 1913: 78; Stoebe *Samuelis* KAT,1, 197). In addition, the quadriconsonantal root yields a non-Semitic-sounding place name. Such concerns did not prevent the translators of the Syriac version and Targum Jonathan from following the MT's construal of the phrase as the preposition *bĕ* + Zelzah, a place name. If original, the phrase would best be interpreted as a temporal indicator or as a prepositional phrase describing action by the two men.

The Greek text renders the Hebrew phrase in three ways in its various manuscript traditions. Vaticanus reads *hallomenous megala,* "leaping greatly," presuming a Hebrew text reading *sōlĕḥim* for *hallomenous* and either *rbm* or *mgl/mʿl* for *megala,* depending upon whether the translator rendered the underlying Hebrew according to meaning or by transliterating the Hebrew consonants and adding vowels that would yield a familiar Greek word. The Latin translation of the LXX in the Polyglot Bible follows this rendering in its translation, *salientes granditer.* The term *megala* does not occur elsewhere in the LXX in an adverbial sense; and the root *ṣlḥ* cannot express the idea of leaping unless followed by the preposition *ʿal* and then only in a metaphorical sense; so the rendering seems to be a guess at interpretation by the translators.

The second rendering is found in the manuscripts of the Church Father Lucian (ca. A.D. 300), who augments the first rendering by adding an initial *mesēmbrias,* "at noon," after "in Benjamin." The same reading is reflected in the Vulgate's *in meridie.* Lucian's version appears to present two variant renderings

of the underlying Hebrew text, since *mesēmbrias* presumes a Hebrew consonantal phrase *bṣl ṣḥ,* "in glowing shade" (i.e., Driver *Samuel* 1913: 78; Tsevat 1962: 111) or *bṣhrym,* "at noon" (i.e., Dhorme *Samuel* EBib, 83; McCarter *1 Samuel* AB, 171).

The third rendering, *en Selo en Bakalath,* appears to be a transcription of an underlying Hebrew consonantal phrase rather than an attempt at translation. It would seem to presume a Hebrew text of *bṣlh bbklt.* This rendering precedes the first one, *hallomenous megala,* in certain mss. Three variant forms occur in various mss: *en Selom Bakala, en Selom Bakallath,* and *en Selo smaakalath.*

A number of attempts to reconstruct a plausible Hebrew consonantal text that would make sense in the established context have been made, highlighting the uncertainty of the original text and its meaning. Maintaining the MT consonants intact, one proposal suggests that the phrase reads "at Zelzah," reflecting a place name whose identity has been lost (Keil and Delitzsch 1872: 97; Klein *1 Samuel* WBC, 91). A second reads *bĕṣēl ṣaḥ,* "in scorching shade," deriving the substantive *ṣaḥ* from the root *ṣḥḥ* and translating "cloudless clear atmosphere" in the sense of scorching heat rather than of the sometimes presumed hot wind (Zimolong 1938: 175–76; for a slight variation, see Hertzberg *Samuel* OTL, 77). A third proposal favors the adoption of *bĕ‹ēt soḥŏrayim* "around noon," following the second variant reading attested in Lucian (i.e., Dhorme *Samuel* EBib, 83), while a fourth views the MT phrase to be a corruption of an original *bĕṣēlā‹,* reflecting the burial place of Kish (2 Sam 21:14) and entering v 2 as a scribal gloss (i.e., Smith *Samuel* ICC, 67; Miller 1974: 159–60). A fifth alters the final *ḥet* to a *lamed* and adds a *mem,* reading *bĕṣelṣĕlîm,* "with cymbals" or "with music" (Cappell 1689).

A sixth proposal alters the initial *bêt* to an *‹ayin* and the second *ṣade* to a *śin* to reconstruct the original text as *‹ēṣel śīaḥ,* "near a bush" (Caspar *Samuel* KAT, 111). A seventh, reconstructing a Hebrew text *ṣlḥy rbm* from the first Greek rendering, suggests that the resulting Hebrew text itself is a corruption of an original Hebrew consonantal text *ṣdym bkm,* "awaiting you impatiently," referring to Saul's father and his fellow townspeople's anxiously awaiting the return of Saul and his companion (Dalman 1929: 354). An eighth similarly proposes that the MT and Greek text both reflect a corrupted underlying Hebrew text but restores it as *ṣōpîm lĕkā,* "looking out for you," referring back to the two men (Budde *Samuel* KHC, 66). A ninth proposal links the phrase to the verbal expression used in vv 6 and 10, *ṣālāḥ ‹al,* "take possession," or "rush upon," and suggests that it was intended to indicate that the two men Saul would encounter were divinely possessed (Ackroyd *1 Samuel* CBC, 82). A tenth proposal reconstructs an underlying Hebrew text *bṣl‹m bmqlwt,* "in their limping on staffs," from the first and third Greek renderings (McCarter *1 Samuel* AB, 171).

Finally, an eleventh suggests that the third Greek rendering transliterates an original Hebrew *bṣlh b‹lh,* "at Silo of Ba‹alah," and that the resulting phrase is a geographical indicator referring to a hamlet in the neighborhood of Kiriath-jearim. Ba‹alah is an alternate name for Kiriath-jearim in Josh 15:9 and 1 Chr 13:6, the reported onetime home of the ark. The pilgrim Theodosius (ca. A.D. 530) refers to a site called Silona, where the ark of the Lord had been located (Tsevat 1962: 112, 114–15). In this case, the phrase would best be taken as a secondary gloss meant to clarify the location of Rachel's tomb in light of Gen 35:16–21.

DIANA V. EDELMAN

ZEMARAIM (PLACE) [Heb *ṣĕmārayim* (צְמָרַיִם)]. **1.** A town appearing in the list of cities belonging to the E part of Benjamin (Josh 18:21–24), possibly identifiable with Ras et-Taḥuneh (M.R.

170147; *LBHG*, 385; cf. *HGB*, 401). Shishak's campaign list in the Amon temple at Karnak also mentions this town (*CTAED*, 204).

2. A mountain in the hill country of Ephraim where Abijah of Judah met Jeroboam I of Israel in battle (2 Chr 13:4). The outcome of the battle was that Judah annexed part of S Ephraim.

The town Zemaraim and the mountain Zemaraim could be identified as the same location if one explains that the once Ephraimite Mt. Zemaraim was annexed and thereafter reckoned as part of a Judahite administrative district (as described by Josh 18:21–24), either by Abijah after his victory against Jeroboam I (Cross and Wright 1956: 222–23) or by Josiah through his annexation of territory from the Assyrian province of Samaria (Noth *Josua* HAT, 111–12).

WESLEY I. TOEWS

ZEMARITES [Heb *ṣĕmārî* (צְמָרִי)]. A people descending from Canaan, son of Ham and grandson of Noah (Gen 10:18; 1 Chr 1:16). They are associated in these genealogies with peoples who are found elsewhere in the OT among the native, pre-Israelite inhabitants of the land of Israel (Deut 7:1; Josh 3:10; 24:11). They were dispossessed under Joshua and during the settlement period. In Akkadian texts there are several references to a city of Ṣimir, Ṣimiri, or Ṣimirra, while the Amarna Tablets from Egypt refer to Ṣumur. All place it in Syria. Tiglath-pileser I (ca. 1116–1078 B.C.) refers to the city as lying S of Arvad. An exact identification of the site has not been made; but a location between Arvad and Tripoli, the area of the later Phoenicians, fits the evidence. See also *EncMiqr* 6: 740–42.

DAVID W. BAKER

ZEMER (PLACE) [Heb *ṣemer* (צֶמֶר)]. A city on the coast of Phoenicia near the mouth of the Elutheros river (Nahr el-Kebir) at the site of the modern town of Sumra, located between Arvad and Tripoli, just N of the Syrian-Lebanese border. Zemer was conquered by Thutmose III of Egypt in the 15th century B.C. but was lost in the Amarna period. Seti I captured it again later in the 14th century B.C. During the Assyrian supremacy it, like other Phoenician cities, became tributary to Tiglath-pileser III and those who succeeded him. It is possibly this city that is referred to by the conjectural rendering Zemer [Heb *ṣemer*] in Ezek 27:8, RSV, where the Masoretic Text reads *ṣôr*, "Tyre." Zemer was inhabited by one of the Hamite tribes, who are represented in the genealogical tables as "sons of Canaan" (Gen 10:18; 1 Chr 1:16). The men of Zemer were noted for their skilled service as pilots on the Tyrian ships (Ezek 27:8).

RAY L. ROTH

ZEMIRAH (PERSON) [Heb *zĕmîrâ* (זְמִירָה)]. A Benjaminite, son of Becher (1 Chr 7:8). Nowhere else are the sons of Becher listed. The genealogical list found here bearing Benjamin's name follows Issachar. Normally Zebulun, who is missing from this list, follows Issachar. Another Benjaminite genealogical list occurs later in its normal sequence (1 Chronicles 8). This second list does not list Becher as a son of Benjamin or consequently Zemirah. Genesis 46 is the only other place Becher the Benjaminite is mentioned, and there the families are not mentioned. If Benjamin has mistakenly replaced Zebulun in this list, then Becher would be a son of Zebulun, and Zemirah would be a Zebulunite rather than a Benjaminite. Noth (*IPN*, 242) and BHS read the fem. ending and thus *zĕmaryāh* with LXX^{AL}.

TOM WAYNE WILLETT

ZENAN (PLACE) [Heb *ṣĕnān* (צְנָן)]. A town situated in the Shephelah, or lowlands, of Judah (Josh 15:37), within the same district as Lachish. This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster

compiled under the Judean monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the Monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). It may be the same place as Zaanan, which appears in Mic 1:11 along with several other lowland towns in the prophet's lament over the fate of Judah and Jerusalem. Although ancient Zenan is surely to be found in the general vicinity of Lachish, no more precise identification can be offered at the present time.

WADE R. KOTTER

ZENAS (PERSON) [Gk *Zēnas* (Ζηνας)]. A Christian, identified as a lawyer, whom "Paul" urged Titus to speed on his way from Crete along with Apollos (Titus 3:13). The name Zenas is Greek, a contraction of *Zēnodōros,* "gift of God." Zenas is described as a *nomikos,* meaning "learned in the law," or "lawyer," although it is not clear whether he was an expert in Jewish law (e.g., a scribe or rabbi versed in the Torah), Roman law, or Greek law. Three different reasons can be given to explain his identification by the author of Titus as lawyer: (1) simply to distinguish him from another person of the same name; (2) to show that "Paul" was free from prison when the letter was written and no longer needed Zenas' services; (3) to demonstrate that the Church of the author's day attracted to itself individuals with this status (from an earlier period, cf. Erastus, the city treasurer, Rom 16:23).

It is often assumed that Zenas and Apollos, who is named with him, were with "Paul" when the letter was written and that these two delivered the letter, after which they were to be sent on their way (back to Paul?). It has also been inferred from Zenas' association with Apollos that he, like Apollos, was a Christian preacher. In sending the two men back, Titus is instructed to "see that they lack nothing" (3:13). They were to be provided with whatever provisions they needed for the journey.

According to post-NT tradition (the Greek Menologies), the first bishop of Diospolis (Lydda) in Palestine was Zenas, who wrote a letter to Titus; but this letter was most likely attributed to that bishop from the reference to the Zenas named in Titus 3:13. Also, in the *Acts of Paul* 3.2 a certain Zenon is named as a son of Onesiphorus (cf. 2 Tim 1:16; 4:19), thus leading some commentators to see a possible connection between him and the Zenas mentioned in Titus 3:13 (Dibelius and Conzelmann *The Pastoral Epistles* Hermeneia, 153).

JOHN GILLMAN

ZEPHANIAH (PERSON) [Heb *ṣĕpanyâ* (צְפַנְיָה), *ṣĕpanyāhû* (צְפַנְיָהוּ)]. **1.** A Kohathite and ancestor of the levitical singer Heman (1 Chr 6:21—Eng 6:36). He is the son of Tahath (6:22—Eng 6:37; cf., however, 1 Chr 6:9—Eng 6:24, where Uriel is named as the son of Tahath).

2. A prophet during the reign of Josiah (640–609 B.C.E.). He is identified as son of Cushi, son of Gedaliah, son of Amariah, son of Hezekiah (Zeph 1:1). This extended genealogy is exceptional. Although Jer 36:14 is comparable (cf. also Bar 1:1), it is to be noted that this verse is very possibly to be emended to read "Jehudi son of Nethaniah *and* Shelemiah son of Cushi." In the case of Zephaniah's father, it is not clear whether the designation "Cushi" (Heb *kûšî*) represents a proper name or the gentilic form. If the gentilic form ("the Cushite") is intended, this alternative does not necessarily signify that Zephaniah's father was of foreign descent. However, it is possible that the extended genealogy does reflect a concern to avoid any possible misunderstanding occasioned by the name of Zephaniah's father and seeks to demonstrate that the prophet was in fact of native descent. It is improbable that the Hezekiah named as Zephaniah's great-grandfather was the Judean king by that name, although the possibility cannot be ruled out on chronological grounds. Apart from what is stated in the superscription, the book of Zephaniah provides no further information relating to the person of the prophet. It is apparent that Zephaniah exercised his prophetic ministry in Jerusalem. A bulla which dates from the early 6th century and which is

inscribed *lyrmyhw bn ṣpnyhw bn nby[ʾ?]* has been found at Lachish (see Seybold 1985: 64–65; and inscription no. 31 in Hestrin et al. 1972: 25 [Eng], 36 [Heb]). Although certain identification is impossible, the inscription may refer to the prophet Zephaniah. If this is the case, Zephaniah was the father of Jeremiah (the owner of the seal), who appears to have been a member of a prophetic guild. See also ZEPHANIAH, BOOK OF.

3. "Second priest" of Jerusalem (next in rank to Seraiah) and one of the royal officials put to death in Riblah by the Babylonians in 587/586 B.C.E. (Jer 52:24–27; 2 Kgs 25:18–21). He was preceded in this office by Jehoiada (Jer 29:26). As the son of Maaseiah (Jer 21:1; 37:3), Zephaniah may have been a cousin of the prophet Jeremiah (cf. Jer 32:7; 35:4). On two occasions Zephaniah was a member of a deputation sent by Zedekiah to consult Jeremiah (Jer 21:1; 37:3; some scholars believe 21:1–7 and 37:3–10 to be different accounts of the same event). Zephaniah's responsibilities included the maintenance of order in the temple (Jer 29:24–27; cf. Jer 20:1–2). In a letter written by the exiled prophet Shemaiah, Zephaniah is reprimanded for not having rebuked Jeremiah (Jer 29:27; the LXX has a different reading in 36:27). However, rather than punishing Jeremiah, Zephaniah is reported to have read to Jeremiah the letter which he received from Shemaiah (Jer 29:29).

4. The father of Josiah, to whose house Zechariah was commanded to take the gold and silver received from the exiles Heldai, Tobijah, and Jedaiah (Zech 6:10, 14). Possibly he is to be identified with #3 above. In 6:14 Josiah's name has been replaced by *ḥēn* (RSV reads "Josiah" with the Syriac and 6:10). It has been proposed that the word *lĕ ḥēn* in 6:14 may be an administrative title (cf. Neo-Assyrian *laḫḫinu* and Aram *lḥn*) and that Josiah was a temple steward in charge of cultic apparel (Demsky 1981). It is to be noted that some commentators and translations favor a reading of 6:10 which would include Josiah, son of Zephaniah, among those who returned from Exile bearing gold and silver (e.g., NEB).

JOHN M. BERRIDGE

ZEPHANIAH, APOCALYPSE OF. An early Jewish text describing the cosmic journey of a righteous soul accompanied by an angelic guide who interprets the seer's visions of torment, heavenly intercession, and final judgment. Only fragments of this work have survived. The largest extant portion of text is a Coptic ms in the Achmimic dialect which was found in the White Monastery of Shenoute near modern Sohâg in Upper Egypt. Separate leaves of the manuscript were purchased by European scholars between 1881 and 1888 and published together with a much smaller fragment in the Sahidic dialect by G. Steindorff in 1899. Prior to that time, our only knowledge of an ancient *Apocalypse of Zephaniah* was a brief quotation by Clement of Alexandria (*Str.* 5.11.77) and mention in three early Christian lists of apocryphal writings.

The anonymous *Catalogue of the Sixty Canonical Books* included a work entitled the *Apocalypse of Zephaniah.* The *Synopsis scripturae sacrae* of Pseudo-Athanasius and the stichometry appended to the chronography of Nicephorus also list an apocryphal book attributed to Zephaniah. The latter source assigns it a length of 600 stichoi. There is little reason to doubt the traditional opinion that all three citations refer to the work that Clement quotes. That quotation describes

> And a spirit took me and brought me up into the fifth heaven. And I saw angels who are called "lords," and the diadem was set upon them in the Holy Spirit, and the throne of each of them was sevenfold more (brilliant) than the light of the rising sun. (And they were) dwelling in the temples of salvation and singing hymns to the ineffable most high God. (*Str.* 5.11.77)

The fragment which is preserved in Sahidic is about three times the length of Clement's quotation, and it contains the very important notice that "Truly, I, Zephaniah, saw these things in my vision." That is the

only internal evidence in any of the surviving fragments that the seer was Zephaniah. The Sahidic fragment is closely related to the longer Achmimic text, although it does not contain any of the episodes described in the surviving Achmimic text. The Sahidic fragment employs such exact parallels in literary expression that it may be identified as part of the same text, possibly fitting somewhere within a lacuna of the Achmimic manuscript, or else as part of a slightly expanded Sahidic recension. In any case those two Coptic fragments can be regarded as part of the same *Apoc.Zeph.*

The relationship of Clement's quotation to the Coptic fragments is more problematic. The quotation does not match any episode in the Coptic fragments nor does it share any characteristic phrases. Carl Schmidt, who assumed that the Coptic text was part of the *Apoc.Zeph.* cited in the stichometry, was of the opinion that the Achmimic fragment contained only about one-fourth of the complete work. If that is true, there would be plenty of room to include a trip to the fifth heaven. If, on the other hand, the Achmimic fragment is virtually complete, such an inclusion would not be possible. Because of the literary genre, it is difficult to determine how complete the Coptic text may be. That difficulty can best be described on the basis of a relatively detailed outline of the content of the text.

The beginning of the Achmimic text is missing. It now starts with a fragmentary description of a funeral, followed by a cosmic journey on which the seer is led by an angelic guide. The journey provides visions from six different locations before the seer crosses a river to reach the land where Abraham, Isaac, Jacob, Enoch, Elijah, and David reside. In that place four additional visions are each accompanied by a trumpet blast. After the fourth blast, the incomplete text breaks off in the middle of a sentence.

Within that framework, the series of visions described during the journey include:

(1) Scenes from above Jerusalem, where the seer observes men and women going about their daily tasks unaware of the tenuous nature of human life, which hangs "like a drop of water suspended from a bucket." The scene ends with a glimpse of tormented souls and the seer's plea for God to have compassion on them. (2) Scenes from the top of Mt. Seir, where the seer learns that recording angels continually accompany men. Angels of the Lord record their good deeds and angels of the Accuser write down their sins. (3) A vision of ugly angels, who bear the souls of ungodly men and circulate for three days in the air before casting the souls into eternal punishment. (4) A brief vision of a beautiful heavenly city. (5) Scenes of a fiery sea and Hades, where the seer is confronted by an ugly threatening angel, but delivered by the good angel, Ermiel. While there, the seer is shown two manuscripts, one containing his sins and one relating his good works. The description of the second manuscript is incomplete because at least two pages of the Coptic text are missing at that point. (6) The ms resumes with a fragmentary scene from the crossing of a river between Hades and the land of the patriarchs. The seer is praised and given an angelic garment which enables him to understand the language of the angels and join them in prayer.

The four trumpet scenes include: (1) a vision in which the seer is declared triumphant and sees the six Old Testament heroes mentioned above. (2) A vision of Hades and tormented souls. (3) A vision of the patriarchs and all of the righteous performing intercessory prayer for those in torment. (4) A trumpet blast which precedes a description of God's coming wrath.

As the synopsis shows, the surviving text contains a number of separate visions loosely bound together by the motif of travel or of trumpet blasts. There are abrupt changes of subject. After contemplating the fleeting nature of all human life, the seer suddenly intercedes with God on behalf of the tormented. On top of Mt. Seir, the seer learns that angels record both the good and evil deeds of men, and then he travels to Hades, a place of judgment, where he confronts his own two recorded manuscripts. Between Mt. Seir and Hades, however, are two less connected visions: a fleeting glance at ungodly souls about to be cast into eternal punishment and a very brief vision of a heavenly city. After arriving at the land of the blessed patriarchs, the seer once again sees Hades, but now it is a place of torment. The seer is delivered from scenes of torment in two places, the beautiful city and the land of the patriarchs, but the reader is left to guess how those good regions are related.

Abrupt shift of scene, digression, and repetition are characteristic features of many of the ancient pseudepigrapha, particularly apocalyptic writings such as *1 Enoch, 2 Enoch, 3 Baruch,* and the *Apocalypse of Paul*. Each contains similar accounts of seers who are guided on a cosmic journey by an

angelic guide. In the composition of such works, anonymous authors, editors, and copyists freely expanded and abbreviated existing episodes or inserted new visions until each account of the heavenly journey received its final editing. The *Apoc.Zeph.* bears marks of the same sort of evolution. In working with episodic literature of that type, scholars are unable to reconstruct what may have preceded or followed the portion of text contained in the Achmimic fragment. Consequently, it is possible but not demonstrable that the episode in the fifth heaven described by Clement belongs to the same apocalypse as the Achmimic fragment. For contrasting opinions, see Himmelfarb (1983: 157) and Wintermute (*OTP* 1: 498–501).

The date of the *Apoc.Zeph.* cannot be determined precisely, but the fact that the author alluded to the story of Susanna would date it later than the circulation of the Greek additions to the book of Daniel. If the quotation in Clement belongs to the same apocalypse, the text must be dated long enough before the writing of his *Stromata* to have gained credence as an authentic apocalypse. A similar early date would seem to be called for by Himmelfarb, who suggests that the source of Clement's quotation might be "a reworking … of an earlier Zephaniah Apocalypse now preserved in Coptic" (1983: 158). Recent research tends to support a date between 75 B.C. and A.D. 150.

The provenance cannot be fixed with certainty, but a case can be made for Alexandria. The general opinion is that the text was originally composed in Greek. The writer notes as an ethical failure "a day when I did not turn to the sons of Israel," a comment which suggests the enticement of a Diaspora Jew. A citation by Clement makes it clear that some version of the apocalypse was known in Alexandria, and the existence of both Sahidic and Achmimic fragments demonstrates its continued widespread use in the later Coptic church in Egypt. If the text was composed by a Jew living in Alexandria, however, it should be dated before the destruction of the Jewish quarter in A.D. 117.

Although the *Apoc.Zeph.* is fragmentary, it is an exceptionally important witness to Jewish views of angelology, intercessory prayer, afterlife, and the ethical bases for judgment of the dead. The angelology is moderately dualistic. There are beautiful angels who assist the righteous and ugly angels who are sent to terrify sinners. The "Accuser" is the most important ugly angel, but there is nothing to suggest that he operates in opposition to God as either a fallen angel or chief of demons. His role is similar to that of Satan in the book of Zechariah. All souls are judged by a very sensitive code of ethics. It was recorded as sin when the seer failed to fast, pray, or visit the sick, widows, and orphans. Souls are tormented for sins of bribery, usury, and apostasy, but the patriarchs and righteous souls continually intercede for those in torment. The journey of the seer follows the route of a righteous soul past a judgment in Hades to an afterlife of praise, prayer, and intercession in the land of the patriarchs and righteous.

The text shares several interesting literary images with the NT. It contains a proverbial saying which describes the transitory nature of life by observing two men on a road, two women working at a millstone, and two people in one bed. Matt 24:40–41 and Luke 17:34–35 employ the same vignette to describe the sudden end of the present age. The seer was rebuked when he worshipped the splendor of an angel whom he mistook for the Lord Almighty. A similar scene appears at Rev 19:10. The seer's description of the angel Ermiel is based on a figure appearing in Dan 10:11–15. That description was modified by omitting notice of a "body of beryl," comparing the radiance of his face to the sun, and identifying the figure as one responsible for those imprisoned in the abyss and Hades. The same details appear as part of the description of the risen Christ, who has "the keys of Death and Hades" at Rev 1:13–18. It would appear that the description of Christ is partially based on a traditional Jewish model of a benevolent angel who delivered justified souls from the dead.

The most significant subsequent influence of the *Apoc.Zeph.* is its use by the author of the *Apocalypse of Paul.* All versions of that work exhibit some familiarity with the *Apoc.Zeph.* but the Coptic version has the most extended literary parallels, providing a further indication of the continued popularity of that apocalypse in Egypt.

ORVAL S. WINTERMUTE

ZEPHANIAH, BOOK OF. The ninth book of the Twelve Minor Prophets of the OT, containing the oracles of the prophet Zephaniah. Zephaniah was a Judahite prophet active during the reign of Josiah (640–609 B.C.E.), probably before the reforms undertaken by Josiah as a result of the declining power of Assyria. Attempts to locate Zephaniah later, in the reigns of Jehoiakim or Zedekiah, have not generally won assent. The Josianic date for Zephaniah is consistent with the Deuteronomistic features of the text: e.g., "the host of heaven" in 1:4 (cf. Deut 4:19; 17:3; 2 Kgs 17:10; 21:3; Jer 8:2), worship "on the rooftops" in 1:5 (cf. 2 Kgs 23:12; Jer 19:13; 32:29), and the futility curse in 1:13 (cf. Deut 28:30).

In addition to locating Zephaniah's prophetic activity in the reign of Josiah, the editorial heading of the book (1:1) provides the prophet with a four-generation genealogy that traces Zephaniah's lineage back to Hezekiah. While most scholars have regarded as unprovable Zephaniah's descent from the 8th-century reforming king Hezekiah of Judah, Wilson (1980: 279–80), emphasizing the unusual character of the abnormally long genealogy, has argued for the royal descent of Zephaniah, a prophet who called for reform from within the political and religious establishment.

Zephaniah is firmly in the prophetic tradition of the great Judahite prophets of the 8th century, such as Isaiah (cf. Zeph 3:1–3; and Isa 1:21–23) and Micah (cf. Zeph 3:3–5; Mic 3:1–12); and Zephaniah's theme of the exaltation of Zion (3:14–18), to which the nations will bring tribute (3:10), reminds one of Isa 2:2–4 (= Mic 4:1–4). Zephaniah also shares features and concerns with his contemporary Jeremiah and with the 6th-century prophets Ezekiel and Deutero-Isaiah; among these shared features is apocalyptic eschatology (1:2–3, 7–8, 14–18), a development of late preexilic prophecy that flourished in the prophetic writings of the Exile.

A. The Unity and Authenticity of Zephaniah

The unity and authenticity of this book have been a subject of some debate. An older tradition of historical-critical scholarship analyzed the book as composed of a core from the prophet Zephaniah supplemented by more or less extensive additions and glosses. An extreme form of this view saw only chap. 1 and 2:12–15 as authentic material by the prophet of the Josianic era, with the rest of the book assigned to the exilic or postexilic eras. Current study tends to assign the greater part of the book to the 7th-century prophet Zephaniah, recognizing that the book may have been expanded in the exilic and postexilic periods, in such passages as, e.g., 2:8–11 (in which the oracles against Moab and Ammon are believed by some commentators to reflect the era and conditions of the Exile) and 3:14–20 (considered by many to be a postexilic addition; but see below).

B. The Text of Zephaniah

While the Masoretic Text (MT) of Zephaniah is generally without difficulties, there are a number of passages that contain obscurities (e.g., 1:2, 14; 2:1–2; 3:17–19). Further textual data are now available from the Dead Sea Scrolls: two fragmentary pesharim (commentaries) on Zephaniah from Qumran Cave 1 (1QpZeph 1:18–2:2) and Cave 4 (4QpZeph 1:12–13) and a scroll of the Minor Prophets from Murabaʿat, dating from ca. 100 C.E., containing most of Zephaniah (1:1; 1:11–3:6; 3:8–20) in a textual tradition very close to the MT.

The Septuagint (LXX) of Zephaniah has been studied exhaustively by Gerleman (1942), who concluded that the LXX *Vorlage* of the consonantal text of Zephaniah, while not identical to the MT, stood very close to it, despite variants due to scribal errors, omissions, glosses, different word divisions and vocalizations, and a few instances of possible tendentious translations, e.g., in 2:11, where the Hebrew *ʾĕlōhê hāʾāreṣ* ("the gods of the earth") was translated as *tous theous tōn ethnōn tēs gēs* ("the gods *of the peoples* of the earth") under the influence of Jewish monotheism. Finally, a Greek translation of the twelve Minor Prophets from the 1st century C.E., discovered at Naḥal Ḥever (8 Ḥev XII gr) contains

fragments of Zephaniah (1:1–4, 13–17; 2:9–10; 3:6–7). The importance of this discovery for LXX textual studies has been demonstrated by D. Barthélemy (1963; for the Zephaniah fragments, see 163–78).

C. The Structure and Contents of Zephaniah

The structure of the book of Zephaniah follows the familiar prophetic pattern of oracles of disaster and judgment (1:2–3:8), followed by oracles of salvation (3:9–20). The book begins with an apocalyptic picture of universal world judgment (1:2–3) which will fall first upon Judah and Jerusalem (1:4–2:3). This picture is followed by a series of oracles against the nations (2:4–15), a traditional prophetic speech form. In Zephaniah 3, there is a repetition of the pattern of divine judgment on Jerusalem (3:1–5) and on the nations (3:6–8), followed chiastically by promises of salvation to the nations (3:9–10) and to Zion (3:11–20).

1. Zeph 1:1–6. The editorial heading is followed by an apocalyptic picture of universal judgment (1:2–3) in which annihilation will be the fate of "human and beast, birds of the heavens and fish of the sea"; this series of four is the same as that which occurs in Gen 1:20–26 but in reverse order (fish, birds, beasts, and humans). The inversion in Zephaniah is probably meant to describe God's act of judgment as an act of "anti-creation" (Hos 4:1–3; Jer 4:23–26). The conclusion of the gloss in 1:3 ("I will cut off humankind from upon the face of the earth") is similar to such Deuteronomistic passages as Deut 6:15; 1 Kgs 9:7; 13:34 (cf. Amos 9:8).

In 1:4–6 the perspective shifts from world annihilation to the divine punishment of Judah and Jerusalem for idolatrous practices; these idolatrous cults condemned by Zephaniah were abolished by Josiah (2 Kgs 23:12–13). For the extending of God's hand as a gesture indicating divine punishment, see Ezek 14:13; 25:13, 16, where it is paired with "cut off" as in Zeph 1:4. Verse 5 contains further Deuteronomistic language, as was pointed out above.

2. Zeph 1:7–13. In this section the theme of the "day of Yahweh" is introduced; here as in Amos 5:18–20, it is a day of national punishment (of Israel for Amos, of Judah for Zephaniah). On that day God will prepare a great sacrificial feast, in which will be slaughtered the cosmopolitan, assimilated officials who offended God by their foreign cults and by filling the royal palace (or the temple) with goods gotten by violence and deceit (cf. Jer 5:27). For a similar description of the Day of Yahweh see Isa 34:1–8.

The districts mentioned in vv 10–11 were new Jerusalem suburbs from the time of Hezekiah or Manasseh (2 Kgs 22:14 [= 2 Chr 34:22]; 2 Chr 32:5; 33:14; Neh 11:9; 12:39). The punishment of the complacent and indifferent (v 12) is a futility curse (cf. Amos 5:11). Zeph 1:4–12 are a vivid portrayal of Jerusalem before Josiah's reforms.

3. Zeph 1:14–2:3. In 1:14–18 the apocalyptic Day of Yahweh reappears; this time divine punishment is not described as God's great sacrifice of those who worshipped other gods, but as God's warfare against Judah (Isa 13:9–13; Joel 3:1–5). Concluding this section is an exhortation to the "poor of the earth" to avert God's wrath by "seeking Yahweh"; the failure to do so in 1:6 brought divine judgment.

4. Zeph 2:4–15. This section contains a series of oracles against the nations, a standard element in prophecy (Amos 1–2; Isaiah 13–23; Jeremiah 46–51). In Zephaniah these oracles provide the theological basis for Josiah's program of political expansion in the era which saw the waning of Assyria's might. This expansion by Josiah first extended to the Philistine pentapolis (less Gath, as in Amos 1:6–8, which perhaps had already been destroyed—Amos 6:2). In a series of double entendres, the Philistine cities are personified as women whose fates will be abandonment, spinsterhood, divorce, and barrenness.

The "Cretans" (RSV CHERETHITES) appear nine other times in the OT (1 Sam 30:14; 2 Sam 8:18; 15:18; 20:7, 23; 1 Kgs 1:38, 44; 1 Chr 18:17; Ezek 25:16) as mercenaries who may have come to Canaan along with the Philistines, whose traditional place of origin was Crete (Caphtor: Jer 47:4; Amos 9:7). Zephaniah declares that their coastland will be uninhabited, fit only for pasturage (Isa 17:1–2; 27:10; 32:14; Ezek 25:5).

The theme of the "remnant" appears in 2:7, as it will again in 2:9 and 3:12–13. It is not an innovation of Zephaniah since it was used by the preexilic prophets. In Amos, the survival of only a remnant underlines the almost complete annihilation of Israel (3:12; 5:13, 15). Isaiah speaks rather of a purified, repentant remnant that survives the catastrophe (10:20–22; 11:11, 16; 28:5). In Zeph 2:7 "the remnant of the house

of Judah" takes possession of land previously held by Cretans, Moabites, and Ammonites. In 3:12–13 the remnant of Israel is described as "a people humble and lowly who take refuge in the name of Yahweh"—the same people as those addressed in 2:3 as "the humble of the land" who may find shelter on the day of Yahweh's wrath. This remnant of the lowly and humble will survive the calamities of the Day of Yahweh, and their survival will make possible a reformed and renewed people beyond the divine judgment of sinful Judah.

Like the Cretans in 2:5–7 and Nineveh in 2:13–15, Ammon and Moab (2:8–11) are addressed with traditional curses: they shall be without inhabitant (2:5), land fit only for pasturage (2:6–7), like Sodom and Gomorrah (2:9), the dwelling place of wild animals (2:14, 15), an object of horror to passersby (2:15). For similar curses see Isa 13:19–22; 34:11, 13–15; Jer 18:16; 19:48; 49:17–18; 50:13, 39–40; 51:37. The curse in 2:9 (a wasteland of weeds and salt pits) has two noteworthy extrabiblical parallels in an 8th-century Aramaic treaty (Sefire, *KAI* 1: 222) and in the 7th-century Akkadian annals of Assurbanipal (*LAR* 2: 310).

In 2:11 Yahweh's superiority over "all the gods of the earth" brings about submission and worship from the nations who served these gods. In 2:12 the Cushites (Ethiopians) are destroyed by the sword of Yahweh (Isa 34:5–6; Jer 47:6; Ezek 21:8–10). In the oracle against Assyria (2:13–15), Yahweh again stretches out his hand (as in 1:4) in judgment. Using the traditional curse formulas described above, Yahweh turns Nineveh into a desert waste and a lair of wild beasts that make the passerby shudder.

5. Zeph 3:1–5. The series of oracles against the nations in 2:4–15 is followed by an oracle of judgment against Jerusalem. This sequence of oracles against the nations climaxing in an oracle against Judah's principal city may derive from Amos 1–2, wherein the prophet closes his invective against Israel's former vassals (1:3–2:3) with oracles against Judah (2:4–5) and Israel (2:6–16). The judgment pronounced against Jerusalem in Zeph 3:1–5 recalls a similar passage in Isa 1:21–26, where the leaders of Judah (princes, judges, and counselors) are denounced for their dishonesty and corruption. Similar denunciations are found elsewhere in prophetic literature (Mic 3:1–7, 9–11). The instance of this traditional form in Zephaniah is especially interesting in that it served as the model and prototype of Ezek 22:25–28.

There is an effective contrast between the "princes in her midst" in 3:3 and "Yahweh in her midst" in 3:5. The "violence" of the priests in 3:4 recalls the "violence" in 1:9, and this link may identify "the house of their Master" in 1:9 as the temple.

6. Zeph 3:6–8. In this section we hear the words of Yahweh, whose judgment of the other nations was to serve Judah as a warning of its fate if it did not engage in self-correction and reform (3:7). The first two verbs in 3:6 ("cut off" and "are laid waste") are key words that effectively summarize the judgment pronounced against Judah and Jerusalem in chap. 1 (where the same verb "cut off" occurs in vv 3 and 4), and the doom foreseen for the nations in chap. 2 (where the verb "lay waste" or the related noun occurs in vv 4, 9, 13, and 15). The cities devastated by Yahweh are described traditionally as being turned into uninhabited and untraversable wastes (Jer 2:6; 50:12–13). The concluding v 8 returns to apocalyptic language in its picture of God's judgment coming upon the whole world (1:3–4, 18). And as Zeph 3:1–4 is the prototype for Ezek 22:25–28, so likewise Zeph 3:8 is the source for Ezek 22:31.

7. Zeph 3:9–13. The picture of the divine judgment upon Jerusalem and all the nations in 3:1–8 is followed in 3:9 by a picture of purified nations invoking and serving Yahweh (as promised in 2:11). The conversion of the gentiles and their bringing of tribute to Yahweh are motifs present in Deutero-Isaiah (45:14–17; 49:6; 60:5, 6, 11).

In 3:11–12 Zephaniah pairs Yahweh's removal of the proud "from your midst" with the placing of a humble remnant "in your midst" (for the antonyms "proud" and "humble" cf. Prov 16:19). In 3:13 the humble remnant will follow Yahweh in doing no wrong (cf. 3:5) and in turning away from deceit (cf. 1:9). The conclusion of v 13 looks forward to a peaceful Judah engaging once again in undisturbed shepherding of flocks; the words of judgment on the Cretans in 2:6–7 have become words of blessing for Judah.

8. Zeph 3:14–20. The concluding verses of Zephaniah provide two pictures of joy: the joy of Israel in its redemption by Yahweh (3:14–16) and Yahweh's joy in his people (3:17–18). The joy of Israel over

Yahweh in its midst is found in Isa 12:6 and Zech 2:14–16 [—Eng 2:12–13], and the joy of Yahweh in his people is a motif found in such late texts as Isa 62:4–5 and 65:18–19.

The relationship between these two descriptions of joy is evident in the chiastic arrangement of 3:14–17: "Sing joyfully … shout for joy … rejoice and exult" (A); "the king of Israel" (B); "Yahweh in your midst" (C); "Do not fear any further evil" (D); "Fear not" (D); "Yahweh your God in your midst" (C); "a warrior who will save" (B); "He will be joyful … with gladness … he will rejoice … with joyful song" (A).

The contacts of Zeph 3:14–17 with exilic and postexilic texts have led many scholars to consider the concluding verses of Zephaniah to be a late addition to the text (similar to the view that Amos 9:12–15 is a late addition to the prophetic book). However, the similarity of Zeph 3:14–17 to the preexilic psalms celebrating Yahweh's enthronement (Psalms 47, 95, and 97, where Yahweh is worshipped as king in the midst of his joyful people) makes such a late dating of the conclusion of Zephaniah less certain.

In 3:18, Yahweh's removal of disaster from Israel forms an inclusion with the removal of all things from the face of the earth in 1:2–3. As elsewhere in Zephaniah, words of judgment are transformed into words of consolation and grace (as in Zeph 2:6–7 and 3:13). The same literary device is present in 3:19, where Yahweh's promise to assemble for salvation the lame and the outcast (cf. Mic 3:11) recalls and reverses his assembly of the nations for judgment in 3:8 (cf. Mic 4:6–7; and Jer 31:7–8). Zeph 3:20 brings the book to an end by repeating motifs and vocabulary from 3:19: the gathering and the giving of praise and renown in 19 are repeated in 20; and "in all the earth" in 19 is complemented by "among all the people of the earth" in 20.

JOHN S. KSELMAN

ZEPHATH (PLACE) [Heb *ṣĕpat* (צְפַת)]. One of the Canaanite sites in the region of the Negeb which had not been captured during the original Israelite conquest under Joshua. It was subsequently taken by the allied forces of Simeon and Judah (Judg 1:17). According to the biblical account, the site was renamed Hormah (Heb *ḥrm* "destruction") by the Israelites because it had been destroyed. An alternative account of the naming of Hormah is found in Num 21:3, where it is placed in the vicinity of Arad. Since Zephat was originally a Canaanite name for a town largely destroyed by Israel, it is not surprising that the name is not found elsewhere in the Bible.

The LXX reads *sephek* in Judges 1:17, possibly related to *ḏpk*, which was included in a topographical list of Shishak I from Karnak (Kallai *HGB*, 352–53); but the evidence for this reading and for the subsequent identification is not compelling. An identification of Zephath/Hormah with Tel Masos (M.R.

146069; Kempinsky *EAEHL* 3, 816–19; *RAB*, 114), while not proven, appears to fit the biblical and archaeological evidence.
DAVID W. BAKER

ZEPHATHAH (PLACE) [Heb *ṣĕpatâ* (צְפַתָה)]. A valley near Mareshah (Tell Sandahannah [M.R. 140111], about 1 mile S of Beit Jibrin [Eleutheropolis, M.R. 140112]), where Asa fought Zerah, the Ethiopian, and his raiding party (2 Chr 14:9—Eng 14:10). According to the LXX, the battle took place N of Mareshah. If Zephathah is a place name, as the Hebrew suggests, it can probably be identified with *Wâdī eṣ-Ṣāfiyeh* (Robinson 1841: 31).

TOM WAYNE WILLETT

ZEPHO (PERSON) [Heb *ṣĕpô* (צְפוֹ)]. Var. ZEPHI. The third son of Eliphaz and a grandson of Esau (Gen 36:11, 15; 1 Chr 1:36 [*ṣĕpî*]). He was one of the "tribal leaders" (Heb *ʾallûpîm*) of Edom (Gen 36:15), and as such his name probably represents a clan within the Edomite tribe of Eliphaz. The name can be derived either from Heb **ṣpw/y* "clear, pure," or more likely from Heb **ṣpy,* "to see, behold," and is perhaps a shortened form of a theophoric personal name ("God's beholding").
ULRICH HÜBNER

ZEPHON (PERSON) [Heb *ṣĕpôn* (צְפוֹן)]. Var. ZIPHION. ZEPHONITE. The first of seven sons of Gad listed in the second census taken by Moses in the wilderness (Num 26:15). He is the ancestor of the tribe of the Zephonites. In the related genealogy in Genesis 46 (Gen 46:16), and also in *Jub.* 44:20, his name is given as Ziphion. There is no manuscript evidence to support Zephon or Ziphion as the preferred reading. Rather, these seem to be alternate renderings of the same name.
CHRISTINA DE GROOT VAN HOUTEN

ZEPHONITES [Heb *ṣĕpônî* (צְפוֹנִי)]. See ZIPHION.

ZER (PLACE) [Heb *ṣēr* (צֵר)]. According to the RSV, one of the fortified cities of Naphtali (Josh 19:35). However, the appearance of Zer alongside Ziddim is problematic, and raises the possibility that MT *ṣr* here may refer to Tyre (Heb *ṣr; ṣôr*). See also ZIDDIM.
RAFAEL FRANKEL

ZERAH (PERSON) [Heb *zeraḥ* (זֶרַח)]. ZERAHITES. The name means "dusk," or more likely, is a shortened form of *zĕraḥyāh* or **zĕraḥ-ʾēl,* "Yahweh [God] has risen [like the morning-sun]." The name belongs to various persons and clans mentioned in the OT. Names from the root **ḎRḤ* are attested in Amorite, Canaanite, ancient S Arabian, and ancient N Arabian (Weippert 1971: 252; Harding 1971: 251f.).

1. One of the five subtribes of Judah, allegedly descended from Judah's daughter-in-law and concubine Tamar (Gen 38:30; also Gen 46:12; Num 26:20; 1 Chr 2:4, 6). In Joshua 7 (referred to in Josh 22:20), the fate of Achan from the clan of Zerah serves as a warning to those who disregard the ban (*ḥerem*). According to 1 Chr 27:11, 13 Hushah and Netophah (Kh. Bedd Fālūḥ; M.R. 171119; Kob 1978) belonged to this clan; Zerahites were among the inhabitants of Jerusalem (1 Chr 9:6; Neh 11:24).

2. A clan of the tribe of Simeon (Num 26:13; 1 Chr 4:24). In Gen 46:10, Zohar is listed instead of Zerah. It is not necessary to decide which one of these two contradictory statements is correct. After Simeon and Levi were dispersed in the course of a conflict with the city of Shechem (Genesis 34; 49:5–7), the tribe of Simeon disappeared from the historical record. The references to this tribe (except Genesis 34; 49:5–7) are highly doubtful (Donner 1984: 130f.; Mittmann 1977: 217–19).

3. A levitical clan (1 Chr 6:6, 26). It is impossible to say whether or not this clan derived from the Judahite clan (see #1 above). Clearly, however, the majority of the later Levites were the offspring of the priesthoods of local sanctuaries abolished in the course of cultic reforms emanating from Jerusalem in the 7th to the 5th centuries B.C., rather than the descendants of the lost (and half-mythical) tribe of Levi in Genesis 34 (Donner 1984: 352f.).

4. A subtribe of Reuel, second largest of the three Edomite tribes (Gen 36:13, 17; 1 Chr 1:37). It is even conceivable that the Judahite clan (#1 above) had emerged out of this Edomite tribe and had crossed from the E side of the Wâdī Arabah before it joined Judah. The name of this tribe has survived into the classical, Islamic, and modern periods as the name of the town Udhruḥ (M.R. 207971) in S Jordan, 9 km E of Petra (Knauf and Maʿani 1987); this location may indicate the general territory of this tribe.

5. The father of Jobab, the second ruler of the Edomite King List (Gen 36:33; 1 Chr 1:44). This Zerah may have been a historical person; however, no further reference to him is known. Alternatively, the filiation could indicate the tribal background of this ruler (Knauf 1985: 246).

6. An Ethiopian (Heb *kûšî*) who appears to have been the leader of an Arab tribe (2 Chr 14:8—Eng 14:9; cf. Cushan in Hab 3:7 and perhaps "Cushite" in Num 12:1; Knauf 1988). He cannot have been a ruler of the "Ethiopic" (Cushitic) dynasty in Egypt. Zerah is attested as a name of ancient Arabs (see above); but it cannot possibly be the name of an Egyptian ruler, since ancient Egyptian had no phoneme that was rendered as *z* by any ancient Semitic language. The account in 2 Chr 14:8–14 is unhistorical (Welten 1973: 129–40); it may reflect a skirmish with bedouin in the vicinity of Mareshah sometime in the postexilic period, as indicated by the nature of the booty (v 14).

ERNST AXEL KNAUF

ZERAHIAH (PERSON)

[Heb *zĕraḥyâ* (זְרַחְיָה)]. A personal name formed by adding the theophoric element *yāh* to the Heb verb *zrḥ,* which means "to rise" (BDB, 280) and "to flash up" or "to shine forth" (KB, 267) as of the sun or of light. The verb is used in Deut 33:2 (*wĕzāraḥ*) and in Isa 60:2 (*yizraḥ*) with Yahweh as its subject, thus picturing the deity, as Noth (*IPN,* 184) suggests, as a bringer of success and joy. Interpretations of the name include "Yahweh will arise/shine" (BDB, 280), "Yahweh has shone forth" (*ISBE* 4: 1192), "Yah has dawned" (*HBD,* 1162; *EncBib* 4: 5411). Noth (*IPN,* 184 n. 1) invites a comparison with the S. Arabic name *drḥ ʾl,* as does Mauch (*IDB* 4: 954) with the Akkadian *Za-ar-hi-ilu.* Two individuals in the Hebrew Bible bear this name.

1. A descendant of Aaron through Eleazar, and the son of Uzzi and father of Meraioth. Zerahiah (1 Chr 5:32—Eng 6:6; LXX Codex Vaticanus *Zaraia,* Alexandrinus *Zaraias* [first] and *Zarias* [second]) is the seventh-named generation in a genealogy of preexilic "sons of Aaron" (5:29b–41—Eng 6:3b–15) which Braun (*1 Chronicles* WBC, 83) says is part of the most extensive and the latest priestly line in the OT. He is listed seventh (1 Chr 6:36—Eng 6:51; LXX *Zaraia*) in a shorter genealogy of "sons of Aaron" (6:35–38—Eng 6:50–53). In a third genealogy (Ezra 7:1–5) which provides Ezra with Aaronite lineage, probably collaterally (Clines *Ezra, Nehemiah and Esther* NCBC, 59; Blenkinsopp *Ezra-Nehemiah* OTL, 136), Zerahiah (v 4; LXX *Zaraia*) appears in the position of seventh generation from Aaron. This third list appears defective (Williamson *Ezra, Nehemiah* WBC, 91) and/or selective (Blenkinsopp, *Ezra-Nehemiah*

OTL, 136) when compared with the first genealogy. The Greek name *Zaraia* also appears in the LXX Codex Alexandrinus (but not Vaticanus) of 1 Esdr 8:2.

2. A member of the "sons of Pahath-moab" whose son Eliehoenai was among those who went up from Babylonia with Ezra (Ezra 8:4; 1 Esdr 8:31). Zerahiah's (*Zareia* LXX^{B}; *Zaraia* LXX^{A} = Ezra 8:4; *Zaraia* = 1 Esdr 8:31) son was accompanied by 200 males from his family.

RODNEY H. SHEARER

ZERAIAH (PERSON) [Gk *Zaraias* (Ζαραιας)]. An alternate form of the name ZEBADIAH.

ZERDAIAH (PERSON) [Gk *Zerdaias* (Ζερδαιας)]. A descendant of Zamoth and one of the returned exiles who married a foreign woman during the era of Ezra's mission (1 Esdr 9:28). In the parallel text of Ezra 10:27, the name Aziza appears in the position Zerdaiah holds in 1 Esdr 9:28. For the discussion, see AZIZA.

JEFFREY A. FAGER

ZERED, BROOK OF (PLACE) [Heb *naḥal zered* (נַחַל זֶרֶד)]. VALLEY OF ZERED. The wadi and valley that the Israelites crossed, ending their 40 years of sojourn in the wilderness (Deut 2:13–14). The Bible elsewhere suggests that it was located S of Moabite territory and the Arnon river (Wadi Mujib). Thus, most scholars identify the Zered with the Wadi Ḥasa, which empties into the Arabah Valley near the SE end of the Dead Sea, and consider its 35-mile-long canyon—with its span of 3.5 to 4 miles—to have been the ancient boundary between Moab and Edom.

A number of other biblical references are often associated with this wadi, including Isaiah's reference to the "Brook of the Willows" (*naḥal hāʿărābîm*) in his oracle against Moab (15:7). Amos' reference to the "Brook of the Arabah" (*naḥal hāʿărābâ*) probably also refers to the Zered as the southernmost limit of Israelite territory (note the poetic parallelism with "the entrance to Hamath" as the northernmost limit). The reference to "this dry stream-bed" (*hannaḥal hazzeh*) in conjunction with the Israelites' circuitous seven-day march (i.e., around the S tip of the Dead Sea) against Moab (2 Kgs 3:16) probably also alludes to the Zered.

GARY A. HERION

ZEREDAH (PLACE) [Heb *ṣĕrēdâ* (צְרֵדָה)]. **1.** The hometown of Jeroboam, who revolted unsuccessfully against Solomon, but who later became king of the N kingdom of Israel in a successful revolt against Solomon's son, Rehoboam. 1 Kgs 11:26 identifies Jeroboam, the son of Nebat, as an Ephraimite of Zeredah and as a servant of Solomon, whose mother's name was Zeruah (leprous), a widow. Jeroboam was in charge of the forced labor of the house of Joseph (1 Kgs 11:28), i.e., Ephraim and Manasseh (or Israel? all of the traditional ten tribes). The LXX inserts after 12:24 that while Jeroboam was in charge of the labor gangs, he built Sarira in the hill country of Ephraim, raised a force of 300 chariots, fortified the City of David, and aspired to the kingdom—a slight expansion on the MT reading that he "lifted up his hand against the king" (1 Kgs 11:27).

Thus Zeredah (= Sarira), probably Jeroboam's birthplace, instead of Shechem (cf. 1 Kgs 12:25) was the place of both the unsuccessful earlier revolt against Solomon (11:26) and the later successful revolt against Rehoboam (12:16). It is not impossible that Zeredah is an alternate name for Shechem, but its name may be reflected in ʾAin Seridah adjacent to Deir Ghassaneh (M.R. 159161; Pritchard 1987: 254), 15 miles SW of Shechem (Aharoni *LBHG*, 123; Wright *WHAB*, 64, map IX) in the center of Ephraim's territory. The designation of Nebat, Jeroboam's father, as an Ephraimite would seem to locate the place in this tribal area.

The name of Jeroboam's mother in the LXX (3 Kgdms 12:24b) is Sarira, and she is called a harlot. Commentators have wondered if she is called leprous (Zeruah, MT) or a whore (LXX) as a libelous jibe at Jeroboam. Perhaps Zeruah and Sarira are wordplays indicating that Zeredah is not a place but a symbol or metaphor of Jeroboam or of the contempt in which he was held by orthodox writers. The MT has "from

the zeredah" in 1 Kgs 11:26, and the definite article would add to the suggestion that the word is a noun and not a proper name.

2. A site in the plain of the Jordan usually identified with Zarethan. The Zeredah spelling is used in 2 Chr 4:17, which parallels 1 Kgs 7:46, where the spelling is Zarethan (Heb *ṣārtān*). It is also taken as the equivalent of Zererah (Heb *ṣĕrērâ*) in Judg 7:22. The KJV follows the MT in 2 Chr 4:17 and spells it "Zeredathah." The ending may be a locative. The identity of Zeredah depends, of course, on the location of the Solomon/Hiram bronze-working area in the Jordan Valley. The *kikkar* is the plain, circle, or territory of the Jordan River valley (1 Kgs 7:46; 2 Chr 4:17); and Succoth and Zarethan are where they are usually located (these two sites are usually identified with Tell Deir ʿAlla [M.R. 208178] and Tell es-Saʿidiyeh [M.R. 204186] respectively). See ZARETHAN.

HENRY O. THOMPSON

ZERERAH (PLACE) [Heb *ṣĕrērâ* (צְרֵרָה)]. A site mentioned in the path of the Midianite flight from Gideon. After Gideon's surprise night attack on the camp of the Midianites, the army fled as far as Beth-shittah toward Zererah (MT *ṣĕrērātâ*), as far as the border of Abel-meholah by Tabbath. Most scholars understand Zererah to be a variant spelling of Zeredah (1 Kgs 11:26; Zeredah in 2 Chr 4:17)—20 Hebrew manuscripts read *ṣĕrērātâ* in both Judg 7:22 and 1 Kgs 11:26. Both are usually seen as variants of Zarethan (Josh 3:16; 1 Kgs 4:12; 7:46).

One could assume the Midianites fled to the site of Zererah as some scholars suggest; but the text says they fled as far as Beth-shittah, which is toward or in the direction of Zererah. The location of Beth-shittah is unknown. Soggin (*Judges* ET, OTL) notes an Arab village, Shattah, *west* of Beth-shan, but adds that Zererah may be a locality beyond the Jordan. Smick (1973: 81) claims that Zererah was at the site of one of the fords of the Jordan River. Boling (*Judges* AB, 48, map 2) suggests Beth-shittah was up the Wadi Kufrinje E of Tell es-Saʿidiyeh, i.e., E of Zarethan. Zarethan might also be Tell Abu Hamad on the lower Jabbok, while Tell es-Saʿidiyeh may be biblical Zaphon (Aharoni *LBHG*, 313). Pritchard identifies Saʿidiyeh with Zaphon (1987: 230, 251; the first end map shows Zaphon on the Wadi Kufrinje and Zarethan S of the Jabbok and S of Deir ʿAlla; pp. 96–97 identify Zarethan with Tell es-Saʿidiyeh and Zaphon with Tell Qos on the Wadi Rajib, both N of Deir ʿAlla; Pritchard [1985: 3] and Tubb [1986] have both indicated that there is insufficient evidence to conclude with what biblical site Saʿidiyeh may be identified).

Smick (1973: 105 n. 70) recognizes that Zererah may be the correct reading. If so, he suggests the place may be 3.5 miles S of Saʿidiyeh and S of the Wadi Rajib near Tell el-Mazar (M.R. 207181) and that the name "Zererah" may be preserved in the name of the nearby town of Darar (just a mile N of Deir ʿAlla). Darar is 890 feet above the river at sea level on an E scarp of the Jordan Valley.

ZERESH (PERSON) [Heb *zereš* (זֶרֶשׁ)]. The wife of Haman in the story of Esther (Esth 5:10, 14; 6:13). She is portrayed as one of the chief advisers to her husband. In Esth 5:14 she, along with certain friends, advises Haman to obtain royal consent for the execution of his archenemy, Mordecai. As Paton notes, this is reminiscent of the story told by classical authors about the Persian queen Amestris, who asked her husband King Xerxes to kill her rival (*Esther* ICC, 240; cf. Herodotus 9.10; Plut. *Art.* 14, 17, 23).

In Esth 6:13 Zeresh and the same certain friends, now called, "wise ones," again counsel Haman. They warn him that he will not prevail in his struggle with Mordecai but that he will surely fall before him because Mordecai is a Jew. Several scholars have noted that most likely here, the author puts his own theology into the mouths of Haman's advisers. To the author, OT traditions such as Exod 17:16; Num 24:20; 1 Sam 15:2ff.; 2 Sam 1:8–16; etc., had established long before that the house of Saul, to which Mordecai is linked (Esth 2:5), would win out over the house of Agag, the Amalekite with which Haman is associated (Esth 3:1, 10; 8:5; 9:10, 24). Thus Zeresh and Haman's wise friends are portrayed as echoing these OT traditions in a prophetic way (Clines 1984: 43–44; *Ezra, Nehemiah, Esther* NCBC, 309–10; Berg 1979: 103–4; Moore *Esther* AB, 66).

Paton feels *zereš* is the Heb equivalent of Pers *zara,* "gold" or Old Bactrian *zarš,* "desirous," (*Esther* ICC, 70). Gehman links it to Avestan *zaršayamna,* "the joyful one," or perhaps "the one with ruffled hair" (1924: 327). Others have claimed that *zareš* is a corruption of *kiriša,* the name of an Elamite goddess, or *siris,* the Babylonian wine goddess (Paton *Esther* ICC, 70, 89).

JOHN M. WIEBE

ZERETH (PERSON) [Heb *ṣeret* (צֶרֶת)]. The son of Asshur and his wife Helah (1 Chr 4:7).

H. C. LO

ZERETH-SHAHAR (PLACE) [Heb *ṣeret haššaḥar* (צֶרֶת הַשַּׁחַר)]. A Moabite town in the region dominated by Heshbon and given by Moses to the tribe of Reuben on the E side of the Jordan river (Josh 13:19). The definite article in the Hebrew causes the LXX to split the place into two towns, Serada and Sior (Gk *Serada kai Sior*) on top of Mt. Emak. Emak is a transliteration of the Heb word *valley (ʿemek).* Codex Vaticanus confuses matters further with reference to Zion on Mt. Enab. The text of Joshua indicates a location on a "mountain" in the middle of the valley. Kallai (*HGB*, 441) speculates that this mountain refers to a ridge which rises slowly to Heshbon on the plain of Madeba.

Boling and Wright (*Joshua* AB, 342–43) locate the town at *ʾel-Zarat* (M.R. 203111) near (Mount?) ʿAttarus (Ataroth) and directly above the E shore of the Dead Sea. The traditional identification of the site with the hot springs known to Arabs as *ez-Zāra* is based on speculation in 1854 (Seetzen) and 1874 (Tristam) that Zereth-Shahar was near Callirrhoe and the wâdī Zerqa Maʿin (Strobel 1977). They found merely the ruins of an old fort with broken basalt columns near an "old Roman or Jewish road." From this description we should conclude that the site is thoroughly unknown today.

PAUL NIMRAH FRANKYLN

ZERI (PERSON) [Heb *ṣĕrî* (צְרִי)]. One of the sons of Jeduthun who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:3). When the lots are cast to determine duties (1 Chr 25:9–31), the name Izri (1 Chr 25:11) appears where the name Zeri would be expected, suggesting that the two names are variants. For further discussion, see IZRI.

J. CLINTON MCCANN, JR.

ZEROR (PERSON) [Heb *ṣĕrôr* (צְרוֹר)]. The great-grandfather of Saul ben Kish, the first king of Israel; likewise, the father of Abiel and the son of Becorath (1 Sam 9:1). Three variant forms of the name are found in the LXX: Sara in LXX^{L}, Sared in LXX^{D-A}, and Ared in LXX^{B}. The first lacks the final *reš* of the MT; the second and third have read the final consonant as a *reš* instead of a *dalet,* while the third has read the initial *ṣadē* as an *ʿayin.* The name probably means "flint" (Noth *IPN*, 225).

Zeror appears only once in the Hebrew Bible, in the genealogy given for Saul in the introductory verse of the old folktale underlying 1 Sam 9:1–10:16. The author of the story has opened his account using the literary convention of the seven-generation ancestry to emphasize that Saul was destined to greatness from birth (Sasson 1978: 185; contra McCarter *1 Samuel* AB, 168; for details, see APHIAH).

Zeror's absence from the Saulide genealogy in 1 Chr 8:33–40 and 9:39–44 can be explained in three ways. One approach would be to use anthropological models to suggest that the two genealogies represent a change in the ranking of the extended Saulide family branches for dynastic succession, a change that led to the elimination of Zeror when he no longer served a useful function for asserting lineage prominence (indirectly, Flanagan 1981: 59). A second approach would be to identify Zeror with Zur in 1 Chr 8:30 and 9:36 by postulating a loss of the second *reš* from the name (Demsky 1971: 17). Since Zur appears as one of ten sons, and the brother of Kish instead of his grandfather as in 1 Sam 9:1, one would have to assume a change in ranking as well, as in the first approach. A third approach would be to suggest that the name was deliberately dropped by the Chronicler along with Abiel, Becorath, and Aphiah to allow him to graft the Saulide family tree onto the postexilic genealogy of the clans resettling Gibeon. See NER.

DIANA V. EDELMAN

ZEROR, TEL (M.R. 147203). A 12-acre mound, formed of two summits connected by a saddle, and situated near an ancient fork of the Harerah River in the Sharon Plain. The mound was excavated in 1964–66 and in 1974 by a Japanese-Israeli team directed by K. Ohata. Twenty-one occupational levels were discerned, dated from the MB I to the late Middle Ages.

The site was first settled in the MB I, to which the earliest four strata were assigned. Two superimposed systems of fortifications were exposed, consisting of brick walls built upon artificial earth embankments with a moat and an earthenwork counterscarp at the base. A large tower or city gate was also partially exposed. The site was abandoned at the end of the period and was left uninhabited during MB II–LB I (ca. 1800–1500 B.C.).

In the LB II, Zeror was an unwalled town and a center for commerce and industry. A building of palatial dimensions was uncovered on the S summit. Remains of smelting furnaces, bellows nozzles, and clay crucibles, as well as copper slag, give ample evidence for a metallurgical industry. There was an abundance of Cypriot pottery associated with the metallurgical installations. The cemetery, located on a low knoll outside the town limits, had its first interments in this period. During the LB, Zeror was probably a Cypriot colony of coppersmiths and merchants, who obtained copper ingots from their homeland and traded their finished products with the local population.

No signs of destruction were observed in the last LB stratum. The 12th-century settlers cut pits and silos into the deserted remains of the previous levels. The material culture of these settlers resembles in every aspect the culture of the small contemporary settlements found in the adjacent hill country, generally attributed to the Israelite settlement.

In the 11th century, the S summit of the mound was fortified by a casemate wall, and burials in the cemetery resumed. The cist graves were built of stones and covered with large slabs. There were several interments in each cist, suggesting a family sepulcher. The burial offerings included weapons, copper bowls, figurines, and rich pottery assemblages. Among the unique finds were oil lamps with closed nozzles, without comparison in this period. It has been suggested that 11th-century Tel Zeror was a S outpost of Dor, 20 km to the N.

Under the kingdom of Israel the same pattern continued. The S summit was again surrounded with a wall, while the other parts of the mound were left unfortified. The wall was only 1 m thick and was reinforced with inner buttresses, placed at regular intervals. The houses were built according to the typical four-room house plan of the Iron Age. A cistern dug at the base of the fort supplied water to the town. A

bowl, bearing an inscription in Aramaic characters, read: … *B› L›LSMK* ("… b›a belonging[?] to Elsamak"). The fort and the village at the foot of the tell suffered several destructions during the 10th–8th centuries B.C. Iron Age Tel Zeror came to an end in the 8th century, probably as a result of the Assyrian conquest of the kingdom of Israel.

Small farmsteads and lookout posts continued to exist on the S summit during the Persian, Hellenistic, and Early Roman periods. The site was deserted forever in the Byzantine period, and only the S summit was inhabited again in the late Middle Ages (Mamluk period).

The question of the identification of Tel Zeror remains unsolved. Mazar (i.e., Maisler) has suggested *ḏ-r-r*, #115 in Thutmose's list, while Aharoni (*LBHG*, 166–68, 188 n.85) preferred *m-k-t-r* (Migdal), #71 of the same list.

MOSHE KOCHAVI

ZERUAH (PERSON) [Heb *ṣĕrûʿâ* (צְרוּעָה)]. Mother of Jeroboam, the first king of N Israel, and widow of Nebat, an Ephraimite (1 Kgs 11:26). Zeruah's name occurs in a genealogical note introducing Jeroboam, a "servant of Solomon," who later becomes king of Israel (1 Kings 12). While the identity of the king's mother is a common feature in Judean regnal formulas, it is missing from those of Israelite kings. Thus, the identification of Zeruah in 1 Kgs 11:26 is a rare reference to an Israelite king's mother.

In a variant version of Jeroboam's origin—1 Kgs 12:24 (LXX)—Jeroboam's mother is Sarira, a "harlot." The name "Sarira" (lit. "leper") along with the epithet "harlot" may signify an attempt to vilify the house of Jeroboam.

LINDA S. SCHEARING

ZERUBBABEL (PERSON) [Heb *zĕrubbābel* (זְרֻבָּבֶל)]. A Babylonian Jew who journeyed to Palestine after the Exile (Ezra 2:2) and served as governor of Judah under Darius I (522–486 B.C.). His name is probably derived from Akk *zēr-bābili,* "seed of Babylon."

A. Ancestry

Zerubbabel was of the line of David. Although the Bible typically designates him the son of Shealtiel (Ezra 3:2, 8; 5:2; Neh 12:1; Hag 1:1, 12, 14; 2:2, 23), 1 Chr 3:19 lists Pedaiah as Zerubbabel's father. Scholars have generally offered two possible solutions to this discrepancy. Some have suggested Shealtiel died childless and Pedaiah his brother fathered Zerubbabel, who then became the legal son of Shealtiel according to the principle of levirate marriage (Deut 25:5–10). Others have proposed that the text of Chronicles contains an error in transmission or refers to another individual by the same name.

Scholars have also debated the relationship between Zerubbabel and Sheshbazzar (Ezra 1:8). Some have contended that the two names refer to the same person (cf., e.g., Ezra 1:8; Josephus *Ant* 11.1.3 §13–14) since both are designated "governor of Judah" (Ezra 5:14; Hag 1:1) and both receive credit for laying the foundation of the Second Temple (Ezra 3:8–10; 5:16). Against this identification, others have cited (1) Ezra 5:14–16, which seems to distinguish the two men, and (2) the unlikelihood of a Jew, especially a Jew of the royal house, bearing two Babylonian names. Other interpreters have proposed that Sheshbazzar was the Shenazzar of 1 Chr 3:18, and was therefore Zerubbabel's uncle; but although the names are similar, the identification must remain uncertain. Still another suggestion, and probably the simplest, is that Sheshbazzar began the work on the temple's foundation and Zerubbabel finished it; and, consequently, both received credit for the task in the biblical record.

B. Historical Background

The fall of Jerusalem to the Babylonians in 586 B.C. had resulted in the destruction of Jerusalem and the temple and the deportation of much of the Jewish population to Babylon. After the Persians conquered Babylon in 539 B.C., the decree of Cyrus in the first year of his reign gave the Jews the opportunity to return home and rebuild their city and temple with the full support of the Persian government (Ezra 1:1–4). This action of Cyrus regarding the Jews illustrates his general policy of tolerance toward subject peoples, a policy he no doubt intended to help promote and maintain good will in his empire. The decree opened the door to an exciting new era of Jewish history, an era in which Zerubbabel played a prominent role.

C. Zerubbabel's Role

Along with Jeshua, the high priest, and many princes of Judah, Zerubbabel led the first group of returnees back to Judah to begin the rebuilding process. (On Zerubbabel's relationship to Sheshbazzar, see above.) His title, "governor" (Hag 1:1, 14; 2:2, 21), refers to the head of a satrap or small province, and demonstrates the significance of Zerubbabel's role in the eyes of both the Persians and the biblical writers. Zerubbabel functioned as the local political leader of the Jewish people, while Jeshua ("Joshua" in Haggai-Zechariah) served as their spiritual leader.

Under Zerubbabel's leadership the people began restoring Jerusalem soon after their arrival. Jeshua, assisted by the other priests, established the altar of burnt offerings according to the law of Moses, and reinstituted the morning and evening offerings and other sacrifices (Ezra 3:2–6). Then in the second year after the return, in the second month, extensive work on the temple began as a united effort of political and spiritual leadership; and the temple's foundation was soon laid and dedicated about 536 B.C. amid great celebration (Ezra 3:8–13).

But work on the temple did not continue smoothly. Opposition arose from Judah's enemies, who initially offered to assist the Jews on the temple project. When Zerubbabel and the Jewish leaders rejected their offer, they proceeded to harass and frustrate the Jews so much that temple work soon slowed to a standstill. Conditions remained that way throughout the rest of the reign of Cyrus and all the days of his son Cambyses II (529–522 B.C.) until Darius I came to power in 522 B.C. (Ezra 4:1–5, 24).

Early in the reign of Darius, matters came to a head. The prophets Haggai and Zechariah, convinced the time had come to rebuild God's house, challenged the people's apathetic attitude and urged Zerubbabel, Jeshua, and the others to revive the work and complete the temple (Ezra 5:1–2; Haggai; Zech 4:6–9). The words of these prophets brought about a renewed interest in the work, an interest noted by Tattenai, governor of Syria, who investigated the matter to discover who had authorized the rebuilding of the temple. When Zerubbabel and the Jewish leadership informed him they were acting under Persian authority, Tattenai sent a letter to Darius to verify the truth of their statement (Ezra 5:3–17).

When Darius received the letter from Tattenai, he ordered a search of the royal archives, a search that uncovered Cyrus' decree on behalf of the Jews (Ezra 6:1–5). The king sent a reply to Tattenai informing him of the decree and confirming Zerubbabel's authority to continue the work. Furthermore, Darius commanded that the costs of the work be covered with funds from the royal treasury and warned against hindering the Jews in any way (Ezra 6:6–12).

The decree of Darius no doubt fanned the prophetic flames lit by Haggai and Zechariah; and work on the temple resumed, again under the leadership of Zerubbabel and Jeshua (cf. Sir 49:11–12). In the sixth year of Darius (516 B.C.), the temple was completed and its personnel appointed to their tasks, an accomplishment the people celebrated with great joy (Ezra 6:15–18). About a month later, all Judah gathered together in Jerusalem to observe the Passover and celebrate the Feast of Unleavened Bread around their finished temple (Ezra 6:19–22).

Zerubbabel's connection with the line of David may have fueled messianic hopes in Judah. The prophet Haggai spoke of a coming day of God's judgment against heaven and earth, when God would make Zerubbabel his signet ring, a chosen instrument for a special purpose (Hag 2:20–23; cf. Sir 49:11). Some interpreters have understood the prophet Zechariah as echoing this theme; but although Zechariah mentions Zerubbabel as God's instrument for completing the temple (Zech 4:6–9), the eschatological dimension of Zechariah's prophecy focuses more on Jeshua ("Joshua" in Zech 3:1–10; 6:9–15).

Following the accounts of the completion of the temple, Zerubbabel disappears from the biblical record, except for three NT verses that include him in the genealogy of Jesus Christ (Matt 1:12, 13; Luke 3:27), but make no further comment about him. What happened to him is unknown. Some scholars have proposed that Zerubbabel fell into disfavor with Persian authorities and was then either deposed, taken to Persia, imprisoned, and/or put to death. Such theories, however, are based upon arguments from silence. Simply because a person is not mentioned after a certain time, we cannot conclude that this indicates his death or removal from office. Zerubbabel is probably not mentioned in the biblical narratives after the completion of the temple because he no longer played a role in the biblical writer's overall purpose.

The apocryphal work of 1 Esdras (3:1–5:6; cf. Jos. *Ant* 11.3) recounted how Zerubbabel won the right to rebuild Jerusalem after proving himself the wisest of the king's bodyguards. Rabbinic tradition held Zerubbabel in high regard, and the 6th-century A.D. *Seder ʿOlam Zuṭa* suggested that, after completing the temple, Zerubbabel returned to Babylon to occupy a place of prominence.

BRYAN E. BEYER

ZERUIAH (PERSON) [Heb *ṣĕrûyâ* (צְרוּיָה)]. The name "Zeruiah" is compounded from the elements *ṣŏrî* (an aromatic tree, either mastic or balsam) and *yāh* (the short form of Yahweh). Thus, Zeruiah means something like "the balsam of Yahweh" or "the mastic of Yahweh." The name "Zeruiah" is applied exclusively to the sister of David who was also the mother of three of his chief retainers: Joab, Abishai, and Asahel (1 Chr 2:16; 2 Sam 17:25), the infamous "sons of Zeruiah."

D. G. SCHLEY

ZERVANISM. Zervanism (or Zurvanism) takes its name from Zurvan, the personified conception of time among the ancient Iranians. Zervanism was not an independent religion and formed no community of its own but appeared as a theological current within Zoroastrianism, which expressed itself particularly in cosmogonic and cosmological thought. Unlike the Mazdeans, who worshipped Ahura Mazda as the supreme deity, Zurvanites can be defined as those who instead put Zurvan in that position. The practical value of such a distinction is, however, considerably weakened by the fact that only a few sources explicitly state that Zurvan was the highest god.

Zervanism took shape in W Iran and was especially associated with the magi. From the late Achaemenid period (404–331 B.C.) down to the fall of the Sassanian Empire in the 7th century A.D., the official forms of Iranian religion were strongly influenced by Zurvanite concepts.

According to the principal myth of Zervanism, attested mainly in Christian polemical sources of the 5th century A.D., there existed in the very beginning one almighty deity named Zurvan. He made sacrifices for a period of a thousand years in order to have a son who would be the creator of heaven and earth. When the thousand years had passed, doubt occurred in his mind as to the efficacy of his sacrifice. At that moment two sons were conceived, Ahura Mazda from the sacrifice and Ahriman from the doubt. Having promised rulership to the firstborn, Zurvan reluctantly gave it to Ahriman, who cunningly succeeded in piercing the womb before his brother. Then, when Ahura Mazda appeared, Zurvan immediately recognized him as the son for whom he had offered sacrifice. Ahura Mazda is made overlord, and all that he creates is good and truthful. Ahriman receives kingship for 9,000 years, and his creatures are all evil and false. After that period, however, Ahura Mazda will rule in total power for eternity.

Zervanism thus relegates the primordial opposition between the Good and Evil characteristic of genuine Zoroastrianism to a 2d stage in the development of cosmic history, thereby introducing to the dualistic heritage a monistic framework, which was of no less importance to the Zurvanites than to the Mazdeans.

The image of the god Zurvan is complex. On the one hand, he appears as an otiose high-god with clear pantheistic traits who has left the creation of the world to his son Ahura Mazda. On the other, he is invoked as a more active deity (cf. personal names like *Zurvāndāt* "given by Zurvan") who also manifests himself through different hypostases. These are grouped in tetrads in which Zurvan himself appears as the fourth entity or is made up by the totality of the four aspects or elements without his being named explicitly. The best-known tetrad *ašōqar, frašōqar, zarōqar,* and *zurwān,* has been preserved only in Syriac texts but clearly reflects Avestan cult epithets (cf. Yašt 14:28). The first three epithets have been interpreted as "making virile," "making resplendent," and "making old," and have been taken to refer to the three stages of man's life; youth, maturity, and old age. This interpretation is not undisputed, however. The idea of Zurvan as a tetramorphous god of time and fate seems also to underlie the Zoroastrian concept of a world history of 12,000 years subdivided into four periods of 3000 years each.

Other aspects of Zervanism are little known. A tendency for misogyny can be discerned in some Zurvanite myths preserved in the Pahlavi texts, and the depreciation of women may have been a distinctive feature of Zervanism.

The origins of Zervanism can ultimately be traced back to Indo-Iranian speculations on time and sacrifice, but Zervanism as we know it developed into a distinct phenomenon only through the encounter of the Iranians with the high cultures of the ancient Near East in the 7th to the 5th centuries B.C.

From the viewpoint of the history of religions, one should notice that Zervanism was the branch of Zoroastrianism which provided the background for Manichaeism and the Mysteries of Mithras and which exerted considerable influence on Judaism in the Hellenistic and Roman periods.

In spite of the efforts made by qualified researchers in the 20th century, Zervanism is still incompletely known, and several problems remain to be solved. The usefulness of distinguishing specific Zurvanite elements outside the range of cosmogony and cosmology must be seriously questioned. The relationship between Zurvanites and Mazdeans within the history of Zoroastrianism needs to be elucidated in more detail. Last, but not least, the intricate question of how to interpret the evidence of the Pahlavi texts requires further discussion. See also ZOROASTER, ZOROASTRIANISM.

ANDERS ÅHULTGRD

ZETA. The sixth letter of the Greek alphabet.

ZETHAM (PERSON) [Heb *zētām* (זֵתָם)]. A Levite in the Gershonite division of temple bureaucrats and a son of Ladan (1 Chr 23:8). The name appears to be related to *zayît,* "olive tree," although complete assurance on this matter is elusive. In 1 Chr 23:8 he is noted as having two brothers, Jehiel and Joel. 1 Chr 26:22, however, seems to indicate that Zetham was the son of Jehiel. The latter text is ambiguous. One option of interpretation is to read 1 Chr 26:22 as implying that Jehiel's son, who is not named in the text, as well as Zetham and Joel, his brothers, were treasurers in the temple. One must also reckon with the possibilities that 1 Chr 23:8 and 26:22 preserve two different traditions of who Zetham's father was or that the text has suffered in transmission.

JAMES M. KENNEDY

ZETHAN (PERSON) [Heb *zêtān* (זֵיתָן)]. A Benjaminite, and grandson of Jediael, son of Benjamin (1 Chr 7:10). This is the only place Jediael is listed as son of Benjamin. The genealogical list found here bearing Benjamin's name follows Issachar. Normally Zebulun, who is missing from this list, follows Issachar. Another Benjaminite genealogical list occurs later in its normal sequence (1 Chronicles 8). This second list does not list Jediael as a son of Benjamin or consequently Zethan. If Benjamin has mistakenly replaced Zebulun in this list, then Jediael would be a son of Zebulun, and Zethan would be a Zebulunite rather than a Benjaminite. According to Noth (*IPN*, 230) the name probably means "olive keeper."
TOM WAYNE WILLETT

ZETHAR (PERSON) [Heb *zētar* (זֵתַר)]. See MEHUMAN.

ZEUS, FRIEND OF STRANGERS. See GERIZIM, MOUNT.

ZEUS, TEMPLE OF. See OLYMPIAN ZEUS, TEMPLE OF.

ZIA (PERSON) [Heb *zîaʿ* (זִיעַ)]. A Gadite, who was one of the ten (or eleven; see SHAPHAT) sons of Abihail (1 Chr 5:12–13). His name is formed from the root *zwʿ* and probably meant "the trembler" (Noth *IPN*, 242).

Zia and his kinsmen lived opposite the Reubenites in "Bashan as far as Salecah" and "in Gilead, in Bashan … and in all the pasture lands of Sharon to their limits" (1 Chr 5:11, 17). Although Num 13:24–28 assigns Gilead to Gad, it mentions neither Bashan, which is too far N, nor Sharon, which is too far W. It may be that the reference in 1 Chronicles 5 to Bashan reflects confusion about the N boundary of Gad or about the limits of Bashan (cf. Deut 3:10). The inclusion of Sharon within Gad's territory finds support in the Mesha inscription (line 13; *ANET*, 320), which refers to a city or region by that name in Transjordan.

The claim (1 Chr 5:17) that Zia and the other sons of Abihail were enrolled "in the days of Jotham … and … Jeroboam" poses a problem since the kings' reigns were separated by several years (unless Jotham's co-regency with his father Azariah/Uzziah is counted).

Neither Zia nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).
M. PATRICK GRAHAM

ZIBA (PERSON) [Heb *ṣîbāʾ* (צִיבָא)]. Servant/steward of the house of Saul during the early reign of David mentioned in 2 Sam 9:3–4, 9ff.; 16:1–4; and 19:17, 24–29.

There is a question as to the exact nature of his status. In 9:2 he is referred to as *ʿebed,* "servant," of the "house of Saul." In other places, however, he is termed *nʿr šaʾûl,* literally "the lad of Saul" (9:9), and *naʿar mĕpîbōšet,* literally "the lad of Mephibosheth" (16:1). McCarter (*2 Samuel* AB) argues that while the term *naʿar* usually refers to ordinary house servants, the scope of the authority given this individual in 9:9 suggests that he was most probably a "steward" of Saul's. Additional evidence is found in 19:18, when Ziba is referred to as *naʿar bēt.*

There are three different narratives regarding Ziba. The portrayal of this character in them is multifaceted. The first narrative is rather neutral. He is introduced as a trusted servant of Saul's who was intimately aware of the situation of the members of the royal family (9:2–3). He is also portrayed as a capable administrator, given the charge he has to administer all the lands of Saul's household and to fund Mephibosheth (9:10). Similarly, he is portrayed as a successful business person, given the size of his own household (9:10b). Finally, he is portrayed as one who willingly transfers his loyalty from his former master, Saul, to David (9:11).

The second and third narratives are conflicting in their portrayal of him. In 16:1–4 he is seen as one who is completely loyal to David, in that he conveys much-needed supplies to the king on his flight from

Jerusalem and he also informs the king of the impending treason of his master, Mephibosheth. The result of this behavior is that he is greatly rewarded in that he is given complete control over Saul's lands.

In the third narrative complex, 19:17b–18, 24–30, he is portrayed as one who is totally solicitous of the king, while also as one who is duplicitous. The results of this narrative lead to his losing half of the gains of the lands garnered in the second narrative. Thus, one is not sure whether to see Ziba as only an opportunist or as "one after David's own heart"!

RANDALL C. BAILEY

ZIBEON (PERSON) [Heb *ṣib‹ôn* (צִבְעוֹן)]. **1.** A clan name in the genealogy of Seir the Horite in Gen 36:20, 24, 29. Zibeon is listed as the third of four sons of Seir in these passages as well as in the parallel genealogy in 1 Chr 1:38, 40. He was the father of two sons, Aiah and Amah, and served as a clan chief over the Horites in the region of Edom. These clans are not to be confused with the Hurrians but rather represent the original inhabitants (perhaps as cave dwellers) of the region of Edom. They were subsequently displaced by the encroaching "sons of Esau" (Deut 2:12–22). The conquest of the Horite clans is paralleled in the text by the conquest of Canaan by the tribes of Israel.

2. A Hivite, perhaps a Hurrian living in Palestine, whose granddaughter, Oholibamah, daughter of his son Anah (KJV incorrectly reads "his daughter Anah"), was married to Esau. Wilson (1977: 176–77) suggests that the combining of Esau's genealogy with the Horite genealogy of Gen 36:20–30 is a misinterpretation by the author. It may also be due to a confusion between Horite and Hivite (see North 1973: 58–61). Thus Gen 36:2–3 is a "literary composition" compiled in parallel with Gen 36:9–19; 26:34; and 28:9. It follows the pattern of having first a Hittite, and then a Hivite wife, regardless of the names.

VICTOR H. MATTHEWS

ZIBIA (PERSON) [Heb *ṣibyā‹* (צִבְיָא)]. A Benjaminite, son of Shaharaim by Hodesh (1 Chr 8:9). According to 1 Chr 8:28, Zibia was one of the Benjaminites who dwelt in Jerusalem. The fem. form of this name (Zibiah) can be found in 2 Kgs 12:2 and 2 Chr 24:1, which speaks of the mother of Jehoash (Joash).

TOM WAYNE WILLETT

ZIBIAH (PERSON) [Heb *ṣibyāhû* (צִבְיָהוּ)]. Mother of Joash, king of Judah (2 Kgs 12:2—Eng 12:1 = 2 Chr 24:1). Zibiah's name occurs in the regnal formula of her son. Because she was from Beer-sheba, her marriage to the house of Judah may indicate the latter's attempt to gain support from the Negeb tribes bordering Edom. See also JOASH; QUEEN.

LINDA S. SCHEARING

ZICHRI (PERSON) [Heb *zikrî* (זִכְרִי)]. Twelve different persons in the Hebrew Bible are known to have had this name: one Reubenite, one Judahite, one Ephraimite, four Benjaminites, and perhaps as many as five Levites. In the LXX tradition the name is given either as *zechrei/zachrei* (Codex Vaticanus) or *zechri* (Codex Alexandrinus), except as noted below.

1. A Levite, the son of Izhar, the son of Kohath, and brother of Korah and Nepheg, and thus first cousin of Aaron, Moses, and Miriam (Exod 6:16, 18, 20–21; Num 26:59). The name appears in a genealogy (Exod 6:14–25) dealing with Israel's first three sons (Reuben, Simeon, and especially Levi) embedded in the midst of a Priestly (P) narrative on the commissioning of Moses and Aaron (Exod 6:2–7:7). The point of the listing is to underscore the tribal and family ties (Exod 6:16–25) of both Moses and Aaron (Exod 6:13, 26–27), while giving respectful but brief deference to Israel's firstborn (Exod 6:14) and secondborn (Exod 6:15).

2. A Benjaminite, the son of Shimei (1 Chr 8:19, 21). He is said to have had eight brothers (1 Chr 8:19–21). His father, Shimei (KJV Shimhi), is probably identical with the person named "Shema" in 1 Chr 8:13, who together with his brother Beriah is credited with having led the Benjaminite families dwelling at Aijalon in driving out the inhabitants of Gath (1 Chr 8:13), an event otherwise unknown.

3. A Benjaminite, the son of Shashak (1 Chr 8:23, 25). He had ten brothers, whose names are given in 1 Chr 8:22–25. His name occurs as "Zabdi" in the Syriac Bible.

4. A Benjaminite, the son of Jeroham (1 Chr 8:27). This Jeroham is perhaps the same person as "Jeremoth" mentioned in 1 Chr 8:14. The names of his five brothers are supplied in 1 Chr 8:26–27. His name (cf. also ## 2 and 3 above) is found in a listing of heads of Benjaminite families who, according to 1 Chr 8:28, were living in Jerusalem in the postexilic period. However, this verse may have been imposed and repeated in its present position from 1 Chr 9:34, on material originally supportive of contemporary postexilic Benjaminite locations outside Jerusalem.

5. A Levite, the son of Asaph, and distant ancestor of Mattaniah (1 Chr 9:15). His name occurs in connection with a list of specific Levites (1 Chr 9:14–16) within a larger register of principal groups (1 Chr 9:4–33) said to have been resident in Jerusalem after the return from Exile (1 Chr 9:2–3, 34). In the Synoptic parallel to be found in the book of Nehemiah, the corresponding name is "Zabdi," a person further described as the ancestor of Mattaniah, the leader who regularly began the thanksgiving in prayer (Neh 11:17). The name "Zaccur," mentioned in 1 Chr 25:2, 10 and Neh 12:35, may represent still another textual variant on the name.

6. A Levite descended from Eliezer, the son of Moses, from Kohath through Amram (1 Chr 26:25; 23:6, 12–13, 15, 17). His family was important to the Chronicler as one of a number of families which King David by tradition once authorized to be in charge of the disposition of gifts dedicated for the maintenance of the temple (1 Chr 26:26–28).

7. A Reubenite, the father of Eliezer, who was chief officer over his tribe (1 Chr 27:16). The positioning of his name points to a probable connection with the census reportedly undertaken in the time of David and Joab (1 Chr 27:23–24). As the portrayal of David's role in this census appears in a more positive light in comparison with that given by the Chronicler in 1 Chronicles 21, the verses involved may reflect some secondary, editorial revisioning in support of David.

8. A Judahite, the father of Amasiah, who, according to the Chronicler, willingly offered himself for service to Yahweh (cf. Judg 5:9), together with a sizable force of warriors (2 Chr 17:16), in the reign of Jehoshaphat (ca. 873–849 B.C.E.). The mention here of military security was part of the Chronicler's programmatic effort to show his postexilic audience that Yahweh never fails to reward faithfulness.

9. Perhaps a Levite, the father of Elishaphat (2 Chr 23:1), who was one of five captains enlisted by the priest Jehoiada to help overthrow Athaliah in the 7th year of her reign (ca. 837 B.C.E.). In the parallel verse in 2 Kgs 11:4, in place of the names of the five captains, reference is made only to "the captains of the Carites and of the guards." The Chronicler's version of the story attempts to remove any suggestion that non-Levites had once entered the sacrosanct precincts of the temple. In Israel's past the Levites had often exercised a quasi-military function (Spenser 1984: 270). In the absence of a native military presence in the postexilic period, it was not unusual for the Chronicler to want to underscore the legitimacy and potential of such cultic personnel for the preservation of the postexilic sacrosanctity of the temple (Dillard *2 Chronicles* WBC, 180). The LXX mss reflect a variety of spellings of this name: *zacharia* (Vaticanus), *zacharias* (Alexandrinus), and *zechri* (Lucian recension).

10. A valiant Ephraimite in King Pekah's (ca. 737–732 B.C.E.) army who, according to the Chronicler, killed a royal prince and two high royal officials of King Ahaz (ca. 735–715 B.C.E.) of Judah (2 Chr 28:7). The Chronicler uses this person to illustrate the principle of divine retribution at work in the lives of such wicked persons as King Ahaz. The illustrative unit involved (2 Chr 8:5–15) is a supplement unique to the Chronicler, without parallel in 2 Kgs 16. In fact, 2 Kgs 16:5–6 = Isa 7:1 would seem to contradict the Chronicler's claim about Ahaz' defeat and losses. Here also the LXX mss exhibit a number of variant spellings of the name under consideration: *ezekrei* (Vaticanus), *ezechri* (Alexandrinus), and *zacharias* (Lucian recension).

11. A Benjaminite, the father of Joel, who was an overseer, resident in Jerusalem in the time of Nehemiah (Neh 11:9). He is linked with those individuals of Benjamin and Judah (Neh 11:4) whom the people blessed since they were willing to forgo living in the Judean towns outside Jerusalem to live in the holy city itself (Neh 11:1–3). His name is missing in the corresponding synoptic section in 1 Chr 9:7–9 (= Neh 11:7–9).

12. A levitical priest who was head over the priestly course of Abijah (NEB Abiah), the eighth course of priests (see 1 Chr 24:10; Neh 12:4; 10:8—Eng 10:7), in the days of the high priest Joiakim (Neh 12:17). Joiakim was the high priest (ca. 520–445 B.C.E.) who succeeded Jeshua (Neh 12:10), the contemporary of Zerubbabel (Neh 12:1). The name is contained in a list (Neh 12:12–21) basically updating an earlier list in the same chapter (Neh 12:1–7). In the Lucian recension of the LXX, the name is given as *zacharias.* In the NT period another Zechariah (Gk *zacharias;* KJV Zacharias), the husband of Elizabeth and father of John the Baptist (Luke 1:5, 57, 59–63), belonged to this same priestly course.

ROGER W. UITTI

ZIDDIM (PLACE) [Heb *ṣiddîm* (צִדִּים)]. According to the RSV of Josh 19:35, one of the fortified cities of Naphtali, listed immediately before Zer (MT *ṣr*). These two cities are listed immediately after the unusual introductory phrase "and fortified cities" (Heb *wĕ‹ārê mibṣār*). The Talmud explains: "Ziddim Kefar Hitayya, Zer adjoining" (*y. Meq.* 1:1:70a). Abel accepts this identification, placing Ziddim at Hattin el-Qadim near Hittin (M.R. 192245) and Zer in the vicinity; he also connects the place name Zer to the personal name Jezer, the son of Naphtali (Gen 46:24; *GP:* 1, 457, 460–61, Map 3).

However, the construction of the Hebrew phrase in Josh 19:35 is unusual. Ziddim is prefixed by *he* (the definite article), while Zer lacks the conjunctive *waw* usual in the town lists in Joshua. Saarisalo (1927: 128 n. 1) suggested that Ziddim and Zer do not represent names of towns, and Alt (1927: 72 n. 2) proposed that the whole opening phrase is a corrupted form of "from the fortress of Tyre to Great Sidon" (cf. Josh 19:28, 29). In the LXX, Josh 19:35 reads: "and the fortified cities of the Tyrians, Tyre and …" Aharoni (1957: 80) suggests that wording is a result of dittography, the letters *ṣadê* and *reš* appearing three times in the presumed Vorlage, while Ahituv (*EncMiqr* 6:765) sees it as an attempt to interpret the difficult text. Kochavi (1984: 68), however, proposes that the LXX represents the original text, reflecting an otherwise undocumented strong Tyrian influence in upper Galilee as also evidenced by archaeological finds such as those from Mt. Adir. See also GALILEE (PRE-HELLENISTIC). If this is correct, there were no cities by the name of Ziddim and Zer.

RAFAEL FRANKEL

ZIHA (PERSON) [Heb *ṣiyhā›* (צִיחָא)]. An overseer of the Nethinim, the temple officers (Neh 11:21). The chronologies in other passages list the sons of Ziha as comprising a part of the Nethinim (Ezra 2:43; Neh 7:46). There is a possibility that Ziha (Neh 11:21) is an eponym of a family of the Nethinim. Williamson (*Ezra, Nehemiah* WBC) points out that this verse was an addition to the genealogy of priests and Levites (Nehemiah 11). Thus, Ziha may be a name used to represent overseers of the temple officers. See NETHINIM.

GARY C. AUGUSTIN

ZIKLAG (PLACE) [Heb *ṣîqlag* (צִיקְלַג), *ṣīqlag* (צִקְלַג)]. A town in the transition zone between the N Negeb and the S Shephelah, initially assigned to the tribal territory of Simeon (Josh 19:5) but later incorporated into the Negeb province of Judah (Josh 15:31). It is also mentioned by the editor of 1 Chronicles as one of the towns occupied by the descendants of Simeon (1 Chr 4:30). The differences between the list in 1 Chronicles and that in Josh 19:1–9 seem to be merely editorial in nature, suggesting that both are derived from a single document describing the territory of Simeon sometime early in the period of the Monarchy, presumably before Simeon was consolidated with the tribe of Judah (Myers *1 Chronicles* AB, 25–31). The inclusion of Ziklag in the list of Josh 15:21–62 obviously reflects the situation after the territory of Simeon had been absorbed by the tribe of Judah. The theory that the list of Josh 15:21–62 is derived from an administrative roster compiled under the Judean monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the Monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). Even though it was assigned to the territory of Simeon, during the reign of Saul Ziklag had come under Philistine control. In exile among the Philistines, David was given Ziklag by Achish, Philistine king of Gath, as a reward for his presumed loyalty (1 Sam 27:6). David and his band used Ziklag as their base of operations in a campaign against various groups who threatened the S borders of Judah. 1 Chr 12:1–8 relate that warriors from Benjamin, presumably unhappy with Saul's increasing incompetence, buttressed the strength of David's band based at Ziklag. Upon his return from the Philistine muster at Aphek, where he had been released from any obligation to join the Philistine attack on the Israelites, David found that Ziklag had been ransacked and burned by a band of marauding Amalekites (1 Sam 30:1–3). After rescuing their captive wives and children, David and his men returned to Ziklag (1 Sam 30:26), where news of the defeat of the Israelites and the death of Saul at the hands of the Philistines soon arrived (2 Sam 1:1–9). 1 Sam 27:6 suggests that Ziklag remained under Judean control from David's time down to the end of the Monarchy, and Neh 11:28 informs us that it was among the towns of Judah resettled by those returning from the Babylonian Exile.

Ziklag has often been identified with Tell el-Khuweilfeh (Tel Halif; M.R. 137087), a large mound approximately 15 km NE of Beer-sheba (eg., *IDB* 4: 957). However, its geographical position raises some difficulty with this identification since it appears to lie within the territory of Judah rather than that of the Philistines (*ISBE* 4: 1196). It would seem that an Iron Age site further to the W, more within the area of Philistine domination, would be a better candidate. One mound which fits this description (Oren 1982) is Tell esh-Sharia (M.R. 119088), along the Naḥal Gerar approximately 25 km SE of Gaza and 17 km due W of Tell el-Khuweilfeh. Strata of the appropriate periods for historical Ziklag have been uncovered in recent excavations, including indications of a substantial Philistine presence in the later part of the Iron I period (Oren 1982: 163; see further below). Continuing work at these sites, and other nearby Iron Age mounds, will no doubt clarify our picture of this region during the early part of the Iron Age.

WADE R. KOTTER

Many scholars, following Press (1955: 806–7; cf. Mazar 1975: 114, n. 12; Aharoni *LBHG*; Kallai 1967; Rainey *IDBSup*, 984–85; Naʾaman 1980; and Seger 1988), identify Ziklag with Tell esh-Shariʿa (M.R. 119088; also known as Tel Seraʿ). Tell esh-Shariʿa is situated in the NW Negeb, midway between Beer-sheba and Gaza. The mound rises on the N bank of Naḥal Gerar (Wadi esh-Shariʿa) near several perennial springs. The mound is horseshoe in shape with steep slopes on all but the W side, where apparently the city gate was located. The area of the summit is some 4–5 acres, and it rises 168 m above sea level, and the accumulation of occupational debris may reach 10–12 m.

Six seasons of excavations were conducted at Tell esh-Shari‘a (1972–1982) under the direction of E. D. Oren. These have revealed occupational remains from the Chalcolithic to the early Islamic periods. Excavations focused on two major areas: A in the southeast corner and D on the north edge of the tell, as well as area B in the southwest corner and R on the south bank of Naḥal Gerar (see the following table).

Stratum	Era	Areas
I	Byzantine Period (4th–6th centuries C.E.)	D, R
II	Hellenistic-Roman Period (2d century B.C.E.–1st century C.E.)	A, B, D, R
III	Persian Period (5th–4th centuries B.C.E.)	A, B, C, D
IV	Iron Age IIC–III (7th–6th centuries B.C.E.)	A, D
V	Iron Age IIC (7th century B.C.E.)	A, C, D
VI	Iron Age IIB (8th century B.C.E.)	A, D
VII	Iron Age IC–IIA (10th–9th centuries B.C.E.)	A, B, D
VIII	Iron Age I (12th–11th centuries B.C.E.)	A, B
IX	LB IIB–Iron Age IA (early 12th century B.C.E.)	A
X	LB IIB (13th century B.C.E.)	A
XI	LB IIA (14th century B.C.E.)	A
XII	MB III–LB IA (17th–15th centuries B.C.E.)	A, B
XIII	Chalcolithic–Early Bronze I, IV	A

A. Bronze Age Settlements (Strata XII–IX)

Excavations at Tell esh-Shari‘a demonstrated that the successive MB and LB Age settlements developed uninterruptedly from the earliest, stratum XII, of the MB III in the 17th century B.C.E. until the destruction of stratum IX of the LB IIB in the mid-12th century B.C.E. The earliest Canaanite town was established in MB III; and is represented by a well-preserved monumental structure, most likely a palace, that occupied the SE corner of the tell and was erected on a massive platform, more than 1 m high. The excavated section consisted of a large courtyard enclosed on two sides by a series of small chambers resembling in plan the “courtyard Palace” at Tell el-Ajjul. Four phases (stratum XII 1–4) of rebuilding were recorded in the palace, the topmost of which was assigned to the late LB I (15th century B.C.E.). It is noteworthy that, unlike many other MB settlements in Canaan, Tell esh-Shari‘a did not produce evidence of destruction at the end of the MB or a gap of occupation during the early LB.

Strata XI–IX of LB II are represented in area A by well-organized administrative and cult structures. The architectural remains in stratum XI of the 14th century B.C.E. consisted of a large structure on stone foundations and a wide open courtyard. The latter is pitted with *favissae* that were full of animal bones intermixed with rich collections of pottery vessels, such as bowls on high pedestals, perforated cylindrical stands, and Cypriot imports. The area immediately above the courtyard and *favissae* is occupied in the next stratum (X) by a large structure, Building 1118, and a circular mudbrick granary nearby. The main hall of Building 1118, identified as a Canaanite sanctuary, is furnished with plastered benches and a small plastered platform fronted by a stone-built basin. The three successive floors of stratum X and the associated *favissae* were packed with pottery vessels intermixed with charcoal and sacrificial animal bones. The collection included Egyptian alabaster vases, ivory inlays, cylinder seals, and scarabs, as well as numerous Mycenaean and Cypriot imports.

Immediately N of the sanctuary a well-preserved structure, Building 906, which has been identified as a governor’s residency, was excavated. See Fig. ZIK.01. Three structural phases (stratum IX 1–3) were distinguished. Building 906 was originally square in plan, 25 × 25 m, including a central courtyard with column bases and small chambers on three sides; and it was roofed over with cedar beams. The building came to an end by a wholesale fire that resulted in the collapse of the upper story. Building 906 yielded a large collection of pottery, faience, and alabaster vases. The most intriguing find was a group of eleven

bowls and ostraca inscribed with Egyptian hieratic of the late New Kingdom. These texts deal with large measures of grain, presumably taxes paid to the local temple or fort; and they shed new light on the tax system in Canaan under Egyptian rule. One of the inscriptions reads "Year 20 + x" most likely of Rameses III. The destruction debris of stratum VI at Lachish yielded similar hieratic inscriptions mentioning "Year 4" and "Year 10." The discovery of some bronze objects in stratum VI inscribed with the cartouches of Ramesses confirmed our observations and implies that the destruction of Canaanite Lachish, like that of Tell esh-Shari‘a, occurred in the mid-12th century B.C.E., after the death of Rameses III. The destruction of stratum IX and its residency at Tell esh-Shari‘a may be ascribed to a group of Sea Peoples or to a raiding party of nomads (Amalekites?) from the Negeb.

B. Iron Age and Persian Period (Strata VIII–III)

The early Iron Age Philistine settlement, stratum VIII, of the 12th–11th centuries B.C.E. is represented by three phases of rebuilding, the latest of which was followed closely, with no destruction or gap in occupation, by the Israelite stratum VII of Iron Age IC–IIA in the 10th–9th centuries B.C.E. The cultural continuity is manifested by both architectural and ceramic tradition, testifying to the occupation of the city throughout the Iron Age I–II periods by a strong Philistine element of the population.

Stratum VII in the 10th–9th centuries witnessed the most intensive Iron Age building activity, marked by four or five phases of rebuilding and a considerable accumulation of debris. Area A is represented by well-planned four-room type houses consisting of a rectangular courtyard flanked by small rooms on two sides. The courtyard is divided in the middle by a row of pillars with one section nicely paved and the other furnished with cooking and baking installations. Two small chambers probably served as staircases leading to the second story of the house. In area D and partly under the "Assyrian Fort" of stratum V were excavated the impressive remains of ashlar buildings (stratum VI) that once flanked a street. The lower courses of the mudbrick wall were lined on the outer face with nicely squared *kurkar* blocks which were drafted with flat margins and laid in alternating headers and stretchers. The mudbrick walls of these buildings were erected directly on the foundations of earlier structures with a similar ground plan. The pottery repertoire from these buildings suggests that sometime in the 9th century B.C.E. the walls were razed to the foundation level and new structures of ashlar facing were erected. The ashlar buildings were destroyed in the 8th century by a tremendous fire that left behind masses of charred beams, baked brick, and cracked ashlar blocks.

Stratum V of the 7th century B.C.E. is represented by two large fortified structures that guarded the SE and NE approaches to the Iron Age town. The one in area A was badly destroyed by a brick-lined silo and storage pits of stratum III. Excavations in area D unearthed the remains of a massively built citadel that consisted of long and narrow basement halls and was enclosed by a 4-m -thick wall. The brick-lined floors of the halls were scattered with an assortment of objects including some unique finds. A socketed crescent-shaped bronze standard of Assyrian type, symbolizing the moon-god Sin, was found in the N hall next to a heavy iron chain, which was ca. 1 m long and on one end of which were four pitchforklike prongs. The latter was perhaps used as a grappling device for climbing walls. The central hall produced a large socketed bronze spearhead which is closely paralleled on Neo-Assyrian reliefs and N Syrian orthostats. The floor debris yielded fragments of delicate Assyrian palace ware, a faience statuette of the Egyptian goddess Sekhmet, and a long Aramaic ostracon listing commodities, such as silver, olives, and aloes, and personal names including those of S Arabic origin. One of the pottery vessels was inscribed with the word *lyrm* ("belonging to Yaram"). See Fig. ZIK.02.

Excavations in the spacious open courtyard of the citadel yielded evidence for iron-working installations, most likely for military purposes, such as iron slag, crucibles, clay pipes for bellows, as well as an intact smithy for repairing iron implements and weapons. The late 7th-century B.C.E. date for the destruction of the citadel, probably during a military campaign of the Saite dynasty, is confirmed by Archaic Greek imports found in refuse pits which were cut into the walls and floors of the citadel (stratum IV). The presence of Assyrian type bronzes and Assyrian Palace Ware suggested that the citadel, like nearby Tell Jemmeh, had been occupied for some time, or perhaps had been constructed by the Assyrian military administration in S Philistia.

The architectural remains of the Persian period (5th–4th centuries B.C.E.) consisted of two superimposed houses of the courtyard type. In area A a well-preserved brick-lined grain silo, some 5 m across, came to light. Identical structures were recorded at neighboring Tell Jemmeh. These structures yielded numerous imported Greek vessels, bronze Greek fibulae and terra-cottas, as well as a number of Aramaic ostraca.

C. Roman and Byzantine Settlements

During the Roman period the town evidently moved down the plain on the S bank of Naḥal Gerar (area R), and the summit of the mound was only sporadically occupied. On the tell were exposed the remains of a large structure (stratum II), perhaps a villa, which was protected by a massive stone wall and watchtower. The floor of the inner building was found heaped with fragments of painted wall plaster decorated with geometric and floral designs as well as Nabatean, Roman, and Aretine wares. Some fragmentary walls associated with Hellenistic ceramics imply a short-lived occupation during the 2d to 1st centuries B.C.E.

Remains of a large structure, probably a Byzantine church or monastery, were recorded on the summit of the tell where a fragmentary mosaic floor was discovered by chance in the early 1950s. In area R a well-preserved bathhouse was partly excavated. It consisted of a hypocaust with red brick arched niches and clay pipes built in the walls, as well as a system of stone-lined channels for drainage. The pottery repertoire from this building provides a 5th–6th century C.E. date for the latest use of the bathhouse.

ELIEZER D. OREN

ZILLAH (PERSON) [Heb *ṣillâ* (צִלָּה)]. Second wife of Lamech in the line of Cain, mother of Tubal-cain and of Naamah (Gen 4:19–22). Along with Lamech's other wife, Adah, Zillah was the addressee of Lamech's song of vengeance (Gen 4:23). See LAMECH. To understand the name, it is possible to compare the Hebrew *ṣēl,* "shadow, shade," or *ṣll,* "to shrill, tinkle." If the former meaning is the original, then it may carry the sense of refreshment or of "dark"; if the latter meaning is correct, then the context invites the meaning of "a shrill war cry" or of "a cymbal," the latter with possible reference to the beauty of the voice (Gabriel 1959: 416). If Adah refers to the Hebrew word for ornament and Zillah to the word for tinkling cymbal (*ṣilṣûl*), then there is a word pair similar to that in Cant 2:14 (Cassuto 1961: 234). Stamm (1967: 337) regards the name as of unclear meaning. Forms of personal names with the same root may occur in the Hebrew Bible in *haṣṣĕlelpōnî* (a feminine name in 1 Chr 4:3; Sawyer 1986: 159; but cf. *IPN*, 241), and in *bĕṣal›ēl* (Exod 31:2 et al.; *IPN*, 152; *EncMiqr* 6: 733). The root *ṣll,* "shade, protection," appears in personal names of the W Semitic world in Old Akkadian (Gelb 1957: 243–44; Gevirtz 1963: 25–26) and Amorite (Gelb et al. 1980: 34, 365). While occurrences of *ṣillu* are common in Akkadian names of various periods (Tallqvist 1914: 303), the W Semitic element is attested in the early 2d millennium B.C. in personal names.

RICHARD S. HESS

ZILLETHAI (PERSON) [Heb *ṣilletay* (צִלְּתַי)]. The name of two different persons mentioned in the OT.

1. A Benjaminite, descendant of Shimei, who headed a family that lived in Jerusalem (1 Chr 8:20). Braun considers the statement that these families lived in Jerusalem (1 Chr 8:28) as applying to the entire genealogy of Benjaminites in 1 Chr 8:1–28 and, therefore, as a contradiction of the statements in 1 Chr 8:6, 8, 12, 13 placing various segments of the genealogy in other locations (*1 Chronicles* WBC, 126). The statement in 8:28, however, probably applies only to the immediately preceding names. Williamson argues that one should distinguish between the history of the various families and the locality in which they lived at the time the genealogy was recorded (*1–2 Chronicles* NCBC, 85). Since Jerusalem lay on the border between Judah and Benjamin, it is not surprising to find Benjaminites residing there.

2. A member of the tribe of Manasseh who allied himself with David during his time at Ziklag (1 Chr 12:20). Williamson (109) notes that since David had accompanied the Philistines at least as far as Aphek near the border of Manasseh, it is quite credible that men of Manasseh would have defected to him at this time (1 Sam 29:11; 1 Chr 12:19).
RAYMOND B. DILLARD

ZILPAH (PERSON) [Heb *zilpâ* (זִלְפָּה)]. The maid of Leah and the concubine of Jacob. When Jacob married Leah, Laban gave Zilpah to his daughter Leah (Gen 29:24). After Leah had stopped bearing children to Jacob, Leah gave Zilpah to Jacob as a concubine (Gen 30:9) in the same way that her sister Rachel had given her maid Bilhah to Jacob (Gen 30:3). Zilpah conceived two sons by Jacob: Gad and Asher (Gen 30:10–13; 35:26). The sons of Zilpah became shepherds, and they tended the flock of their father (Gen 37:2). When Jacob and his family migrated to Egypt at the time of the great famine in the land of Canaan, sixteen descendants of Zilpah are listed among the seventy people who went to Egypt (Gen 46:18). Among these were Gad and his seven children (Gen 46:16) and Asher and his four sons, his daughter, and his two grandchildren, the sons of Beriah (Gen 46:17).

Speiser (*Genesis* AB, 227) attempted to relate Laban's giving Zilpah to Leah with Hurrian marriage practices as attested in the Nuzi tablets. Speiser said it was customary among the upper-class citizens in Hurrian society to give a personal slave girl to the bride at the occasion of her marriage. However, this view has been strongly disputed by Frankena (1972) and by Van Seters (1969: 394) because the giving of a maid to a bride was a common practice in ancient Mesopotamia.

CLAUDE F. MARIOTTINI

ZIMMAH (PERSON) [Heb *zimmâ* (זִמָּה)]. A Gershonite Levite, son of Jahath and father of Joah (1 Chr 6:5, 27—Eng 6:20, 42). The name "Zimmah" appears related to a root *zmm,* "to purpose, devise." The *he* on the end probably alludes to the theophoric element. 1 Chronicles portrays Zimmah as the fifth generation from Levi, but 2 Chr 29:12 indicates he was the father of a contemporary of Hezekiah. Regarding the period of time in which he lived, the latter is probably the historically accurate of the two

notices. Concerning 1 Chr 6:5, 27—Eng 6:20, 42 the possibility exists that the redactor of Chronicles places Zimmah and his son Joah in as close a relation to Levi as possible in order to provide and enhance legitimacy for Joah's role in 2 Chronicles 29. Another possibility is that the list in 1 Chronicles 6 derives from a fragmentary source which omitted names.
JAMES M. KENNEDY

ZIMRAN (PERSON) [Heb *zimrān* (זִמְרָן)]. A clan name mentioned in the genealogy of Abraham and his wife Keturah in Gen 25:2 and in the parallel genealogical list in 1 Chr 1:32. Zimran is described as the first of Keturah's six sons. No clear regional identification has been made with this name, although the clan was most likely among those living on the fringes of the Negeb and in N Arabia. As Skinner (*Genesis* ICC, 350) notes, the connection with Zabram (Ptolemy 6.7.5), placing them W of Mecca, is too far S. Their very obscurity was used by the biblical author(s) to stand in stark contrast with the importance of the descendants of Isaac, Abraham's son by Sarah. Even those of Ishmael have a slightly better position within the scheme of Israelite history than that of these Arabian tribes.
VICTOR H. MATTHEWS

ZIMRI (PERSON) [Heb *zimrî* (זִמְרִי)]. **1.** The eldest son of Zerah and grandson of Judah and Tamar, according to the Chronicler's genealogy in 1 Chr 2:6. The name is given as Zabdi in the earlier source, Josh 7:1, 17–18. The change from the original Zabdi to the Chronicler's Zimri was likely due to two factors. Orthographically, both the *bet/mem* interchange (both labials) and the *dalet/reš* interchange (similar appearance) would easily lead to confusion. Secondly, the Chronicler's attention to temple music is evident in this passage. As brothers of Zimri he lists Ethan and Heman, elsewhere associated with Israel's temple music (Psalms 88–89). Such interest likely influenced reading the name as Zimri since the name would be related to the singing of cultic music (*zamar/mizmor*). In relating the name as "Zimri" the chronicler thus associates later temple music with all three of these brothers. The confusion between "Zabdi" and "Zimri" is further reflected in the LXX reading of "Zambri" at Joshua 7. According to Joshua 7 Zimri/Zabdi's son was Achan, whose family was destroyed in the Valley of Achor (so the name "Achan" is given as "Achar" in 1 Chr 2:7) because of his illicit confiscation of the banned goods.

2. Zimri, son of Salu, was a Simeonite leader ("head of a father's house") who during the wilderness wanderings broke faith with God by bringing a Midianite princess named Cozbi into his family home (Num 25:6–18). This act of personal infidelity followed upon the heels of the people's "apostasy at Peor" and the ensuing divine judgment, which included both execution of the offenders as well as widespread plague. Whether Zimri engaged Cozbi for purposes of marriage, for some form of cultic prostitution, or for purposes of divining an end to the plague is unclear. In its present form the story, a part of the P narrative, serves to legitimate the Zadokite priesthood (v 13), which in the postexilic period traced its ancestry back to Aaron through Phinehas. As such, Phinehas is the "hero" of the story, who smote both Zimri and Cozbi for their indiscretion (contra Ps 106:30–31, which does not yet know of the tradition concerning Zimri and Cozbi, and which speaks in general terms of Phinehas' "interposition"). That the name "Zimri" is given so late in the story has suggested to some that the names were added only at a late stage as an attack upon those who claimed descent from this Zimri.

3. The name Zimri is given in the Saulide genealogy in 1 Chr 8:36 (= 9:42) in descending order as follows:

> Jeiel, Gibeon/Ner (contrast 8:29–30, 33; 9:39; in 9:36 Ner is listed as Gibeon's son, i.e., Kish's brother), Kish, Saul, Jonathan, Meribbaal, Micah, Ahaz, Jehoaddah (given as Jarah in 9:42), Zimri, Moza, Binea, Raphah (given as Rephaiah in 9:43), Eleasah, Azel …

The redundancy of the lists in 8:29–40 and 9:35–44, as well as the confusion of whether Ner is Kish's father or brother, suggests that the lists have undergone considerable editorial revision. Many assume that the former genealogy is dependent upon the latter. Saul's genealogy in vv 33–38 was probably prompted by the mention of Kish in v 30 and, together with the doublet in chap. 9, provides a bridge to the narrative of Saul at Gilboa in chap. 10. The present form of the genealogies is certainly exilic, as evidenced by the

14 generations which follow Saul. This genealogical tradition is in conflict with the statement in 1 Chr 10:6 that the entire Saulide house perished. The account in the Deuteronomistic History, however, allows that the house was continued through the line of Jonathan's son Mephibosheth (= Meribbaal), though even here there is confusion, as is attested by 2 Sam 9:3; 19:24; and especially 21:7–8.

4. The king of Israel ca. 876 B.C.E., who came to the throne by means of a coup and who committed suicide in the midst of a second coup after reigning only seven days (1 Kgs 16:8–20). During an initial phase of extreme instability in the Israelite royal house, there was a rapid succession of coups and countercoups as various military leaders attempted to consolidate power in the wake of the demise of Judean suzerainty and tumultuous international intrigue. The house of Jeroboam (Jeroboam and Nadab) was overthrown by Baasha, perhaps in an effort by Baasha to divert energies away from foreign engagements against the Philistines to focus upon consolidating power against Judah. Baasha had a long rule, marked by continuous border skirmishes against Judah. His son, Elah, was not able to consolidate power, and after only two years was killed in a coup led by Zimri, one of his chariot commanders. Zimri did so without the support of the army, which proved to be his downfall. Omri, the commander of the army, was invested with popular support and laid siege to the capital city, Tirzah, where Zimri sought refuge. Seeing that the situation was lost, Zimri burned the citadel down upon himself. After a brief period Omri was able to consolidate his royal control and established the longest-lived and most powerful dynastic house in Israel's history.

The very name of Zimri became a slur which could be used against one's adversary, as used by Jezebel against Jehu during his coup (2 Kgs 9:31). In referring to Jehu as a "Zimri," Jezebel may have been referring to any of several different facts. Unlike Baasha, who assassinated Nadab in the midst of battle (1 Kgs 15:27), Zimri did his treacherous work behind the curtain of domestic tranquillity, when such violence was least expected. Elah was drunk in a private home in Tirzah when Zimri, presumably entering as a friend, struck him down. Zimri likely did so with the help of Elah's chief steward, Arza, who likely was "assisting" Elah into his stupor. To be a "Zimri," then, may have connoted someone who conducts his treachery behind the screen of supposed goodwill and with the help of insiders who ply the victim with hospitality until he is incapable of defending himself. Thus the appropriateness of Jezebel's question when she asks Jehu, her own "Zimri," if he is coming "in peace." Such is the way "Zimris" always come!
ROD R. HUTTON

ZIMRI (PLACE) [Heb *zimrî* (זִמְרִי)]. The name "Zimri" occurs in a list of nations which, according to the prophet Jeremiah, Yahweh plans to destroy (Jer 25:25). The kingdom of Zimri is otherwise completely unknown; the LXX omits any mention of its name. Bright (*Jeremiah* AB, 161) suggests that Zimri is an error for Zimki, and that Zimki is an "atbash" for Elam. An atbash is "a cipher by which letters of one name, counted from the beginning of the alphabet, are exchanged for corresponding letters counted from the end" (ibid.).
SIDNIE ANN WHITE

ZIN, WILDERNESS OF (PLACE) [Heb *midbar ṣin* (מִדְבַּר צִן)]. A desert region and perhaps a place located in the Negeb on the S border of Canaan wherein was situated Kadesh-barnea (Num 13:21; 20:1; 27:14; 33:36; 34:3–4; Deut 32:51; Josh 15:1, 3). The itinerary in Num 33:36 lists it as the area of the stopping place after Ezion-geber and associates the Wilderness of Zin with Kadesh. This same area is referred to as the Wilderness of Kadesh in Ps 29:8. It is thus part of "that great and terrible wilderness" (Deut 1:19; 8:15) and is one of the seven wildernesses (Shur, Etham, Sin, Sinai, Paran, Zin, and Kadesh) crossed by Moses and the Israelites in the Exodus.

It is mentioned in the episode of the spies who "spied out the land from the wilderness of Zin to Rehob" (Num 13:21) and in connection with the death of Miriam at Kadesh (Num 20:1). It is also the setting of the episode at "the waters of Meribah of Kadesh in the wilderness of Zin" in which Moses failed to sanctify the Lord before Israel and was punished by not being permitted to enter the promised land (Num 27:14; Deut 32:51).

The Wilderness of Zin is not to be confused with the Wilderness of Sin. There is no distinction made in the LXX or the Vg between Heb *ṣin* and *sîn,* both of which are rendered "Sin" (but see Num 34:4; and Josh 15:3, where MT *ṣinâ,* "to Zin," is rendered "Senna" in both LXX and Vg). Modern English translations uniformly render the distinction Zin and Sin.

Zin and the Wilderness of Zin are prominent landmarks in the descriptions of the boundaries of the tribe of Judah in Num 34:3–4: "your south side shall be from the wilderness of Zin along the side of Edom, and your southern boundary shall be from the end of the Salt Sea on the east; and your boundary shall turn south of the ascent of Akrabbim, and cross to Zin, and its end shall be south of Kadesh-barnea." A similar description is found in Josh 15:1, 3. In both Num 34:4 and Josh 15:3 the name "Zin" occurs with the locative *h-* in a context that suggests a distinction between Zin and the Wilderness of Zin. Some have interpreted these passages as evidence that there was a specific place, located between Kadesh and the ascent of Akrabbim, named Zin from which the wilderness derived its name (*GTTOT,* 136).

The location of Kadesh-barnea at Tell el-ʿAin el-Qudeirat (M.R. 096006) first suggested by Woolley and Lawrence in their survey of the area (Woolley and Lawrence 1914–15: 62–71) has gained general acceptance (*EAEHL* 3: 697–98) and provides a specific landmark from which the boundaries of this area can be determined. See also KADESH-BARNEA. The E border of the Wilderness of Zin is Edom, and it extends to the W at least to Kadesh-barnea and possibly beyond. The border on the N is approximately a straight line from the southern end of the Dead Sea through Beer-sheba to Gaza (*GTTOT,* 247–51), while the border on the S is the Wilderness of Paran. Kadesh is said to have been located in the Wilderness of Paran as well as the Wilderness of Zin in the episode of sending out the spies (Num 13:3, 26), and the fact that it is variously located in both wildernesses may indicate that it was on the border of the two areas. See PARAN. A detailed description of this area can be found in Woolley and Lawrence 1914–15 and *GTTOT,* 247–51.

DAVID R. SEELY

ZINA (PERSON) [Heb *zînāʾ* (זִינָא)]. See ZIZAH.

ZION (PLACE) [Heb *ṣiyyôn* (צִיּוֹן)]. An ancient name for various parts of Jerusalem, of Judah and all the land, and also a metaphor for the people of God, at various periods, from biblical times to the modern period. See ZION TRADITIONS.

A. Origin and Meaning of the Name

The exact meaning of the name is uncertain. Various proposals as to etymon of the word include: (1) the Heb *ṣāwāh,* "to erect" (i.e., a structure), or *ṣāyāh,* "to be dry" (because of the dryness of Jerusalem; cf. Isa 41:18, "parched ground"); (2) the Hurrian *seya,* "brook," "river," suggesting the Gihon spring just below the City of David; (3) the Arabic *ṣahweh,* "hillcrest," "ridge," i.e., the location of the city; *Ṣahyūn* (= "Zion" and the comparable Syr root *Ṣĕhyûn,* from which the Ar form may have developed); or possibly, the most plausible, *ṣâna,* "protect," from a hypothetical etymon **ṣiyan,* "fortress." This etymon is related to the Heb root *ṣnn* found in the derived form *ṣinnâ,* " (large) shield." These Arabic etyma would suggest that Zion was a fortress located on a ridge.

Among the many references to Zion are (1) "the sons of Zion" (once, Lam 4:2); (2) the "Daughters of Zion" (one time, Cant 3:11); (3) "the Daughter of Zion" (many times in the OT and twice in the NT); (4) "the Virgin Daughter of Zion" (three times, 2 Kgs 19:21; Isa 37:22; Lam 2:13); (5) Mt. Zion (a number of times); (6) Zion (many times) or O Zion (six times). Although not used as frequently as the name Jerusalem (760 times), Zion is a very common appellative for Jerusalem and God's people. Zion sometimes is used metaphorically, such as the spiritual "Mount Zion … the Heavenly Jerusalem, the city of the living God" (Heb 12:22).

B. Zion in the Bible

Most often Zion refers to parts of the city of Jerusalem and its environs or the country of which the city is the capital. Frequently, Zion even represents the inhabitants of Jerusalem or the whole country. Sometimes physical features connected with Zion are stressed. The praise of God is to be made in the "gates" of the Daughter of Zion (Ps 9:14), that "stronghold" which has "watchtowers" (Mic 4:8) and whose "wall" the Lord determined to destroy (Lam 2:8). Mt. Zion experiences "dew" falling on it as the dew falls on Mt. Hermon (Ps 133:3). See Smith 1907: 134–69; Simons 1952: 60–64; Kenyon 1967: 187–93; Finegan 1969: 147–52.

When David captured Jerusalem at the beginning of the Monarchy, the city was called "the fortress of Zion," "the City of David" (2 Sam 5:7; 1 Chr 11:5). At that time, it was only a small fortified city on the SE ridge S of what would subsequently become the Temple Mount. 1 Kgs 8:1 (= 2 Chr 5:2) relates how Solomon subsequently brought up from Zion, the City of David, the ark of the covenant to the new Zion, the Temple Mount.

The temple is therefore also called Zion, Mt. Zion, or the holy hill of Zion. The divine King of Israel is frequently spoken of as dwelling there. God, the Lord, is said to be enthroned in Zion (Ps 9:11); it (the temple) is his dwelling place (Ps 76:2), his holy hill (Joel 3:17, cf. the glory of God on the tabernacle, Exod 40:34). The Lord Almighty, is dwelling on Mt. Zion (Isa 8:18). God shines forth from Zion (Ps 50:2), the place where his Name dwells (Isa 18:7). It is from Zion that a deliverer/redeemer will come forth (Rom 11:26a [= Isa 59:20a]). This deliverer is the Son of whom God speaks, "I have installed my King on Zion, my holy hill" (Ps 2:6). He is that one whom God has laid as the cornerstone in Zion (Isa 28:16 [= Rom 9:33; 1 Pet 2:6]). In the future, it is from Mt. Zion that the Lord will rule over men forever (Mic 4:7); the Lord Almighty will reign on Mt. Zion, even in Jerusalem (Isa 24:23). Furthermore, it is at the temple of the divine king that aliens such as Moab are instructed to bring lambs as tribute to the mount (the temple) of the Daughter of Zion (Isa 16:1). Also, when the Assyrian army advances against Jerusalem, Isaiah describes how that the enemy will defy the mount (the temple hill, or Jerusalem including the temple hill) of the Daughter of Zion (Isa 10:32).

Frequently the term "Zion" is used for Jerusalem, the city, or the people who inhabit it. The good news of the gospel is to be proclaimed to Zion, the people of Jerusalem (Isa 40:9; 52:7). Later this is expanded in Rom 10:15 to include the whole world. Making Zion prosper is equated with building up the walls of Jerusalem (Ps 51:18); furthermore, bringing judgment against Zion is also bringing judgment against Jerusalem (Isa 10:12). The Lord's roaring from Zion is the same as his thundering from Jerusalem (Joel 3:16). The bloodshed practiced in Zion is explained as an illustration of wickedness of Jerusalem (Mic 3:10); the result of this wickedness will be that "Zion will be plowed like a field, Jerusalem will become a heap of rubble" (Mic 3:12).

Often the term "Daughter of Zion" describes the inhabitants of Jerusalem. Only once is the plural Daughters of Zion used (Cant 3:11). On occasion these inhabitants are called the Virgin Daughter of Zion, indicating their presumed chaste nature as children of God. The Virgin Daughter of Zion, the Daughter of Jerusalem, will mock Sennacherib, king of Assyria, as he approaches with his army (2 Kgs 19:21 [= Isa 37:22]). Although condemning Jerusalem for her sin, the Lord still reminds her that she is the Virgin Daughter of Zion (Lam 2:13). The Lord provides the blessing of his salvation to the daughter of Zion by sending to Jerusalem his king (Zech 9:9 [= Matt 21:5; John 12:15; cf. Isa 62:11]). In the NT, the fulfillment of this blessing is seen in Jesus as he rides among the crowds into Jerusalem on a donkey (cf. Zeph 3:14; Zech 2:10). Zion, the holy city of Jerusalem, which was viewed as the captive Daughter of Zion (Isa 52:1–2), is called upon to awake. But the Lord's punishment for sin is the lot of the inhabitants of Jerusalem, the Daughter of Zion (Lam 2:8). In her rebellion, "the Daughter of Zion is left like a shelter in a vineyard" (Isa 1:8); and because of her sin, the splendor has departed from her (Lam 1:6). The Lord has covered her with his anger (Lam 2:1) and poured out his wrath on her (Lam 2:4). Writhing like a woman in labor, the Daughter of Zion will go to Babylon into Exile (Mic 4:10). For further discussion, see ZION, DAUGHTER OF.

Sometimes Zion refers to the tribe or land of Judah, or to the whole of Israel. In his electing process, God chose the tribe of Judah, Mt. Zion, whom he loved (Ps 78:68). They, Mt. Zion, are the tribe of God's

inheritance (Ps 74:2); Mt. Zion, including the villages of Judah, rejoices because of God's righteous acts (Ps 48:11). On occasion, Zion includes all the land of Israel. Captive Israel is brought back to (the land of) Zion (Ps 126:1); after the Babylonian Captivity, the people of Israel will turn their faces toward Zion (Jer 50:5).

Sometimes the metaphorical dimension of Zion is stressed. "Those who trust in the Lord are like Mount Zion" (Ps 125:1). Believers are told that they have come to Mt. Zion, the heavenly Jerusalem, the city of the living God (Heb 12:22). Prophetically, the Lord has sent his king to Zion, his holy hill (Zech 9:9 [= Matt 21:5; John 12:15]) and there placed him on the throne (Ps 2:6). He has laid his cornerstone in Zion (Isa 28:16 [= Rom 9:33; 1 Pet 2:6]), and, in the future, the Lamb will stand on Mt. Zion with the 144,000 (Rev 14:1).

C. Zion in the Byzantine and Early Church Age

By the 4th century A.D., the name "Zion" had been transferred in Christian usage from Jerusalem's SE ridge to its SW ridge. This is an understandable change for two reasons. First, this part of the city was the least destroyed by Titus in A.D. 70. Second, even after Hadrian's suppression of the Second Jewish Revolt (A.D. 132–35), it provided the Christians a place to worship not far from the crucifixion site. The Bordeaux Pilgrim (A.D. 333) definitely calls the W hill Sion (CChr Series Latina CLXXV, 16) and Epiphanius (d. A.D. 392) also makes that identification. He makes reference to the existence of a small church there in Hadrian's time that commemorates the place where the disciples had gathered on the day of Pentecost. This same place also came to be identified as the place of the Lord's Supper. This church eventually was replaced by a large basilica named, Holy Mount Zion, the Mother of All Churches (which is pictured in the Madeba Mosaic map, ca. A.D. 575). Later, the SW ridge became the location for the tomb of David (Mare 1987: 224–25, 233–36) as well as the Cenacle (the place of the Lord's Supper). Thus there continued until modern times a confusion between the Davidic Zion, located both on the SE hill and the Temple Mount, and the Christian Mt. Zion on the SW hill. Even today the SW hill is called Mt. Zion and the gate of the S side of the wall, the Zion Gate.

W. HAROLD MARE

ZION GOSPEL EDITION. The name given by Schmidtke to a group of Greek NT gospel mss (first identified by Bousset 1894: 132–35) which, after each gospel, or, in some cases, only after certain gospels, all have the same colophon: "Gospel according to (name) ; having been written and checked against the ancient copies reserved in Jerusalem on the holy mountain; in (#) *stichoi* (lines) and (#) *kephalaioi* (chapters)." Cyril of Jerusalem (*Catech.* 16.4; Migne *PG* 33, 924) tells of a church standing on Mt. Zion in the mid-4th century; Schmidtke assumed that the "ancient copies" were located there. In their margin, some of the mss contain variant readings in marginal scholia introduced by the words *to Ioudaïkon*—"the Jewish (gospel)," which has led scholars to connect the scholia with the lost Judeo-Christian gospel tradition.

The "Jerusalem colophon" is found in mss 039, 20, 117, 153, 157, 164, 215, 262, 300, 376, 428, 565, 566, 686, 718, 728, 748, 754, 892, 899, 901, 922, 980, 1032, 1071, 1118, 1121, 1124, 1187, 1198, 1355, 1422, 1521, 1545, 1555, 1682, 2145, and 2245, all dating from the 9th to the 13th centuries. Their text is generally Antiochene, indicating that the archetype was probably deposited there after its collation in Jerusalem. Two of these mss (566 and 899) contain scholia with variants from *to Ioudaïkon;* another ms (1424) has additional scholia introduced by the same formula but lacks the colophon. The scholia in ms 566 are at Matt 4:5; 16:17; 18:22; and 26:74. (The last two of these scholia are given as the standard canonical reading in mss 4 and 273.) Manuscript 899 gives two of the scholia found in ms 566 (Matt 18:22; and 26:74), as well as an additional scholion at Matt 12:40. Although it lacks the "Jerusalem

colophon," ms 1424 contains the scholia at Matt 16:17 and 26:74, as well as eight additional scholia, all introduced by *to Ioudaïkon:* Matt 5:22; 7:5; 10:16; 11:12; 11:25; 15:5; 16:2; and 27:65. In addition, this ms gives two further scholia at Matt 2:21 and 6:13 which, although not introduced by the *to Ioudaïkon* formula, probably come from the same source as the other scholia, according to Schmidtke.

Examples of the scholion are: at Matt 4:5; "*to Ioudaïkon:* has not 'into the holy city' but 'to Jerusalem' "; at Matt 11:25: "*to Ioudaïkon:* 'I thank thee,' " omitting "Father" *ante* "I" and substituting *eucharistō* for *exomologoumai.* Strikingly, many of the scholia can be paralleled from much earlier Christian literature, invariably connected with the lost Judeo-Christian gospels: the *Gospel of the Hebrews,* the *Gospel of the Ebionites,* or the *Gospel of the Nazoraeans.* For example, the first scholion given above (Matt 4:5) agrees with the reading of the Liège Harmony ("to Jerusalem"), itself dependent upon Tatian's 2d-century *Diatessaron,* which harmonized not just the four canonical gospels, but also a fifth, Judeo-Christian source. The second scholion (Matt 11:25) agrees in its omission of "Father" with the 2d-century writer Marcion (per Tertullian, *adv. Marc.* 4.25.1) and with the 4th-century Vetus Latina ms *a,* which contains numerous readings from the Judeo-Christian gospel tradition, such as the light in the Jordan at Jesus' baptism. Furthermore, it is significant that all of the scholia are attached to Matthew; for the gospel(s) written in "Hebrew letters" used by Judeo-Christian groups are variously called the "authentic text of Matthew" (Jerome, in *Matt.* 12.13; cf. also *de vir. ill.* 3) or "Matthew which is not complete but falsified and distorted" (Epiphanius, *haer.* 30.13.1; cf. also 29.9.4). The parallels with other Judeo-Christian traditions and this association with Matthew are what led scholars to conclude that the variants come from one of the now-lost Judeo-Christian gospels named above. Schmidtke (1911) assigned the readings to the *Gospel of the Nazoraeans,* and Vielhauer (1963) has followed him. However, one must remember that this attribution is tentative; for we cannot be certain from which—if any—of the Judeo-Christian gospels the scholia derive; indeed, they may come from more than one source. Acknowledging this difficulty and recognizing that the scholia appear only in the 9th century, one must not underestimate their value; for the fact that virtually all of the scholia can be paralleled from much earlier sources connected with the Judeo-Christian gospel tradition argues decisively for their antiquity and authenticity.

WILLIAM L. PETERSEN

ZION TRADITIONS. Meaning: theology and traditions connected with the term "Zion."

A. The Meaning of "Zion"
B. The Theology of Zion
  1. Enthronement after Victory
  2. The Election of Zion and David
  3. Visions of Peace
C. History of the Zion Traditions
  1. Israelite Antecedents
  2. Canaanite Antecedents
  3. Zion in the Monarchy and the Second Temple Period
  4. Zion in Christianity and Rabbinic Judaism

A. The Meaning of "Zion"

In its biblical usage, the term "Zion" has at least four meanings. The word seems, first, to have been the name of a fortress in Jerusalem during the period just before David captured the city from the Jebusites. It was he who changed the name "the stronghold of Zion" to "the City of David" (2 Sam 5:7, 9). The

likelihood is that the earliest biblical usage of the term was in reference to the ridge in the SE section of Jerusalem which lies between the Wadi Kidron and the Tyropoeon Valley. David's son and successor Solomon expanded Jerusalem to the NW, building his great temple of YHWH, the God of Israel, upon a hill that came to be known as "Mount Zion" (e.g., Ps 78:68–69). Indeed, as we shall soon see, the biblical Zion traditions are usually tightly associated with the theology of the temple. It is thus this second meaning, the use of "Zion" to designate the Temple Mount, that is most relevant to our discussion. From the second derives the third meaning: by a process of metonymy "Zion" came to refer to Jerusalem itself, that is, to the entire temple city. Thus, Lamentations uses "Fair Zion" (e.g., JPSV [1985]) and "Jerusalem" interchangeably (e.g., Lam 2:6–8). "Fair Zion" is simply the poignant personification of the great temple city; a sharp distinction between the traditions of Zion and those of Jerusalem cannot be sustained. By a further use of metonymy, Zion, like Jerusalem, came to refer to the people Israel and not just their temple mountain and city, so that Second Isaiah reports YHWH to "[h]ave said to Zion: 'You are My people!' " (Isa 51:16; JPSV), and Zechariah can apostrophize thus: "O Zion, you who dwell in Fair Babylon!" (Zech 2:11; JPSV). This last citation, from about 520 B.C.E., shows how much the term "Zion" changed—or, rather, grew—in the half millennium from the time Israel first used it. Once the name of a ridge in pre-Davidic Jerusalem, it had now become a designation for the people of Israel themselves, though without having shed its spatial reference. Since the fates of the Temple Mount, of Jerusalem, and of the whole house of Israel were inextricably intertwined in the temple theology, it stands to reason that the same term could come to refer to any and all of the three.

Today "Mount Zion" is the name of a hill in Jerusalem on which are found structures that are purported to be David's tomb and the upper room in which Jesus is reported to have eaten his Last Supper. It must be noted that the identification of this hill with the biblical Zion is postbiblical, in fact Byzantine. Rather, the Mount Zion of the Bible is the Temple Mount (*har habbayit*), at the foot of which one finds today the Western Wall and atop which sits a spectacular mosque, the Dome of the Rock.

B. The Theology of Zion

The larger significance of the biblical term "Zion" lies not in the domain of topography but in that of theology.

1. Enthronement after Victory. The term evokes a whole range of concepts having to do with the kingship, might, justice, and faithfulness of YHWH and the security and beatitude of those privileged to lodge in his sacred mountain in humility and faith and to witness his (re)enthronement upon it. These "Zion traditions" lurk behind dozens of passages in the Hebrew Bible but are especially evident in Psalms and Isaiah. In the former book they are most pronounced in Psalms 2, 46, 48, 65, 76, 84, 87, 95–99, 110, 122, 125, 128, and 132. In Isaiah the Zion traditions are prominent in 8:5–10; 17:12–14; 24:21–23; 25:6–12; 26:1–7; 30:27–33; 33:5–6, 14–24; 37:33–38; 60–62; and 65:17–25. In most of these passages, Zion is explicitly mentioned; but even in those in which it is not, the theological concepts associated with it are in abundant evidence.

A sense of those traditions can be gained from Psalm 48 (JPSV), a representative song of Zion. The term "song of Zion," though of biblical origin (Ps 137:3), is, of course, misleading, since if there can be only one subject of this and kindred poems, it is clear that the subject is not Zion, but YHWH. Psalm 48 begins and ends with the praise of him who is "great," "much acclaimed," and the worshipping community's "God forever." But the place at which this message of the incomparability, invincibility, and faithfulness of God has been made known is not extraneous. Rather, Zion is "his holy mountain," and for good reason, as it is "fair-crested, joy of all the earth," and the "summit of Zaphon" (v 3). This last word is known from Canaanite poems of the LB Age to have been the mountain abode of Baal, the great god of the thunderstorm, whose martial exploits constitute the subject of some Canaanite epics (Sarna *EncBib* 6: 747–49). Canaanite Zaphon lay somewhere to the N of Israel, as can be learned from the fact that the same word came to mean "north" in Hebrew. The application to Zion of the name of Baal's mountain suggests a large degree of continuity between Israel and Canaan, though it does not constitute proof that the Jebusites had already identified Zion with Zaphon (Roberts 1973: 336).

It is not altogether clear that "the great king" of whom Zion is the city (v 3) is YHWH rather than David, his chosen vice-regent and adopted son; but this identification makes less difference here than in other streams of biblical tradition; for in the Jerusalem theology the sovereignty of YHWH and that of David cannot usually be disengaged. Still, the likelihood is that the kingship celebrated in Psalm 48 is YHWH's. As is common in the Hebrew Bible and the rest of the ANE, this kingship is thought to rest upon a victory; the victory demonstrates the would-be king's overwhelming might and establishes his suzerain claim upon those whom he has rescued. In our psalm, the enemy YHWH overcomes is a coalition of unspecified kings who seem to be undone by the mere sight of the battlements of the great temple city (vv 5–9). It is this effortless victory over these unnamed adversaries that grounds YHWH's claim to suzerainty—he is "the great king"—and proves him "a haven" to those who shelter within Zion's sacred precincts. It is not that the great triumph happens to occur at Zion, as if it could just as easily occur elsewhere. Rather, as v 9 makes clear, Zion provides vivid visual testimony to these theological affirmations of the invincibility, sovereignty, and reliability of YHWH, God of Israel. Mount Zion and its structures are the geographical and architectural equivalent of a theophany. They provide direct visual evidence for certain key points of theology. This is the reason that the worshipping community (perhaps a group of pilgrims) is instructed in vv 13–14 to make a careful tour of Zion, noting all its towers, ramparts, and citadels. These are to the eye what the stories of his mighty acts are to the ear: "what we heard we have now witnessed" (v 9).

One of these key points of theology is God's "beneficence" (*ṣedeq,* v 11). The association of this term with the joy and exultation of Zion and the towns of the Judean countryside suggests a more specific meaning. Joy is, of course, often associated with enthronement (Ollenburger 1987: 33–35), just as inauguration days are festive occasions now. Given the connection of Zion with enthronement, it is not surprising that joy, in turn, should be a prominent feature of the Zion tradition and that the mount itself could be termed "joy of all the earth" (v 2). But in the ANE it was not unusual for a king upon his accession or the anniversary of it to give his subjects a very tangible cause for joy by issuing a decree that would cancel debts, release prisoners, repatriate prisoners of war, and the like. Weinfeld has shown that the expression *ṣedeq ûmišpāṭ,* usually rendered as "justice and righteousness" (or something similar), is, in fact, a technical term for this sort of decree (biblical law routinized these instrumentalities of redemption through the institutions of the Sabbatical and jubilee years and the Sabbath itself; e.g., Leviticus 25; Weinfeld 1985; Levenson 1988: 100–106). Thus the "beneficence" (*ṣedeq*) of Ps 48:11 is to be associated with the "judgments" (*mišpāṭîm*) of the following verse. The two words are a hendiadys that has been separated. Between them lies the consequence of the easements to which they refer, the joy of Zion and exultation of Judah.

Whether the attack narrated in Psalm 48 actually happened or not, the enemies in it are historical, a coalition of kings, and not some natural force. A distinction between historical and natural enemies, however, would be artificial when applied to the Zion traditions. In another song of Zion, Psalm 46, the potential sources of fear fall into both categories. The mountains topple into the sea—creation itself is undone—and "nations rage," but the worshippers remain serene, secure in the knowledge that God is in his holy city and will rescue it by daybreak, even from the historical/natural cataclysm that rages outside its walls (Ps 46:2–8). Similarly, Psalm 65, which begins with the praise of God in Zion (v 2), speaks of him as the one:

> [7]who by His power fixed the mountains firmly,
> who is girded with might,
> [8]who stills the raging seas,
> the raging waves,
> and tumultuous peoples (Ps 65:7–8; JPSV)

The serenity of those privileged to dwell in Zion derives from their faith in the power of YHWH to master all assaults upon him (and them), whether from raw nature or from the rebellious human heart. The enthronement of YHWH signifies his unassailable mastery over all else, his establishment of order in nature, and his unshakable fidelity to those who seek and have no hope but him. The drama of YHWH's

(re)enthronement on Zion is a re-presentation both of the cosmogonic events that have come to be called "creation" and of the great lesson of the history of redemption—that YHWH shall not fail to deliver his faithful allies. The safety of those who dwell in the city of God as the "waters rage and foam" and "kingdoms topple" (Ps 46:4, 7; JPSV) recalls Israel's successful crossing of the sea and the drowning of pharaoh's troops in hot pursuit (Exodus 14–15). Though the Zion traditions do not touch upon the redemption from Egypt and are less historically particular than those of the Exodus, to set the two complexes of tradition into opposition, as is often done, is to miss the high degree of theological congruity between them (Levenson 1987: 185–217).

In contrast to the angry, chaotic waters mentioned in Pss 46:3–4 and 65:7–8, we also hear mentioned "a river whose streams gladden God's city" (Ps 46:5; JPSV), which may be synonymous with "[t]he gently flowing waters of Siloam" of Isa 8:6 (JPSV). The latter refers to a conduit, expanded in the 8th century B.C.E. into a tunnel, which brought water from the spring of Gihon into the city of Jerusalem. By making such an identification, however, we may be missing the old Canaanite roots and deep mythical character of the river of the gladdening streams. The vision of the new order of things in Ezekiel 40–48 includes a spring arising from the temple itself and flowing into the Dead Sea, which it will then miraculously desalinize (Ezek 47:1–12; cf. Zech 14:8; Joel 4:18—Eng 3:18). Ultimately, this imagery and that of Ps 46:5 probably derive from the description in Canaanite sources of the abode of the great god El "at the sources of the two rivers,/In the midst of the fountains of the double-deep" (Cross *CMHE*, 36–38). In all likelihood, the biblical Zion traditions conflate elements of the myths of El and of Baal (Roberts 1973: 336). YHWH, the God enthroned on Zion, is indebted to both of these Canaanite deities but identical to neither and different from both in important respects.

2. The Election of Zion and David. The image of Zion that emerges from the literature examined so far is that of an enchanted mountain on which the victory of YHWH over all adversaries and in defense of those faithful to him is consummated, celebrated, and perhaps even reenacted. Other passages, however, see Zion's uniqueness as owing to election: YHWH has *chosen* it as the site of his royal palace, the temple, the place where he finds rest (Pss 78:68–69; 132:13; cf. 1 Kgs 8:44, 48; 11:13, 32, 36; 14:21; 2 Kgs 21:7; 23:27; Zech 1:17; 2:16; 3:2). Ollenburger argues that the election of Zion "is to be understood predominantly in a cultic sense and is probably dependent upon the Deuteronomic doctrine of cult centralization in which the cultic site of [YHWH's] choice … is restricted to Jerusalem" (Ollenburger 1987: 61). It is surely the case that the absence of any language of chosenness in so many of the poems that reflect the Zion traditions casts doubt upon the claim that those traditions were always grounded in election. But it is also doubtful that the Deuteronomistic school innovated the idea of YHWH's choice of Zion, for in two poems that seem to be pre-Deuteronomic, the election of Zion is explicit (Pss 78:68–69; 132:13). It is telling that in both these instances YHWH's choice of Zion is conjoined to his choice of David (Pss 78:70–72; 132:11–12, 17–18). Though the evidence is in any event slight, it is probable that the idea in the royal theology that the house of David was chosen for kingship is the mother of the idea of Zion's election. Going even further, Roberts once saw the Davidic theology as the very source of the Zion traditions, so that the defeat of YHWH's enemies at Zion reflects a revolt by vassals of Judah against their Davidic suzerain (Roberts 1973). Though this theory nicely fits the image in Psalm 2, in which YHWH reiterates his support for his afflicted vassal installed on Mt. Zion (v 5), it does not fit many other exemplars of the Zion tradition, which generally lack all mention of David. It bears mention that the victory of the god against an assault by foreign peoples has ample mythological antecedents in both Mesopotamia and Canaan (Stolz 1970: 72–101), and this has led Roberts to modify his thinking (1982: 102–3). It is unnecessary to search for precise historical events behind the reflection of this old motif in the Zion traditions.

Though the traditions of Zion cannot be subsumed into those of David in the Jerusalem cultus, the union of the two traditions in poems like Psalms 2 and 132 is hardly surprising. In both pieces, David serves as YHWH's vice-regent, the terrestrial manifestation of God's governance of the world, his vicar in the sanguinary realm of politics (cf. Psalm 110). In this high royal theology, one cannot speak of the enthronement of the one sovereign apart from the other. Indeed, in Psalm 89 (in which Zion is not

mentioned), YHWH's creation of the world finds completion in his commissioning of David, into whose keeping he commits the malevolent forces of chaos (v 26; Levenson 1988: 111–17). Since Zion is in some of the literature the locus of creation, that is, of YHWH's mastering and taming the pernicious forces of disorder, and since the human king on occasion plays a key role in that cosmogonic drama, it follows that the Zion and the David traditions would connect, as they in fact have in Psalms 2, Psalm 110, and 132.

3. Visions of Peace. The paradoxical consequence of YHWH's great victory at his holy city is an end to the weapons of war and the inauguration of a reign of peace:

[9]Come and see what the LORD has done,
how He has wrought desolation on the earth.
[10]He puts a stop to wars throughout the earth,
breaking the bow, snapping the spear,
consigning wagons to the flames.
[11]"Desist! Realize that I am God!
I dominate the nations;
I dominate the earth."

(Ps 46:10–11; JPSV; cf. Ps 76:4; Ezek 39:9–10)

The basis of this vision of peace is not pacifism, but rather the limitless scope of YHWH's triumph: his victory over the nations, his dominance over the world ensures that weapons will be futile. The recognition of YHWH's lordship is the basis of universal peace.

In Isa 2:2–4 (paralleled in Mic 4:1–4), the exaltation of Zion over all other mountains results in a joyful pilgrimage of the nations to the source of divine instruction (*tôrâ*). Instead of a battle, we hear of YHWH's successful arbitration between the nations:

And they shall beat their swords into plowpoints
And their spears into pruning hooks:
Nation shall not take up
Sword against nation;
Never again shall they train for war. (Isa 2:4)

The idea of peace is prominent in the traditions of Zion/Jerusalem, in part because the last three consonants of the holy city's name (*šlm*) appear to have been understood as related to the word for peace (*šālôm;* e.g., Ps 122:6–8). The deeper reason, however, has to do with God's protection of his temple city and its status as a visible symbol of the futility of wars and weapons when they are directed against the master of all that is. It is through acknowledging the invincibility of the God of Israel, symbolized by the exaltation of his Temple Mount, that the war-weary nations at long last find peace (Wildberger 1957).

The protection and peace that Zion symbolized and manifested were thought to be available even in the absence of the eschatological glorification of the mountain that Isa 2:2–4 envisions. Individual worshippers longed for admittance to the mountain of YHWH and the temple atop it; some even expressed a wish to spend their lives there (e.g., Pss 23:6; 27:4). The conditions for admittance were a prominent feature of the "entrance liturgies" (e.g., Psalms 15; 24; Isa 33:14–16). Only those could be admitted who lived a blameless and upright life, avoiding slander, fraud, interest taking, and bribes, upholding oaths and honoring those who, like themselves, revere YHWH:

Such a one shall dwell in lofty security,
With inaccessible cliffs for his stronghold,
With his food supplied
And his drink assured (Isa 33:16; JPSV)

Delekat reconstructs a more limited context for these criteria of admission, connecting them with the use of holy sites as places of asylum (e.g., Exod 21:12–14; Num 35:9–34; Deut 19:1–12; 1 Kgs 1:50–53; 2:28–35; Delekat 1967: esp. 166–76). If this connection is correct, then the entrance liturgies served a precise legal function: they distinguished those who were deserving of asylum from those who were not. In the case of a homicide without malice aforethought, admission to the temple complex could mean the difference between life and death at the hands of his victim's blood avenger. Perhaps this is what lies

behind the psalmist's statement that YHWH "spread[s] a table before me in full view of my enemies" (Ps 23:5; JPSV) and that he is "chased" (*rdp*) only by goodness and love while he dwells in the temple (v 6). The safety of the hunted individual within the sacred precincts of the temple is the correlative of the inviolability of Zion from attacking kings in compositions such as Psalms 2, 46, and 48. The connection of Zion's inviolability with old provisions of law again argues against an origin of the motif in a specific historical event.

C. History of the Zion Traditions

1. Israelite Antecedents. The history of the Zion traditions is difficult to trace because the dates of so many of its key texts are uncertain. One of its sources almost surely lies in the traditions of the ark, the full name of which seems to have been "the ark of the covenant of the LORD of Hosts enthroned on the cherubim" (1 Sam 4:4; cf. 2 Sam 6:2; JPSV). The expression "LORD of hosts" becomes prominent in the Jerusalem cult. Psalm 24, for example, celebrates the triumphant entry of the "LORD of hosts," identified with the "King of glory" (*kābôd,* v 10; JPSV) into his holy mountain. *Kābôd* is another term associated with the ark. After its capture by the Philistines in the 11th century B.C.E., the daughter-in-law of the high priest of Shiloh names her son Ichabod (*ʾî-kābôd;* literally "no glory") because "the glory [*kābôd*] has departed from Israel" (1 Sam 4:21; JPSV). The idea of YHWH as enthroned on the cherubim was also an important item of the Jerusalem cultus (see Isa 37:14–16; and esp. Ps 99:1–3). Though this evidence is more exiguous than we would like, it does suggest strongly that one antecedent of the Zion traditions lay in the ark traditions, especially as they developed at Shiloh just before the emergence of the monarchy (Mettinger 1982: 19–37; Ollenburger 1987: 37–43).

2. Canaanite Antecedents. The Shilonite ark traditions cannot, however, explain the sense of Zion as an enchanted *place,* the inviolable mountain home of YHWH. One antecedent of this important aspect of the Zion tradition would seem to lie in certain traditions of Mt. Sinai, which were transferred to Zion (Levenson 1987: 89–92). It is possible that this transference was aided by a mythology of Zion already held by the Jebusites, from whom David took the mountain stronghold (Rowley 1939; Hayes 1963: 423–24). Proponents of the Jebusite origin of the Zion traditions point especially to Gen 14:18–19, in which Abram gives a tenth of his booty to Melchizedek, priest-king of Salem (i.e., Jerusalem; see Ps 76:3). Evidently an etiology of the Israelite tithe, this passage would seem to imply considerable continuity between the pre-Israelite and the Israelite priesthoods of Jerusalem. The obscure mention of Melchizedek in Ps 110:4 seems to speak to the same point. More convincing is David's purchase of the threshing floor of Araunah the Jebusite for an altar after the apparition of the angel of YHWH at that spot (2 Sam 24:15–25). If the cultus of Jerusalem in the early Monarchy was influenced by Jebusite traditions, it is entirely possible that those elements in the Zion tradition that seem to lack secure rooting in old Israelite tradition came in from this Canaanite source. It is likely that the tendency in the Hebrew Bible, especially the psalms, to describe YHWH as a rock, crag, stronghold, and the like was influenced by the very topography of Jerusalem (e.g., Ps 71:3; see also Ps 125:2). Unfortunately, the paucity and ambiguity of the evidence prevent the indebtedness of the Zion tradition to pre-Israelite Jerusalem from moving beyond conjecture.

3. Zion in the Monarchy and the Second Temple Period. With David's conquest of Jerusalem and accession to the throne of the united kingdom of Judah and Israel and then Solomon's construction of the state temple, the traditions of Zion undoubtedly became an essential component of Israel's religious tradition. The partial union of the Zion and the David traditions mentioned earlier probably goes back to this period, though it is important to remember that either tradition could be articulated independently, without allusion to the other. Zion as a symbol of the people of Israel's national honor derives from the conception of the mountain as the place in which the human king, who is the viceroy of the divine king, sits enthroned, effortlessly subduing rebellious vassals, just as his divine suzerain and adoptive father subdues the kingdoms that assault his sacred mountain (e.g., Psalms 2; 110). As the royal shrine first of the united monarchy and then of Judah alone after the schism, the temple atop Zion would have become a site for pilgrimage (see, e.g., Psalms 84; 122), an institution that would have become more important as Judean kings such as Hezekiah and Josiah attempted to centralize sacrifice in Jerusalem (2 Chronicles 30;

2 Kgs 23:1–27). During the former's reign in the latter part of the 8th century B.C.E., Zion traditions seem to have come to the fore through the preaching of the prophet Isaiah (Hayes and Irvine 1987: 54–56; Levenson 1987: 156–65). It has, however, been argued that the Zion theology in Isaiah is a later interpolation and that the idea of Zion's inviolability developed after the failure of the Assyrian king Sennacherib to depose Hezekiah in 701 B.C.E. (Clements 1980: 72–89). Such radical literary-critical surgery is not necessary. The traditions of the Holy One of Israel enthroned in majesty in his unassailable mountain temple need not be ascribed to later tradents. They fit comfortably into Isaiah's worldview.

After the fall of Judah and the torching of the temple in 587 B.C.E., Zion became a poignant symbol of national disgrace, of the contradiction between the great royal city of promise and memory and the pitiful ruins of the present era. The widowed lady of Lamentations, "Fair Zion," is a personification of the chosen nation in the agony of its rejection by God (e.g., Lam 1:1–11). The direction is reversed, however, after the Exile, as Third Isaiah envisions the remarriage of the spurned nation, the return of her lost children, a pilgrimage of foreign nations and their kings, once her tormentors but now bent on doing her homage (Isaiah 60–62). All this results from the new victory of her husband and deliverer, as he again comes in glory, to be enthroned as of old (Isaiah 60–62). Though Wanke sees the Zion theology generally as postexilic (1966), demonstrably postexilic literature such as Third Isaiah is markedly different from the Zion psalms and more complex. Ps 137:3 shows that the songs of Zion were a known quantity before the Exile.

4. Zion in Christianity and Rabbinic Judaism. In the NT, the Zion traditions as outlined here are not to be found, though much of their characteristic spirituality persists under different symbols. As Cohn notes, "the increasingly Gentile composition of the predominantly diasporic 'church' was bound to loosen attachments to a place few had known" (Cohn 1981: 77). The tendency in early Christianity was thus to spiritualize and delocalize the traditions of the Hebrew Bible in a way that left scant room for the old ideas of sacred space. Paul's allegory in Gal 4:22–26, for example, is predicated upon a stark dichotomy of the earthly and the heavenly Jerusalem. The former is identified with the Jews and slavery, the latter with the Church and freedom. The distinction between the two Jerusalems is known in the rabbinic tradition as well, except that, as Talmon points out, "the idea of the celestial Jerusalem as it was conceived by Jewish thinkers, and even by mystic fancy never lost its touch with down-to-earth reality" (1971: 309), as it often did in Christian allegory and the spirituality that it expressed. Though the rabbinic tradition evolved the practice and study of torah into a religion fit for Diaspora, it continued to pray for the restoration of Zion and the return of Jewry to its sacred homeland. It is no wonder that in modern times the Zion traditions have provided the name of a powerful movement for Jewish survival and renewal, "Zionism."

JON D. LEVENSON

ZION, DAUGHTER OF [Heb *bat-ṣiyyôn* (בַּת־צִיּוֹן)]. A poetic personification of the city of Jerusalem and its inhabitants. This expression, more properly translated "Daughter Zion" (Stinespring 1965), occurs 26 times in the OT, all in poetic contexts. The plural, *bĕnôt-ṣiyyôn,* occurs four times, also in poetic contexts but always referring specifically to female inhabitants of the city, a literal signification which does not ever fit the singular form of the phrase, which therefore must be understood as figurative.

The expression probably originated to symbolize the nationalistic traditions of Judah, epitomized by its capital city. Zion is technically the name of the pre-Davidic fortified hill of Jerusalem but occurs frequently, especially in poetry, as a synonym for the city as a whole. The "Daughter Zion" expression accounts for about 25 percent of its total appearances in the OT. The expression "daughter of Jerusalem" (always in the singular; 2 Kgs 19:21 = Isa 37:22; Mic 4:8; Zeph 3:14; Lam 2:18; and Zech 9:9), occurs only in association with "Daughter Zion" and may be regarded as a virtually synonymous phrase.

The people represented by the expression *bat-ṣiyyôn* have a home, a place from which they derive identity. That place is Zion, the city of the Lord. The holy city is both a meeting point for God and people and a center, a point of stability, around which the human community revolves.

Why is that holy city personified as a daughter? Partially, because such a practice was common in the Hebrew language. Not just Jerusalem, but Tyre (Ps 45:13—Eng 45:12), Babylon (e.g., Ps 137:8), and Tarshish (Isa 23:10) were so described. The reasons behind that practice, however, are not entirely clear. Perhaps cities were thought of as daughters—subordinate offspring—of a nation as a whole. Perhaps the Hebrew predisposition to use feminine nouns for abstract or collective concepts is at work here. Or perhaps the reason is more subtle. While sons are thought to represent the adventuresome spirit of a society, constantly pressing beyond established boundaries at the outmost part (the circumference) of the community, female children are associated with stability, with nurturing the community at its very center. While the stereotypical male spirit lies in conquest, the stereotypical female spirit lies in culture. Accordingly, the expression *bat-ṣiyyôn* is not used to refer to the Hebrew people in their wilderness wanderings or in their territorial conquests in Canaan during the period of the Judges. Rather, the expression refers to the Hebrews as a settled people, a centered and stable people whose life and culture revolved around the divine-human encounter focused on the holy city, Jerusalem.

A comparison with Greek traditions about Athens, the "holy city" of the divine daughter Athena, suggests that one may understand the femininity of Zion not merely in terms of the city as being the mother of its inhabitants (the traditional explanation for the personification), but also (and perhaps rather) in terms of the city as divine daugher. As such, the city is the quintessence of civilization and culture, of a stable lifestyle, of permanent relationships. It is also the particular recipient of divine favor and, conversely on occasion, of divine wrath and punishment.

Precisely half of the occurrences of Daughter Zion imagery in the OT reflect dignity, joy, favor, and exaltation. Typical is this passage from Zephaniah (3:14, RSV):

> Sing aloud, O daughter of Zion (sic);
> Shout, O Israel!
> Rejoice and exult with all your heart,
> O daughter of Jerusalem!

(Additional references include Isa 16:1; 52:2; 62:11; Mic 4:13; Jer 6:2; Lam 4:22; Zech 2:14—Eng 2:10; and Ps 9:15–Eng 9:14.)

The remaining half of the occurrences cite the city as the object of wrath, mortification, and destruction—a pitiful image indeed, made poignant by the fact that the expression itself probably originated to depict the city and her people in victorious, secure prosperity. Here, then, in Lam 2:13 (RSV), is found ironic reversal, the downfall of what has been cherished, refined, and cultured:

> What can I say for you, to what compare you,
> O daughter of Jerusalem?
> What can I liken to you, that I may comfort you,

O virgin daughter of Zion?
For vast as the sea is your ruin;
Who can restore you?

(Additional references include Isa 1:8; 10:32; Mic 1:13; 4:10; Jer 6:23; Lam 1:6, 2:1, 4, 8, 10, 13.)

The expression *bat-ṣiyyôn,* "Daughter Zion," is more than simply the personification of a group of people. Rather, it is an image of the unity between place and people within which divine favor and civilization create a setting of stability and home. To see the beauty of that setting defaced is, therefore, to the ancient poet comparable to seeing a beloved and cherished young woman in anguish (Jer 4:31):

For I heard a cry as of a woman in travail,
anguish as of one bringing forth her first child,
the cry of the daughter of Zion (sic) gasping for breath,
stretching out her hands,
"Woe is me! I am fainting before murderers."

ELAINE R. FOLLIS

ZIOR (PLACE) [Heb *ṣîʿōr* (צִיעֹר)]. A town situated in the central hill country of Judah (Josh 15:54), within the same district as Hebron. The only reference to this settlement occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). The theory that this list is derived from an administrative roster compiled under the Judean monarchy (Alt 1925) has been widely accepted, although controversy continues over the precise makeup of the districts, the proper context of the town lists of Benjamin and Dan, and the period of the Monarchy to which the original roster belongs (Boling and Wright *Joshua* AB, 64–72). Although modern Sair, about 8 km NNE of Hebron, bears some similarity in name to ancient Zior, it is located too far to the N to be an acceptable candidate (Boling and Wright, *Joshua* AB, 389). The ancient site is surely to be found in closer proximity to Hebron.

WADE R. KOTTER

ZIPH (PERSON) [Heb *zîp* (זִיף)]. **1.** A grandson (?) of Caleb and therefore probably the name of a prominent Calebite family in Judah (1 Chr 2:43). The wording of this list is problematic, and the MT and LXX differ over the name of Ziph's father; consequently, the genealogical relationship between "Ziph" and "Maresha" is confusing (see Myers *1 Chronicles* AB, 11).

2. The son of Jehallelel, who is listed in a genealogy of Calebites (1 Chr 4:16). This Ziph was therefore the name of a prominent Judean family, although it is unclear what relationship this name has with Ziph #1 above or with the several Judean places named ZIPH. In all probability this genealogical list (1 Chr 4:16–20) is preexilic, since it includes Ziph and Eshtemoa, both of which lay outside Judean territory in the time of Nehemiah (Myers, p. 29).

GARY A. HERION

ZIPH (PLACE) [Heb *zîp* (זִיף)]. ZIPHITES. **1.** A city of Judah which lay in the administrative district to the SE of Hebron, the district which also contained Maon, Carmel, and Juttah (Josh 15:55). Eusebius noted a village by this name to the E of Hebron. However, the two sites which today bear the ancient name, Tell Zîf and its neighbor Khirbet Zîf, are situated about 7 km to the SSE of Hebron.

Tell Zîf (M.R. 162048) is generally accepted as the biblical site. It stands on the edge of the Judean desert, which falls away steeply to the E. No systematic excavations have taken place at the site, but a

Jewish ossuary with a bilingual inscription in Greek and Aramaic was recovered from one of the tombs (Rahmani 1972).

When David was alienated from Saul, he gathered a small army of 600 men and fled into the desert. Much of this time was spent in the "Wilderness of Ziph," the desolate area to the E of the city; and Jonathan visited him there (1 Sam 23:14–16). The citizens of the city, however, were loyal to Saul and sent word to him at Gibeah that David was hiding in the area (1 Sam 23:19–24; 26:1). Saul came to Ziph to pursue David (1 Sam 26:2); but David refused to harm Saul when the king's guards fell asleep, leaving Saul unprotected (1 Sam 26:6–25). Memory of David's perilous time in the Wilderness of Ziph gave rise to the superscription of Psalm 54.

According to 2 Chr 11:8 Ziph was one of the cities fortified by Solomon's son Rehoboam. Recently it has been suggested that the list of cities in 2 Chr 11:6–10 should be redated to the time of Hezekiah and that the list represents the attempts of the latter to meet the impending threat of Assyria (Naʾaman 1986).

2. A city of Judah in the district of the S Negeb near the border with Edom (Josh 15:24). Questions have been raised about its existence on both literary and archaeological grounds. In the LXX, the name of Ziph is either missing or confused. A Khirbet ez-Zeifeh has been reported SW of Kurnub (M.R. 156048), but its history of occupation is unknown.

3. One of the four places named in the royal-stamp jar handles. It is generally equated with Ziph # 1 above. See STAMPS, ROYAL JAR HANDLE.

H. DARRELL LANCE

ZIPHAH (PERSON) [Heb *zîpâ* (זִיפָה)]. Son of Jehallelel in the genealogy of Judah (1 Chr 4:16). It has been observed that this name is a feminine form of Ziph, which precedes it. The suggestion has been made that Ziphah is a dittography of Ziph (Curtis *Chronicles* ICC).

H. C. LO

ZIPHION (PERSON) [Heb *ṣipyôn* (צִפְיוֹן)]. ZEPHONITES. The oldest son of Gad (Gen 46:16). He was the grandson of Jacob and Zilpah, the maid whom Laban gave to his daughter Leah on the occasion of Leah's marriage to Jacob (Gen 29:24). Ziphion's name is included in the record of Jacob's family which descended with him to Egypt at the invitation of Joseph at the time of a great famine in the land of Canaan (Gen 46:8–27). In the Sam. Pent. and the LXX the name Ziphion appears as Zephon. This reading agrees with the second census list of the clans of Gad in Num 26:15, where Zephon appears as the son of Gad and the ancestral leader of the Zephonites, one of the Gadite clans. Ziphion's name does not appear in the genealogical list of the other clans of Gad mentioned in 1 Chr 5:11–17.

CLAUDE F. MARIOTTINI

ZIPHRON (PLACE) [Heb *ziprôn* (זִפְרוֹן)]. The exact location of this place is not known but is described as a marker for one of the boundaries of the area of Canaan (Num 34:9). The text reveals that it is situated between Zebad and Hazar-enan.

JEFFREY K. LOTT

ZIPPOR (PERSON) [Heb *ṣippôr* (צִפּוֹר)]. The father of Balak, the king of Moab during the days of Moses (Num 22:2, 4, 10, 16; Josh 24:9; Judg 11:25). It was Zippor's son, Balak, who contracted with Balaam, the son of Beor, to curse the Israelites during their residency in the plains of Moab (Numbers 22–24). The tradition in Josh 24:9 suggests that Balak ben Zippor summoned Balaam in the wake of a military standoff. Balak attacked Israel and then sent for Balaam. However, the rhetorical question in Judg 11:25 suggests that there was no military confrontation between Balak and Israel. This latter view is

supported by the full narrative in Numbers 22–24, which only hints at possible military confrontation (e.g., 22:6, 11; 24:17) but which also suggests that no such conflict preceded Balaam's oracular activity.

Whether Balak, son of Zippor, is a fictitious eponym symbolizing the region of *el-belqa* or is a historical figure based upon a petty city-king is impossible to determine since no records exist to confirm that there was a "royal house of Moab" in these early days of Moab's rising national identity.

ROD R. HUTTON

ZIPPORAH (PERSON) [Heb *ṣippōrâ* (צִפֹּרָה)]. The Midianite woman who emerges briefly from the shadows of her father (Reuel/Jethro) and husband (Moses) to act as savior in a mysterious and dangerous situation (Exod 4:24–26). Exod 2:16–22 present Zipporah as the daughter of the Midianite priest Reuel (called Jethro in the rest of the book of Exodus). She was given in marriage to Moses, and the two became parents of Gershom and Eliezer. Zipporah wards off a divine attack which presumably occurred as she and Gershom accompanied Moses on his return to Egypt from Midian. The tradition of Exod 18:1–9, however, suggests that Zipporah stayed with Jethro during the events surrounding the Exodus, only to be reunited with Moses when he and the Israelites approached the Wilderness of Sinai.

That Zipporah is cast in a saving role is one of the few certainties about the intractable narrative of Exod 4:24–26. She averts a divine attack by performing a threefold ritual: she cuts off her son's foreskin, touches his feet (genitals?), and pronounces the words, "Surely you are a bridegroom of blood (*ḥătan dāmîm*) to me!" (v 25). The verse is laden with difficulties. First, the referent of the pronoun "his" is uncertain. In supplying the antecedent "Moses," the RSV adopts the view of many commentators. Second, many assume that Zipporah's words are directed to Moses, although that too is uncertain. Third, the expression *ḥătan dāmîm* is enigmatic (see *TDOT* 5: 270–77). The fact that the narrator of v 26b attempted to explain the expression suggests that it was ambiguous even at some stage of textual composition. Finally, the biblical writer does not explain how Zipporah knew what to do in this threatening situation and how she came to adopt a male role in performing the circumcision of her son. Other problems and proposed solutions connected with the meaning of Exod 4:24–26 are discussed by Childs (*Exodus* OTL); Kaplan (1981); Houtman (1983); and Robinson (1986).

Zipporah is relegated to a peripheral role by the writers of Exod 2:16–22 and 18:1–9. Exod 2:16–22 is a bethrothal type scene, the standard features of which are outlined by Culley (1976: 41–43). Zipporah is mentioned by name only in being identified as the daughter given to Moses by her father, the real point of the narrative being the relationship between Moses and his father-in-law, as Coats (1973) and Fuchs (1987) have shown. Likewise, in Exod 18:1–9 Zipporah and her sons altogether disappear from the narrative at the point of the family's reunion after the Exodus, indicating that the significant "family" here consists of Moses and Jethro.

RITA J. BURNS

ZIV [Heb *zîw* (זִיו)]. The second month of the Canaanite calendar, roughly corresponding to April and May. See CALENDARS (ANCIENT ISRAELITE AND EARLY JEWISH).

ZIZ, ASCENT OF (PLACE) [Heb *maʿălēh haṣṣîṣ* (מַעֲלֵה הַצִּיץ)]. A mountain pass used by a coalition of Moabites, Ammonites, and Meunites to attack Jerusalem during the reign of Jehoshaphat (2

Chr 20:16). The context suggests that the pass was a strategic link between Jerusalem and En-gedi on the W shore of the Dead Sea (2 Chr 20:2), and that the end of the wadi (Heb *naḥal*) associated with this ascent lay E of the Wilderness of Jeruel (v 16) in the vicinity of Tekoa. The Ascent of Ziz has often been associated generally with the Wadi Ḥaṣaṣa (Naḥal Ḥaṣeṣôn) that drains the hills 8 miles SE of Tekoa into the Dead Sea about 6 miles N of En-gedi. Thus it has been suggested that MT *ḥṣyṣ* may be the corruption of an original **ḥṣyṣ*, "Ascent of Ḥaṣîṣ" (*IDB* 4: 961). However, more recently the Ascent of Ziz has been associated quite specifically with a military road constructed during the Israelite monarchic period and winding up into the cliffs outside En-gedi. The course of the road winds for more than a mile covering a distance of less than half a mile "as the crow flies"; it thus reduces the 45 percent gradient of the cliffs to 19.5 percent (the road's gradient; Harel 1967, but note that the compass indicator on related fig. 3 appears to be pointing *south*, not north as indicated!).

GARY A. HERION

ZIZA (PERSON) [Heb *zîzāʾ* (זִיזָא)]. 1. The son of King Rehoboam of Judah (ca. 922–915 B.C.E.) and Maacah (KJV Maachah), the daughter of (NEB "granddaughter") of Absalom, and the brother of Abijah, Attai, and Shelomith (2 Chr 11:20). His name occurs in a subsection (2 Chr 11:18–23) of the Chronicler's presentation of the reign of Rehoboam (2 Chr 10:1–12:16), whose initial obedience to Yahweh's word, in contrast to the idolatrous activities of Jeroboam I (ca. 922–901 B.C.E.), the rival king of Israel, brought Yahweh's corresponding blessing on the womb and family (see also 1 Chr 3:1–9; 14:2–7; 25:4–5; 26:4–5; 2 Chr 13:21). This son of Rehoboam, in fact, was one of 88 children in all (28 sons and 60 daughters), the children of 18 wives and 60 concubines (2 Chr 11:21b). It is added that Ziza's mother, Maacah, was the favored wife of Rehoboam (1 Chr 11:21a) and that Ziza's eldest brother, Abijah, was designated the crown prince (1 Chr 11:22) and eventually did succeed his father as king of Judah (2 Chr 12:16). Elsewhere, in the RSV, the name of the mother of Ziza's brother is given as "Micaiah (KJV Michaiah; NEB Maacah) the daughter of Uriel of Gibeah" (2 Chr 13:2) and also as "Maacah (KJV Maachah) the daughter (NEB 'granddaughter') of Abishalom" (in the Synoptic parallel in 1 Kgs 15:2). While it is clear that Asa succeeded Abjiah (1 Kings 15 = Abijam), his father, as king (2 Chr 13:23—Eng 14:1; 1 Kgs 15:8), it is perplexing to read further on in the RSV that Asa's "mother" was a woman named "Maacah (KJV Maachah) the daughter (NEB 'granddaughter') of Abishalom" (1 Kgs 15:10; 15:13 = 2 Chr 15:16), thus making her a wife of Ziza's brother Abijah! For clarification, see MAACAH (PERSON).

2. A Simeonite, the son of Shiphi (1 Chr 4:37). He is named as one of the 13 princes of the tribe of Simeon who, in the days of King Hezekiah (ca. 715–687/686 B.C.E.), migrated "to the entrance of Gedor," or as often amended on the basis of the LXX "to the entrance of Gerar," because of overpopulation and the need for additional pastureland (1 Chr 4:34–41). Ziza's importance to this list of princes is perhaps indicated in the fact that his name is the last one given and the only name whose genealogy is traced back five generations, to his distant ancestor Shemaiah. This interest in the tribe of Simeon, in a day when the tribe had long ceased to be a viable political entity, was part of the Chronicler's postexilic agenda of promiting an all-inclusive Israel.

ROGER W. UITTI

ZIZAH (PERSON) [Heb *zîzâ* (זִיזָה)]. Var. ZINA. Zizah is named in 1 Chr 23:10–11 as the second of four sons of Shimei of the levitical line of Gershom (v 6; but written Gershon inv 7). The variant Zina (Heb *zînāʾ*) in v 10 is not supported by the LXX (*Ziza*) or Vg (*Ziza*). According to Rudolph (*Chronikbücher*, HAT 152–55) the list in which this name is included is part of a subsequent expansion of the Chronicler's work and thus represents the arrangement of levitical temple service at a time later than the Chronicler. Williamson (*Chronicles* NCBC, 158–61) agrees that the list represents an arrangement

contemporaneous with its composition but contends that it was "an originally independent piece" incorporated by the Chronicler himself.
J. S. ROGERS

ZOAN (PLACE) [Heb *ṣō‹an* (צֹעַן)]. Major Egyptian city of the 1st millennium B.C., situated in the 14th township of Lower Egypt on the lower Tanitic branch of the Nile in the E Delta, 29 miles S of the Mediterranean (Baines and Malak 1980; Num 13:22; Ps 78:12). The various renderings of the name in other languages include: Eg *Ḏ‹nt,* Akk *Ṣa›nu,* and Gk *Tanis* (Romer in *LÄ* 6: 194–209). Excavation of the site was begun by A. Mariette (1850s) and W. M. F. Petrie (1883–86) and P. Montet (1929–51) and is being pursued currently by the Institute français d'archáologie orientale under J. Yoyotte and P. Brissaud. Although the district "Field of the Storm (*Ḏ‹,* whence *Ḏ‹nt*)" is known from the middle of the 13th century B.C., Zo‹an the town is first mentioned in the 23d year of Ramesses XI of the 20th Dyn. (ca. 1183 B.C.). It is the residence of Smendes, the officer assigned to the administration of Lower Egypt. When Ramesses died (childless?) and Smendes succeeded him as founder of the 21st Dyn. (ca. 1176–931 B.C.), Zo‹an became the official residence, replacing the old Ramesside capital, Pi-Ramesses, 30 km to the S (See Montet 1941). As Pi-Ramesses declined and was abandoned (thanks perhaps to a shifting of the Nile branch which deprived its harbor of water), its monumental buildings and installations were dismantled and the masonry shipped N to build Zo‹an. Even statues and steles which had once adorned Pi-Ramesses now came to rest in the new city. So many blocks mentioning Ramesses II, Merneptah, and even kings of the 13th through 15th Dyns. ended up at the new city that early excavators, such as P. Montet, mistakenly identified Zo‹an with Pi-Ramesses and Avaris, an identification now universally abandoned (cf. Num 13:22 for a similar mistake).

The first great builder to turn the small provincial town into a monumental city was Psusennes I (Montet 1951), son and successor of Smendes. He laid out the enclosure and built the temple of Amon, which was enlarged by Siamun (984–965). Zo‹an was dedicated to the Theban Triad, Amon, Mut, and Khonsu, whose temples formed the central enceinte of the city; and "high priest of Amon" became a formal title of the kings of the 21st Dyn. While maintaining friendly relations with the family of Herihor which held the office of (true) high priest of Amon at Thebes, the 21st Dyn. severed mortuary ties with the S city and now preferred burial within the enclosure of Amon at Zo‹an. Excavation has recovered several royal interments at the site, some intact with silver coffins and gold jewelry, including those of Psusennes I (1050–1000), Osorkon II (873–844, Montet 1947), and Sheshonk III (819–767, Montet 1960).

The Libyan 22d Dyn., founded by Sheshonk I (931), maintained the city as a residence and, from 873, built extensively at the site (cf. 1 Kgs 14:25). With the last king of the dynasty, Zo‹an's political primary lapsed (ca. 725 B.C.), as Sais and Napata became the power centers in the Nile Valley for the next two centuries. Nevertheless, the pharaonic administration continued from time to time to raise new buildings or enlarge the old in the city from the Saite period to the end of Ptolemaic rule; and the city continued prosperous into Roman times (see Montet 1952, 1966).

The Hebrews became familiar with Zo‹an during the period of the Monarchy, when it was the Egyptian capital (Isa 19:11, 13; 30:4; Ezek 30:14); one tradition localized the confrontation between Moses and Pharaoh in the "Field of Zoan" (Ps 78:12, 43).

DONALD B. REDFORD

ZOAR (PLACE) [Heb *ṣō‹ar* (צֹעַר)]. A city marking the southernmost point of the Valley of Jordan (or the Valley of Jericho) in Gen 13:10 and Deut 34:3. According to Gen 14:2, 8 the unnamed "king of Bela, that is, Zoar" was a member of a coalition of five kings which was defeated by Chedorlaomer and his allies. Since the other five kings are called by their names, it is probable that "king of Bela, that is, Zoar" originally read "Bela, king of Zoar" (Albright 1921: 70). *Bela‹* means "swallowed" or "destroyed" and belongs to the type of "speaking names" borne by his four allies. (*Pal. Tgs.* and *Tg. Ps.-J.* explained Bela as "the city that swallows its inhabitants.") Bela as a royal name is attested in Gen 36:22 as that of the first king of Edom, a region that included Zoar. It is possible that an editor reversed the sequence of names in the passage in question in order to harmonize it with Gen 19:20–22, according to which Zoar received its name only after the destruction of Sodom and Gomorrah. Lot begged the two angels who had led him out of the doomed Sodom to spare the nearby town—which was but "a little thing" (*miṣ‹ār*)—so that he would be able to reach it before the disaster struck. His request was granted; therefore the town was called Zoar (from the root *ṣ‹r,* originally *ṣġr,* "to be small"). This is an etiological story to explain the contrast between the desolate nature of the W shore of the Dead Sea, especially of Jebel Usdum (see SODOM AND GOMORRAH), and the immediately adjacent lush oasis of Zoar.

It was supposed that Zoar appears in two Amarna Letters from Palestine as ^{uru}*Zu-uḫ-ra,* EA 334:3, and ^{uru}*Zu-uḫ-ru,* EA 335:3 (in which *zu* could be read *ṣú*); see *GP* 2: 466. However, the contents of EA 335 indicate that the city in question was located in W Judea, near Lakiši (Lachish) and Muḫrašti (Moresheth). It may rather correspond to Zior (*ṣî‹or*; Josh 15:54), in the district of Hebron, probably to the W of it.

Zoar is mentioned in two poems describing a catastrophic invasion of Moab by an unnamed enemy (probably the Babylonians), which form the chapters of Isaiah 15–16 and Jeremiah 48 but were composed toward the middle of the 6th century B.C. In Isa 15:5, fugitives from Moab flee to Zoar; in Jer 48:4 (emended in RSV following LXX), Zoar is the farthest point where the cry of the Moabites is heard; in v 34, it appears in a similar context. Did it belong to Moab? Its role as a place of refuge for fleeing Moabites (Isa 15:5), and its identification with a site on the S bank of the border stream Zered (see below), speak for its belonging to Edom. It was also located near the border of the kingdom of Judah. Zair (**ṣā‹ir,* loc. *ṣĕ‹îrāh*) in 2 Kgs 8:21, where King Joram fought the Edomite revolt, may represent the same place.

In the Hellenistic period, Zoar, along with all of Edom, passed into the hands of the Nabateans. At that time, it was known under the Aramaic form of it name, *Zō‹ar* (from *z‹r* "to be small"). Alexander Jannaeus conquered it, among other places, from the Nabateans; but Hyrcanus II retroceded them (Joseph. *Ant* 13.15.4 §397: *Zoara;* 14.1.4 §18: *Zōara*). After the annexation of the Nabatean kingdom by Rome (A.D. 106), Zoar belonged to the province of Arabia (*Zoara,* Ptol. *Geog.* 5.17.5, in Arabia Petraea), then to its S part that was renamed *Palaestina Tertia* by Diocletian (*Zoara,* Not. dign. or. 34:26; *Zōora,* Hierocles 721:7; Georgius Cyprius 1051). On the 6th-century mosaic map of Palestine from Medeba, the city appears under the double designation *Balak* (LXX form of Bela) and *Zoora* and is shown as a middle-sized (three-towered) fortress surrounded by palm trees, situated near the southern tip of the Dead Sea, on the S bank of a stream corresponding to Zered. To the crusaders of the Kingdom of Jerusalem, the place was known as Segor (as in Vg) or Palmaria.

In the Middle Ages, under the Arabs, the city was called both *Ṣuġar* and *Zuġar,* and experienced a period of great prosperity. The Dead Sea was called the Sea of Zuġar. It became a major commercial center and the principal city of the province of aš-Šarâh (ancient Edom). Its surroundings, which combined hot climate with abundance of water from perennial brooks and springs, were famous for their fertility. It exported dates, date syrup, indigo, sugar, and balm. (The data of medieval Arab geographers are conveniently collected in le Strange 1890: 286–92; cf. also *GP* 2: 466–68). The city was later abandoned, and little of it is visible on the surface.

The information on Zoar provided by the Bible, Josephus *JW* 4.8.4 §482, and the Medeba Map, is corroborated by Dimmašqi: 213 (quoted in le Strange 1890: 292), who specifies that "Zuġar lies in the district of aṣ-Ṣâfîyah in the Ġawr (or el-Ghôr, the Rift Valley)." A Jordanian village on the S bank of Wâdī

Ḥasâ (Zered), ca. 3 km from the shore of the Dead Sea, is still called Ṣâfî, and the area E of it, Ġôr eṣ-Ṣâfî. 1.5 km to the SE of Ṣâfî, where the Zered is joined by a perennial brook from the W, there rises a hillock (perhaps a tell) with ruins of a Byzantine fort, generally assumed to correspond to the Roman-Byzantine Zoara/Zoora (see Glueck 1935: 7–10; 1937: 20–21; Map I/12 in the *Atlas of Israel*). The surrounding area contains traces of Bronze Age, Nabatean, Roman-Byzantine, and medieval Arab settlements. Excavations may yet disclose the biblical and postbiblical city of Zoar.

ZOBAH (PLACE) [Heb *ṣôbâ* (צוֹבָה)]. Also called Aram-Zobah (*ʾăram ṣôbâ/ṣôbāʾ*), this was the name of a powerful Aramean kingdom of southern Syria during the 11th century B.C.E. Zobah, under its king, Hadadezer, came into conflict with the new kingdom of Israel under David. Most scholars now locate Zobah in the N Biqaʿ valley of modern Lebanon, extending E of the Anti-lebanon range to the N of Damascus and into the plain of Homs (Malamat 1963: 3–4).

The only substantial source of information preserved about this state is in the Hebrew Bible. Accounts of three conflicts between Zobah and Israel are found in 2 Sam 8:3–8 (= 1 Chr 18:3–8) and 2 Sam 10:1–19 (= 1 Chr 19:1–19). Zobah is also mentioned in 1 Sam 14:47, where it is listed as one of the nations with which Saul did battle during his reign. However, it is not clear how reliable this latter source is (Pitard 1987: 90).

The accounts in 2 Samuel/1 Chronicles suggest that Zobah was the dominant state in central and S Syria during the latter part of the 11th century and that it was the center of a small empire that encompassed most of the minor states surrounding it. Some scholars (cf. Malamat *POTT*, 141–42) have suggested that the empire controlled by Hadadezer, the only king of Zobah actually attested in our sources, extended as far N as Pethor (Pitru), in the region of Carchemish in N Syria; 2 Sam 8:3 and 10:16 indeed suggest a wide influence by Zobah in N Syria. However, caution is in order when speculating about the extent of Zobah's actual political control since 2 Sam 8:10 indicates that the important kingdom of Hamath, directly N of Zobah, was not under Zobah's domination during the time of Hadadezer's reign. Whatever Zobah's position was in the N, the evidence seems clear from our sources that it dominated most of S Syria and perhaps parts of Transjordan, including Ammon.

That the leading state of the area would eventually come into conflict with the expanding young kingdom of Israel is not surprising. It appears that the event that led to the opening of hostilities between the two was the intervention by Zobah in a conflict that arose between Israel and Ammon (2 Sam 10:1–19). According to 10:6, Ammon "hired" several armies to join them in battle against Israel, including Zobah, Beth Rehob, Maacah, and Tob. It seems likely, however, that Ammon was a vassal of Zobah (or was offering to become one in exchange for protection) and that Hadadezer decided to use this opportunity to deal with the new threat to his empire. Beth Rehob, Maacah, and Tob were also probably part of Hadadezer's empire (cf. 2 Sam 10:19).

The first battle (2 Sam 10:9–14), in which Joab divided his forces and fought the Aramean and Ammonite armies separately, seems to have been a standoff since all sides withdrew after the battle (10:14). Hadadezer then regrouped his forces, adding fresh troops; and David himself led the Israelite army to the site of Helam (location unknown), where the Israelites defeated Hadadezer's army (10:15–19). At this point several of Hadadezer's vassals astutely switched their allegiance to David.

There has been some question as to whether the battle described in 2 Sam 8:3–8 was a distinct one or whether this passage is simply a different account of the battle of Helam. Most likely it is an account of a separate encounter between the two nations, and this battle took place after those described in 2 Samuel

10 (Pitard 1987: 93). Although the circumstances which led to this battle are not clear (8:3 is obscure as to who was on his way to the Euphrates, David or Hadadezer), the battle seems to have taken place in Hadadezer's territory; and it was a decisive victory for David, who captured much of Zobah's chariotry and plundered two of Hadadezer's cities.

From this time on, Zobah lost its political influence. During the 10th century, Damascus became the dominant power in S Syria, and Zobah seems to have become a part of Aram-Damascus' territory. See ARAM (PLACE). When Aram-Damascus was eventually defeated by the Assyrians (732 B.C.E.) and incorporated into the Assyrian Empire, the area that it had controlled was divided into provinces. One of those provinces is called *ṣubatu*, presumably the area of Zobah (Forrer 1920: 62–63). References to this district have been found in documents from the reigns of Sargon II, Sennacherib, and Asshurbanipal (see Parpola 1970: 325).

WAYNE T. PITARD

ZOBEBAH (PERSON) [Heb *ṣōbēbâ* (צֹבֵבָה)]. The son of Koz (1 Chr 4:8) in the genealogy of Judah.

It is interesting to note that the name is preceded by the definite article in the Hebrew text. This element is not represented in the LXX as well as modern translations. Myers, however, construes the definite article as part of the name (*Chronicles* AB).

H. C. LO

ZOHAR (PERSON) [Heb *ṣōḥăr* (צֹחַר)]. **1.** The father of Ephron the Hittite (Gen 23:8; 25:9). Zohar's son Ephron sold a field which contained the cave of Machpelah to Abraham so that Abraham could bury his wife Sarah. Hoffner (1969: 32) has shown that the names of persons called "Hittites" in the OT are almost all good Semitic names, e.g., Ephron, Gen 23:8; Judith et al., Gen 26:34; Ahimelech, 1 Sam 26:6; etc. Zohar is also a good Semitic name from *ṣḥr* meaning "tawny." Therefore, it is most likely that Zohar was part of a group of Canaanites living in the hills near Hebron during the time of Abraham and not a Hittite from Anatolia. See also *POTT*, 197–228.

2. One of the sons of Simeon (Gen 46:10; Exod 6:15). In Num 26:13 and 1 Chr 4:24 he is called Zerah and is the founder of a family of the tribe of Simeon called Zerahites. For possible relationships between the lists in Genesis 46 and Number 26, see Noth *Numbers* OTL, 203 and Budd *Numbers* WBC, 290.

ZOLDERA (PLACE). See LYSTRA.

ZOOLOGY (FAUNA). This article surveys what is known about fauna, especially domestic fauna, in the ANE, and particularly in ancient Palestine from the EB Age to the Greco-Roman period. Gathered together here are all entries on fauna and animal-related topics, which in other Bible dictionaries are usually separately titled. In addition, the orientation of the article is radically different.

First, in consideration of the limited space allocated for the article, most of the discussion is devoted to those animals which have played a significant role in the cultural history of the Near East. These are primarily the domestic animals. The heading "Zoology" is thus something of a misnomer, since a great many animals are largely or totally ignored. For comprehensive zoological descriptions of Palestine/Israel, the reader is referred to the works of Tristram (*SWP* 7) and Bodenheimer (1935; 1960).

Second, the purpose of this article is not to illustrate or explain the biblical text, but rather to give the reader a better understanding of one aspect of the day-to-day world in which people lived during the biblical period, especially as this is recoverable from archaeological excavations. Biblical texts are accordingly cited only where they contribute to that understanding. Literary topoi involving animals as a rule are not discussed.

The scope of the discussion devoted to each animal is therefore not limited to what the Bible happens to say about that animal, as has so often been the case in treatments of "biblical" fauna. The purpose of the article is to present a basic historical and biological profile of each animal, the latter emphasizing those features which made it useful to humans. Wherever archaeological data on the use of an animal exist, these are discussed, along with anthropological models and comparative studies which may help to explain the archaeology. In a few cases, such as the horse harness, the camel saddle, and the plow, brief discussions of technology relevant to the exploitation of an animal are given as well.

One of the most exciting developments in archaeology of the last twenty or so years is the realization that the systematic study of animal bones from a site provides invaluable insight into the economic and cultural life of its inhabitants. Some of this literature is discussed in the text. Additional references are included in the bibliography. At the end of the article, the reader will also find an index of studies on fauna from sites in Israel and selected sites in Jordan. Unless referred to in the paper, studies on Stone Age sites were generally not included in the index, since their date lies too far outside the time frame of this survey. For comparative purposes, however, Chalcolithic and EB sites were included.

Perhaps the most important function of the article is to guide readers to sources for further reading. The bibliography is therefore fairly comprehensive. Most of the articles and books listed there were consulted for the preparation of this article. A few additional entries are included for the sake of completeness.

Since both the Hebrew Bible and the NT are treated in this dictionary, the scope of this article might legitimately have extended to the Greco-Roman world as well. However, the discussion of domestic fauna and their use in Greece and Rome would have meant an even larger article. So, practical necessity forces the writer to exclude most of this material. Some use is made of classical texts on agriculture and animal husbandry, and occasional references to other classical texts may be included for comparative purposes.

This entry is divided into three major parts. The first part focuses on background issues, such as the environmental aspects of animal habitats in biblical lands, animal domestication, and recent methods designed to increase our knowledge of animals and how they were utilized in antiquity. The second part, constituting the bulk of this entry, provides profiles of specific animals. The animals discussed are grouped according to modern zoological categories. In its third major part, this entry concludes with two appendices: one listing the animals mentioned in the Bible, along with the corresponding Hebrew name and its various Semitic cognates (with some brief philological notes provided); and the other indexing studies on faunal remains discovered in selected sites in Israel and Jordan.

BACKGROUND ISSUES AND METHODS

———

A. Environmental Zones and Their Animal Inhabitants

One of the most important factors in the cultural and political history of ancient Palestine was that it was a bridge between the Hittite and Mesopotamian empires in the north and west and that of Egypt in the south. In ecological terms, too, Palestine is a meeting place of different zones: the Palearctic, the Irano-Turanian, the Tropical, and the Saharo-Arabian, each with its own characteristic climate, flora, and fauna.

The *Palearctic region* in Israel extends N and S along the moist hill country of the Levant as far S as the Negeb desert. Annual rainfall in this region may be as much as 1000 mm (39 in) or more. There are two reasons, a dry summer (May through October) and a wet winter (November through April). See also PALESTINE, CLIMATE OF. The flora of this zone, like that of other Mediterranean countries, was originally, dominated by oak forest or maquis. See also FLORA. Typical wild fauna include the wild boar (*Sus scrofa*), roe deer (*Capreolus capreolus*), brown bear (*Ursus arctos*), weasels (*Mustela nivalis*), and shrews (*Crocidura russula, Crocidura leucodon*). Israel/Palestine is the most southernmost limit of the range of many palearctic species.

The *Irano-Turanian* zone is a semi-arid steppe separating the Mediterranean environment from the desert. It extends in a strip along either side of the Jordan River from the Sea of Galilee in the N to the Dead Sea in the S. In contrast to the Mediterranean region, which was once covered by oak forest, and where horticulture can be practiced without irrigation, trees do not grow naturally in the steppe. Its climax plant is the shrub *Zysiphus lotus.* Within this region, however, are pockets of tropical vegetation, which thrive around natural springs and along the banks of the Jordan River. These are no doubt relicts of a much larger tropical zone which flourished in the area in prehistoric times. Typical Irano-Turanian fauna include the goitered gazelle (*Gazella subgutturosa*), Iranian fallow deer (*Dama dama mesopotamica*), and the Asiatic mouflon (*Ovis orientalis*), the ancestor of modern domestic sheep.

The *Tropical Zone* is restricted to pockets of land around desert springs and to the marshy areas along the Jordan River. Israel's marshlands also once included 15 km^2 of swamp in the Huleh Valley, most of which was drained in the 1950s. Animal and particularly bird life in these marshes is rich because they are an important stopping place for migratory birds, as well as home for local waterfowl. Tropical fauna species were entirely restricted to these pockets of marshland. The hippopotamus, for example, appears to have survived in some marshlands until at least the Iron Age. Hippopotamus bones have been found in the Iron Age strata (XII–XI) at Tell Qasileh (Haas 1953; Davis 1985). According to Davis, one of the bones, a metacarpus, shows signs of cut marks, suggesting that the animal was slaughtered for meat. Hippopotamus bones are also reported to have been found at Aphek and Dan.

Another marshland species was the crocodile, which inhabited the marshes of the Nahal Tanninim (wadi ez-Zerka) N of Caesarea (Buchanan 1920; Masterman 1921; Fast 1959). Just N of Caesarea was a place called Crocodilon Polis (Strabo, *Geog.* 16.27; Pliny, *HN* 6.17). Several dead crocodiles purportedly from the Nahal Tanninim were purchased by Europeans in the last decade of the 19th century.

The *Saharo-Arabian* zone is hot and arid with less than 50 mm (2 in) of rainfall per year. Actually, when annual rainfall is this low, it is not the upper limit, but the lower which is decisive in determining the nature of local flora. In Eilat, it is not unusual for a year to pass with no rainfall at all. Native fauna include various species of gazelle (*Gazella dorcas, Gazella gazella*), the lesser Egyptian gerbil (*Gerbillus gerbillus*), the jerboa (*Jaculus jaculus*), the golden spring mouse (*Acomys russatus*), and the sand rat (*Psammomys obessus*). In most historical periods, the desert zone has been of only marginal cultural significance. Animal life of the desert accordingly receives short shrift in this article. From a zoological point of view, however, it is among the most interesting environmental zones. Before we conclude this section on environment, therefore, we must take a brief look at the animal life of this region.

The heat and aridity of the desert pose two significant challenges to animal life: maintaining an acceptable body temperature, and preventing dehydration (Schmidt-Nielsen 1964; Schmidt-Nielsen and Schmidt-Nielsen 1952; Evenari et al. 1982). Desert animals adapt to these environmental challenges in

different ways, depending on their size. With their large surface-to-mass ratio, small animals are much more liable than large animals to rapid rises in temperature when exposed to heat and radiant energy. Given their limited water resources, it would be far more costly for them to eliminate excess heat by evaporating sweat than it is for large animals with smaller surface-to-mass ratios. For example, a mouse weighing 100 g would have to expand 15% of its body weight in water to avoid overheating, as against 1% for a camel and 1.5% for man (Evenari et al. 1982: 315). Most small animals (rodents, insects, mollusks, birds, and reptiles), therefore, do not sweat to cool themselves, nor do they even have sweat glands; consequently, they protect themselves from the heat by burrowing. This convenient option is not open to large animals. Often unable to find much shelter from the sun or the heat, they respond by sweating, which hastens the rate at which heat is eliminated from the surface of the body. This extra cooling is needed because large animals have more mass to cool but relatively less surface area through which excess heat can escape than do small animals. However, because of their size, large animals are also able to absorb a greater amount of heat before their body temperature rises. The temperature of a 10 kg (22 lb) animal exposed to daytime desert heat will rise 5°C (9°F) in half an hour, while that of, say, a 500 kg (1100 lb) camel will take over seven hours to reach the same point (Hillel 1982: 59).

Desert animals may thus be divided into two groups, depending on how they regulate heat and water. The first group comprises small animals which do not expend water for heat regulation. The second group includes large land animals, which must sweat in order to eliminate heat. To this second category belong the ungulates (camels, sheep, goats, and gazelle) and the larger carnivores. Within each of these two groups there is an additional subdivision between those animals which obtain sufficient water from their food alone and those which must drink extra water. Each of these groups is more fully considered below.

Since they do not sweat, desert rodents survive by burrowing underground, an act that insulates them from the heat of the sun. A burrow 20 cm (7.8 in) underground may be as much as 20°C (36°F) cooler than the surface, and similarly warmer at night. Since small animals cannot survive continuous temperatures in excess of 45°C (113°F), and since daytime ground-surface temperatures may rise as high as 60–70°C (140–160°F), this insulating difference is vital. Burrowing is the necessary concomitant of the rodent's small size because small animals are especially vulnerable to big fluctuations in temperature.

Burrowing also protects an animal from dehydration, for the relative humidity of the burrow may be as high as 90%, as against 10% or less on the surface. Dry foods stored in this humid environment absorb moisture from the soil. According to Evenari, Shanan, and Tadmor (1982: 317), for example, seeds of the spiny zilla (*Zilla spinosa*) stored in the burrow of the fat jird (*Meriones arassus*) at a relative humidity of 60% contained 23–26% more water than the same seeds outside the burrow. Water thus derived, combined with water produced by the metabolism of carbohydrates and fats, is usually sufficient to meet the requirements of many rodents. These species thrive on dry foods without access to drinking water or even green vegetation (see further Schmidt-Nielsen and Schmidt-Nielsen 1952: 137–47). Carnivorous rodents, of course, derive needed water from the bodies of their prey, which ordinarily contain 60–70% water by weight.

Among all desert-dwelling animals, water losses are held to a minimum. Waste products such as urea and excess electrolytes are often expelled in concentrated form, and feces are relatively dry. For example, the urea concentration in the feces of the golden spring mouse is about five times greater than that in human feces, and the electrolyte concentration six times greater (Evenari et al. 1982: 315). The jerboa's urea and electrolyte concentrations are respectively about four and three times more concentrated than man's. These values are not untypical of Israel's desert rodents in general. The feces of the desert rat contain less than 40% water by weight. Values for some larger species are given in the following table.

Table 1
Percentage of Water in Feces

	Feed	% Water by Weight
Camel	Hay and dates, no water	43%

Camel	Hay and dates, daily water	52%
Donkey	Had and dates, daily water	64%
Man	Mixed Diet	66%
Cow	Pasture	85%

Source: Schmidt-Neilsen 1964: 61

As regards waste products, one advantage of plant- as opposed to meat (i.e., protein)-rich diets is that less urea (a by-product of protein metabolism) is produced in the first place.

Birds, like rodents, have no sweat glands, and therefore do not dissipate excess heat through perspiration. Instead, water is evaporated from their lungs during respiration. This respiratory cooling is accelerated by panting, which has been found to have certain advantages over sweating as a means of evaporative cooling. Experiments on dogs, which also cool themselves in this manner, and humans, who sweat, show that the latter are much more liable to dehydration, because they will drink only as much water as is necessary to maintain a constant concentration of chloride in the blood. The absolute amount of chloride, however, steadily falls as salt is lost in sweat. Not only are humans thus susceptible to dehydration, but the drop in the relative percent of electrolytes in the blood is also potentially fatal. In panting, however, no salt is lost. A dog will therefore drink enough water to regain its original body weight. Panting, while thus conserving body salts, is also quite adequate to dissipate excess body heat. This has been experimentally verified in the case of the black raven of the Negeb (*Corvus corax ruficolis*). Birds, like reptiles, limit their water losses by expelling highly concentrated waste products (uric acid and excess electrolytes) in the feces rather than in the urine. While carnivorous and omnivorous birds obtain sufficient water from their diet alone, graminivorous birds must drink water.

Birds are most active at night or in the morning and evening, when heat and radiant energy are less than at midday. Those that are active during the day escape some of the heat by hovering high above the ground. When stationary, they hold their wings away from the body in order to facilitate the elimination of body heat. Their feathers, like the fleece of sheep, also keep heat out. In one case, a gradient of 30°C (54°F) was reported between the outer feathers and the skin underneath (Evenari, et al. 1982: 319). The body temperature of birds is also higher than that of mammals, reducing the need for cooling in the first place.

Reptiles, like birds, cool themselves by respiration. Although cold blooded, even reptiles cannot tolerate excessive heat. Snakes in particular are vulnerable because they are in direct contact with the hot ground. Most desert snakes are carnivorous, and their food therefore contains enough water (at least 60–70% of body weight) to satisfy their needs.

Even mollusks, which are usually associated with moister climates, have adapted to life in the desert. Two species, the desert snail (*Eremina desertorum*) and the white desert snail (*Sphincterochyla boissierii*), are commonly seen in the Negeb. On occasion, the former may cover dwarf bushes in considerable numbers. Water content of the snail body is typically between 60 and 90%, and may be reduced by as much as 65% of body weight without injuring the animal (Evanari et al. 1982: 323).

By way of comparison with animals native to the desert, a word may be said about how human beings fare in desert environments. Humans lack most of the special physiological adaptations found in desert natives. But, it turns out that not all of these adaptions would necessarily be advantagous. For instance, under desert conditions, the rate of sweating in human beings may be as high as 1.5 liters per *hour*. The minimum amount of water needed for proper urine formation, by contrast, is 500 ml per *day*. Little would be gained, therefore, even if the concentration of the urine could be doubled, since this form of water loss is an insigificant fraction of the amount of water daily expended in sweat (Schmidt-Nielsen and Schmidt-Nielsen 1952: 151).

Man’s natural ability to rehydrate after severe water loss is limited in comparison with some other animals, especially the ungulates. Although a man’s weight is 2/3 that of a donkey, after exertion he may nevertheless drink as little as 1/10th as much water in a short space of time, no matter how thirsty he is.

Thus a human being requires several hours to rehydrate, whereas a dog may do so in half an hour, and camels and donkeys in a matter of minutes. Provided with adequate water and salt, however, humans function well in a desert climate. What humans lack in specific biological adaptation, they make up for in overall flexibility, which allows them to function in a variety of environments. They can compensate for their biological shortcomings with respect to a given environment by behavioral changes (e.g., diet, settlement patterns, etc.) and technological innovation.

The climatic map of Palestine/Israel which underlies its ecological divisions has remained fairly stable in historical times, though there has been some fluctuation in the location of the border between the desert in the S and the arable land in the N. A northward shift in this border, for example, is thought to have been one of the factors in the decline of the EB city of Arad. The country's natural distribution of flora and fauna, however, has changed enormously since large-scale settlement of the area began in the EB Age. This is especially true of the temperate regions, where settlement has been most intense. New plants such as the vine have been introduced, and natives such as the olive have been domesticated (Stager 1985), while aboriginal vegetation such as oak forest has been cleared for cultivation. In view of its effect on wild fauna, the process of deforestation merits some discussion here.

In prehistoric times, the highlands of Transjordan and much of Cisjordan were covered by heavy oak or mixed oak/pistachio forest (cf. Baruch 1986; Gophna, Liphschitz, and Lev-Yadun 1987). While much of this was destroyed in historical times, remnants survived until as late as the 19th century (literature and details in Rowton 1965; 1967; Mikesell 1969; Gophna, Liphschitz, and Lev-Yadun 1986; 1987). Sometimes, the only traces of the trees are the place names they have left behind (Schumacher 1888: 15, 23; Kislev 1985). But the Bible itself makes it clear that large blocks of heavy forest still existed in the mid-1st millennium B.C.E. (Josh 17:14–18; 2 Sam 18:6–8; Isa 2:13; Ezek 27:6). Exactly how much is hard to say. One indication comes from studies of pollen (e.g., Baruch 1986), which show that by about 1000 B.C.E. the proportion of Tabor Oak (*Quercus ithaburensis*), for example, had declined by approximately 67% and that of Evergreen Oak (*Quercus calliprinos*) by 33–50% from what they had been before intensive settlement in the area began in the EB Age. These declines correspond to increases in the proportion of the olive tree due to human cultivation. While these findings clearly indicate that a great deal of oak forest had been lost prior to the biblical period proper (i.e., the Iron Age), they also show that much of it remained. It was not until the Roman period that the loss of oak forest reached anything near completeness. (These results taken from the Galilee are said by Baruch [1989] to be indicative of samples he has taken elsewhere in the country.)

The extent of deforestation in a given period can also be roughly calculated by estimating the cumulative effect of human populations on primitive forest cover. At any given time, the extent of deforestation would have been equal to the amount of primitive forest cleared in earlier periods minus the amount of forest regenerated when settlements were abandoned. In Israel, the periods of greatest settlement activity are the EB II–III (Gophna 1984; Broshi and Gophna 1984), the MB II (Gophna 1984; Broshi and Gophna 1986), the Iron I–II (Shiloh 1980; Zertal 1986; Finkelstein, *AIS*), and the Roman-Byzantine period (Broshi 1979). The EB IV is thought to have been a period of less intensive settlement, in which pastoral nomadism was relatively more important than in periods of urban activity (Dever 1980). In the hill country, the LB Age is also a period of marked decline in terms both of the number of settlements and of their size (Gonen 1984; Zertal 1986; Finkelstein, *AIS*). These periods of decline in settlement activity are much longer than the recovery rate of oak forest, which is between 30 and 50 years (Gregg 1988: 123; Livneh 1981: 82), and would thus have allowed ample time for regrowth. Certain factors favored regrowth. The technology available to Bronze Age farmers for clearing forests left stumps and root systems capable of producing new growth sooner than would be the case from virgin soil (Gophna, Liphschitz, and Lev-Yadun 1986: 78; Rowton 1965: 379; also cf. Isa 11:1). What is more, the trees often anchor themselves in underlying bedrock, since the topsoil is not infrequently rather thin. This makes the extraction of root systems, which are capable of sending out new shoots, very difficult.

A preliminary estimate of the extent of deforestation due to human settlement has recently been done for the Sharon by Gophna, Liphschitz, and Lev-Yadun (1986), based on their study of settlement patterns

in the central coastal plain. They estimated that even at the height of urban settlement in the area (the MB II), only about 25% of the forest cover had been lost. This estimate is probably too conservative, since continued grazing undoubtedly prevented complete recovery of the forest in some areas. Still, such studies give us a rough idea of how forest reserves were affected by human settlement patterns. When the results of the archaeological surveys of Ephraim and Manasseh are published in their entirety, it should be possible to make fairly reliable estimates of deforestation in the hill country.

These changes in flora have brought about changes in the distribution of animals. Forest dwellers, such as bear, wild boar, and various species of deer, have become less common or even extinct. But the most significant change in fauna has been, of course, the introduction and spread of domestic livestock. These processes are discussed in more detail below.

B. Animals and Early Human Society

1. Hunting and Its Cultural Legacy. For the last 10,000 years or so, man's closest association with animals has been with domestic species. Hunting has played an increasingly minor role in both the economic and the cultural spheres. Indeed, already in the great civilizations of antiquity, big game hunting at least had become little more than sport for the aristocracy. The only cultural significance was its role in royal ideology, whose purpose was to celebrate the martial prowess of the king. Royal hunting was highly ritualized in nature in the sense that as a behavior pattern it had lost its original function, and had been invested with new value as a purely symbolic activity. In the extreme case, no real hunting would even take place. The symbolic requirements of the ritual hunt could be satisfied if the king slew a token animal, such as a lion, which could be caught beforehand and bound so as to present no real danger (so the Abyssinian enthronement ritual described by Littmann and Krencker 1913: 37). The symbolic and propagandistic value of the ritual hunt is much in evidence in ancient Assyria (cf. Meissner 1911) and in Egypt. In ancient Israel, the mythos of the king as intrepid hunter is not in evidence.

Of all the varieties of the hunt, only fishing and fowling were still widely pursued in historical times. Unlike big game hunting, these activittes were still relatively profitable and could be managed without the benefit of sophisiticated weapons or the use of horses. Whereas the bow and arrow were weapons characteristic of the aristocracy and symbolic of the king's far-reaching power, the tools of the ordinary hunter were nets and traps. While they were used to capture large game, such as gazelle, they were most commonly employed for catching fish and birds. It is to bird traps, for example, that the Hebrew terms for "trap," *môqēš* and *paḥ,* invariably refer (Gerleman 1946). The use of nets was among the oldest and most widespread hunting techniques. The snaring of birds and fish is frequently depicted in both Mesopotamian and Egyptian art. Indeed, the very word of "hunting" in Sumerian, NIGIN, is graphically represented by the ideogram for "net." But no matter how widely practiced, even those most common forms of hunting contributed only marginally to most ancient economies, all of which were dominated by the exploitation of domestic plants and animals.

The dependence of civilization on domestic animals, and the consequent decline of hunting as a way of life, are nevertheless comparatively recent events in the history of the human species. For something like 99% of our existence as a species, we have lived as hunters. It should therefore come as no surprise that certain of our most basic cultural institutions have their origins in our prehistoric association with the hunt.

Animal sacrifice, for instance, almost certainly originates in the hunt (Burkert 1983). Only a phenomenon as old and as basic as hunting can explain the ubiquity of animal sacrifice as *the* sacral act par excellence throughout the ancient world. Of course, sacrifice came to be interpreted in many different ways. On the underlying formal level, however, one finds striking similarities both between sacrificial rituals among widely disparate cultures, and between hunting rituals on the one hand and sacrificial rituals on the other (cf. Meuli 1946 and discussion in Burkert 1983: 12–16).

In Egypt, for example, the sacrificial bull was treated as a foe vanquished in the hunt (Moret 1908; Otto 1950; Eggebrecht 1973). The slaughtering ritual, as reconstructed by Otto, began with the lassoing (*śpḥ*) of the wild bull. Lassoing was also used in the hunting of the other common sacrificial species, antelope, gazelle, and ibex, and is depicted already in predynastic rock drawings (Winkler 1937: figs. 17, 47, 56,

57, etc.; 1938–39; Pls. XV.1, XXIX.1). After being caught, the victim was fettered and slaughtered. In depictions of this stage of the ritual, a woman named "kite" (*ḏr.t*), who stands next to the butcher, taunts the bull, "Your two lips have done that against you [i.e. your own cry has betrayed you to the hunter]. Does your mouth (still) open?" (Otto 1950: 168). Ms. Kite is thought to represent the carrion bird of the same name, which would have been a frequent sight on the hunt. Next, a courtier says to the statue receiving the offering, "I have fettered them [the victims] for you. I have brought you your enemy." He then addresses the victim, "Do not attack that god" [the recipient of the offering], probably referring to the fact that unlike most game animals the wild bull will charge the hunter.

Like the ritual of capture and killing, the choice of victim was determined by the tradition of the hunt. In Egypt, the preferred species for sacrifice continued to be those which were commonly hunted: wild cattle, antelope, gazelle, and ibex. The common domestic species, sheep and goats, were avoided (Barta 1963).

In the other great urban cultures of antiquity, however, it was not wild but domestic animals which were usually sacrificed. This fact would seem to belie any connection between hunting and sacrifice. But, sacrifice, like hunting itself in the wake of the Neolithic food revolution, was ritualized behavior. By Neolithic times, the ritual killing of animals had become an indispensable accompaniment to every sacred occasion or turning point in life, such as birth, purification, and death. Tradition, in other words, associated piety with the slaughter of animals. When domestic animals replaced wild game as human's principal source of meat, they also filled the role previously played by game in sacrifice.

Like the hunt, sacrifice or at least the sacrificial meal was typically a collective activity, providing occasion for kin to gather together for a meal of meat, a treat which came infrequently for all but the aristocracy. Sacrifice thus continued many of the social functions of the hunt. It reinforced kinship ties and regulated the distribution of precious animal resources.

2. Domestication. a. History and Traits. For a long while, prehistorians believed that the domestication of plants and animals evolved as hunter-gatherers realized that by farming they could produce larger amounts of food more reliably and with less labor than was possible by hunting. What gave this idea credibility was the assumption that the life of the hunter-gatherer was one of deprivation and unending exertion. But, recent studies of contemporary hunter-gatherer societies such as the!Kung Bushmen (Lee 1968; 1969; 1979) suggest that, left to themselves, these groups lead a relatively carefree life in which food is plentiful and easily acquired. Except for highly specialized hunters such as the Eskimo, who are subject to extreme climatic conditions and a limited variety of food resources, modern hunter-gatherers generally have access to a food base that is adequate and reliable, and they do not expend inordinate amounts of time in collecting it. The!Kung work week, for instance, which includes time spent in foraging and hunting for and preparing food, collecting firewood, and making and repairing tools, amounts to only about 42 hours a week (Lee 1979: 272–80). It is not without a certain delight in turning old preconceptions about this lifestyle on their head that Marshall Sahlins thus calls these people "the original affluent society."

It is the farmer's life, by contrast, that is difficult. He must not only prepare and plant his fields, harvest the crops, and tend his livestock, but also build pens to shelter the animals and fences to keep them out of the fields. Nowadays, it is therefore suggested by some that the switch-over to agriculture and the use of domestic livestock were forced upon hunter-gatherers by a combination of factors such as a lower density of game, climatic change, and a loss of habitable land (Harris 1977). According to this view, the ever-increasing scarcity of resources remains perhaps the single most powerful force shaping human culture.

While scarcity no doubt shapes culture, there are other ways of looking at the process of domestication. It has been suggested, for example, that people might have started raising young animals that they captured or whose parents had been killed in the hunt. Another theory is that domestication was a natural consequence of mutual adaptation or co-evolution (cf. Clutton-Brock 1987). From the animal's viewpoint, it is argued, natural selection itself played a role in the process of domestication, because from an evolutionary perspective, domestication offered significant advantages to animals as well as humans (as the success of domestic animals demonstrates). Domestic animals enjoy among other things protection from predators, and are thus more likely to survive. It was therefore in an animal's interest to associate

with humans. The closer its association, the greater its advantage over others of its species. Natural selection thus favored tame animal populations. According to this scenario, animals gradually gave up their aggressive and territorial traits, needed for survival in the wild, in return for protection and food. It would have been a modest step for humans to undertake to manage these animals, and so exploit them at will. Those species whose management ultimately proved most consistently profitable soon monopolized man's attention. No doubt there was experimentation with a number of species. An interesting example of a close man-animal relationship that did not end up in domestication is the fallow deer of prehistoric Cyprus. These animals were deliberately introduced by man, and intensively exploited. At Dhali-Agridhi, for example, fallow deer account for about 79% of the bones in the sample (Carter 1989; Croft 1989). Having once realized the benefits of keeping their own animals, people may have abandoned hunting long before economic necessity drove them to do so.

As the example from Dhali-Agridhi illustrates, the animals that humans hunted or even managed were not necessarily the ones that ended up being domesticated. Domestication in the fullest sense of the word was made possible by the fact that certain animals demonstrated an inherent predisposition to human control. One could say, therefore, that there is a certain inevitability about domestication, for given a sufficiently intimate association with the domestic-animals-to-be, people could scarcely have failed to notice their inherent susceptibility to human control.

The traits indicative of domesticability are the following. First, the social behavior of the animal must naturally be based on a hierarchy of dominant and submissive individuals, into which human beings can insert themselves as leader. Second, the animal must not be adapted for instant flight because such animals (e.g., the gazelle) will not breed freely if penned up or herded too closely together. Third, the animal must be easy to tend, that is, rather placid, flexible in its feeding habits, and naturally gregarious, so that herdsmen need expend a minimum of energy in keeping a herd together. Lastly, the animal must be responsive to human behavior—human commands, mood changes, facial expressions, etc. The best illustration of this sensitivity is the dog, which will imitate the smile on its owner's face or be frightened by an angry look (cf. further Clutton-Brock 1987: 15–16, 36).

Domestication, in its fullest sense, means that an animal's breeding, territory, and food supply are controlled by humans (Clutton-Brock 1987: 11, 21). *Populations* of animals managed in this way are said to be "domestic." One speaks of populations, because domestication involves more than the exploitation of an individual animal during its lifetime. The management of breeding enables humans to manipulate the characteristics of entire animal populations over generations through artificial selection. However, with certain animals, artificial selection offers no significant advantage. As a result of natural selection, some animals are already perfectly adapted to meet certain human needs. In such cases, breeding many as well be left to nature. Such animals are said to be "domesticated" rather than "domestic." They are tame *individuals* which are also dependent on humans, but whose breeding involves little or no selection. These "exploited captives" include the camel and the elephant.

The establishment of sedentary communities based on agriculture and animal husbandry has created still another type of human-animal relation, one stage further down the scale of intimacy from that of the domesticated animal. Known as commensalism, it is defined as a one-sided symbiosis between a passive, but dominant partner—in this case humans—and another species, which derives exclusive benefit from the relationship (cf. Tchernov 1984). The benefits accruing from this relationship include greater availability and dependability of the food supply, protection from predators, and a decrease in interspecific competition. The greater the degree of human sedentation, the greater the benefit to the commensal partner. Man's commonest commensal partners are the house mouse (*Mus musculus*), the black rat (*Rattus rattus*), the brown rat (*Rattus norvegicus*), the sparrow (*Passer domesticus*), and the *Columbidae*. In the latter case, commensalism led to actual domestication.

b. The Primary Domesticates. In view of the conditions which must be satisfied before an animal can be domesticated, it should come as no surprise that there are so few domesticates. The ones which shall concern us here are the common livestock species: sheep, goats, cattle, and pigs. After the dog, these were the first animals to be domesticated and remained the most important throughout antiquity.

Domestic sheep (*Ovis aries*) are the descendants of *Ovis orientalis,* the Asiatic mouflon, a dark, small-bodied, short-tailed sheep, still found in the mountainous zone from Asia Minor to S Iran. Domesticated sheep may have arrived in Palestine by way of trade with Anatolia, from which imports, such as obsidian, first appear in the Neolithic. The domestic goat (*Capra hircus*), too, descends from a wild species, the bezoar (*Capra aegagrus*), native to this region. It is therefore in this area that these two animals must first have been domesticated; and, indeed, the earliest paleozoological evidence for their domestication occurs here. Within this region, however, domestication may have arisen simultaneously and independently. The date of the domestication of sheep and goats is thought to have been sometime during the 9th millennium B.C.E. (Clutton-Brock 1987: 56), preceding the domestication of cattle by about 1500 years.

Cattle were domesticated later than sheep and goats because their size and often combative disposition presented would-be herdsmen with a much stiffer challenge. The wild ancestor of domestic cattle, the aurochs (*Bos primigenius*), stood about 2 m high and bore large, forward-facing horns. These formidable beasts were found throughout the prehistoric Near East, including regions such as Saudi Arabia, where today cattle are only infrequently found (Tchernov 1974: 240). They survived in remoter areas, such as N Mesopotamia, until at least 900 B.C.E.—long after the introduction of domestic cattle.

Domestic pigs all descend from a single wild species, *Sus scrofa,* despite some 19th and early 20th century claims to the contrary (Flannery 1983: 164). Signs of domestication, such as smaller dentition, first appear in the archaeological record between 6500 and 6000 B.C.E. at Jarmo in the Zagros mountains and perhaps a little earlier at Çayönü in S Turkey. In the Levant, dates for the introduction of domestic swing range from about 6000 B.C.E. at Tell Judaideh in the Antioch Plain to 5000 B.C.E. at Jericho. In Egypt, the earliest domestic specimens occur ca. 4000 B.C.E. At many sites, the appearance of domestic pigs is associated with the introduction of pottery. This raises the possibility that the practice of raising pigs spread along with the technology of pottery making. Such a scenario would also explain the late debut of the domestic pig at Jericho, where wild boar had been a major food item in the Pre-Pottery Neolithic (Clutton-Brock 1971). There may have been, however, multiple centers from which this knowledge spread, since cattle and pigs were being domesticated in Greece at least as early as 6200 B.C.E. (Flannery 1983: 182).

To conclude this section on domestication, we shall look at one of the earliest examples of the phenomenon in which the entire process is illustrated. The site in question is Tell Jericho, whose history of occupation spans the period during which the domestication of plants and animals began.

In the Pre-Pottery Neolithic A (PPN A), about 8000 B.C.E., domestic cereals (emmer wheat and hulled two-row barley) made their first appearance. Domestic animals were as yet unknown. The inhabitants of the village at this period, numbering perhaps about 2000, practiced simple agriculture and hunting. The importance of the latter is indicated by the large proportion of gazelle bones in the sample, along with bones of other wild species, such as the boar and the common fox (*Vulpes vulpes;* Clutton-Brock 1971). (For foxes as food animals, see also Turnbull and Reed [1974: 99] and Flannery [1969: 314].) Although it has been claimed that the gazelle at Jericho were tamed captives (Legge 1972), there is no evidence for this in the bones themselves (Clutton-Brock 1987) or in the proportion of juveniles (Ducos 1978). (For a general discussion of bone size and age distribution, see further below.) It is more likely that they were caught and killed in large numbers in nets, or in corrals or "kites" of the sort found further S in the Arabah, in the Sinai, in Transjordan, and in Syria (see below under Gazelle).

In the PPN B, the period associated with the domestication of animals, the make-up of the food supply is already different. The importance of gazelle, for example, has diminished. Gazelle now constitute only half as much (ca. 18%) of the meat supply as in the preceding period. While it is likely that cattle and goats were being domesticated in this period, this is difficult to prove because these earliest domesticates are all morphologically indistinct from their wild counterparts. That is, their bones are much larger than those of domestic cattle and goats from later periods, indicating that they have not long been domesticated. (More will be said below about the phenomenon of size reduction in domestic animals.) Some of these large animals may therefore have been wild aurochs and bezoar. Sheep are not certainly attested until the EB Age.

In the Bronze Age, the importance of gazelle continues to decline while that of goats increases. By the MB Age, gazelle contribute only 3.4% of the meat supply. The pig, whose contribution to the food supply during the EB Age had been fairly small, stages a comeback, albeit in domestic form. The effects of domestication are evident: these pigs are smaller than those of the Pre-Pottery period, and the proportion of juveniles—another indication of domestication—has increased (12.5% in the Pre-Pottery, 32.5% in the Bronze Age). Relatively speaking, however, the pig's contribution is still less than it was in the Pre-Pottery period because of the growing importance of domestic cattle, goats, and sheep.

3. The "Secondary Products Revolution." In recent years it has become fashionable in some circles to speak not of a single revolution in the use of animals, but of two. Proponents of this view argue that for a long time after their domestication domestic animals still appear to have been kept chiefly as sources of meat. Many of the activities which we associate with animal husbandry may only have became widespread as late as 4000–3500 B.C.E.—three or four thousand years after the advent of farming. These activities include the exploitation of livestock for milk, riding, traction, and pack transport. These developments collectively make up what Sherratt (1981; 1983) calls the "secondary products revolution." His arguments are in brief as follows.

The use of the scratch-plow drawn by oxen first appears in the iconographic record about 4000 B.C.E. at Uruk, though the invention of this technology may have preceded its appearance in art by some time. From the Near East, use of the plow spread to Europe, where it is attested by actual plow-marks in datable surfaces and by copper models of yoked oxen ca. 3700–3500 B.C.E. Also from the 4th millennium comes the first evidence for the use of equids as pack animals. Excavations in a tomb at Giv‘atayim, in Israel, uncovered a donkey figurine with containers on its back. The figure dates to the Ghassulian (Late Chalcolithic) period (Kaplan 1969: 31, and pl. VII). Another pack donkey figure was found in an EB I tomb at Tel Azor (Druks and Tsaferis 1970). As Sherratt notes, the Late Chalcolithic and EB periods witnessed a growth in the number of settlements in the Negeb and Sinai, due to the trade in copper, in which donkey transport played an essential role. Again, from the 4th millennium we have our first evidence from both iconography and faunal studies of the use of goats and cattle for milk, as well as of the development of woolly sheep by artificial selection. From this point on, the use of wool is said increasingly to have replaced that of vegetable fiber such as linen.

Sherratt's concept of a "secondary products revolution" has drawn sharp criticism from some circles (e.g., Chapman 1983). One of its obvious defects is that the dates at which various innovations in animal husbandry are first attested constitute only a terminus ante quem. It cannot be ruled out that while archaeologically unattested, some of these innovations go back as far as animal domestication itself.

Still, there can be little doubt that the exploitation of animals for "secondary products" did in fact lag behind their use as a source of meat. For example, the amount and quality of the wool obtainable from hairy sheep would alone scarcely have justified the effort of keeping them. And, in fact, Mesopotamian and Egyptian art both show that hairy sheep continued to be raised even after woolly sheep had been introduced. Hairy sheep were obviously not then being kept principally for their wool and probably never had been. The issue is not whether the very earliest farmers used secondary products, but how significant their use was. These farmers may have collected wool shed by hairy sheep, but that is exploitation of a far different order than the deliberate breeding and selection of sheep for that purpose. The same distinction applies to the use of milk from cattle, sheep, and goats. The question in this case is whether it is likely that groups of humans still in the throes of the transition from hunting to farming would have valued milk or milk-products enough to make them a principal consideration in determining how to manage their herds.

There is also something more to be said about the first use of animals in intensive agriculture. While this event no doubt precedes its appearance in art by some time, it was probably not by millennia. Indirect evidence for this comes from the ‘Uvda Valley, in the SE Negeb. Intensive agriculture based on animal labor begins in this area sometime during the 4th millennium B.C.E., as evidenced by the introduction of numerous circular threshing floors and large, subterranean granaries (Avner 1989). The circular form of the threshing floors indicates the use of tethered animals rather than human labor. Once again, the use of animals is associated with a 4th-millennium context. The development of agriculture in this marginal area

no doubt lagged behind that of major cultural centers. But the lag-time involved was probably on the order of hundreds rather than thousands of years.

Some additional support for Sherratt's theory comes from the study of the timetable according to which animals were slaughtered. Theoretical models suggest that if there was a widespread trend at early sites toward the slaughtering of young animals, this would be evidence for an emphasis on meat rather than on milk or wool production. While a preference for adult animals could indicate either meat or milk production, an increasing dependence on adult animals over time would be evidence for a shift in emphasis to secondary products. In fact, this is precisely what one sees at Neolithic sites in the Deh Lurah Plain and the Kermanshar Valley, Iran (Flannery 1969; Davis 1984; Hesse 1978). At Shiqmim, a Chalcolithic site in the Negeb, over 50% of all male caprovines were slaughtered before they reached their first year of age, and over 50% of female goats were killed before age 21/2, clearly indicating that goats of both sexes and male sheep were raised primarily for meat. Female sheep survived in greater numbers, indicating their use for wool (Grigson 1987). The pattern for EB Arad is similar (Lernau 1978).

While a shift toward the use of secondary products thus does seem to have occurred, it is difficult to determine exactly when this took place. In fact, it may have occurred at different times, depending on the product involved and the geographical location. Sherratt oversimplified the problem in lumping all of the secondary products together. Evidence for a change in herd management to accommodate milk and wool production exists as early as the 6th millennium in Iran, while in Palestine hairy sheep were still the dominant species as late as the EB II (Lernau 1978).

In addition to milk, wool, and traction, domestic livestock provided other less valuable resources, whose place in the domestic economy nevertheless should not be overlooked. Dung cakes, for example, were and still are an important fuel for the household hearth, especially in areas where firewood is scarce (cf. Moens and Wetterstrom 1988; Miller 1984). Another use of dung was as a tanning agent. In areas where oak trees were available, tanning was usually extracted from acorn cups, roots, and bark (cf. Parsons 1962: 214 n. 1; Mikesell 1961: 101–2), but in ancient Palestine the dung of dogs and pigs was also used (*b.Ber.* 25a).

4. Effects of Domestication. a. On the Animal. An animal's adaptation to the conditions of captivity produces certain anatomical changes. Some of these are rather superficial and are only apparent in the living specimen. Others are evident in the skeletal structure and the teeth, and are thus susceptible to archaeological analysis. In general, these changes are the same regardless of species. A term often used to describe them is "pedomorphism," the retention of juvenile features into adulthood. The mechanism which causes these changes to occur is still poorly understood. It may not be generic. For example, it has been suggested that these effects may be the result of arrested development caused by precocious sexual maturity, or by hormone changes resulting from changed environmental conditions (Boettger 1958: 20; Spurway 1955: 349). In any event, because some changes are relatively superficial, domestic animals which return to the wild quickly revert to a morphological state more like that of wild than of domestic species. An example of this is the feral pigs of New Zealand (cf. Newberry 1928: 217).

(1) Morphological Changes Apparent in Skeletal Remains. As a result of domestication, overall size is reduced in most species. One important exception is the horse, whose size has increased (Epstein 1962: 295). The size of the bones is therefore the primary criterion by which wild and domestic species are distinguished in faunal remains from archaeological excavations. At Jericho, for example, it is possible to illustrate the decreasing size of cattle over several millennia (Clutton-Brock 1971: 44–46). As a measure of size in this case, the width of the distal end of the metacarpal (forefoot) bones was used. In the Pre-Pottery period this figure ranges from 69–75 mm, in the Bronze Age from 54–65 mm, and in the Iron Age from 46–58 mm. Smaller bone size corresponds to smaller dentition. Since teeth are generally better preserved than almost any other part of the skeleton, they are among the commonest measures of domestication in faunal samples.

While the chief effect of domestication noticeable in bone samples is a reduction in size, there are some other noteworthy changes. Among ungulates, for instance, hornlessness in females is also evidence of domestication. Since males cannot be distinguished from females in a bone sample, this characteristic

manifests itself simply in a paucity of horn cores relative to what one might have expected from a wild sample of comparable size. In the case of goats there are also clear trends in the shape of the horns (Flannery 1965: 1254; Clutton-Brock 1971: 49–50). The wild goat has scimitar-like horns whose bony cores are diamond-shaped in cross section at the skull. The earliest domestic goats are also all of this type. By 6000 B.C.E., however, a twisted-horn variety with a flattened core appears at sites in N Mesopotamia and the Zagros and quickly spreads through this region. Elsewhere, the change is slower. In PPN B Jericho, the scimitar shape is overwhelmingly predominant. During the EB Age, the two types appear in about equal numbers. In the MB Age, however, it is the twisted-horn variety that predominates. The reason for the change in horn shape is as yet unclear. One explanation has it that the twisted horn, a rare aberration among wild goats, was artificially selected because goats with this characteristic could be distinguished more easily from their wild counterparts (Clutton-Brock 1971: 50). However, it may be that the change in horn formation is not in itself important, but points to a preference for some other feature associated with the twisted-horn type.

Apart from morphological changes in the bones and teeth, domestication may be indicated in a faunal sample by the presence of an abnormally large percentage of juveniles. In particular, this suggests that the animals were being raised for meat. On the other hand, juveniles are also easier to hunt, so this criterion must be used with caution (Ducos 1978).

(2) Changes Not Apparent in Skeletal Remains (in general see Clutton-Brock 1987: 22–25). The result of selective breeding, several morphological changes are not attested in skeletal remains. One of these is the lengthening of the ears, which is typical of most domestic animals except the horse. Another is the fat-tail of sheep, which in some breeds has grown to a length of several feet. Herodotus (3.113), for example, describes a breed of Arabian sheep whose tails were so long that they required special wagons to support them (cf. Anati 1968, discussed below under Sheep). Such breeds became possible only because of the protection afforded them by humans against natural enemies (Hilzheimer 1936). Third, the tails of other animals have also undergone considerable development. In horses, the hair of the mane and the tail is much longer than in wild horses, asses, and zebras. Also the hair of the mane falls to one side in all domestic breeds, whereas in their wild relatives it stands erect. In dogs and pigs, the curled tail is a mark of domestication.

Most morphological characteristics such as these, which distinguish specific *breeds* within a species, will not appear in the skeletal remains, since the selection of such features usually involves rather superficial changes. This makes it difficult to identify breeds within a faunal sample. Further, while different breeds no doubt existed, the production of well-defined breeds was open to a great deal of chance, since a proper understanding of genetic inheritance was lacking. In any event, in the absence of widely acknowledged and precise criteria for the identification of a breed, the perpetuation of a breed over many generations was in part a matter of chance. In a few cases, such as the Arabian horse, detailed pedigrees *were* kept (Clutton-Brock 1987: 33).

b. On Humans. In the process of domesticating animals, human beings were also changed. Domestication, in other words, is a process of reciprocal adaptation. For example, peoples with a long history of association with cattle, sheep, and goats have developed the ability to absorb lactose (milk sugar) even as adults (see further below under Goats). In some cases, the adaptation is almost wholly on the part of the human being. For example, the lifestyle of camel nomads is entirely determined by the capabilities and limitations of the camel, while the camel appears to have changed very little and is dependent on humans only in those areas where it is unable to obtain water by itself.

C. Animal Bone Archaeology

Given the paucity of detailed written information from antiquity about animals, we are often dependent on the archaeologist for what knowledge we have about the history of man's relationship with them. Where detailed written information exists, as in ancient Mesopotamia, it still does not give us a complete picture even of the common domestic animals, much less of those which were of little or no use to human beings. Unfortunately, it is only within roughly the last twenty years that the recovery and analysis of faunal remains has become a regular part of most excavations. There are some notable exceptions to this

generalization, such as the University of Chicago's excavation at Tell Asmar, whose faunal remains were studied by Hilzheimer (1941). And, generally speaking, archaeologists of prehistory have done a better job of studying faunal remains than those of the historical periods, since the latter have been preoccupied with architectural remains and the reconstruction of pottery sequences.

Having at last come into their own as a vital element in archaeological excavations, faunal studies are now capable of providing insights into problems of primary interest to social historians. However, the value of faunal analysis is conditioned by the quality and size of the sample provided by the excavation itself. In older excavations, only the bones of large mammals were kept, if they were saved at all. The remains of smaller mammals, birds, fish, reptiles, and insects went largely undetected, since they are recoverable only when the excavated dirt is sifted through a series of fine mesh screens (cf. the figure in Caloi, Compagnoni, and Tosi 1978). The tiniest skeletal material, such as that of insects and mollusks, will pass through the finest screen. In order to recover this, archaeologists use a technique called a flotation, the basic idea of which is that organic remains have a lower specific gravity than inorganic and will float to the surface of a liquid where they can be retrieved, while the rest of the (inorganic) material will sink.

While the analysis of bones from archaeological excavations is of interest to zoologists, its essential purpose is to aid the archaeologist in reconstructing aspects of human society. For this reason, faunal analysis is no longer simply a matter of identifying the species from which bones derive. Instead, it emphasizes those aspects of a bone sample which shed light on problems of culture and economy. These include the problems of domestication and "secondary products" discussed above. It is also possible to derive information from the bones about such aspects of animal use as the relative proportions of species (e.g., sheep and goats versus cattle), the slaughtering schedule, and details of butchering technique (Hesse and Wapnish 1985; Davis 1987a). The following synopsis is intended to give the non-specialist an overview of the methods used to extract information of this sort from bone samples.

1. Relative Frequency of Species. Like all statistical studies, bone counts of any sort presuppose that the sample is large enough to be statistically significant. The relative proportion of species is measured in several ways. Of these, one of the commonest and simplest is to compare and total number of bones from each species. However, there are several potential problems with frequencies based on simple bone counts of this sort. If, for instance, a sample contains 50% cattle parts from whole carcasses, and 50% horse parts consisting only of skulls, then in fact many more horses are represented than cattle, despite there being an equal number of fragments of each species (cf. Hesse and Wapnish 1985: 112). Account should therefore be taken not only of total number of fragments but also of uneven distribution of bone types.

A second difficulty with simple number counts is the likelihood that fragments from the same bone will be counted separately instead of as a single analytic unit. If all bones in the sample had been subjected to the same processes of destruction, this source of bias could perhaps be ignored. But, if the bones of some species had been preferentially broken, the number of bones counted in that group would be much higher than that of other groups in the sample, making it look as if those species were more common than they actually were. Finally, estimates of relative abundance may be skewed by the fact that the more bones a species has, the greater its share of the sample will be, and the more likely it is to be represented in the sample in the first place. Its importance may therefore be overestimated.

These biases can be corrected as follows (cf. Hesse and Wapnish 1985; Wapnish et al. 1977; Hesse and Perkins 1974). A skeleton contains a certain number of specimens of each bone type, e.g., 2 shoulder bones (*scapulae*), 2 of each of the various fore- and hindleg bone types, etc. The total number of the element type is divided by its anatomical frequency to correct for the likelihood of recovering different bones from the same skeleton and for the fact that not all bones occur with the same anatomical frequency from one species to another. Bone types which according to this correction are over- or under-represented are eliminated. The arithmetic mean of the resulting list of frequencies is then calculated for each animal. By comparing the mean frequency of the various species, one arrives at a more reliable estimate of relative proportions in the sample.

Many zooarchaeologists still prefer to compare the minimum number of individuals (MNI) represented by the bones of the respective species (Watson 1979). The maximum MNI in a sample of bones of a given species is equal to the total number of bones of the most common bone type divided by the number of such boxes per individual. The bone type selected as the diagnostic is typically one of the large bones, since they are more likely to survive, and will therefore yield the greatest minimal number of individuals. The accuracy of the MNI can be increased by sorting the bones according to age and size and adding MNIs for each of the age and size groups (Bökönyi 1970). MNIs counted in this way will be higher than those based on a gross sample.

The drawback of this method is the inherent improbability of the resulting numbers in all but very large samples. The reason for this is that the bone type or element of bone type selected as the diagnostic may be over-represented in certain species as a result of cultural factors. For example, when an animal was butchered, those portions selected for meat may have been taken to one part of the site and those used for tools to another. Unless the bones of every species are utilized in the same way, and this is unlikely to have been the case, there may be significant variation in the relative proportions from one part of the site to another.

Other methods for estimating relative abundance are bone volume and bone weight. Since these are almost never used at sites in the Near East, the reader seeking additional information about them is referred to the technical literature (e.g., Hesse and Wapnish 1985).

2. Slaughtering Schedule. Several methods are used to determine the age at which animals were slaughtered. When an animal reaches a certain age, the ends of its long bones (epiphyses) fuse. The age at which this fusion occurs is more or less constant within a species and is therefore a diagnostic for determining the relative proportion of juveniles and adults in a sample. The age at which fusion takes place, while roughly uniform in a species, is nonetheless linked to factors such as sex and nutrition. Age at fusion is therefore best given as a range of values. Data for domestic livestock are found in Todd and Todd (1938) and Silver (1969). Since the epiphyses of various bones fuse at different ages, it is possible to compile a schedule of the proportion of animals slaughtered at various ages (cf. Payne 1973; Redding 1981).

A potential source of bias in this method is the fact that mature (fused) bones survive in greater numbers than immature (unfused) bones. Absolute numbers obtained in this way are therefore not entirely trustworthy. However, by comparing the porportion of fused bones at one age with those at another age it is still possible to draw general conclusions about patterns in the age at death.

Cognizance also must be taken of any differential deposition of bones at the site. Adults and juveniles, for example, may have been slaughtered at different parts of a site depending on the particular uses to which they were put. Males and females may similarly have been segregated. Differential deposition of this sort may obscure the true slaughtering patterns for the site as a whole.

Another method of determining age at death is the eruption sequence of the teeth (Ewbank et al. 1964). In order to distinguish the age of older animals whose complement of teeth is complete, tooth wear is examined. Wear sequences are now available for sheep and goats, cattle, horses, and camels (Grant 1975; 1978; 1982; Deniz and Payne 1982; Crabtree 1982; Sisson and Grossman 1953; Rabagliati 1924; Payne 1973).

3. Butchering Technique. In addition to providing data on age at death, bones also indicate how animals were butchered. From cut marks on the bones, for example, one can observe precisely how an animal was skinned and dismembered. Additional information on the details of slaughtering is obtainable from the distribution of the bones. In the Palegawra cave in N Iraq, for example, onagers appear to have been the principal meat source. But their skulls appear infrequently among the bones, indicating that the animals must have been killed elsewhere and that only the meat-bearing portions were transported to the site (Turnbull and Reed 1974). This sort of differential deposition has been labelled the "Schlepp Effect" (Perkins, Daly, and Daly 1968).

A. Ungulates

1. Domestic Species. In primitive Mediterranean and ANE societies, whether urban or seminomadic, livestock was the principal form of useful wealth. The wealth of Homer's heroes, for example, is never related other than in terms of cattle, sheep, and goats, even if they own large tracts of land. If this is true of a sedentary society such as Homer's, it goes without saying that it characterizes pastoralist societies. Israel's ancestors, who according to the patriarchal narratives were tent-dwelling seminomads (Gen 13:3, 7, 18; 18:1, 10; 26:17; 35:21; 46:32, 34), are said to have possessed movable wealth, but no property (Gen 26:14). When Abraham wished to bury his wife Sarah, he first had to buy a plot of land (Genesis 23; also cf. Gen 33:19).

Among Near Eastern pastoralists, as among city-dwellers, livestock (cattle, sheep, and goats) functioned as a standard and even medium of exchange. The same is true of numerous pre-modern societies. Traces of such livestock currency are preserved in the business vocabulary of many languages. English "fee," for example, corresponds etymologically to German *Vieh*, "cattle," and from the Latin cognate *pecu*, "cattle," we derive *"pecuniary," "impecunious,"* etc. The Indian *rupee* comes from Sanskrit *rupa*, "cattle." Similarly, Hebrew *miqneh* means both "livestock" and "purchase." For the use of livestock as a medium of exchange in the Bible, see Gen 38:17. Even if the actual medium of transaction was silver, measured by weight (in shekels), the value of a thing might be calculated in terms of livestock (Gen 33:19; Josh 24:32; contrast Genesis 23). This was true of early Greece (cf. *Iliad* 2: 448–49; 6:236; 23:703, 885), and the Hittite empire as well. In the latter case, though payment was clearly made in silver, prices for

livestock were calculated based on value relative to one sheep, where 1 sheep = 1 shekel of silver (Laws II §63ff., ed. Friedrich 1959; *ANET*, pp. 195–96, §178ff.).

a. Relative Value of Cattle, Sheep, and Goats. For certain periods, livestock prices are known for much of the Near East. Data on prices are to be found in economic documents (receipts, price lists, etc.), in legal texts, and occasionally in narratives. In Mesopotamia, where rich documentation exists from an early date, it is even possible to track prices over a long period. Comparative data are collected in Heltzer (1978).

From this material it emerges that prices are relatively uniform from one area to another and stable over time. The relative value of cattle and sheep was typically ten to one, cattle having a monetary value of ten shekels, sheep one (cf., e.g., Hittite Laws II §63–64, ed. Friedrich 1959; *ANET*, pp. 195–96, §178–79; for Nuzi, cf. Speiser 1960: 32). This ten-to-one ratio was recognized throughout the Near East in all periods, as well as in early Rome (Festus, *Epit.* 24). The goat cost two-thirds of a shekel (Hittite Laws II §64; *ANET*, p. 196, §179), because the woolly fleece, which accounted for the sheep's total value, brought a higher price than goat's hair (valued at one-fourth of a shekel, Hittite Laws II §71; *ANET*, p. 196, §185A).

b. Composition of Mixed Herds. It is possible to derive some information about the relative proportions of animals on the farm (ratio of sheep/goats to cattle) from numbers in lists of property or sacrifices scattered throughout the Bible. These data are compiled in the following tables.

Table 2
Compositon of Herds

Texts	No. of Sheep/Goats	No. of Cattle	Relative Proportion
Job 1:3[a]	7,000	×	7:1
Num 31:31[b]	675,000	72,000	9.4:1
			Avg. 8.2:1

[a]The data here are assumed to be fictional and representative of what an Israelite writer thought were the typical proportions of an average herd.

[b]These figures represent the booty taken in the Israelite conquest of Midian. Again, their historical validity is dubious. But even as fictions they tell us something about what were thought to be proper proportions.

Table 3
Composition of Sacrificial Lists

Text	No. of Sheep/Goats	No. of Cattle	Relative Proportion
Gen 32:14–15	2 (200 + 20)	40 + 10	8.8:1
Num 7:17 etc.[a]	×	2	7.5:1
1 Kgs 8:63	120,000	22,000	5.5:1
Ezra 6:17	200 + 400	100	6.0:1
Ezra 8:35	96 + 77 + 12	12	15.4 [8.0]:1[b]
2 Chr 15:11[c]	7,000	700	10.0:1
2 Chr 29:33	3,000	600	5.0:1
2 Chr 30:24	7,000	1,000	7.0:1
	10,000	1,000	10.0:1
2 Chr 35:7–9	30,000	3,000	10.0:1
	2,600	300	8.7:1
	5,000	500	10.0:1
			Avg. 8.7 [8.0]:1[d]

[a]Only the values of the *zebaḥ haššĕlāmîm* are taken here. N.B.: no historical value is necessarily to be attached to any of these numbers or indeed to any of the events described. As in Table 1, they may at best illustrate only what was thought to be a proper proportion.

[b]The numbers 96, 77, and 12 are significant in their own right. In particular, 77 and 12 appear to have some symbolic importance, 12 indicating one animal per tribe, 77, like the number 7, indicating symbolic completeness. The 96:12 (8:1) ratio is more in line with what we find in other texts.

[c]The author of Chronicles appears frequently to use a 10:1 ratio as a rule of thumb.

[d]The ratio in brackets is based on a figure of 8:1 rather than of 15.4:1 for Ezra 8:35.

Data on the proportion of sheep to goats is sparse. According to 1 Sam 25:2, sheep outnumber goats by three to one. According to an extra-biblical source, the ratio was 10.3 to 1 (Annals of Thutmose III, *ANET*, 237). Figures on the proportion of females to males are also hard to come by. According to Gen 32:15, however, there were about ten females for every male.

Data about the composition of herds are also now available from archaeological excavations. These figures are given in Table 4.

Table 4
Composition of Herds Based on Faunal Analysis

						Caprovines[b]		Cattle		
Period	Site	Total No. of Bones All Species[a] MNI	No. MNI	%	Ratio of Sheep to Goats[c]	No. MNI	%	Ratio of Caprovines to Cattle[d]	Source

[a]Where two figures are given for a site, the upper represents the total number of bones, the lower the minimum number of individuals. In the percentage columns, the upper and lower figures are respectively based on the number of bones and MNI.

[b]The total of all sheep and goats. Sheep and goat bones are often not distinguished from one another in faunal analysis. Even where they are, a large number of bone fragments usually remain, which are only identifiable as belonging to either sheep or goats. Hence the value of a combined category.

[c]The ratio of sheep to goats in the sample is typically based on a small fraction of bones definitely identifiable as belonging to either sheep or goats. Since the number of such bones is usually small, the resulting ratio must be taken with a grain of salt.

[d]Based on the respective percentages of caprovines and cattle.

[e]In the Negeb today, sheep outnumber goats by about three to one (Levy 1983).

[f]Values for the EB II represent totals for all four strata, since the respective proportions of cattle, sheep, and goats remain almost constant throughout this period.

[g]Davis (1976: 155) reports the following ratios. For EB I: 1.5 (Area T), 2.0 (Area K); for EB II (strata III–I): 1.0 (Area T), 1.2 (Area K).

[h]While MNIs are not given separately for the two periods, the total MNI from both periods is 80 for caprovines and 7 for cattle, giving a ratio of 11.4 to 1.

[i]The first value is simply based on the fraction of the total number of bones, the second on a comparison of the mean relative frequency of selected bone types of each species.

[j]Calculated according to the method outlined by Watson (1979).

[k]Based on a comparison of the mean relative frequency of selected bone types of each species.

[l]The data from Strata I–III are here combined. There is a noticeable trend toward the raising of sheep and goats at the expense of cattle. In III, the ratio of caprovines to cattle is 1.2; in II it is 2.0; and in I it is 2.5.

[m]Average of Strata V–IV.

[n]In Davis' opinion, the cattle bones are over-represented since sieving was not undertaken.

From the table, it is evident that in desert areas sheep and goats were raised in preference to cattle, on average by a little over 10:1. In the coastal plain, the ratio of caprovines to cattle was on the order of between 1:1 and 2:1. The difference between these two ratios is readily explained as a result both of the richer supply of fodder and of the moister climate. The hill country and Shephelah occupy a place somewhere between these two extremes. In the region, sheep and goats typically outnumber cattle by between 2:1 and 7:1.

It is difficult to know how representative these ratios are of actual proportions, since detailed comparative data for some areas are not available prior to the Israeli occupation of the West Bank in 1967. The results of the 1974 animal census of the West Bank have now been published in part by Finkelstein (*AIS*, 134). In general, the ratio of caprovines to cattle is everywhere much higher than in the archaeological samples considered above. This is no doubt due to the fact that mechanized farming has largely replaced the use of the ox-drawn plow. There would therefore be little purpose in dwelling on exact figures. Certain of the regional tendencies noted in the composition of ancient herds are nevertheless apparent even in the recent censuses. In the desert areas comprising the E portion of the country (those areas Finkelstein calls the "desert fringe" and the "central range"), caprovines far outnumber cattle, as they did in archaeological samples from the Negeb. Since agriculture in the desert zone is limited, but pasturage is abundant, the absolute number of sheep and goats is also very high. The E "desert fringe," for example, had almost as many caprovines as the "central range," despite the fact that it is one-third as large (for the definition of these areas, see Finkelstein, *AIS*). In the hill country, the relative proportion of caprovines to cattle varies by as much as a factor of 5, depending on local terrain. Where agriculture is intensive and the terrain moderate (as in the foothills [Shephelah], the N slopes, and the N central range), the proportion of cattle is greatest. Where the terrain is rugged (as in the S slopes), horticulture predominates, and the proportion of cattle decreases.

2. Animals as Food. a. Diet, Sacrifice, and Slaughter. Regardless of the place or period in question, diets in antiquity were predominantly vegetarian. The use of animal products was in large measure confined to milk curds and cheeses. Based on figures given in the Mishnah (*Ketub.* 5:8–9), Broshi (1986) has estimated that in Roman Palestine, for example, cereals constituted perhaps 50% of the caloric intake in the average Jewish diet, with wine, olive oil, legumes, and fruit making up the rest. Although precise figures are seldom given, studies of diet in other areas of the ancient world confirm that meat was not a common item in the average diet. For Mesopotamia, see Bottéro (1985), Ellison (1981; 1983; 1984), and Limet (1987); for Egypt, see Saffirio (1972), Darby et al. (1977); for Rome, see André (1961) and K. White (1976); and for Arabia, see Jacob (1897: 88–109) and Rodinson (*Ency. Islam* 2: 1057–72). Most people could afford to eat meat only on special occasions. Typically accompanying these was a sacrifice of some sort. Indeed, it was not uncommon for a single animal to provide both the sacrifice and the meal. Every use of meat thus became a sacral meal, and every act of animal slaughter a sacrifice.

The Bible makes this connection explicit. In Israelite priestly literature, sacrifice and slaughter were nearly synonymous. According to Leviticus 17, all animals of sacrificeable species (cattle, sheep, and goats) were to be slaughtered at the *mizbēaḥ* or "altar," literally "the place of sacrificial slaughter" (*zebaḥ*). An unrelated literary text suggests that slaughter had once taken place on the altar itself (Gen 22:9–10). Whenever a person wished to eat beef or mutton, it would in theory have been necessary to take an animal to the sanctuary and to slaughter it there. A priest would then have flung its blood against the

altar and burnt the fat covering the internal organs. In payment for his services, the officiating priest received the right shoulder (*šoq*), while the priestly corps was awarded the breast (*ḥazeh*) as a sort of prebend. The owner got what was left. Game animals were not sacrificeable in Israel, and could therefore not be brought to the sanctuary (e.g., as captives, as was done in Egypt [see above]). The only rule regulating their slaughter was that the blood must be drained out on the ground and covered. Failure to observe these rules rendered one guilty of bloodshed, no less than if one had committed murder (Lev 17:4). Animals which had died a natural death, or which had been killed by wild beasts were (in theory at least) off-limits as food (Lev 22:8). The violation of this rule made one temporarily impure but did not carry the penalty of divine retribution.

Whether actual practice ever conformed to this legislation is open to doubt. It would certainly have been impracticable to have only one location where people could take their animals for slaughter. It is possible, therefore, that the text is simply a utopian agenda. Alternatively, one could argue that while the text of Leviticus 17 speaks only of a single sanctuary, in fact it presupposes the existence of numerous local sanctuaries, whose prototype was the legendary Tabernacle. Multiple sanctuaries in fact existed until the Josianic reform, which restricted all cultic activity to the temple in Jerusalem.

The centralization of the cult forced a revision in the rules for animal slaughter, utopian or not. Both the reform and the new legislation are reflected in Deut 12:15. Since local sanctuaries had been done away with, people living long distances from the central sanctuary were allowed to slaughter animals wherever they wished, provided that they drained the carcass of its blood. It is explicitly said that domestic animals were now to be treated like wild game ("like gazelle and deer," v 15). Deuteronomy's legislation may be said to represent a step in the direction of the secularization of animal slaughter vis-à-vis the priestly corpus.

The only other restriction on the killing of animals was that newborns could not be sacrificed or, presumably, slaughtered for any purpose until they were at least eight days old (Exod 22:28–29; Lev 22:27). This eight-day waiting period is perhaps reminiscent of that required before a newborn boy could be circumcised (Gen 17:12). The rationale for this delay is not given, but may have had something to do with the ritual impurity attached to the process of birth. This is strongly suggested by the mention of circumcision in Lev 12:3 in connection with the week-long impurity of a woman who has given birth to a boy. Compare the week-long secondary contamination contracted by intercourse with the woman who has had an issue of blood (Lev 15:24).

The determination of the gender of the animal slaughtered was in part at least determined by economics. Only a few male animals are needed to ensure that reproduction takes place at an acceptable pace. In Mandate Palestine, for example, a single ram could fertilize 35 or more ewes. Since males give no milk, there was little purpose in maintaining them as adults. With this large reserve of slaughterable males, it is perhaps not surprising that male animals constituted the majority of sacrificial victims irrespective of species. In ancient Israel, males were *required* for the burnt offering (*ʿolâ*), the purgation offering (*ḥaṭṭāʾt*—if brought in behalf of the high priest, the people, or the leaders of the people) and the reparation offering (*ʾāšām*), as well as for the regular sacrifices described in Numbers 28–29. Females were required only in the private *ḥaṭṭāʾt.* Either male or female could be used for the *zebaḥ.*

While there is no explicit discussion of the method by which animals were slaughtered, it can be inferred from the terminology. The term for "slaughter" in biblical Hebrew is *šaḥat,* which, like its Arabic cognate *šaḥata,* literally means "to cut the throat." This remains the way in which animals are slaughtered in both Judaism and Islam. When an animal was to be killed but not eaten or sacrificed, its neck was broken (Exod 34:20; Deut 21:4), indicating that no sacrificial connotation was attached to the act. The offering of a limb amputated from a live animal, a practice attested in Egyptian funerary rites (Weigall 1915: 10; Dondelinger 1979, pl. 6; Eggebrecht 1973: 55–61), was implicitly forbidden.

b. Food Prohibitions. The biblical dietary law (Leviticus 11; Deut 14:1–20) has elicited many different explanations. A convenient review of relevant scholarship to 1969 is found in Kornfeld (1969). Until a little over 20 years ago, scholarly opinion concerning the rationale of the dietary law was divided into two broad categories, which we may call the *religious* and the *hygienic.* Scholars of the first group typically

held that certain animals were regarded as unclean because of their association with pagan worship (Elliger, *Leviticus* HAT, and many others). For criticism of this view, see Kornfeld (1969). Along a different tack, it was suggested that the motivation of Israel's food prohibitions was to inculcate respect for life by limiting the consumption of animal flesh (Milgrom 1963). This explanation ignores the fact that no restrictions are placed on the primary food-producing species. Proponents of the hygenic approach, on the other hand, maintained that the prohibitions were intended to identify health hazards. They pointed in particular to the fact that the pig is often a carrier of trichinosis (Albright, *YGC*, 177–78; cf. already Maimonides, *Guide of the Perplexed*, 3.48). This approach too, while still popular in some circles, can no longer be maintained. For criticism, see Harris (1977: 200; 1985: 160; Simoons 1961: 37ff.).

More recent discussions of the dietary law have sought to explain it in economic or sociological terms. Prominent among these are the studies of the American anthropologist Marvin Harris (1974; 1977; 1985), who maintains that Israel's food prohibitions were designed to ensure that people's tastes did not jeopardize their economic security. Certain animal foods were prohibited, Harris argues, because producing them had proved to be a waste of scarce resources (Harris 1985). At the heart of Harris' theory is his treatment of the pork prohibition. This is dealt with at length in the section on the pig (see below).

The other notable contribution to the study of the dietary law is the work of the British sociologist Mary Douglas (1966; 1975). Douglas believed that she had discovered in the biblical criteria for distinguishing clean and unclean animals an essential unity of motivation: clean animals had those essential morphological features judged to be proper to their respective habitats. Douglas identified the means of locomotion as the most crucial of these features. Thus, cattle were expected to go on four (cloven) hooves, birds to fly (rather than to walk), and fish to move by means of fins. The biblical classification regards as unclean "creatures which are anomalous, whether in living between two spheres or having defining features of another sphere, or lacking defining features" (Douglas 1975: 266).

Although it is a conceptual advance over its predecessors, Douglas' idea of an animal taxonomy based on the means of locomotion ultimately proves to be untenable (Firmage fc.). One brief example must suffice to illustrate why. In the case of the unclean birds, for example, there is nothing about their wings that is at all anomalous. In contrast, it is precisely the unclean quadruped's missing hoof or cleft in the hoof and the marine creature's lack of proper fins which make them "anomalous." Douglas emphasizes the fact that some unclean birds swim or dive in addition to flying. But, unlike fish, which can only swim, and land animals, which can only walk on the ground, *all* birds locomote in at least two ways, and all would, according to Douglas' logic, be unclean. Thus, neither in regard to their means of locomotion, nor in their movement between two environmental spheres can the unclean birds be called anomalous.

The key idea in Douglas' theory is that the boundaries dividing one animal taxon from another are like the boundaries that separate Israelites from non-Israelites, clean from unclean, holy from profane. And, indeed, there are similarities between the ways in which animals and people are classified. But Douglas missed the most important analogy of all, the one which in fact explains the dietary law. In its most elemental form, the analogy is the divine injunction with which the dietary law concludes, "You are to make yourselves holy and keep yourselves holy, because I am holy" (Lev 11:44). On the practical level, this meant that every aspect of life, including diet, should be scrutinized to see whether or not it conformed to this command. As far as diet was concerned, the problem facing Israel's priesthood was to decide on what basis foods should be judged proper or improper. Their solution was simply to compare what Israelites ate with what YHWH "ate." YHWH's "diet" was, of course, the sacrificial offerings (cf. the phrase *leḥem ʾelohîm;* Lev 21:6, 8, etc.; 22:25). YHWH's "table" was the altar (*šulḥān YHWH;* cf. Ezek 44:16; Mal 1:12). (On the anthropomorphic background of these terms, see Haran 1961.) The sacrificeable species, cattle, sheep, and goats, thus became the paradigm against which the "cleanness" of all other animals could be measured (Firmage fc.).

The criteria for the selection of clean quadrupeds (i.e., that clean animals must be ruminants and have cloven hooves) are a précis of this paradigm. These are the features which the priests judged to be both

comprehensive and easily applicable. And, in fact, of the superficial features apparent (as they had to be) even to the most inexperienced observer, these are, zoologically speaking, very logical choices.

The criteria, then, were from the beginning an essential element of the dietary law. But, the priests needed no criteria to tell them that bears, lions, dogs, rodents, and countless other animals were different from the domestic livestock they offered to YHWH. The differences from the paradigm of clean animals were self-evident. The problem was that as a legal principle it was not enough simply to prohibit all animals that did not *look like* domestic livestock. Inevitably, there would have to be guidelines for deciding difficult cases (such as the camel and the pig) and guaranteeing consistency of application. Some sort of criteria were necessary if the prohibition was to be practicable. Our criteria are therefore those features which the priests believed could be most simply and unambiguously applied by the layperson to whom the law is addressed (Lev 11:1).

According to Lev 11:3 all clean land animals satisfy two criteria: they have cloven hooves, and they are ruminants. The four outlawed species singled out for special mention in Lev 11:4–7 are there because they are anomalous in having only one of these required characteristics, but they are not the only ones excluded by these two criteria. Douglas failed to recognize that these two criteria alone suffice to exclude *all* land animals which are not cloven-hooved, including those species mentioned later in vv 26–30. In fact, the four species of vv 4–7 are the *only* ones commonly encountered in Israel's immediate environment which meet one but not both criteria. Within this tiny group, the pig has a special place, for it alone in the entire animal world known to Israel has cloven hooves but does not chew the cud. Of all prohibited quadrupeds, therefore, only the pig is excluded on the basis of the criterion of rumination. With this one exception, all unclean animals could have been excluded simply by the requirement that they have cloven hooves.

When it comes to fish, this model seems to shipwreck on the fact that there was no temple paradigm as in the previous case, for fish were not allowed on the altar, and there was therefore no reason for any fish to be declared unclean. In principle, all marine life would have been licit, for there was no potentially restrictive temple model that would have obliged the priests to exclude certain fish species as unclean. Nevertheless, some species were prohibited, because in lacking fins and scales they were regarded as snakes (see below under Fish). In other words, fins and scales were the criteria used to distinguish fish from snakes (so already Yerkes 1923–24). For further examples of the equation of fish and snakes, see Scheftelowitz 1911 and Lagercrantz 1953.

It might be objected that the absence of a food category from the temple paradigm would on the contrary have forced the priests to regard that category as unclean. But this clearly was not the case or else all fish would have been declared unclean. There are any number of other common food items (such as fruit, nuts, herbs, and vegetables) which are not included among the altar offerings. Further, items such as yeast and honey, which are specifically *prohibited* from being offered on the altar (Lev 2:11) are nevertheless allowed in the ordinary diet.

With regard to the birds, no theory can avoid being speculative since no criteria are given. However, it is widely held that the twenty unclean species and their subspecies (designated by *lĕmînēhû/-â/-ô*) are excluded because they are predatory or carrion birds. This explanation is found already in the *Letter of Aristeas* (146; *OTP* 2: 22). The Mishnah too gives it as the rationale: "A bird that seizes food in its claws is unclean; one which has an extra talon, a claw, and the skin of whose stomach can be pealed is clean" (*Ḥul.* 3:6). This explanation is credible, but requires more comment than is possible here (see, however, Firmage fc.). The important point is that birds, too, have a paradigm against which their fitness as food may be judged. That paradigm is of course defined by Israel's domestic birds, the pigeon and the dove, which are graminivorous.

Flying insects are dealt with as a subset of the birds, because they also have wings. Leviticus 11 classifies them as winged creatures of the swarming variety (*šereṣ hāʿôp*). As winged creatures, they presumably came under the paradigm of the pigeon and the dove. Yet the criterion specified in the biblical text has nothing to do with the one suggested for the preceding list of birds (i.e., diet). In the case of insects, however, their much more obvious physical dissimilarity with the paradigm would automatically

have excluded them to begin with. They were as self-evidently different from the paradigmatic birds as lions, horses, and rats were from the cattle paradigm. Thus, in principle, all flying insects would be excluded from the diet, because they do not resemble the birds under whose paradigm they fall. (Crawling insects without wings would of course be excluded, with all other *šĕrāsîm,* on the basis of the domestic animal paradigm.) Therefore, in fact, Leviticus 11 states that "*all* swarming winged creatures which go on all fours shall be an abomination to you" (v 21). The law, however, makes an immediate concession, "But *these* you may eat from among all the winged swarmers which go on all fours—those with joints above the lower legs (or feet) which they use for leaping across the ground" (v 22). That the priests were concerned that the concession might be abused is evident in the fact that, uniquely in Leviticus 11, the *licit* species are specified by name (v 23). The reason for the concession is unknown.

To summarize, it has been suggested that in two categories, land animals and birds, the priests already had a general notion of what animals would be unclean because their dissimilarity to the sacrificial paradigm was obvious. In order to make this elemental observation practicable the priests drew up criteria which the layperson could be expected to apply without difficulty. Criteria for fish were added as a result of a secondary analogy with the land animals.

Of the criteria, the most singular is certainly that of chewing the cud. The reader will recall that the pig is the only animal excluded by this requirement that could not have been outlawed solely on the basis of the cloven-hoof criterion. It is therefore not unreasonable to suggest that when the criteria were first developed, the only basis of selection was whether the animal had cloven hooves or not. The fact that a second criterion was extrapolated from the sacrificial species solely in order to exclude the pig may indicate that, alone among the prohibited animals of Leviticus 11, the pig was already an unfavored species. This is the only demonstrable instance in the dietary law where the priests would seem to have accepted an ancient tabu (on this tabu, see Pig below).

c. Food Prohibitions in Egypt and Mesopotamia. Dietary restrictions are known in both Egypt and Mesopotamia as well as in Israel. In Egypt, certain foods, most of them animal products, were prohibited to specific sections of the populace (Montet 1950). Our knowledge about these prohibitions derives in the main from lists of prohibited items inscribed in the temples at Denderah, Edfu, and Kom Ombo. From these lists, it emerges that each nome had its own prohibition (*bwt*), the precise nature of which was determined by the local cult. Thus, for example, in areas where the chief deity was Hathor, who manifests herself in bovine form, the use of the cow as food was prohibited. At Tjebu, the capital of the tenth nome of Upper Egypt, and at Tanis in the Delta, it was similarly forbidden to kill the hippopotamus, one of the animals mythologically associated with Seth, the principal local god in each case. In other parts of the country, however, the hippopotamus was actively hunted, not only because it threatened human life, but also *because* of its connection with Seth. It is noteworthy, therefore, that at Edfu itself, one of the cult centers of Horus, Seth's mythological rival, it was likewise forbidden to hunt the hippopotamus. The explanation of the prohibition in this case is apparently that the hunting of the hippopotamus was reserved for the priests, who would kill it as part of the ritual reenactment of the conflict between Horus and Seth.

As these and other examples show, Egypt's food prohibitions were restricted in several ways. First, they did not apply to the nation as a whole. Second, where dietary restrictions did apply, they typically dealt with only one species. As we shall see, the pattern of Egypt's dietary laws was in both these respects markedly different from that of ancient Israel. On the other hand, the two systems were similar in that the dietary prohibitions originated in cultic considerations.

While we are less well informed about Mesopotamian dietary restrictions, there seem to have been two different kinds of prohibition. The relevant terms are Sum *níg-gig,* "bad thing" (Akk *ikkibu;* see Hallo 1985; Klein and Sefati 1988) and Sum *azag* (KUG.DINGIR), "sacrosanct" (Akk *asakku*). Common in proverbial sayings, the first of these terms, in its earliest usage, covers acts of injustice, dishonesty, and bad manners; in later texts it also includes a variety of cultic infractions offensive to the gods, among which are some relating to diet. Diet, however, is far from being a central concern. *Ikkibu* corresponds to Hebrew *tˀēbâ* (from **WˀB,* a root attested in the opposite meaning in Egyptian), which has the same range of application, including food (Deut 14:3). The Akkadian equivalent usually occurs in calendars listing

the months and days when certain kinds of activities should be avoided. Again, dietary restrictions are among these but are not central. On the 7th day of the 7th month (Tasritu), for example, one should avoid embarking on a boat, crossing a river, jumping a ditch, eating pigeon or chicken, and so on (cf. Hallo 1985: 31). The motivation of most of these proscriptions is obscure. The second term, *asakku,* as the Sumerian ideogram suggests, originally referred to something set apart for the deity (DINGER). The idiom *asakkam akālum,* "to violate a tabu," suggests perhaps that which was reserved for the deity was or had often been a food offering (cf. Jer 2:3). In actual usage, however, food was not necessarily involved.

It is evident from the foregoing that there is no connection between the biblical and the Egyptian or Mesopotamian dietary prohibitions.

3. SHEEP. The native sheep of Israel is the fat-tailed Awassi, which is also the predominant species in Syria, Jordan, and Iraq. It is typically white with brown or black head and feet. Rams are usually horned, ewes hornless. Its height at the withers is around 68 cm in adult females and 75 cm in males (vital statistics unless otherwise noted are from Hirsch 1933). Body weight of a ewe at shearing time is between 30 and 50 kg (66–110 lb), 40–65 kg (90–145 lb) at summer's end; newborns weigh 3–6 kg (7–13 lb), and yearling weights vary between 25 and 40 kg (55–90 lb). Mature rams weigh from 60 to 90 kg (130–200 lb). The tail may weigh up to 15 kg (33 lb) in the female and 10 kg (22 lb) in the male (Evenari et al. 1982: 311; smaller figures in Hirsch 1933: 16).

Fat-tailed sheep were apparently being bred as early as the late 4th millennium B.C.E. in Mesopotamia. They are first depicted on a bowl of the Uruk III period (photograph in Zeuner 1963: 173), and on the "Standard of Ur" from the Early Dynastic III period (*ANEP* #304 central row, 3d figure from left, incorrectly identified in the notes as an oryx). The view that the fat tail is a product of domestication has been challenged by Anati on the basis of rock drawings of fat-tailed sheep from S Arabia, said to date to the early 2d or even 3d millennium B.C.E. (1968: 38). Anati's reason for thinking that these may represent wild individuals is that in several drawings (pls. I; IVA, B; VIIIB) the sheep are transfixed by a spear, indicating that they were hunted. Anati observes (1968: 40–41) that the concentration of fat in the tail may be a natural adaptation to desert life, much like the camel's hump (for discussion of the biology involved, see Camel below). The speared animals, however, may represent feral individuals (i.e., once-domestic escapees), especially since none of these particular drawings is very early. The decisive point against Anati's thesis is that the genus *Ovis* is absent from the wild fauna of this part of the world (Tchernov 1974: 244).

a. Wool Production. The coat of wild sheep, like that of deer and gazelle, consists of stiff, permanent, outer hairs (called the kemp) covering a short woolly underlayer, which grows during winter and is shed in summer. The outer hairs are produced by "primary" hair follicles, the underfur by smaller follicles located close to the primaries in groups of three to five (Flannery 1965: 1253–54). In domestic sheep, however, the number of secondary follicles per primary may be doubled. The advantages of the permanent woolly fleece of the domestic sheep, which requires shearing, are not only that there is more of it, but also that it can be quickly collected without any loss.

When wool is cleaned, much of the lanolin, which makes natural wool soft and water-resistant, is washed away. Not a little wool is also lost. Talmudic sources relate that in order to minimize these losses, some sheep were from birth wrapped in a cover which kept the wool clean and obviated the need for washing, producing what was called "Milat-wool" (Ben-David 1974: 130). The same practice is attested in Anatolia, at least as early as the 4th century B.C.E. (cf. Aristophanes, *Lys.* 732). In Mandate Palestine, rams produced an average of 2.25 kg (5.5 lb) annually, ewes 1.75 kg (4 lb), yearlings 1.4 kg (3.3 lb), and lambs 0.5 kg (1.1 lb; Hirsch 1933: 9). According to Talmudic sources, the first shearing produced as little as 215 g (0.5 lb) of wool per sheep (Ben-David 1974: 130).

Sheepshearing was often localized where the weaving and dyeing of cloth was performed. One such shearing center in Iron Age Israel was Timnah (Gen 38:12). Recent archaeological excavations on the site have uncovered numerous loom weights, indicative of the cloth industry. Early breeders paid little attention to the color of the fleece. But, with the growth of the purple dye industry, the demand for white wool increased, since dye cannot be used on black, tan, or gray wool (Epstein 1962: 292).

b. Grazing and Water Requirements. During winter and spring, sheep and goats graze on the rich grass produced by the rains. In summer and early autumn, they feed on weeds, as well as stubble left over from the harvest. Late autumn and early winter are seasons of shortage, during which sheep subsist on the fat stored in their tails. Unlike cattle, sheep and goats move as they graze and are therefore better suited to the nomadic way of life. Having a higher tolerance to hot, arid climates than most other mammals, sheep and goats can endure long periods of temperatures in excess of 43° C (110° F). Sheep eliminate heat by sweating and by panting. At high temperatures, the respiration rate may increase tenfold (from 30 to 300 times per minute). When body temperature reaches 41° C (106° F), open-mouthed panting begins (Schmidt-Nielsen and Schmidt-Nielsen 1952: 154). They derive some benefit from the insulating effect of their fleece.

Like other ungulates, sheep can replenish water losses in short order. After five days without water, for example, a sheep may drink as much as 9 liters (2.5 gal U.S.) of water in a few seconds (Evenari et al. 1982: 311). In pasture, sheep can go for weeks without drinking. But, growth improves when they are allowed to drink daily or every other day. The Awassi fat-tailed sheep will graze 15–20 km (10–12 mi) from the waterhole.

c. Sheep as Milk Producers. Although their average yield is only about half that of goats (Dalman 1939: 189; Hirsch 1933: 8), sheep rank second only to goats as milk producers in the Near East. The yield of the fat-tailed Awassi sheep varies between 30 and 150 liters (8–40 gal) per annum (Hirsch 1933: 19; cf. Evenari et al. 1982: 311). The fat content of the milk is between 6 and 8% (Hirsch 1933: 19). Milking begins during February or March and continues for 3–4 months.

d. Reproductive Capacity and Slaughter Schedule (Hirsch 1933: 26). Female fertility among sheep is governed by pasture conditions. Estrus begins in June and continues until September, the months when females are in peak condition as a result of rich spring and summer grazing. Lambs are born from December to April, when fodder for the young is at a maximum. The gestation period is 152 days. In years of normal pasturage, new births total about 70% of the number of fertile ewes. Single births are normative. Weaning takes place at about two months, and young males are usually sold for slaughter at this time. Their weight at this age is between 15 and 25 kg (33–55 lb). Natural mortality rates among bedouin flocks are said to be between 15 and 20% in normal years, 40 and 50% in bad ones (Hirsch 1933: 24). Ewes typically bear their first lamb at two years of age and reproduce annually until seven. Unlike bull calves, rams are not often castrated. However, a few individuals may be castrated to function as leaders of the flock (bellwethers). These individuals are taken from their mothers at birth and raised by the shepherd.

4. GOATS. Israel's native goat, known in Arabic as the Ma῾az Jebali, is usually black, though gray and mixed colors also occur. Both sexes are bearded, but the beard of the male is longer than that of the female. Males are on average about 80 cm (31 in) high at the withers, females 69 cm (28 in). Body weight of bucks is from 60 to 90 kg (132–200 lb), while doe weigh from 30 to 55 kg (66–110 lb). Newborns weigh 1.5–3.0 kg (3.3–6.6 lb).

One of the trends observable in the breeding of goats is the changing shape of the horns (Flannery 1965: 1254). The wild goat has scimitar-shaped horns whose bony cores are diamond-shaped in cross section at the skull. The earliest domestic goats are all of this type. By 6000 B.C.E., however, a twisted-horn variety with a flattened core appears at sites in N Mesopotamia and the Zagros, and spreads quickly in this region. Elsewhere, the change is slower. In PPN B Jericho, the scimitar shape is overwhelmingly predominant. During the EB Age, the two types appear in about equal numbers. In the MB Age, however, it is the twisted-horn variety that predominates. The significance of this trend is as yet unclear. It may be that the change in horn formation is not in itself important, but points to a change in preference for some other feature associated with the twisted-horn type.

As indicated above, it is usually impossible to identify domestic breeds from bones alone. However, it is possible to say something about regional differences among domestic goats in Israel. Northern breeds appear to have been somewhat larger than those of the south (Wapnish et al. 1977: 37), much as today one distinguishes between the Negeb goat and the larger Baladi goat of the Galilee. These two Israeli species

are in turn immediate in size between the large Syrian mountain goats and the Hejaz dwarf goats of the Arabian peninsula (Epstein 1946). Being adapted to life in a harsh mountain environment where food and water may be scarce, goats are perhaps the most versatile of domestic animals. As part of a mixed herd, they thus enable the pastoralist to make the fullest use of marginal land, for they will eat woody and thorny vegetation which sheep and cattle will not. Like sheep, goats are also naturally well adapted to the arid climate that characterizes much of the Near East. Pastoralists depend upon this adaptation as well. Bedouin goats can go for as long as two weeks without drinking and, like the camel, replenish lost water very quickly—as much as 40% of body weight within a few minutes (Hillel 1982: 61). Their ability to go for longer periods without water extends the distance they may be driven from the water hole, which in turn means additional grazing. A doubling of the radius from the water hole quadruples the grazing area. Where the carrying capacity of the land is low and water holes scarce, this additional grazing range is crucial.

The downside of grazing goats is that unless controlled they are capable of destroying the vegetation of an area. Thus, some early Greek colonial charters prohibited the grazing of goats where young trees were growing (Varro, *Rust.* 1.2.14–16). In some farming areas where arable land was scarce, goats were prohibited altogether (Robert 1949). Unfortunately, pastoralists have had little incentive to safeguard pastures from overgrazing. If the vegetation of one area is depleted, they, unlike the farmers, can simply move on to another. While ultimately dependent on the land, they have no personal investment in it.

Overgrazing by goats has also contributed to the decline of the forests by impeding or even halting regrowth. Saplings up to 12 feet are vulnerable to destruction by goats (Gregg 1988: 123; see also the photo in Weitz 1974: 25). Where there is moderate grazing, the forest generally will not regain its former density or height, but will return to some sort of intermediate shrub form (maquis or garigue; Rowton 1965: 378; Mikesell 1961: 105ff.).

a. Goats as Milk Producers. In general, until very recently, goats rather than cattle were the primary suppliers of milk throughout the Near East. This is epitomized in the Talmudic saying, "The goat is for milking, the sheep for shearing, the hen for laying eggs, and the ox for plowing" (*b. Šabb.* 19b). The use of goats rather than cattle in milk production is also implicit in the biblical commandment not to boil a kid in its mother's milk (see below). It may be, as Haran (1979) suggests, that "kid" in this passage represents all young animals. Even so, it is the goat that is chosen as the paradigmatic milk-giving animal. Omitting the quantity of milk consumed by the kid, a goat's annual yield is between 50 and 250 liters (13–65 gal) but averages about 75 liters (20 gal; Hirsch 1933: 8), daily quantities falling between one and three liters. Lactation lasts for seven to eight months.

Close association with cattle and goats, and the necessity of exploiting the resources they provide, have led to an important adaptation in humans: the ability of adults to metabolize lactose from milk. Adaptation is indicated by the strong correlation between the ability of a population to absorb lactose on the one hand, and a tradition of pastoralism on the other, and conversely by the correlation between lactose malabsorption and the absence of pastoralism (cf. Simoons 1979; Harris 1985: 130–53).

Goat milk is richer in protein and fat, and easier to digest than cow's milk. Unimproved varieties of goat in the Near East today produce from 3–6 liters (0.75–1.5 gal) per day for up to six months a year.

b. Boiling a Kid in its Mother's Milk. Concern to protect the milk supply is thought by some to underlie the biblical commandment not to boil a kid in its mother's milk (Exod 23:19; 34:26; Deut 14:21). At least since the Mishnaic period (cf. *m. Hul.* 8:4), this injunction has been interpreted in Judaism as implying an extended restriction on contact between meat of any kind and milk, not only in cooking, but also in eating. So thorough-going is the segregation of the two in Jewish law, that separate sets of utensils must be used in the preparation and serving of meat and milk dishes. One finds similar restrictions among some pastoralist societies in contemporary Africa, whose concern is evidently that certain substances, such as meat, by contact with milk adversely affect its production. This led Frazer (1918: 150–54) to suggest the same rationale for the Israelite prohibition.

While by no means implausible, this interpretation has against it the fact that the rigorous separation of meat and milk as it appears in rabbinic Judaism seems to have been unknown to Israel's pastoralist

ancestors (or at least to the writer who recounts their story [cf. Gen 18:8]). Indeed, there is some reason to suppose that the practice of their separation in fact does not antedate the 1st century C.E. First, Philo (ca. 20 B.C.E.–45 C.E.) seems to grant that meat may be boiled in milk provided that one does not violate the literal sense of the biblical commandment (*Virt* 144), which he takes to be that no young animal should be cooked in its own mother's milk. Second, notices of the separation of meat and milk are lacking in Second Temple literature, even where they might reasonably be expected (as in the *Letter of Aristeas*). Third, the separation of meat and milk as it is practiced in Africa is not known among pastoral tribes of the Near East. On the contrary, 19th and 20th century travellers frequently report that bedouin cook the flesh of young goats in milk (sources in Haran 1979).

According to Philo, Moses' intent in prohibiting the boiling of a kid in its mother's milk was to teach Israel that mercy and self-restraint should govern people's relations with animals no less than with each other (cf. *Virt* 125–44). A person may not satisfy his or her appetites with disregard for the feelings of animals, especially where mothers and their young are concerned. One was barred, for example, from sacrificing a newborn animal until it was at least eight days old (Exod 22:28–29; Lev 22:27). Nothing could be more brutal, Philo says, than to add to the mother's birth pangs the pain of being separated from her young immediately after giving birth, for it is at this time that her maternal instincts are strongest.

In other respects, too, the law called for self-restraint. It would be an act of unnatural excess, Philo argued, to cook a young animal in the very substance with which nature intended it to be sustained. In a similar vein, the law prohibits one from sacrificing an animal together with its young (Lev 22:28), since this would again involve an unnatural combination of that which gives life and that which receives it.

There is something to be said for each of these ideas. Biblical law does in fact prescribe that animals be humanely treated. This is most obvious in the commandment not to muzzle the ox during threshing (Deut 25:4). But, it is doubtful that Exod 22:28–29 and Lev 22:27 are similarly motivated (see above on Sacrifice and Slaughter). However, the connection between Lev 22:28 and the prohibition of cooking a kid in its mother's milk may be roughly correct. It is the sort of thing that is difficult to prove.

One other explanation of this prohibition must be mentioned, if only to be refuted. Since Maimonides' day, many scholars have suggested that the boiling of a kid in its mother's milk refers to some pagan practice which Israel is commanded to forsake. However, no example of such a rite has ever been cited. This explanation remains nothing more than scholarly speculation (for further discussion, see Haran 1979; Keel 1980).

c. Goat's Hair (Akk *saqqu;* Heb *śaq* > Gk *sakkos;* Lat *saccus* > Eng "sack, sackcloth"). In the Near East generally, the value of goat's hair was limited first by the fact that it was too coarse for use in most garments, and second by its black color (Isa 50:3; Rev 6:12), which prevented the use of dyes. The wearing of a goat-hair garment thus indicated either that one could afford nothing better, or that one was in mourning or doing penance. More typical uses included the manufacture of sacks (Gen 42:25; Lev 11:32) and tent fabric. Bedouin tents today are still made of this fabric. It is against this background that the use of *śaq* for the outer covering of the Israelite Tabernacle must be understood. In Mandate Palestine, the weight of the hair from an adult goat varied between 300 and 500 g (0.75–1.0 lb; Hirsch 1933: 60). Shearing takes place in May.

d. Reproductive Capacity and Slaughtering Schedule. The gestation period is 5 months. In years of normal pasturage, the number of newborns is about 70% of the number of bearing females (Hirsch 1933: 8). First-time mothers usually give birth to a single kid. In subsequent births, however, twinning is normal. Weaning takes place at about two months, at which time a kid will weigh 10 to 15 kg (22–33 lb). Most male kids are slaughtered as yearlings, while doe are kept until age eight and are then slaughtered.

5. CATTLE. a. Physiology. Like most animals, mammals lack the enzymes needed to metabolize cellulose. But ruminants, such as cattle, sheep, and goats, have complex stomach consisting of four chambers. The first of these, the rumen, functions like a huge fermentation vat (Rogers 1958). In a large cow its capacity may be 160–200 liters (40–52 gal). Microorganisms in the rumen begin to break down the insoluble cellulose, from which they synthesize nutrients such as Vitamin B, amino acids, and proteins. These microbes in turn are digested by the animal in the last of its stomachs. In this way,

ruminants are able to obtain proteins and vitamins even on protein-deficient diets, such as grass. As the microbes digest the carbohydrates formed by the breakdown of the cellulose, the by-products produce chiefly acetic acid (vinegar), the salt of which is absorbed directly from the rumen into the bloodstream and oxidized as a source of energy, much as humans use glucose. This first stage of digestion takes about 9 hours. Then, from the rumen, the partially digested food passes into the second stomach, from which it is regurgitated into the mouth as "cuds." After being chewed and swallowed again, the food passes through the first two stomachs and into the third, where water is squeezed from the pulp. In the fourth stomach, food is digested much as in the stomachs of other animals. The use of the rumen is a gradual process of adjustment (Rogers 1958). At birth, feeding on milk, the calf digests its food like non-ruminants. Its rumen is small and there are few microbes in it. This situation changes only once the young animal begins to eat grass.

b. Milk Production. As already noted, cattle were valued in antiquity less as milk providers than as sources of traction. The use of goats rather than cows as milk providers is also implicit in the biblical commandment not to boil a kid in its mother's milk (see above). (However, it might also be said that mention only of the goat reflects a cultural stage during which the Israelites were exclusively sheep and goat pastoralists.) Several factors may have contributed to the preferential treatment given to goats as providers of milk. Among these are the hardiness of the goat and its ability to make do on very marginal fodder, as well as the fact that in arid or even semi-arid climates a goat may in fact produce as much milk as a cow.

In unimproved breeds, getting a cow to let down her milk is not always a straightforward affair, as is evidenced by the many tricks used to get the milk flowing (in general see Amoroso and Jewell 1963). The Scythians, for example, are said to have employed two people to milk a cow: one would insert a hollow tube into the cow's vagina and blow air inside it while the other milked (Herodotus 4.2), the idea being that sexual stimulation facilitates release of the milk. The same technique was used in early modern Arabia (Bílek and Segert 1958: 185), in Europe, and is still practiced in much of Africa (Amoroso and Jewell 1963). The physiology of the milk-ejection reflex and its connection with sexual stimulation are now well understood. Stimulation of the breast during suckling and sexual arousal both cause the brain to release the hormone oxytocin, which in turn stimulates the contraction of the basket cells in the udder which contain the milk. This same hormone initiates contractions in the uterus.

Reflex though it is, the ejection of milk is not infrequently conditioned by other factors. That is, the mother associates letting down her milk with regular events, such as the suckling of her calf. Farmers can also exploit these associations. The cow learns to associate, for example, the presence of a certain milker, the sound of buckets, or a set time of day with the act of milking. The greater the regularity of the association, the easier milking will be. To facilitate the process, the calf may be tied near the mother or even to her leg (cf. *ANEP*, 100), or a substitute may be used in the calf's stead. If the calf has died, for example, its skin may be stuffed and placed next to the mother, or the milker may use it to disguise him- or herself. In modern Scotland, when a calf is born, the milkmaid covers her hands with blood from the birth and lets the cow lick them clean just as she does the calf. This is supposed to form a bond between milkmaid and cow like that between calf and mother (Spurway 1955: 352).

Lactation in a cow lasts perhaps 7–10 months, and the daily yield in unimproved varieties is around 4 liters (1 gal). A cow will lactate as long as she is capable of bearing offspring.

c. Reproductive Capacity and Slaughtering Schedule. A heifer is usually mated when she is between 15 and 27 months old. Each year thereafter, she will bear a calf, until about age 7. The gestation period is nine months. In rural Palestinian society today, cows are thought to cope with work in the field better than bulls. Most male calves are therefore slaughtered for meat (Turkowski 1969: 30). This practice has the additional advantage of conserving more of the cow's milk for human use.

Not all young males were slaughtered, however. A certain number not used for breeding were kept for drawing the plow. These were usually castrated in order to make them more tractable, and to promote the build-up of fat in the tissues. Following castration, the bones continue to grow in length but not in girth (Clutton-Brock 1987: 25). A castrated ox is therefore fatter and longer in the limb than a bull raised under

the same conditions. Methods of castration included cutting, crushing, or cauterizing the testicles (cf. Aristotle, *Hist. An.* 510b3; Columella, *Rust.* 6.26). The biblical prohibition of offering certain kinds of blemished animals refer to the first two of these methods (Lev 22:24).

d. Oxen and Plow. As indicated above, oxen, not horses, were the principal draught animals in ancient agriculture, despite the fact that a horse can pull a given weight half again as far as an ox can in the same amount of time (L. White 1962: 62 citing earlier literature). A horse also has more endurance than an ox, and can work an additional hour or two per day. This greater efficiency was recognized by farmers in areas where horses were used in agriculture. In Slavic parts of 12th century Germany, for example, land was measured according to how much could be worked by a pair of oxen or by one horse. On such a scale at least, a horse would be worth two oxen. Similarly, according to the Hittite Laws (II §63–65, ed. Friedrich 1959; *ANET*, pp. 195–96, §178–80), a plow horse (ANŠU. KUR.RA *tu-ri-ia-u-as*) is almost twice as valuable as an ox used for plowing (GUD.APIN.LAL) (the prices are 20 and 12 shekels respectively).

Prior to the introduction of the horse in European agriculture, one common measure of agricultural land had been the area that an eight-ox team could work (cf. L. White 1962: 52–53). In the modern Middle East, there is a similar method of land measurement, though only a single team of oxen is used. In modern Arabic, this unit of land, a *faddan* (about one acre), is the amount of land one "yoke" (*faddan*) of oxen can plow in a day (Turkowski 1969: 30). The same association is found in Isa 5:10, *ṣemed,* "yoke; measure of surface area."

The smaller number of oxen in the typical Palestinian term is indicative of the fact that in Europe a much heavier plow was needed to exploit denser alluvial soils. Unlike the scratch plow used until today throughout the Mediterranean, the European plow with its coulter, share, and mold-board not only cuts through turf, but also turns it over. To move such an apparatus through the soil required a much larger team. The two-oxen team seems to have been normative in the Levant throughout antiquity (cf. Pliny, *HN* 8.18 for Syria), though larger teams were known (1 Kgs 19:19). Because the scratch plow does not usually turn over the soil, a field must be plowed twice. In the hill country of Israel, the first plowing takes place in December, the second in January. The second time, the ground is cross plowed (i.e., in a direction at right angles with the first).

6. PIGS. a. Distribution of the Wild Pig. The distribution of the wild pig in antiquity was much as it is today, from Europe and North Africa in the W to China in the E. It is found in the Nile Valley, the Delta and the Fayyum, and throughout the Fertile Crescent from the Beer-sheba Basin to the Persian Gulf; within this range, it is most abundant in forest and marshland. Wild pigs are so abundant in the marshlands of S Iraq, for example, that they pose a significant threat to local agriculture as well as to human life (Thesiger 1983: *passim;* Maxwell 1957: 73). In the medieval period, wild pigs abounded in the lowlands of the Orontes and provided sport for hunters (Hitti 1929: 231, 251–52). According to al-Jāḥiẓ (*Kitāb al-Ḥayawān,* 4.49), wild boar were in fact so common a feature of rural Syria that farmers allowed lions to roam their lands in order to keep pigs away.

Wild boar are abundant in Israel as well. They thrive in the wadis and remoter highland areas on either side of the Jordan River. They inhabit the Golan and parts of the Galilee, where they are hunted by kibbutzniks and Christian Arabs. Since these areas are still rather thinly populated, they constitute a kind of refuge for the pig. In earlier times, however, boar were to be found everywhere. Tristram (*SWP* 7:3) observed that the boar was abundant "in every part of the country … it extends into the bare wilderness, even where there is no cover, nor other food than the roots of desert bulbs." The southernmost extent of the wild pig's range in W Asia is roughly along a line extending from the N Arabah (Ilani 1983) in the E to Gaza in the W (Hart 1891: 233).

Wild pigs are not found today in the Arabian peninsula, nor have they been part of its natural fauna during historical times, although in the Neolithic period wild pigs were found in central Arabia (Tchernov 1974: 242). However, the Arabian climate then was wetter than it is today. In the period of desiccation which followed the Neolithic, the pig and other forest dwellers such as the fallow deer (*Dama dama mesopotamica*) and the Indian elephant (*Elephas maximus*) became extinct in this region. Other species, such as cattle, not well adapted to a desert environment, also appear increasingly uncommon. Around

2000 B.C., the pig was reintroduced into Central Arabia as a domestic species but never became a significant element in the economy.

b. Raising Pigs. Pigs are by nature omnivorous. The precise make-up of their diet in the wild will therefore depend on what is available in the environment. Common food items, however, include acorns, bulbs (e.g., *Urginea undulata* [Hart 1891: 233]), but also small invertebrates, snakes, and carrion. However, pigs are not well adapted to a grass (cellulose) diet since they are not ruminants.

Like their wild counterparts, domestic pigs thrive on almost any diet, except grass. The care of domestic pigs differs therefore altogether from that of sheep and goats. Whether or not a community raised pigs was determined in part by its way of life and in part by its environment. Although they are occasionally herded over long distances on their way to market (Diener and Robkin 1978: 498; Harris 1985: 114), pigs are not so well suited to transhumance (as are sheep and goats). While more versatile than is often supposed, pigs prefer to range in oak forests, where they feed on acorns, tubers, and grubs. In the E Mediterranean, they might also feed on the pods of the carob tree, which is native to the area (Luke 15:15–16; nowadays, it serves as pig fodder in Spain as well [Parsons 1962: 228]). But it would be difficult for entire communities to follow herds of pigs through the forests. Further, as previously noted, pigs are not well adapted to cellulose (e.g., grass) diets. Nor do they provide valuable secondary products, such as milk and wool. For these reasons, pigs are not found in communities where pastoral nomadism is the dominant way of life. Swineherding, as we find it in antiquity and the Middle Ages, is associated with settled communities.

Urban pigs would often be sent out each day in the care of a swineherd to forage in the forests or to grub in fields which were lying fallow (Columella, *Rust.* 7.9.9; Parsons 1962: 218; Hémardinquer 1979: 53–54). At night, the swineherd would bring them back to town. Incidentally, it was this practice, not some uncleanness attached to pigs that accounts for the swineherd's separate existence. It also explains Herodotus' remarks about swineherds in Egypt (2.47): he took the aversion to swineherds as support for his claim that pork was prohibited. All it indicates, however, is that urban folk found these rustic types just a little too dirty for comfort. It had nothing to do with pigs *per se.* Shepherds were treated with the same disdain (cf. Gen 46:34).

While their natural habitat is the oak forest, pigs also thrive in urban environments, where there is an abundance of waste material on which they can feed. Before the advent of the modern meat industry, it was not uncommon in many parts of the world for an urban family to raise a pig or two at home on household refuse and agricultural waste. In the Mediterranean area, this waste is known to have included common items such as bran and olive pulp. Plautus (*Capt.* 4.2.28), for example, informs us that in Rome millers kept pigs which they fed on bran (cf. also Columella, *Rust.* 7.9.2). The same practice is attested in early modern France (Hémardinquer 1979: 54). Possible evidence for it also comes from ancient Mesopotamia: in Old Babylonian texts from Sippar a certain Marduk-dayyan is given ^{zid}*ḫulāṣu,* "bran?" for pigs (Goetze 1948: 88–89, nos. 15.1 and 16.1).

Olive pulp is attested as pig food in early modern Languedoc (Hémardinquer 1979: 55) and contemporary Spain (Parsons 1962: 229). In rural Tunisia today, olive pulp is used to feed camels which drive the crushing apparatus (cf. Cato, *Agr.* 10–11, according to whom the proper equipment for an olive yard included a swine herd). Since over 80% of the olive may end up as waste (Ruppin 1920: 62; Eitam 1987: 26, 54 n. 27) this was potentially an enormous source of rich fodder.

Other abundant waste products which might have been used as pig fodder, though explicit statements to this effect are lacking, include chaff (cf. Grigson 1982: 301; Simoons 1961: 29) and grape pulp. Grape pulp *was* used in Roman Italy as supplementary cattle fodder (Cato, *Agr.* 25: Varro, *Rust.* 54).

Additionally, pigs were often allowed to roam the streets in search of whatever refuse they might find; this might well include (in addition to the items mentioned above) inedibles such as feces (cf. Maimonides, *Guide* 3.48) and carrion (cf. Grigson 1982: 299 and literature cited there). This practice of leaving pigs to fend for themselves is widely attested in ancient and medieval Europe (cf., e.g., Plautus *Capt.* 4.2.28ff. [*in publico*]). According to Evans (1906: 158ff.) pigs still wandered the streets of S Italy and Sicily in the early years of this century. Pigs running wild in the cities were often responsible for the

death of little children, and were publicly tried and executed for their offenses. This problem elicited numerous civic ordinances banning pigs from the streets (Hémardinquer 1979: 53; Defoe 1987: 64). One can still see pigs scavenging in the streets of the poorer Christian areas and garbage dumps of modern Cairo. A possible reference to these street-wise pigs in the ANE occurs in the Hittite Law I §82, which speaks of the ŠAḫ *ḫi-la-an-na-aš*, "swine of the gate (?)" (Friedrich 1959: 44). The gate might be the location of the city garbage dump (Greenfield and Shaffer 1983: 125), or the site of a threshing floor where waste from the processing of grain would be available (1 Kgs 22:10; Ruth 3:2; in extra-biblical literature, cf. 2 Aqhat v. 6–7 [*ANET*, 15]). Hittite Law I §86 (*ANET*, 193) deals with the case of a pig which has run amuck in someone's property—perhaps another instance of the same phenomenon. That pigs scavenged inside the city limits may also be inferred from the two references to pigs in the Hittite Instructions for Temple Officials (Sturtevant and Bechtel 1935: 160, 14.60, 64; *ANET*, 209). In this text, the pig is linked with the dog, another scavenger, as a potential source of contamination of kitchen vessels. This suggests that, as in Europe, pigs may have been fed on kitchen midden. But the Instructions are also concerned about keeping pigs away from the entrance to the temple, which probably indicates that they were roaming the streets.

Explicit evidence for pigs scavenging in the streets comes from Babylonia. Describing his revenge on the murderers of Sennacherib, Esarhaddon says, "I fed their corpses, cut into small pieces, to dogs [and] pigs … After I had performed this and (thus) made quiet … the hearts of the great gods … I removed the corpses whom the pestilence had felled, whose leftovers (after) the dogs and pigs had fed on them were obstructing the streets …" (Rassam Cylinder iv. 65–82; *ANET*, 288). The scavenging of pigs in the streets is also indicated in the following popular maxim from about the same time as the events just described (*BWL*, 215, lines 13–14; on its background, cf. Lambert 1957–58: 189):

> The pig is unholy […] bespattering his backside,
> Making the streets smell, polluting the houses.

Of course grain (in the Near East usually barley) was also fed to pigs, as attested in Old Babylonian tablets from Sippar (e.g., Goetze 1948: 90, no. 18) and Lagash (Bauer 1972: 169 [no. 41, IV.9–V.1], 177–78 [no. 42, V5.8–VII.2]). It is difficult to say in these cases whether grain was used simply as a dietary supplement prior to slaughtering or whether it formed a significant part of the pig's diet at all times. Either way, it is important to keep in mind that grain used to feed pigs need not have been fit for human consumption. Spoiled grain can also be used as fodder (Kridder and Carroll 1971: 10). The amount of grain spoilage in Iron Age Israel was perhaps between 10 and 25% (Finkelstein, *AIS*, 267 n. 21; Rosen 1986: 173).

The frequency and time of farrowing, and hence the slaughtering schedule for pigs, are perhaps more variable than those for cattle and caprovines. In the wild, two farrowings per year are typical (Lauwerier 1983). Gestation lasts just under four months. Litters are born from March to June, depending on the availability of acorns in the forest. Two farrowings a year also seem to have been the norm for domestic pigs, according to classical and early modern sources (cf. Varro, *Rust.* 2.4.7; additional sources in Lauwerier 1983). Litters may consist of as many as a dozen piglets. The young reach sexual maturity at 18 months. The natural lifespan is 15–20 years.

c. Pigs in Religious Ritual. Pigs played a prominent role only in certain kinds of sacrifice. Among the Hittites, young pigs and dogs were favored as symbolic victims in rites for the elimination of impurity (cf. discussion under Dogs below). An example of these rites is the "Ritual for the Elimination of Family Discord" (Rost 1953). The operator, an old woman (^{SAL}š U.GI), took a young pig (ŠAḫ.TUR) and held it up before the quarreling parties then recited, "Look, it has become fat on plants and grain. As it will not see the sky or the other piglets hereafter, so these who are making the sacrifice shall not see the evil curse." Having said this, she swung the piglet between the parties. They then killed it and buried it along with an offering of bread and a libation of wine (ii.44–54). The ritual was clearly a composite of two different types of action. It was first a rite of elimination by which an evil was transferred to something else, in this case an animal, and then destroyed or banished. Burial was one means of returning the animal to the

underworld, whence impurity, disease, and magical spells were thought to arise. But it was also a propitiatory offering to the numinous powers of that world, hence the bread and wine.

Another of these Hittite rituals was one performed to eliminate plague in the army or in the land (Friedrich 1925). In this case, there was again a transfer to animals (rams), but instead of being "returned" to the underworld they were banished into foreign territory. An adult pig, a goat, and a ram were sacrificed to the deity believed to be responsible for the plague. Here the offering of the pig was purely propitiatory.

On the basis of the Hittite material, it would seem that the pig as sacrificial victim was closely associated with rituals of a chthonic character. This association was not limited to Anatolia. Among the Romans, pig sacrifices were associated with agricultural rites for the promotion of the harvest. Cato (*Agr.* 134.1) mentions that a pig was offered to Ceres before the harvest, when thinning a grove (*Agr.* 129), and before tilling the ground (*Agr.* 140). Similarly, when one wanted to purify the land, one made a sacrifice consisting of a piglet, a lamb, and a calf. The animals were led around the land to be purified, and prayers were offered to Mars (*Agr.* 141). Aulius Gellius (4.6, 7) mentions that there was also a pig sacrifice after the harvest.

The association of the pig with agricultural ritual is at the heart of the Greek Thesmophoria, the principal form of the Demeter cult (Burkert 1985: 242–46). In Athens and Sparta, this festival was held in October or November before planting took place. For three days, married women would live in temporary shelters in the precincts of the sanctuary; men were strictly excluded. Each woman would bring certain offerings with her including a young pig, which would be thrown into a special ritual pit known as the *megara* (< W Semitic *mʿrh,* "cave"). On the first day of the festival, the decayed remains of earlier pig offerings would be brought up to the surface to be spread with the seed at planting time in order to bring a good harvest. On the second day, the women would fast in commemoration of the abduction of Kore. The third day of the festival, introduced with a banquet, celebrated the goddess Kalligeneia ("of the beautiful birth"), who is perhaps Demeter herself in one of her aspects. The association of the pig with the vegetation goddess is both old and widespread. Ceramic pig figurines marked with impressions of grain have been found at Luka Vrublevets-Kaya, a Chalcolithic site in the Ukraine, and a pig-faced vegetation goddess was found at Rastu, a site of the same date in W Romania (Gimbutas 1982: 211–14).

Pigs also figured in elimination rites of the sort found among the Hittites. Indeed they are the usual victims in all rites of purification in Greece. Agamemnon dedicated a pig to Zeus, Helios, and the Furies as part of his reconciliation with Achilles. He took an oath of innocence, then had the pig thrown into the sea, whereupon he told Zeus who had been the cause of the conflict, to take his dinner and leave them alone (*Iliad* 19.250–75). (For the sea as repository of impurity, see *Iliad* 1.313–14.) Agamemnon's pig was a purificatory oath sacrifice. As in all purificatory sacrifices (cf. the Israelite *ḥaṭṭāʾt*), the offerer never partook of the victim's flesh, since his purpose was to rid himself of the impurity absorbed by the victim.

A pig sacrifice was part of the Greek ritual for the purification of the homicide. In this case, a piglet was slaughtered over the head of the person to be purified, and the blood was then rinsed off. The idea of this rite, according to Burkert (1985: 81), was that the person defiled by blood should once again be covered with blood. His defilement by bloodshed was thus reenacted and given a form that could be seen and felt. When it was washed away, guilt went with it. This scenario is strongly reminiscent of the Israelite ritual prescribed in the case of a homicide victim whose killer is unknown (Deut 21:1–9; for discussion cf. Wright 1987b).

Another purification ritual involving pig sacrifice took place at the beginning of the popular assembly in Athens (Nilsson 1955: 105; Burkert 1985: 81–82). Officials called *peristiarchoi* would carry a piglet around the square, slaughter it, and spray its blood over the seats, and then discard the carcass. Several details of this ritual are worth pointing out. First, as both Nilsson and Burkert have observed, the name of the officials indicates that the ritual originated in the purification of the (public) hearth of altar (*hestia*) prior to the resumption of sacrifices. Second, the purifying agent, blood, is applied all around the area to be cleansed. As in the purification of the homicide, blood is used as the ritual detergent. Third, the animal

victim is disposed of and is not eaten by the offerer(s). In each of these respects, the ritual reminds one of the Israelite *ḥaṭṭāʾt,* whose purpose was the purification of sancta, and especially the altars of the tabernacle (cf. Leviticus 4; 5:1–13; 6:17–23; 16:11–19; Num 15:24–31). A pig sacrifice was also one of the preliminaries of initiation in the cult of Eleusis. Opinions differ on whether this pig sacrifice was purificatory in nature (so Burkert 1983: 256–64) or an offering to Demeter, with whom the cult of Eleusis is associated (Nilsson 1955: 105 n. 1).

In summary, pigs (and dogs) were customary only in sacrifices in which the offerer had no share in the sacrificial meat. These were most commonly of a purificatory nature. The choice of these two animals was probably dictated in part by the fact that they were cheap and easily available. However, the contempt in which both dogs and pigs were almost universally held also must have been determinative, for neither animal was used in other kinds of sacrifice. One would not have offered a pig or a dog, however inexpensive, to an Olympian deity. This was not because pigs and dogs were more "chthonic" than other animals, as is sometimes said, but simply because they were contemptible. In fact, what made them contemptible also made them cheap: they needed little care and could be fed on refuse or allowed to scavenge in the streets.

There is nothing in rituals associated with the pig in the ANE or in Greece to justify the conclusion that its involvement in these motivated its prohibition as food in Israel. Indeed, the pig's traditional role in purificatory sacrifice was in Israel performed by "clean" animals, as in the ritual for the unsolved murder. Another such case is the ceremony for the Day of Atonement (Leviticus 16), which is a classic rite of elimination involving the transfer of impurity to a "scapegoat." Like its pagan analogues, the goat bearing the impurity was banished beyond the borders of society into a world inhabited by demons. Obviously this was not considered grounds for prohibiting the consumption of goat meat. If Israel could adapt pagan rituals of this kind to fit its world-view, there is no reason why the pig should not have retained its traditional role in the cult. It would seem, then, that the absence of the pig from Israelite ritual results from other concerns.

d. Prohibition of Pork in Israel. Despite the abundance of wild boar in many parts of the ANE, and despite the efficiency with which domestic pigs convert refuse into high-quality animal protein, pork has been prohibited in at least two major Near Eastern cultures: Israel and Islam. The biblical prohibition of pork has elicited several major types of explanation: the religious, the hygienic, and the ecological.

Those who explain the prohibition on religious grounds generally argue that it was the pig's association with pagan worship that rendered it impure (Price 1925; de Vaux 1958: 262; Noth, *Leviticus* OTL; Elliger, *Leviticus* HAT, 150). This view, as just indicated, has little to recommend it. Others hold that in antiquity the pig was a totem of the Semitic tribes and therefore was prohibited as food except on special occasions (Smith 1927: 290; Chelhod 1964: 202–3). While fashionable in some anthropological circles at the turn of the century, the concept of totemism in general has lately been severely criticized (cf. Lévi-Strauss 1963), and its relevance to the Near East in particular has always been doubtful.

Proponents of the hygienic approach, for their part, suggest that it was either the pig's filthy habits, such as its willingness to eat excrement (Maimonides, *Guide* 3.48), or its association with trichinosis (Albright, *YGC*, 177–78) that rendered it unclean. This explanation too, though attractive in the case of the pig, must ultimately be abandoned (for discussion, see Harris 1977: 200; 1985: 160; Simoons 1961: 37ff.).

The ecological approach is chiefly associated with the work of the American anthropologist Marvin Harris, who argues that the pig was prohibited because in the end it proved too costly to raise (1977: 195–98; cf. also 1974; 1985). He argues that there were several reasons for this. First, unlike other domestic animals, the pig cannot be used for transport, riding, or milk production: it is therefore useful only as a source of meat. Second, once deprived of their natural forest habitat, pigs would have to be raised on precious grain reserves. Finally, the pig is not well adapted to the hot, arid climate of the Near East. Other anthropologists, however, counter that the pig is a rather good economic investment even in the Middle East and that pigs could have been maintained with a minimum of expense (Diener and Robkin 1978). In fact, they argue, the pig was so cheap to raise that the early Muslim empire builders outlawed it in order to insure that conquered non-Muslim communities did not have too much economic autonomy. The

prohibition of pork in ancient Egypt is similarly supposed to have been intended to assert government control over the masses. According to this model, a domestic pig industry flourished among the peasants whenever and wherever strong, central control was absent.

Neither of these theories in the end bears critical examination. Harris exaggerates the problems involved in raising pigs. As Diener and Robkin point out, the Near East is by no means uniformly hot and arid. Furthermore, pigs can survive even in desert conditions, where forest cover is lacking and where water and food are scarce. For example, wild boar are found S of the Atlas Mountains in N Africa, where annual rainfall is less than 100 mm (*EncBrit* [15th ed.] 24: 924). Also, domestic pigs are sometimes raised in very inhospitable conditions, as among the Moshaweng Tlokwa of the E Kalahari Desert (Grivetti 1978). The wide geographical distribution of the wild boar and the domestic pig in fact suggests that the pig's adaptability to environment is much greater than Harris described.

The idea that raising pigs would have been a drain on food supplies is also doubtful. As Harris is well aware, the pig is among the most efficient scavengers. With the many potential sources of food discussed above, it seems likely that a small-scale pig industry could have been supported largely from waste products. Such an industry would not necessarily have produced prime specimens; but pigs can survive, albeit in stunted form, on amazingly sparse rations. When the diet is inadequate, it is possible to bring pigs up to an acceptable weight simply by delaying the time of slaughter (cf. Parsons 1962: 229).

Pigs were doubtless also fed on good quality grain, but this does not necessarily mean that people were put at a disadvantage. The cost-benefit ratio would have depended on the amount of surplus grain available. Harris seems to have assumed that there simply was none. Nevertheless, it is beyond doubt that certain geographical areas and economic groups enjoyed considerable surpluses. Parts of the Transjordan, for example, were able to export a surplus of wheat to Tyre (Ezek 27:17). The same area provided a tribute of 10,000 kor each of wheat and barley to the Judean king Jotham (2 Chr 27:5). Even small rural communities may have enjoyed substantial surpluses. Finkelstein has suggested that the annual surplus at ʿIzbet Ṣarṭah (Level II—11th cent.) was on the order of 100% (*AIS*, 268–69). This figure is over and above probable crop losses and seed needed for planting. By way of comparison, Arab villages in the ʿIzbet Ṣarṭah area according to the 1945 Village Statistics on average also produced twice as much grain as they consumed. In general, the specialized horticulture that we find in Iron Age Israel characterizes a society that has developed beyond a meager subsistence economy (Stager 1985: 181). Harris further assumed that Israel's forests had all but disappeared, yet this was probably not the case (as indicated above).

Archaeological excavations show that during certain periods in areas where pork is now prohibited because of Jewish or Islamic law, pigs were once raised in substantial numbers, a fact which suggests that the prohibition of pork is more a matter of culture than of environment. At Carthage (N Africa), for example, pig remains are almost as numerous as those of sheep and goats in the Roman, Vandal, and Byzantine periods (Reese 1977). In Egypt during the same periods, they were raised on a large scale in the Fayyum (cf. Preaux 1939: 221–23) and elsewhere (Johnson and West 1967: 206–7, 213), as they had been in pharaonic times (see Hecker 1982). The situation at sites in Israel, while indicating that Israelites in fact did not eat pork, gives us no reason to suppose that environmental conditions were decisive. While no pig remains were found in Iron Age contexts at ʿIzbet Ṣarṭah (Hellwing and Adjeman 1986) and Shiloh (Hellwing and Sadeh 1985), and only traces have been reported from the Iron Age levels at Dan (Wapnish et al. 1977), in other parts of the country pig bones have been found in Iron Age contexts. At Miqne/Ekron (Hesse and Wapnish 1985), 315 fragments of the genus *Sus* are reported, as against 1496 for cattle and 2300 for caprovines—a significant percentage. Much smaller but still significant percentages occur at Qasile (Davis 1985) and Tell Qiri (Davis 1987b). In the bone sample from the Iron II strata at Tell es-Saʿidiyeh, juvenile (hence probably domestic) pigs constituted 13% of the sample (Martin 1988). Horses, bear, and lion were also eaten. The presence of pig bones at these sites likely reflects ethnic and cultural differences rather than environment. The pig skeleton found at Hazor in an Iron II (Israelite) context is enigmatic, not only by virtue of its occurrence, but also because it is complete (Angress 1960). The reason for playing down the importance of environment is that in periods preceding the Iron Age,

pigs are found in significant numbers in areas where (according to Harris' theory) there would be little reason to expect them. In the bone sample from MB Tell Jemmeh, for instance, pigs constituted between 10 and 15% of the total—at least as much and probably more than cattle (7–13%; Wapnish and Hesse 1988). Pigs were raised in the same area during the Chalcolithic, as attested by the faunal remains at Wadi Gaza D and Gilat, where pigs respectively made up 36.0 and 17.9% of the sample (Grigson 1987: 235). It is true that these sites enjoy slightly more rainfall than others in the Nahal Besor, and it may therefore be said that even this small amount determined whether pigs could be raised or not. But if pigs could be raised under these still harsh conditions, then there can scarcely have been any environmental impediment to their being raised under the much more favorable conditions obtaining to the N.

In light of the foregoing discussion, it seems fair to conclude that had the Israelites wanted to raise pigs they could have done so. Furthermore, there is no reason why the Israelites could not in any event have hunted wild boar. Harris would perhaps argue that hunting was a waste of time for farmers and pastoralists, and indeed in the faunal remains from most Israelite sites wild animals make up only a tiny percentage of the total. But the fact remains that the biblical dietary law allows Israelites to hunt other kinds of game.

To criticize Harris' exaggerated version of materialistic determinism is not to deny that culture broadly conforms to ecological constraints; rather it is to assert that "it does so according to a definite symbolic scheme which is never the only one possible" (Sahlins 1976: viii). Harris' theory, even if it showed why pork is not eaten, would fail to explain why the dietary law justifies itself in terms of the symbolic categories of cleanness and impurity. It was as a part of this symbolic system, and not simply as a list of tabus, that the dietary law was transmitted to the people. It was within this system that the formulators of the law themselves evidently sought the ultimate justification for the prohibitions.

For all its vehemence, Diener and Robkin's attack on Harris' theory scarcely fares better. Their explanation of the pork prohibition in early Islam founders on its presupposition that pork was a significant element in the economy of pre-Islamic Arabia, a view for which absolutely no textual or archaeological support is forthcoming. It is more reasonable to suppose, as scholars have long done, that the Islamic pig prohibition was adopted from Judaism as part of Muhammad's effort to establish himself as a prophet in the tradition of the Bible (Wensinck 1914; Cook 1986). Jewish influence also probably explains the avoidance of pork reportedly practiced among the Saracens (Sozomenos, *h.e.* 6.38). (On their explanation of the pork prohibition in ancient Egypt, see below.)

To date, the most satisfying explanation of the pig prohibition is still perhaps that of Simoons (1961), who held that the prejudice against pigs and eating pork first developed among sheep and goat pastoralists. Characteristic of agricultural peoples, the pig was alien to the pastoralist's way of life and was treated with disgust. Modern Americans, for example, tend to react in this way to insectivory or to the consumption of horsemeat. This is not to say that the proto-Israelites regarded the pig as "unclean" in the sense in which that word is used in the book of Leviticus. It may be that the author(s) of the biblical dietary law took a pre-existing avoidance of pork and incorporated in into a systematic ideological superstructure.

e. Prohibition of Pork in Egypt. The idea that pork was prohibited in ancient Egypt stems principally from classical writers (Herodotus 2.47; Plutarch, *de Is. et Os.* 352.5; Athenaeus, *Deipnosophists* 7.300a; Sextus Empiricus, *Pyr.* 3.223). The prohibition they describe seems to have been restricted to priests (so explicitly Plutarch and Sextus Empiricus). The ambiguous term "Egyptians" used by Herodotus and Athenaeus likely refers only to a certain segment of the population. Given that Herodotus knew Egypt only second- or third-hand, he might easily have made generalizations that had no basis in fact. Athenaeus, a native of Naucratis, no doubt provides reliable information, but one must keep in mind that he was not writing a treatise about Egyptian food habits. For the purpose of casual reference, it may have been convenient for him to refer to an "Egyptian" prohibition of pork, although he was aware that in fact it did not apply to all Egyptians. Either way, the information provided by classical writers has limited applicability, for none of them could accurately describe the situation in earlier periods.

Without the statements of these classical writers, it is unlikely that the idea of a pork prohibition would ever have arisen. Egyptian sources themselves suggest that pigs were commonplace of the domestic economy. For example, pigs were part of the bequest made to the 3d Dynasty noble Metjen by his father (the term "cattle" used in the text is determined by ideograms for asses and pigs; *Urk.* 1.3.2; cf. Breasted, *ARE* 1: 171). Large herds of swine were maintained on the properties of the Ptah temple of Amenophis III at Memphis (1000 swine, 1000 piglets; *Urk.* 4.1797.2), and of the mortuary temple of Seti I at Abydos (Kitchen 1975: 1.51.12). Renni, governor of El-Kab, says he possessed 122 oxen, 100 sheep, 1200 goats, and 1500 pigs (*Urk.* 4.75.15). Pigs are included in the list of livestock of Thutnakht, a subordinate of the chief steward Rensi in the *Eloquent Peasant* (B.ii.138; *ANET*, 410). It is hardly credible that such herds were maintained solely for the once-a-year event in which (according to Herodotus) pigs were sacrificed and eaten in honor of the "moon god"; the sacrifice of pigs in this cult would not explain the donations to the temples of Amenophis III and Seti I.

There is also important archaeological evidence for pig consumption. Pig bones have even been found among the domestic animal remains from 1st Dynasty cemeteries at Helwan, in the 5th Dynasty pyramid of Dedkare-Isesi at Saqqara, in the 6th Dynasty tomb of Hetep Heres at Giza, and at Tell ed-Ḍabʿa (Hecker 1982: 64). But by far the most important evidence has come from the workmen's village at Amarna, where pigpens were recently identified adjacent to the E side of the housing complex (Kemp 1987: 40). Pig bones were also found in significant numbers in the refuse heaps. A preliminary study of the ratios of pigs to cattle and goats yields the following results (Hecker 1982: 66):

Table 5
Relative Percentages of Animal Bones at Tell El-Amarna

	Houses 5 and 6	Area S of Village Wall
Pig	67.2%	39.8%
Goat	28.4%	38.4%
Cattle	3.4%	21.3%

Pig bones were also found in the workmen's village at Deir el-Medineh (Hecker 1982: 64). (In this connection, note that pigs [*šʾiw*] also occur as commodities in the ostraca from Deir el-Medineh [Janssen 1975: 177].) This evidence belies Herodotus' account about the segregation of swineherds, at least as far as earlier periods are concerned. And, of course, it shows that the pork prohibition affecting priests, if it existed at all in this period, did not apply to other levels of society.

First of all, the association of the pig with Seth cannot certainly be dated even as far back as the Old Kingdom (Griffiths 1960: 32–33). Second, during the period of Egypt's most powerful central government, the New Kingdom, Seth became the patron deity of the pharaoh himself. At Tukh, the center of Seth worship from the earliest period, there is a New Kingdom temple, with contributions by 18th Dynasty and Ramesside kings. Seth was also worshiped at Tell ed-Ḍabʿa during the Ramesside period. This last cult center, of course, does not tell us much about the worship of Seth in earlier periods, since the association of Seth with the site is no doubt the result of the local Hyksos cult of Baʿal, with whom Seth was identified (cf. the story of the 400th anniversary of Seth worship at Tanis; *ANET*, 252). Still, the fact that Seth could reestablish himself as the patron deity of the Ramesside kings goes a long way toward invalidating Diener and Robkin's suggested association with the peasantry.

In any event, what happens in the cult does not necessarily reflect what happens in the economy. Seth may "rise" and "fall" in significance, but Seth is not the embodiment of pig farming any more than Horus represents falconry. Furthermore, there is no evidence that the pig—even though it was one of the animals associated in mythology with Seth—was ever part of the *cult* of Seth, i.e., that it was a favored offering. Indeed, Seth's only actual (i.e., non-mythological) association with the pig is the "Seth-animal" which Newberry (1928) identified with a species of wild pig (many do not accept the identification). There is, therefore, no evident connection between the fortunes of Seth and the place of pigs in the domestic economy or in the cult. This is as true of Seth's rise as it is of his fall from grace.

The prominence of Seth during the Ramesside period is motivated by concerns which have nothing to do with the pig. When, for example, after his attack on Qadesh, Seti ("Seth's man") erected a stela to Seth, Amun, and Montu (*ANET*, 252), it was in celebration not of the god's cult animal but of the more abstract quality of martial prowess which the god embodied (cf. already Thutmoses III's Armant Stela; *ANET*, 236, lines 85ff.). As a warrior god, Seth became the patron of the king in battle (e.g., Amenhotep II: Memphis Stela, *ANET*, 245; Ramesses III: Medinat Habu, *ANET*, 250, 263). In the "Marriage Stela" (*ANET*, 257), Ramesses II invokes Seth as his father along with Re. Seth, in other words, is not a code word for popular resistance and pig-consumption, as Diener and Robkin would have us believe.

The Rassam Cylinder inscription of Sennacherib suggests that pigs were still a common feature of daily life in 7th century Mesopotamia. Unfortunately, studies of faunal remains from Mesopotamian sites of this period are virtually nonexistent, and it is thus impossible to establish how large a role pigs played in the economy. From earlier periods, however, evidence is more abundant. These data are collected in the following table.

Table 6
Relative Percentages of Animal Bones in EB Sites in Mesopotamia

Site and Period	Caprovines	Cattle	Pigs	Source
Tell Asmar NO.	62	47	65	Hilzheimer (1942)
MNI	6	4–5	14–16	
%[a]	26.0	19.7	27.3

[b]Based on MNI

The many different terms for pigs in Sumerian and Akkadian are discussed in Salonen (1974). For a detailed study of pig raising in Sumeria, see Rosengarten (1960).

B. Equids

1. ONAGERS. Two principal species are found, the Syrian (*Equus hemionus hemippus*) and the Persian (*Equus hemionus onager*). The onager is the only equid native to the Near East but is not the ancestor of the domestic donkey, as is sometimes thought. This is evident from the fact that the offspring of the Asian donkey and the onager is sterile, while that of the Asian donkey and the African wild ass is fertile (Clutton-Brock 1987: 98). The onager was never domesticated because, like the gazelle, it is temperamentally unsuited to manipulation by man. Though its remains are frequently found in archaeological sites, there is no evidence in the bones or teeth that would point to domestication (Clutton-Brock 1987: 98 *contra* Zeuner 1963; Hilzheimer 1941). These remains are more likely evidence of the hunting of onagers, as depicted in the much later reliefs from the palace of Ashurbanipal.

2. HORSES. a. Prehistoric Distribution. During the Paleolithic era, herds of wild horses (*Equus ferus*) roamed the grasslands of both the Eurasian and the American continents. But due to the growth of forests following the last Ice Age and to overhunting by man, the horse was already extinct in North America by 8000 B.C.E. In the Old World, it was driven farther and farther E, until today the remnants of the primitive wild horse, the so called Przewalski horse, are found only in Mongolia. Had it not been for its domestication by man, the horse would probably have disappeared altogether from the Old World as it had from North America (Clutton-Brock 1987: 81).

The various modern breeds of horse are probably all the descendants of a single primitive stock, their different characteristics being the result of artificial selection by man, as well as of certain environmental

influences which affect all mammals. Northern, "cold-blooded" breeds have heavy bodies and short extremities (legs, ears), while southern, "hot-blooded" breeds are sleeker and more finely featured (cf. Clutton-Brock 1987: 83). These differences, apparent already in the 2d millennium B.C.E., were however less marked than today. There was not the sharp distinction between heavy N workhorses and S thoroughbreds that there is today, since horses in the ancient world were all generally smaller (most less than 125 cm [49 in] at the withers).

b. The Horse in the Near East. As just noted, the homeland of the domestic horse was in the Eurasian steppes, where it was first domesticated in the late Neolithic. Its appearance S of the hilly flanks of the Near East is due to human activity. From these hills, the horse was first introduced into the Near East, as we learn from (among other things) the Sumerian term for horse, ANŠE.KUR.RA, "donkey of the mountains." On the basis of textual, iconographic, and archaeological evidence, it appears that this took place during the late 3d millennium B.C.E., perhaps somewhat earlier in S Iran (Moorey 1970; Zarins 1976). The arrival of the horse coincides with the development of the chariot, in association with which we first meet the horse in every other society in the ancient world. The still-popular idea of prehistoric Eurasian horse-nomads must be abandoned (Wiesner 1968).

Compared with cattle, sheep, and goats, the horse played only a minor role in the economy of the Near East. It was never extensively used in agriculture or transport, despite its efficiency. In agriculture it was the ox, and in transport the donkey, which were principally used. Failure to exploit the horse's work potential ultimately played a large role in the decline of the Near East vis-à-vis the West in the Middle Ages (see L. White 1962: 57ff.; Braudel 1981: 344–45). The principal use of the horse was for drawing chariots. Before the horse's rise to prominence in the 2d millennium B.C.E., donkeys, mules, and oxen were used for this purpose as well. Mounted cavalry make their first appearance in the 1st millennium B.C.E. This was true also among the Arabian nomads, later renowned for their horsemanship. In central Arabia, the horse appears in rock art for the first time in the "Literate Period" (ca. 1000 B.C.E.–650 C.E.). Its earliest possible use, then, would have been at about the same time that the camel is thought to have been fully domesticated (Tchernov 1974: 247). The widespread use of the horse among nomads, however, came rather later. Inscriptions apparently associated with these rock drawings indicate a date in the latter half of the Literate Period. Unlike the camel, which played a vital economic role in bedouin society, the horse was chiefly valued as an item of prestige.

Given the enormous expense of purchasing and maintaining warhorses, specialized handling and veterinary expertise were called for. A book of instructions on the handling of horses is extant in Hittite (Kammenhuber 1961). Another on the treatment of diseases in horses has survived from Ugarit (Cohen and Sivan 1983; Pardee 1985). Fragmentary Akkadian prescriptions for horse disorders are also extant (Pardee 1985).

c. Equipment. The history of the exploitation of the horse in warfare is very much a history of the technology associated with horsemanship. Of prime importance were bits, bridles, and harnesses (Potratz 1966; Bittel 1975; Littauer and Crouwel 1979). Much of the earliest technology for controlling equids had originally been designed for cattle. Prior to the invention of the bit and bridle, for example, horses and other equids were often controlled by means of a nose-ring attached to a single cord. While adequate for leading cattle, this arrangement was an unsatisfactory means of steering a horse from behind, especially if the horse was pulling a chariot. It was the need for more effective control of the horse in warfare that provided the impetus for the development of the bit and the bridle. The use of these probably remained confined to the military. A proper bit consists of a solid mouthpiece or cannon attached to cheekplates, which prevent the cannon from sliding out of the mouth and also exert pressure on the sensitive sides of the mouth. The first metal bits appear in the 16th century B.C.E. Bits dated to the 15th century were excavated at Tell el ʿAjjul (Stewart 1974).

Like the nose-ring, ancient yoke harnesses, being originally designed for oxen, were ill suited for the horse. In oxen, the yoke pulled not against the throat, but against the front of the animal's withers. The neck strap served only to keep the animal in line. In horses, however, the withers are much less well developed, so that it was no longer the yoke resting against the withers, but the neck strap around the

throat which pulled the burden, choking the horse. The effect of this type of harnessing can be seen in representations of horses drawing chariots. Not only does the neck choke the horse, it also forces the horse to hold its head erect. This posture in turn limits the horse's speed, because a horse can extend its front legs only as far as the line running from the tip of its nose to the ground. The more erect the horse's head, the shorter the step and the choppier the pace.

Used on a horse, the yoke harness was also relatively inefficient, since the point of traction was up at the withers rather than at the shoulders and was thus too high for maximum mechanical effect. In practical terms, this means that a team of horses, which today (thanks to the horse collar) could be expected to pull 2,500 kg (5,500 lb), could pull only 500 kg (1,100 lb) in ancient harnesses (White 1962: 156, n. 1 to p. 60).

The horseshoe proper (White 1962: 57ff.) is not certainly attested before the 9th century C.E., when it appears in rider-graves in the Yenisei region of Siberia. At about the same time, it is mentioned in the *Tactica* of the Byzantine Emperor Leo VI, who reigned 886–911. The Greco-Roman world knew only of hipposandals, which were attached with thongs or wires, either for ornamentation or to protect a broken hoof (cf. Catullus 17.26, which refers to a *solea* and not to a shoe). The silence of Greco-Roman writers on the subject of horseshoes is telling, given the size of the literature devoted to the use and care of horses (cf. Xenophon, *On Horsemanship;* Columella, *Rust.* 6.27–35; Oder and Hoppe 1924). There is also no evidence from the Near East to justify our supposing that the horseshoe was known there.

Since the principal use of the horse was for pulling chariots, horseback riding was relatively uncommon (cf. Moorey 1970). Saddles in the proper sense of the word were therefore unknown, though saddle blankets, and girths were occasionally used. From the Mesopotamian evidence, it is clear that when people first began riding horses they sat toward the back, as they were accustomed to sit on the donkey. The ass has low withers and straight shoulders, which make it advantageous for the rider to sit toward the rump if he wishes to avoid falling off. Bareback riding techniques obviously took some time to develop. The earliest depiction of horseback riding in Mesopotamia occurs on a seal impression from Kish dated to the Early Dynastic III period (Zarins 1976: 260–61). In Egypt, the first depiction of figures on horseback comes from the 18th Dynasty (Schulman 1957). In almost all of these representations, Egyptian and Mesopotamian alike, riders are depicted either nude or only lightly armed, indicating that they probably served as scouts or messengers.

The stirrup (White 1962: 14ff.) first appeared in the late 2d century B.C.E. in India, where, at its most advanced stage, it accommodated only a barefoot rider's big toe. From India the idea spread to Pakistan and Afghanistan sometime before 100 C.E. There, however, it consisted of a bar or hook capable of supporting a shod rider. Buddhist missionaries then spread the idea to China, sometime during the Chin Dynasty (265–420 C.E.). Hunan tomb figures of this period are shown equipped with stirrups. By the time it first occurs in Chinese literature (477 C.E.), it is already in common use. It reached Iran and the Arab world in the late 7th century and Europe in the early 8th. The stirrup was totally unknown in the classical world, and in the ANE. Xenophon (*On Horsemanship* 7.5) for example, describes the technique for proper riding as follows:

> When he has taken his seat, whether on the horse's bare back or on a cloth, we do not like that he should sit as if he were on a carriage seat, but as if he were standing upright with his legs somewhat apart; for thus he will cling more firmly to the horse with his thighs, and, keeping himself erect, he will be able to throw a javelin or to strike a blow on horseback, if it be necessary, with greater force.

The absence of the stirrup prevented the use of the horse in shock combat since a rider could easily be unmounted.

3. ASSES. The wild ass (*Equus africanus*) appears to have originated in N Africa. It is unknown exactly when the ass was first domesticated, though a date of 3500 B.C.E. is suggested. (On the early use of the donkey, see above under "Secondary Products Revolution.") From the beginning, its primary role was as a pack animal.

The donkey also played an obscure role in certain cultic situations. It was not permitted as a sacrifice or as food in ancient Israel and appears only infrequently in sacrificial texts from Ugarit (cf. *UT* 62:18ff.).

Noteworthy, therefore, is its prominence as a symbolic victim in the ritual of covenant making among the W Semitic inhabitants of the Mari area (Noth 1957), as well as in S Arabia (see below). At Mari, the idiom to "kill an ass" (*ḫa-a-ri-im qa-ta-li-im,* ARM II 37.6, 11) meant to make a treaty (*ḫayārum* is the Akkadian realization of W Sem *ʿayr* [Heb *ʿayir,* Ug *ʿr*]). Compare also *ḫayaram ša šalīmim qutulma,* "kill an ass of peace-making" (Dossin 1938: 109). In S Arabia, too, the donkey seems to have played a role in the ritual of treaty making, as seen in the following passage: *kl gwm ḏ›lm wšymm wḏḥblm wḥmrm* "every community (owing allegiance to) a god or patron deity or (bound by) an alliance or *ḥmr* [ass] -treaty" (*RES* 3945.1; cf. 3624; 3948.4ff.).

The domesticated ass or donkey is physiologically well suited to its one-time role as the primary beast of burden in the ANE. While not altogether the camel's equal as water conserver, the donkey can likewise tolerate significant losses of body water (as high as 25–30% of body weight), though for shorter periods (Schmidt-Nielsen 1959). Like the camel, it can do so because its water losses come from the tissues and not from the blood, the volume of which remains fairly constant. And, like the camel, the donkey can replenish its entire water loss in a matter of minutes—an adaptation to the necessity of being in a constant state of readiness to flee while drinking at the water hole. However, the donkey requires water more frequently than the camel because it eliminates heat by evaporating sweat as much as four times faster than the camel. Apparently the donkey can store a certain amount of water against future losses. One of the donkey's important adaptations is a low concentration of chloride in the sweat (Schmidt-Nielsen and Schmidt-Nielsen 1952: 155). The fact that more of the chloride remains in the blood means that when the donkey rehydrates the concentration of chloride is not drastically reduced. In humans, rehydration must be accompanied by the ingestion of salt or else shock or even death may result. A wild animal, however, might find it difficult to replace its salt as quickly, and salt loss could cripple its ability to evade predators. Thus, the donkey's low-salt sweat clearly has survival value.

Different equid species do not usually interbreed in nature. Man-made hybrids are the *mule* (the offspring of a male donkey [jackass] and a mare) and the *hinny* (the offspring of a stallion and a female donkey [jenny]). The offspring in either case may be male or female, but will always be sterile. The two types are morphologically distinguishable. In each case, the front end resembles that of the sire and the hindquarters those of the dam. Mules therefore have a large head and ears like those of the donkey and powerful hindquarters like those of the horse, the tail consisting of long hairs originating in or near the root. Hinnies, on the other hand, have lighter, more finely featured heads and smaller ears, while the tip of the tail is tufted.

4. CAMELS. Primitive camelids first appeared some 40 million years ago in N America. Toward the end of the Tertiary, they spread from there into South America, where their descendant, the llama, survives today. Another group migrated across the Bering Strait to Asia, and quickly spread to the Near East and Africa. Camel bones have been found in Plio-Pleistocene levels in the Omo beds in Ethiopia (Howell et al. 1969), in the Marsabit Road (Early Pleistocene) in N Kenya, and in Olduvai Bed II (Middle Pleistocene; Gentry and Gentry 1969). The earliest certainly datable camel remains in the Near East are those from the Acheulian (Middle Pleistocene) site at Latamne, Syria (Hooijer 1961). Camel bones have been found at several Levallois-Mousterian (Middle Paleolithic, Upper Pleistocene) sites, including Bir-Sahara (Wendorf et al. 1976) in SW Egypt; Mugharet el-Emireh (Bate 1929), Sabha (Vaufrey 1951), Qafzeh (Bouchud 1974), Tabun C (Payne and Garrard 1983), Far›ah (Grigson 1983) in Israel; and Azraq in Jordan (Clutton-Brock 1970). Assemblages from still later periods have been recovered from the Neolithic site at Sha‹ar Ha-Golan (Stekelis 1951) and in Strata IV and III (EB I–II) at Arad (Lernau 1978: 87). A few bone fragments were found in the EB IV level at Be›er Reṣiṣim (Hakker-Orion 1984). By the beginning of the historical period, however, the wild camel was probably extinct in most parts of N Africa, the Levant, and Egypt. See also CAMEL.

In historical times, there have been two species of camel, the Bactrian (*Camelus bactrianus*), a stocky, two-humped camel native to the cold deserts of central Asia, and the Arabian (*Camelus dromedarius*), a swift, longer-legged animal with a single hump, today found throughout N Africa and the Near East. Camels are even-toed ungulates. But, unlike other ungulates, they do not have proper hooves. Their toes

are instead protected by a pad of skin. Although they ruminate, they also differ from true ruminants in some respects. Ruminants, for example, typically have a complex stomach consisting of four chambers (see under cattle above); the camel, however, has three. Also unlike other ruminants, camels have vestigal incisors in the premaxilla (upper jaw) and large canine teeth. In other ruminants, the lower incisors bite against a hard upper gum.

a. Adaptation to Desert Life (Schmidt-Nielsen 1959; Gauthier-Pilters and Dagg 1981). Anatomical study has shown that the camel has no hidden water reserve. This is also indicated by the fact that a camel deprived of water for a long period will drink only as much water as it has lost. The camel's trademark, its hump, is a mass of fibrous connecting tissue and fat, and not, as is popularly believed, the animal's water supply. When the animal is starved, this hump disappears: it is, in fact, the camel's principal energy reserve.

In other mammals, especially domestic animals, fat is distributed throughout the body under the skin, though there may also be areas where it accumulates in larger quantities (e.g., the rump or tail of sheep). The concentration of fat in a single location is one of the camel's adaptations to life in an arid environment. It allows the body to dissipate heat readily, without sweating. Where fat is deposited evenly under the skin, as in humans, it acts as an insulator to keep heat inside, and more sweating is required to draw the heat off. Camels do sweat, but they can tolerate a rise of temperature to as high as 105°F before they sweat freely (6°C above normal). In order to mitigate water loss through sweating, the camel's body temperature may be allowed to drop as low as 93°F at night. This 12° tolerance compares with about 2° in humans. For a 500 kg (1100 lb) camel to dispose by perspiration the heat represented in that 6° rise in temperature (i.e., 500 kg × 0.8 cal/kg [the specific heat of animal tissue] × 6 = 2400 cal) would require about 5 liters (1.3 gal) of water.

Another means by which sweating is minimized is the camel's coat of hair (part of which is retained year-round), which insulates the body from heat absorption from the outside and which shields the camel from the radiant energy of the sun. Shorn camels will sweat 60% more than those that are unshorn. This adaptive strategy reminds one of the fact that the bedouin themselves dress in several layers of woolen clothing.

The camel limits its water losses in one other, though less significant way. It has developed the ability to reprocess urea, one of the principal waste products expelled in urine. Sheep and cows also have this ability to some extent (Rogers 1958). The urea that is not reprocessed and other waste products are expelled in highly concentrated form—in summer in as little as one liter (34 oz) of urine per day.

The key to the camel's tolerance of heat and aridity, however, is not its methods of water conservation but its ability to maintain a constant amount of water in the blood plasma. A camel that has lost one-quarter of its body weight in water loses less than one-tenth of its plasma. Under the same conditions, a man would lose up to 33% of his plasma (a loss of 12% is usually fatal in human; the blood becomes too thick to carry off heat, and this leads to rapid overheating and death). Camels, on the other hand, can still function with plasma losses as high as 25% and within minutes of drinking will regain their former condition. This tolerance for water loss is possible because losses come not from the blood but from the tissues.

The camel's other adaptations to life in the desert include the ability to close its nostrils (e.g., during sandstorms), long eye lashes to shade the eyes from the sun, and a split upper lip enabling it to grasp and eat the thorny plants and shrubs that are commonly found in the desert.

There are, however, factors which limit the productivity of the camel. Unlike almost all other domestic animals, male camels rut only at certain times of the year (during or after the rainy season; Kohler 1984: 202). Females reach sexual maturity rather late (at 5 years) and produce a calf only every other year, until about age 21 (Gauthier-Pilters and Dagg 1981). The breeding season is short and the gestation period long (12 months, as compared with 5 for sheep and goats). Nor will females go into heat while they are lactating (Kohler 1984: 202). The mortality rate among calves is perhaps as high as 30%. The net result of all these factors is that the annual growth rate of camel herds is around 1.5% as against 18% for sheep and 33% for goats (Dahl and Hjort 1976). This means that only in very large herds could camels be a

significant source of meat. The camel is therefore principally valuable as a source of milk and as a beast of burden.

b. Domestication of the Camel. (1) Early Evidence. Since the primary use of the camel has always been outside urban centers and since domestic camels are too valuable a resource to be used except rarely as food, the camel is seldom well represented in faunal deposits. It is therefore difficult to trace the early history of the camel's relationship with man. The earliest evidence for some sort of domestication of the camel comes from Shar-i Sokhta in central Iran (Compagnoni and Tosi 1978) and from Umm an-Nar (Hoch 1977) off the coast of Abu Dhabi. At the former site, four camel bones were found in fills dated to between 2600 and 2500 B.C.E. Another was found in a stratified road deposit dated between 2700 and 2600 B.C.E. The excavations also uncovered a jar of camel dung buried in the floor of a house dated between 2700 and 2600 B.C.E. and a wad of yarn composed of camel's hair woven together with fiber from sheep and goats. These finds suggest that the camel was being exploited as a supplier at least of fiber and fuel. This relationship may perhaps be interpreted as the beginning of the process of domestication. But one must keep in mind that domestication will mean different things from one animal to another. In the case of the camel, it has not involved significant intervention in the animal's morphology and behavior, as it has with sheep and goats. The reason is simply that artificial selection could scarcely improve the one feature which makes the camel so useful: its ability to be used as a beast of burden under hostile desert conditions. The domestication of the camel has instead been the process of man's learning to exploit the camel's natural adaptation to the desert and to adapt *himself* to the camel's way of life. The camel may be said to have been fully domesticated when it was used as a beast of burden in the settlement of and movement through the desert (Compagnoni and Tosi 1978: 100). This was certainly not the state of affairs at Shar-i Sokhta. Indeed, even as a producer of renewable products the camel played a very minor role, to judge by its small attestation in the sample (5 bones in 20,000).

New data from the Arabian peninsula conform to the same pattern. In rock art from central Arabia, the camel appears already in the earliest of the Neolithic period and sporadically thereafter until ca. 1000 B.C., when the number of depictions rises enormously. Except for one questionable example, all of these drawings depict the dromedary. This chronological distribution corresponds very well with what we find elsewhere in the Near East.

(2) The Camel in Egypt and Mesopotamia. Although the camel was apparently found in N Africa as late as the Paleolithic, it does not seem to have survived there into historical times. Its disappearance may be due in part to changing climatic conditions. From about 9000–6000 B.C.E. and again from 3500–2500 B.C.E., the Sahara experienced wet phases, during which its climate was like that of the modern savanna. Preferring a more arid environment, the camel may thus have been driven S. In any event, reliable archaeological evidence for the presence of the camel in Egypt is not found until the Middle Kingdom (Midant-Reynes and Braunstein-Silvestre 1977 *pace* Ripinsky 1975; 1983). Of particular importance is the find at Sayala, Nubia (Bietak 1966: 33–34, 38). If, as is generally thought, the wild camel had long been extinct in N Africa, then the Sayala find must be regarded as evidence for the domestication of the camel in the early 2d millennium B.C.E.

The only other reliable find is a small ceramic figurine of a camel bearing two jars on its back found in a 19th Dynasty tomb from the Rifeh area, near Giza (Petrie 1907, pl. 27). This is among the earliest pieces of evidence for the dating of the first use of the camel as a beast of burden. Though early, it falls just close enough to the time of the camel's apparent domestication in W Asia to be credible.

The earliest representations of the domestic camel (i.e., of camel with rider) are (1) a N Syrian seal dated to between 1800 and 1400 B.C.E. depicting two Bactrian camels with riders (Gordon 1939: 21 no. 55, pl. VII no. 55), (2) another Syrian seal dated to the 17th century B.C.E. showing a dromedary with rider (Ward 1910: 319, no. 1011), and (3) a fragmentary ceramic relief probably of camel with rider from the Ur III period at Tell Asmar (Frankfort et al. 1940: 212 figs. 126–27). The second of these is perhaps disputable: the animal lacks a hump, its feet look like those of an equid, and its tufted tail suggests that if it is an equid it is probably a donkey. Its neck, however, is much too long for an equid, and the head is more like that of a camel than that of a horse. The rider is sitting sidesaddle, a common way of riding the

camel but unusual for the horse. If these pieces of evidence are valid, they would suggest that the domestication of the camel took place at the latest in the early 2d millennium B.C.E. rather than in the 12th century, as argued by Albright.

c. The Domestic Camel in Palestine. While camel remains sporadically occur at MB and LB sites, it is not until the Iron Age that they are found in significant numbers. Isolated and often stratigraphically dubious, camel remains from the MB Age are reported at Gezer, Megiddo, Taanach, and el-Jisr (Isserlin 1950). At LB sites, camel bones have turned up only at Timna (Rothenberg 1972: 105), and these may belong to wild species from Arabia. In Palestine at least, there is therefore no reason to suppose that the domestic camel was in use until after 1200 B.C.E. Donkey bones, on the other hand, are found at most sites in both these periods, suggesting that it was indeed the donkey rather than the camel that was the primary pack animal.

In the Iron Age, however, the situation was radically different. Camel bones have been found in abundance in all three levels at Kadesh-barnea (Hakker-Orion 1984), in Stratum II (Iron I) at ʿIzbet Ṣarṭah (Hellwing and Adjeman 1986), and also in the Iron II level at Tell Jemmeh (see below). Not surprisingly, camel bones are found at numerous Nabatean sites in the Negeb, such as Moa and Avdat. A Greek inscription written on a camel scapula found at Avdat mentions the sale of camels to caravans and lists their prices (Negev 1977). To date, the distribution of camel remains in Israel suggests a strong association with the trade routes of the Negeb (Hakker-Orion 1984).

Given the paucity of camel remains in ANE faunal deposits, the size of the Tell Jemmeh collection makes it especially important for the study of the utilization of the camel in this area (Wapnish 1984). There 472 camel bones, 357 in a stratified context, have been uncovered. They come from all parts of the site, but only from the LB levels onward. In the levels of the 7th century, a period of massive Assyrian involvement in the area, there is an eight-fold increase in the number of camel bone fragments relative to the LB Age. This number in turn more than quadruples in the Neo-Babylonian and Persian levels. All parts of the camel are represented in these samples. Eighteen percent of the bones show cut marks, and 20% are burned, indicating that the inhabitants used the camel as a source of meat. The number of unfused bone elements is small, and in the major periods the proportion of bones from juvenile animals is less than 18%. At the same time, there are no indications of great age or disease in the bones. The mortality pattern is thus dominated by healthy, mature animals (5–20 years). Since young animals are not prominent in the sample, it is unlikely either that camels were raised on the site or that there was in the area an intensive meat industry. Some portion of the animals may have come from nearby pastoralist groups, but this would not explain the sharp increases in later periods. Hence, it is suggested that the bulk of the animals came from caravans passing through the area.

d. The Camel and the Development of Nomadism. Without the camel, human exploitation of the deserts would have been impossible. Since the domestication of the camel took place only toward the end of the 1st millennium B.C.E., this date is also the terminus post quem for camel nomadism. However, even after this date, the full potential of the camel remained long undeveloped, due to inadequate riding technology. Like the horse, for example, the camel could play an effective role in mounted combat only once a proper saddle had been developed. In the case of the horse, the key element was the stirrup; but in the case of the camel, it was a saddle frame straddling the hump with a (saddle) horn on either side to give the rider maximal support in shock combat. Adapted from the horse saddle, which first appears in the Asian steppes at about the beginning of the Common Era, the camel saddle appears not to have been used on the camel until ca. 250 C.E. (Dostal 1958). It is first attested in reliefs from Syria (e.g., Palmyra and Dura-Europos), where Arabian camel riders came into contact with saddle technology from the N. This date coincides with the "bedouinization of Arabia," which until then had been settled by farmers. See also BEDOUIN AND BEDOUIN STATES.

e. Patterns of Camel Use. The camel could be used for transport, which is of critical importance for all bedouin. Pack animals were usually either geldings or non-lactating females, and were mature animals over 5 years of age.

Camels also produce large quantities of milk whose fat content (7.11%) may be as much as twice that of cow's milk (3.5–5%). Camel lactation lasts for 12 months, so that camel pastoralists have a source of milk year-round, even during the dry season. Some bedouin are able to maintain themselves solely on a diet of 5 to 10 liters (1.5–2.5 gal) of camel milk a day. Surprisingly this protein- and fat-rich diet has no adverse pathological effects (Lapicirella et al. 1962). Among bedouin whose principal product is milk, most male calves are slaughtered in order to conserve their mother's milk (Sweet 1965a; Dahl and Hjort 1976). Females are slaughtered only if they are too weak to survive. Healthy adults are seldom slaughtered, except for ritual purposes (Sweet 1965b; S. Smith 1978; Nelson 1974).

Camel pastoralists will occasionally sell old or sick animals in urban markets. Many bedouin consider it a sacrilege to sell their camels (Torry 1974) or will do so only in great need (S. Smith 1978). Merchant caravans will also sell intractable or vicious animals in order to prevent possible losses en route. A number of factors facilitate the management of camels en route. First, camels have strong attachments to areas associated with certain experiences. A female for example, will return to give birth where her first calf was born. When lactating, she will suckle her calf in the same place each day (Kohler 1984: 203). If separated from the herd, a camel will wait at the place where it was left. Second, camels are now largely dependent on humans for their water, which must be drawn up from wells.

5. ELEPHANTS. Two species of elephant survived the end of the last Ice Age: the African (*Loxodonta africana*) and the Indian (*Elephas maximus*). Several characteristics distinguish the two types. First, the elephant of the African savanna is bigger and has much larger ears than its Indian counterpart. An African bull may reach a height of 6–7.5 m (20–24 ft) and weigh over 6000 kg (13,200 lb). African females are somewhat shorter and weigh about 3000 kg (6600 lb). Indian bulls are typically 2–3.5 m (6.5–11.5 ft) high, and weigh 5000 kg (11,000 lb). Classical writers believed that the Indian was the larger and were followed by Linnaeus, hence the misnomer *Elephas maximus* for the Indian species. It may be that the classical writers were describing the smaller "forest" variety of the African elephant (*Loxodonta africana cyclotis*), which now inhabits only isolated parts of west and west-central Africa, but which in ancient times may have ranged through N Africa as well, until its extinction at the hands of the Romans (Scullard 1974). Second, the African type is straight- or sway-backed, while the Indian is convex. Third, both males and females of the African elephant have tusks; females of the Indian type may occasionally carry tusks, but they are very small. Fourth, the teeth of the Indian elephant are more numerous and more closely packed than those of the African. Finally, the trunk of the African elephant terminates in two finger-like projections, whereas that of the Indian elephant has only one.

All elephants prefer jungle and forest habitats, but can adapt to any environment with sufficient vegetation. Their gestation period is 22 months, and offspring mature slowly, much like human offspring. Lifespan in the wild is about 60 years. Though gregarious, intelligent, and highly responsive to control by humans, elephants have not been bred in captivity over generations, like domestic animals. Tame individuals have, however, been kept since at least ca. 2000 B.C.E., when they appear in seals from the Indus Valley. In some of these seals, they carry a blanket on their backs, indicating their use by man.

A sub-species of the Asian elephant appears to have survived well into historical times in the marshes of the middle Euphrates and Habur rivers. Egyptian texts of the New Kingdom describe elephant hunts in this region (known as the land of Niy). Amunemhep, the general of Thutmose III, describes one such hunt which took place about 1464 B.C.E., in which 120 elephants were slaughtered. Assyrian kings from Tiglath-pileser I to Ashurnasirpal II also mounted elephant hunting expeditions around Harran. As a result of overhunting, elephants were exterminated from W Asia by the 9th century B.C.E.

Despite their strength, elephants were not exploited for labor either in the Near East or in the classical world. They played a minor role in the armies of the Persian and Roman empires and were used by Hannibal against Rome, but they often proved to be more of a liability than an asset. In the Roman Empire, elephants also fought in the games and performed tricks in the circuses.

The elephant's great "contribution" to ANE culture was of course ivory (Barnett 1982). Among the earliest of luxury items, ivory was being traded already in the Chalcolithic period. At Bir es-Safadi, a Chalcolithic site in the Negeb, remains of an ivory workshop, an unworked elephant tusk, and statuettes

carved from ivory were found (Mellaart 1966; Perrot 1959; 1964). Objects carved from hippopotamus ivory were also found here and in the "Cave of the Treasure" in the Nahal Mishmar (Bar Adon 1980), another Chalcolithic site. Hippopotamus tusks were found in the EB II level at Arad (Davis 1976). In view of the geographical location of these sites, it is likely that the ivory in question was imported from Egypt.

Further details about the ivory trade and the production of ornamentation in ivory can be found in Barnett (1982).

6. GAZELLE. Two species of gazelle are found in Israel, the dorcas (*Gazella dorcas*) and the mountain or Arabian gazelle (*G. gazella*). In Transjordan, one also commonly finds the goitered gazelle (*Gazella subgutturosa*). The two Israeli species are distinguishable on the basis of size, color, and habitat (Shalmon 1987). At 140 cm (4.5 ft) *G. gazella* is over twice as tall as *G. dorcas,* whose average height is 60 cm (2 ft). *G. gazella* is gray-brown in color and *G. dorcas* light brown. *G. dorcas* inhabits the desert plains while *G. gazella* is a mountain type. The goitered gazelle is the largest and most heavily built of the three. It is also distinguished from the other two species by the hornlessness in the female.

Although gazelle constituted one of the hunter-gatherer's primary sources of food, and despite the hunter's intimate knowledge of their behavior (which was exploited in the construction of traps, see below), humans were unable to domesticate gazelle because they lacked the requisite traits of domesticability. Gazelle are adapted to quick flight, and they panic when confined; consequently, they will not breed freely in captivity. Gazelle are territorial. Further, they do not live in a social system based on a hierarchy of dominance and submission. As a result, they have never been domesticated or managed on a large scale (*pace* Legge 1972). Egyptian pictures of people feeding gazelles (e.g., Tomb 3 at Beni Hasan) are not necessarily evidence to the contrary since these animals may simply be captives. Captive gazelle (MAS.DA) were kept in Mesopotamia as well (Gadd 1940: 52, no. A965). The gazelle's principal use to man has therefore been as a source of meat acquired by hunting. The prominence of gazelle bones in the faunal assemblage from Jericho indicates their importance in the local economy before the advent of animal domestication. It has been estimated that gazelle supplied almost 37% of the meat consumed in PPN A Jericho (Clutton-Brock 1971). In the PPN B, however, gazelle contributed slightly less than half that amount, and by the MB Age only 3.4%. The gazelle made up 15.6% of the total number of bones (22.2% based on MNI) at Chalcolithic Beer-sheba (Angress 1959). At Tell Aphek and Tell Dalit in Israel's coastal plain, gazelle bones constituted 5.3% of the EB I–II, and 5.6% of the MB II sample (Hellwing and Gophna 1984). At most sites from later periods, gazelle bones constitute 1% or less of the total sample. Generally, it may be said that the proportion of gazelle, deer, or antelope in an archaeological sample is a measure of the role which hunting played in the economy of that area, and varies inversely with the proportion of sheep and goat bones. In Europe before the Neolithic, the economy was based on deer, in the Near East on gazelle. Thus, in the sample from PPN A Jericho, gazelle bones outnumbered those of sheep/goats 10 to 1, whereas in PPN B (ca. 7000 B.C.E.)—the cultural period associated with the introduction of domestication—sheep and goats outnumbered gazelle about 3.5 to 1.

The principal method of hunting gazelle involved the use of large corrals ("kites") in the shape of triangles open at one end into which gazelle would be driven. The walls of these corrals, constructed out of local stone so as to blend with natural surroundings, converge to an opening built on the verge of a natural slope or artificially constructed pit, also surrounded by walls, into which the gazelle would leap unawares, as they fled. Trapped here, and often injured, they would be slaughtered en masse. The arms of these kites are occasionally only a single course of stones high—far too low to serve as a real barrier; however, it seems that gazelle will follow these short walls rather than jump them. This simple technology evidences an intimate knowledge of gazelle behavior. (The Israeli Nature Authority has imitated this kite technique, using [instead of stone walls] strips of white plastic tape laid out on the ground, with the same extraordinary results.)

In Palestine, half a dozen kites, first built perhaps as early as the Chalcolithic period, have been located in the Arabah and the Negeb (Meshel 1980: 271–72, 284–85; Rothenberg 1972: 53). Others have been found in Sinai, Syria, and Transjordan (Meshel 1974; 1980, both with earlier literature; Pravolotsky 1980;

Betts 1983–85). The kites of the Black Desert (Jordan) may date from as early as the 7th millennium B.C.E. The use of these kites by bedouin continued into our century and has been witnessed by western travelers (cf. literature quoted in Meshel 1974: 134–35). The use of kites for hunting gazelle is also depicted in a Safaitic rock drawing from E Jordan accompanied by an inscription indicating the name of the builder of the kite. In Palestine and the Sinai, one usually finds single kites; in Syria and the Transjordan, however, they often occur in groups or chains that may comprise dozens of kites stretching over many kilometers. This difference reflects the fact that the common gazelle species of Syria and the Transjordan, *Gazella subgutturosa,* lived in herds numbering thousands of individuals, while in Palestine and Sinai the common species, *G. dorcas* and *G. gazella,* are found in groups of less than 20 head. A cluster of over fifteen kites has, however, been found in the vicinity of Jebel Junna some 40 km NE of St. Catherine's Monastery. Associated with the group of kites are a number of rock drawings depicting the hunting of ostrich, wild asses, oryx, and ibex, which apparently thrived on the abundant local vegetation (acacia trees and broom plant). Together, these two plants can provide various forms of food almost year-round, and today support a large population of camels and goats raised by bedouin. The location of the kites in the Arabah was similarly determined by the forest of acacia trees found in the vicinity of the spring at Jotbata.

The use of "kite" technology is not restricted to ancient W Asia. Similar corralling techniques are found among the Indian tribes of the Great Basin in the western United States (Steward 1938: 34–36, 231–33) who hunt antelope and deer in this fashion. The rationale for the use of corrals is the same in both cases: antelope and gazelle are very difficult for lone hunters to chase on foot. Collective effort greatly increases the efficiency of the hunt.

While the Hebrew term or terms for the kite have not certainly been identified, one promising candidate is *madḥēpâ* (Ps 140:12), a noun of instrument or place, which could indicate either some sort of device used in the chase or else a trap into which game would be driven. In the context of Psalm 140, the latter meaning is clearly preferable (cf. Mishnaic Hebrew *ṣād le-* "hunt into an enclosure," e.g., *m. Šabb.* 13:5). For discussion see Greenberg (1977).

7. DEER. Though sometimes found in treeless environments, deer are woodland fauna (see in general Chaplin 1977 and Whitehead 1972). The elimination of the Palestinian forests and competition with domestic ruminants for grassland contributed to the eventual disappearance of Palestine's deer species. During the biblical period, however, sizable populations probably still existed. Iranian fallow deer (*Dama dama mesopotamica*), for example, were found in the Galilee as late as the 1880s (Tristram *SWP* 7: 4) but were extinct by the end of the last century. In 1979, fallow deer were brought from Khuzistan and reintroduced into the Hai Bar Carmel Reserve.

Somewhat larger than its European relative, the Iranian fallow deer reaches heights in excess of 90 cm (3 ft) at the shoulder in the male, 78 cm (2.5 ft) in the female. Males weigh from 63–103 kg (140–227 lb), females 29–55 kg (64–121 lb). As is the case with all deer except the reindeer, only the male fallow deer has antlers, the proportions and complexity of which are indicative the animal's age. The antlers of the fallow deer are said to be palmate, meaning that the space between the bases of some of the branches is filled in. The antlers are typically about 70 cm (27 in) in length. Unlike horns, antlers are shed every winter and regrown in the course of the following year. Although the fallow deer is often seen in large herds, its social organization is actually based on individual or mother-fawn units. Much of the time, males and females roam in separate herds. When rutting begins in early fall, male and female herds congregate and remain together through early winter. Females do not go into heat simultaneously, but one after the other. Gestation takes about 8.5 months, and new births arrive at the beginning of summer. On fallow deer in general, see further Chapman and Chapman (1975).

The other deer species of Palestine, the roe (*Capreolus capreolus*), is distinguished from the fallow by its smaller size (63–88 cm [2–3 ft] shoulder height in the male) and weight (17–23 kg [37–50 lb] in the male). Unlike the fallow deer, it congregates only in small herds, parents and their offspring constituting the basic unit. During winter months, however, several family groups will join together. Rutting takes place from mid-June until the end of July. Gestation lasts about 11 months, and twinning is usual. A full-

grown male stands about 70 cm (2.3 ft) at the shoulder. The last roe deer was shot on Mt. Carmel in 1910 (Tchernov 1974: 239).

Like the gazelle, deer constituted only a small percentage of the meat supply at most Bronze and Iron Age sites. In the Iron Age level at Tell Dan, however, deer (probably fallow deer) made up 13% of the total number of bones, amounting to about 4% of the meat supply, as against 7% for sheep and goats and 89% for cattle (Wapnish et al. 1977). Although never domesticated, deer are known to have been kept in captivity in some places. Texts from 15th century Alalakh include a ration list for animals among which is the stag (DÀRA.MAŠ [*ayalu*]; cf. Lambert 1960).

8. Rodents and Other Small Mammals. Wild rodents appear never to have been a noteworthy food resource (Redding 1978: 65). They may be introduced into a site from nearby areas by birds of prey or by domestic or wild carnivores, or they may colonize an area as a consequence of human settlement there (cf. the note on "commensalism" above). In some periods, however, domesticated rodents have been exploited as food sources. The Romans, for example, raised dormice as a delicacy, until the practice was prohibited by the sumptuary laws (cf. Varro, *Rust.* 3.15).

The most important meat-supplying rodent was the rabbit. Though once regarded as rodents, rabbits and hares differ anatomically from rodents in certain respects (cf. Clutton-Brock 1987: 145). Their way of digesting fibrous vegetation is also peculiar. After having once digested a meal, they excrete this and then ingest the feces. After food has thus been doubly digested, the remainder is eliminated as scat. There is therefore a certain resemblance between rabbits and hares and ruminants in that food is redigested in each case, and, like the ruminants, rabbits and hares always seem to be chewing. It is possible that it was this superficial observation which led the creator(s) of the biblical dietary law (mistakenly) to classify the hare with the ruminants (cf. Lev 11:6).

The hare (Akk *arnabu;* Heb *ʾarnebet*), the larger relative of the rabbit, is native to the Near East. The rabbit, on the other hand, though ubiquitous today, was unknown in the ANE. Its present, world-wide distribution, like that of the horse, is due to human intervention (cf. note on *sapan* in the Table of Animal Names at the end of this article). It was originally found only in Spain, S France and perhaps N Africa. The Romans discovered the rabbit in Spain and quickly took to raising it in captivity. With the Romans, the rabbit spread to Europe and from there to the rest of the world. Even the "wild" rabbit of Europe is the feral descendant of this Roman import. We also owe to the classical world the symbolism of the hare and the rabbit (Goodenough 1958; Maringer 1978). Closely associated with Dionysus, the god of fertility and life, but also of death and immortality, the hare was commonly depicted on Greco-Roman and, later, Christian funerary monuments (the "Easter Bunny" is the latest manifestation of the tradition).

Apart from the hare, the other prominent "rodent" of the Bible is the coney or hyrax (*Procavia capensis*). (In fact, hyraxes are not rodents, but primitive ungulates; they show close affinities with the elephant and the aardvark.) Indigenous to Sub-Saharan and E Africa, the hyrax is found as far N as Syria. Its habitat is rocky terrain, in both desert and forested regions. It varies in size from about 44–54 cm (17–21 in) and weighs 1.8–5.4 kg (4.0–11.9 lb). Hyraxes feed mainly on grass and do not ruminate, although they have a three-part digestive tract like that of ruminants. Like the ruminants, they digest fiber by means of microbes in the gut. Although like desert animals they use water efficiently, excreting highly concentrated urine, they have difficulty regulating body temperature and therefore seek shelter in the rocks. Social organization consists of family groups of about half a dozen related adult females and an adult male. Family units may join to form larger groups of up to about 25. Mating takes place once a year, typically resulting in one to four offspring. Gestation last about 240 days. Upon reaching sexual maturity at 16 months, females join the family group. Males leave the group at about 2.5 years. Lifespan is 9–12 years.

9. Carnivores. The wild carnivores of Palestine included the wolf, the lion, the leopard (both spotted and black varieties), the cheetah, the jackal, and the bear. Recent archaeological excavations have uncovered remains of both the lion and the bear in Iron Age levels (Martin 1988). While the lion appears to have disappeared before modern times, the bear survived until early in this century. Tristram (*SWP* 7), for example, wrote of having seen a Syrian bear (*Ursos arctos syriacus*) in the Wadi Hammam. Wolves,

leopards, and cheetahs were also still seen as late as the beginning of this century in Carmel and Galilee. Leopards survive today in parts of the Judean Desert and the Negeb.

While the lion captured the imagination of biblical poets (as in Homer, most of the references to the lion occur in poetic similes), the leopard seems to have had a greater real impact on human society. Leopard traps from as early as the Chalcolithic period are found in the ʿUvda Valley in the SE Negeb. To date, about five of these have been discovered in the area. These traps typically consist of a rectangular chamber built of local stones. The chamber is just large enough to accommodate a leopard and at the same time prevent it from turning around once inside. The floor is made of large flat stones to prevent the animal from digging its way out. Bait was tied to a peg at the far end of the trap opposite the door. This peg was in turn attached by rope to another peg supporting the door of the trap. When the leopard pulled at the bait, the second peg was dislodged, causing the door to fall. Located on paths leading to dwelling sites, these traps were apparently designed to protect the inhabitants from night attacks by the leopard.

Among the Chalcolithic inhabitants of the Negeb and the Sinai, the leopard was apparently also divinized. Schematic leopard figures in profile composed of small stones laid in the sand have been found in both regions in association with open-air sanctuaries (Avner 1984; Yogev 1983). A number of the leopards are shown with cubs on their backs. The leopards' spots and one of their eyes, greatly exaggerated in size, are also depicted by stones. All of the animals are oriented to the E, perhaps indicating their divine status. This interesting exception aside, however, wild carnivores had very little impact on human society.

10. DOGS. Our earliest evidence for the domestication of the dog comes from the Palegawra Cave in Iraq, ca. 10,000 B.C.E. (Turnbull and Reed 1974: 100). The domestic dog is distinguished from the wolf by several features resulting from domestication. These include the lengthening of the ears and the development of the curly tail. Another domestic feature is the propensity to bark, which is undeveloped in wild canids but which has obvious value as a form of communication (e.g., warning) between dog and master.

Dogs, like pigs, lived as scavengers. Feral pariah dogs roamed in packs on the outskirts of towns (Ps 59:6, 14; cf. Rev 22:15), where refuse was plentiful. Inside the towns, dogs also lived by scavenging (cf. *ANET*, 209, 228; cf. 1 Kgs 14:11). Even today one sees feral or nearly feral dogs scavenging in the streets of Cairo. Today we commonly speak of the dog as "man's best friend." In the Bible, however, the dog is always spoken of in contempt.

Noteworthy, though still unexplained, is the dog cemetery recently uncovered at Ashkelon (Rabinovich 1988). The cemetery, dating from the Persian period (500–450 B.C.E.), has so far yielded 700 shallow burial pits, each containing the carefully articulated body of a dog. Sixty to seventy percent of the animals are puppies. There is no sign of associated cultic activity: there are no offerings, and the bones show no cut marks, nor are the neck bones broken. Likewise, no temple or cultic architecture has, as yet, been found. Nevertheless, it seems unlikely that sentiment alone can explain the burials. There are as yet no known parallels to dog burials of this sort either among the Philistines, who continued to live in the city at this time, or among the Phoenicians, who ruled the city in behalf of the Persian Empire, although 7 dog burials from the same period were uncovered at neighboring Ashdod. Dogs were revered among the Zoroastrians but were not buried in cemeteries. Tentatively, Stager (1991, esp. pp. 39–42) has proposed that the Phoenicians were responsible for the dog burials at Ashkelon and regarded the dogs as sacred, possibly associated with a healing cult.

Dogs, and particularly puppies, played a role in rites for the elimination of impurity and disease in both Anatolia and Mesopotamia. In these rites, they are frequently associated with young pigs (see discussion above). Thus, in the Tunnawi ritual, a pig and a dog are waved over a patient in order to absorb his illness before they are burned (cf. Wright 1987a: 59). The pig and the puppy appear again together in the "Ritual Against Family Discord" (Rost 1953), where in order to eliminate this form of curse, the two parties involved spit into the dog's mouth. The dog is then killed and buried, thus disposing of the discord (iii.14–18). Puppies and piglets appear again together in the ritual for the purification of an army after defeat (Masson 1950; also discussed in Gurney 1954: 151). In this case, a pig, a dog, a goat, and a man

are cut in half and placed some distance apart. A gateway is then built and placed in front of the pieces. Fires are built before the gate on either side. The army passes through the gate and between pieces, and on reaching the other side is sprinkled with water. Dogs were used in similar ceremonies in Macedonia and Boeotia (Nilsson 1955: 106; Burkert 1985: 82).

Another common ritual use of the dog and the pig is in Lamaštu- (in older studies, "Labartu-") exorcisms (cf. Myhrman 1902; Thureau-Dangin 1921). Lamaštu was the female demon of sickness and fever responsible for the death of children, on whose flesh and blood she was thought to feed. In one exorcism type, an image of Lamaštu is made, then the offerer places the heart of a young pig in its mouth. She is given a black dog as her servant and is told to go off to the mountains to hunt young animals instead of children. Young pigs would have been especially well suited as substitutes because of the human qualities. The equivalance of the child victim and the pig substitute is strongly suggested by the fact that Lamaštu is said to suckle (*ušēnaq*) the child victim (IV R 58 iii 35 in Myhrman's collection; cf. also Falkenstein *LKU* 33:22 *bilanni mārēkina lušeniq,* "Bring me your children that I may suckle [them]"; additional references in *CAD* E, 165 [2]); in amulets, Lamaštu is depicted suckling a young pig at one breast and a puppy at the other (e.g., *ANEP*, 657, 658, 857). If the pig was the substitute for the human victim, the dog seems to have been her companion and helper. Thus, in one text (IV R 58 ii 49–52), Lamaštu is told to grab (i.e., shut) the mouths of her dogs so that they will not disturb the sleeping child.

In addition to the dog and pig offerings, Lamaštu is given bread and roasted grain and a leather bag in which to carry them, a jug of water, grain for making beer, oil to anoint herself, clothing and sandals that never wear out, an ass to carry her across the desert, and a ship to take her across the sea. Thus provisioned, she is banished to the underworld, located in the W across the sea (Thureau-Dangin 1921: 183ff.). The underworld is the ultimate source and repository of impurity and disease. For additional examples of the dog's association with the underworld, see Pope, *Song of Songs* AB, 210–14.

Images of dogs were used in Hittite rituals designed to exorcise evil spirits from the royal palace (Friedrich 1925: 14–15, I.22–26, II.15–23). They would be set up at the threshold to keep spirits away during the night and to prevent spirits that had been banished from returning. Dog models were similarly used in Assyria (Meissner 1919; 1922), though in this case they were buried under the threshold. In the Mari area, dogs were on occasion ritually slaughtered as part of the ritual of covenant-making (cf. Noth 1957; see also Asses above).

The word "dog" was also a technical term for certain cultic functionaries in Israel (cf. Deut 23:19), Phoenicia (*KAI* 37A 16; B 10), and among the Hittites. Hittite texts indicate that these "dog men" (LU.MEŠ.UR.GER$_X$) "sing" and "bark." They may have been male prostitutes of some sort. Cf. further Jakob-Rost (1966). See also PROSTITUTION.

C. BIRDS

Israel's bird population is among the most varied in the world. Tristram's (*SWP* 7) survey lists over 350 species. Some of these are year-round residents, others visit only briefly during their autumn and spring migrations. Every year, for example, hundreds of thousands of raptors from E Europe fly S over Israel on their way to winter homes in Africa (Leshem 1984–85). Large birds prefer this route because, with their long wings and heavy bodies, they are best adapted for soaring and gliding and cannot endure the long periods of sustained flight necessary to cross the E Mediterranean. By taking the overland route, they can exploit currents of warm air rising from the land during the day, riding these currents upward until the air cools and ceases to rise, and then gliding down to the next thermal. In this way, raptors travel long distances (90–150 mi) without expending large amounts of energy. Among these migrants are the white stork (*Ciconia ciconia*) and the buzzard (*Buteo* species). Israel's local raptor population, though now much diminished by pesticides and poisons, included the bearded, black, and griffon vultures (*Gypaetus barbatus, Aegypius monachus, Gyps fulvus*), the golden, imperial, spotted, and tawny eagles (*Aquila chrysaetos, A. heliaca, A. clanga, A. rapax*), and lanner and peregrine falcons (*Falco biarmicus, F. peregrinus*). The identification of specific Heb words with particular species of birds is problematic (see Appendix below, esp. notes 34–64).

Israel offers other attractions to bird populations, both temporary and permanent. Chief among these is the Sea of Galilee. Prior to its reclamation in the 1950s, the Huleh Swamp was also home to a variety of birds. The bird populations of these areas are described in Lulav (1978). As of 1948, permanent residents, numbering at least 14 species, included the collared dove (*Streptopelia decaocta*), the rock partridge (*Alectoris graeca*), the quail (*Coturnix coturnix*), the pied kingfisher (*Ceryle rudis*), the smyrna kingfisher (*Halcyon smyrnensis*), and the fish owl (*Ketupa Ceylonensis*).

The wild birds of Palestine also included the ostrich, which not only inhabited desert areas (where it was frequently depicted in rock art) but also could be found in the coastal plain, as demonstrated by the recent discovery of ostrich eggs (dated to the Chalcolithic period) near Tel Michal. The ostrich survived in the country until the present century. Ostrich-egg containers are known from an early date.

1. DOVES AND PIGEONS. Although the Bible does not explicitly mention the raising of doves or pigeons, nor is this practice yet attested in excavations, this activity must have been a fairly common feature of daily life in ancient Israel since doves and pigeons were regularly sacrificed. They were required offerings for the purification of the parturient (Lev 12:6), of persons with certain venereal diseases (Lev 15:14, 30), and of a Nazirite polluted by corpse contamination (Num 6:10). Birds could also be substituted for expensive livestock in both the burnt offering (Lev 5:7; 12:8; 14:21–22) and the purification offering (Lev 5:7; 14:21–22). For the poorest of the poor, even bird offerings might prove too expensive, and they were permitted to bring a little grain instead of a live offering (Lev 5:11). These rules presuppose that doves or pigeons are readily obtainable and relatively cheap. This sort of modest demand could probably have been met by raising doves in one's own house.

During the Hellenistic period, however, doves and pigeons began to be raised in large, industrial installations (see Tefer 1986). The earliest such installation, or *columbarium,* is found near Mareshah and dates from the end of the 3d century B.C.E. It is thought that the particular type of dovecote represented there, and the large-scale industry which it implies, were introduced from Ptolemaic Egypt, with which Mareshah had important commercial ties. Dove raising on a similar scale is well known from the classical world (cf. Saglio 1887).

The type of *columbarium* found at Mareshah, like many of the area's agricultural installations (stables, barns, and sheep pens), was located underground, apparently because the limestone which makes up the hills of this region was easily quarried and because such installations were more stable and longer-lasting than surface structures. The underground *columbaria* of the Mareshah type were of various shapes and sizes. A small installation could contain as few as 20 or 30 niches, a large one as many as 2000. Each niche was typically 15 to 25 cm in each direction. Entrance to the *columbarium* was usually from above. In larger *columbaria,* steps are carved into the walls of the chamber, in smaller installations ladders must have been used. (The Mishnaic term for such a ladder, *lul,* came to denote the *columbarium* as a whole; this same term refers to a chicken coop.) To date, approximately 1000 *columbaria* have been found in the country, 900 of which are located in the Shephelah, and most of these are of the Mareshah type. Such *columbaria* are found in most settlements in this region. Their combined capacity is estimated at around 170,000 pigeon holes. This particular kind of installation came to an end as a consequence of the Bar Kokhba Revolt, in preparation for which many of the *columbaria* were converted into hiding places for the Jewish rebels. After the revolt had been put down, the Jewish population in the Shephelah was severely reduced, and the center of Jewish activity shifted to Galilee. In the wake of these changes, the cultural tradition of the raising of doves on such a large scale came to an end.

No single reason can explain why people began raising doves as a major industry during the Hellenistic period. An impetus from Egypt, where doves had probably long been raised, may have stimulated their development. But the perpetuation of the industry must have been fueled by local demand. In Egypt, one of the principal demands was for dove dung, since domestic livestock were uncommon and their dung consequently unavailable. Since a single bird produces about 10 kg (22 lb) of dung per year, a large number of birds would be required to make a dung-based industry work. However, in Israel the demand for dove dung would have been rather less, since the dung of livestock was readily available.

Another reason for raising pigeons was of course for their meat (which comes, as it were, packaged in convenient meal-sized units produced with modest expense). As meat producers, doves and pigeons are a highly cost-effective investment. Under optimal conditions, a pair of doves produces 3 or 4 batches a year, each batch comprising 2 chicks; the young begin to reproduce already before the end of their first year. Hence, a large coop of, say, 1500 birds, comprising 500 reproducing pairs, might generate 3000–4000 marketable young per year. Expenses for food at least can be reduced by allowing the birds to leave the coop at certain times. The only other expenses involved in raising pigeons would be those connected with the construction of the coop itself and its maintenance. In the case of the underground installations of the Shephelah, construction costs would be restricted to labor, since the entire installation was hewn from rock.

A further incentive for the establishment of the pigeon industry was the standing need for sacrificial offerings. Initially at least, doves would have been marketed only to local pagan cults, since Mareshah's population was non-Jewish. Prior to its conquest by John Hyrcanus ca. 110 B.C.E. and the forced conversion of its inhabitants, the city had been an Edomite (Idumean) enclave. In the mid-3d century B.C.E. a Sidonian colony was also established in the area. In view especially of the latter population, Oren (1968) has argued that the Mareshah type dovecote originally provided doves for the cult of Aphrodite-Atargatis, to whom the dove was sacred. He suggests that the tradition of raising doves continued after Mareshah's inhabitants converted to Judaism, because the birds still had a certain usefulness in magical rites. This last idea seems a bit far-fetched. It seems more likely that the doves supplied the needs of the temple in Jerusalem.

John Hyrcanus' conquest and conversion of Mareshah had far-reaching results for the raising of doves. First, it opened up a market for locally produced doves among the Jews. Rabbinic sources inform us that doves and pigeons were supplied to the temple in Jerusalem from sources outside the city (Tefer 1986: 186), and Mareshah may have been among the first of these. More importantly, though, the conquest spread knowledge of the basic technology to Jewish settlements. During this period the number of *columbaria* expanded greatly. The production cycle was probably designed so as to provide birds for the thousands of pilgrims arriving in Jerusalem for the three major annual festivals.

Homing pigeons are not attested thus far in Mesopotamia, or in Egypt until the Byzantine or Islamic period, but apparently they were known in Greece as early as 444 B.C.E. (PW [2d ser.] 8: 2479–2500). The story goes that a certain Taurosthenes of Aegina informed his father of his victory in the Olympic games by tying a small token to the leg of a pigeon. For further literature, see Keel (1977).

2. CHICKENS. The wild ancestor of the domestic chicken (*Gallus domesticus*) is the red jungle fowl (*Gallus gallus*), a native of India. The earliest attestation of the domestic chicken in Palestine comes from the LB Age at Tell Michal (Hellwing and Feig 1989). The chicken makes its first appearance in Israelite art in seals from the late 8th century B.C.E. (Hestrin and Dayagi-Mendels 1979: 20–21, nos. 5, 6).

According to Talmudic sources, chickens produced on average 10 eggs per month (as compared with 20 today) (Ben-David 1974: 130).

3. Falconry in the ANE. It is widely believed that falconry was practiced in the ANE (Reiter 1988). This view is based on the following evidence. First, in Mesopotamian omen texts, mention is made of a certain *šurdu*-bird, often identified with the hunting falcon because it is said to attack other birds. Second, Middle Babylonian *kudurru*s depict what is thought to be a falcon on top of a pole. Third, a Neo-Assyrian relief from Khorsabad appears to depict a figure with a falcon perched on his right wrist. In his left, he holds arrows, though he carries no bow. A second, larger figure is shown shooting down a bird with bow and arrow. Fourth, late Hittite reliefs and seals depict deities or demons in association with falcons. On one relief type, for example, a deity standing on the back of a stag carries a falcon in one hand and in the other holds a shepherd's staff.

This evidence is far from compelling. The *šurdu*-bird in the omen texts, though perhaps a falcon, is not necessarily a hunting falcon. The "bird on the pole" in the *kudurru*s, the symbol of the divine pair Sugamuna and Sumaliya, is also not necessarily to be connected with hunting, any more than is the Horus-falcon in Egypt. In addition, a number of uncertainties plague the interpretation of the Khorsabad

relief (presently found in the Louvre). The precise identification of the species of bird in question here (and of birds in Assyrian reliefs in general) is not straightforward. Further, it is possible that the bird is not perched on the man's wrist, but is held in his hand. As servant of the second figure (and his smaller size suggests that he is such), he would be responsible for retrieving the fallen bird and for extracting the arrow with which it was felled. This would explain the arrow in his hand and his lack of a bow. If this is indeed an illustration of falconry, then the use of bow and arrow is puzzling, for there is no need for either. Equally puzzling in their absence would be the horse and the dog, which have been associated with falconry from early in its history (e.g., in Han Dynasty China). Finally, in the Hittite reliefs and seals the association of the falcon, the hare, and the stag with a divinity probably indicates the latter's role as protector of wildlife, of predator and prey alike. There is no necessary connection with the human use of falcons for hunting.

On the basis of this material, then, there is little reason to suppose that falconry was known in the ANE. More convincing, however, is the literary evidence. In the story of Aqhat from Ugarit, Anat tells Yatp, "I will put you like an eagle (*nšr*) on my *ḥbš,* like a hawk (*dˀiy*) on/in my *tʿrt*" (3 Aqhat 17–18; cf. 28–29). *Ḥbš,* etymologically, is presumably something which one binds on or about oneself. Gibson (1978: 112) renders it "wristlet" (but cf. also EA 147:12, where *ḥabši* glosses ZAG, "right hand"). *Tʿrt* in Ugaritic (cf. 1 Aqhat 27) and *tʿr* in biblical Hebrew have the meaning "sheath." Gibson here translates "glove." It is conceivable, therefore, that falconry was known, at least in Syria, as early as the LB Age.

4. Birds in Navigation. The use of birds as aids in navigation is attested in a number of seafaring societies (Hornell 1946). According to Indian sources of the 5th century B.C.E., Hindu merchants going overseas would take "shore-sighting birds" with them in order to locate land when their ship became lost. Pliny (*HN* 6.24 [81]) mentions the same practice among sailors from Ceylon in his day. Polynesian sailors not only use trained birds for this purpose but also followed the paths of migratory birds.

The use of birds in navigation in the Near East has left its traces in the biblical story of the Flood (Gen 8:7–12) and its Mesopotamian analogue, Gilgamesh (*ANET*, 94–95). In the Gilgamesh version, Utnapishtim sends out in succession a dove (*summatu*), a swallow (*sinuntu*), and finally a raven (*aribu*), the last of which finds land and does not return. In the biblical account, Noah first sends out a raven (*ʿorēb*), which flies around until the water covering the earth has dried up. Then, he releases a pigeon, which having failed to find a place to light, comes back. A week later, he sends the pigeon again, and it returns with an olive twig in its beak. After another week has passed, he releases the pigeon, but it does not return. According to the text, the pigeons are launched in order to see how far the water had subsided. Each successive trial reveals some new information about the habitability of the land. The raven, on the other hand, is sent just once. Unlike the pigeon, it will not return to the ship. It is therefore useless as a measure of how high the water is. But it will indicate by its flight the direction in which land is located. The raven is thus the logical choice to be released first. Since the biblical version of the story is the more sensible, it is possible that the motif of releasing birds originates in the W and is a later addition in the epic of Gilgamesh. (Compare Freedman 1973, but note that the classical sources he cites have nothing to do with the calculated use of birds in seafaring, nor do his arguments about the Gilgamesh poet's ignorance of boatbuilding seem convincing.)

D. FISH

Israel's freshwater fish fall into two geographical groups: the first comprises species inhabiting rivers flowing into the Mediterranean, the second those found in the Sea of Galilee and the Jordan River. Apart from marine immigrants such as the eel, all but one of the fishes of the first group belong to the Mediterranean type. The composition of the second group, however, shows the same variety with respect to zoogeographical zones that characterizes Israel's land animals. Of the 19 fish species native to Galilee, for example, about half belong to the Ethiopian zone. The rest are divided among the Palearctic, the Oriental, and the Tethys (perimediterranean) zones (Ben-Tuvia 1978). On Israel's freshwater fish, see in general Goren (1983).

Of Israel's native fish species, the most economically important is the Galilee sprat or sardine (*Mirogrex terraesanctae terraesanctae*), which today accounts for about 60% of the total annual catch from the lake.

Spawning starts in late November, when water temperatures drop below 20°C (68°F), and continues until mid-March. Eggs are laid on rocky bottoms of the E shores. Minimum size is 10 cm (3.9 in) for males, 11.5 cm (4.5 in) for females (small by comparison with other species in the lake). Other economically important species include two types of Tilapia, the St. Peter's fish (*Sarotherodon galilaeus*) and the Jordan St. Peter's fish (*Sarotherodon aureus*), both of which spawn from April until August. Average minimum size for both species is 20 to 25 cm (7.8–9.8 in).

Our knowledge of fishing in ancient Israel is limited not only by a paucity of written material, but also by a lack of relevant bone studies. While the study of large animal bones from archaeological excavations is now well advanced, fish bones have received less attention, in part because of a certain bias among bone specialists toward large animal studies, and in part because the retrieval of such small bones involves a greater expenditure of time and money than many archaeologists can afford. What we do know about ancient fishing comes from Israel's neighboring cultures (cf. Nun 1964). But, despite this dearth of information, it is probably safe to say that the Israelite diet in most places was fish-poor. During the biblical period, the Israelites had but limited access to the sea, since the S coast was controlled by the Philistines and the N coast by the Phoenicians. Along the remaining stretch of coast, there are no harbors, so maritime activity on a large scale was out of the question. Fish from the coasts therefore had to be purchased from foreign agents (Job 40:30—Eng 41:6; Neh 13:16). The amounts involved can scarcely have been very large. For Israelites living inland, the primary sources of fish were the Jordan River and the Sea of Galilee. But the quantity of fish derived from these too was small and probably only satisfied local markets. For an approximate idea of how much fish the Galilee supplied, one may compare data from the Mandate period, during which time the annual catch varied between a mere 200 and 500 tons (Ben-Tuvia 1978: 427). The Israelites' lack of firsthand familiarity with fish is reflected in the fact that in the entire Bible not a single species name is preserved.

In view of our present lack of archaeological data, it is difficult to say which fish the Israelites ate. Leviticus 11 prohibits all fish lacking fins and scales, but we do not know how old this rule is or whether it was ever observed. This rule is significant, however, for what it tells us about how the Israelites classified fish. As noted above in the discussion of the dietary law, what made some fish unclean was their resemblance to snakes. Odd as it may seem to us, this comparison was fairly widespread. The Babylonians apparently avoided catfish (Akk *girītu,* Sum MURRA) on the same grounds (Salonen 1970: 185–87). The identification of the *girītu* as a form of snake survived the end of Mesopotamian culture. Its Arabic derivative, *jirrīt,* is compared in classical Arabic lexica to Persian *marmāhi,* "snake fish" (*Lane,* 404). Another example of the comparison of scale-less fish and snakes is Akk *kuppu,* "goby (?)," which is determined not only by MUS, the sign for snake, but also by KU_6, that for fish. Pre-eminent among snake-like fish is the eel, which was widely identified as a form of snake. In the Greco-Roman world, for example, it was believed that the *muraena* eel mated with a viper (PW [2d ser.] 31: 652–57). Indeed, the Latin term for eel, *anguila,* derives from that for snake, *anguis.* The equation of eels and snakes is also found in Muslim legal and zoological texts (Cook 1986: 242; al-Jāḥiẓ 1982: 2.56). For further examples of the identification of fin-less and scale-less fish as snakes, see Scheftelowitz (1911). One should also note that in much of contemporary Africa, there is as a result of this identification widespread aversion to eating any fish (Lagercrantz 1953).

E. Mollusks

The mollusks constitute a phylum of the kingdom *Animalia,* comprising perhaps as many as 100,000 living and 35,000 extinct species, most of which inhabit the oceans. Among the classes belonging to this phylum are *Gastropoda,* which comprises univalves (or one-shelled mollusks) such as snails, as well as shell-less species, such as slugs; *Pelecypoda* (also called *Bivalvia*), i.e., those with two-part shells, including clams, mussels, oysters, and scallops; and *Cephalopoda,* which comprises squids, cuttlefish, and octopuses.

1. Basic Anatomy and Physiology. As their name (< Lat *mollis*) indicates, mollusks are soft-bodied, boneless creatures. Their unsegmented bodies typically consist of a "foot," used for creeping and burrowing, and a head attached directly to the foot. But there are many variations on this pattern. In

squids and octopuses, for example, the "foot" is divided into a number of sucker-bearing tentacles. In snails and cephalopods the head is well developed. Bivalves on the other hand have no head.

On the dorsal surface of the foot is the visceral hump, which contains the internal organs. Covering the hump is the mantle, a thin tissue whose inner surface is elaborated into either gills (in the case of marine species) or a lung, and whose outer surface excretes the shell typical of most mollusks.

All mollusks except the bivalves feed by means of a device known as the radula (Lat "scraper"), which consists of a chitinous ribbon set with recurved, chitinous teeth. Somewhat like the blade of a chain saw, the radula is pulled back and forth over a piece of cartilage (the odontophore) which protrudes into the mouth. This sawing action enables the mollusk to break up its food.

Molluscan diets exhibit considerable variety. Simple gastropods, such as the abalone, use the radula to collect and to break up algae and other tiny particles of food. Most snails, on the other hand, are scavengers and may eat fresh or decaying vegetable and animal matter. A few gastropods are predatory, among them marine snails such as the whelks (*Buccinidae*), the rock shells (*Muricidae*), and the volutes (*Volutidae*). Among the animals on which these carnivores prey are other mollusks, whose shells offer surprisingly little protection. The predatory mollusk projects the odontophore and radula from the mouth and employs them like a drill to pierce its victim's shell. Having drilled a hole in the shell, the predatory snail then extends its proboscis and inserts it into the hole to extract its food. Like the gastropods, the cephalopods use the radula to feed. In addition, they have chitinous jaws (resembling a beak) with which they tear their food, and claw-bearing tentacles with which to grab it. Formidable predators, large cephalopods such as the giant squid can tear a good-sized animal apart in minutes. The peaceable bivalves lack a head and therefore have neither jaws nor radula. Most are therefore filter feeders. Particles of food are trapped in the gills and carried along ciliated grooves into the mouth.

The reproductive anatomy and life cycle of mollusks vary considerably. Most marine snails, bivalves, and cephalopods are unisexual (i.e., having distinct male and female individuals). Land snails and slugs, on the other hand, are bisexual (hermaphroditic). Other mollusks, such as the slipper limpet (*Crepidula fornicata*) and perhaps the murex species *Trunculariopsis trunculus* (see below), change sex—a phenomenon also found among fish (Ross and Losey 1983; Shapiro 1987). Most mollusks are oviparous or ovoviviparous. Lifespan is usually one year for snails, one to four years for cephalopods. Land snails in moist environments usually breed in the spring; those preferring a dry climate mate in autumn. Gestation in both cases lasts a few weeks.

Nearly 70 snail species are found in Israel, in all regions. Particularly noteworthy are desert species, such as the desert snail (*Eremina desertorum*) and the white desert snail (*Sphincterochyla boissierii*), which between rainstorms survive in a dormant state, sometimes for periods of a year or more. Commonly seen in the Negeb, they may on occasion cover dwarf bushes in considerable numbers.

2. Mollusks in Archaeology. Like the bones of vertebrates, mollusk shells found in excavations are the object of increasingly sophisticated scientific study. One relatively recent example of such work is the use of mollusk shells as a sort of biological calendar by which seasonal activity at a site can be identified. Shell building, it turns out, takes place only at discrete, daily intervals (Pannella and MacClintock 1968; House and Farrow 1968). This regularity is most clearly seen in the bivalves. When examined under a microscope, light-colored increments of daily growth are punctuated by thin bands of dark color indicating a hiatus in shell deposition. In addition to this daily rhythm, there is a 14-day periodicity linked to the tides. The increments of daily growth laid down during neap tides are thinner than those of the spring tides. This tidal periodicity is in turn modulated by a seasonal pattern. During the cold winter months, shell deposition is at a minimum. Maximum growth takes place just before and after the summer months. The periods of minimal and maximal growth are respectively marked by dark and light macro-bands.

If we compare the pattern of these alternating bands of growth and recession in shells obtained in archaeological excavation with that of live shells from the environment in which the excavated shells originated, it is possible to determine among other things at what season the mollusk was culled. Such

information can be of great value to the archaeologist in determining whether a site was only seasonally occupied or not (Coutts 1970).

It is also possible to determine the season in which a marine mollusk was culled by examining the ratio of O^{16} and O^{18} in the calcium carbonate from the growing edge of the shell (Killingley 1981; Deith 1983). This ratio depends on the temperature of the water in which the mollusk was living and can therefore be correlated with seasonal changes.

Land snails, for their part, provide the archaeologist with valuable information on paleoclimates (J. Evans 1972). In a diachronic study, a decline in the abundance of previously common species, or the increase in that of uncommon species, may indicate long-term changes in temperature or rainfall. The effect of human activity is also detectable from changes in the mollusk species of an area. The clearing of woodland, for example, will manifest itself in a decline of woodland species and an increase in grassland and xerophilous species.

3. Murex (Purple Dye). The most culturally significant of the mollusks were the murex snail, of which there are three important varieties, *Trunculariopsis trunculus, Bolinus brandaris,* and *Thais haemastoma.* The dyes from these mollusks were highly prized in both the ancient Mediterranean world and the Near East. On Crete, the murex snail was being exploited at least as early as the Middle Minoan III (Hutchinson 1962: 239). Their production was one of the cultural trademarks of Levantine, and especially Phoenician culture (see Ziderman 1990; Rendsburg 1991). The association of Phoenicia in particular with the dye industry is reflected even in the toponomy of the area. Modern Haifa, for example, which is situated on the S edge of Phoenicia's purple dye producing region, was known during the Hellenistic period as *Porphyrion,* literally "Purple Town" (*EncMiqr* 1: 529–30; on the etymology of *porphyry*/purple, cf. Astour 1965). According to Pliny, it was the search for murex beds which led the Phoenicians to set up colonies all around the Mediterranean.

Large heaps of discarded shells produced by the dye industry are found in association with Phoenician settlements along the Lebanese, Italian, and N African coasts (cf. Jensen 1963: 106–7). Those at Tyre and Sidon are particularly noteworthy (Jidejian 1969: 150 n. 29; 1971: 11–12). Smaller deposits have been excavated at Sarepta (Pritchard 1978: 126–27) and Ugarit (Schaeffer 1951). In the accumulation of shells from Shiqmona, near modern Haifa, shells from all three dye-producing snail species but no animal bones or other mollusk shells were found—evidence that the shells were indeed refuse from dye production (Karmon and Spanier 1988).

Otherwise, physical remnants of the purple dye industry are surprisingly few, considering its importance. Sherds of LB pottery stained by traces of the dye have been found at Minet el-Beida, the harbor quarter of Ugarit (Schaeffer 1951), and at Sarepta (McGovern and Michel 1984; 1985). Iron age sherds with purple stains have been found at Tell Keisan (Briend et al. 1980: 226–27) and Tell Shiqmona (Karmon and Spanier 1988). Excavations at APOLLONIA, on the shore of the S Sharon Plain, revealed large numbers of murex shells from Persian and Hellenistic period contexts. At Tell Mor, excavations uncovered a dyeing installation of the Hellenistic period consisting of several plastered pools connected by pipes, which were found near a cistern containing thousands of shells (*EAEHL* 3: 889–90).

Despite the significance of these dyes, archaeologists and scientists are still ignorant about many aspects of their production, in part because of the paucity of archaeological remains associated with the dye industry, in part because of the complicated chemistry of the dyes. Production began with collection of the snails. *Truncullariopsis trunculus* was gathered by hand in shallow water along the coasts of Lebanon and N Israel. The other two species were collected from deeper water by means of nets and traps baited with cockles (the use of which is attested not only by Pliny but also by their presence in the accumulations of murex shells at Tyre and Sidon; Jidejian 1969: 143, 150 n. 30). The harvested snails were then apparently kept in captivity until a sufficient quantity had accumulated. The evidence for this claim is that holes drilled in some of the shells from Akko and Caesarea, once thought to be the work of the dye makers, in fact turn out to be the result of conspecific cannibalism (Spanier and Karmon 1980). The extent of such cannibalism would increase in captivity, when the snails only had each other to feed on. As noted already by Pliny (*HN* 9.128), the murex feeds on other mollusks by using its radula to drill through the shell.

A large number of snails was necessary to produce dye in any quantity. According to Pliny (*HN* 9.135), 125 kg (275 lb) of snail glands were needed to dye 20 kg (44 lb) of wool. (The exact amount of wool is actually missing in the mss, but 50 Roman pounds is suggested on textual grounds [Bailey 1929: 156]. This figure is also about what one would extrapolate from the following data on the amount of wool one snail gland is capable of dyeing.) A single snail yields 0.1–0.12 mg of pure dye, the chemical name for which is 6,6´-dibromoindigotin (hereafter abbreviated as DBI) (Friedländer 1909; Bruin 1967). In other words, as many as 10,000 snails might be needed to produce one gram of dye. While generally indicative of the large number of shells required, this figure is perhaps somewhat misleading. Friedländer and Bruin wanted to produce *pure* dye for chemical analysis, whereas the ancient dye makers may have been satisfied with a product which was less than entirely pure. Cruder dye could be extracted in much greater quantity. Fouquet and Beilig (1971) obtained 1.2 mg of crude precursor from a single *Trunculariopsis trunculus* and 0.6 mg from *Bolinus brandaris.* Furthermore, it must be kept in mind that very little dye is actually needed to color cloth. According to Elsner and Spanier (1985) and Elsner (1988; *apud* Ziderman 1987), a single dye-producing gland will dye 1 gram of wool to a standard shade of 1:1–2:1.

According to Pliny (*HN* 9.125–42), once a sufficient number of snails had been gathered, the larger shells were cracked open and the hypobranchial gland, the source of the dye, was removed. Smaller shells were simply crushed. This mass of glands and other matter was steeped in salt for three days, water was then added to this mass, and the whole was inspissated at a moderate temperature in a leaden (*plumbum)* container for 9 days. (*Plumbum* sometimes also refers to tin, and experiments using tin have been conducted [McGovern and Michel 1987]. Cf. however Bailey 1929: 155.) This liquid was strained to remove unwanted organic waste from the snails and was then suitable for dyeing.

The liquid extracted from the gland is initially white. When oxidized, however, it soon turns yellow, which is apparently also the color of the fluid (the so-called leuco-base) into which the wool was dipped. When exposed to sunlight and air, purple color would develop *in the wool.* This is the usual process for indigoid dyes. The use of a leuco-base is actually detectable on the sherds from Tell Keisan and Tell Shiqmona (see Karmon and Spanier 1988). These sherds come from large storage vessels in which the leuco-base was kept. The reducing dye in the belly of the vessel left no color on the walls. But the surface of the liquid, which was oxidized by contact with the air, left a band of purple color around the rim of the vessel—a deposition of organic fractions from the snail remains which had absorbed the oxidized dye. Tyrian purple was therefore what is now known as a vat-dye. A vat-dye is applied in a reduced, water-soluble form, then oxidized in the fiber back to its insoluble form. Color thus introduced into cloth will not wash out or fade in water.

It is generally said that the dye derived from *B. brandaris* is red-purple, while that from *T. trunculus* is blue-purple. The former is therefore equated by some with the Hebrew color term *ʾargaman* and the latter with *těkēlet* (cf. Ziderman 1987). But the determination of the color of the dye from these shells depends on a number of variables, and it is thus perhaps an oversimplification to say that a given color is specifically associated with a given shell (cf. the ongoing debate between Ziderman [1987; 1988] and McGovern and Michel [1988]).

The first of the factors influencing hue is the sex of the snail. In *T. trunculus,* for example, the male usually yields a blue dye (indigotin), the female blue-red (DBI) (Elsner and Spanier 1985). In a large sample, where males and females had been collected together, one might therefore expect a bluer dye than one where females alone were used, other factors being equal. Furthermore, the sex bias, and therefore the color of the dye, may thus have varied seasonally, for it turns out that the prevalence of the sexes varies according to season (Elsner 1988 *apud* Ziderman 1988: 85). Males, it seems, predominate in early spring, females in summer. One explanation for this variability is that the snail changes its sex—a well-documented phenomenon in some mollusks (e.g., *Crepidula fornicata*) and in fish (see above under Fish).

Second, DBI itself may convert to indigotin when the leuco-base is exposed to light (Driessen 1944). This means that in a given sample of DBI, some indigotin (blue) is likely to be present. The extent to which such conversion takes place would depend among other things on how much light is present during processing. Further, while the primary chromogen in both species of murex is DBI, their respective dyes

are said to respond with differing sensitivities to light. The dye from *B. brandaris* develops in strong sunlight, whereas that from *T. trunculus* may form even in the dark (Jensen 1963: 109). Third, color can be altered by changing the pH of the dyeing bath (Elsner 1988: 87; Jensen 1963: 109).

Finally, according to Pliny (*HN* 9.135) at least, the best color (resembling congealed blood) was in any event to be obtained by first dipping the material in dye from the snail he called the purple or *pelagia* (i.e., *B. brandaris* or *T. trunculus*), then in that of *buccinum* (i.e., *Thais haemastoma*), which contained a greater amount of blue. The fact that the heaps of shells around Sidon had been segregated according to species is perhaps evidence of such discrete processes (cf. Born 1937: 111).

In antiquity, two basic varieties of purple were recognized, which respectively contained more red or more blue. The former, known in Hebrew as *ʾargaman* (LXX *porphyra*), is mentioned in the Bible but is actually described only in rabbinic sources (see Dalman 1939: 78–84). The same term is used of reddish purple wool (*argamannu* = SIG.ZA.GÍN.SA^5) in Middle and Neo-Assyrian sources (on this and the following terms, cf. Landsberger 1967). The blue variety of purple was known in Hebrew as *tĕkēlet* (Gk *hyakinthos;* Akk *takiltu* = SIG.ZA.GÍN.MI [Middle and Neo-Assyrian], applies only to wool). In Ugaritic, the terms for blue-purple and red-purple are *ʾiqniʾ* and *pḥm* respectively (see discussion in Landsberger 1967: 158, which gives earlier literature; see also Hoffner 1967). The latter term is thought to mean "glowing coal," hence its association with red. The former has an interesting and very ancient genealogy. First attested in the Sumerian word GÍN, as in ZA.GÍN, "lapis lazuli" (literally "precious GÍN-stone"), it appears to be a *Kulturwort.* Other manifestations of this word are Akk *uqnu,* Hurr (Nuzi) *kinaḫḫu,* Hit *ku (wa)nnas,* Syr *qunʿa,* and Gk *kyanos,* from which we derive "cyan." The choice of lapis lazuli as a cover term to describe purple-dyed wool (SIG.ZA.GÍN) is not a little odd, since its constituent colors are in fact blue and green, rather than blue and red. However, the Semitic languages and Sumerian in common with Greek had no generic terms for purple or blue, and lapis was evidently the closest approximation they could come up with.

In view of the cost of purple dye, it is not surprising that it characterized the dress of the wealthy. In ancient Israel, as in the classical world (cf. Wilson 1924), purple in both its varieties was associated with aristocracy and especially with royalty (e.g., *ʾargaman:* Judg 8:36; *tĕkēlet:* Ezek 23:6). Both varieties were used in the garments of the high priest, who is decked out in royal splendor (Exod 28:6, 15, 31; cf. 1 Macc 10:20), and in the inner drapery (*miškan*) of the tabernacle, which is the residence of YHWH, the divine king (Exod 26:1; cf. also *Ant* 7.7; *JW* 7.6). In pagan cults, the divine image was similarly outfitted (Jer 10:9). A single cord of *tĕkēlet* was attached to the tassels of the common person's dress, in token of his status as a member of YHWH's holy people (Num 15:37–41; cf. Milgrom 1983).

F. Arthropods and Insects

The animals of this phylum, which includes crustaceans, insects, and spiders, are characterized by a chitinous skeleton composed of jointed segments. According to the dietary law of Leviticus 11, all insects except locusts were prohibited as food. Here, as in the case of the pig, it is often said that the prohibition arose from considerations of hygiene. Of course, insects often do carry disease, but (as we observed in the case of the pig) so do animals that are not prohibited. Most insect-borne parasites, viruses, and bacteria would in any event be destroyed in cooking. Alternatively, it is suggested that insects are "bad-to-think," that insectivory evokes a certain natural squeamishness. This reaction, however, would seem to be a peculiarity of modern Western culture, since the use of insects as human food is widespread (cf. Bodenheimer 1951; Bates 1959–60; Harris 1985: 154–74). Certain insects, such as the locust are in fact excellent sources of protein, when they can be had. In the larval stage, insects in general provide a high percentage of protein to body weight (Redford and Dorea 1984).

1. LOCUSTS. The locust is a migratory phase of the grasshopper (*Schistocerca gregaria*), which is regularly found throughout the Near East as a solitary insect incapable of flight. In remote areas, away from population centers, developed land, and forests, the number of individuals may grow without restraint. When conditions become sufficiently crowded, the grasshopper undergoes certain morphological and behavioral changes, the result of which is the formation of migratory swarms capable of devastating regions on an international scale.

An eyewitness of the plague of locusts which descended on Palestine in the spring of 1915 describes its progress as follows (L. Bauer 1926). Swarms of locusts flew overhead for five days, darkening the sky and leaving droppings everywhere. During this time, males and females mated. The females each then deposited clumps of 50–80 eggs in uncultivated ground, at a depth of 5–8 cm (2.0–3.1 in). After 30 to 40 days, the young locusts, each about 1 cm in length, began to hatch. Within another 5 to 6 weeks, they had grown to a length of 5 to 7 cm, their appetite increasing proportionately. Four distinct stages were recognizable. The first generation was pale yellow in color, their offspring at first black. Having shed this first skin, the young emerge green-yellow, with black and white dots and stripes. They change skin again, becoming red with black marbling in the wingtips. In this final stage, they are winged.

Once an infestation has begun, there is little that can be done to stop it; even modern pesticides are only partially effective. Given the mobility of these insects, virtually no community in the Near East is immune from their attack. Because locusts originate in regions where ground cover is sparse (such as the desert), certain areas are more vulnerable than others. The presence of natural forest or agricultural land appears to impede the population explosion which sets off the swarming process. In the case of forest, predators keep the population under control. In the case of agricultural land, it seems that harrowing and plowing destroy the eggs.

2. BEES. Although bees had been raised in Egypt from as early as the Old Kingdom (Kuény 1950), there is no evidence for this practice in ancient Palestine until the Hellenistic period (Neufeld 1978, which discusses earlier literature). Despite this lack of evidence, they may well have been raised. The one thing we know for sure is that the honey of wild bees was collected (cf. 1 Sam 14:25–28). The richest source of wild honey was the forest, but it could also be gathered from hives in the cliffs (Deut 32:13; Ps 81:17). The yield from honey hunting is surprisingly large. A single hive may produce as much as 50 kg (110 lb) of honey. Honey eaten in the comb may offer certain side benefits. It is not uncommon for the larvae to be eaten with the comb (cf. R. Bailey 1989: 685), and larvae are an excellent source of protein.

Since bees were raised in Egypt, there was little need there to raid wild hives. The typical Egyptian beekeeping installation consisted of cylindrical ceramic tubes a meter or so in length laid horizontally one upon the other. These tubes were modeled after the hollow tree trunks or limbs in which one might encounter bees in the wild. When the honeycombs had been filled, honey could easily have been extracted from the end of the tube with a hook. This entire technology is precisely paralleled among modern Palestinian peasants (see discussion in Neufeld 1978).

In Mesopotamia, the first evidence for beekeeping comes from the stele of Šamaš-reš-usur (early 8th century B.C.E.), who boasts that he had "brought down from the mountain of Habha people, the flies which collect honey, which none of my predecessors had ever known or brought down … and located them in the gardens of the town GN. (There) they might now collect honey and wax. I (even) knew how to separate honey (from) wax by boiling (the comb) and (my) gardeners know it too" (Weissbach 1903: 11 col. iv.13–16; v.1–6). In view of the absence of any mention of honey hunting or beekeeping in texts prior to this time, Šamaš-reš-usur's claim is credible.

3. Aphids and Scale Insects. Aphids (or plant lice) and scale insects (or mealybugs) are among the most successful herbivores. Their reproductive capacity, genetic adaptability, and feeding habits also make them among the most destructive agricultural pests (Brown 1975). The life cycle of aphids and scale insects, like that of the locust, depends substantially on weather and food supply. When conditions become sufficiently crowded, they, like the locust, undergo certain morphological and behavioral changes resulting in the formation of migratory swarms. The numbers involved are staggering. A single fundatrix could produce as many as 10^{16} individuals per summer (Brown 1975: 267). While natural controls, such as predation by other insects (ladybugs, wasps, etc.) and by birds, keep aphid and scale populations in check, they are nevertheless capable of destroying vegetation on a large scale. Unlike locusts, aphids and scales do not actually consume the leafy matter of a plant, but instead suck out its juices through tube-like beaks. Deprived of nutrients, the plant victim is stunted, and becomes more susceptible to attack by viruses and fungi, which may be transmitted by the aphid or scale itself.

Despite their destructive potential, a few aphids and scale insects have proved useful to humans, chiefly in the production of varnishes, waxes, and dyes (Brown 1975). Some of these are still without synthetic substitutes. The Indian scale insect *Laccifer lacca* Kerr, for example, secretes the resinous material from which shellac is made. As regards the Near East, there have been two principal uses of scale insects and aphids. The first of these is the famous cochineal dye (known in biblical Hebrew as *tôlāʿat šani*) produced by the Mediterranean scale, or Kermes insect (*Kermes ilicis*), which infests the Kermes oak (*Quercus coccifera*). Cochineal was extracted from the waxy protective shell (scale) secreted by the insect (for details, see Forbes 1956: 102–6). As in the case of purple dye, it seems to have been the inhabitants of Phoenicia and N Israel who were most closely associated with the production of the cochineal. According to biblical genealogies (Gen 46:13; Num 26:23), there was a Galilean clan whose eponymous ancestor was Tola, i.e., "Kermes," first of the sons of Issachar. Tola's brother was Puvah, whose name means "madder" (Ar *fuwwa*), the plant from which another red dye was manufactured. The gentilic form of Puvah is Puni (Num 26:23), which is no doubt also what the term "Phoenician" means (Astour 1965).

The second and most famous benefit conferred by scale insects, though it was not recognized as such, was MANNA. Bodenheimer (1951) suggested that the biblical manna was the product of two species of scale insects, *Trabutina mannipara* and *Naiacoccus serpentinus*, which live on the tamarisk tree in the Sinai peninsula. Like other insects which feed on plant sap, these scale insects excrete large quantities of excess sugars, or honeydew, which accumulate in granular masses. The connection between manna and insect secretions is strongly suggested by the fact that the Arabic cognate *mann* denotes both the aphid and the "honeydew" which it excretes. *Man as-simmā,* "honeydew (*manna*) from heaven," is found in Arabic pharmacopoeias.

G. Earthworms

Although of no direct economic or cultural significance in Near Eastern history, earthworms play a vital role in the formation of surface soil and thus indirectly influence agricultural productivity. Their activity in the soil also has consequences for archaeology. On both points see already Darwin (1881) and more recently Atkinson (1957).

Most worms are active only in the top 15–18 cm of soil, though some species may burrow as deep as 2 m, especially in cold or dry weather. Worms live in burrows formed in part by the expansion of the worm's body in interstices in the soil, and in part by the ingestion of soil. In all species, soil ingested underground is itself the primary constituent of the diet, though some species, such as *Allolobophora nocturna* and *Allolobophora longa*, also feed on vegetable matter on the surface. These two species play the greatest role in the formation of new surface soil, which they create by depositing on the surface remains of the earth they digested underground. The net effect of such deposits, multiplied millions of times (earthworm densities per acre may range from 500,000 to several million, depending on the habitat), is a layer of extremely fine soil. It is estimated that this soil is laid down at the rate of 0.5–6.4 mm (i.e., up to 0.25 in) per year. This deposition takes place in autumn and spring, when the worms are active. Worms are dormant during summer and part of the winter.

As a result of earthworm activity, material left on the surface of the ground gradually disappears, as it is worked further and further into the soil. This sinking is caused by the ongoing deposition of new surface soil, and by the collapse of worm burrows further underground. The absolute level of the surface remains more or less constant because these two processes cancel each other out. But small objects will sink relative to the surface. The rate of this sinking is about 5 cm (2 in) in 10 years and may continue until the bottom of the soil layer is reached in 40 years' time. The effect of this process may be seen in the field. Where earthworms are active and the land has long been undisturbed by agriculture, one finds a stone-free zone of fine surface soil. Plowing destroys this stone-free zone by bringing up rocks from deeper down. This creates the stony soil which characterizes agricultural land. The sinking process has consequences for stratigraphy, since small finds such as sherds and coins may be displaced downward from the stratum in which they were originally deposited.

APPENDIX 1: ANIMAL NAMES IN BIBLICAL HEBREW

The following is a comprehensive list of biblical animal names and their Semitic cognates. The list shows that cognate names signify the same animal in the vast majority of domestic and common wild mammal species. In the case of birds and fish, on the other hand, far fewer species are identified by shared generic names. The same is true of reptiles and insects. The date of the earliest attestation in Akkadian is given in parenthesis; but if no such parenthetical period is indicated, that means that the name is already attested in Old Babylonian or earlier (cf. lamb and ewe). Parentheses in the English column indicate that the animal was certainly known, though the term appearing in the Hebrew column is not attested in biblical Hebrew (e.g., elephant; "MH" means Mishnaic Hebrew).

The identification of the animals represented by these names is not always certain. As the list demonstrates, this is especially true of birds, fish, reptiles, and insects. Domestic and common wild mammals are more readily identified thanks to their attestation in literary sources.

UNGULATES

MOLLUSKS

	Akkadian	Hebrew	Ugaritic	Aram/Syr	ESA/Ethiopic	Arabic
snail		*šablûl*[78]				

[1]Probable etymology "dumb" (beast). Cf. Eth *bĕhma*. In general, it is opposed to *ḥayyâ*, "wild animal" (e.g., Gen 7:14). According to Jeffrey, Arabic *bahīmatun* < Heb.

[2]Note that the Akk term also came to denote an "ass-load" (Heb *ḥomer*) at Mari and Nuzi.

[3]Cf. Eg *ʿr*, a collective term for both goats and asses.

[4]While clearly distinct from horses (cf. 1 Kgs 10:25), the texts give us little with which to distinguish the *pered* from the *ḥămôr*.

[5]The generic term for horse, *sûs* is an old *Wanderwort* attested as *sí-sí* in Sumerian texts of the Ur III period and as *sisāʾum* in Old Assyrian. According to Goetze (1962: 34–35), the spelling of the Ug form *�least* (*�least* being used for foreign words) and the prominence of the horse in Hurrian culture suggest that the immediate source of the Ugaritic term at least may be Hurrian (*siswo-*). Goetze has suggested that a "*centum*" form of the word, **sikwo-*, underlies Linear B *(h)iqo*, Gk *hippos*, and Lat *equus*, while the Sanskrit equivalent *aśva-* seems to underlie Hurrian *iššiya-* (<? **ekwiyo-*) and *aššušš anni-*, the name which Kikkuli, the horse specialist of the Hittite hippiatric texts, gives to his profession.

[6]In the two passages where this word is used (1 Kgs 5:8—Eng 4:28; Mic 1:13), it is likely that chariot horses are intended.

[7]Only Job 39:5.

[8]The word only occurs in the plural. Note also the name of letter *ʾalep*, thought to represent a bull's head.

[9]Usually denotes a head of cattle, without differentiating sex. The Semitic term passes into Indo-European as *taur-*, Gk *tauros*, Lat *taurus*. Like other animal names (e.g., *ʾayil*), the term also denotes prominent persons. In Keret iv.7–8, 17–18, for example, *ṯr* is applied to nobility.

[10]The Ethiopic *ʾĕgʷal* denotes the young of any animal; *ʾĕgʷlt* is more specifically "calf." One also finds *ʾĕgwal*, with initial *ʿayin*.

[11]A W Semitic variant *ḫazzum* (i.e., *ʿazzim*) occurs at Mari.

[12]Etymologically, "the hairy one." Usually occurs in the phrase *śĕʿîr ʿizzîm*.

[13]*Atūdu* is equated with *s/šappārum* (SEG$_9$.BAR), identified in most lexical citations as a wild ram (e.g., CAD A.1 225b, A.2 521a, D118a, but correctly as "wild boar" in B4a). In the *Malku = šarru* series both *atūdu* and *šappāru* are equated with *šaḫû*, "swine" (V:46f.). Despite its identification with the boar, *šappāru* is thought to be the source of Heb *šopār*, "ram's horn." For a similar semantic shift in cognates, cf. Lat *caper*, "goat," Gk *kapros*, "boar."

[14]Only Deut 14:5.

[15]Note fig. meaning "leader" (of people) and similar usage of *ʾayyāl* and *ʿāttûd*. *ʾayil* < **ʾayl*) appears to be based on the same root as *ʾayyāl*, "stag." Underlying both perhaps is the notion of leading the flock/herd (cf. Ar *ʾawwal* "first").

[16]Metathesized variant *keśeb/kiśbâ*.

[17]In addition to this common term for camel, cf. also Obil, David's camel driver (*ʾôbîl*, 1 Chr 27:30), which recalls Akk *ibilu*, "camel," "dromedary," and Ar *ibilun*, "camel" (coll.).

[18]Perhaps derived from Prakrit *piḍu* (Barnett 1982: 9). The Greek *elephas* is probably ultimately derived from Semitic *ʾlp* via Anatolia (Laroche 1965; Ventris and Chadwick 1973: 346). This derivation is reinforced by the Sumerian term for elephant AM.SÍ "ox with a hand."

[19]In the Golan this term refers to the roebuck (Post 1890).

[20]Cf. note 15 on *ʾayil*, "ram."

[21]Among the Palestinians of the Carmel, this term denotes the roebuck (Conder 1890; Post 1890). Its name presumably refers to its reddish, *fallow* color.

[22]Only Deut 14:5. Cf. Dishon, the tribe located in Edom (Gen 36:21), the natural habitat of the Addax. The LXX *pygarg* means "white-rumped."

[23]There is an old form *arm/wûm, arwium* attested in Old Akkadian and Old Babylonian PNs and in later lexical lists meaning "gazelle buck" (*ar-mu-u = ṣa-bi-tu*), along with a variant form *armu* found in Middle Babylonian and Assyrian and later texts meaning "mountain goat buck."

[24]The Indo-European (cf. Linear B *lewōn-*, Cl. Gk *leōn*, Germ *Löwe*, Eng lion) probably derives from this Semitic root. The *-nt-* stem seen in Linear B and Greek may indicate Anatolian mediation in the transition (Ventris and Chadwick 1973: 346).

[25]Only in poetry.

[26]Only 1 Kgs 10:22 = 2 Chr 9:21. Imported by Solomon's Israelite-Phoenician fleet from an undetermined location (not Tarshish!) somewhere in either E Africa, S Arabia, or India (cf. Barnett 1982: 9 and literature cited there). For baboons in Arabia see Harrison 1964–65: 1.183–90. Underlying all of the Semitic forms in Sanskrit *kapi,* from which is also derived Gk *kēbos* and Eg *gꜣf* (also *gwf, gf*—all determined by the monkey rather than baboon sign).

[27]The name is based on an emendation of Isa 2:20 (MT): people will throw their idols *laḥpor pērôt ûlāʿātallēpîm*." The emended phrase would yield a meaning "diggers," referring to rodents of some kind. On *ʿătalēp*, "bat," see n. 32 below.

[28]Only Lev 11:29. For possible etymology, cf. Aram *ḥĕlad*, "creep"; MH *ḥālad*, "undermine."

[29]In Old Babylonian only in PN 's.

[30]As PN already in Old Akkadian.

[31]Lev 11:5 and Deut 14:7 describe the *šāpān* as being like the hare in that it always seems to be chewing (the biblical definition of a ruminant). Elsewhere, it is said to be a small animal inhabiting rocky areas (Ps 104:18; Prov 30:26). This information, while insufficient for a positive identification, suggests the hyrax. The word *šāpān* has an interesting story connected with it. When the Phoenicians reached Spain, they encountered the rabbit for the first time and so named the place *I-sapan*, "the island of hyraxes," apparently confusing the rabbit with a kind of hyrax. This is the origin of the Latin Hispania.

[32]The bat is technically a mammal and not a bird, according to modern zoological classification (its young are born alive and are nursed by the mother). The biblical classification operates according to simpler anatomical criteria: the presence or absence of wings.

[33]The translation "porcupine" suggested by the cognates is perhaps possible in Isa 14:23, but unlikely in the other two occurrences of the word, where it seems to denote some kind of bird (see under Birds of Prey).

[34]*ʿôp* serves primarily to distinguish flying creatures of all sorts from creatures of the land and the sea. Thus, its most frequent use is in the phrase *ʿôp haššāmayîm* (36X).

[35]This is only one of the many meanings of this word, others being "state, condition, fortune, guest, lion, a kind of idol, and locust." Less multivalent is the verb *ʾayafa*, "to loath," "to take an augury."

[36]For the term, cf. Tchernov (1984), and see above under Domestication.

[37]"Chirpers." Cf. Akk *ṣapārum*, "chatter, twitter," Ar *ṣafara*, "whistle, chirp." In origin, this name is also probably onomatopoeic, like Eng sparrow, Lat *passer*, both with initial *sp-, ps-* combinations that imitate "chirping" (itself an onomatopoeic word). Another Hebrew root of this form is *ṣāpap* (used of birds in Isa 10:14), whose Ar cognate *ṣufṣufun* denotes the sparrow in some dialects. The Akk cognate is equivalent to Sum, "street bird" (AILA.MUŠEN), also suggesting the sparrow.

Ṣippôr denotes all birds like the sparrow which were caught for food (Deut 22:6–7; Amos 3:5; Lam 3:52) and which lived around human settlements (Pss 84:4; 102:8). It includes the important domestic categories of dove and pigeon (Gen 15:9–10; Lev 14; *passim*; Cf. also Hos 11:11). Used in conjunction with *kānāp* (e.g., in the phrase *kol ṣippôr kol-kānāp*), it becomes a term for birds in general (Gen 7:14; Ezek 17:23; 39:4; Ps 148:10). In Lev 14:4, the addition of *ṭĕhorôt* has nothing to do with the distinction between clean (i.e., edible) and "unclean" (inedible) birds, and thus does not indicate that *ṣippôr* by itself might also refer to raptors. In other words, while *ʿop kānāp* (Gen 1:21) may be redundant, the same cannot be said of *ṣippôr kānāp*.

[38]The chicken is pictured on Hebrew seals and must therefore have been known to the Israelites, though its Biblical Hebrew name is unknown. Mishnaic Hebrew has *tarnĕgôl*, derived from Akkadian *tarlugallum* (< Sum DAR.LUGAL.MUŠEN).

[39]Perhaps onomatopoeic. Cf. Gk *trugos*, Lat *turtur*. In addition to *yonâ* and *tôr* note also the name Jemimah, *yĕmîmâ* (Job 42:14), which also probably refers to the dove (Driver 1955–58: 1.130).

[40]1 Kgs 5:3—insufficient in itself for identification. On the nominal pattern, cf. Nöldeke (1904: 117). The fact that the birds were fattened, however, reminds one of the forced feeding of cranes, ducks, and geese in ancient Egypt (cf. Darby, Ghalioungui, and Grivetti 1977: 1, 273) and suggests the identification of *barbur* with one of these species.

[41]1 Sam 26:20; Jer 17:11. These passages are insufficient for identifying the species of bird in question.

[42]Apparently meaning "screamers" (cf. Ar *ʿāṭa*). Cf. also Gk *aetos*, "eagle." The Ar root may derive not from birds per se, but from some primitive sound thought to typify screaming. The Ug *ʿṭ* occurs in a list of goods which includes livestock and geese (*uÙz*) but the species is unidentifiable.

[43]Both the Ar and the Heb names are onomatopoeic. For the Ar pattern, see Nöldeke (1904); for the Heb, note the similarly onomatopoeic names based on the same root: *ʾî*, "jackal," Ar *ʾibn āwā*. The identification of the bird is very uncertain. Apart from Leviticus 11 and Deuteronomy 14, it is attested in Job 28:7, which describes it as keen-sighted.

[44]According to Driver (1955–58: 1.8) the name is onomatopoeic, composed of sonant *n* + base *šr* representing a whirring sound (cf. Lat *susurrus*, Germ *schwirren*, also *ṣrṣr*, etc., under "locust" below). The identification with the griffon vulture is based on its long wing span (Ezek 17:3) and its ldblquote bald spot" (Mic 1:16). The griffon vulture first consumes the soft parts of the body such as the eye, before turning to the rest (cf. Prov 30:17). The gathering of the nations to devour the spoil (Deut 28:49) also suggests the vulture rather than the more solitary eagle. LXX has *aetos*, "eagle." There are, however, a number of passages where the bird could just as well be the eagle, including some which Driver initially ascribed to the vulture (corrected in Driver 1955–58: 3). The precise identification of the species indicated by Ug *nšr* is not possible on the basis of our texts.

[45]The etymology ("black one") strongly suggests the crow/raven or "blackbird" (cf. Song of Songs 5:11). Its habit of plucking out the eyes of its victims (Prov 30:17) is also characteristic of the raven (cf. Aristophanes, *Birds* 582 and *Acharnians* 92). The name is descriptive rather than onomatopoeic (*pace* Driver 1955–58: 1.12 n. 44).

[46]Etymology uncertain. *Yaʿēn* is attested only in Lam 4:3 (*qre*). The alternative form *bat-yaʿănâ* is attested in Lev 11:16; Deut 14:15; Isa 13:21; 34:13; 43:20; etc., which depict the bird as a desert-dweller. The identification of the bird with the ostrich (LXX *strouthos*) is consistent with this habitat and with the description in Job 39:13–18: it lays its eggs on the ground and leaves them unprotected, as ostriches do during the day, and is noted for its speed on land (v 18). The ostrich can go for long periods without water and is thus suited to life in the desert. On the other hand, the wailing of the *bat-yaʿănâ* (Mic 1:8) and its fondness for old ruins suggest the owl (Driver). Perhaps the term denoted different birds at various times or from one region to another.

[47]Only Lev 11:13; Deut 14:12. The word means "smasher" (cf. Heb *pāras*; Akk *parāsu*). The bearded vulture or "bone breaker," as it is popularly known, drops its victims from a great height until the bones are shattered. Cf. Ar *kāsir aṭ-ṭair*, "predatory bird."

[48]Driver (1955–58: 1.10) derives the name by metathesis from the root *ʿnz* from which is derived Akk *enzu*, Heb *ʿēz*, "goat," hence "goat vulture" (cf. Gk *aigupios* < *aix*"goat" + *gups* "vulture"). It was identified as such because of its goat-like "beard." Attested only in Lev 11:13; Deut 14:12. LXX has *aliaetos*, "osprey," which also means "bone-breaker."

[49] Only Lev 11:14; Deut 14:13. The variant *dayyâ* occurs in Isa 34:15. The verb *dāʾâ* is probably denominative (Driver). The general sense of the verb, "to swoop," would suggest perhaps a hawk of some kind. The Ugaritic cognate *dıÙy* is paralleled by *nšr* (UT, 383 #634).

[50]Lev 11:16; Deut 14:15. According to Driver (1955–58: 1.13), the name means "robber" (cf. Targumim *ḥaṭîpitâ*). Driver suggests an owl of some sort (so LXX *glaux*). But cf. Ar *ẓalîm*, "male ostrich," from a root meaning "to do wrong."

[51]The Versions translate "sea gull" (*laros*). Driver, however, suggests the long-eared owl, which is said to be very thin when at rest (cf. Ar *saḫufa*, "be emaciated").

[52]Outside Lev 11:16 and Deut 14:15 only Job 39:26. LXX has *ierax*, "hawk, falcon." Ug *nṣ* occurs in a list of foodstuffs, along with another bird, the *ʿṣr* (cf. Akk *iṣṣur*), but its exact meaning is unknown.

[53]Lev 11:17; Deut 14:16; Ps 102:7. In the latter passage it is said to inhabit the ruins, probably indicating an owl (so LXX, Vg). Driver, following Knobel, compares Germ *Kauz*, "tawny owl," the similarity of which suggests that the word may be onomatopoeic.

[54]Lev 11:17; Deut 14:17. Perhaps a diving bird (cf. Heb *hišlîk*; Gk *kataraktēs* points in the same direction).

[55]Lev 11:17; Deut 14:16; Isa 34:11 (in a list of birds which will inhabit the ruins of Edom). LXX has *eibis*, "ibis," but this bird is unknown in Palestine. This equation may reflect Egyptianizing on the part of the translator. The possible Akk equivalent *enšub/pu* (SB) may denote an owl of some sort. It is a bird of ill omen which frequents human habitations. The Heb etymology (< NŠP "blow") also suggests an owl. The nominal pattern of this word, *yaqtûl*, is found in other Semitic animal names, such as Syr *yarbûʿāʾ*, "jerboa"; *yaḫmûrāʾ*, "a kind of deer"; *yaqrûrāʾ*, "a toad"; Ar *yaʿsûb* "male bee, drone."

[56]Lev 11:18, 30; Deut 14:16. LXX *porphyrion*, "water hen." More probably some sort of owl, as indicated by its name (< NŠM, "pant". Cf. the derivation of the *yanšûp*.

[57]Lev 11:18; Deut 14:17; Isa 34:11; Zeph 2:14; Ps 102:7. LXX has *pelekan*, but this is improbable in Isa 34:11 (cf. above on *yanšûp*), as well as in the passages from Zephaniah and Psalms (*qĕʾat midbar!*). Driver suggests the name may be onomatopoeic for the cry of the scops-owl, "kiu-kiu."

[58]Lev 11:18; Deut 14:17. LXX *kuknos* "swan." Driver's objections to the translation "vulture" are not very compelling, but, as he points out, the Arabic cognate also refers to the pelican (Dozy), and the closely related *ruḫam* to the osprey. If the approximate equivalents in our list are correct, then a vulture is out of place at this point in the list. Hence our tentative "osprey."

[59]Lev 11:19; Deut 14:18; Jer 8:7; Zech 5:9; Ps 104:17. LXX *arōdios*. Jer 8:7 suggests a migratory bird. The Hebrew term has traditionally been taken to refer to the tender care which the stork bestows on its young, though of course this criterion is not decisive. Neither is the fact that the bird nests in trees (Ps 104:17). Another bird fitting this profile is the heron, which Driver suggests may have been included with the stork under this name.

[60]Lev 11:19; Deut 14:8. LXX has *charadios*, meaning uncertain. The name may refer to the bird's prominent beak ("nose"). Driver suggests the cormorant.

[61]Lev 11:19; Deut 14:18. LXX has *epops*, "hoopoe." Onomatopoeic. Cf. e.g., *qwqwpt*, Copt *koukoufat*; Syr *qâqûpāʾ*.

[62]Apparently a bird in Isa 34:11; Zeph 2:14. The cognates, however, refer to the porcupine (see above under Rodents).

[63]Only Isa 34:15. Certain identification impossible, but context suggests a bird.

[64]Possible cognates include Akk *ḫarbu* (an unidentified bird) and Ar *ḥarbun*, "male bustard" (Driver 1955–58: 2.137).

[65]Cf. NB *kulbā*.

[66]Isa 51:8. Cf. also Eth *ḍaḍe*; Gk *sēs*.

[67] Of the terms for "locust" only *ʾarbeh* is commonly used. Most others appear only once or infrequently: *ṣĕlāṣal* (Deut 28:42), *ḥargol* (Lev 11:22), *ḥāgāb* (Lev 11:22; Num 13:33; Isa 40:22; 2 Chr 7:13), *gāzām* (Amos 4:9, Joel 1:4; 2:25), *gôbay* (Amos 7:1; Nah 3:17), *ḥāsîl* (1 Kgs 8:37; Isa 33:4; Joel 1:4; 2:25), *yeleq* (Jer 51:14; Nah 3:15, 16; Joel 1:4; 2:25; Ps 105:34). Neither the contexts nor the etymologies are sufficient to enable us to identify whether or not we are dealing in each case with separate species or stages of development in one or two species.

[68]Variant form *ṣarṣaru*, meaning "cricket."

[69]Cf. Nöldeke (1904) on this type of nominal formation in bird and insect names. The roots *ṣlṣl* and *ṣrṣr* are onomatopoeic. Cf. Ar *ṣarṣara* "scream," *ṣarra*, "chirp" (of cricket), etc.

[70]Both the etymology (< *RMM* "decay"; cf. Ar *ramma*) and the contexts suggest this meaning. Cf. Exod 16:24; Isa 14:11; Job 25:6 both parallel *tôlēʿâ*.

[71]Certain identification on the basis of Isa 59:3, which refers to the *qûrê ʿākkabîš*, "spider threads."

[72]Lev 11:30. Note that this same term refers to a kind of owl in Deut 14:16.

[73]? < *śārap*, "burn."

[74]Only Lev 11:30.

[75]Only Lev 11:30.

[76]Ug *nḥšm* parallels *bṯnm* in RS 24.244.

[77]Most probably like *nāḥāš*. Onomatopoeic.

[78]Only Ps 58:9. From the *Šapʿel* of BLL (Heb *bālal*, "mix with oil," Ar *balla*, "moisten," Akk *balālum*, "sprinkle, mix") apparently referring to the trail which the snail leaves behind.

ZOPHAH (PERSON) [Heb *ṣôpaḥ* (צוֹפַח)]. A descendant of Asher, named in the genealogical list in 1 Chr 7:35. His father, Helem, is perhaps to be identified with Hotham, placing Zophah within the dominant line of the Asherite genealogy. Although eleven sons are attributed to him, nothing else is known about this figure: his name does not appear in the parallel lists of Asher's line in Numbers 26 and Genesis 46 or elsewhere, and its etymology ("wide, broad") reveals little. As Gray notes, many of the names in this list appear to be geographical or tribal rather than personal. In keeping with such an interpretation, Edelman suggests that Zophah may be equated with the land of Zuph (Edelman 1985: 86).

ZOPHAI (PERSON) [Heb *ṣôpay* (צוֹפַי)]. See ZUPH (PERSON).

ZOPHAR (PERSON) [Heb *ṣôpar* (צוֹפַר)]. The third friend of Job, identified as "the Naamathite" (Job 2:11; 11:1; 20:1; 42:9). His name is perhaps related to "bird" (e.g., Num 22:2, 10, etc.), but the meaning is problematic. With the near consensus that Job is not to be seen as reflecting any recognizable historical background, the characters of the book have come to be viewed as dramatic figures possessing individual pecularities which surface in their dialogue with the miserable Job. The three friends come first, we are told, "to comfort and condole" the sufferer (2:11). Zophar is the third speaker among Job's friends. One certainly finds his speeches in chaps. 11 and 20; however, Zophar has no speech in the (apparently disrupted) third cycle. This has led to all kinds of guesses about the original order of the cycle in an attempt to reconstruct a third Zophar speech. However, several scholars have offered serious attempts to read the existing text as essentially original and undisrupted (cf. Habel *Job* OTL; Janzen *Job* Interpretation).

In his first address (11:2–6), Zophar rejects Job's claim to innocence and the implication that God is somehow irrationally guilty for Job's trouble. He goes on to warn Job that if God would only speak, Job would realize that his claims of innocence and great wisdom are in fact pretentious and blasphemous (vv 7–12). By implication, of course, Zophar himself claims this same great wisdom. Surely part of the author's intent is to satirize Zophar as a very poor friend indeed who is more interested in preserving his theological certainty than in listening with openness to the sufferer (Habel *Job* OTL, 205).

The second speech in chap. 20 is more brutal in its attempts to prove Job to be evil, fully deserving his misery. That speech demonstrates the author's brilliant poetic skill which consists in the use of preceding speeches by succeeding speakers to reject the ideas of the earlier speakers by holding them up to sustained ridicule. One might call this device "hoisting one on one's own petard" (cf. Holbert 1981 and Habel *Job*

OTL). For example, Zophar classes Job with the sinners by using Job's own words against him. Job, in reference to the *gō‹ēl,* "redeemer," had earlier said, "as the last one he will rise on the dust" (19:25). Zophar, referring to Job's youthful strength, now retorts, "it will lie with him in the dust" (20:11). While Job looks for a "rising" of his redeemer, Zophar speaks of Job's own "lying down" in death. Job pictures his redeemer standing firmly "on the dust"; Zophar pictures the "dust" as Job's grave.

Such analysis makes it very clear that the Joban dialogue is clearly a real dialogue and not a series of monologues bearing little or no connection to one another. As one reads this dialogue, one must keep vigilant for the repeated, and redefined, word or phrase, now used ironically or satirically in the new speech. Thus will the poem's masterful subtlety be laid bare to the reader. Zophar's second speech of chap. 20 is one of the best examples of the technique.

In terms of his basic theological stance, Zophar's differences from his two friends are very slight. However, he is different from Eliphaz and Bildad in terms of the origin of his knowledge. While Eliphaz has a direct revelation from God (4:12–21) and Bildad is a reader of the sacred tradition (8:9–12), Zophar seems to rely on hallowed sayings of the wisdom school, which inform his attempts to refute Job (11:7–12). But, like his friends, Zophar's second address to Job does not bother to "footnote" the source of information; it merely goes on the attack, holding Job up to ridicule by means of invective and, unlike the first speech, offering the sufferer no possible place of repentance or acceptance (compare 11:13ff. with the unrelieved "end of the wicked" material of 20:6–29). One might say that the friends' initial attempt to prove Job wrong by the relative niceties of theological debate soon gives way to the raw language of the infuriated inquisitor. Such a pattern can also be seen by comparing chaps. 4 and 5 with chap. 15 (Eliphaz) and chap. 8 with chap. 18 (Bildad).

ZOPHIM (PLACE) [Heb *ṣōpîm* (צֹפִים)]. A high point near or on the top of Pisgah and close to the NE end of the Dead Sea (Num 23:14). Zophim was the second place to which Balak took Balaam hoping that he would curse the Israelites. Insofar as *ṣōpîm* literally means "watchers," Num 23:14 may include the descriptive label "field of the watchers" rather than a proper name "Zophim." Since prophets were at times called "watcher" (Isa 52:8), such a label would be especially appropriate here. Some have suggested, however, that modern Tala‹at es-Safa possibly preserves the actual name.

TERRY L. BRENSINGER

ZOR (PLACE). See JORDAN, JUNGLE OF.

ZORAH (PLACE) [Heb *ṣor‹â* (צָרְעָה)]. ZORITE; ZORATHITE. A town located in the Sorek valley, identified with Sar‹a (Tel Zor‹a; (M.R. 148131), about 3 km N of Beth-shemesh. Zorah is mentioned in the Amarna Letters as one of the towns in the kingdom of Gezer attacked by ‹Apiru (EA 273). At the time of the Israelite conquest, Zorah was allotted to the tribe of Dan. It was, together with Eshtaol, the core area of Danite settlement in the Judean foothills: Manoah, father of Samson, hailed from Zorah (Judg 13:2), Samson was first inspired between Zorah and Eshtaol (Judg 13:25), and both Manoah and Samson were buried between the two sites (Judg 16:31). Finally, it was from Zorah and Eshtaol that the Danites sallied forth to conquer Laish (Judges 18).

Later, Zorah was annexed to Judah (Josh 15:33) and was inhabited by Judahites of the clan of Kiriath-jearim (1 Chr 2:54–55). Zorah was one of the Judean cities purportedly fortified by Rehoboam (2 Chr 11:10) and was also one of the cities settled at the time of the return of the Judean exiles from Babylon (Neh 11:29). Aharoni (*LBHG*, 410) has suggested, however, that the town could have been among those whose inhabitants were not exiled but were permitted to stay on under Babylonian rule.

ZOROASTER, ZOROASTRIANISM. "Zoroastrianism" is the name of the religion founded by Zoroaster, probably sometime late in the 2d millennium B.C. It enjoyed great popularity during the time of the Persian Empire, and is still adhered to by minorities in Iran and the Indian subcontinent and by scattered migrant groups, mostly in Europe, North America, and Australia.

A. The Prophet

Zoroaster was the great Iranian prophet and founder of the religion named after him. The Iranian form of his name was Zarathustra. A tradition preserved in a few late sources (none older than the 3d century A.D.) sets him at "228 years before Alexander," i.e., in the 6th century B.C.; but this dating is now generally rejected as spurious, it being agreed that he belonged to what were for his people prehistoric times. Present debate centers on whether he lived during the Iranian pastoral period on the central Asian steppes (between ca. 1400 and 1200 B.C.) or after the Iranian tribes had moved S into the land now known as Iran (ca. 1000 B.C.). The evidence comes solely from the *Gāthās,* 17 short poetic works composed by him and preserved in a liturgy of the daily Zoroastrian act of worship, the *yasna.* They are accordingly identified as *Y (asna)* 28–34, 43–51, 53.

The *Gāthās* are in an E Iranian language very close to the Hindu *Rigveda* (whose many hymns are assigned to ca. 1400–900 B.C.); but in Iran they are almost isolated in their antiquity, with many hapaxes and baffling syntactical problems. This is part of the reason they are very difficult to understand; they belong, moreover, to a school of mantic poetry—already old in the prophet's day—which is subtle, condensed, and richly allusive. The *Gāthās* are seldom expository, being addressed, for the most part, in lofty, impassioned terms, to God himself (known to Zoroaster as Ahura Mazda). The underlying doctrine can accordingly be fully understood only with the help of the later Zoroastrian scriptures.

All that can be certainly known of Zoroaster himself is to be deduced from these hymns. They show him to have been a priest of the Old Iranian religion, trained in beliefs and rituals, but also a prophet and seer, one who saw God in visions and believed that, by preaching what he thus apprehended, he could lead men to salvation and help to redeem the world from evil. He appears as a man of powerful intellect, who evolved a remarkably logical and coherent theology. He failed, nevertheless, to win a hearing from his own people, and eventually left them, impoverished and rejected (Y 46.1–2). He made his way to another Iranian tribe, ruled by Kavi Vishtaspa. This prince accepted his teachings (Y 51.16); and Zoroaster, settling at his court, saw his religion established. Some *Gāthās* were composed during his early life, others were composed or extended during this period. Iranian tradition required priests to marry, and in one of the later *Gāthās* (Y 53) he speaks of his youngest daughter, Pouruchista.

The legend of the prophet's life, although almost entirely hagiographical, probably contains some factual matter, such as his father's name and that he lived long (dying, it is said, at age 77). According to the legend, Zoroaster had three wives, three sons, and three daughters—a suspect symmetry, since three is the holy number of Zoroastrianism. Different sources recount miracles of his birth (among them, that he was born laughing) and childhood, tell of his wanderings as a seeker of truth, and describe his moment of illumination when, fetching pure water from a river at dawn, he was visited by the divine (cf. Y 43.5). Although Zoroaster is regarded by his followers as wholly human, his spirit receives profound veneration, and his name is constantly invoked.

B. Sources

Controversy over what appear to have been Zoroastrianism's remarkable contributions to religious thought is largely due to deficiencies in its written sources. When Zoroaster lived, the Iranians had no knowledge of writing; and when, perhaps in the 8th century B.C., the religion reached the W Iranians (i.e., the Medes and Persians), the systems of writing which it encountered (cuneiform and alphabetic Aramaic) were unsuitable for recording an Indoeuropean language accurately. The Zoroastrian priests believed in the power of the word as a union of sound and sense; and, accordingly, they rejected the use of writing for religious works. The Avesta—their collection of holy texts in the otherwise unknown E Iranian language called "Avestan" (after the collection)—therefore remained in oral transmission for more than a thousand years more, until, probably in the 5th century A.D., the 44-character "Avestan" alphabet evolved to record the texts. The *Gāthās,* having been strictly memorized, were well preserved, but much else, handed down in a more fluid transmission, suffered textual corruption to varying extents.

The written "Great Avesta" was divided into three parts: religious, legal, and miscellaneous works. The first contained the liturgical texts, including all those in Old Avestan. Chief among these are the *Gāthās* and two great *manthras* or holy sayings. One, the *Yathā ahū vairyō* (Middle Persian *Ahunvar*), attributed to Zoroaster himself, is constantly recited. It and the *Airyəmā išyō* are both brief utterances, which in the *yasna* liturgy enclose the *Gāthās.* These in turn enclose the *Yasna Haptanhāiti,* a short liturgy which accompanied the offerings. Over centuries the *yasna* was extended to 72 sections, mostly in Younger Avestan, some of the added materials being taken from the "great" *yashts,* in part very ancient hymns to individual divinities, the *yazatas.* The liturgical texts include the *Vendidād,* a mixed compilation concerned mainly with purity laws. Apart from two short, difficult works on ritual and some fragments, only these parts of the "Great Avesta" survive, the rest being lost under Islam and known only through summaries and the *zand* or "interpretation."

Zands had existed in various Iranian languages, but only one survives extensively, in Middle Persian, also called Pahlavi. Unfortunately this is a poor language for exegesis; its grammar is simple to the point of ambiguity, and it is written in a difficult script. Almost all extant Avestan texts have their *zand,* which has been compared with Jewish midrash. It consists regularly of a literal translation of the Avestan, often a more idiomatic Middle Persian rendering, and a commentary, sometimes extensive and added to by named authorities over centuries. Several important Pahlavi books (notably the *Bundahishn* and *Wizīdagīhā ī Zādsparam*) consist largely of selections from the *zand* of lost Avestan works, and these contain substantial amounts of dogmatic theology. They received additions down to the 9th century A.D. (the last period of considerable scholastic activity in the face of growing repression by Islam) and have accordingly been classified as "9th-century books"—a misleading title, since most of their contents go back over many centuries. Absolute dating is, however, impossible for any of the materials in such slow-growing compilations; and there is still a lack of satisfactory editions of most Pahlavi works.

Close dating is possible for religious elements in inscriptions, notably those of the Achaemenids (chiefly 6th century B.C.), and Sassanians (mostly 3d century A.D.). There is datable evidence also in the writings of Greek, Latin, Syriac, and other foreign authors.

Alongside the written texts the magisterium of the living religion lasted down to the mid-19th century. Thereafter, social change (with a weakening of the priesthood), the impact of Western academic theories, and religious reform have produced a diversity of beliefs, though orthopraxy is still largely maintained. These developments are recorded in a considerably modern literature in English and Gujarati.

C. Background

The beliefs and rituals of the ancient Iranians can be reconstructed partly from comparison with the closely related religion of Vedic India, partly from fragmentary evidence about other Iranian religions (e.g., Old Persian and Scythian), and partly from archaic elements surviving in the Avesta and in Zoroastrian observance. They were polytheists who conceived their gods as cosmic beings, essentially benign, and apprehended a universal principle, *arta* or *asha,* "that which ought to be"; this should govern everything in the natural and human spheres. They acknowledged three Ahuras (Lords) who guarded *asha,* the chief being Ahura Mazda, Lord of Wisdom (Pahlavi *Ohrmazd*). Animatism dominated their way of perceiving the world, and they endued feelings, qualities, and states, no less than natural phenomena,

with personality. The gods, they believed, had created the world in seven stages: sky, water, earth, plants, animals, man, and fire (the vital force which gives warmth and life to the rest and, through the sun, is to regulate nature). Then, by sacrifice, they set it in motion, with new life following death and the cycle of the seasons beginning. This state of new life was thought to be unending as long as men did their part through sacrifice and worship, notably by the daily performance of a priestly rite, the *yasna,* by which the creations were purified and blessed. The essential rituals were offerings to fire and water. Worship was performed mostly in the open, without temples, altars, or images.

At death most souls were thought to pass as shadows to an underworld, needing food-offerings from their descendants to sustain them; but some fortunate souls, it was hoped, would ascend to join the gods in heaven. With this hope was belief in resurrection of the body within a year or so after death, so that the soul, reincarnated, could thereafter fully enjoy again the pleasures it had known on earth.

D. Teachings of Zoroaster

The *Gāthās* show that Zoroaster lived at a time of social turmoil, with bloodshed and lawlessness. This apparently reflects changes brought about by the coming of the Bronze Age to the Central Asian steppes, with the war chariot (first attested there ca. 1500 B.C.) giving new mobility to predatory, well-armed warrior bands. Zoroaster was driven accordingly to meditate profoundly on good and evil and the goal of life, and finally achieved a majestic vision of cosmic unity and purpose (see esp. Y 30.2; Y 45.2). He apprehended Ahura Mazda as God, the one eternal uncreated Being, wholly good, wise, and beneficient; but coexisting with him he saw another Being, the Evil Spirit, Angra Mainyu (Pahlavi *Ahriman*), who was wholly evil, ignorant, and malign, likewise uncreated, but doomed in the end to perish. Ahura Mazda, Zoroaster held, has created this sevenfold world as a battleground where evil can be encountered and overcome. To help in this great struggle he sends forth lesser divinities, notably the six "Holy Immortals" (Aməsha Spəntas; Pahlavi *Ameshaspands*), who are at once hypostases of the powers of God and independent divinities, yet also forces which can enter into the just man. Further, each, together with the holy spirit of Ahura Mazda, guards one of the seven physical creations and can dwell within it, if it is in a state of purity, being thus both immanent and transcendent divinities.

These complex concepts, arising from ancient animatism, seem both mystically and logically apprehended. The names of this great Heptad (whose translations can be only approximate) are as follows: Desirable Dominion (*Khshathra Vairya,* Pahlavi *Shahrevar*), who guards the sky; Wholeness or Health (*Haurvatāt/Hordād*), water; Holy Devotion (*Spənta Ārmaiti/Spendārmad*), earth; Immortality (*Amərətāt/Amurdād*), plants; Good Purpose (*Vohu Manah/Vahman*), animals; the Holy Spirit (*Spənta Mainyu/Spenāg Mēnōg*), man; and Best Truth or Righteousness (*Asha Vahishta/Ardvahisht*), fire. The Heptad is represented at the *yasna* through the seven creations, and its members enter into just and pure worshippers.

Zoroaster thus gave new dimensions to the daily act of worship and linked the moral, spiritual, and physical worlds in a remarkable way. The great Aməsha Spəntas emanated other lesser divinities, the main ones being the beneficent gods of the old religion, among whom was the lesser Ahura, Mithra. These beings, like the Heptad, are called *yazatas,* i.e., "those to be worshipped." The *yazatas* are all of one essence and of one will with Ahura Mazda; and all strive together, with different functions, to fulfill a single aim: the defeat of evil. Zoroaster thus recognized a unity of divine purpose but a multiplicity of agents, under God, to fulfill it. The names of the Heptad recur throughout the *Gāthās* (notably as a group in Y 47.1), the doctrine concerning them being, with radical dualism, at the heart of Zoroaster's teachings. Angra Mainyu produced his own counterforces of evil, notably the Daēvas (ancient war gods), who, like him, are to be repudiated and defied.

Through his Holy Spirit (Y 44.7), Ahura Mazda created the world perfectly good; but in his omniscience he foresaw Angra Mainyu's attack upon it, which brought corruption on all things and the blow of death. All seven creations should strive, instinctively or, in the case of man consciously, to combat him and his forces and so bring about Frasho-kərəti (Pahlavi *Frašegird*), "Making wonderful," i.e., the restoration of the world to its original state of goodness, which will be enduring.

Zoroaster believed profoundly in the justice of God (*asha*), which has been called the decisive confessional concept of his religion; but the injustices of his own time drove him to project its strict, final administration to the hereafter. Fusing the two existing beliefs about life after death, he taught that everyone, man and woman alike, could attain heaven by accepting his revelation and acting justly in accord with it (Y 46.10). But all must first be judged when, on the third day after death (as in traditional Iranian belief), the soul ascends at sunrise to the peak of Mt. Hara, the mythical mountain at the center of the earth. There its good thoughts, words, and acts are weighed in a balance against the bad; and if the good are preponderant, the soul crosses the broad Chinvat Bridge and passes on up to heaven. If the bad outweigh the good, the bridge contracts, and the soul plunges down through a chasm into the underworld, seen by Zoroaster as the "place of worst existence," i.e., hell, where the Evil Spirit presides over retributive punishment. The blessed and damned will remain in heaven or hell as spirits only until Frasho-kərəti. At that time there will be a general resurrection of bodies, and the departed spirits will be reincarnated to undergo the Last Judgment.

Among the ancient Iranians the ultimate judicial test was an ordeal by fire, and Zoroaster also saw the Last Judgment to be enacted through such an ordeal, but on a cosmic scale. Molten metal would flow out from the mountains to form a burning river; and the reincarnated souls, together with those still living, would pass through it in the flesh. Similar to the belief with the ordinary judicial ordeal, the good will be saved by divine intervention, but the wicked will perish in soul and body on this last day (Y 51.9). The fiery river will then flow down into hell, cleansing it; and Angra Mainyu and his legions will perish. God's great goal will thus be achieved, making evil extinct. There will be an end of history since there will be no more need for striving, no more begetting or dying. The blessed will share a communion meal at a last *yasna,* which will make their bodies immortal; and they will forever live joyfully in the kingdom of Ahura Mazda on this once-more-perfected earth, made level and as beautiful as a garden (Persian "paradise") in spring.

Zoroaster called on all men to be *saoshyants,* i.e., those who will help to redeem the world; and after his death—but still well within the prehistoric period of Zoroastrianism— a belief evolved that in a last great battle before Frasho-kərəti, the forces of good will be led by *the* Saoshyant, the world savior, who will be born miraculously of a virgin mother by Zoroaster's own seed, preserved in the depths of a lake.

E. Worship and Observances

Zoroaster retained the traditional priestly act of worship, the *yasna,* with the new significance that the laity could participate by sharing in the consecrated offerings. The ancient Iranians had three traditional times for private prayer: sunrise, noon, and sunset (Y 44.5). For Zoroastrians, these were increased to five, with midnight and dawn prayers added, the same prayers being said each time. These were obligatory for men and women, whether priests or laity, after they had been invested with the sacred cord (Avestan n*aiwyəhana,* later called *kusti/kushti*) at the age of fifteen. This cord is passed three times around the waist and tied in front and back with a reef knot; it is untied and retied while praying standing in the presence of fire (sun, moon, or hearth fire), which is the "creation" of Asha Vahishta and, accordingly, the icon of truth and justice (cf. Y 43.9). The essence of the appointed prayers consists of two Gathic verses (Y 46.7 and 46.16), of which the first (in one translation) runs: "Whom, Mazda, hast thou appointed protector for one like me, if the Wicked One shall dare to harm me? Whom but thy Fire [= *Asha*] and thy (Good) Purpose, by whose acts, Lord, Truth is nourished. Proclaim this teaching to my inner self." They also include a short affirmation of faith, as follows: "I profess myself a Mazda-worshipper and follower of Zarathushtra, having pledged myself to and avowed the faith. I pledge myself to the well-thought thought, I pledge myself to the well-spoken word, I pledge myself to the well-acted act. I pledge myself to the Mazda-worshipping religion, which throws off attacks, which causes weapons to be laid down, which is just, which of all faiths which are and shall be is the greatest, the best, the fairest, which is Ahuric, Zarathushtrian." The *Ahunvar* is also always recited.

For communal observance there were appointed seven holy days of obligation, devoted to the Heptad and their creations. These days were spent in corporate worship, followed by feasting and merrymaking—Zoroastrian doctrine holds that grief belongs to Angra Mainyu and that fasting is a sin, since it weakens

the good body created by Ahura Mazda and saps the strength needed to fight evil; so all holy days are observed joyfully. The sixth feast, dedicated to Ahura Mazda and man, was followed that night, the last of the old year, by an evidently traditional festival of All Souls (Avestan *Hamaspathmaēdaya*); and the next day was celebrated in honor of Asha and fire. This festival, known as "New Day" (Pahlavi *Nō Rōz*), is the holiest and most joyous in the Zoroastrian year, prefiguring the "New Day" of Frasho-kərəti to come.

Close parallels with Indian usages show that the cult of the dead was of great importance in the Old Iranian religion. Its significance was presumably much reduced by Zoroaster, whose stress was on individual responsibility for one's own fate after death; nevertheless, old observances persisted or were reabsorbed as his religion spread among the Iranians. Rites were performed for the soul during the three days after death, at the fourth-day dawn, monthly during the first year, and thereafter annually for thirty years, after which the departed soul was remembered at All Souls with the family dead, who were expected to help their descendants in return for consecrated offerings of food and clothing (*Yasht* 13, 49–52). These rituals, still maintained in traditionalist families today, are clearly associated in origin with belief in a hereafter in a shadowy underworld.

Evidently there also had been ancient purity laws, which received a firm doctrinal basis through Zoroaster's dualism, by which pollution of all kinds was attributed to Angra Mainyu. These laws accordingly appear to have been greatly extended by successive generations of Zoroastrian priests. The worst contamination was that which came from a dead body; and because the creations are to be kept as pure as possible, corpses were disposed of, not by burial or cremation (polluting to earth and fire), but by exposure in barren places, to be swiftly devoured by birds or wild beasts. Later funerary "Towers of Silence" (*dakhmas*) were built for this purpose. Another serious contamination derived from a flow of blood from the body, and harsh laws developed isolating menstruating women. There was a series of purificatory rites, notably, for severe contamination, the "ablution of nine nights" (Persian *barashnom-i nō-shabe*) in which ritual washing was administered by priests (or, for women, by priests' wives) with recital of holy texts and was followed by a nine-night retreat, with further ritual ablutions.

F. Brief History of the Faith

Zorastrianism entered history under the Achaemenids, who ruled the Persian Empire (ca. 550–331 B.C.). The Persians gradually introduced certain alien practices into the E Iranian religion, notably by founding temples, some with images of *yazatas*, others, more orthopractic, with fire as the sacred icon. The religious calendar was created under their rule, with each month and day being dedicated to a *yazata*. When month and day name coincided, this was celebrated as that *yazata*'s feast day, the number of holy days being thus markedly increased. Zervanism also appears to have evolved in W Iran at this time. See also ZERVANISM.

The magi, priests of the old religion under the Medes and Persians, now became known as the primary Zoroastrian priests, accompanying Persian rulers, soldiers, and colonists throughout the imperial lands. This was still an age of ethnic religions; Zoroaster had been ahead of his time in preaching a creedal, universal faith; but his followers had mainly come to regard his teachings as an Iranian possession. They therefore made little effort, it seems, to seek converts among the subject peoples. Still, leading Zoroastrian beliefs must have become widely known, the impact of some of which has been seen in the works of early Ionian philosophers, and of Plato and his school, and has been traced in some exilic and postexilic parts of the OT, notably Second Isaiah and possibly Genesis 11. It has also been suggested that the wide extension of Jewish purity laws at this time, to cover most aspects of daily life, may owe something to Zoroastrian example, with Nehemiah (who served as cupbearer to one of the Persian great kings) perhaps playing some part in this.

It is, however, in the Hellenistic period, after Alexander had conquered the Persian Empire, that doctrines appear in the Jewish intertestamental writings which, in Pharisaic Judaism and Christianity, form an eschatological system markedly similar to the Zoroastrian one. This similarity used to be perplexing because of two misconceptions. One was that after Alexander, Zoroastrianism survived only within Iran itself. The other was that even in Iran it yielded largely to Hellenistic religion, surviving in orthodoxy only secretly in Persia proper (i.e., the modern province of Fars, in SW Iran). It is now known

that under the polytheistic and tolerant Hellenes, descendants of Iranian colonists maintained their ancestral religion and its places of worship in W Asia Minor down to at least the 3d century A.D. and in E Asia Minor to at least the 5th, living in some places (such as Sardis) on friendly terms and as fellow citizens with Diaspora Jews. Both Iranians and Jews spoke and wrote Greek; and probably already in late Achaemenid times, Persian Sibyllists were composing Greek verses. In these, after Alexander, they seem to have incorporated a good deal of Zoroastrian eschatology, looking for the Macedonians to be defeated by the Saoshyant, i.e., to be the last earthly power. Their works were evidently among those studied by the Jewish Sibyllists, and they appear to have been an important channel for the transmission of Zoroastrian beliefs and expectations to the Hellenistic world generally.

It is also now known (thanks largely to archaeological discoveries) that in Iran itself Zoroastrianism flourished uninterruptedly under the Seleucids; and that the Arsacids from NE Iran, who ruled the Parthian Empire (essentially Iran and Babylonia) from 141 B.C. to A.D. 224 and had many and on the whole friendly contacts with Jews of the E Diaspora, were good Zoroastrians. They maintained the innovations of temple worship and a common religious calendar; and toward the end of their epoch, one of their kings ordered the collection and preservation of all known Avestan texts in oral transmission. Under their rule there were regional Zoroastrian churches, rather than a single church; and they continued the Achaemenid tolerance toward the religions of other peoples. During Seleucid and Arsacid times, Zoroastrianism, like other religions in the same period, absorbed a quantity of Hellenistic-Babylonian astrological lore.

The Arsacids were overthrown by the Persian Sassanians, the last Zoroastrian dynasty of Iran. They were more authoritarian, establishing a unified church under a Persian high priest; and with ever-increasing pressure from more proselytizing religions, notably Buddhism, Christianity, and Manichaeism, Zoroastrianism was put on the defensive; and intermittent persecutions took place. The Syriac "lives" of Christian martyrs yield interesting, if biased, information about Sassanian Zoroastrianism, which, as far as the kings and higher clergy were concerned, was evidently Zervanite. With the writing down of Pahlavi and Avestan texts and increasing notice by foreign observers, the late Sassanian period is the best known in the ancient history of Zoroastrianism. Fire temples were founded in almost every village in Persia, and a vigorous iconoclastic campaign (pursued throughout the epoch) resulted by the 7th century in the suppression of the use of cult images throughout the community. The power and wealth of the priesthood appear to have increased steadily, with an increase also in rites and observances necessary for salvation. Scattered information on this appears in the "Book of a Thousand Judgments" (*Mādiyān ī Hazā Dādestān*), a casebook of Sassanian law, ecclesiastically administered.

The Arab conquest of Iran in the 7th century and the establishment of Islam as the state religion led to the slow erosion of Zoroastrianism. Scholastic activity continued, however, until the 9th century; and several books, including a massive compilation, the "Acts of the Religion" (*Dēnkard*), and an original work of the time, the "Doubt-dispelling Exposition" (*Shkand-gumānīg Vizār*), contain serious debates with Muslims, Jews, and Christians. Late in that century, with persecution increasing, a small group of believers sought religious freedom overseas, settling in Gujarat in W India, where they were known as Parsis (Persians). After years of obscure poverty they began, from the 17th century, to prosper as brokers and merchants, gaining fame for their individual wealth and philanthropy—charity is strongly inculcated in Zoroastrianism, since it is each man's duty to care for his fellow man, as the special creatures of Ohrmazd.

Meanwhile, in Iran the Zoroastrians suffered cruelly through invasions by Turks and Mongols and ever-harsher punitive laws until they were reduced to an impoverished remnant living chiefly around the desert cities of Yazd and Kerman in central Iran. Their mss were repeatedly destroyed, and those Pahlavi books which survive were saved by being sent to their coreligionists in India. Only essential doctrine and observances could be maintained, but Zoroastrians upheld these with tenacity. Their circumstances improved slowly from the late 19th century, and they in turn produced wealthy philanthropists. Changing political conditions in the second half of the 20th century have brought about considerable emigration from both communities.

G. The Religion in Modern Times

At no point in the ancient history of the faith is there any trace that its dualism was being questioned (except by Zurvanite monism), either by its own adherents or by foreign observers. In early encounters with Christianity and Islam this dualism was firmly upheld as a satisfying answer to the problem of evil. In modern times, however, Europeans began to speculate about Zoroastrianism before the Avestan or Pahlavi books were known in the West. From the Greeks they had learned to respect Zoroaster, while Christian history taught them to abhor dualism. From the 17th century they argued accordingly that Zoroaster had been misrepresented in this respect, being in fact a monotheist. After the *Gāthās* became known, a German philologist proposed a textual basis for this idea on Zervanite lines: "Truly there are two primal Spirits, twins renowned to be in conflict" (Y 30.3). The term "twins" is well attested in Vedic usage for two beings or things that for some reason form a pair, here plainly in that they were alike uncreated; but instead of following Zoroastrian tradition in seeing these "twins" as Ahura Mazda and Angra Mainyu, he supposed Ahura Mazda to be the putative "father" of the "twins," understood to be his own Holy Spirit and the Evil Spirit. The problem of theodicy was thus introduced into the academic study of Zoroastrianism, and it was confidently assumed that Zoroaster had taught his followers so inadequately that from the very beginning they had misunderstood him concerning this essential belief. It took Western scholars, some 3000 years later, to set the error right. The difficult and archaic doctrine of the Heptad, which still underlies the Zoroastrian world outlook, was at the same time reduced to one of philosophical abstractions; and the highly abstract nature of Zoroaster's teachings has since been much discussed.

These interpretations were introduced to the English-speaking, i.e., Western-educated Parsis of Bombay in a series of lectures in the 1860s. They had been suffering from sharp attacks by a Christian missionary on their dualism and so-called polytheism; some influential lay reformists gladly embraced the escape thus offered them and forthwith proclaimed Gathic doctrine to be a simple monotheism. There was no single recognized priestly authority to rebut this position; and gradually, linked with other aspects of reform, monotheism became the prevailing belief in the community, shielding it from attacks by both Christians and Muslims. It also gave reciprocal support to Western academic theorizing (which, the anchor line of Zoroastrian tradition having been cut, has developed in diverse and often highly speculative ways).

Doctrinally, the religion is now in disarray and open to inroads by theosophists, ritualists, and popular "gurus," the priesthood also being affected. A number of its adherents respond to this confusion by concentrating on practice, especially on the threefold ethic of good thoughts, words, and acts. Practical problems (i.e., the dwindling numbers of priests, outside marriages, new funerary rites, and the acceptance or rejection of converts) also occupy much attention. Yet, however great the controversies, the differing groups remain united by a determination to uphold their ancient and noble religion despite all difficulties.

ZOSTRIANOS (NHC VIII,*1*). The figure Zostrianos is the visionary in the gnostic apocalypse *Zostrianos* in the Nag Hammadi library. Though the manuscript is poorly preserved, enough of the Sahidic Coptic text remains to indicate that this tractate depicts a heavenly journey. Following a divine call, Zostrianos leaves his body by means of a mystical trance and travels through the heavenly world. During his ascent he learns from a series of interpreting angels a mythological gnosis and its philosophical interpretation. Finally he is commissioned as a messenger of this gnosis and returns to earth to preach it and to leave it in book form for the elect, who are called the children of Seth. A concluding homily urges the reader to flee from the bondage of this world (from femaleness) and to choose the salvation of maleness.

Zostrianos provides an important witness for a non-Christian, philosophical brand of Gnosticism known previously only through polemical references in the writings of Plotinus and Porphyry. Its gnosis is most clearly related to that of *The Three Steles of Seth* (NHC VII,*5*) and *Allogenes* (NHC XI,*3*). Of particular interest is its identification of the three mythological aeons of the Barbelo Aeon with the Existence-Life-Mind triad known from later Neoplatonists such as Marius Victorinus. *Zostrianos* posits a high-god, the thrice-powerful Invisible Spirit, as the ultimate source of everything. The Barbelo Aeon and her three constituent aeons (the Hidden, the First-appearing, the Self-begotten) represent successively imperfect emanations from the Invisible Spirit. Each of these aeons contains within itself a multitude of entities (aeons, angels, glories, waters, etc.) which serve as patterns or models for similar but less perfect entities in the next lower level. Thus, the lower levels of the Self-begotten Aeon contain a heavenly Adam, a Seth, models for the various types of souls found on earth, and the like. Using these patterns, the fallen Sophia constructs the physical universe in which souls are trapped.

Although its basic orientation is philosophical, *Zostrianos* contains some materials that ultimately derive from Judaism and Christianity. Names such as Adam, Seth, and Daveithe are obviously Jewish in origin, as is the idea that creation was accomplished by a word (9,1–4). There are also both formal and material connections to some Jewish apocalyptic works, especially *1* and *2 Enoch.* Zostrianos is portrayed as standing before heavenly entities after each stage of his initiation in the manner of angels who stand before the Lord. This "standing" is then interpreted philosophically as a sign that he has transcended material existence. Baptisms with water also play a significant role in the tractate; at each stage of his ascent Zostrianos is baptized in the name of the entities in whose region he now stands. These baptisms as well as a warning against the baptism of others (the Christians?) in the concluding homily (131,2–5) suggest a cultic use of baptism similar to that known in Hellenistic Judaism and in Christianity. Yet specific references to the NT are few, and those that do occur seem to reflect a general cultural knowledge of passages rather than a particular interest in Christianity. There are, for example, references to seeking and finding (3,18–19; 131,17–19). One passage (28,20–22) in a list of the types of souls alludes to the Pauline triad of faith, hope, and love known best from 1 Corinthians 13, saying that there are some who love, some who hope, and some who believe. To these three it evidently added a fourth, in lines now lost.

Thus, the tractate *Zostrianos* is more valuable as a witness to our knowledge of philosophical Gnosticism than to the Christian varieties. Because of the proposed relationship to Plotinus and his school, *Zostrianos* probably dates from the late 2d or early 3d centuries C.E. For more specifically Christian versions of a similar gnosis, consult *The Apocryphon of John* (NHC II,*1*; III,*1*; IV,*1*) and *The Gospel of the Egyptians* (III,*2*; IV,*2*).

JOHN H. SIEBER

ZUAR (PERSON) [Heb *ṣûʿar* (**צוּעַר**)]. The father of the chief (*nāśîʾ*, Num 2:5) Nethanel of the tribe of Issachar. Each of the five times that Zuar is mentioned in the OT occurs in a tribal list where his mark of distinction is his status as the father of Nathanel. Under the leadership of Zuar's son Nethanel, the tribe of Issachar participated in the census of Israelite fighting men carried out by Moses (Num 1:8, 28–29), presented its offerings on the second day of the twelve-day celebration of the dedication of the altar (Num 7:18, 23), took its proper place on the E side of the tabernacle in the Israelite camp (Num 2:5), and assumed its position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:15). The name Zuar means the "small one" and probably refers to the small physical build of the person (*IPN*, 225).
DALE F. LAUNDERVILLE

ZUGOTH. The Hebrew word *zûgôṯ* means "pairs," and it is used in rabbinic Judaism to designate five pairs of individuals who constitute the primary chain of tradents of the oral torah (lit. "memorized torah") from the Great Assembly to the rabbis of the beginning of the Tannaitic age (1st century C.E.). In the Mishnah, tractate *ʾAbot* 1:4–15 lists these five pairs as: (1) Yose b. Yoezer and Yose b. Yoḥanan, (2) Joshua b. Peraḥyah and Nittai the Arbelite, (3) Judah b. Tabbai and Simeon b. Shetaḥ, (4) Shemaiah and Abtalion, and (5) Hillel and Shammai. The Mishnah's framers (*m. Ḥag* 2:2) hold that one of these individuals was always the *nāśîʾ* (lit. "prince") of the Sanhedrin while the other was the *ʾab bēt din* (lit. "father of the court"). The precise significance of these titles remains unclear. Furthermore, scholars have attempted to identify some of these names with figures known from other sources, such as Josephus. But these identifications constitute little more than speculation. Indeed, since the pairs are first mentioned in texts dating some 130–200 years after the death of the last of them (Hillel and Shammai) and several centuries after the earliest, it is probable that the pairs, like the Great Assembly, are creations of the rabbis of the post-70 period.
PAUL V. M. FLESHER

ZUPH (PERSON) [Heb *šp* (**שׁף**)]. Var. ZIPH; ZOPHAI. An ancestor of Samuel (1 Sam 1:1). He was an Ephraimite and the father of at least one son, Tohu. The variants of his name are uncertain in the text: his name is given as "Ziph" in 1 Chr 6:20—Eng 6:35, Ketib, for which the Qere is "Zuph" and which the LXX renders as "Souph." 1 Chr 6:11—Eng 6:26 has "Zophai" (RSV Zophai); but the LXX renders this as "Souphi," reading the vowel *šûreq* rather than *ḥōlem.* Thus both variants may be considered doubtful; perhaps "Zufi" was a variant. The district of ZUPH was almost certainly named in his memory.
GERALD J. PETTER

ZUPH (PLACE) [Heb *ṣûp* (**צוּף**)]. A district where Saul sought his father's asses (1 Sam 9:5). Though its exact location is uncertain, it was almost certainly in the tribe of Ephraim and derived its name from the person Zuph. The MT of 1 Sam 1:1a creates the impression that after the district derived its name from the person, it gave its name in turn to a village. Therefore the name, "Ramathaim-Zophim" would

suggest "Ramathaim, inhabited by the residents of Zuph." But the construction of the town name is grammatically improbable, if not impossible (cf. Wellhausen 1871: 34–35). The final *m* of "Zophim" (Heb *ṣōpîm*) should be deleted (dittography) yielding "a man of Ramathaim, a Zuphite of the hill country of Ephraim, whose name was Elkanah." If this is correct (most scholars agree with this resolution of the textual difficulty), Zuph was the home district of Elkanah, Samuel's father, and thus also of Samuel. Ramathaim was then most probably identical with the Ramah with which Samuel was closely associated (1 Sam 7:17; 8:4), and Zuph may be further identified as the district in which Ramah was located. McCarter (*1 Samuel* AB, 51) reviews the treatment of the textual question since Wellhausen. See Edelman (1988: 56, 58) for possible identification of the region.

GERALD J. PETTER

ZUR (PERSON) [Heb *ṣûr* (צוּר)]. The name of two persons in the OT.

1. A Midianite "king" (Num 25:15; 31:8; Josh 13:21). The list of Midianite "kings" in Num 31:8, together with the account into which it is embedded, poses several historical problems. See EVI; HUR; REBA; REKEM (PERSON). According to Knauf (1988: 166–67) these names form an itinerary through S Transjordan and N Arabia in the Persian period. Zur can be identified with Khirbet Dôr, where pottery from the 7th through 5th centuries B.C. is attested (Knauf 1988: 166 n. 706). His daughter Cozbi (for her name, see Knauf 1988: 164) serves in Num 25:15 as one of several redactional links between Numbers 22–24, the Balaam episode, and Numbers 31, the Midianite War (Knauf 1988: 161–65).

2. A Benjaminite, contemporary with Saul's father, Kish, who lived at Gibeon (1 Chr 8:30; 9:36). As a personal name, Zur is also attested in Phoenician. In both languages the name is probably derived from *ṣûr* "rock," whereas it is difficult to connect Safaitic *ṣr* (from *ṢRR*), Safaitic or Lihyanite *ḍr* (from *ḌWR* or *ḌRR*), or Safaitic *ẓr* with the Benjaminite's name (Knauf 1988: 89). Any of these Arabian parallels would apply to Zur #1, if the "Midianite king" should indeed have been a person rather than a place.

ERNST AXEL KNAUF

ZURIEL (PERSON) [Heb *ṣûrîʾēl* (צוּרִיאֵל)]. A Levite of the clan of Merari, son of Abihail (Num 3:35) according to the first census taken by Moses in the wilderness. He was head of the Merari family, who were to be encamped on the N side of the tabernacle and were responsible for its frame.

CHRISTINA DE GROOT VAN HOUTEN

ZURISHADDAI (PERSON) [Heb *ṣûrîšaddāy* (צוּרִישַׁדָּי)]. Var. SARASADAI. The father of the chief (*nāśîʾ*, Num 2:12) Shelumiel of the tribe of Simeon. Each of the five times that Zurishaddai is mentioned in the OT occurs in a tribal list where his mark of distinction is his status as the father of Shelumiel. Under the leadership of Zurishaddai's son Shelumiel, the tribe of Simeon participated in the census of Israelite fighting men carried out by Moses (Num 1:6, 22–23), presented its offerings on the fifth day of the twelve-day celebration of the dedication of the altar (Num 7:36, 41), took its proper place on the south side of the tabernacle in the Israelite camp (Num 2:12), and assumed its position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:19).

The name "Zurishaddai" means "Shaddai is my rock." The rock metaphor is not uncommon in personal names either as the theophoric element (e.g., Pedahzur) or as a description of the qualities or actions of the deity (e.g., Elizur). Noth (*IPN*, 156) categorizes more specific uses of the rock metaphor in characterizing Yahweh as follows: sending help (Pss 89:27—Eng v 26; 95:1), providing powerful protection (Isa 17:10; Pss 31:3—Eng v 2; 62:8—Eng v 7) and safety (Deut 32:37; Pss 18:3—Eng v 2;

94:22), and standing firm as a reliable source of help (Isa 26:4). The genealogy of Judith, listing Salamiel, son of Sarasadai (8:1), may refer to Zurishaddai and his son Shelumiel.
DALE F. LAUNDERVILLE

ZURRAʿA, KHIRBET EL-. See GATH-HEPHER.

ZUZIM [Heb *zûzîm* (זוּזִים)]. In Gen 14:5, a people defeated by Chedorlaomer and his allies at Ham, listed between the Rephaim and the Emim. Its position corresponds to that of the Zamzummîm in the enumeration of prehistoric peoples in the "first introduction" to Deuteronomy (Deut 2:20), from which the author of Genesis 14 borrowed the names of the other early peoples of the Transjordan. Questions arise whether *zûzîm* in Gen 14:5 is the original writing or a distortion of *zamzummîm* (as may be suggested by 1 QapGen) and why LXX rendered it "mighty nation," *Tg. Onq.* and *Tg. Ps.-J.* "powerful ones," Syr "mighty ones," and the Palestinian Targum "distinguished, noble ones." The old derivation of *zûzîm* from Ziza in the Roman province of Arabia (Ptol. *Geog.* 5.17.6), medieval Zîzâ (on which see le Strange 1890: 554–55, cf. 493; Dillmann 1897: 2, 41) is not probable because that site (now el-Jîzah, 15 km east of Medebah), lies too close to Kiriathaim, which belonged to the Emim (see SHAVEH-KIRIATHAIM). The assumption that "mighty nation" in rendered an original **ʿazûzîm* (see commentaries) is possible but inconsistent with Deuteronomy 2. The explanation may lie in an alternative etymology of *zamzummîm.* The name is usually derived from Ar *zamzama* "to produce a murmur that can be heard from afar; to mutter indistinctly," as it was understood by *Tg. Ps.-J.* in Deut 2:20, which translated it *zimtānê,* cf. Syriac *zam* "to sound, resound, buzz." But Ar *zumzûm-* means "the best, the select (of men or camels)," and a word with a similar meaning apparently existed in Hebrew as well, for *Tg. Onq.* in Deut 2:20 translated *zamzummîm* by *ḥaŝbānê* "prominent, respected, high-standing people," which is semantically very close to the renderings of *zûzîm* in LXX, Syr, and the Targums. It is also a better epithet for a race of giants than "murmurers" or "mutterers." It is therefore probable that not only 1QapGen but the LXX, Syr, and the Targums as well, proceeded from *zamzummîm* (or rather **zūmzummîm,* as in 1QapGen) instead of *zûzîm.*
